

Western Union Money Transfer Method!

Some Time ago when I start carding i just like other beginner carders who really do hard effort to card some big companies like Western Union ,Moneygram etc With no Success. But Now be Happy because You will be eligible to card Western union smoothly with no enough effort ! Hopefully You will get Success After reading this ebook. This method specialty is , it will not patch ever i think so ,because If Western Union try to patch this .They have to shutdown their core server because the problem is , TTL packet in data communication!This Method will work for anyone , no need for extra skills even starter can do it easily ! Why We are waiting So

LET START :)

Some Requirements to run this method!

First you need a medium Internet connection with good pc.

A fresh ssh shell ,socks5 or http proxy.(there are three options you have. (You can Chose one of them).For socks you can try (vip72.com)but i advise you ,buy some private ips because Most of companies provide shared socks worldwide. Everyone use that socks So you can lose your payment because no one knows that how many times this socks has used by Western Union.So keep in mind!

Second Use rdp or vmware or any standalone pc.I personally use rdp so i prefer you to

use rdp.if you want to use vmware its ok but one thing download exsi vmware server or install into vmware workstation.and download vmware sphere client and control the exsi server and make guest OS into sphere client .thats compulsory step for vmware users.Because when you use vmware with exsi you

will have the ability to control and change the gateway setting and looks you legit and clean User Pc.If there will be any problem to setting up the Vmware then dont contact me :D because I will make a thread for you on (ABH)!

I just Forgot one important Thing When you will place a socks5 check the ip address .If ip address Match the state then copy the ip Address city and state name.or write in Google (statename cityname time) .Google will give you the time of the socks5 city or state.Change your computer or rdp time from where

you want to send money same as socks5 time.

Body of Method!

Ok ! When you get all the above Things then Install only (Firefox) , why Firefox?

Because Firefox has some addons that makes your browser like your notepad i mean to say you can change the settings of Firefox freely like source code :D not enough but that settings can do our Method working.If you already have Firefox installed then update the Java environment Or Flash player of Your browser ! Next Go into Firefox URL And write About:config and hit on button that is saying (i will be carefull i promise).Now in the search bar write this line(network.proxy.socks_remote_dns) and change the value to true.We Change the setting because If We will not do it Your sock5 will get your real dns not the socks5 dns .Next Past this line too into the search bar(network.http.pipelining.maxrequests) and Change its value to 8.This setting Will keep your socks5 alive for long time because We have set the data request limit only 8 .Now you will not face dead socks5 problem while payment .If Your socks5 will go offline then there will be problem from the server side where you buy socks5.Next is, You have to install 2 Addons Which names are (Ghosty , Useragent overrider).First Why We use Ghosty addon into the browser ?Behind the reason Ghosty can take your privacy hidden not 100 percent but It works with our Method Because it blocks the scripts that can reach your real ip

address, Location or other things that cause for Lose transaction . When you install this addon .There will be Ghosty face on the top in Menu Bar. Click on it ,Click on Setting ,Click on Option and Then Click on Advance or take your Browser scroll Down at the end and Check the Box (Delete the Flash cookies and Silver light cookies) Save it. All done with Ghosty Now Second useragent overrider, This helps us by showing the targeted server ,different operating systems ,mean if you are using Window 32 bit ,You can show Window 64 bit or you can show even Andriod phone too.

When you will install useragent .There will be a light color box into your menu bar ,Hit it .There will be down menu Select any browser or Andriod phone as you like But I Personally use Firefox Windows or chrome Windows Useragent for Western Union Payments ! OK Now you have done all the things With Firefox Browser. Now Run the Socks5 With Proxifier or Use the Socks5 to set it up in Firefox directly . For Setting Sock5 into the

Firefox Browser .You need to open the Firefox and go into Option then advance and then Network from down tab ! Click on First setting tab and Select Manual setting and past your proxy ip and port Click Ok and you are done.

Now When you done all setting with sock5 (Forcelly Your socks5 should not be blacklisted in spam or dns ! Go [Https://www.Westernunion.com](https://www.Westernunion.com) and Click on Register .Fill Your Email address (Dont use live ,Yahoo etc Just use Gmail or your private inbox ! Because When you verify Your email .Western Union do try to trace your real location or some other information of Your Email id .So Be Careful While choosing this. Now If Your are Paying with hacked cc then put the

name, address, zipcodes etc matched by Credit card. Now We are on Tricky Part the Phone number. Always use Landline numbers , not the Mobile numbers Because if you will use Mobile number ,on payment page you will need to face mobile phone verification ,to avoid this you have to pick state matched phone number .You can get one from Pinger or you can use paid numbers like skype numbers etc. Personally I dont trust on pinger numbers because they are public numbers ,anyone can use these numbers on Western Union. So keep in Mind !

Next the date of Birth Matter ,To get USA DOB You can get it from <http://www.instantcheckmate.com> or For outside of USA ,There are other Mehtods to Get DOB.Lets Come to the Point If Credit card owner's age is above to 45 Then put into age Year section between 1970 to 1987 .If He or She is under 45 age then put the real one .Behind this There is another Philosophy :D .But you do that as I said then its all OK. Now select security question and Fill Captcha ,Agree the Conditions and Click on Continue .You will receive a Confirmation email into your email id .Here important Part You have to open your Gmail id into Same Browser Where you are signing up Western Union. There is an other Philosophy :D But Do it. When you will verify email to placing the code into Western union verification box ,click Continue. Now You are into your New Profile with Western Union .Go into your profile and Click on Payment information that is most Left side of the page. Click on Add credit or put all the Credit card information and save it. Now Go up and under send money tab click on transaction fees like that. You will go on next page .Here you have to select the country from drop down menu or put the amount How

much you want to send .Now Select the receiving way or Payment way or Click on Continue. Here You have to put First name or Last name of the person(payee) Which one will receive the Money .If your receiving way is bank deposit then put Bank information like Bank name, routing code or Bank Account number .When you will fill Click on Continue Button .Here you have to Enter the cvv code, Credit card number or expiry date of the credit card which is saved by you before , into profile ! Now Click continue Next page will be your review transaction page .Review the transaction and Accept the policies of Western Union and Click on Review or continue .Your Transaction Will go successfully by saying that We have sent you email about your payment But wait for our confirmation email or they will say your money transfer is Ready to pick up :D (Thats Hard).But This Ebook is a Solution of All Western Union instant Payments .I Mean this Message(your money transfer is Ready to pick up).

Western Union System

First You know Western Union is a Money transfer service. They got services of Firewalls ,from comodo company , verizon company also one more company that is private company(i just forgot its name sorry). They got some service from Oracle that serve the Western Union to develop the scripts to make Western Union secure over the

internet .Western Union Strong Gun is java for carders because Java has the ability to trace your real location or java has some scripts that works with DDOS attacks! When you visit Western Union Website even just for surfing they send the DLL file in your windows folders without your knowing(its classified problem i just found it but cannot open it it is shit i tried many time but anyway) . And that file live in

your pc one month ,after a one month it discard automatically .Some users are asking me about we do success transfer first and after that we did nt get success transfer with that account so here the Reason. Due to this i dont use my pc .i use rdp .I know you got my point. The next thing is they use a billing processer specially credit card which is works with three things at a time .First one is When you click on review and continue for last Payment page of Western Union, Flash queries or Fram run with javascripts and try to down your ip address and send a little bit kind of DDOS attack in shape of some big data packets. Now its all depend on you sock5 to how to avoid it or defeat .if your socks will run fast then they can bear it for sure. Or Also one thing when you buy socks You should be clear there should be ssh functionality too.IF there will not dont worry but socks should be fast.

Very Important and Legs of Method :D

Tricks!

If You want to send Under 500\$.You can use above method and you will get 100% success without documents or phone Verifications.

If you want to send 2k or 1k .You Will have to Follow my advice .When you buy credit card .Take the bin of the credit card and search online about the bank You can search on binchecker.com and You will find Right Result ,When you will get bank name Go on to bank site and then go in contact us section and see the bank closing time. When You will get the time of closing ,Note it**. Now You will have to wait till then when the bank will be close after day passed. (When The bank will go offline I mean on standalone mode :D) **In one hour** you have to make Payment after closing the bank. Do The transaction and your transaction will go**

Strait with Ready to pick up message! Cheers :D

Important Note : When you buy card , Make Sure The name of the card should

have to Match with bank name that is really important who uses USA credit cards .I am telling you because There are many countries But not all who have this kind of security from Western Union while sending Payments Online From USA . Other Countries are fine .I send from UK, Canada or USA Too !

Thats All :D

**Happy Carding Western Union
Successfully!**

Thanks For Purchasing :)
