How to check dataone usage ? Checking BSNL Broadband Usage

As you know all DataOne plans are NOT unlimited. So if you have opted for a limited plan then you should be carefull about the dataone usage.

Your Dataone broadband usage can be checked as follows.

1) Open <http://10.240.43.216/webLogin.jsp> in Internet Explorer (Firefox not supported).

IF THE ABOVE LINK IS NOT WORKING, Please try [Check Broadband Usage](#)

2) Enter you dataone username and password.

3) Click on "Service Records" link.

4) Select the month for period you are checking the usage.

5) Click 'OK'

6) Value of 'Total Volume' is your total dataone usage of that particular month.

Important : if you open this link in any browser other than Internet Explorer, you may get an error message like "{ Sorry, you cannot access portal because your explore is not Cookie-enabled.

Please set your exploreCookie-enabled, and access portal again!"

So Please try with internet Explorer Only.

Also please note that the link is accessible only from DataOne internet connection.

Note: Installing ad blocking software / Pop Up & Ad Blocking Add Ons in your browser will help you to reduce the dataone usage.

Remember Small Plans and Big Usage will increase your bill.

Hello,

Its an good post,

1 question:-

BSNI broadband uses different

ADSL's every time. this causes

difficulty in some default settings, as I have done before.

So, If possible please send me all settings of all bsnl ADSL's, for sharing Purpose in 7 pc's by DHCP.

Hi Jin,

Great blog, very interesting tid bits on Data One broadband. Hope this is not the end of your posts... looking forward to more. This is after all the year of the broadband... new online games (came) and IPTV (coming soon) so we'll have more activity and need informed bloggers like you! Thanks for all your contributions so far!

Parag P. Doke said...

Each time I attempt to find one working URL from where I can retrieve usage details...I simply get irritated due to the lack of some defined method to do so.

Each search result reports tonnes of IP addresses and the pages hosted by BSNL keep taking me to the sancharnet site (which does not recognise a dataone login) or the web-mail.

Has anyone been able to identify one method to follow, to retrieve usage details ???

Something as simple as:

- 1) Go to the BSNL homepage <http://bsnl.co.in/>
- 2) Click the [whatever link]
- 3) Login with or without the @dataone.in

Thanks in advance,

Parag P. Doke

02 October, 2007,

After opening <http://10.240.43.216/weblogging.jsp> in Internet Explorer, entering user Id & Password in the next screen & then clicking on service records .. I do not get service records. Instead am told: " Sorry. Operation timed out. For safety pl. log in again. " What to do? Am getting very high bills but can't check/ monitor. Is there a chance some wrong feeding of data in the modem ? or some cookies setting (not known) problem? respond & help. : Geeta

Friends, Getting broadband usage is not working past 10 days through www.bbservice.bsnl.in or www.data.bsnl.in or even through <http://10.240.43.216/webLogin.jsp>.

I tried many times but failed. At last I tried thru www.bsnl.co.in/service/dataone.htm and clicked "Check Usage" at the bottom of the screen. Then I could slowly get into it and obtained my usage details.

Dhathri said...

Hi friends,

I know one way of checking usage details which is fast and easy.
Visit <http://bbservice.bsnl.in/>

For username and password just call your near by BSNL office and tell them your phone number ,within minutes they check the server and give you your username.

Try this and let me know whether you succeeded or not.All The Best

I am a Broad Band Subscriber. I frequently get 'Error-676' and 'Error-678' on my account and my Broad Band service gets interrupted. Similarly, 'Usage Checking Facility' is normally not available due to 'Internal Server Error' or 'Regular Maintenance'. BSNL needs to workout and improve upon its Broad Band Service.

Vilas Havanur,
Tyroneind.

both link r nor working please tell me how to chech my dataone usage

12:49 AM

vilas said...

Some Subscribers of BSNL Broadband find it difficult to chech their Broadband usage. Please visit my Blog at <http://broadband-usage.blogspot.com> wherein I have explained two procedures to check the usage. I hope, this will solve the problem of most of the Subscribers.

4:43 AM

selvaraj said...

i dont know how to check my user account... it shows that i entered an invalid username/password

5:53 PM

vilas said...

I have observed that when I try to connect the BSNL Broad-Band, I come across the ERRORS mentioned here, very frequently, resulting in non-connection of BSNL Broad-Band. (1) ERROR-676, (2) ERROR-678, (3) ERROR-691 and (4) ERROR-769.

Subscribers, like me are unaware as to what exactly BSNL has done to eliminate these ERRORS. Further, when I get connected somehow to the Broad-Band and I need the Internet for my Top Priority work; it runs too slow which is quite irritating for me. According to some Officers of BSNL, the problem-source or root-cause lies with the BSNL REMOTE SERVER at Bengaluru (Bangalore).

BSNL really needs to be more Customer Oriented and make sincere and positive efforts to improve upon its working styles and ensure trouble-free Service to their Customers or else Customers have so many options wide open to them and readily available in open market.

Vilas Havanur,
Tyrionind.
