

Highlights of DRAFT Eco-City Action Plan for Sangli Miraj Kupwad

Prepared By

Environmental Management Centre

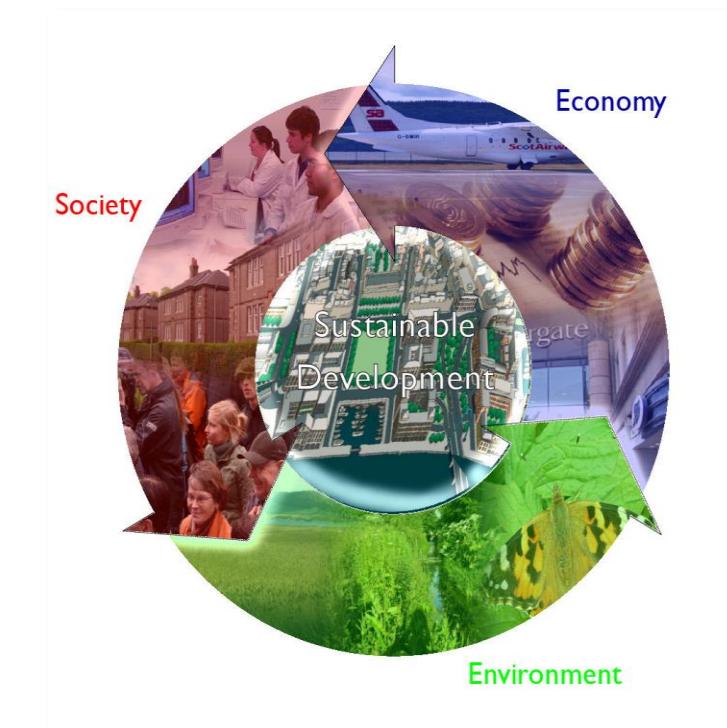

November 14, 2014

What is Eco-City?

“Eco-City” is a city that decreases environmental burden/stress, improves living conditions and helps in achieving sustainable development through a comprehensive urban improvement system involving planning and management of land and its resources and implementation of environmental improvement measures.

The Eco-cities include area-wide improvements and providing of infrastructure and services.

- <http://cpcbenvis.nic.in/ar2002/ar1-2ch14.htm>

Eco-City is not.....

- A basket of projects or Just about
 - Planting trees
 - Building fountains
 - Putting posters
- It's a **PROCESS** – and a realization of **MAINSTREAMING** Eco-considerations through **PARTNERSHIPS**
- Projects are then logical outcomes and not the sole objective.....
- Community involvement and institutional capacity building are key ingredients of Eco-City PROCSS.

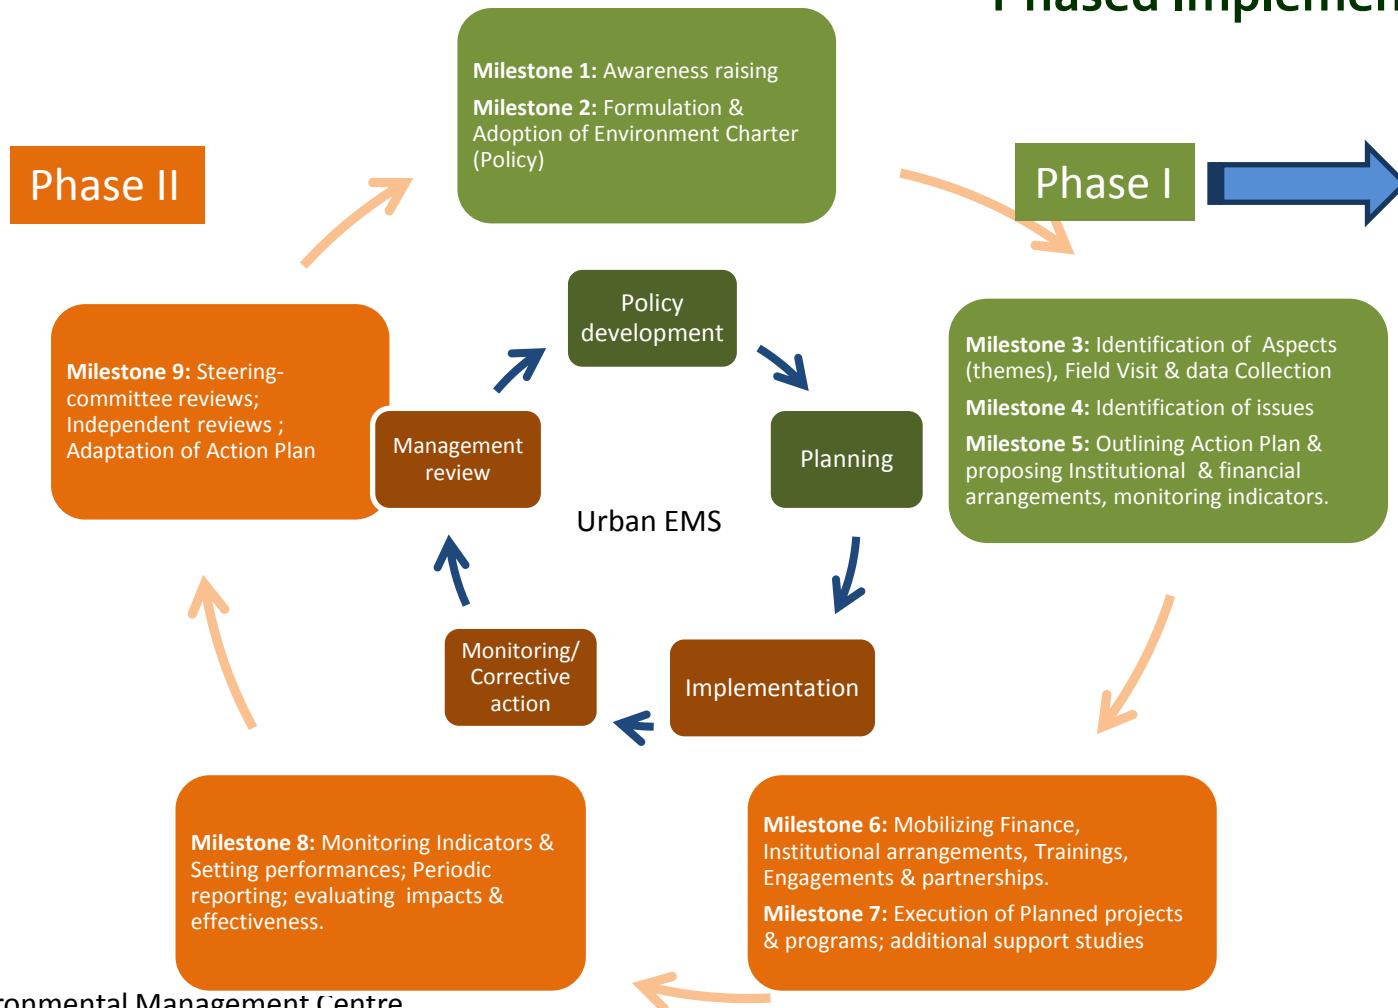

Why Eco-City ?

- Improve **quality of life** for all
- Make Urban investments **sustainable**
- Ensure that these investments are **effective**
- Improve **equity and transparency**
- Build a **brand** that every citizen is proud of
- **Inspire and guide** others to follow

Number of experts 8
Number of postings on map 17

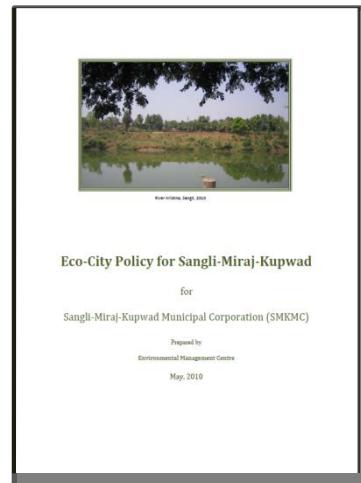

Milestone 2: Formulation of Policy Vision, Goals and Guiding Principles

Formulation of Policy - Vision, Goals, Principles

Participatory approach

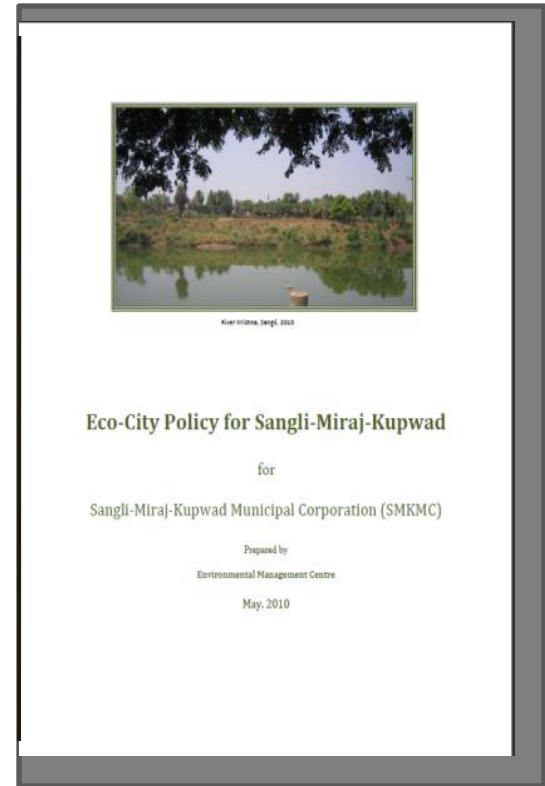

- **Consultation workshop with core committee on policy development March, 3, 2010.**
- **Draft Eco-City policy later discussed with core committee on April, 26, 2010**

Components of Environmental Policy

Components of Policy

- **Vision**
- **Guiding principles**
- **Goals**
- **Roles and responsibilities**
- **Pledge and Commitment**

Components of Policy

Vision statement for SMK Eco-City –

The residents of Sangli-Miraj-Kupwad (SMK) shall work together to help make their cities a clean, healthy and safe place. SMK as an emerging Eco-City shall grow by following the path of sustainable development where decisions for development will be inclusive and integrate economic, environmental and social considerations.

Guiding Principles :

- 1) Sustainable use of natural resources
- 2) Manage waste to reduce risks and meet compliance
- 3) Reduce pollution to acceptable levels
- 4) Promote modes of transport that are environmentally friendly
- 5) Incorporate 'green' building practices into all future plans
- 6) Ensure land use to create a healthy & safe place to live in
- 7) Ensure efficient use of energy and seek to reduce climate change impacts

Milestone 3: Identification of Themes , Field Visits and Data Collection

Theme Identification

Themes identified based upon –

- Situation Analyses
- Feedback from consultation workshops
- Field interactions

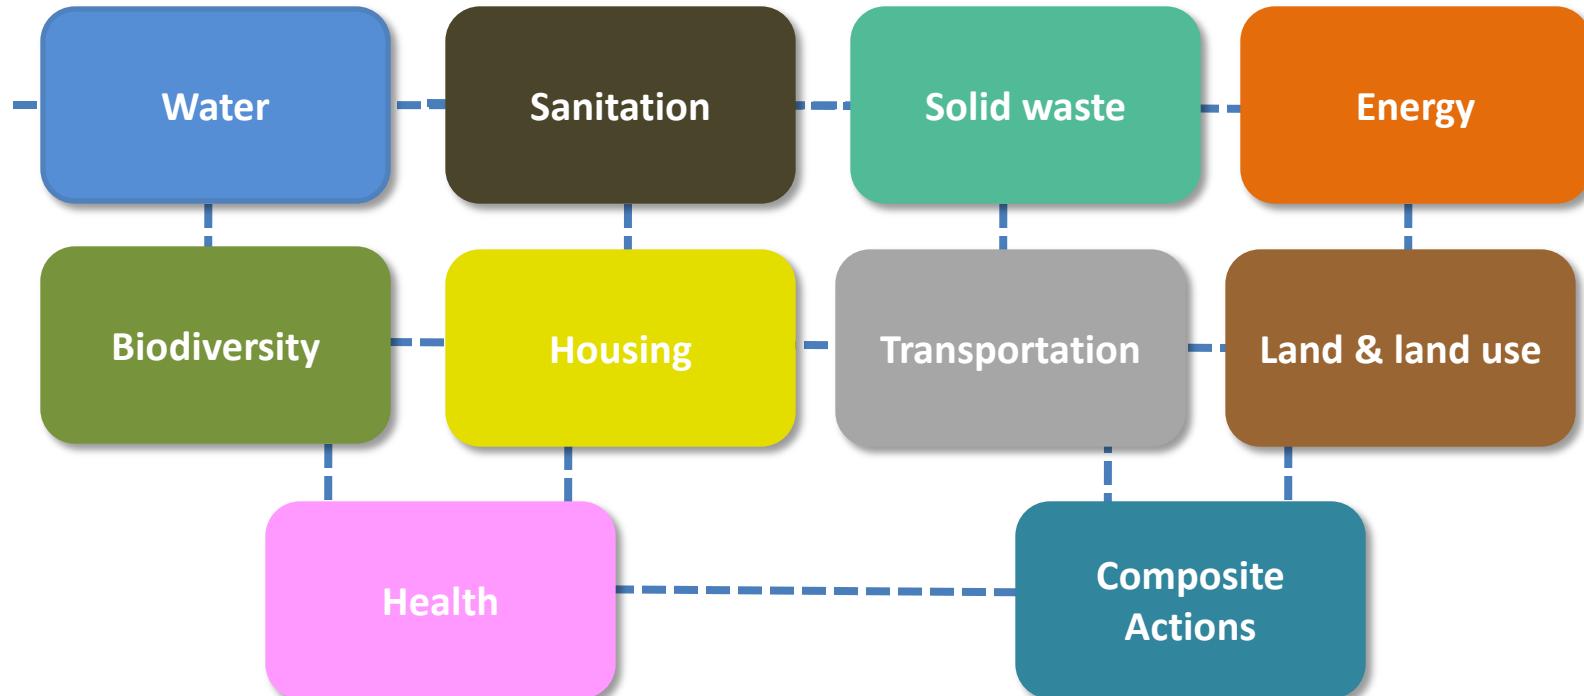

Thematic Approach

The thematic approach provides-

- **Focused information collection**
- **Provides specific attention to legal compliance**
- **Leads to identification of specific investment projects, progress and associated polices**
- **Guides institutional arrangements**
- **Provides opportunity to harmonize with budgetary plan**

Themes for Action Plan

Many of the themes are interlinked.

Field Visits

EMC team made various field visits for data collection -

- **February, 10-13, 2010**
- **March, 2-5, 2010**
- **April, 26-30, 2010**

Aspects considered

- **Existing scenario**
- **Issues and concerns**
- **Proposed /ongoing activities in terms of projects, programs etc.**

Data Collection

Data for following themes/sectors was collected :

- Water supply and treatment
- Wastewater management
- Solid waste management
- Energy consumption for street lighting and signaling
- Health status of city
- Garden and land use
- Housing related policies
- Transport
- City development plan
- Municipal Governance and Budgets

Sources for Data Collection

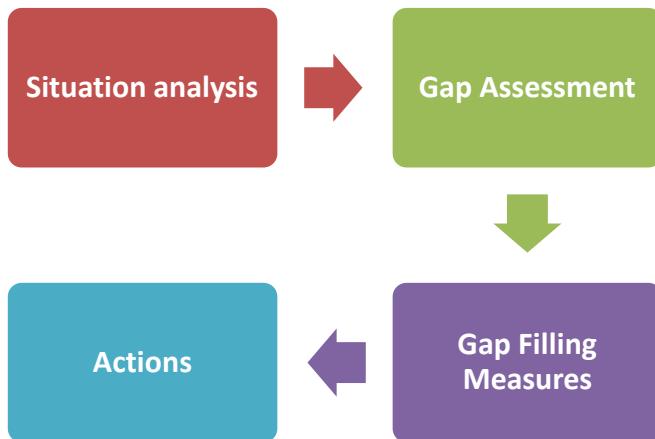

- SMKMC
- Hon. Commissioner,
- Hon. Mayor
- Hon. Dy. Mayor and all office bearers
- Medical Health Officer
- City Engineer
- Head, Water works
- Town planning Engineer

- Maharashtra Jeevan Pradhikaran, Sangli Office
- Maharashtra Pollution Control Board, Sangli SRO office
- Civil hospital, Sangli
- Core committee members

Key Issues - Situation Analysis

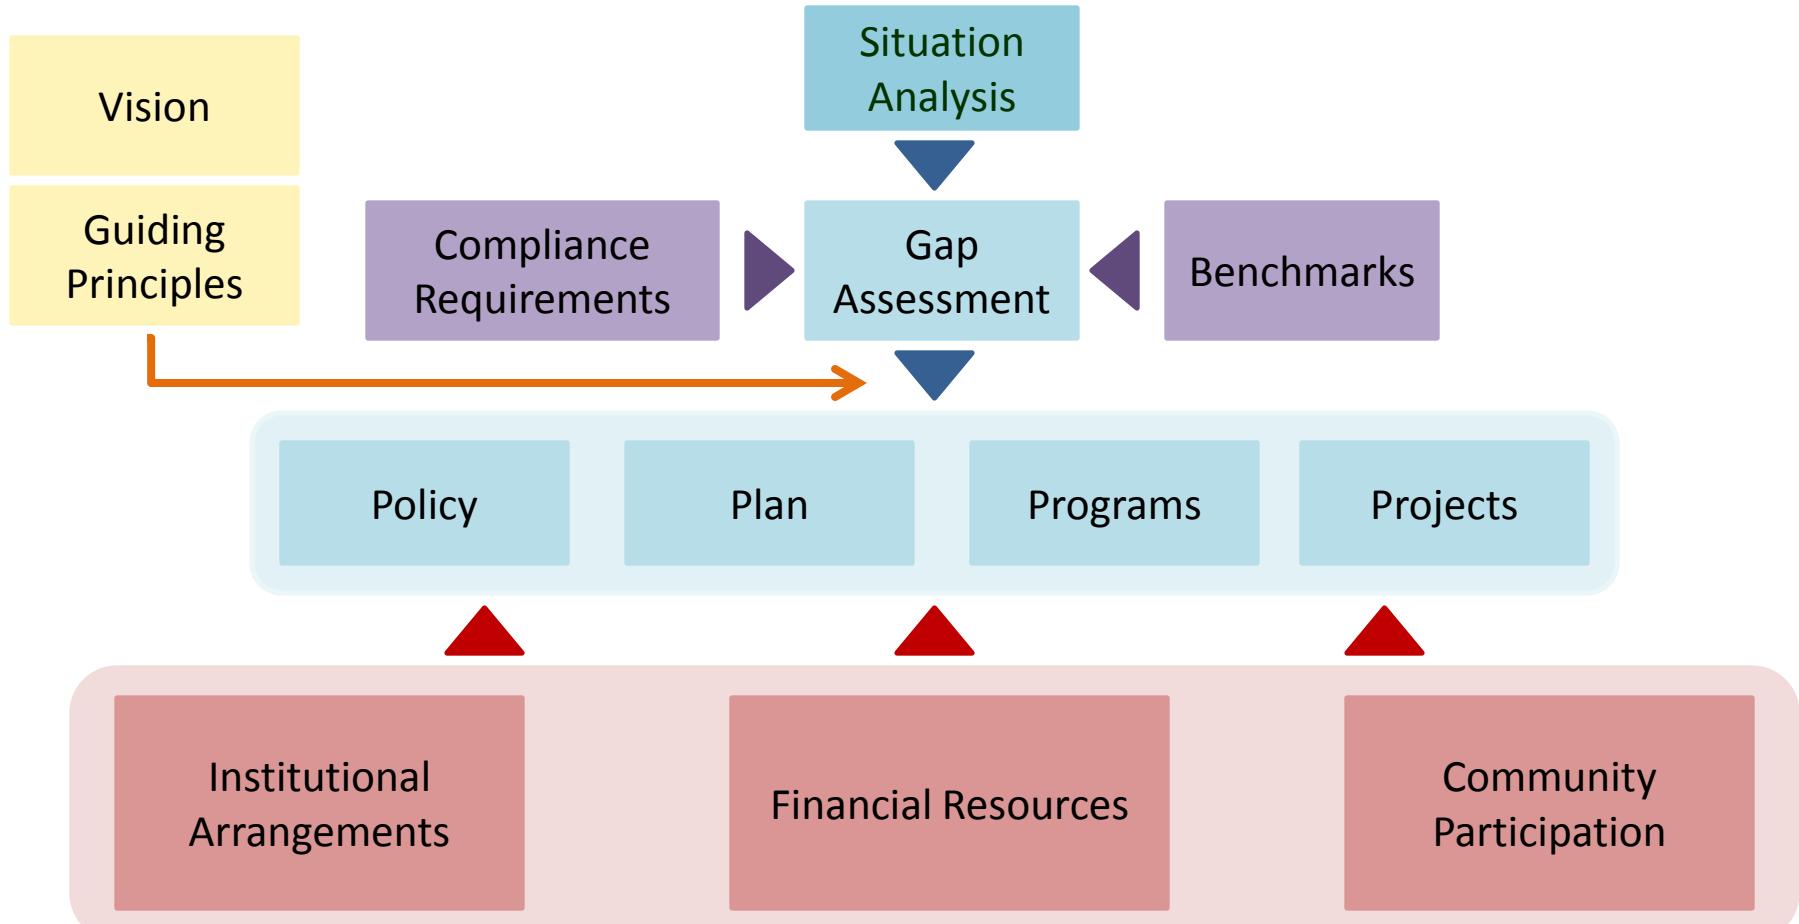

- Non-compliance on Solid Waste Management
- Poor wastewater management infrastructure
- Unsafe quality of drinking water
- No systematic efforts to conserve urban biodiversity
- Inadequate public transport
- City vulnerable to epidemic and transmissible diseases
- Citizen interest on environment not well nurtured and supported
- Low capacity of SMK-MC (from technical , institutional as well as financial perspective)

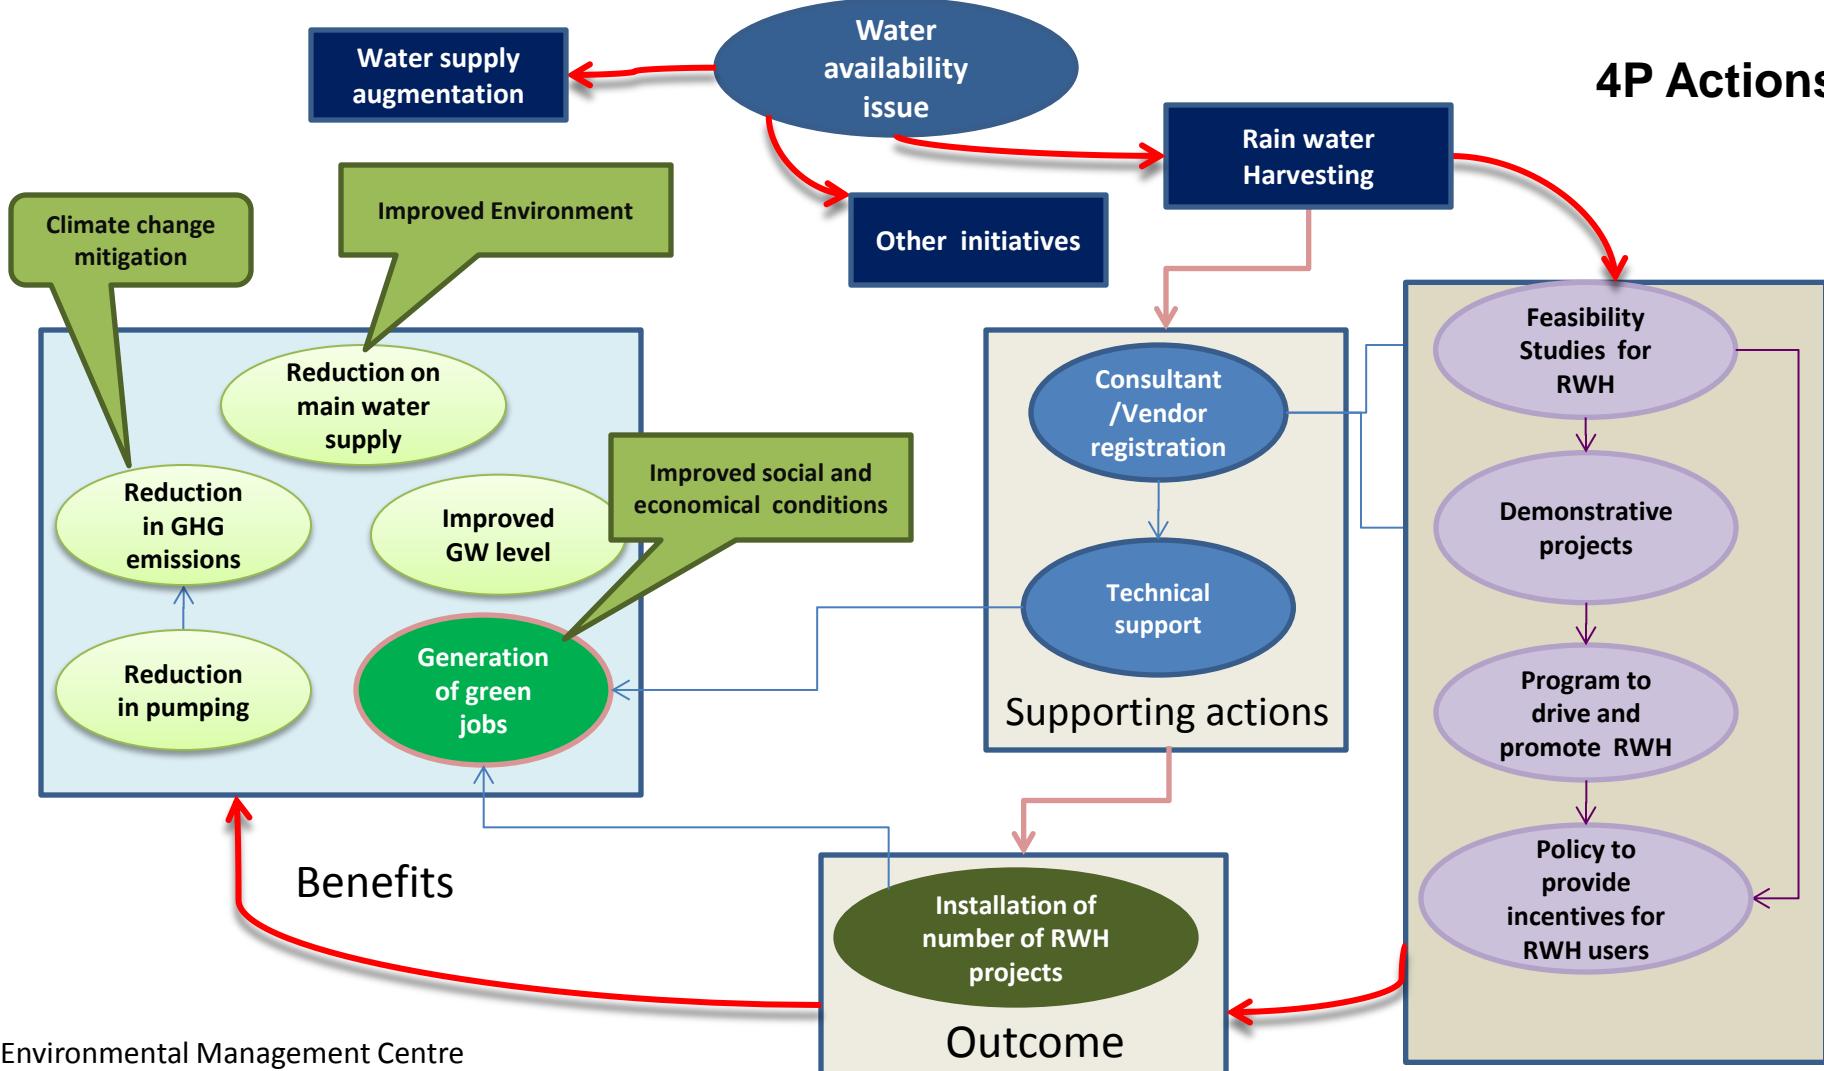

Milestone 4: identification of Issues

Milestone 5: Outlining Projects, Programs Plans and Enabling Policy Measures- The Action Plan

Logical Process for Action Plan Evolution

4P Actions

In 2004, Bangalore became the first city in the state of Karnataka, India to include Rainwater Harvesting (RWH) into its byelaws.

The law says that, every building with a plinth area of exceeding 100 sq mtrs and built on a site measuring not less than 200 sq mtrs must have one or more RWH structures

This policy was implemented Karnataka was facing a situation where more than 70% of the state was drought prone

There were problems faced when it came to retrofitting existing buildings with RWH units. Though there had been a deadline of May-2010 set for buildings to install RWH units, the deadline has been postponed by a month due to lack of pop-up filters required in RWH units.

Also, no list of recommended technical reliable contractors who can install the RWH system at residential plots at reasonable costs was provided by the government. As a result, citizens were skeptical to install units as they were afraid of being taken advantage of by local consultants due to the deadline issued for installation.

Rainwater Harvesting in Bangalore – why it did not work?

Example of Structured Actions – Theme of Water

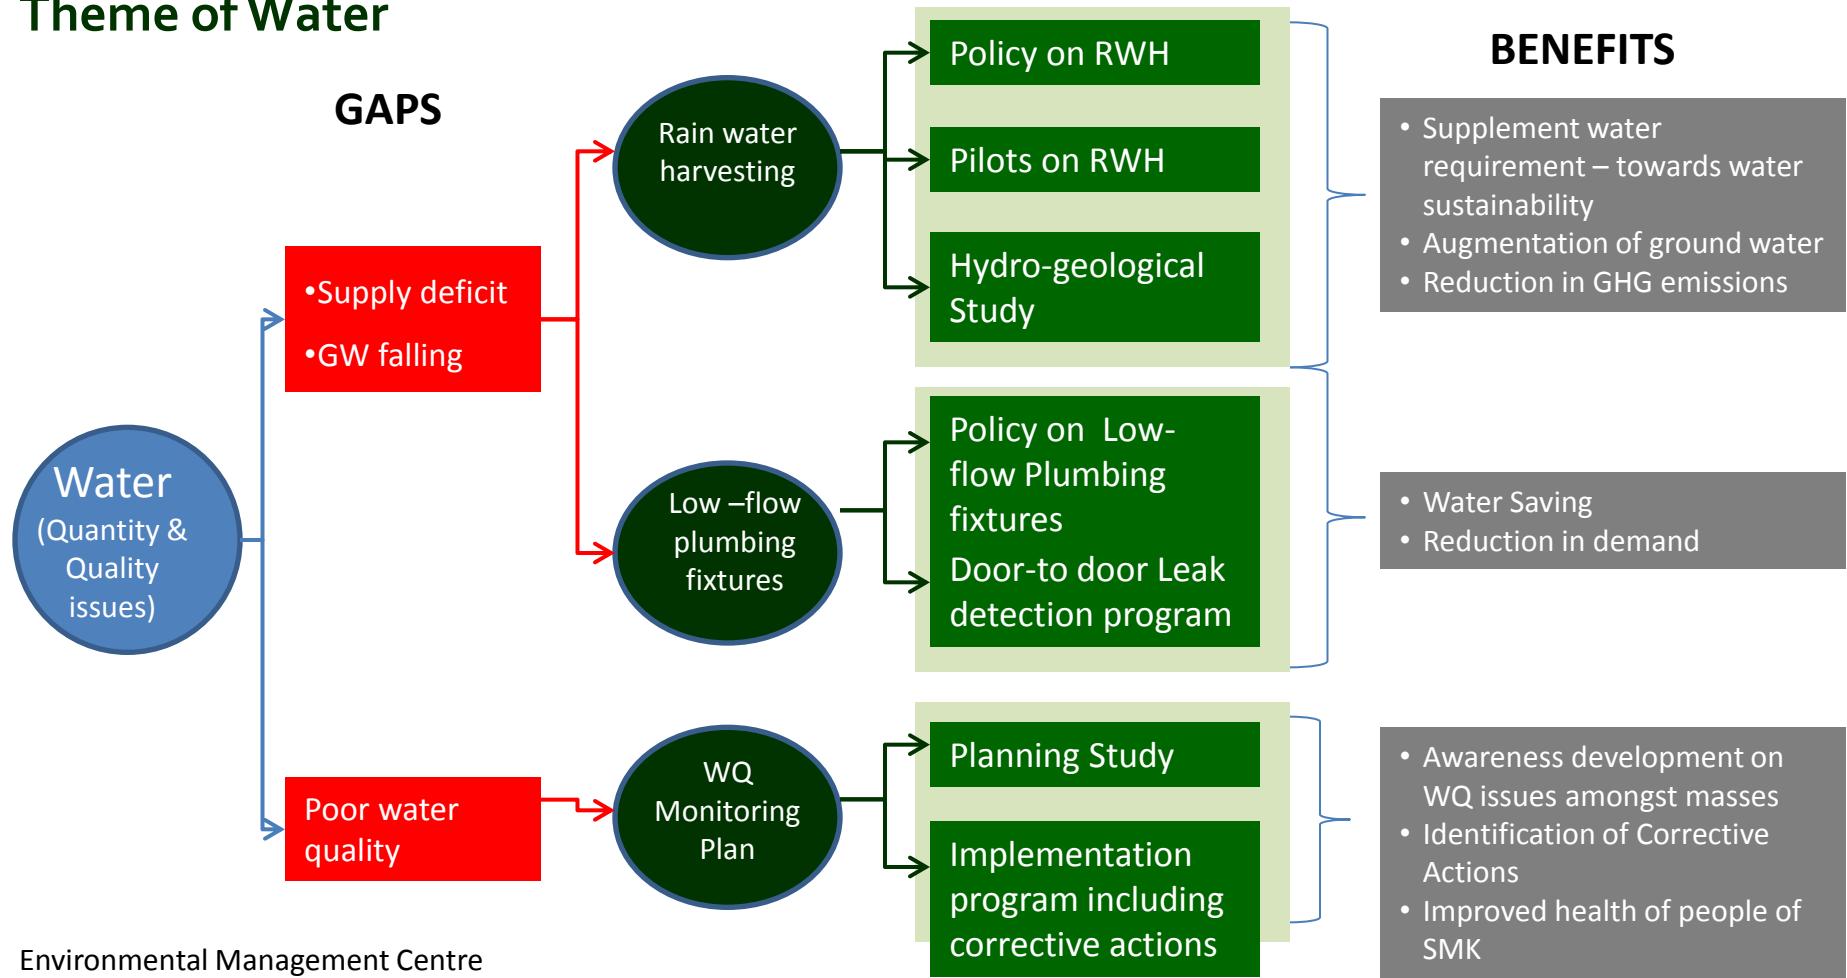

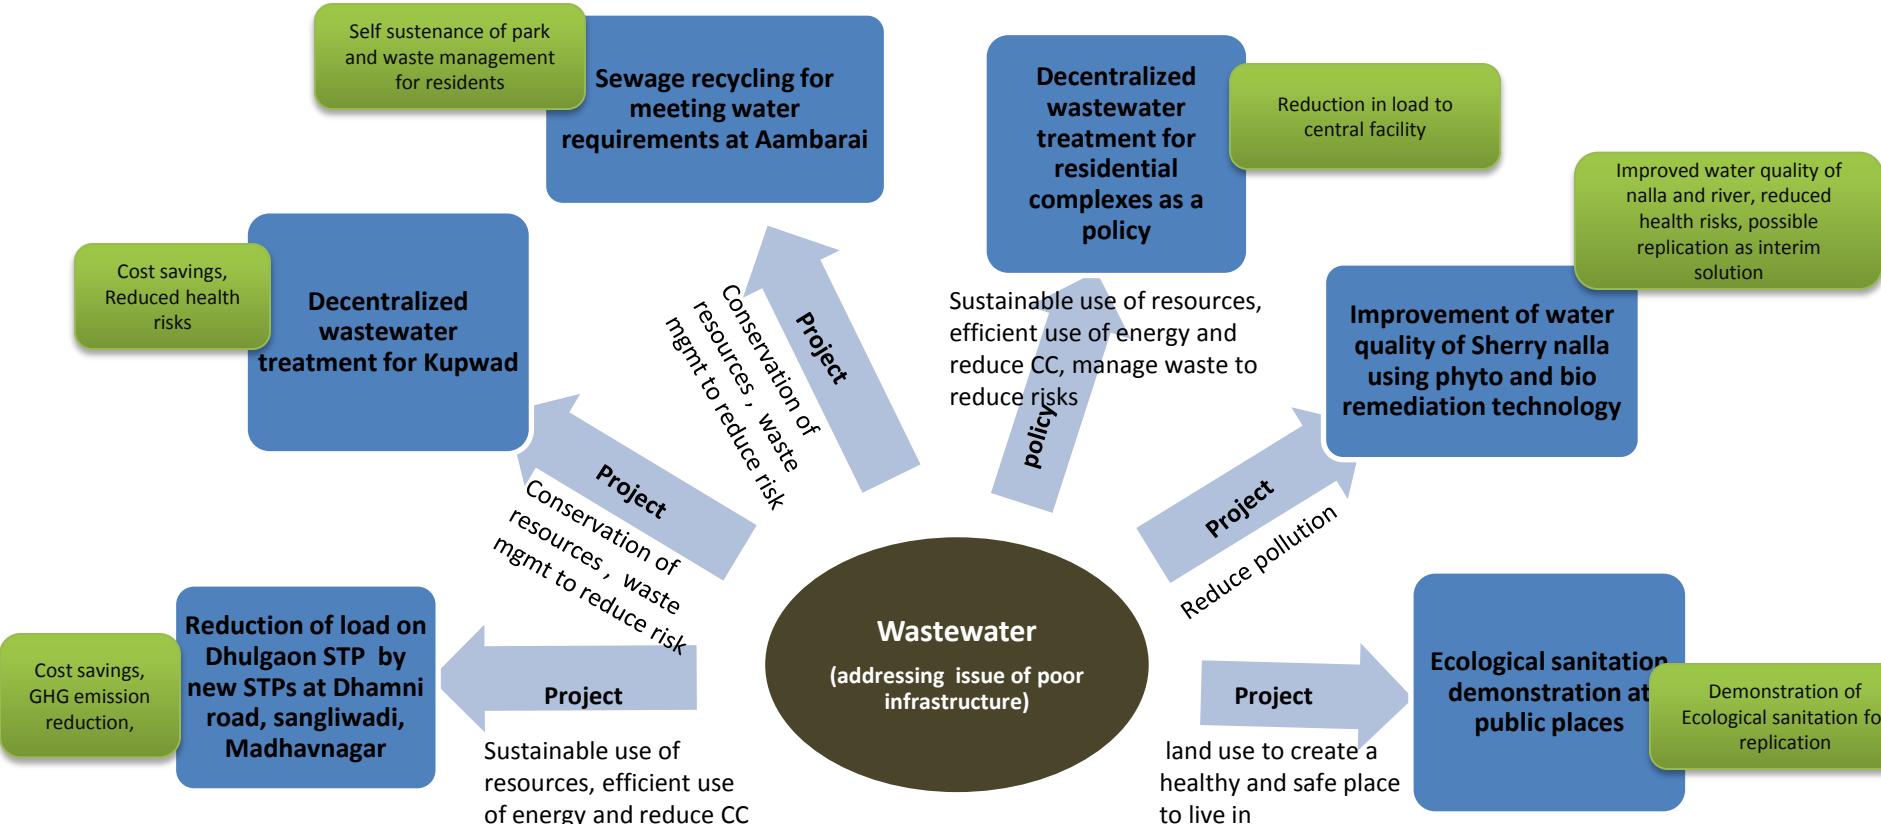

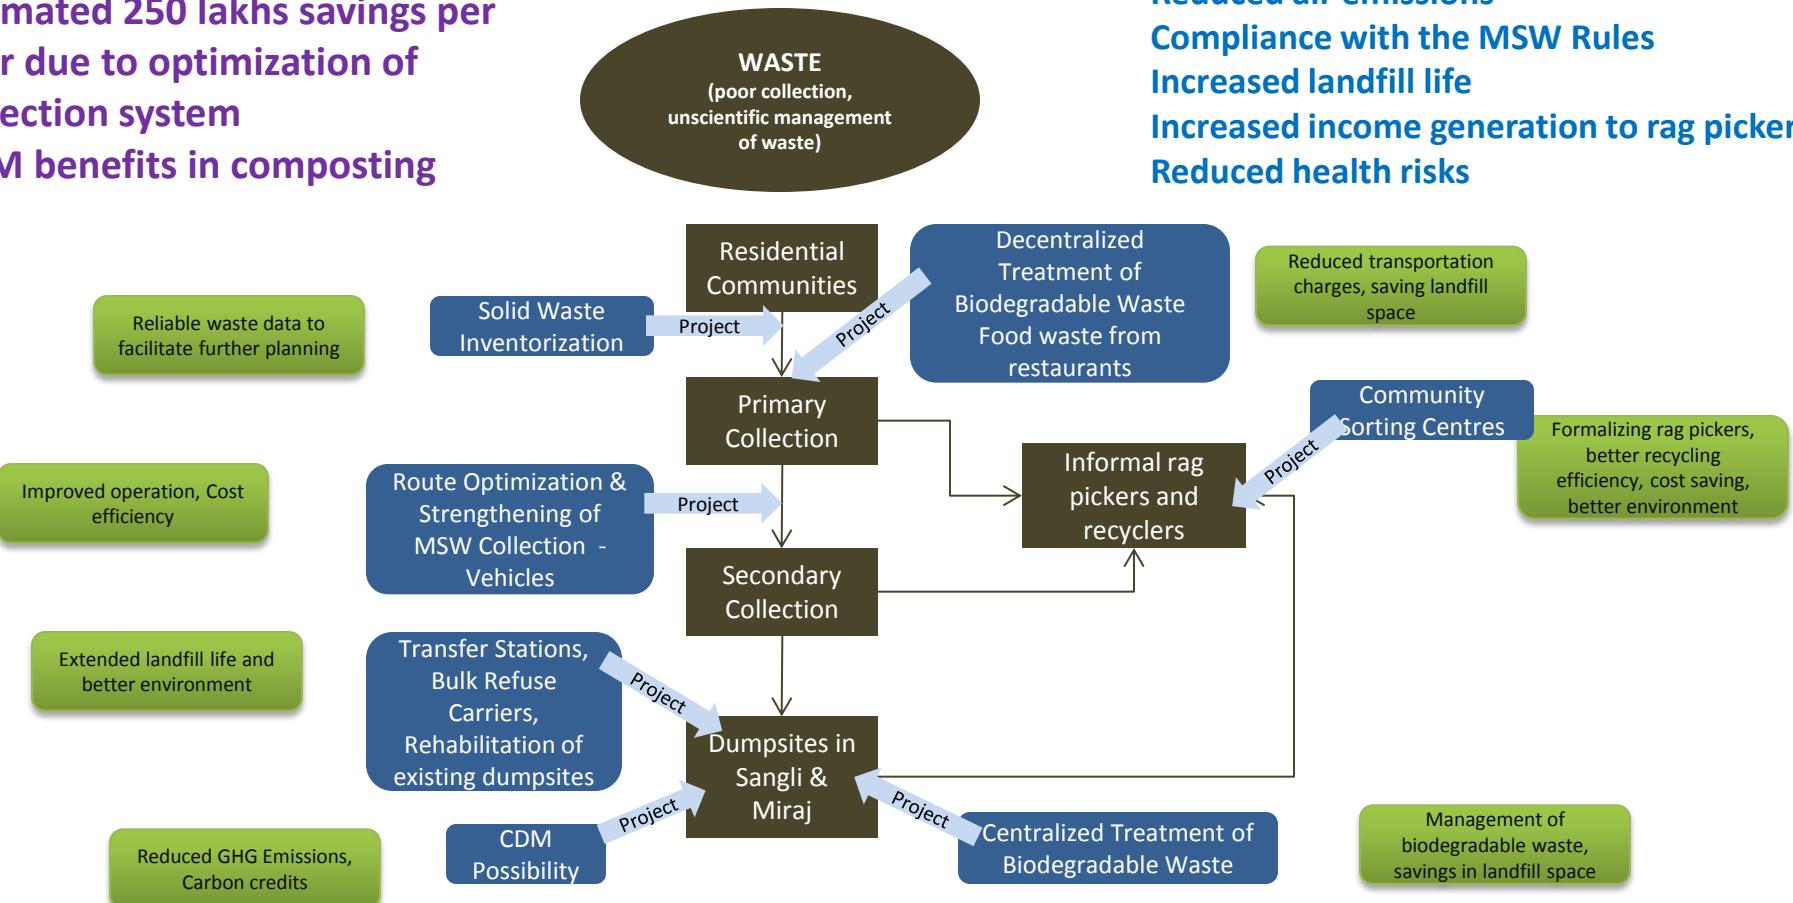

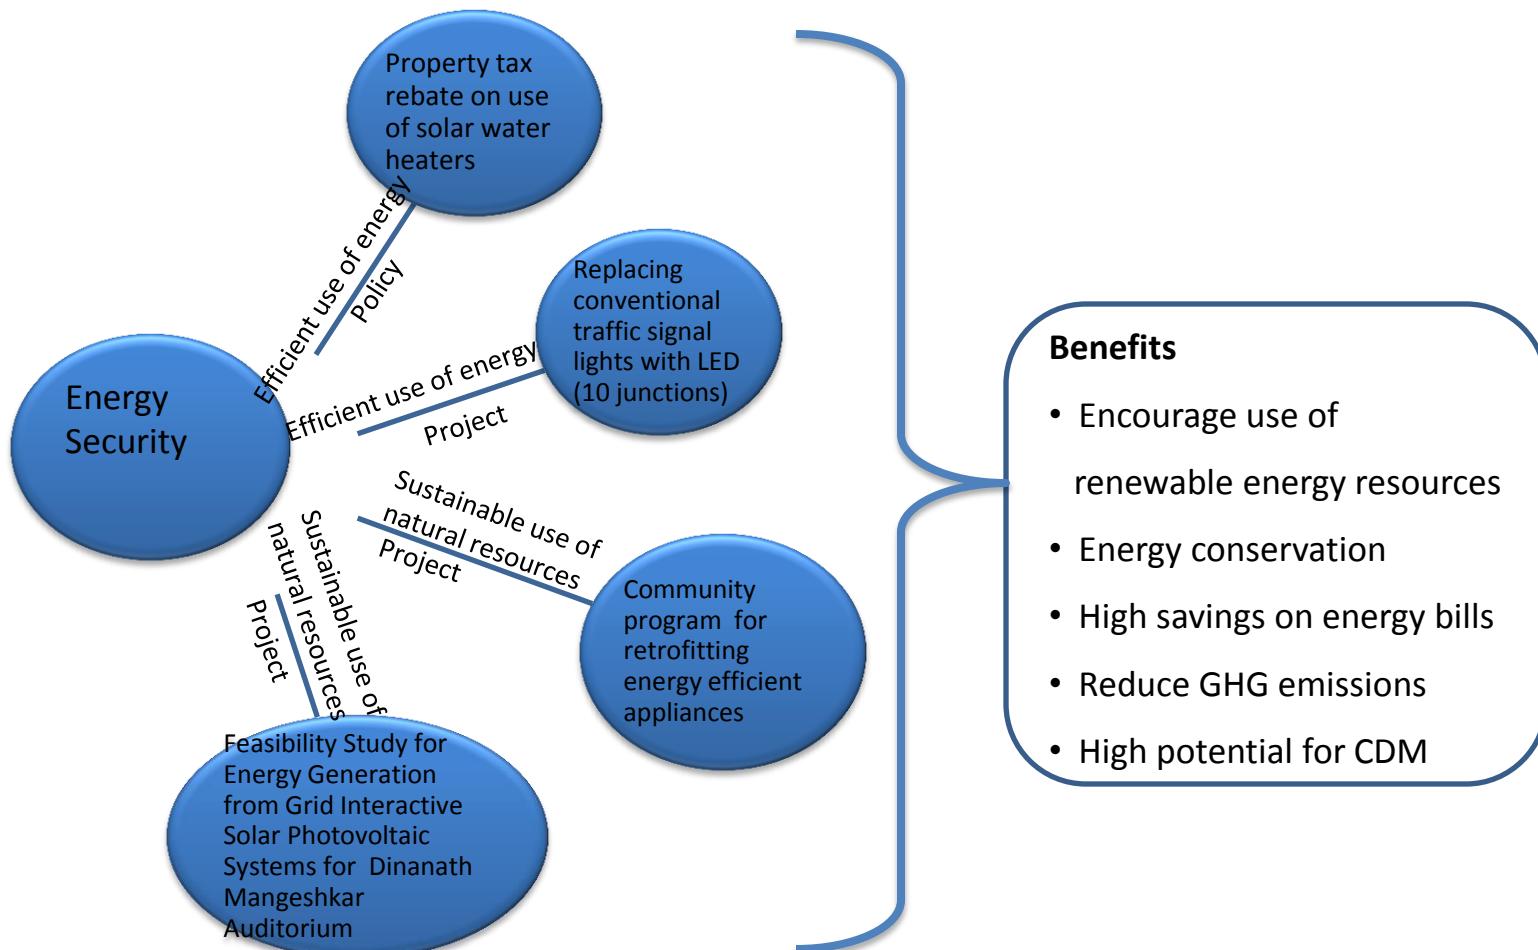

Illustration of Project costs, Linkage to Guiding Principles - Theme - Waste water

Inclusive approach for Financial Sustainability – Example of Solid Waste

Estimated 250 lakhs savings per year due to optimization of collection system
CDM benefits in composting

Solar Ordinance in Barcelona

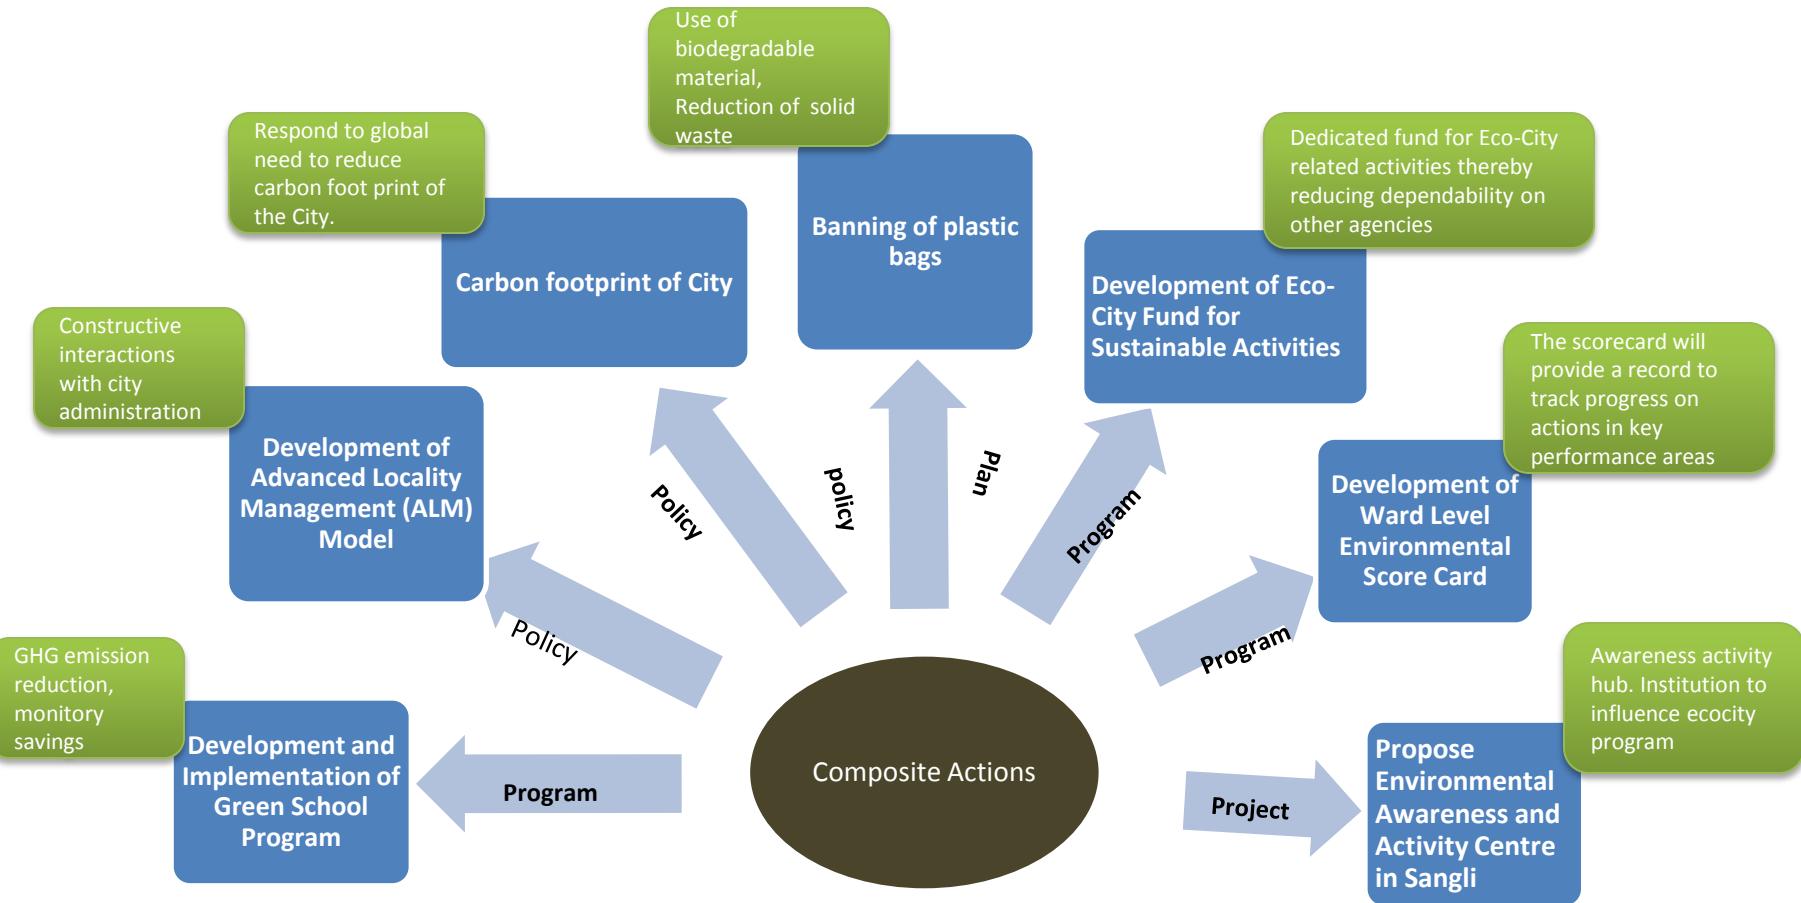

Sangli-Solar City?

Barcelona enforced the “Solar Ordinance”, a new standard in August 2000. As per this standard, buildings should use thermal solar energy for 60% of their sanitary hot water supplies. The Barcelona City Municipal authorities drafted the rules and made them mandatory. This initiative was also supported by different European Commission programmes, including the Campaign for Energy Sustainable Europe 2005-2008.

Spain was the first European country to make the implementation of solar thermal energy obligatory in new and refurbished buildings. Each building would reduce energy consumption by between 30% and 40%. Moreover, the CO₂ emissions associated with energy production and consumption would be reduced by 40% to 55%. It has also been estimated that for each household (4 people, 100 m²) one or two m² of photovoltaic panels would be needed, which would involve an additional cost of 600 to 2,000 euros (1% of the total cost of the house). This initial cost would be paid off in 5-10 years. After that period, each family would save up to 80 euros per year.

The Ministry of Housing and the professional unions of architects and engineers started to offer intensive training courses in order to prepare and educate professionals on this matter. The companies that produced and commercialized solar energy systems and equipment benefited the most as revenues multiplied and approximately 5000 jobs were generated.

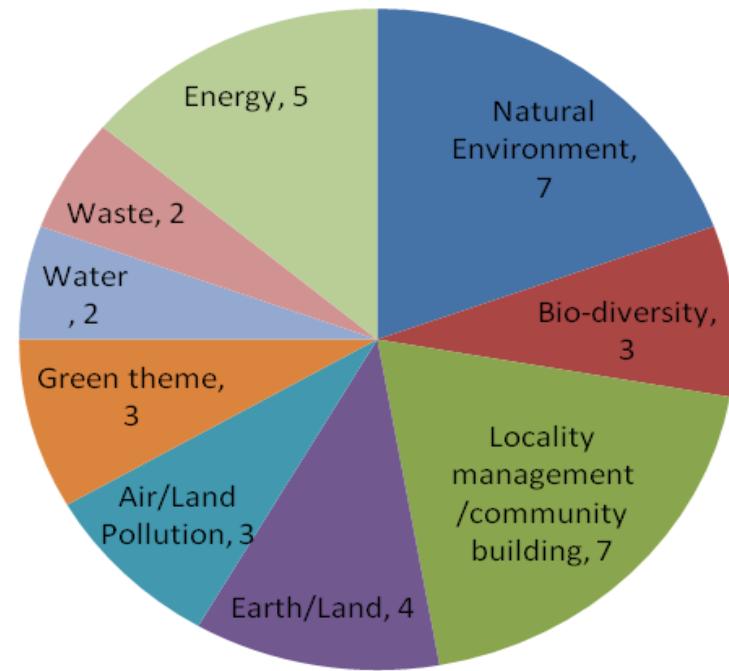

Low investment – High Impact Initiatives

Distribution of Awareness Activities across Themes

Some of the Awareness Activities :

- Paryawaran Vyakhyanmala
- Climate Change Communication Kit
- Not just walk in the park
- Maaja Shaharchya Nisarg Rang – Photo Competition
- Environmental Film Festival
- Adarsh Galli Sundar Galli

Activities presented in the form of a Calender

Number denotes number of activities for a particular theme

Example of detailing - Environment Awareness and Activity Centre

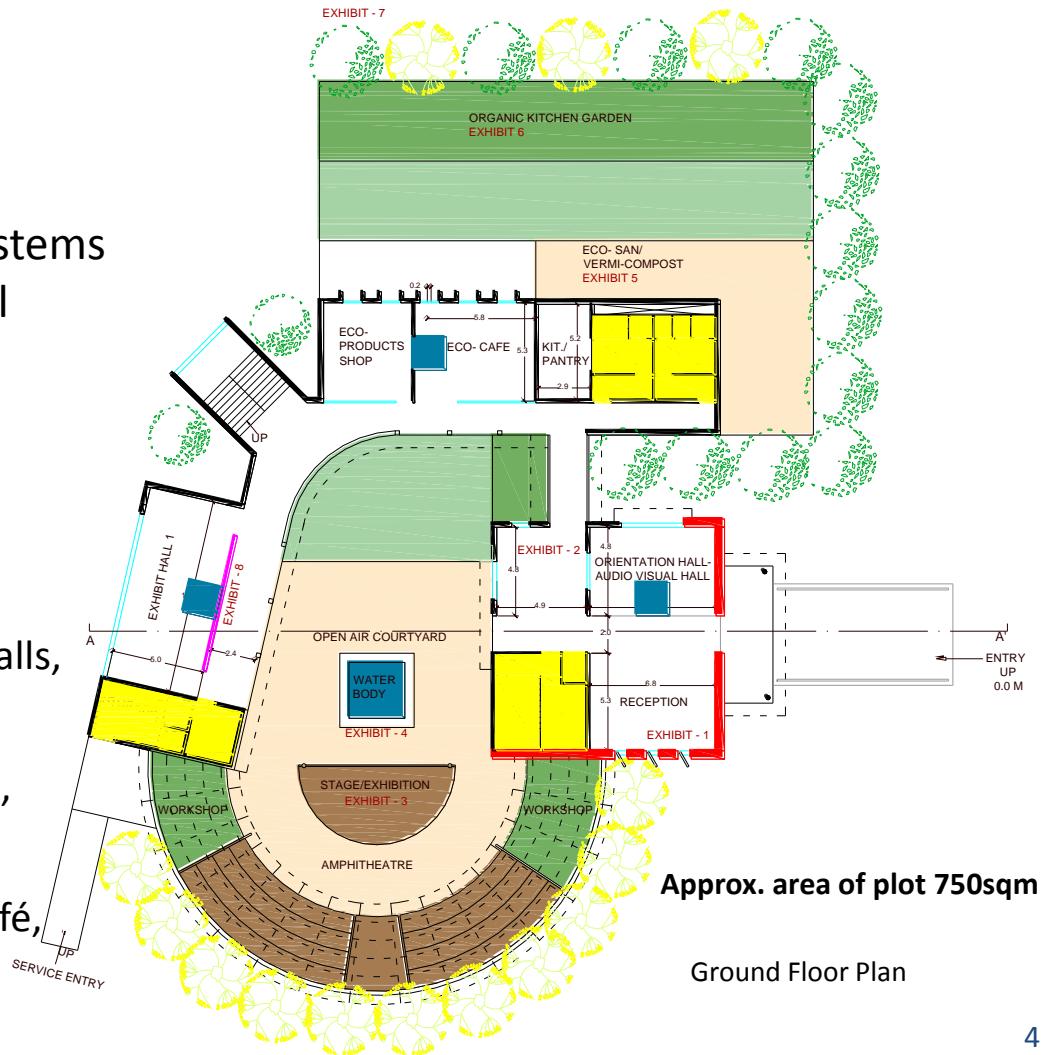

EAAC will-

- Provide **resources, awareness and expertise** on environment
- Provide a **platform for communication** between public authorities, developers, citizens, students and professionals
- Provide a **venue** for environmental awareness and outreach programs

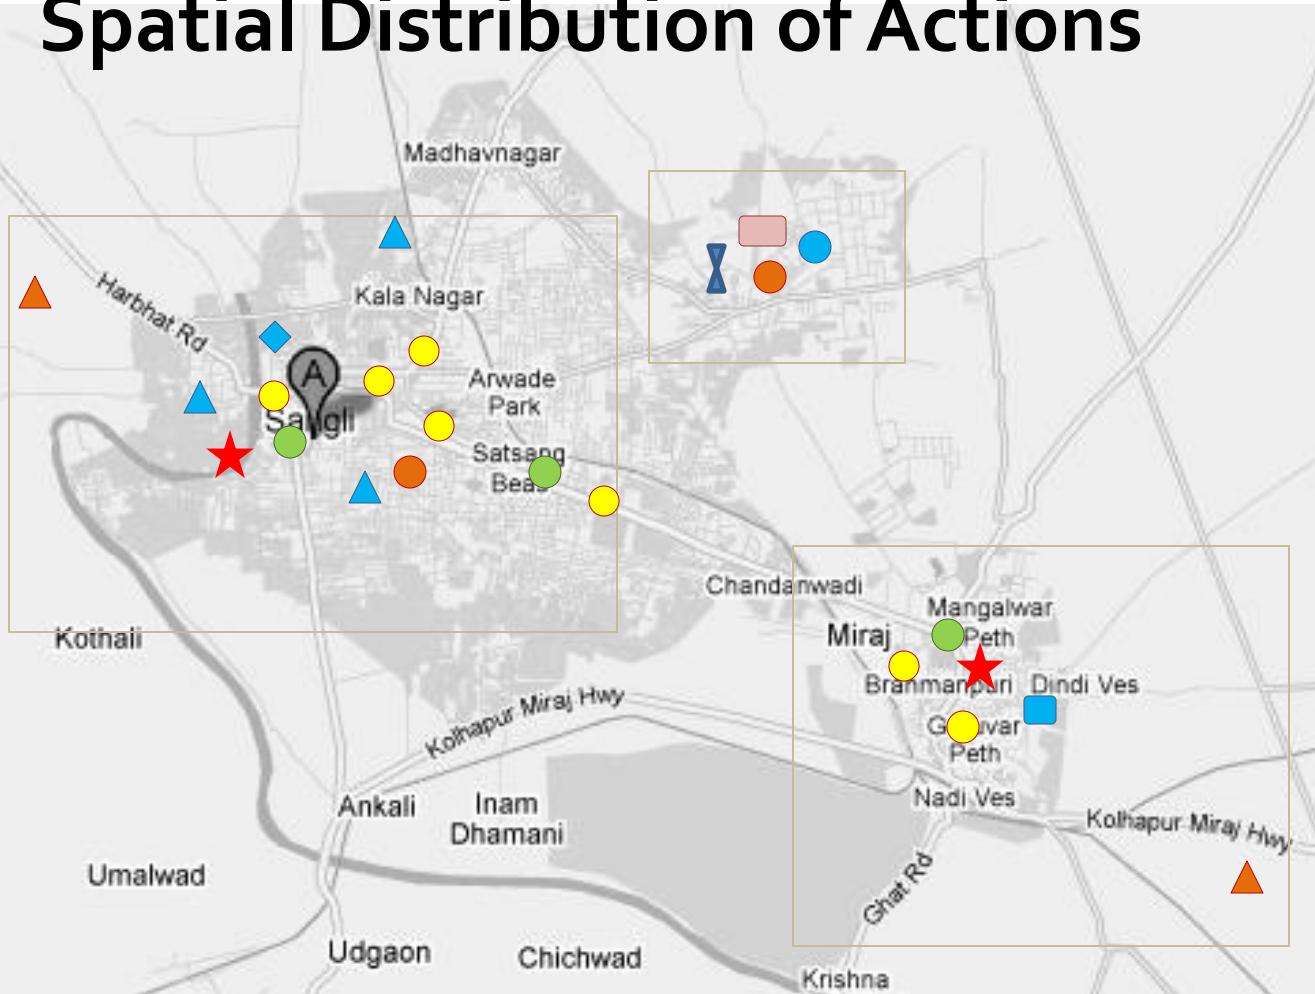

Concept

- Designed as an exhibit itself
- The EAAC is a GREEN BUILDING
- Illustrates passive architecture design systems such as green roofs, north lights, internal courtyards etc.

- EAAC comprises of
 - administration centre,
 - exhibit and resources centre (exhibit halls, library, education and entertainment cell),
 - activity and training centre (workshops, multipurpose hall) and
 - cultural and commercial centre (eco café, eco-shop, organic garden, community wall)

Spatial Distribution of Actions

WASTE - WATER	
●	Decentralized Treatment Plants
◆	Sheri nalla in-stream treatment
▲	STP for reducing load on Dhulgaon STP
■	EcoSan Pilot Project
SOLID-WASTE	
▲	Biomethanation Plants
●	Composting plants
ENERGY	
●	Energy Saving at Traffic Signals
LAND-USE	
★	Creation and Enhancement of Public Spaces
AIR, TRANSPORT	
●	Landscaping at Traffic Islands
HEALTH	
■	Organic based Mosquito Control

Structure of Action Plan Report

- Action plan report comprises of 2 Volumes
- Volume I describes entire process of Eco-City action plan preparation, situation analysis summarized actions with financial considerations
- Actions presented in the form of priority, time charts and summary of budgets
- Volume II describes each theme based action in detail with scope of work, cost, technology options, case studies, benefits, supporting actions, institutional and financial arrangements etc.

Structure of Action Plan Report

Volume I

- **Introduction**
- **Methodology**
- **Eco-City Charter**
- **Situation Analysis**
- **Strategy to Develop Action Plan**
- **Summary of Actions**
- **Financial Arrangements**

Volume II

Section I – Theme based actions

- **Water**
- **Wastewater**
- **Solid waste**
- **Energy**
- **Air**
- **Transport**
- **Land and land use**
- **Biodiversity**
- **Health**
- **Building Construction**
- **Society Involvement**

Section II -Awareness Activities

- **Calender of Activities**
- **Detailed Activities**

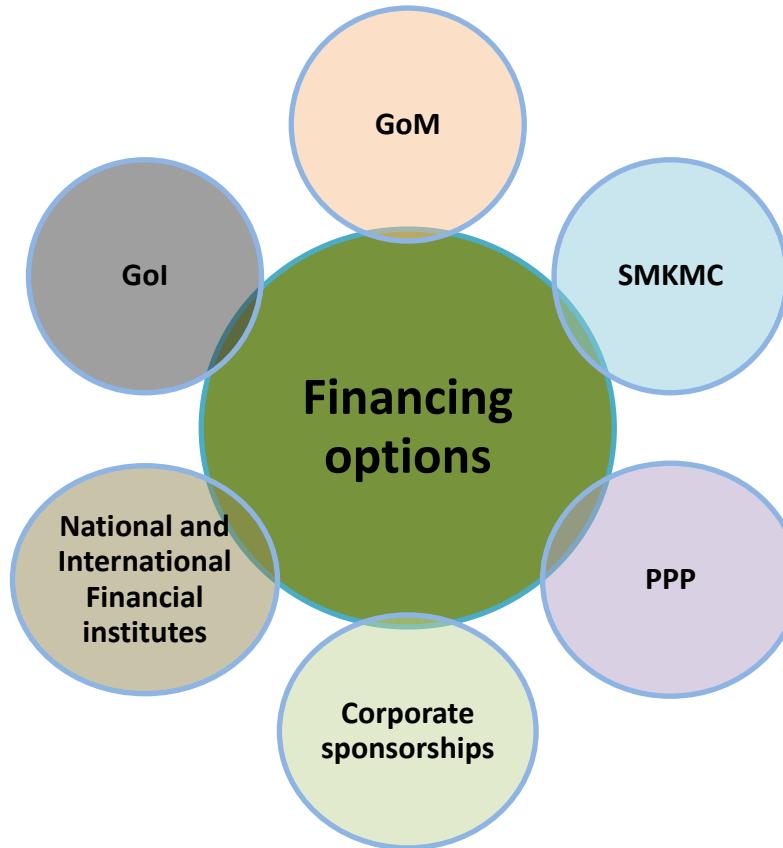

Taking Ahead Eco-City Action Plan.....

- The Action Plan will act as a guide for the Development Planning (DP) process.
- The Action Plan will provide a basic structure for arranging and implementing specific urban environmental projects and programmes.
- The Eco-City Action Plan will help SMKMC to apply for funding from national agencies, international development partners, private investors.

Taking Ahead Eco-City Action Plan.....

- The Action Plan will act as a guide for the Development Planning (DP) process.
- The Action Plan will provide a basic structure for arranging and implementing specific urban environmental projects and programmes.
- The Eco-City Action Plan will help SMKMC to apply for funding from national agencies, international development partners, private investors.

Financing Options

Potential Agencies

- GTZ-ASEM for DPRs, Institutional Support and Capacity Building
- Eco2Cities Program of the World Bank
- City Development Initiative of Asia –supported by ADB, SIDA, KfW
- ICLEI

- Solar Cities Program, MNES, GoI
- Clinton Climate Initiative

- Ecocity Program of MOEF, GoI
- Pooled Municipal Debt Fund (PMDO)

Recommendations

- Formal Adoption of Vision, Goals and Principles
- Vigorous launch/campaigning – especially on community participation and awareness related events
- Setting of the Ecocity Cell at SMK-MC with twinning arrangement with key institutions – Building understanding, interest and capacity
- Action Plan as products for submission to various agencies and for discussions
- State level and National workshops on Ecocities
- Presentation at World Ecocity Summit at Montreal, August 22-26, 2011
Mobilizing financial resources for DPRs of select projects
- Mobilizing financial resources for investments
- Updation of the Action Plan

THANK YOU....
