Preface

We are honored and humbled to serve as the editors of *Asian Americans: An Encyclopedia of Social, Cultural, Economic, and Political History*. This three-volume encyclopedia is a collaborative effort of more than two hundred scholars from various fields and disciplines. The project is committed to making research results and records about Asian Americans readily available in one reference source, where the interested reader can locate the facts, events, trends, or policies concerning Asian Americans, Asian American history, and Asian American studies. Conscious efforts were made on a number of fronts to reflect some of the important developments in Asian American studies and to cover underrepresented groups. Most of the entries build upon existing literature, whereas new research was conducted to cover understudied areas and topics. We gave special attention to issues concerning race, class, and gender relations, as well as transpacific and transnational dimensions of Asian Americans.

Given the diversity and complexity of the ethnic group and the rapid pace of growth of Asian Americans in a fast-changing world, we recognize that the completion of such an undertaking is only one step to our ever-expanding knowledge of the Asian American experience. The field of Asian American studies is relatively young. We trust this book will create a foundation for the expansion of academic inquiries. By making these records more readily accessible, we hope to reach out to a wider audience and inspire more future research.

Beginning in 2000, the U.S. Census Bureau has identified Native Hawaiians and Pacific Islanders as an independent race category separate from Asian Americans. Native Hawaiians and Pacific Islanders have unique histories and experiences of their own, and their affiliations with the United States are quite different from those of Asian Americans. To lump Native Hawaiians and Pacific Islanders together with Asian Americans is to marginalize these groups of people. Nevertheless, because they had been grouped together with Asian Americans by government agencies and academic institutions, readers are more likely to look for information about them from Asian American reference books. For this reason we have made an effort to include some entries on Native Hawaiians and Pacific Islanders in this project.

This comprehensive reference project contains approximately 600 entries. Cross-referencing is provided in some entries by the use of *see also* lines. An archive of primary sources in Volume 3 is an important addition to the project, which will enable the student to advance beyond narrative summary of historical research. A detailed chronology in Volume 1 offers a quick glance of historical facts and events. We considered several options of organizing the project but eventually settled on the A–Z

arrangement for easy look-up. In addition to the alphabetical list of entries in the front matter, the index serves as a useful tool for name/subject searching.

Transliteration of Names

The transliteration of personal names in this book is sometimes inconsistent for a number of reasons. In most Asian societies, the family name precedes an individual's given name. Asians living in the United States often invert their family and given names following American and European practice, but some have chosen not to do so. For example, Rhee is the family name of Syngman Rhee, a prominent Korean American community leader and the first president of the Republic of Korea, and Yao is the family name for Yao Ming—the former Houston Rockets NBA star from China who never inverted his family and given name. Different transliteration systems and regional dialects also prevent consistency in translation and conversion. Chinese from Taiwan or pre-1949 China transliterate names according to the Wade-Giles system, whereas those from the People's Republic of China use the pinyin transliteration system, one that has been adopted by most academic institutions and educational programs in the United States and throughout the world.

Acknowledgments

It would not be possible to consolidate such a wealth of scholarship, information, and source materials into one reference book without the contributions of over 200 scholars. To build a diverse and inclusive list of entries, we reached out to accomplished scholars and graduate students in both humanities and social sciences, and we also solicited entries from a large number of writers and independent scholars in law, journalism, political activism, and other fields. Our editorial process is one of community building, through which we enjoyed the luxury of having a productive conversation with a large community of scholars. We sincerely hope this project will help expand such a conversation among scholars and students.

We want to thank everyone who has generously shared their scholarly expertise in their entries as well as their ideas and acts of encouragement. Several colleagues and scholars deserve special acknowledgment for their concrete suggestions in the planning stage of the project, and for their efforts in helping to recruit contributors. Sucheng Chan, who insisted that encyclopedia entries should be comprehensive, definitive, and reliable, not only contributed her own original essays, but also helped secure entries from a number of prominent scholars. Suggestions from Diane Fujino, Pei-te Lien, Ruthanne Lum McCunn, and Zuoyue Wang added invaluable guidance to several subject areas. We also want to thank the University of California, Santa Barbara, and the Dean's Office of the Bellarmine College of Liberal Arts at the Loyola Marymount University for providing a welcoming environment for research and writing. Contributions from our colleagues as well as excellent administrative support from Elizabeth Faulkner, Elizabeth Guerrero, and Arlene Phillips from these two universities are very much appreciated. We also want to thank Katie Do, Fang He, Yanjun Liu, Myung Jin Lee, Andrew Turner, and Tian Wu for their assistance.

Finally, we would like to thank the editors at ABC-Clio, especially James Sherman, Kim Kennedy-White, and John Wagner. PreMediaGlobal, especially project manager Magendrarvarman Nithyanandam, provided superb service in copy-editing, typesetting, proofreading, and indexing of the book. We would also like to thank Ellen Rasmussen for photographic research.

Introduction: Asian Americans in the Twenty-First Century

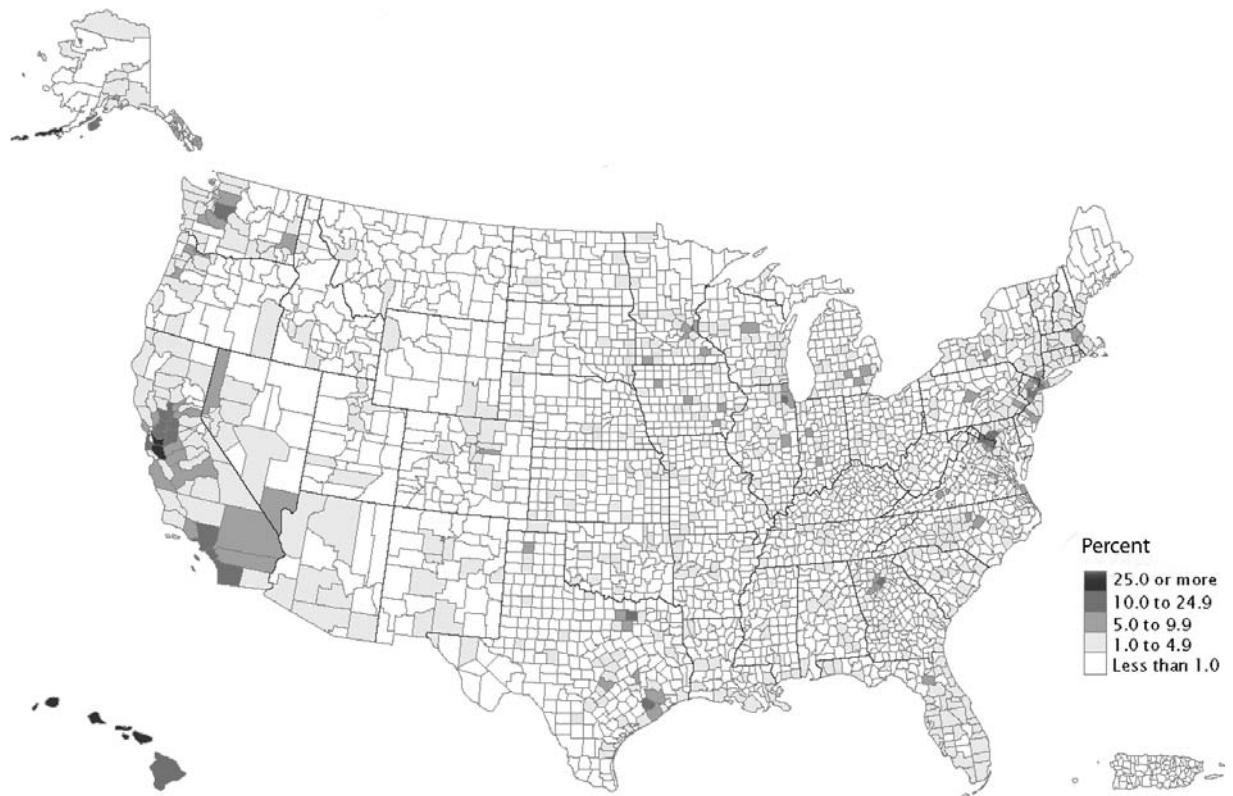

Beginning from the California Gold Rush, Asians have settled in the United States for more than 160 years. The two major groups that arrived first in the late nineteenth century originated from China and Japan. They were joined by immigrants from Korea, the Philippines, and India in the early decades of the twentieth century. Until the late 1960s, however, the Asian population in the United States was small. Between 1951 and 1960, immigrants from Asia accounted for only 6 percent of the total immigrants to the United States. The rate of Asian immigrants began to increase substantially beginning in the 1970s after the Immigration Act of 1965 ended the national origin quota system. Post-1965 Asian immigrants came in large numbers, and they came from many more Asian nations and regions. Most significant changes occurred in the late 1970s and 1980s, when large waves of Southeast Asian immigrants arrived as refugees after the Vietnam War.

Today's Asian America is built by immigrants and their descendants who originated from countries in South Asia, East Asia, and Southeast Asia. In the 1960s, a new generation of Asian Americans, inspired by the Civil Rights Movement, began to organize across ethnic lines in search of a unified front in their struggle for racial equality and social justice. Increasing visibility of Asian Americans as one of the more prominent minority groups in recent decades has had significant impact in political, economic, and social realms; it has also affected race and ethnic relations in the United States in profound and complicated ways.

Population and Distribution

Asian America has become the fastest-growing racial group in the United States, increasing from 3.8 million in 1980 to 6.9 million in 1990, to 10.2 million in 2000, and to 17.3 million in 2010 (including 2.6 million mixed-race individuals). It comprised 5.6 percent of the total U.S. population of 308.7 million. Between 2000 and 2010, the total U.S. population grew by 9.7 percent, from 281.4 million to 308.7 million, whereas the Asian American population increased more than four times faster, with a growth rate of 46 percent. It is worth noting that about 2.6 million people reported to be Asian in combination with other races, which represents 15 percent of the Asian American population. Mixed race Asian Americans is the fastest growing subgroup of the Asian American population.

A high percentage (46 percent) of the Asian American population resided in the West in 2010, constituting 11 percent of the region's total population. Meanwhile,

Asians as a percentage of county population: 2010.

22 percent of the population lived in the South (3 percent of the region's population), 20 percent in the Northeast (6 percent of the region's population), and 13 percent in the Midwest (3 percent of the region's total population). The percentage of the total Asian American population residing in the West had declined recently, however, from 49 percent to 46 percent within a decade. Meanwhile, the proportion of Asian population in the South increased from 19 percent to 22 percent.

Nearly three-fourths of the entire Asian American population resided in ten states in 2010, led by California, home to 5,556,592 Asian Americans. The other states with large populations of Asian Americans were New York, 1,579,494; Texas, 1,110,666; New Jersey, 725,356; Hawaii, 780,968; Illinois, 668,694; Washington, 604,251; Florida, 573,083; Virginia, 522,199; and Pennsylvania, 402,587. All these states have experienced substantial growth of their Asian American population in the past decade. Texas, Florida, and Virginia each enjoyed a growth rate of between 71 to 72 percent, and this pattern continues to show the increasing dispersal of Asian Americans out of their traditional population centers on the West Coast and in Hawaii. Following these states in Asian population growth are Pennsylvania (62 percent), Washington State (53 percent), and New Jersey (52 percent). In comparison, the growth rate is relatively low in Hawaii (11 percent), although the Asian population represents over 50 percent of the entire population. Asians represented 62 percent of Honolulu's population and 51 percent of the population in Kauai. In terms of actual population numbers,

California had the largest gain of Asian American population over the decade, from 4.2 million in 2000 to 5.6 million in 2010. Within California, Asian population constituted more than 25 percent of the total population in four counties, all within the San Francisco-San Jose metropolitan area. Metropolitan areas with the largest population of Asian Americans were Los Angeles (1,884,669), New York (1,878,261), San Francisco Bay Area (1,577,790), Chicago (532,801), Washington, D.C. (517,458) and Honolulu (477,503).

Chinese American, the oldest Asian ethnic group in the United States, was the largest group of Asian America in 2010 (3.8 million). The next two largest groups were Filipinos (3.4 million) and Asian Indians (3.2 million). Given the high rate of immigration in the past decade, these three groups constituted 60 percent of the entire Asian American population. At the same time, since its implementation in 1990, the Diversity Immigrant Visa Program that allows citizens of countries with low rates of immigration to secure permanent residency in the United States have added to the diversity of Asian Americans. In addition to this program, economic and political changes in Asia ranging from rapid development to civil wars have resulted in new immigrant groups from Bhutan to East Timor.

Immigrants constitute a significant majority of adult Asian Americans. According to an analysis of the 2010 census by the Pew Research Center, 59 percent of Asian Americans and 74 percent of its adult population were foreign-born, compared with 13 percent of the total U.S. population. However, there were significant demographic variations within different subgroups. For instance, 75 percent of Korean Americans were foreign born, but only 38 percent of the Japanese American population were immigrants. Among the foreign-born Asian Americans, 54 percent were women. The female-to-male ratio was greater than two-to-one among Japanese immigrants, but males outnumbered females among immigrants from India.

Chinese, next to Spanish, is the most widely spoken non-English language in the United States. In 2010, an estimated 2.8 million people aged five and older spoke Chinese at home. Other Asian languages spoken by a large number of Asian Americans at home are Tagalog, Vietnamese, and Korean. Over half of the foreign-born Asian American population (53 percent) self-reported that they could speak English well, higher than other foreign-born groups in the United States (45 percent).

Socioeconomic Status: Improvement and Gaps

Before World War II, most Asian Americans worked at unskilled and low-paying jobs, often in racially segregated ethnic communities or as migratory agriculture laborers. After World War II, especially since the Civil Rights Movement, Asian Americans have gained access to the mainstream job market; their socioeconomic status has also shown significant improvement. Such improvements have been reported in the Census in every decade since 1970, reinforcing a “model minority” image for Asian Americans.

Asian Americans, however, are not a monolithic population. In the 2010 Census, the estimated median household income for Asian Americans was \$66,286—higher than it was for the overall U.S. population (\$50,831), the non-Hispanic white population (\$56,178), the Hispanic population (\$38,818), and the black population (\$33,137). However, there were wide gaps among different Asian groups. Asian

Indians had a median household income of \$90,711, for example, but the Bangladeshi median household income was only \$48,471.¹ Median household wealth (net worth) for Asian Americans was \$83,500 in 2010, higher than the median household wealth for the overall U.S. population (\$68,529), and higher than it was for Hispanics (\$7,800) and blacks (\$5,730) by large margins. But median household wealth for Asian Americans was significantly lower than it was for non-Hispanic whites (\$112,000). These data on income and wealth should take into account the fact that higher percentages of Asian Americans are urban dwellers concentrated in California, Hawaii, and New York, regions known for their high costs of living. In addition, it is crucial to understand that immigration is a highly selective process. For instance, whereas the median household income of Asian Indians was much higher than that of Hispanics in 2010, the per capita Gross Domestic Product (GDP) of Mexico was over six times that of India (\$10,146 and \$1,514, respectively, in 2011).

Poverty and health insurance rates provide different angles to assess socioeconomic status of Asian Americans. In 2010, about 12.2 percent of Asian Americans were reported by the Census Bureau as living in poverty. In comparison, poverty rates for non-Hispanic whites, Hispanics, and blacks were 9.9 percent, 26.5 percent, and 27.4 percent, respectively. Although poverty rates for Filipino, Japanese, and Indian Americans were relatively low (6, 8, and 8 percent, respectively), 26 percent of Hmong Americans were living below the poverty line. It is worth noting that although 16.5 percent of Asian Americans did not have health insurance in 2009, that rate increased to 18.4 percent in 2010. Nearly a quarter of both Pakistani and Bangladeshi Americans (23 percent) and more than a fifth of Korean (22 percent) and Cambodian (21 percent) Americans were uninsured, whereas the percentage of people without health insurance among non-Hispanic whites, Hispanics, and blacks were 13.5 percent, 30.7 percent, and 20.8 percent, respectively.

Employment patterns for Asian Americans are also complex. Although 48 percent of Asian Americans aged 16 and older were employed in management and professional occupations in 2010, about 17 percent of them worked in service occupations, 22 percent in sales and office occupations, and 10 percent in production, transportation, and moving and shipping occupations. In comparison, only 40 percent of employed Americans held management and professional jobs. Occupational distribution among different Asian groups, however, was diverse. Although two-thirds of Asian Indians held jobs in management and professional occupations, only about a third of Vietnamese Americans did so. Hmong and Cambodian Americans were relatively underrepresented in management and professional positions (20 to 21 percent). Whether Asian Americans with comparable educational levels and professional qualifications are earning the same pay or achieving equal professional advancement opportunities remains to be a serious question. Business ownership rate among Asian Americans continued to grow. In 2007, 1.5 million businesses were owned by Asian Americans, reflecting a 40.4 percent increase from 2002. It must be noted that a large proportion was small businesses, as 44.7 Asian American-owned businesses were in repair and maintenance, personal and laundry services, professional and technical services, and retail trade.

One Asian American group that has usually been overlooked is undocumented immigrants. Undocumented Hispanic immigrants have received most public and

media attention, and they account for approximately three-quarters of the total undocumented population in the United States. The U.S. government officially estimates that about 10–11 percent of the U.S. undocumented immigrants are from Asia, constituting approximately 13–15 percent of the Asian immigrant population. Whether undocumented Asian immigrants have been undercounted remains an open question. If so, their population would have a significant impact on socioeconomic status of the overall Asian American population.

Educational Attainment: Achievement and Gaps

Recognizing both growth and diversity of Asian Americans are especially important in reading statistics of Asian Americans in education. A most remarkable characteristic of the Asian American population is its high level of educational attainment. About 49 percent of Asian Americans aged 25 and older had at least a bachelor's degree in 2010, which was much higher than that of the total U.S. population (28 percent). However, levels of educational attainment for different Asian American groups were uneven. About 70 percent Asian Indian Americans, for example, had at least a bachelor's degree, but only 14 percent of both Cambodian and Laotian Americans held a similar degree.²

The analysis by the Pew Research Center also showed high educational attainment among the new Asian immigrants: 61 percent of the immigrants between the ages of 25 and 64 have at least a bachelor's degree, almost twice as high as non-Asian immigrants. About 81 percent of new immigrants from India held a college degree, but only 17 percent of immigrants from Vietnam had attended college. Further behind immigrants from Vietnam are new immigrants from Cambodia and Laos who have much lower college education attainment.

A higher percentage of Asian Americans 25 and older had graduate or professional degrees than the total U.S. population (20 percent to 10 percent). The Pew Research Center revealed that Asian American students and students from Asia accounted for 25 percent of doctorate degrees granted at U.S. universities in 2010, with considerable numbers in engineering, science, mathematics, computer science, physical science, and life science. Asian or Asian American students also received 20 percent of PhDs granted by U.S. universities in social sciences. These high levels of educational attainment helped Asian Americans find professional jobs. U.S.-trained Asian students from China and India have also been the main beneficiaries of H-1B visa program, which revitalized in 1990, this visa program also provided temporary employment opportunities for foreign-trained Asians in “specialty occupations,” especially in engineering, sciences, and business-related professions. With employer sponsorship, a significant percentage of H-1B visa holders have successfully adjusted into immigrant status. Foreign students from India and China, as well as skilled workers, were the two top-ranked groups to benefit from the program, and they received three-fourths of all H-1B visas granted to Asia in 2011. Indians alone accounted for 56 percent of all the H-1B visas granted by the United States in 2011, whereas those from China received an additional 8 percent. Although considerable numbers of students from Korea, Philippines, Japan, and Taiwan also benefited from this temporary visa program, very few students from other Asian nations were able to do so.

Conclusion

Improved socioeconomic status and increased visibilities of Asian Americans in U.S. politics, educational institutions, and other areas of American life have impacted the development of American society in significant ways. In many parts of the United States, Asian Americans have changed the social landscape of cities and neighborhoods, integrating their customs, values, languages, foods, and institutions. The increasing presence of Asian Americans has enriched the American society, but it has also challenged and strained the nation. Unfortunately, accompanying the drastic demographic changes were also incidents of racial conflict and hate crime, as well as a resurfacing anti-immigrant sentiment. Increasing political participation of Asian Americans has shown impressive results, as more and more of their representatives have been either elected or appointed to political, government, and judiciary posts at local, state, and national levels. In turn, Asian Americans have been able to more effectively pursue political and policy issues that concern them the most: social justice, immigration, health care, public support for education, U.S. foreign relations, and international trade. Their devotion to education and their high enrollment in colleges and universities have had a great impact in educational reform, and many colleges and universities across the United States have established and expanded course offerings in Asian American studies, in Asian history, culture, and languages, and developed educational exchange programs with more and more Asian nations.

At the beginning of the twenty-first century, the Census Bureau projected that the Asian American population will grow to 37.6 million by the year 2050, comprising 9.3 of the total U.S. population. The rapid growth of Asian American population of the late twentieth century was the result of large waves of new immigrants from Asia, which became possible after the Immigration Act of 1965 and a host of legislations that addressed the immigration and refugee issues. There is no doubt that new immigrants will continue to come from Asia in significant numbers in the next few decades. In addition to immigration policies of the United States and changing U.S. diplomatic relations with Asian nations, globalization and the development of global economy will play an increasingly important role in determining sources of Asian immigration and directions of Asian migration. Scholars have already noticed that economic development and high living standard in Japan have made emigration less attractive in the past few decades. Korean immigration peaked in the 1970s and 1980s, but it declined in the late 1990s. Although the number of Chinese immigrants continued to grow, the rate of growth has slowed in the past decade. Developments in other parts of the world may also affect Asian migration, as more and more individuals are also paying attention to different opportunities in Europe, Australia, South and Central Americas, Africa, as well as in their neighboring Asian countries. From an Asian diaspora perspective, it would not be difficult to find that Asian emigration has become increasingly multidirectional, in which the United States is one destination (the most attractive one) among many others. Moreover, an increasingly large number of Asian Americans have resettled to Japan, Korea, China, and other Asian nations and many more are moving between Asia and the United States. All these developments will play important roles in shaping Asian immigration and the contours of twenty-first-century Asian America.

Xiaojian Zhao and Edward J. W. Park

Notes

1. Comparison between median household income of Asian Americans is based on tables released by Census Bureau in September 2010, see United States Census Bureau Newsroom, “Income, Poverty, and Health Insurance Coverage in the United States: 2011” (September 12, 2012); comparison between median household income between Asian Indian Americans and Bangladeshi Americans is based on a report from an earlier release from the Bureau, see United States Census Bureau News Release, “2010 Census Shows Asians are Fastest-Growing Race Group” (March 21, 2012).

2. The Pew Research Center’s analysis of Asian Americans, based on the 2010 U.S. Census, selects only six Asian American groups. Many smaller and less well-to-do groups are left out. See, Pew Research Center, *The Rise of Asian Americans*, July 12, 2012.

Chronology

- 13,000 B.C. to 10,000 B.C.** The first human groups arrive in North America from Asia via Beringia, a large landmass that connects Asia to Alaska.
- 300–750 A.D.** Seafaring Polynesians, probably from Southeast Asia, settle the South Pacific Islands, including the remote northern Hawaii Islands. Taro, coconuts, and bananas are introduced to the islands by the migrants.
- 618–907** Tang dynasty begins in China. Canton centers China’s maritime commerce, where thousands of foreign merchants congregate.
- 900–1000** Filipinos extend trade from Malaysia to China.
- 1127** Southern Song dynasty (1127–1279) begins in China. Chinese shipowners and merchants in the lower Yangzi Delta and along the southern coast become active in international trade. Quanzhou in Fujian province emerges as the center for foreign commerce.
- 1400** Malacca is founded by Parameswara and will soon emerge as a major regional commercial center where Chinese, Arab, Malay, and Indian merchants congregate.
- 1492** Christopher Columbus lands in the New World when looking for a passage to India, bringing European attention to the Americas.
- 1511** A Portuguese fleet conquers Malacca in Malaysia, signifying the beginning of European expansion in Southeast Asia.
- 1521** Ferdinand Magellan arrives in the Philippine Islands, drawing European attention to the islands.
- 1526–1707** The Mughal Empire is founded in India, dominating nearly the entire India subcontinent at its height and controlling a population of nearly 150 million.
- 1543** Japanese encounter Europeans for the first time when some Portuguese land on a small island off the southern tip of Kyushu Island in southwestern Japan.
- 1549** Jesuit Francis Xavier starts Christian proselytizing in Japan. The Catholic missionaries will convert about 300,000 Japanese by the end of the sixteenth century.

- 1560** Oda Nobunaga (1534–1582) begins the unification drive of Japan, ending Ahikaga rule in 1573.
- 1565–1815** Some Filipinos and Chinese sailors and stewards are hired by Spaniards for the Manila Galleon Trade. Chinese luxury goods are shipped to Spain via Manila in the Philippines and Acapulco, Mexico, by galleons, which are large Spanish cargo ships.
- 1565–1898** The Philippine Islands are occupied by Spain, interrupted by a brief occupation by Great Britain from 1762 to 1764.
- 1587** The Spanish galleon *Nuestra Señora de Esperanza* (*Our Lady of Hope*) lands in present-day California on October 18, with a few Filipino crew members on board.
- 1592–1598** Japan invades Korea with the ultimate goal of conquering China. This military aggression ends with the death of the powerful warrior Toyotomi Hideyoshi, leaving Korea in ruins.
- 1598** United East India Company is founded by Dutch merchants in India.
- 1600** The Portuguese establish a colony in Macao.
- 1600–1602** The British East India Company is established. Along with the Dutch United East India Company, this company will emerge as a major player in the early global trade.
- 1603** Tokugawa Ieyasu emerges as the leader of a unified Japan, signifying the beginning of the Tokugawa Shogunate controlled by *Shogun*—military rulers.
- 1606** Anti-Christian decrees are first issued in Japan.
- 1636** The Manchu army invades Korea.
- 1638** Japan begins a period of seclusion, triggered by a rebellion involving about 20,000 Japanese Christians in 1637 and 1638.
- 1640** Japan closes its doors to most Westerners.
- 1664** The Qing Dynasty (1644–1911) succeeds the Ming dynasty (1366–1644) in China. Thousands of Ming loyalists flee abroad after the Manchu conquest. The Qing government forbids individuals to leave the country.
- 1729** The British East India Company ships 200 chests of opium to China, and Chinese emperor Yung Ching issues the first anti-opium edict, providing severe punishment on the sale of opium and the opening of opium-smoking divans.
- 1760** Canton regains dominance in foreign commerce. Western merchants are permitted to trade with government-licensed Chinese merchants through the *cohong* system.

- 1762–1764** Great Britain occupies some parts of the Philippines, but its influence is limited compared to that of Spain. The latter remains the dominant influence on the islands. British influence is limited compared to that of Spain.
- 1763** Some Filipinos working for the Spaniards in the Manila Galleon Trade between the Philippines and Mexico jump ship and settle in present-day Louisiana. They build small communities along the Mississippi River Delta.
- 1776–1783** The American Revolution takes place in British North America in 1776. The original 13 colonies gain independence from Britain in 1783.
- 1778** Captain James Cook (1728–1779), a British explorer and navy commander, arrives in the Hawaii Islands in an attempt to discover the northwest passage between Alaska and Asia. On the islands Cook finds that the indigenous people have built a unique culture of their own, including a highly sophisticated agriculture with irrigation systems. *Kalo* (taro) is the main staple food cultivated by the locals. Farmers and fishermen are ruled by *mo'i* (kings) of various regions on the islands.
- 1784** At Canton harbor, *Empress of China*, a commercial vessel outfitted by New York and Philadelphia merchants, opens trade between the newly established United States and China. The voyage is immensely successful.
- 1785** The presence of Chinese individuals is recorded in Baltimore, Maryland and Pennsylvania.
- 1787** The Constitution of the United States is signed at the Pennsylvania State house in Philadelphia on September 17. The new government will become effective in March 1789, after the Constitution is ratified by each of the 13 colonies.
- 1789** Small groups of Chinese land on Hawaii. Most of those who migrated to Hawaii in the early years are from two Chinese southern provinces of Guangdong and Fujian. Some Chinese migrants have sugarcane cultivation experience and sugar-making skills.
- 1790** The first U.S. Naturalization Act is enacted, stipulating that only “free white persons” can gain American citizenship.
- 1791** The Bill of Rights, consisting of 10 constitutional amendments, becomes part of the U.S. Constitution. These amendments provide civil rights to individuals, including freedom of religion, freedom of speech, freedom of assembly, freedom to bear arms, and freedom from unreasonable searches. The right to a fair trial by an impartial jury is also provided.

- 1802** A Chinese “sugar master” arrives in Hawaii, bringing with him simple sugar-making equipment, including boiling pans.
- 1806** Eight Japanese sailors boarding an American ship arrive in Hawaii. They are the first recorded Japanese who land on the Hawaii Islands.
- 1810** A *mo‘i* (king) of the island of Hawaii, Kamehameha, unifies the Hawaii Islands with the assistance of Western weapons and military advisers, ending wars among different regions and islands.
- 1814–1816** Nepal loses a war against the British.
- 1815** Filipino settlers in Louisiana join French pirate Jean Laffitte in the Battle of New Orleans against the British. This battle will lead to the American acquisition of Louisiana as a state.
- 1819** Sir Thomas Stamford Raffles arrives in Singapore as an agent of the British East India Company, making the island known to Westerners.
- 1820** Protestant missionaries from New England arrive in Hawaii.
Whaling ships begin to arrive in Hawaii’s harbors, accelerating the process of commercialization in the islands in place of a rural, largely subsistence lifestyle and communalism.
- 1824** Singapore is purchased by Great Britain. Within a year the city of Singapore becomes a major commercial port, with trade exceeding that of Malaya’s Malacca and Penang combined.
Through the Anglo-Dutch Treaty, Britain gains possession of Malacca, a major regional commercial center in Malaysia, in exchange for territory on the island of Sumatra in what is today Indonesia.
The British invade Burma (Myanmar) and gain their first foothold. Two more wars of conquest will follow in the next few decades until Burma is completely taken over by the British and annexed into India in 1885.
- 1826** Great Britain forms the Colony of the Straits Settlements based on its strongholds in Singapore as well as Malaya’s Malacca and Penang. In 1867, the Straits Settlements are made a British Crown Colony, which will last until 1946.
Siam (Thailand) enters the Treaty of Amity and Commerce with Great Britain.
- 1830** Three Chinese are recorded in the U.S. Census. This is the first time Asians appear in official government documents.
- 1830–1840** Chinese sugar-making mills are established on the islands of Maui and Hawaii in the 1830s. Within a decade at least half a dozen such mills will be in operation.

- 1831** The first group of Hawaiian students starts their classes at Lāhaināluna, a mission school established to train native teachers. Some of the native students are in their 30s when they enter the institution to learn to read and write.
- 1833** The United States begins diplomatic exchange with Siam (Thailand).
- A small number of Filipinos settle in St. Malo at the mouth of the Mississippi River and establish a fishing village. This village will be destroyed by a hurricane 60 years later.
- 1839** The first Opium War (1839–1842) between China and Britain begins. To crack down on the opium traffic, Chinese imperial commissioner Lin Zexu (Lin Tse-hsu) confiscated and destroyed thousands of chests of opium stored in the English merchants' store-ships in Canton, triggering the war. Britain wins the war and forces China to enter the Treaty of Nanjing in 1842.
- A constitutional monarchy is created by Kamehameha III in Hawaii. It will create its first written constitution a year later and establish a legislature and court system.
- The Chiefs' Children's School, also known as the Royal School, is established in Hawaii.
- 1840** A significant change takes place in the land tenure system in Hawaii, transferring communal land to private hands. Westerners gradually gain access to land for sugarcane cultivation.
- The Kingdom of Hawaii produces its first constitution, providing a basis for representational government.
- Eight Chinese are recorded in the Census.
- 1842** The United States recognizes the Kingdom of Hawaii and sends G. P. Judd (a missionary to Hawaii) as its prime minister to the islands. The growth of the sugar industry in Hawaii will attract great interest from American businessmen.
- The Treaty of Nanjing (Nanking), signed on August 29, concludes the first Opium War between Great Britain and China. China is forced to open five ports for trade, cede Hong Kong to Britain, and grant British subjects extraterritoriality.
- 1843** Manjiro Nakahama, known later as John Mung, is rescued at sea by an American vessel. He is the first Japanese to arrive in the United States.
- 1844** The Treaty of Wang Hiya (Wangxia) between the United States and China is signed on July 3. Americans gain many concessions from China similar to those provided in the Treaty of Nanjing.

- 1845–1847** Organic Acts are enacted in Hawaii, setting terms for the government.
- 1848** Gold is discovered on the American River in north central California. Miners begin to flood in from different parts of the world.
- The Great Mahele—land redistribution—takes place in Hawaii. Privatization of the lands allows the development of sugar plantations on the islands.
- The Treaty of Guadalupe Hidalgo is signed between the United States on May 20, transferring almost half of Mexico to the United States, including parts of California, Colorado, Nevada, and Utah as well as Arizona, New Mexico, and Texas to the United States.
- 1849** Chinese begin to arrive in California during the Gold Rush. Most of the early arrivals are men from Guangdong province.
- 1850** The Taiping Rebellion (1850–1864), one of the largest peasant uprisings in Chinese history, begins.
- The indigenous population declines rapidly after Hawaii’s contact with Westerners. Legislative measures are taken to prevent its people from leaving the islands. The Royal Hawaiian Agricultural Society is established to increase the labor supply in Hawaii, and it will take major steps to recruit workers from other countries. This government agency will be replaced by the Planters’ Society and a bureau of immigration in 1864.
- Japanese Hikoza Hamada, also known as Joseph Heco, is rescued at sea by an American sailing ship.
- The Foreign Miners Tax law is enacted in California to make the state “for Americans.”
- Groups of Chinese are invited to participate in President Zachary Taylor’s “grand funeral pageant” in New York.
- The Census records 758 Chinese living in the United States.
- 1851** The first two Chinese district associations are formed in San Francisco by immigrants.
- 1852** More than 20,000 Chinese flock to San Francisco en route to the gold fields of the Sierra Nevada Mountains. Few of these male immigrants bring their wives with them; groups of Chinese women are trafficked to the United States to work as prostitutes against their will.
- Foreign Miners’ Tax law is reenacted, aimed mainly at Chinese.
- 1853** American commodore Matthew Perry sails into Edo (Tokyo) Bay, forcing Japan to enter the treaty of Kanagawa and ending 200 years

of Japanese isolation. Americans gain privileges similar to those they have in China.

- 1854** Chinese in Hawaii organize a funeral society, the first Asian immigrant association.
- 1855** The Married Women Law, the first legislation regarding women's citizenship status, grants an alien woman American citizenship upon her marriage to an American citizen but does not specify whether a female citizen can keep her legal status upon marriage to a foreigner.
- In *People v. Hall*, the California Supreme Court reverses the conviction of George Hall for the murder of a Chinese on the grounds that the conviction is based on evidence provided by Chinese witnesses. Chinese testimony against white individuals will not be allowed until 1872.
- Yung Wing graduates from Yale College and becomes the first Chinese to receive a college degree in America.
- 1856** The second Opium War (1856–1860) between China and a joined force of Great Britain and France begins.
- 1858** France begins its conquest of Vietnam, starting in the south.
- 1859** France begins an effort to conquer Cambodia and Laos.
- A segregated school for Chinese children is established in San Francisco. Classes will be held only in the evenings a year later until its closing in 1871.
- 1860** The Qing government agrees to all terms in the Treaty of Tianjin, originally negotiated in 1858, on the very day the British burn to the ground Yuan Ming Yuan, the summer palace of the Chinese emperor. The new treaty imposes extraordinarily strict terms on China and cedes Jiulong (Kowloon) to Britain.
- The U.S. Census records 34,933 Chinese, which includes 1,784 women.
- 1861** The battle at Fort Sumter in Charleston, South Carolina marks the beginning of U.S. Civil War.
- The Joint Select Committee Relative to the Chinese Population of the State of California praises the Chinese for their contribution of \$14,000,000 to the state's economy.
- 1862** Violence against Chinese increases. One committee report of the California State Legislature reveals that 88 Chinese miners have been murdered, including 11 killed by collectors of the Foreign Miners' Tax.

- 1862**
(*cont.*) Six Chinese district associations join force and organize a federation called *gongsuo*, known by mainstream American society as the Six Chinese Companies. This organization will be renamed as the Chinese Consolidated Benevolent Association in 1882.
- 1863** British ships bombard the city of Kagoshima in Japan in retaliation for the death of an Englishman.
France claims Cambodia as its protectorate, making it a colony in 1884.
- 1864** Japanese cannons installed at the straits of Shimonoseki are destroyed by joint Western naval forces.
- 1865** About 3,000 Chinese workers are hired by the Central Pacific Railroad Company to construct the transcontinental railroad.
- 1866** Seven French ships appear in Korean waters, pressuring Korea to open its door for foreign trade. American and Japanese will follow in the next few years.
- 1867** Chinese railroad workers strike against the Central Pacific Railroad Company. About 10,000 Chinese are recruited at the time.
- 1868** Burlingame Treaty is signed by the United States and China, securing Americans privileges in China and providing mutual protections for free migration.
Meiji Restoration takes place in Japan, ending its feudal system. The teenage Emperor Meiji is restored as a symbolic figure to paramount status, and reform measures are taken to Westernize and modernize the nation. A conscription law will soon be enacted.
- 1869** Several hundred Japanese laborers are brought to Hawaii, Guam, and California by Americans and others. The 148 Japanese are treated poorly in Hawaii's sugar plantations. The Japanese government will bring 40 of them home and ban emigration.
The transcontinental railroad is completed on May 10, leaving 10,000 Chinese laborers unemployed; many Chinese will find work in agriculture.
- 1870** A new naturalization law extends the privilege to aliens of African nativity and to persons of African descent, but it does not mention the status of alien Asians.
Chinese are officially added to the Census form of the United States. Among the 63,199 individuals recorded, 4,566 are female. About 40 percent of the gainfully employed Chinese find work in light manufacturing industries, others are more likely to be self-employed. Laundry, restaurant, and grocery will become three major businesses in the ethnic economy before World War II.

Chinese become scapegoats as a nationwide recession leads to the rise of unemployment on the West Coast.

- 1871** In Los Angeles’s Chinatown, violence erupts against the Chinese on October 24, killing 15 and injuring an additional 6.
- 1871–1899** A total of 491 Asian Indians have arrived in the United States.
- 1872** The first group of the Chinese Educational Mission, led by Yung Wing, arrive in Hartford, Connecticut.
- 1873–1884** San Francisco’s board of supervisors passes 14 ordinances to restrict Chinese laundry operations, imposing extra financial burdens on Chinese laundrymen.
- 1873** Zun Zow Matzmulla becomes the first Japanese student to graduate from the U.S. Naval Academy.
- 1874** The hula dance, banned in 1830, is reinstated in Hawaii.
- 1875** The Page Law is enacted, forbidding the entry of Chinese, Japanese, and Mongolian contract laborers, prostitutes, and felons. The number of female Chinese immigrants will decline significantly.
- The United States ratifies a reciprocity treaty with the Kingdom of Hawaii, permitting the shipment of sugar to America duty-free.
- 1876** Japan forces Korea to sign the Treaty of Kanghwa, gaining privileges similar to those China and Japan were forced to give to Western powers.
- Joint Special Committee of Congress starts investigation of Chinese immigration and holds hearings in San Francisco; anti-Chinese violence breaks out in Chico, California, killing four Chinese laborers and injuring two.
- 1878** *In re Ah Yup* decision, the court decides that Chinese immigrants are ineligible for citizenship because they are neither white nor black.
- 1879** The University of Santo Tomas, a Spanish university in the Philippines, founds the School of Midwifery, providing higher education for Filipino women for the first time.
- President Rutherford B. Hayes vetoes the Fifteen Passenger Bill, which seeks to allow no more than 15 Chinese on each ship to the United States.
- 1880** The Burlingame Treaty is renegotiated to give the United States unilateral power to “regulate, limit or suspend” the “coming or residence” of Chinese laborers.
- Conflicts between Britain and the Burmese monarch intensify.

- 1880**
(*cont.*) The 1880 Census records a total of 105,465 Chinese in the United States, including 4,779 women.
- 1881** Hawaii's King Kalakaua visits Japan during his world tour and tries to persuade Japan to lift emigration restrictions, but the Japanese emperor is not moved.
- The Chinese government ends the Educational Mission and orders all the teachers and students to return to China immediately.
- Sit Moon, a converted Christian, becomes the first Chinese pastor of a church in Hawaii. Japanese pastors in Hawaii include Miyama Kanichi, Sokabe Shiro, and Okumura Takie.
- 1882** President Chester Arthur endorses the Chinese Exclusion Act on May 6, suspending the immigration of Chinese laborers for 10 years. The law signifies the beginning of a 61-year Chinese exclusion. It also stipulates that no state or federal court shall grant citizenship to Chinese.
- Adm. Robert W. Shufeldt signs the Treaty of Kanghai with Korea, securing for the United States the same privileges that Korea gives to Japan. Korea will sign similar treaties with Great Britain, Germany, Russia, Italy, and France.
- The Chinese Consolidated Benevolent Association (CCBA) is established in San Francisco, providing leadership for Chinese immigrants.
- 1882–1886** Anti-Chinese agitation gains momentum in Hawaii; some restrictive measures are issued.
- 1884** An amendment to the Chinese Exclusion Act requires each exempt Chinese applicant to present a certificate issued by the government of China.
- A federal circuit court for the district of California turns down two petitions of Chinese women, preventing the entry of wives of Chinese laborers.
- The first Chinese language school in the United States is established in San Francisco.
- American medical missionary Horace N. Allen arrives in Korea.
- 1885** In *Yick Wo v. Hopkins*, the Chinese successfully establish a case in the U.S. Supreme Court against discrimination.
- Chinese in San Francisco battle for the right to public education. In *Tape v. Hurley*, the California Supreme Court rules that children born in California to Chinese parents shall not be denied public education.

Mob violence takes the lives of 28 Chinese and wounds 15 in Rock Springs, Wyoming. In Seattle in Washington Territory, an anti-Chinese Congress orders the evacuation of all Chinese. Tacoma residents evacuate 600 Chinese by force and take them to a railroad station in Lake View. In San Francisco's Chinatown, arsonists set fire to several buildings, killing 13 people.

France annexes Vietnam.

Great Britain gains complete control of Burma and annexes it to India.

Japanese contract laborers begin to arrive in Hawaii in large numbers. These male and female laborers are recruited by American Robert Walker Irwin to work in sugar plantations.

1886 Seattle residents force an evacuation of Chinese, loading 350 Chinese into wagons and taking them to the docks to be shipped away. Violence is prevented with the presence of federal troops. Murder or expulsion of Chinese also occurs at Snake River Canyon in Idaho; Denver, Colorado; Portland, Oregon; Squaw Valley, Coal Creek, Black Diamond, Tacoma, Puyallup in Washington; and many communities in California.

1887 Hawaii's constitution becomes effective, assuring the planters and businessmen of control over the government of the kingdom.

When I Was a Boy in China, authored by Lee Yan Phou (1861–1938), is published.

1888 The Scott Act, another amendment of the Chinese exclusion, is signed into law, denying reentry of Chinese who left the United States to visit families in China.

1889 *Chae Chan Ping v. United States* challenges the Scott Act unsuccessfully.

1890 The McKinley Tariff grants duty-free status to all foreign sugar, depriving the special privilege enjoyed by Hawaiian sugar producers in previous two decades.

The Census records 107,488 Chinese in the United States with a male to female ratio of 26.8 to 1. More than 2,039 Japanese are recorded.

1892 The Geary Act extends Chinese exclusion for 10 years and requires alien Chinese to carry registration cards. Chinese immigrants challenge the law but lose their case (*Fong Yue Ting v. United States*).

Antigovernment demonstrations are staged in Korea led by Tonghak (Eastern learning) movement leaders.

- 1892**
(*cont.*) The first Japanese-language newspaper in Hawaii appears in Honolulu.
- 1893** About 20 Japanese shoemakers in San Francisco organize a Shoemakers' League, which becomes the first Japanese trade association in the United States.
- Hawaii's Queen Liliuokalani is overthrown in January in a virtually bloodless coup led by American, German, and British businessmen. A provisional government is established, and Hawaii becomes a U.S. protectorate. A treaty for annexation of the islands by the United States will soon be negotiated.
- 1894** The Sino-Japanese War (1894–1895) starts in Korea in response to the presence of Chinese military called in by Korean government to suppress the Tonghak Rebellion. Japan wins the war.
- France forms the French Indo-China Union after its conquest of Vietnam, Cambodia, and Laos is completed.
- 1895** Recruitment of Japanese laborers to Hawaii becomes a private enterprise.
- 1896** Japanese in Hawaii start the first Japanese-language school in Honolulu.
- An uprising led by the radical Katipunan in Spanish-occupied Philippines takes place.
- 1898** The Treaty of Paris concludes the Spanish-American war; the United States acquires the Philippines, Puerto Rico, and Guam.
- Chinese immigrants win a landmark case, *Wong Kim Ark v. United States*. The U.S. Supreme Court rules that anyone born in the United States is a citizen and that right cannot be taken away.
- The Boxer Rebellion (1898–1901), a Chinese nationalist uprising against foreigners and the Qing government begins. An international expedition of nearly 20,000 soldiers is formed to crackdown the uprising.
- The United States officially annexes Hawaii.
- Japanese farmers in the United States form *kenjinkai*, which are prefecture-based social organizations.
- The first Japanese-language newspaper in the mainland United States, the *Nichibei Shimbun*, is published in San Francisco.
- 1899** The Philippine-American War (1899–1901) breaks out as American military forces begin their occupation of the islands. Casualty of the guerrilla warfare will reach 20,000 Filipinos and 4,200 Americans.

The North American Buddhist Mission in San Francisco is incorporated under the laws of California by Japanese missionaries.

Chinese American Ng Poon Chew starts *Hua Mei Sun Bo* (*Chinese American Morning Paper*), a Chinese language weekly in Los Angeles.

1900

President William McKinley signs the Organic Act into law on August 30 to establish a U.S. territorial government in Hawaii. All islanders become U.S. citizens.

In *United States v. Mrs. Gun Lim*, a federal circuit court rules that wives and minor children of Chinese merchants domiciled in the United States are admissible.

The U.S. Census records 89,863 Chinese on the mainland, including 4,522 women. The population of Japanese reaches 24,326 on the mainland and 60,000 in Hawaii.

Ng Poon Chew and several Chinese Christians publish the first independent community newspaper, the *Chinese-Western Daily* (*Chung Sai Yat Po*, 1900–1950), in San Francisco.

1901

The United States establishes a civilian government in the Philippines after the Philippine-American War. Many Americans will serve in the territorial government and teach in schools.

A new California's antimiscegenation law prohibits marriages between whites and "Mongolians."

A group of Chinese residents in Philadelphia is organized to obtain civil rights in the United States. It calls on Chinese American citizens to vote in elections.

A group of boarding school students in Hawaii organizes perhaps the first Japanese American baseball team.

The Boxer Protocol is imposed on China by Western nations on September 7. Peter Rye becomes the first recorded Korean immigrant to Hawaii.

1902

In *Tsoi Sim v. the United States*, Chinese Americans successfully establish a federal court case, allowing an alien Chinese wife of an American citizen the right to reside with her husband.

Several Japanese businessmen found the Japanese American Industrial Corporation (JAIC), one of the largest labor contracting firms in California.

The Philippines Organic Act is enacted, setting up terms for the civil government.

- 1902**
(*cont.*) Another amendment of the Chinese Exclusion Act extends Chinese exclusion for 10 more years. Immigration of Chinese to U.S territories is also restricted.
- 1903** The U.S. government sponsored the *pensionado* program in the Philippines, providing aid to young students to study in the United States.
- Japanese and Mexican farm workers strike jointly in Oxnard, California, and win. But the American Federation of Labor refuses to accept Japanese laborers.
- Ahn Chang-ho establishes the *Chinmok-ho* (friendship society), the first Korean immigrant community organization on the U.S. mainland.
- Contract laborers from Korea begin to arrive in Hawaii.
- 1904** Another amendment to the Chinese Exclusion Act is enacted, making exclusion of the Chinese permanent.
- The Russo-Japanese War (1904–1905) is fought in Korea. Japan defeats a Western colonial power and emerges as the dominate military power in Asia.
- About 1,200 Japanese plantation workers in Hawaii strike in Waialua and win some of their demands. Another strike was staged by Japanese workers on Lahaina plantation on Maui.
- An American-educated Japanese, Jo Sakai, founds a farming colony near Boca Raton, Florida.
- The Chinese American Citizens Alliance (CACA), an organization of U.S.-born Chinese, is established in San Francisco.
- 1905** *United States v. Ju Toy*, a U.S. Supreme Court decision, affirms that the bureau of immigration has final jurisdiction over entry and deportation issues of Chinese immigrants. The ruling denies Chinese the right to judiciary review.
- Japan declares Korea as its protectorate and prohibits Korean emigration to Hawaii and the United States.
- People in China boycott American goods in response to unfair treatment of Chinese immigrants in the United States.
- The Asiatic Exclusion League, the first anti-Japanese pressure group, is created in San Francisco.
- Korean immigrants establish the Mutual Assistance Society in San Francisco.
- 1906** Hawaiian plantation owners begin recruiting workers from the Philippines. A small group of Filipino workers arrives in the islands.

Abiko Kyutaro (1865–1936), the founder of the *Nichibei Shimbun* newspaper, establishes the American Land and Produce Company and builds a farm community—Yamato Colony—near Livingston, California.

The San Francisco School Board denies children of Japanese descent the right to attend regular public schools, creating a diplomatic crisis between the United States and Japan.

San Francisco is shaken by an earthquake; many buildings and records are destroyed by the quake and fire, including birth certificates. This incident creates an opportunity for Chinese to circumvent exclusion laws. Some Chinese claim they were born in the city and are in fact U.S. citizens and use their newly claimed citizenship to bring wives and children to the United States.

Ninety percent of the Filipinos migrants are Catholic, as a result of the presence of Catholic Church in the Philippines during the centuries of Spanish colonization.

1907

In an agreement with Japan, known as the Gentlemen's Agreement, the United States makes Japan to agree not to issue passports to laborers. President Roosevelt's Executive Order 589 also prohibiting Japanese in Hawaii, Mexico, or Canada from remigrating to the U.S. mainland.

The Expatriation Act stipulates that any American woman who marries a foreigner shall take the nationality of her husband.

Large groups of Asian Indians begin to immigrate to the United States.

The United Korean Society publishes its newspaper, the *United Korean News*, in Hawaii.

The U.S. colonial government establishes its first nursing school in the Philippines. Some Philippine-trained nurses will later travel to the United States for advanced professional education.

Several hundred white workers march to the Asian Indian community in Bellingham, forcing the immigrant laborers to cross the border into Canada.

Korean immigrants in Hawaii create the United Korean Society, providing leadership for all Korean organizations and village councils.

1908

The Korean Women's Association is established in San Francisco.

1909

Japanese plantation workers strike for four months on the island of Oahu, but Hawaii plantation owners refused to negotiate.

The Payne-Aldrich Tariff Act, also known as the Philippine Tariff Act, is enacted, setting terms for imports from the Islands.

- 1909**
(*cont.*)
- Yung Wing, the very first U.S.-educated Chinese scholar, publishes his autobiography, *My Life in China and America*.
- The Japanese Association of America, the most important community organization prior to World War II is established.
- The Korean National Association is established, assuming leadership for Korea's independence from Japan.
- The *New Korea*, a Korean immigrant newspaper, is published by the Korean National Association.
- 1910**
- An immigration detention center is established on Angel Island near San Francisco to screen and interrogate Asian immigrants, especially Chinese.
- Japan annexes Korea.
- The Census counts 71,531 Chinese, 72,152 Japanese, 5,008 Koreans, and 406 Filipinos living on the U.S. mainland.
- A group of Korean immigrants hired to pick oranges in Upland, California are attacked by white workers with rocks and stones.
- Hawaii-born Arthur K. Ozawa, the first Japanese American lawyer, is admitted to the bar in Michigan and Hawaii.
- Japanese picture brides begin to arrive.
- 1910–1924**
- About 500 Korean nationalists flee their country after Japanese annexation and settle in the United States.
- 1911**
- The Filipino Federation of Labor is founded.
- Sun Yat-sen (1866–1925), who attended medical school in Hawaii, founds the Republic of China.
- 1912**
- Kinji Ushijima, better known as George Shima, gains fame as the “Potato King.”
- The Sikhs build their first *gurdwara* in the United States in Stockton, California.
- Hawaiian native swimmer Duke Kahanamoku ties the world record and wins the gold medal in the 100-meter freestyle event at the Olympic Games in Stockholm, Sweden. He will break his own record in the 1920 Olympics.
- 1913**
- The California Alien Land Law is enacted on May 19, prohibiting aliens ineligible for citizenship to purchase or lease land for more than three years for agricultural purposes. Similar laws will pass in Washington, Oregon, Idaho, Montana, Arizona, New Mexico, Nebraska, Texas, Kansas, Louisiana, Missouri, and Minnesota.

Syngman Rhee (1875–1965), the first president of the Republic of Korea, begins to organize his followers for Korea’s independence.

Ghadar, a newspaper by the Hindustan Association of the Pacific Coast, is published.

1914 Sessue Hayakawa, a Japanese stage actor, appears in two movies during his first year in the United States.

Wu Tingfang (1842–1922), a prominent Chinese scholar and diplomat, publishes *America through the Spectacles of an Oriental Diplomat*.

Fifteen Korean farm laborers in Riverside, California, are attacked by a mob and forced to leave the area.

1915 The Ghadar movement takes place; more than 400 Asian Indian immigrants from the United States travel to their homeland to start a revolution for independence.

1917 The 1917 Immigration Act creates an Asiatic Barred Zone, excluding Asian Indians using a geographic criterion.

The Japanese Boys Club and Japanese Girls Club are organized.

1918 A second Japanese farming colony is built in Cressey, California. A new law permits native-born Filipinos or Puerto Ricans who have served in the U.S. military to gain citizenship, but it does not mention servicemen from other Asian groups.

Asian Indians establish the Hindustani Welfare Reform Society in the Imperial Valley to reach all Indian immigrants.

1919 A third Japanese farming colony is established in Cortez, California.

Korean provincial government-in-exile is established in Shanghai, China to lead the Korean independence movement.

A new law allows any person of foreign birth who has served in the U.S. military to petition for naturalization, but it does not specify whether non-Filipino Asians are included.

About 150 Koreans attend the first Korean Liberty Congress in Philadelphia to support the nationalist movement in their homeland.

Second-generation Japanese Americans organize the American Loyalty Club in San Francisco.

1919–1920 A large-scale strike organized by both Japanese and Filipino plantation workers in Hawaii takes place and holds a “77 Cents Parade” in Honolulu.

- 1920** The California Alien Land Law is amended to prohibit aliens ineligible for citizenship from leasing land and from serving as guardians of land under their U.S.-born children’s names.
- The Census records 61,639 Chinese, 111,010 Japanese, 5,603 Filipinos, and 6,181 Koreans in the United States. About 6,400 Asian Indians have arrived in the United States by then.
- The Korean American community establishes the School of Aviation in Willows, California.
- 1921** Japanese immigrants establish a sugar plantation in Texas.
- The United States makes Japan agree not to issue passports to Picture Brides in the so-called Ladies Agreement.
- The 1921 Immigration Act introduces a quota system.
- A federal district court denies the petition of Easurk Emsen Charr, a Korean immigrant, for U.S. citizenship, declaring that the Koreans are part of the Mongol family.
- The first Filipino American newspaper, the *Philippine Independent News*, is published in Salinas, California.
- Filipinos in San Francisco form the Caballeros de Dimas-Alang, a fraternal organization.
- Korean immigrants organize the Comrade Society under the leadership of Syngman Rhee.
- 1922** In *Estate of Tetsubumi Yano*, Japanese Americans win the right to serve as guardians of their American-born children in the California Supreme Court.
- The Cable Act makes an American women’s citizenship independent of that of her husband, contingent upon her husband’s eligibility for naturalization.
- In *Takao Ozawa v. United States*, the U.S. Supreme Court denies an alien Japanese petitioner the right to U.S. citizenship, declaring that he is not Caucasian.
- 150 Filipino nurses form the Filipino Nurses Association (FNA).
- Seventeen-year-old Chinese American Anna May Wong (1907–1961) stars as Lotus Flower in the film *The Toll of the Sea*, after appearing in *The Red Lantern* three years earlier.
- 1923** Japanese Americans lose four cases against alien land laws in the U.S. Supreme Court.
- In *United States v. Bhagat Singh Thind*, the U.S. Supreme Court denaturalizes an Asian Indian, declaring that Asian Indians are not white.

- 1924** The Immigration Act of 1924 is enacted, implementing a racially based quota system to limit immigrants from less desired eastern and southern European countries. Asians are barred.
- Japan changes its rule regarding nationality; children born in the United States of Japanese parents are not necessarily Japanese nationals.
- The Mongolian People's Republic is established.
- In *Cheung Sum Shee et al. v. Nagle*, a U.S. Circuit Court of Appeals allows admission of alien Chinese wives of merchants.
- In *Chang Chan et al. v. John Nagle*, a U.S. Circuit Court of Appeals denies entry to Chinese wives of American citizens.
- The *Chinese Times* (1924–), the newspaper of the Chinese American Citizens Alliance, begins publication in San Francisco.
- Filipino plantation workers in Hawaii strike for eight months.
- Chinese Americans launched a political campaign against new immigration restrictions.
- 1925** In *Toyota v. United States*, the U.S. Supreme Court denies a foreign-born Japanese who have served in the U.S. military the right to naturalization. The high court declares that the limitations based on color and race remain as part of the naturalization laws, but such restrictions do not apply to Filipinos because they are not aliens. This court ruling is significant to Filipino immigrants in the United States.
- Etsu Inagaki Sugimoto publishes *A Daughter of the Samurai* in 1925. A daughter of a *samurai* in feudal Japan, Sugimoto dedicates her book to Japan and America, which she addresses as her “two mothers.”
- The Chinese American Citizens Alliance (CACA), an organization of American-born Chinese, takes the lead lobbying Congress for the admission of Chinese wives of American citizens.
- 1927** James Sakamoto (1903–1955) becomes the first Nisei boxer to fight professionally at the Madison Square Garden in New York.
- 1928** James Sakamoto publishes the *Japanese American Courier* in Seattle, Washington.
- Korean immigrant New Il-Han publishes *When I Was a Boy in Korea*.
- 1930** The Census counts 74,954 Chinese, 138,834 Japanese, and 45,208 Filipinos in the 48 contiguous United States.

- 1930**
(*cont.*)
- A racial riot breaks out in Watsonville, California.
- An amendment of the 1924 Immigration Act is enacted, granting entry to alien Chinese wives of U.S. citizens married prior to May 26, 1924.
- Los Angeles Superior Court Judge J. K. Smith rules that Filipinos are members of the “Mongolian” race.
- The Japanese American Citizens League (JACL), the most influential Japanese community organization formed by American-born children of immigrants, is established.
- Korean immigrant writer Younghill Kang (1903–1972) publishes *The Grass Roof*.
- 1931**
- Japan invades Manchuria in northeastern China on September 18, 1931.
- Chinese in America begin to train pilots for the Chinese Air Force.
- The India Society of America is founded in New York.
- 1933**
- The Filipino Labor Union is founded in November, with a number of branch offices in central California.
- In New York, more than 1,000 Chinese laundrymen form the Chinese Hand Laundry Alliance (CHLA).
- 1933–1934**
- Filipino lettuce pickers in the Salinas Valley of California strike against the growers.
- 1933–1936**
- Chinese sailors in New York join a strike organized by National Maritime Union (NMU).
- 1934**
- President Franklin D. Roosevelt signs the Tydings-McDuffie Act, changing the status of the Philippines from a U.S. territory to commonwealth and restricting migration from the Philippines.
- Garment shop workers in San Francisco’s Chinatown form a Chinese branch of the International Ladies’ Garment workers Union (ILGWU).
- Leaders of the Japanese American Citizens League organize the first Nisei Week festival in Los Angeles.
- Eight second-generation Japanese baseball teams form the Nisei Central Japanese League in California.
- 1935**
- The Grandview Film Company is founded in San Francisco by Chinese Americans.
- A special act is passed to grant U.S. citizenship to about 500 Asian immigrant World War I veterans.

The Filipino Repatriation Act is enacted, offering Filipinos in the United States the opportunity to return to the Philippines.

The Philippine Commonwealth is established.

1936

A bill is introduced to Congress requesting that the privilege of citizens to bring in their wives be extended to all races ineligible to citizenship; it passes the House but fails in the Senate.

Ahn Ik-t'ae (1906–1965), a Korean immigrant living in Philadelphia, completes his composition of the Korean national anthem.

Japanese Americans become active in the electoral politics of Hawaii, winning 9 out of the 39 elected officials for the territorial government.

1937

A group of Chinese workers returning from their summer jobs at Alaskan Salmon canneries organizes the Chinese Workers Mutual Aid Association (CWMAA) in San Francisco.

The Sino-Japanese War escalates.

1938

Hawaii-born Chinese Hiram Fong begins his service in the House of Representatives of the territorial legislature.

The largest Chinese youth organization in New York, the Chinese Youth Club, is established.

1939

Korean Americans picket in Los Angeles against U.S. scrap iron and airplane fuel shipments to Japan.

Chinese American Charlie Low, a native of Nevada, opens the Forbidden City, a nightclub on the outskirts of San Francisco's Chinatown, catering mainly to non-Chinese customers.

The Japanese American 3YSC (Three Year Swim Club) in Hawaii wins its first national team swim title in Detroit, Michigan.

1940

The Census counts 77,504 Chinese and 126,947 Japanese. The Asian Indian population in the United States has declined to 2,045.

The *Chinese Press* (1940–1952), an English newspaper, is established in San Francisco; in New York, members of the Chinese Hand Laundry Alliance publish the *China Daily News*.

Germany, Japan, and Italy enter the Tripartite Pact in September, committing to one another to wage war against any nation that attacks any one of them.

1941

Japan's civilian government of Prince Fumimaro Jonoye is taken over by a military cabinet led by General Hideki Tojo.

The Japanese air force attacks Pearl Harbor, a U.S. naval base in Hawaii, on December 7. The United States declares war on Japan. Germany and Italy declare war on the United States.

- 1941**
(*cont.*)
- France signs an agreement with Japan in July, permitting Japanese troops to move freely through its Indochinese colonies. Japan occupies Indonesia.
- The United States freezes the assets of Japanese immigrants in July.
- The Japanese American Citizens League sends a telegram to President Franklin D. Roosevelt, pledging the loyalty of second-generation Japanese Americans.
- One hundred and sixty Japanese immigrant community leaders in Hawaii are detained in Honolulu after Pearl Harbor.
- 1942**
- President Roosevelt signs the Executive Order 9066, empowering the secretary of war to remove anyone from areas he might designate; Public Law 503 makes it a misdemeanor to violate an order by the secretary of war to leave a “military area”; about 120,000 Japanese in the United States are evacuated and relocated to internment camps.
- Japanese Americans Minoru Yasui, Gordon Hirabayashi, and Fred Korematsu protest curfew and internment orders, but the U.S. Supreme Court will uphold decisions of the government.
- Mass demonstrations erupt at the Manzanar detention camp in California on December 6.
- The National Japanese American Student Relocation Council is established to help interned Nisei to continue their college educations outside.
- Images of non-Japanese Asian Americans begin to improve; opportunities to join the military and work in defense industry become available.
- The *Chinese American Weekly* (1942–1965) starts publication in New York.
- Chinese American Ah Yin (Hazel) Lee Joins the Women’s Flying Training Detachment.
- 1942–1945**
- A total of 15,998 Chinese Americans are recruited to the U.S. military; 214 give their lives.
- Thousands of Filipinos are inducted into the U.S. armed forces; two Filipino infantry regiments are formed. Some 3,600 young Japanese Americans enter the U.S. Army directly from camps. Two all-Japanese infantry, the 100th Infantry Battalion and the 442nd Regimental Combat Team, are formed and later will merge into one.
- 1943**
- The Citizens Committee to Repeal Chinese Exclusion (CCRCE) is formed by a group of Americans.

The repeal of Chinese exclusion acts is signed into law by President Franklin D. Roosevelt on December 17, ending 61 years of Chinese exclusion.

In February, the U.S. government administers a loyalty questionnaire at all 10 detention camps to men and women over the age of 17 to identify and register male Nisei men for the draft; Japanese American internees at Heart Mountain Internment Camp organize to protest the loyalty questionnaire.

Second-generation Chinese American Pardee Lowe publishes *Father and Glorious Descendant*, an autobiographic account of his own experiences.

1944

President Franklin D. Roosevelt signs Public Law No. 405, allowing U.S. citizens to renounce their citizenship in time of war.

One hundred six Nisei soldiers at Fort McClellan, Alabama, refuse to undergo combat training in protest of continued incarceration of their families. Twenty-one of them are sent to jail.

The all-Japanese American 442nd Regimental combat team lands in Italy. The unit suffers 34 percent casualties in action and will become the most decorated unit of its size during the war.

The G.I. Bill of Rights is passed to allow the government to spend federal funds for veterans' education in colleges and vocational schools.

Maggie Gee becomes the second Chinese American women, after Ah Ying Lee, to join the Women Airforce Service Pilots.

Ho Chi Minh forms Viet Minh, a Communist group, and prepares for the seizure of power in Vietnam.

1945

In the *Ex Parte Endo* decision (1945) the court decides that a citizen of undoubted loyalty to the U.S. government should not be held in camp.

Benjamin J. Cayetano is elected governor of Hawaii.

Chinese American Henry Yang is appointed chancellor of the University of California, Santa Barbara.

Asian Indian American Prema Mathai-Davis is appointed to head the Young Women’s Christian Association.

Asian American comedy troupe “18 Mighty Mountain Warriors” is founded in San Francisco.

The National Association of Korean Americans is found in New York City.

South Korean baseball pitcher Chan Ho Park starts his career in professional baseball in the United States.

1995

The United States officially normalizes diplomatic relations with Vietnam on July 11.

Chinese American Jerry Yang, together with David Filo, found Yahoo! Inc.

The University of California, Santa Barbara establishes the first Asian American Studies Department in a major American research university.

Asian Indian American medical doctor Deepak Chopra founds the Chopra Center for Wellbeing, with Doctor David Simon, in Carlsbad, California.

Chinese American Wayne Wang's independent feature film, *Smoke*, wins the Silver Berlin Bear at the Berlin International Film Festival.

Chinese American Gary Locke is elected governor of the state of Washington.

An estimated 120,000 Thai immigrants and their descendants are living in the United States, including Thai Chinese.

Chinese American historian Judy Yung publishes her award-winning monograph, *Unbound Feet: A Social History of Chinese Women in San Francisco*.

The National Alliance of Vietnamese American Service Agencies is established.

Japanese baseball player Hideo Nomo becomes a Major League Baseball player in the United States as a pitcher for the Los Angeles Dodgers.

1996

Chinese American scientist David D. Ho is named *Time* magazine's "Man of the Year" for his contribution to the basic understanding of the AIDS and his pursuit of therapeutic treatment of the disease.

John Huang, a Democratic National Committee fundraiser and former commerce department official, is alleged to have made illegal campaign contributions to President Bill Clinton.

Asian Indian American Sabeer Bhatia starts HotMail, a web-based e-mail system.

Golfer Tiger Woods, born to a Thai mother and African American father, turns pro and is named Sportsman of the Year by *Sports Illustrated* magazine.

Chinese American figure skater Michelle Kwan captures the first of her five gold medals in World Figure Skating Championship.

Chinese American gymnast Amy Chow and her teammates bring home the first American team Olympic gymnastics gold medal.

1997

Hong Kong returns to China, as a 99-year lease between China and Britain expires.

In 1997, Korean American businessman Jay Kim pleads guilty to accepting illegal campaign contributions and is sentenced to one year probation and a \$5,000 fine.

- A President's Executive Order legalizes most transactions between Americans and North Koreans.
- The U.S. Census counts 11.9 million people, or 4.2 percent of the entire population as Asian. This number includes 10.2 million

Asian and 1.7 million of mixed ancestry. Sixty-nine percent of all Asians are foreign born. Among the Asian groups, Asian Indian, Pakistani, and Thai are the three groups with the highest proportions of noncitizens. The majority of the foreign-born Asians arrived in the United States in the past 20 years.

The Census counts 1,855,590 Asian Indians in the United States and 75 percent of them are foreign born.

The Census counts 212,633 Cambodians in the United States and 66 percent of them are foreign born.

The Census counts 2,858,291 Chinese in the United States, making Chinese the largest Asian American population group.

The Census counts 2,385,216 Filipinos in the United States; 68 percent of the population is foreign born. The Philippines send more immigrants to the United States each year than any other Asian nation.

The Census reports more than 184,842 Hmong Americans in the United States and 56 percent of the population is born outside the United States. The majority of Hmong Americans are clustered in five states: California, Minnesota, Wisconsin, North Carolina, and Michigan.

The Census records 1,152,324 Japanese in the United States, and the majority of the population (61 percent) is native born.

The Census records 1,226,825 Koreans in the United States, 78 percent of the population is foreign born.

The Laotian population is 196,893 according to the Census, and 69 percent of which is foreign born.

The Pakistani population is 209,273, and more than 75 percent of the population is foreign born.

The Census counts 150,093 Thai people in the United States.

The Census counts 1,212,465 Vietnamese in the United States and 76 percent of the population is foreign born.

For the first time the Census identifies Native Hawaiians and Pacific Islanders separately from Asian Americans, counting 399,000 individuals.

The National Japanese American Memorial to Patriotism in Washington, D.C. is dedicated during the Veterans Day Memorial weekend.

Pin Chong, a theater director, playwright, choreographer, and video artist, wins an Obie Award for Sustained Achievement.

- Six Korean American investors purchase a shopping mall in the Little Tokyo section of downtown Los Angeles, with plans to convert it into a Korean American shopping center.
- Chinese American Arthur Dong’s *Hollywood Chinese* wins a Golden Horse Award in Taiwan for best documentary film.
- Bryan Clay, the son of an African American father and a Japanese immigrant mother, brings the United States a gold medal at the Beijing Olympics in the decathlon.
- Several Asian Americans win their bids to Congress, including Filipino American Steve Austria, a Republican, representing the 7th District of Ohio; Republican Joseph Cao, the first Vietnamese congressman, representing Louisiana’s 2nd District; Chinese American Judy Chu, a Democrat, representing California’s 32nd District.
- 2009** A racial incident takes place in a South Philadelphia High School in September. Tensions between African American and Asian American students escalate to widespread violence. As many as 30 Asian American students are physically attacked and many receive treatment in the hospital.

Chinese American Charles K. Kao, who has established a successful career in the United States, Britain, and Hong Kong, shares a Nobel Prize in Physics for his contributions to the study of the transmission of light in optical fibers and for fiber communication.

Indian American Venkatraman Ramakrishnan shares a Nobel Prize with Thomas A. Steitz and Ada E. Yonath in Chemistry for his study of the structure and function of the ribosome.

2010

The U.S. Census counts 17.3 million individuals of Asian descent residing in the United States, which comprises 5.6 percent of the total U.S. population. About 2.6 million of the Asian Americans are of mixed-race heritage. California has the largest concentration of Asian Americans (5.6 million), followed by New York (1.6 million). Hawaii has the highest proportion of Asian Americans (57 percent).

The Census counts 1.2 million Native Hawaiians and other Pacific Islanders, which comprises 0.4 percent of the total U.S. population. About 56 percent of the Native Hawaiians and other Pacific Islanders report multiple races.

The Census counts 3.8 million individuals of Chinese descent residing in the United States. Chinese America is the largest Asian American group. There are 3.4 million Filipinos, 3.2 million Asian Indians, 1.7 million Vietnamese, 1.7 million Koreans, and 1.3 million Japanese residing in the United States.

Median household income for Asian Americans is \$67,022. The median income for individual ethnic groups differs greatly: India Americans, \$90,711; Native Hawaiians and other Pacific Islanders, \$52,776; Bangladeshi Americans, \$48,471.

About 50 percent of Asian Americans aged 25 or older has at least a bachelor's degree, much higher than 28 percent of all Americans of the same age group. About 85 percent of Asian Americans aged 25 and older has at least a high school diploma, similar to the overall U.S. population of the same age group. Twenty-five percent of Asian Americans aged 25 and older has a graduate or professional degree, much higher than all Americans of the same age group (10 percent). Only 4 percent of native Hawaiians and other Pacific Islanders aged 25 and older has obtained a graduate or professional degree.

The poverty rate is 12 percent for Asian Americans and 18.8 percent for Native Hawaiians and Pacific Islanders. Also, 18 percent of Asian Americans and 17 percent of Native Hawaiians and other Pacific Islanders do not have health insurance.

Five hundred Asian Americans gather in San Francisco City Hall in April, rallying to address Anti-Asian American violence. The

- A mass shooting takes place on August 5 at a Sikh temple in Oak Creek, Wisconsin, killing six people and wounding four more. The arrested suspect, Wade Michael Page, is a white supremacist.
- Republican Mazie Hirono, a Japanese American, becomes the first Asian American woman U.S. Senator. She is Hawaii’s first woman senator.
- Several Asian American women win their seats for the first time in Congress, including Chinese American Grace Meng, a Democrat and the first Asian American to be elected to Congress from New York’s 6th District; Democrat Tulsi Gabbard, the daughter of a Samoan father and Indian mother, representing Hawaii’s 2nd District; Democrat Ladda Tammy Duckworth, the daughter of a former U.S. Marine father and Thai immigrant mother, representing Illinois’s 8th District.
- Japanese American Mark Allan Takano, a Democrat, wins a seat in Congress, representing California’s redrawn 43rd congressional district in Riverside; Asian Indian American Ami Bera, a Republican, is elected to Congress for California’s 7th congressional district.
- Ang Lee wins the Best Director Academy Award the second time, for *Life of Pi*.
- 2013**
- Chinese American Yitang Zhang, a lecturer at the University of New Hampshire, shocks the mathematical world by proving a landmark theorem in the distribution of prime numbers.

A

Adopted Asian Americans

Historical and Sociological Background

In the last several decades, the adoption of children born in Asia to new parents in the United States has become increasingly common. Various economic, cultural, and demographic factors have contributed to this phenomenon. On the “push” side, an overabundance of children from impoverished areas in Asia combined with a traditional devaluation of girls frequently leads many birth parents to give up their children for adoption. “Pull” factors in the United States and other Western countries include large numbers of couples who are unable or unwilling to conceive children themselves have created a demand for overseas adoptees. Furthermore, inside the United States, the number of children available for adoption, especially infants, has dropped considerably in recent decades and has also led many prospective adopters to look at Asian children.

The practice of Asian-born children being adopted by primarily American (and predominantly White) parents began during the Korean War, as many Americans sought to remedy the plight of growing numbers of children in Korean orphanages by adopting them and bringing them to the United States to live. Studies show that of the 265,524 orphan visas granted by the U.S. State Department between 1948 and 2000, 92,402 of them (34.8 percent) went to children from South Korea. Estimates suggest that anywhere between 110,000 and 150,000 Korean adoptees alone currently reside in the United States, ranging in age from infancy to their 60s.

After the passage of legislation that eased the adoption process, the practice became increasingly common in the 1970s. During this time, several Asian countries experienced political and/or economic upheavals that resulted in the worsening of living conditions for many of their citizens, particularly poor, working class, or rural families, leading many families in vulnerable circumstances to be more willing to give up their infants and young children to be adopted, with one prominent example being “Operation Babylift” that evacuated one thousand Vietnamese children out of the country at the end of the Vietnam War. Also during the 1970s, adoptions from other Asian countries such as China, South Korea, the Philippines, and India began accelerating. Many of these governments also streamlined their adoption procedures to facilitate overseas adoptions.

The U.S. Department of State keeps track of all immigration visas issued to orphans, which are required for international adoptions. Their statistics show that from 1989 to 2008, China sent the most adoptees to the United States on average. But in the latest year that statistics are available (2008), it was surpassed by Guatemala. Also, as shown in State Department statistics, perhaps the most notable trend in recent years is the significant increase of adoptions from African countries such as Ethiopia, Nigeria, Liberia, and Ghana.

Questions about Legal Status of Orphans

The vast majority of these Asian adoptees have been and continue to be girls and this has led to one of the criticisms surrounding such Asian adoptions. Specifically, many feel that because of centuries of deeply engrained

patriarchy and discrimination against women, these Asian countries continue to systematically value the life of a girl much less than that of a boy. Boys are valued more because they can supposedly contribute more labor and have more legal rights. Conversely, when there are too many girls being born, they are too quickly considered “excess property.” Although these criticisms are directed toward the cultural, political, and social systems of the Asian country and not at the adoptees themselves or their American adoptive parents, this gender imbalance continues to be a point of controversy for all parties involved in the adoption process.

In recent years and despite the 1993 passage of the *Hague Convention on Protection of Children and Cooperation in Respect of Intercountry Adoption*, there have been numerous suspicions and controversies regarding child trafficking and whether or not the status of many Asian children as orphans is valid. Allegations include instances when children may have been kidnapped outright, taken from their families through fraud or coercion, or when mothers have been paid money (or given nonmonetary incentives) to relinquish custody of their children for adoption.

In fact, several adoption agencies have been charged with fraud involving improper adoptive activities, and as a result of these issues, the U.S. State Department has imposed significant restrictions on or indefinitely suspended adoptions from certain countries. For example, in April 2008 and in the wake of a State Department report that alleged pervasive corruption and baby selling in Vietnam’s adoption system, Vietnam indefinitely suspended all new adoptions to Americans. A similar moratorium on adoptions from Guatemala was imposed in 2009.

How Adoptive Parents Deal with Racial Differences

On the other side of the adoption process, criticisms have been raised in regard to the cultural appropriateness of such interracial Asian adoptions. On the one hand, many argue that despite the cultural barriers and struggles that Asian adoptees might undergo in the United States, they are still much better off materially and even emotionally than if they stayed in their orphaned situations back in the country of origin. On the other hand, critics of interracial adoption argue that American

political, economic, and military policies through the decades contributed to the push conditions that many Asian countries face. Furthermore, critics feel that non-Asian adoptive parents will “whitewash” these Asian children into white society so that they quickly and perhaps permanently lose their Asian identity and sense of ancestry.

For example, sociologists Jiannbin Lee Shiao and Mia Tuan studied the parenting styles of parents who adopted from Korea. They found that white adoptive parents in their study dealt with the racial differences between themselves and their children by using one of three approaches:

- **Emphasizing the Exotic:** objectifying their children or showing them off as if they were an exotic pet
- **Active Acknowledgment:** recognizing the importance of race and racism in America, encouraging discussion, and careful observation if their children encountered any racially based problems
- **Color-blind:** overlooking, ignoring, or pretending racial differences did not exist

This third approach was the one most commonly used. Within this color-blind approach, many adoptive parents felt that acknowledging racial differences might interfere with the process of integrating their child into their family and their community. Many adoptive parents also did not have the skills to cope with the racial differences between them and their children and used this strategy by default because they were uncomfortable dealing with racial matters, as many such parents had little if any familiarity with racial minorities or cultures other than their own.

Within this color-blind approach, there were often two secondary results. The first was conflating Asian and Asian American—sometimes adoptive parents would occasionally expose their child to Asian culture that might include language classes, going to Asian restaurants, cultural events in their communities, books and other media from or about their country of origin, and even involvement in adoption groups or camps where their children can interact and socialize with other Asian adoptees. But in doing so, many adoptive parents do not distinguish between being

Asian and Asian American. When adoptive parents implicitly assume that being Asian is the same as being Asian American, they frequently forget to educate the child about Asian American issues, as this will be the child's social and cultural environment as long as he or she lives in the United States. In general, many Asian Americans are assumed to be foreigners, even if they were born or raised in the United States.

The other secondary result of the color-blind approach was to frame their child as an "Honorary White." Even if adoptive parents tried to be color-blind, because their social environment was based on white culture, by ignoring racial differences, they ultimately reinforced whiteness. By normalizing whiteness, adoptive parents essentially socialized their children to be white and to see the world from a white perspective. As such, they were unwilling or

unprepared to deal with incidents in which their child was not treated as white and instead, encountered racial prejudice and discrimination based on their Asian physical appearance. Scholars point out that this is not to say that adoptive parents were "bad" parents or that they purposely misled their children into thinking that they were white. Instead, such adoptive parents were a reflection of the white majority culture around them, their thoughts and actions framed by conventional and deeply embedded racial boundaries.

Cultural and Identity Issues Faced by Asian Adoptees

Many Asian adoptees have noted that because they tended to grow up in an almost all-white environment, they never had to think about their ethnic

Cindy Lunte of Moore, Idaho, left, and Wendi Roth of Littleton, Colorado, hold their newly adopted daughters, both from China's Anhui Province, at the White Swan Hotel in Guangzhou, China, October 6, 1998. (AP Photo)

identity—they just assumed they were like everyone else. That is, until they experienced some form of racial prejudice or discrimination from schoolmates, strangers, or even relatives of their adopted family. Because their adoptive families and parents either could not shield them from this almost inevitable process, or could not adequately understand or support their feelings, many of these adopted Asians experienced an “identity crisis.”

This “cultural confusion” frequently involved a viscous cycle in which the parent would unconsciously reinforce whiteness in socializing their child, but on occasion expose them to Asian culture. The child frequently resisted such efforts because Asian culture seemed too different from their “honorary white” lifestyle, and they didn’t want to be seen as different. This resistance to Asian culture reinforced and perpetuated the honorary white status. In this process, many Asian adoptees internalized the anti-Asian racism they saw or experienced. This led many to avoid being associated with anything related to Asians or Asian Americans. This aversion to “Asian-ness” often became harder or at least more complicated when they went to college and came into contact with large numbers of Asian Americans for the first time in their lives, with many feeling uncomfortable or unprepared for sustained interaction with other Asian Americans.

However, this kind of social exclusion is not limited to just whites. In fact, Asian adoptees often encountered intolerance from Asian Americans, who often shunned their attempts to connect with their “roots” because they had lost the ability to speak their native language and/or had little knowledge of their ancestral culture, or if they were perceived to be too “whitewashed.” As many Asian adoptees noted, Asian Americans were not always very inclusive either and could be just as judgmental as anybody else.

Positives Outweighing the Negatives

Although many Asian adoptees have faced this dilemma, this has not been the experience of all Asian adoptees. Rather, many others have enjoyed extraordinary levels of love and understanding from their non-Asian adoptive parents, who have comforted their children when racial discrimination happened and/or

supported their children’s attempts to find their birth parents back in Asia. In addition, many support groups have formed across the country for both adoptive parents of Asian children that allow parents and children to share experiences, support each other, and to learn together about both sides of their racial/ethnic identity.

Furthermore, research has also shown that more recent cohorts of Asian adoptees have been much more open and likely to explore their Asian ancestry and racial identity compared to earlier adoptee cohorts. Similarly, more recent adoptive parents are also more prepared and knowledgeable about racial dynamics involving their adopted children. The Asian American community is also becoming more welcoming to adoptees, particularly as the number of U.S.-born Asian Americans continues to increase, who have more exposure and familiarity interacting with people from diverse racial, ethnic, and cultural backgrounds.

Also in recent years and facilitated by the Internet, many Asian adoptees have formed their own social networks to express and share their experiences and to support others like themselves. These efforts range from personal and group blogs, artistic projects, joint “homeland” trips to reunite with their birth family, support and networking groups, and more formal organizations. In fact, new research suggests that Asian Americans who straddle diverse sets of cultures are happier and report less stress and anxiety when they create their own definitions for fitting in and actively shaping their own identity, rather than passively letting others dictate to them what their identity should be, or trying to gain acceptance into a preexisting and frequently narrowly defined cultural or racial group.

In the end, Asian adoptees represent just how diverse not only American society can be, but also how diverse the Asian American community is as well. As Asian adoption continues to occur, Asian adoptees are likely to be an increasingly prominent feature of the Asian American population and their diverse range of experiences can be seen as resources in bridging different cultural and racial groups, which will become an increasingly important asset as American society increasingly becomes more diverse, globalized, and transnational.

Agbayani, Benny (1971–)

Hawaiian-born Benny Agbayani hit his way to Major League Baseball (MLB) respectability in the late 1990s and early 2000s. Possessing Filipino and Samoan ancestry, Agbayani starred for Hawaii Pacific University (HPU) before getting drafted by the New York Mets in 1993. Agbayani worked his way up the minor league ladder and was rewarded with an MLB appearance in a New York Mets uniform in 1998 after batting .310 and slugging 11 home runs for the Mets' Triple A Norfolk club in 1997.

Agbayani played only a few games for the Mets in 1998, but the next year he became a dependable utility outfielder for the National League club. In 1999, Agbayani appeared in 101 games, batted a respectable .286, and showed power by hitting 14 home runs. More respected as a hitter than a fielder, Agbayani's bat helped the Mets on more than a few occasions. Agbayani's 2000 season was arguably his best. He hit 15 home runs, batted .289, and slugged a key home run that propelled the Mets into the 2000 World Series.

Agbayani's career subsequently headed downward. The 2001 season was his last for the Mets. In 2002, Agbayani wandered from the Toronto Blue Jays of the American League to the Colorado Rockies of the National League and returned to the American League to play briefly for the Boston Red Sox. By 2004, he was out of U.S. organized baseball but performed well for Chiba Lotte of the Japanese Pacific League. Agbayani hit 35 home runs and batted over .300 his first year in the Japanese big league. After five

years with Chiba Lotte, Agbayani retired from professional baseball in 2009 and is now residing in his home state of Hawaii after returning to receive his bachelor's degree from HPU.

Aguila, Chris (1979–)

Possessing Filipino ancestry, Chris Aguila played Major League Baseball (MLB) for parts of four seasons from 2004 to 2008. He has also played Minor League Baseball for several major league organizations since 1997, although he did appear briefly in 2009 for the Japanese major league Fukuoka franchise.

Born in Redwood City, California, in 1979, Aguila was drafted out of high school in 1997 by the Florida Marlins of the National League. He played Minor League Baseball for the Marlins until 2004. During that period, the outfielder demonstrated some power by hitting 26 home runs for three Marlin minor league teams in 2001.

In 2004, Aguila earned a spot on the Marlins' major league roster. He got into 29 games, batting .222, and hitting three home runs. Statistically, 2005 proved to be Aguila's best in the major leagues. He got into 65 games, winding up with a .244 batting average, but no home runs. In 2006, he appeared in 47 games, batted .232, and hit no home runs. Aguila spent all of 2007 in the Minor Leagues, but in 2008 he appeared in eight games for the New York Mets.

Otherwise, Aguila continued to pursue baseball as a professional minor leaguer. He did, however, appear in 14 games for the Fukoaka Softbank in 2009. In 2008, Aguila put together an impressive season for the New Orleans AAA affiliate of the New York Mets. He batted .295 and slugged 29 home runs for the Zephyrs. In 2010, Aguila played Minor League Baseball for three MLB franchises—the Toronto Blue Jays’ Las Vegas affiliate, the Philadelphia Phillies’ Lehigh Valley affiliate, and the Florida Marlins’ New Orleans affiliate. Between those three teams, Aguila appeared in 102 games, hit .240, and powered nine home runs. At 32, it seems doubtful if Aguila will see much more MLB action, if any.

Ah Quin Diary

The Ah Quin Diary is the first significant writing—in English—by a Chinese immigrant to the United States. Spanning 25 years, from 1877 to 1902, it is considered one of the earliest texts in the genre of Asian American literature and fills a gap in the documentary record of American immigration and labor history.

The writer of the diary, Tan Congkuan (c. 1848–1914), was widely known as “Ah Quin.” Ah Quin was born in the Guangdong Province of China to parents who were probably farmers. In his teens, he likely attended an American missionary school in Guangzhou where he learned to read and write in English and in Chinese. In the 1860s, with struggles in southern China that included flood, famine, economic turmoil, and wars, he immigrated to America, thereby joining the Chinese diaspora.

Ah Quin arrived in San Francisco and worked at various jobs along the coast of California, including helping to set up a Chinese Mission School in Santa Barbara in 1874. In June 1877, on the eve of his departure to Alaska to work as a cook for coal miners, Ah Quin began writing in his diary (which he would continue until a decade before his death). Following Alaska, Ah Quin returned to Santa Barbara for several months before moving to San Francisco, where he worked as a domestic for Army officers, first at Camp Reynolds on Angel Island and later at the Presidio. In 1881 he was drawn to San Diego to serve as a labor broker for the construction of the California Southern Railroad. When there he set up a pawn shop in the front room of his home, which became the base for numerous entrepreneurial adventures.

Because of the laws that restricted Chinese women from immigrating and laws that banned miscegenation between whites and “Mongolians,” most Chinese men during this time period were destined to be bachelors; however, Ah Quin returned to San Francisco and married Ah Sue, who had been rescued from prostitution nearly a year earlier by an organization best known as the Donaldina Cameron Mission Home. She came to live with him in San Diego and tended his pawn shop and took care of their 12 children. In his later years, Ah Quin was a San Diego community leader who served alternately as spokesman, middleman, and translator in functions both official and mundane. In a sign of his American patriotism, when then-U.S. President Benjamin Harrison visited San Diego, Ah Quin managed to be within an arm’s reach of him. It’s not surprising that he named several of his sons after U.S. statesmen (e.g., Thomas, George, Franklin, McKinley). Ah Quin was well known as the informal “Mayor of Chinatown” among non-Chinese and Chinese alike, and he (and later his sons) was instrumental in helping to develop the San Diego Chinese American community at the turn to the twentieth century.

Description of the Diaries

There are 10 extant Diaries, approximately half of the number of volumes that are estimated to have once existed. Ah Quin’s proficiency in English is roughly equivalent to his Chinese literacy, with numerous

idiosyncratic spelling and usage patterns in both languages throughout. The daily entries give us a sense of the texture of Ah Quin's life: what time he awoke each morning and went to bed each night; what he cooked (or ate) for breakfast, lunch, and dinner; what Biblical verses he read or what hymns he sang; whom he visited; and what work he accomplished. Approximately 5 percent of the diary, mostly marginalia, is written using Chinese characters in Ah Quin's village dialect (Toishan) of Cantonese. As important as the daily entries are approximately 152 pages of combined appendices that are written totally or partially in Chinese. These include address lists, personal financial records (e.g., loans, remittances, and payoffs), logs for letters sent and received, and recipes—some for herbal medicine—as well as directions in Chinese for how to make a good broom.

On the one hand, Ah Quin's experience is the experience of the immigrant everyman who negotiates in a new world the difficult and inevitable issues of language, biculturalism, discrimination, nationalism, and identity formation. On the other hand, his is a striking story of success—a Horatio Alger's rags-to-riches tale of the rise of a cook to a businessman, including his secrets of hard work, diligent study, and constant networking. The historical importance of this work is predicated not so much on the achievements of the man, although he was remarkably successful—especially given the hostile racial environment in which he lived—but in the rare representation of the personal voice of a Chinese on the West Coast during this era.

Contributions

Ah Quin's Diary was written in English, at a length and with a degree of eloquence that few people believed possible for a nineteenth-century Chinese laborer; the Diary, *prima facie*, challenges the stereotype of an illiterate Chinese workforce. Beginning in the Pacific Northwest just five years before the federal 1882 Chinese Exclusion Law was passed, the Diary gives us a rare, first-person Chinese laborer's perspective during the Age of Chinese Exclusion. Moreover, the Diary gives life to an undocumented Chinese workforce in the form of 800 or so Chinese friends

who are named throughout its 25-year trajectory. It also contains, perhaps, the best original narrative of Chinatown bachelor life prior to the Great San Francisco Earthquake of 1906.

As a literary document, The Ah Quin Diary pre-dates the published stories of Sui Sin Far and the poems of Sadakichi Hartmann that we are currently using to mark the beginnings of the Asian American literary canon. Its existence shifts the paradigm of Asian American literature by locating the beginnings of this tradition in nonfiction (like most other literatures) rather than fiction and lyric. More important, it pushes back the starting point of Asian American literature to a decade—if not a generation—earlier.

In addition, the Diary contributes in important ways to Chinese Diasporic Studies as an account of an “overseas Chinese.” In particular, it represents a Chinese Christian conversion narrative where Christianity lays a foundation for racial and ethnic adaptation that stands in direct contrast to the leading stereotype of the day of the Chinese as “heathen chinee.”

As is often the case with racialized subjects in America, with The Ah Quin Diary, it is the diary that makes the man, not the reverse. Though Ah Quin was an important figure in San Diego's Chinatown during his lifetime, he was not nationally famous; he did not hold a high political office, make unbelievable amounts of money, or influence great legions of students. But given who he was, a Chinese immigrant during the Era of Chinese Exclusion, he has become famous, influential, and sought-out because of his writing. As possibly the only extended first-person narrative of the oppressed during one of the most tumultuous times in America's racial past, he allows us access to his time and his subject position in a way no other document has done. The Ah Quin Diary is important because it exists, and it tells an (Chinese) American tale of the growth and transformation of an immigrant from everyman to entrepreneur and community leader. The Diaries were passed down through several generations of Ah Quin's descendants until they were donated to the San Diego Historical Society archives where they are currently stored.

Ah Yup, In Re (1878)

The petitioner was a Chinese immigrant man appealing to become a naturalized American citizen. Little is known about the petitioner himself: he seems to have been otherwise qualified for American citizenship in terms of his physical and mental health, his ability to support himself financially, no criminal record, and a willingness to take an oath swearing allegiance to his new country. If he were a white European immigrant to California, or even if he were of "African nativity," his case would not have appeared before the federal courts. Indeed, even if he were a white immigrant who had simply declared an intention to become an American citizen (one day), he would have been eligible for many of the political and economic privileges afforded to American citizens in California since 1849. Many voters and politicians in California were not American citizens, and yet, because they were white, they participated in mainstream politics and ran successfully for city government, state office, and for seats in Congress.

The petitioner was Chinese, however, and in the California legislature, in the California Supreme Court, and in cities like San Francisco, prominent political

leaders and judges had already insisted that the Chinese should not be allowed to naturalize as American citizens. In 1852, the year when migration from China to California exceeded 20,000 persons, the state of California had approved a Foreign Miner's Tax aimed at Chinese miners. Several legislators in that debate had insisted that the Chinese would always remain "foreign," as they were not white and so should not be naturalized as American citizens. Two years later, in *People v. Hall*, the California Supreme Court invalidated a murder conviction and death sentence against George Hall, because Chinese witnesses had "improperly testified" in his case. Like other states, California criminal procedure said that "no black or mulatto person, or Indian, shall be allowed to give evidence in favor of, or against a white man." The Chinese were most like "Indians," and just as bad, the court said, and the whole idea of Chinese men as American citizens was offensive: "[the Chinese are] a race of people whom nature has marked as inferior, and who are incapable of progress or intellectual development beyond a certain point, as their history has shown."

By the 1870s, anti-Chinese sentiment was popular and widespread. By the end of that decade, anyone running for public office had to take a stand on Chinese immigration, and politicians supportive of the Chinese lost their races. The end of slavery in the United States after the Civil War only heightened tensions among whites, many of whom feared the development of a "wage slavery" within an emergent economic order where capitalists and industrialists could and did employ immigrants, people of color, women, and children for extremely low wages. White men formed unions, demanded political "reforms," and otherwise sought to resist the possibility of being rendered poor and politically powerless. In 1877, in West Virginia, then in Maryland and in Pennsylvania, railroad workers' unions went on strike, violence erupted, and President Hayes sent in federal troops to quell the unrest.

In California during that year, the state was suffering an economic recession, brought about in part by a prolonged drought. White working class unions were especially active in San Francisco, especially the Workingman's Party led by Dennis Kearney. They demanded that the "Chinese Must Go!" because the

Chinese depressed wages for white men, led corporations to favor this cheap labor over “American citizens,” endangered the sanctity of white women and white families, and thus represented the greatest threat to white Christian civilization on the West Coast. In June of that year, the “Kearney Riots” spread throughout California, and widespread violence against the Chinese became common. In this environment, the federal officials became more sympathetic to American citizens who wished to exclude the Chinese entirely, if only because the few federal officials who had been sympathetic to the Chinese were, by now, ridiculed and threatened on a regular basis.

By the time Ah Yup’s petition came before Judge Lorenzo Sawyer in California, in his capacity as a federal Circuit Court judge, only one other Chinese immigrant had successfully naturalized, and this was in New York in 1873, far from the violent anti-Chinese politics of the West Coast. Sawyer proceeded with the present case carefully: he had asked members of the Bar in California for their opinions, and he noted in his own official one that many had opposed the application. He reviewed the relevant federal statutes: in 1802, “[Congress said that] any alien, being a free white person, may be admitted to become a citizen.” The rule in 1802 was a revised version of the Naturalization Act of 1790, one of the first pieces of legislation passed in the new Republic. After the Civil War, Congress said in 1870 that “the naturalization laws are hereby extended to aliens of African nativity, and to persons of African descent.” In the 1870 revisions, Congress omitted the reference to “white persons,” but Sawyer reasoned that Congress had done so “probably inadvertently.” This was because, by 1875, Congress produced another revision: “The provisions of this title shall apply to aliens being free white persons, and to aliens of African nativity, and to persons of African descent.” The omission was not, in fact, inadvertent at all.

Indeed, Sawyer noted within his opinion that Radical Republicans like Senator Charles Sumner of Massachusetts had insisted that naturalization ought to be possible for all immigrants, irrespective of race. He saw no problem of allowing Chinese American citizens to be naturalized. His opponents from the West, however, had sponsored editorials and cartoons

in response, depicting Chinese men as legislators and judges and governors, thus raising the specter of Americans “ruled by Chinese.” Senator Jackson Morton of Florida warned his colleagues not to allow “a possible immigration of many millions, involving another civilization[,] involving labor problems that no intellect can solve without study and time.” Sumner lost. Sawyer concluded: “It is clear, from these proceedings that congress retained the word ‘white’ in the naturalization laws for the sole purpose of excluding the Chinese from the right of naturalization.”

There were other reasons for the judge’s decision beyond congressional intent. The leading dictionaries that defined “race” and racial groupings had the Chinese under “Mongolian,” not “Caucasian.” In terms of color, the Chinese were not white either, according to leading anthropologists. The judge reasoned: “In popular language, in literature, nor in scientific nomenclature, do we ordinarily, if ever, find the words ‘white person’ used in a sense so comprehensive as to include an individual of the Mongolian race.” Therefore: “The petition must be denied.”

The practice of denying the privilege of naturalization to Chinese immigrants survived until 1943, when Congress revoked formally both the Chinese Exclusion Act and the bar against naturalization. By then, the United States and Nationalist China had formed an alliance against the Empire of Japan during World War II, and so both rules proved politically embarrassing. Still, up until that time, the principle had been extended to deny immigrants from Asia, including Japan, Korea, India, and the Philippines, the same privilege. Ah Yup became an important precedent in the federal courts, cited often to support the idea that Asians should be regarded as “aliens ineligible for citizenship.”

Ahn, Philip (1905–1978)

As one of the first Korean Americans born in the continental United States, Philip Ahn is today best remembered as a pioneering character actor in Hollywood motion pictures, someone who played a number of Japanese “heavies” in World War II films before being cast as the wizened guru Master Kan in the cult TV show *Kung Fu* (1972–1975). Born to Korean immigrant parents on March 29, 1905, Ahn would grow to be a prolific Asian American actor who portrayed a diverse cross-section of roles in over 200 films and television programs from *The Good Earth* (1937) and *Love Is a Many-Splendored Thing* (1955) to *Bonanza* (1950–1973) and *M*A*S*H* (1972–1983).

His father, Ahn Chang Ho (a.k.a. “Dosan”), was not only an anticolonial revolutionary, statesman,

Korean American actor Philip Ahn, 1940s. (Photofest)

reformer, educator, and writer, but also a leader of the first Korean immigration wave to hit American shores. Before making a name for himself in the American film industry, Dosan’s eldest son Philip became a leader of the second generation community based in Southern California, organizing the first Korean American youth group (Ipal or Two-Eight Club) and supervising assimilation and social activities of immigrant children during the 1920s. As a teenager growing up in Los Angeles, Ahn began to demonstrate his talent in drama and public persuasion, gifts that he inherited from Dosan, a bell-toned orator who gave many emotive, patriotic speeches in Korea, the United States, Mexico, Manchuria, and China. Young Ahn honed his acting chops in school and church plays. It was Philip’s childhood friend and neighbor Anna May Wong who first introduced him to the world of professional acting. The high schooler was spotted by silent screen legend Douglas Fairbanks, Sr. when he accompanied Anna May to the set of *The Thief of Baghdad* (1924), a film in which the Chinese American actress settled into the role of a Mongolian slave girl. Fairbanks, Sr. gave Ahn a screen test and offered him a minor role. Flushed with pride, Philip hurried home to deliver the good news only to encounter the fierce disapproval of his Korean mother, Helen Lee, who said, “No son of mine is going to get mixed up with those awful people.”

A few years later, in 1935, she was forced to relent when Philip got his second lucky break. As a sophomore majoring in Foreign Commerce at USC, Ahn applied at Paramount Studios for a part-time position in college football pictures, for which many USC athletes and students were hired as extras. Instead of an extra’s role, Philip was given a chance to audition for director Lewis Milestone, who was searching for a Chinese comedian to appear in a Bing Crosby musical titled *Anything Goes* (1936). After hearing the American-born Korean’s immaculate delivery of the English dialogue, Milestone turned him down, saying he was looking for a pidgin English speaker. On his way out, a flash of inspiration shot through Philip’s mind. He sauntered back to Milestone’s desk to inform him: “You like . . . aligh. You no likee me . . . aligh. Me no care. Hip sabee? Me go school . . . aligh.” The director broke into laughter and said, “Okay . . . the

part's yours!" The following year, 1936, saw Philip Ahn appear in five films, playing supporting roles opposite Hollywood's top stars, such as Gary Cooper, Mae West, and Shirley Temple. Ahn's early career was peppered with dynamic supporting roles, and his prewar heyday culminated with two roles as a romantic lead opposite Anna May Wong in the Paramount B pictures *Daughter of Shanghai* (1937) and *King of Chinatown* (1939).

In *Daughter of Shanghai*, Ahn dismantled Oriental stereotypes by playing an FBI agent who helps Wong's character solve a murder case. Their characters emerge as a romantic couple in the film's final scene. Two years later, the screen duo reunited in *King of Chinatown*, a gangster film set in San Francisco's Chinatown, in which Ahn plays a lawyer who romantically pursues Wong's character, a medical doctor. Fan magazine discourse further solidified the myth of an idealized Hollywood Oriental couple by promoting an unverifiable, offscreen romantic union between the two Asian American performers. Wong's response to this rumor was, "It would be like marrying my brother." Neither Ahn nor Wong ever married and both were rumored to be gay, although ethnic newspapers often interpreted Ahn's bachelorhood as the result of his fatherly responsibility to younger siblings as well as his Korean-style piety to the mother, with whom he lived until her death in 1969, only nine years before he succumbed to a fatal bout with lung cancer.

Daughter of Shanghai and *King of Chinatown* represent the only romantic lead roles Ahn played among the 100-odd titles in his filmography. As Hollywood realigned its representational modes with the public consensus of "yellow peril" in the wake of the Pearl Harbor attacks and U.S. involvement in World War II, Ahn became increasingly mobilized as a Japanese impersonator (in lieu of Japanese American actors facing internment). He earned such appellations as "the man we love to hate" or "leering yellow monster" when appearing in a number of anti-Japanese propaganda films, including *Behind the Rising Sun* (1943), *The Purple Heart* (1944), *Back to Bataan* (1945), and *Blood on the Sun* (1945).

Away from the camera, Philip Ahn sought to bridge the United States and South Korea in political,

diplomatic, and cultural spheres. In May 1962, in recognition of his civic contributions, Ahn was installed as honorary mayor of Panorama City in the San Fernando Valley, a post he kept until his death. There, he helped his sister Soorah open an upscale Cantonese restaurant in 1954, which would prosper over the next three decades as the famous "Phil Ahn's Moongate." Between his dual career as a movie and television actor and as a successful restaurateur, Ahn actively worked as a spokesperson of the Korean American community and as a mediator between Korean politicians, diplomats, and businessmen and their American counterparts. In 1969, when Los Angeles was under the governance of his friend Mayor Sam Yorty, Ahn significantly contributed to establishing the Los Angeles-Busan sister city affiliation, a program for which he served as chairman.

As a token of esteem for this overlooked Asian American screen icon, the City of Los Angeles under Mayor Tom Bradley proclaimed November 14, 1984, as "Philip Ahn Day" or "Korean Day," and posthumously honored the actor with a star on the Hollywood Walk of Fame. Among his contemporary actors of Asian descent, only Anna May Wong and Keye Luke have received similar honors.

Ahn Chang Ho (1878–1938)

Ahn Chang Ho was one of the most significant figures in Korea's independence movement during the period of Japanese annexation. He traveled extensively across the world, leading and organizing an international network of underground activities working toward the liberation of his country. He was one of the earliest leaders of the Korean American community. Ahn was driven by a lifelong passion for achieving national freedom, which was undeterred by repeated persecution and imprisonment. This shaped his legacy as a practitioner of democracy committed to the practice of constitutional self-government as a means of overcoming colonial oppression.

Ahn was born October 11, 1878, in what is now South Pyongyang, North Korea. His father was a scholar and farmer who taught at the village school (seodang) before his death when Ahn was eight. Ahn studied Chinese classics until he moved to Seoul at the age of 16. There he attended the Underwood School (Gusae Hakdang), a missionary-sponsored institution run by Horace G. Underwood and Reverend F. S. Miller. Ahn remained at the school for four years, over the course of which he was taught English by Underwood, exposed to Westernized education, as well as becoming a teacher and a Christian.

In Seoul, Ahn was also exposed to political ideology and practices of supporting self-governing democracy after becoming acquainted with Seo Jaepil, a prominent reformist. Seo introduced Ahn to the Independence Club, an organization he had founded and that was comprised of reformists and activists working toward their vision of an independent Korea.

Ahn began mobilizing politically at an early age. Throughout his lifetime, Ahn's simultaneous visibility in the public eye as a spiritual leader and invisibility as an underground activist resulted in a legacy defined by complexity and often mystery. He was known to be a gifted orator who could rally the masses by making nationalist ideology and methodology accessible to the public. However, deeply interested in philosophy and education, Ahn was also known to be an intellectual who wrote and drafted countless constitutions for the various organizations and underground associations he established. His grassroots efforts across Asia

and the United States ultimately played a crucial role in consolidating the Korean Provisional Government in 1919. Ahn is remembered in history for a multitude of identities and achievements including a pioneering democrat, revolutionary in exile, military strategist, grassroots organizer, reformist educator, and writer of not only constitutions but patriotic songs (he is believed to have contributed to the national anthem).

In 1902, a time when few Koreans were migrating internationally, Ahn traveled to the United States with his wife Helen Lee. He left with the intentions of furthering his education in theology and education; however, after witnessing two Korean merchants fight upon his arrival in America, he decided to continue his activist efforts as well. Ahn and his wife moved to Riverside, California, where he took evening classes to study the Bible and English at a Methodist church in Los Angeles. His initial community-organizing efforts included running an employment agency placing Korean workers in orchards, an activity in which he sometimes participated himself.

Ahn went on to found the United Korean Association (Kongnip hyophoe) in 1905, which mobilized Koreans in the United States. He wrote a democratic constitution for the organization by applying his knowledge of the American constitution. This document was the beginning of a series of constitutions Ahn would draft, which would often describe in detail a system of separation of powers and checks and balances.

In 1907, Ahn returned to Korea, where he founded the New People Society (Sinminhoe), an underground revolutionary organization that also worked toward strengthening the transnational relationship between Korean Americans and Koreans. Up until Japan's annexation of Korea in 1910, Ahn worked toward establishing branches of the Korean National Association (Kungminhoe), a self-governing organization supporting Korean independence in Russia, Manchuria, and China, as well as strengthening grassroots efforts in America.

After the annexation, Ahn focused his energy on what would eventually become the Provisional Government of the Republic of Korea—a government in exile in Shanghai, China. He traveled across Asia and the United States mobilizing Korean National

Association branches and establishing a network of independence activists that began to operate as the central body of the Provisional Government. In 1913 he created “Hungsadan,” a leadership-training society, in San Francisco, California; later on he would also establish the National Representatives of Congress in 1923 and the Korean Independence Party in 1929. For every organization Ahn mobilized, he wrote a commensurate constitution rooted in his core political beliefs emphasizing self-governance and democracy.

The Provisional Government of the Republic of Korea was officially formed in Shanghai in August 1919 in the aftermath of the March First Movement in Korea where massive demonstrations protested Japanese colonial rule; it consolidated three smaller bodies of government in exile in Vladivostok, Seoul, and Shanghai. Ahn accepted the position of chief of the Bureau of Labor and drafted the Provisional Constitution of the Republic of Korea. This constitution delineated a presidential system with three branches of government, was comprised of 8 chapters and 58 articles; it was passed by the Provisional Assembly on September 11, 1919.

Ahn, however, was also vested in militant efforts and had a specific agenda for waging a war of independence. As he traveled from Russia, Manchuria, and to China, Ahn was uniting scattered Korean military groups in systematic preparation for waging a war of independence. Not only did he support democratic government as a means of ending anticolonial struggle, but he also worked toward military unification, formulating military policy and rules, organizing and training leaders, and forming alliances among groups.

Given his activities, it is no surprise that Ahn was closely acquainted with other prominent nationalists including Ahn Jung-gun, Kim Ku, Yi Dong-hwi, Yeo Un-hyong, and Seo Jaepil. In 1926, he returned to Korea where he was continuously arrested and imprisoned by the Japanese authorities—first in connection with Ahn Jung-gun’s assassination of the Japanese Resident General of Korea Ito Hirobumi. In 1937, he was arrested one final time; in poor health, he was released on bail and transferred to the Kyung Sung University hospital where he died on March 10, 1938.

Aikido in America

Aikido is a Japanese martial art that is practiced in the United States and throughout the world. It is primarily a complementary and defensive style of combat that uses an attacker’s own energy to dispel an oncoming attack. In practice, it is about learning to blend and work together with one’s opponent for reciprocal benefits. The word Aikido loosely translates to “the way of harmony and spirit.” Physical strength and size are not integral to the practice of Aikido, thus it can be performed and effectively used by almost everyone. The throws and falls that are common in Aikido practice can be executed by students of almost any size or weight as they are based on being centered and grounded and emphasize hip rotation, motion, and getting off of the line of attack. Aikido differs from many other martial arts in that it is almost exclusively used for practice, functional application, mental and physical benefits, and is not a competitive art/sport.

Aikido was created by Morihei Ueshiba (1883–1969) who is also known as O-Sensei (great teacher). Aikido was born out of Ueshiba’s training in the older art of Daito-Ryu Aiki Jujitsu, his proficiency with multiple weapons, and spiritual beliefs that focused on being harmonious and being one with the surrounding universe. It is an early mixed martial art form with diverse roots. Aikido is thus not only an empty hand style of combat and self-defense, it also combines the use of joint locks, nerve manipulation, and weapons including the jo (wooden stick), bokken (wooden sword), and tanto (wooden knife). The use of breath, meditation, and mind-body awareness are also vital to the art.

Aikido was first brought to the continental United States and the territory of Hawaii in 1953. The first Aikido dojo outside of Japan was established in Honolulu, Hawaii and is still in use seven days a week. Though there are Aikido dojos throughout the United States, the art is especially popular in the Hawaiian Islands perhaps because of the large local Japanese population and its close ties to Japan.

Currently, there are several styles of Aikido that are practiced and passed down. One of the primary motivators for multiple styles emerging was a conflict that occurred after O-Sensei's death between his son, Kisshomaru Ueshiba, and one of his students, Koichi Tohei. The younger Ueshiba continued to teach his father's style whereas Tohei founded a new style with a differing governing organization. Today, the most common forms of Aikido practiced include Aikikai (Ueshiba's traditional style), Ki Aikido (which derived from Tohei), and Iwama style that merged from Kisshomaru Ueshiba's student, Morihiro Saito. Many high-ranking Sensei teaching in the United States today are only two generations removed from the founder.

Twenty-first-century Aikido in America adheres to many of the traditions that were in use when it was first brought over from Japan over 60 years ago. Students begin as white belts and over the course of several years take promotional tests (kyu tests) to achieve the rank of Shodan (1st degree black belt). Shodan is really the beginning of the students' own personal training where they begin to merge their years of Aikido education with their own understanding of the practice. There are several degrees of black belts that are awarded and each additional degree requires years of training. Unlike many martial arts where a student can accumulate ranks and belts in a relatively short period, Aikido is known for being an art where promotions are given at a slower rate and students must practice for a longer period between each belt.

Advancement in Aikido requires a student to be conversant in the Japanese language as tests are given in Japanese. Students must also have a firm grasp of dojo etiquette. Aikido has no preference for age, gender, culture, ethnicity, or nationality but it adheres strongly to respect for rank. Junior students are expected to take direction from senior students and all

dojo members are expected to follow instruction from their Sensei.

Aikido is sometimes criticized for being too complementary and thus not brutal or effective enough as a fighting art. However, as students progress, they are expected to be able to execute techniques at a faster pace and to fend off multiple attackers and attackers brandishing weapons. Though Aikido is a noncompetitive martial art, many of its forms have the potential to cause serious to fatal injuries. A competitive form of the art would require eliminating many of the techniques.

Akaka, Daniel K. (1924–)

Daniel Akaka was a Democrat U.S. Senator from Hawaii, serving in that office between 1990 and 2013. Akaka is also the first senator in the United States of native Hawaiian ancestry, as well as the only Chinese American member currently in the Senate.

Daniel Akaka was born Daniel Kahikina Akaka on September 11, 1924, in Honolulu, Hawaii. Upon graduation from high school, Akaka enlisted in the army and served with the U.S. Corps of Engineers during World War II. His military service extended between 1943 and 1947 in places among Saipan and Tinian. After the war, Akaka studied at the University of Hawaii and received a bachelor of education in 1952. Before becoming a member of the U.S. House of Representatives in 1976, Akaka was first and foremost an educator. He worked as a high school teacher,

vice-principal, principal, and chief program planner for the Department of Education in the state of Hawaii. He also received a Master of Education from the University of Hawaii in 1966.

After working in the Hawaii office of economic opportunity and as special assistant for human resources in the office of the governor George Ariyoshi, Akaka ran for the House seat from Hawaii's second district and was elected into office in 1976. For the next 14 years, Akaka would win six consecutive House elections, extending his term as House representative from 1976 to 1990.

In 1990, Akaka was appointed by Governor John Waihee to the Senate to temporarily fill in for Senator Masayuki "Spark" Matsunaga, who had passed away in April of that year. Akaka was sworn into office on May 16, 1990. Later that year in November, Akaka won the special election to serve out Senator Matsunaga's remaining term (4 years) and has subsequently won all other Senatorial races since then (1996, 2002, and 2008). He left office in early 2013.

As a Senate, Akaka served on a number of committees, including the Veterans' Affairs Committee, the Homeland Security and Governmental Affairs Committee, the Armed Services Committee, the Indian Affairs Committee, and the Banking, Housing, and Urban Affairs Committee. Senator Akaka also has extensive memberships in various caucuses, including but not limited to the Congressional Asian Pacific American Caucus and the Senate Army Caucus.

A World War II veteran himself, Senator Akaka (along with Senator Daniel Inouye, also of Hawaii) is a firm supporter of benefits for Filipino veterans, who had fought under U.S. military command, but had not received compensation for their work and dedication. Sponsored by Senator Akaka, the Filipino veterans compensation bill never made it out of the 110th Congress, although the Veterans Benefits Enhancement Act of 2007 passed in both the Senate and the House. Ironically, benefit provisions for Filipino veterans would not materialize until the inclusion of the provisions within the Stimulus Bill. Along with the Stimulus Bill, benefit for Filipino veterans was signed into law on February 17, 2009 by President Barack Obama.

Another noteworthy issue that Senator Akaka championed is sovereign rights for native Hawaiians.

Since 2000, Akaka has endorsed and introduced various forms of a bill that would secure these rights for native Hawaiians. In the 111th Congress, Senator Akaka, along with Senator Daniel Inouye, introduced the Native Hawaiian Government Reorganization Act of 2009, commonly referred to as the Akaka Bill. The bill was endorsed by a Congressional House Committee and the Senate Indian Affairs Committee in December 2009.

A lifelong public servant, Daniel Akaka is not only one of the few Asian Americans that have ever served in Congress; he had been in office for over 30 years. During which time, he received many awards and was honored by various organizations such as the Vietnam Veterans of America, the State of Hawaii, and the University of Hawaii Alumni Association.

Alexander, Meena (1951–)

Meena Alexander is an internationally acclaimed writer, poet, and scholar. She is a Distinguished Professor of English and a teacher of Creative Writing at Hunter College and the Graduate Center of City University of New York. Her areas of interest and

expertise include poetry, aesthetics, and poetics in transnational and Asian American literature, gender and identity, and migration narratives. She has published several volumes of poetry and also is the author of memoir, fiction, a collection of personal essays and a critical study of English Romanticism.

Meena Alexander was born in Allahabad, India and raised in India and Sudan. She has a BA in English and French from University of Khartoum in 1969 and an MA and PhD in English in 1973 from Nottingham University in England.

Meena Alexander's multiple collections of poetry include *Illiterate Heart* (winner of the 2002 PEN Open Book Award), *Raw Silk* (2004), and *Quickly Changing River* (2008). She is also the editor of the Everyman Library's *Indian Love Poems* (2005). She has written the acclaimed memoir, *Fault Lines* (picked by *Publishers Weekly* as one of the best books of the year in 1993) as well as two novels, one of which is *Nampally Road* (1991). She has published two collections of writings that include short stories, personal essays, and poetry entitled *The Shock of Arrival* (1996) and the *Poetics of Dislocation* (University of Michigan Poets on Poetry series, 2009). She has two academic studies that include *Women in Romanticism*. A book of essays on her work has recently appeared: *Passage to Manhattan: Critical Essays on Meena Alexander* (2009).

She has been the recipient of multiple awards and honors for her work, including the 2009 Distinguished Achievement Award in Literature from the South Asian Literary Association (an organization allied to the Modern Languages Association) for contributions to American literature.

Alexander's works are widely used in women and gender studies, Asian American Studies, studies of poetry, and the study of the South Asian diaspora. Her work in the genres of poetry and memoir explores the bridges and boundaries of creative expression. In her memoir, *Fault Lines*, she interrogates her role as an author with multiple affiliations and identities: "I am a poet writing in America. But [am I an] American poet? . . . An Asian-American poet then? . . . A woman poet, a woman poet of color, a South Indian woman who makes up lines in English . . . A Third World woman poet . . .?" (193) Meena Alexander's work is marked by her ongoing commitment to address

and question the legacy of colonialism and its continuing effects in the era of decolonization and globalization in both transnational and American contexts.

Ali, Agha Shahid (1949–2001)

Agha Shahid Ali was a diasporic Kashmiri poet and professor. Ali penned several volumes of poetry in English and was known for his vast array of literary influences. Ali was mostly raised between Kashmir and Delhi but spent a few years in the United States as a youth when his parents were completing educational work abroad. After coming to the United States for college, Ali spent the rest of his adult life in the United States. As a creative writing professor, Ali held positions in various institutions including University of Massachusetts, Amherst, University of Utah, and New York University. Before his death from cancer in 2001 at the young age of 52, he had published several collections of original poetry, translations of Urdu poet Faiz Ahmed Faiz, and compilations of English language ghazals by a myriad of writers.

Notably, he popularized English-language experimentations with the *ghazal* format, borrowing from a tradition of Urdu poetry based on a series of couplets. In 2000, he published *Ravishing DisUnities: Real Ghazals in English*, a collection of work from various U.S.-based authors showcasing this fusion aesthetic. Yet, he did not exclusively write in this style; many of his edited collections contain ghazals alongside numerous other poetic styles.

The importance of Urdu poetry on his work, however, cannot be understated; one of Ali's most enduring influences was the Urdu poet Faiz Ahmed

Faiz whose work Ali translated in *The Rebel's Silhouette* (1991). Though Ali had pioneered English-language ghazals, he translated Faiz in a lyrical free verse to capture the spirit of Faiz's poetic impulse. His choice to abandon this structure has remained controversial within literary circles, even though Ali included both the English and the original Urdu in his book. His translations remain some of the most widely circulated within the English-speaking world. This compilation reflects Faiz's politically left worldview, including poems written when he was a political prisoner in Pakistan and his well-known composition "Do Not Ask Me for that Love Again," which narrated his story of political disillusionment.

Thematically, Ali's own work explored the textured experiences of diaspora. An early collection, *Half-Inch Himalayas* (1987), contains the seminal eponymous poem, a short musing on seeing the Himalayas shrunk to fit the picture postcard sent to him from Kashmir. In *The Nostalgist Map of America* (1991), Ali poetically explored the social and cultural geography of the United States, poetically narrating a road trip he had taken from one coast to another. Within both of these compilations, Ali mobilized a diverse set of literary references—from classic English writers to Iranian poets. Although Ali wrote specifically from within a Kashmiri diaspora, these references created a historical texture that made palpable the interlinkages between different experiences of displacement and loss. His ability to cull together these distinct literary traditions brought him recognition within the field of creative writing.

Ali's most lasting legacy, however, has been his work that examined the conflict in Kashmir. Violence erupted in Kashmir in 1989 after years of discontent between Kashmiris who claimed they had been systematically disenfranchised by the Indian government. These uprisings and his stunted ability to travel back to (or receive news from) his homeland inspired the poems that became his collection *The Country Without a Post Office* (1997). The poems in this collection are not documentary, per se—they do not attempt to provide a factual account of the insurgency. However, they do utilize fragments of stories (his own and others') to narrate vignettes of life under occupation. The poems grapple with the brutal effects of state

violence on a myriad of levels. Some, like "I see Kashmir from New Delhi at Midnight," reflect on the Indian army's tactics of torture in the infamous Papa II interrogation centers. Others, like "Dear Shahid," conjure the image of the central post office in Kashmir in total disarray—hundreds of letters littered everywhere, neither coming nor going. Yet, even *Post Office* does not candidly express support for any particular political configuration. He instead opted to explore the multiple dimensions of human suffering and loss that itself made a political intervention without explicitly undergirding any party position. At the time of publication, Kashmir conflict was continually framed in the popular press as stemming from an essential conflict between Hindus and Muslims. In poems like "Farewell," Ali intervened in these false binaries by evoking how traditions of Kashmiri Shavisim and Sufism were deeply interwoven. In doing so, he also articulated a set of concerns that were specifically Kashmiri, and not simply leftover conflict from India and Pakistan's bloody partition at the end of British colonialism.

In the years since his passing, Agha Shahid Ali's significance to a transnational South Asian diasporic imaginary has only grown. His posthumous collection *Rooms Are Never Finished* (2002) meditated on the death of his mother from brain cancer (the same disease that would kill him a few short years later) and the journey back to Kashmir with her body. After Ali's own passing, Amitav Ghosh wrote a well-circulated epitaph "The Ghat of the Only World," that was published in numerous locations, including the *Journal of Urdu Studies*. Numerous writers have paid homage to Ali's writings on violence, memory, and affect in their own work on Kashmir. Mirza Waheed and Salman Rushdie both open their respective novels (*The Collaborator* [2011], and *Shalimar the Clown* [2006]) with quotes from *The Country Without a Post Office*. In his memoir on growing up in Kashmir, Basharat Peer also refers to *Post Office*, using Agha's poetry to begin a chapter on memories of torture in the infamous Papa-2 interrogation center. Although most of Ali's impact has been in English-medium audience, his influence has not been exclusively so; in 2002 Srinagar-based poet Shafi Shauq translated *Post Office* into a Kashmiri-language collection of his work entitled

Zuv Chhum Bramaan. From within a small but growing literary tradition that emerged since the Kashmir conflict began, Ali's work has become canonical.

Ali, Saqib (1975–)

Saqib Ali is a software engineer and former state delegate in the Maryland House of Delegates. Between 2007 and 2011, Ali represented the 39th District, which includes Montgomery County. Though he does not consider his Muslim faith to be a defining factor in his political beliefs, he was the state of Maryland's first Muslim elected official.

Saqib Ali was born on January 21, 1975, in Chicago, Illinois. His parents are from India and Pakistan, and he identifies as Pakistani American. Ali studied computer science and earned a bachelor's degree in 1995, and a master's degree in 2001, both from the University of Maryland at College Park.

Ali recalls hearing his family members debating over political issues, but not being involved through voting or other forms of local community engagement. Post 9/11, he wanted to break through the hesitance to become involved in political matters that he sensed in other Muslim Americans. In 2003 and 2004, Ali volunteered as a legislative coordinator for the Howard Dean presidential campaign. He worked full-time for Congressman Chris Van Hollen's reelection campaign in 2004, which he supported largely because of Van Hollen's strong opposition to the Iraq War.

In 2006, Ali ran for the 39th District seat in the Maryland House of Delegates on a platform emphasizing health care access, education funding, and civil rights and civil liberties. Being a political newcomer,

this may have worked in his favor. Senator Patrick J. Hogan and Delegates Nancy J. King and Charles E. Barkley dropped incumbent Delegate Joan F. Stern from their Democratic slate in the primary elections. Saqib won an upset by getting more votes than Stern in the primary and went on to win a seat in the general election. Though Ali did not draw on religion as an issue or cite links between his religion and his political views, at least one individual protested his candidacy with signs making derogatory comments about his faith outside of Ali's home and his campaign headquarters. In the same year, Kumar P. Barve was elected to represent the 17th District, which made Maryland the first state to have two South Asian legislators.

Ali served in the House of Delegates from 2007 to 2011, during which time he was a member of the Environmental Matters Committee, the Washington Suburban Sanitary Commission Matters Committee, and the Montgomery County Delegation. A self-described progressive, Ali's support for gay marriage cost him the backing of some, including that of a friend who refused to continue hosting his campaign website because of this position.

In 2010, Ali ran for State Senate against incumbent Senator Nancy King. King's campaign sent out six negative mailers targeting Ali, including one that accused Ali of receiving money from special interest groups. Ali criticized the mailer for containing a photo in which his entire image, including his skin and facial features, appeared to have been darkened. Though King's campaign claimed that the photo had not been intentionally darkened, other neutral observers argued that King's campaign had also displayed racial insensitivity in other instances. Ali lost to King by a narrow margin.

In 2012, Ali ran for the District 2 seat in the Montgomery County Board of Education, but did not advance past the primaries. He lives in Gaithersburg, Maryland, with his wife, Susan, and two daughters, Sofia and Sascha.

Alien Land Laws

The term, "alien land laws," is actually a misnomer. These laws should more properly be called antialien land laws because their main purpose was to deny certain aliens—those deemed "ineligible to [sic] citizenship"—the right to purchase, transfer, lease, or control agricultural land. "Ineligible" persons referred to immigrants born in Asian countries who were not allowed to become U.S. citizens through naturalization. These laws, passed in California in 1913 and 1920 and amended in 1923 and 1927; in Arizona in 1917; in Washington, Texas, and Louisiana in 1921; in New Mexico in 1922; in Oregon, Idaho, and Montana in 1923; in Kansas and Arkansas in 1925; in Washington (for the second time) in 1937; in Missouri in 1939; in Nebraska, Utah, Wyoming, and Arkansas (for the second time) in 1943; and in Minnesota and Oregon (for the second time) in 1945, were not targeted simply at alien landownership per se. Rather,

by depriving Japanese immigrants of the right to own or lease agricultural land, the laws aimed to keep Issei (first-generation Japanese immigrants) as mere farm laborers—a status they were trying to transcend by leasing land as tenant farmers or even buying land for farms of their own. Anti-Japanese individuals and groups thought that by making the Issei's lives as difficult as possible, the immigrants would sooner or later leave California and other states with significant numbers of Issei farmers. The laws were part and parcel of a multifaceted anti-Japanese movement that spanned the first half of the twentieth century, culminating in the incarceration of both Issei and Nisei, their U.S.-born children living in California, Oregon, Washington, and a section of Arizona during World War II. By enacting these anti-alien land laws, California, in particular, and the federal government engaged in a power struggle that played out within a larger context in which the United States and Japan, two militarily ascendant nations both eager to build empires, competed for hegemony across the Pacific. The competition ended only after Japan was defeated at the end of World War II.

Because "eligibility" or "ineligibility" for U.S. naturalized citizenship underpinned the classification of aliens into several categories, a quick review of U.S. naturalization laws is necessary before discussing the antialien land laws themselves. In 1790 Congress passed the first naturalization law to allow "free, white persons" born in foreign countries who had resided in the United States for at least two years to become naturalized citizens. A 1795 law increased the required period of residency to five years. In the aftermath of the Civil War, the 1868 Fourteenth Amendment declared that all children born in the United States, as well as all foreign-born persons who had been naturalized, were U.S. citizens. The 1870 Naturalization Law made it possible for persons of African nativity or descent to also become citizens but neither the Fourteenth Amendment nor the 1870 law mentioned Asian immigrants—an omission that left their status indeterminate. In 1878 the U.S. Ninth Circuit Court of Appeals ruled on the first "racial prerequisite" case heard in the United States when it decided that Ah Yup, a Chinese "of the Mongolian race," who had petitioned to become a naturalized citizen, was neither a

white nor a black person and hence was not eligible for naturalized citizenship. The 1882 Chinese Exclusion Act reiterated that Chinese did not enjoy the right of naturalization.

Two subsequent California cases, *In re Hong Yen Chang* decided in 1890 and *In re Gee Hop* decided in 1895, revealed clearly that the question of whether Asians had the right to become naturalized U.S. citizens was full of ambiguities. An article entitled “Naturalizing a Chinaman” published in the *New York Times* on November 19, 1887 reported that Hong Yen Chang was a graduate of Columbia University’s Law School. In November 1887 the three men who examined him during his bar examination unanimously recommended that he be admitted to the New York bar. However, two justices in the New York Supreme Court decided he could not be admitted to the bar because he was not a U.S. citizen. The justices were unaware that a special bill had been introduced and passed in the New York state legislature just a week earlier to grant him a certificate of naturalization. After this information became known, the New York State Bar issued him a license to practice law in that state. However, three years later when he applied for a license to practice law in California, the California Supreme Court ruled that “a person of Mongolian nativity is not entitled to naturalization under the laws of the United States and a certificate showing the naturalization of such person by the judgment of any court is void, and cannot entitle him to admission to practice as an attorney in this state; nor will his license to practice in all the courts of the state of New York, issued by the supreme court of that state, avail such applicant” because the documents he possessed had been given to him in violation of the 1882 Chinese Exclusion Law.

In the second case involving a cancellation of citizenship for a Chinese, Gee Hop had been granted naturalized citizenship in 1890 and had obtained a U.S. passport before he left to visit China. Upon his return to the United States in 1895, he was not allowed to disembark from the ship he was on. So he filed a writ of *habeas corpus* to secure his release. The judge who heard his case decided that both his certificate of naturalization and his passport were “facially void” because, as a Chinese, he should never have been given those documents in the first place.

The Chinese did win one victory, however, and it was an important one. The 1898 U.S. Supreme Court decision, *United States v. Wong Kim Ark*, affirmed that children of Chinese ancestry born in the United States were U.S. citizens, regardless of what their parents’ citizenship status might be. That landmark decision upheld the principle that U.S. citizenship is based on *jus soli* (“right of soil,” which means that a person’s citizenship or nationality is determined according to what country he or she is born in), and not *jus sanguinis* (“right of blood,” under which citizenship or nationality is based on the citizenship of an individual’s father).

The right of immigrant Japanese to be naturalized was first considered during the last decade of the nineteenth century and the first decade of the twentieth. In an 1894 case, *In re Saito*, heard in the U.S. First Circuit Court in Massachusetts, the justices declared that Japanese were “Mongolians” and that “the intent of Congress” was to exclude all races except the Caucasian white race from naturalized citizenship. Two cases involving Japanese heard in Washington State, *In re Yamashita* in 1902 and *In re Buntaro Kumagai* in 1908, as well as a 1910 case considered by the U.S. Fourth Circuit Court in Virginia, *Bessho v. United States*, likewise declared Japanese ineligible for naturalized citizenship.

Takuji Yamashita came to the United States as a teenager, attended Tacoma High School, and graduated after only two years of study. In 1902 he graduated from the University of Washington’s Law School and passed his bar examination with distinction. He applied for a license to practice law but was told that he could not get a license because only U.S. citizens could be admitted to the bar. Yamashita appealed to the Washington Supreme Court, acting as his own lawyer. Although the justices praised the brief he had submitted as a document of “solid professional quality” that contained legal arguments that were “quite original,” they decided that because he was a person of “the Japanese race” he was not eligible to become a naturalized citizen. He fearlessly told the justices that denying him that right contradicted the values “of the most enlightened and liberty-loving nation of them all.” Two decades later Yamashita and Charles Kono formed a corporation, the Japanese Real Estate

Holding Company, and tried to file articles of incorporation for the company in an attempt to challenge Washington State's 1921 Alien Land Law (discussed below). When Washington's Secretary of State Jay Hinkle refused to accept the filing papers, Yamashita took his case to the Washington Supreme Court. When that court ruled against him he appealed to the U.S. Supreme Court. In 1922, in *Yamashita v. Hinkle*, the high court affirmed the Washington Supreme Court's decision. Unable to practice law or to own and run a landholding company, Yamashita earned his living as a businessman. (To right a historic wrong, the Washington Supreme Court admitted him posthumously to the state bar as an honorary member in 2001.)

The Buntaro Kumagai case involved a veteran who had served in the U.S. Army and was theoretically eligible for citizenship under an 1862 law that had been incorporated into the Act of 1901 to allow "any alien" who had served in the army and had been honorably discharged to petition for naturalization. However, the U.S. District Court in Washington decided that "any alien" meant only aliens who were "free white persons," so the court denied Buntaro Kumagai's petition. The Namiyo Bessho case involved another veteran who had served in the U.S. Navy for five years and was honorably discharged. In his application for naturalization he relied on an 1894 law that granted citizenship to "any alien" who had served in either the U.S. Navy or the Marine Corps for five consecutive years and was honorably discharged. The U.S. District Court in Virginia rejected his application, saying that Congress did not intend to include "Mongolians" in the term "any alien." On appeal, the U.S. Fourth Circuit Court of Appeals affirmed the district court's ruling.

In the same period, however, several Japanese did manage to become naturalized citizens. In 1896 Ulysses Shinsei Kaneko, a businessman and labor contractor in Riverside, California became a naturalized citizen. A leader in the Japanese American community, he served as the first president of the Riverside Japanese Association. He was the first Issei to buy land (20 acres) in Riverside in 1897 on which he planted an orange grove. A Christian (that is probably how he acquired "Ulysses" as his first name), he also helped buy land to build a Japanese Methodist Church that

he had cofounded. In subsequent years he worked as an auditor for the City of Riverside, served as a juror, worked as a court interpreter, and was elected to the board of directors of Riverside's Chamber of Commerce—an altogether unusual life trajectory for an Issei in California in the early twentieth century. Masuji Miyakawa, the second Issei to become a naturalized American citizen, graduated from the University of Indiana Law School in 1905. He received his certificate of naturalization the same year. In his application for citizenship, he stated that he was descended from samurai but he would be willing to "expressly renounce such title of nobility in Japan" if he could become a U.S. citizen. In 1907 Tamematsu Matsuki also became a naturalized citizen in Florida. (No biographical information is available about him.)

Such contradictory outcomes underline the fact that the racial assumptions embedded in U.S. citizenship laws were arbitrary, socially constructed, and highly malleable. The pseudoscientific category, "Mongolian," was enshrined not only in federal statutes but also in California's second constitution, adopted in 1879, that stipulated "Mongolians" could not become naturalized citizens. In the racial classification schemes prevalent in the eighteenth, nineteenth, and early twentieth centuries, "Mongolian" referred to the "yellow race"—supposedly one of the world's major "races." The other recognized "races" were the Caucasian "white race," the Negro (or "Ethiopian") "black race," the [Native] American "red race," and the Malay (or Filipino) "brown race." The racial basis of U.S. citizenship laws was not overturned until Congress passed the 1952 McCarran-Walter Act (also known as the 1952 Immigration and Nationality Act).

Thus, at the dawn of the twentieth century the answer to the question of whether Japanese could become naturalized American citizens was still legally ambiguous. Nonetheless, the racial classification, "Mongolian," became part of the ideological foundation upon which the anti-Japanese movement developed. After the United States annexed Hawaii in 1898, Congress passed an Organic Act in 1900 to make Hawaiian laws conform to U.S. laws. Before 1900 contract labor had been legal in Hawaii where more than a hundred thousand Chinese and Japanese contract workers had been recruited to work

in the islands' sugar cane plantations during the second half of the nineteenth century. By that century's end Japanese comprised more than 70 percent of the plantation labor force. Once they were freed from their contracts, an increasing number of them migrated to the U.S. mainland where wages were much higher than in Hawaii. These re-migrants, together with new migrants coming directly from Japan to the continental United States, quickly made the Japanese presence more visible in California, Oregon, Washington, and further inland in the American West. Anti-Asian racial paranoia that had subsided somewhat after the Chinese were excluded in 1882 once again became an important element in the politics of the Western states.

The California state assembly and senate together passed a resolution unanimously in 1905 to warn against the "growing and threatened invasion of our State by Japanese immigrants." In 1906 the San Francisco school board attempted to place Japanese children into segregated schools. When the Japanese government protested, President Theodore Roosevelt, wary of potential military conflict with Japan—a rising military power that had defeated China in the 1894–1895 Sino-Japanese War and 10 years later defeated Russia and completely demolished the latter's navy in the 1904–1905 Russo-Japanese war—intervened and persuaded California's officials to rescind the segregation order. In exchange, the president promised California's officials that he would negotiate with the Japanese government to ask it to prevent any more Japanese laborers from coming to the United States. The agreement the two nations reached in 1907 was called the Gentlemen's Agreement; it went into effect in 1908. Roosevelt also signed Executive Order 589 in 1907 to prohibit Japanese (as well as Koreans over whose country Japan had imposed a protectorate in 1905) going to or were already in Hawaii, Mexico, and Canada from re-migrating to the "continental territory of the United States." This stricture applied to both skilled and unskilled laborers.

Despite the ongoing federal efforts to curb Japanese immigration, in January 1907 California's legislators introduced the first antialien land bill in the state assembly and the state senate passed a resolution denouncing the federal intervention in the school segregation case. However, after receiving a telegram

from the California congressional delegation in Washington, D.C. urging delay in light of the diplomatic negotiations going on at the time between the United States and Japan, the bill did not go forward. A month later, however, a new antialien land bill was introduced in the assembly and the state senate proposed to put a measure on the ballot to ascertain the will of the voters with regard to Japanese immigration and land ownership. Again, President Roosevelt interceded. Not to be thus stymied, five antialien bills, including one to forbid ownership of land by aliens, were introduced in the California legislature in 1909 but these, too, were killed by Governor James Gillett "under the bludgeoning of the big stick in the skilled hands of President Roosevelt," as Franklin Hichborn, chronicler of the California legislature's history, colorfully put it. Equally important, because the final version of the 1909 antialien land bill applied to *all* aliens, European investors and bankers who had purchased arable land or who intended to purchase farmland in California lobbied hard against its passage.

National party politics affected deeply the fate of the proposed antialien land bills. After Hiram Johnson, a Republican, won the governorship in California in 1910, Republican President William Howard Taft summoned him to Washington to request that nothing be done to antagonize Japan when that country and the United States were negotiating what would become the 1911 Treaty of Commerce and Navigation. President Taft also warned Governor Johnson that San Francisco, which was competing to host the 1915 Panama-Pacific Exposition—a huge international trade fair to promote business between East Asia and the United States that would simultaneously celebrate the projected completion of the Panama Canal—would not be considered as a possible site for the exposition if anti-Japanese hostilities broke out there. Johnson understood the warning and impeded the state legislature's efforts to pass an antialien land bill during the 1911 legislative session. However, when Democrat Woodrow Wilson won the presidency in 1912, Governor Johnson, who had run as the vice presidential candidate on the Progressive Party ticket during the 1912 elections, did not feel similarly compelled to help Wilson maintain amicable relations between the United States and Japan. In 1913 five antialien land bills were

introduced in the California assembly and two in the senate. Despite Japan's outcry and U.S. Secretary of State William Jennings Bryan's cross-country trip to California to urge Johnson and California's lawmakers not to pass the legislation, the governor defiantly signed the final version of the bill into law on May 19, 1913, the interests of the promoters of the Panama-Pacific Exposition notwithstanding.

Section 1 of California's 1913 Alien Land Law stated that "all aliens eligible to citizenship . . . may acquire, possess, enjoy, transit and inherit real property, or any interest therein, in this state, in the same manner and to the same extent as citizens of the United States, except as otherwise provided by the laws of this state." Section 2 indicated that "aliens *other than those mentioned in section one* [emphasis added] . . . may acquire, possess, enjoy, and transfer real property, or any interest therein, in this state, in the manner and to the extent and for the purposes prescribed by any treaty now existing between the government of the United States and the nation or country of which such alien is a citizen or subject, and not otherwise, and may in addition thereto lease lands in this state for agricultural purposes for a term not exceeding three years." The remaining six sections stipulated that companies, associations, or corporations in which a majority of the shareholders were ineligible aliens were similarly curtailed. Title to any land purchased illegally would be escheated (confiscated) with title passing to the state of California. Heirs to farmland owned by ineligible aliens could not inherit it; instead, the government would sell such properties, deduct the expenses incurred during that sale, and distribute the remaining money to the heirs. The law was cleverly worded: it avoided identifying who the ineligible aliens were and what their countries of origin might be. This semantic trick allowed Californians to claim that the law did not single out Japanese for discrimination.

Japan and its ambassador to the United States saw through the ruse immediately. Ten days before Governor Johnson signed the bill into law, the Japanese ambassador to the United States, Chinda Sutemi, who had received both his BA and MA degrees in the United States, had earlier served as Japan's consul in San Francisco, and was thus quite knowledgeable about the United States, wrote a letter of protest to

Secretary of State Bryan, calling the alien land law "unfair," "discriminatory," "prejudicial," "inequitable," "repugnant," and "inconsistent with the provisions of the treaty actually in force between Japan and the United States, and is also opposed to the spirit and fundamental principles of amity and good understanding upon which the conventional relations of the two countries depend." Ambassador Chinda argued that the 1913 Alien Land Law was "a discrimination against my countrymen whose *right to become American citizens has not yet been definitely established*." Secretary Bryan responded that the California law was "not political" and was "not part of any general national policy which would indicate unfriendliness . . . between the two nations. It is *wholly economic*. It is based upon the particular economic conditions existing in California as interpreted by her own people, who *wish to avoid certain conditions of competition* in their agricultural activities." Bryan pointed out that aliens in the United States had "the privilege of *suing* in the Federal courts" if they felt their rights had been infringed. Chinda rebutted that the Japanese government was "unable to escape the conclusion that the measure is unfair and *intentionally racially discriminatory*." Bryan asserted once again that "[t]he contest is economic; the racial difference is a *mere mark or incident of the economic struggle*" [all emphasis added].

This diplomatic correspondence, preserved in the archives of the U.S. State Department and housed in the National Archives, prophesied the actions that would be taken in the ensuing decade. Immigrant Japanese would contest their right to become naturalized citizens until they lost decisively in the 1922 U.S. Supreme Court case, *Takao Ozawa v. United States* (discussed below). Legislators in California and other states would find increasingly effective ways to strip Issei farmers of the right to cultivate the soil, thus reducing competition against European American farmers. Issei farmers and European American landowners who wished to lease land to them would go to court repeatedly in efforts to have the anti-alien land laws declared unconstitutional. To those European American landowners who claimed that their lands could not be used productively without Japanese laborers and tenants, the alien land laws' backers

responded that the farm labor shortage would quickly end once the Panama Canal was completed because the canal would enable large numbers of European farm hands to reach California more quickly and cheaply by boat rather than having to travel overland from the East coast to the West. The hoped-for relief in the form of European immigrants substantiated the Tokyo government's argument that the main goal of California's 1913 Alien Land Law was to discriminate against Japanese immigrants solely on the basis of their race.

The racially charged antagonism toward Issei developed in part because they were successful cultivators of the soil. Even more troubling to European Americans was the Issei's alacrity in climbing up the agricultural ladder, moving upward from landless wage laborers to sharecroppers or tenant farmers and finally owner-operators of their own farms. The 1900 U.S. Census counted only 37 farms operated by Japanese on 4,674 acres in California. The 1910 Census showed that there were 1,816 Japanese-operated farms occupying a total of 99,524 acres. Pioneer historian Yuji Ichioka, however, found much larger numbers in Japanese-language sources that indicated Issei (counting owner-operators, sharecroppers, tenant farmers, and contract farmers together) cultivated 17,260 acres in 1902 (almost four times the acreage reported in the 1900 Census), 61,858 acres in 1905, 131,292 acres in 1907 when the first alien land bills were introduced in the California legislature, 194,742 acres in 1910 (almost double the figure in the 1910 Census), and 281,687 acres in 1913 when Governor Hiram Johnson finally signed an alien land bill into law. Between May 19, 1913, when the law was signed, and August 10, when it went into effect, Japanese rushed to form landholding companies as the 1913 law did not prohibit such companies. Of the 141 Japanese-owned companies in existence in California at the end of 1913, 100 held agricultural land; of the latter, 65 had been established hastily in July and early August.

Issei also continued to buy land by placing titles in the names of their U.S.-born children, some of whom were very young. At the same time, they leased increasingly more land from European American landowners who preferred to lease to them because the financial returns from farms cultivated by Japanese

tenants were higher than from those leased to European American tenants. Even though leases were supposed to last only a maximum of three years, official records in California's counties (that I have examined systematically) show that many three-year leases were renewed once, twice, or even three times, in the process bypassing the three-year limitation. During World War I there was an increased demand for food and Issei farmers, as well as farmers of other ethnic origins, prospered. By 1917 Issei farmers in California produced almost 90 percent of the state's celery, asparagus, onions, tomatoes, berries, and cantaloupes; more than 70 percent of its flowers and ornamental shrubs; 50 percent of the seeds of various crops; 45 percent of the sugar beets; 40 percent of the leafy vegetables; and 35 percent of the grapes. These figures reflect the fact that the 1913 Alien Land Law was not strictly enforced both because of the nation's wartime need for food and because Japan and the United States were allies during World War I.

After World War I ended in 1918 the U.S. agricultural economy went into a slump. Not only did prices of farm commodities fall, but many discharged veterans could not find jobs. Such conditions offered anti-Japanese individuals and groups a chance to reenergize the anti-Japanese movement. Their first target was the 1913 Alien Land Law; their ultimate goals were to pressure Congress to pass a Japanese exclusion law to bar not only male laborers but also picture brides and to push through a constitutional amendment to deny U.S. citizenship to children of Japanese ancestry born in the United States. By then, European American farmers and landowners had also turned against prospective Japanese tenants because they, along with Issei owner-operators, were hiring an increasing number of their coethnics as farm workers, thereby shrinking the pool of Japanese agricultural laborers available for hire by European American farmers. No further increase in the number of Japanese farm workers could be expected because the Gentlemen's Agreement had effectively stopped the immigration of Japanese male laborers. Their decreasing numbers meant that Issei farm workers could now demand higher wages, something that greatly troubled European Americans.

The widespread fears felt and the hostility shown by white Californians were most succinctly enunciated

in several essays written by some of the state's major opinion-makers and published in the January 1921 issue of *Annals of the American Academy of Political and Social Science*. U.S. Senator James D. Phelan, running for reelection in 1920, called the situation a "danger" because the Japanese were "impossible competitors, and drive the white settlers, whose standards of living are different, from their farms." California must take action, he said, because it was a matter of "self-preservation to prevent the Japanese from absorbing the soil, because the future of the white race, American institutions and western civilization are put in peril." Marshall De Motte, chairman of the State Board of Control, charged that neither Japanese immigrants nor their U.S.-born children will ever assimilate because they "to the end hold their allegiance to a foreign imperial government." Both Phelan and De Motte averred that if Japan needed more territory, it should expand in "other parts of Asia." De Motte continued, "This is a white man's country. We cannot take in a race . . . which is not servile in character and can not [sic] live side by side with whites without showing aggression." John S. Chambers, California's state controller, claimed that Japan had a "policy of peaceful penetration, of conquest by colonization, . . . [via a] 'bloodless struggle.'" He observed that whereas the number of Japanese was still small, "it is the manner in which they are located and operate that breathes the danger."

V. S. McClatchy, publisher of the Sacramento *Bee* newspaper, warned about the "non-assimilability" of the Japanese, their "unusually large [sic] birth-rate" and "economic competition." He particularly feared that "their Government claims all Japanese, no matter where born, as its citizens, . . . [Japanese] hold that their Mikado is one living God to whom they owe their very existence, and therefore all obedience." Thus, "in the event of war" between Japan and the United States, McClatchy predicted Japan would "recognize those Japanese as the citizens of Japan" and they would have to serve in Japan's military forces against the United States. In another article published in the *Overland Monthly and Out West Magazine* in 1924, McClatchy said that the Japanese were "alien invaders" trying to "colonize the State" and thus posed "not only a national but an international danger." He then asked

Californians to look at the situation in Hawaii "where by the year 1940, Japanese will control the elections because of the great number of their Hawaiian-born children who will have reached the age of twenty-one." He warned that "the Japanese in California will in time exceed the whites in number" also. He implored Congress to take action before California, Oregon, and Washington fall "under [the] economic and racial control of the Japanese. For unfortunate Hawaii it is already too late." Paul Scharrenberg, a labor leader, quoting a statement disseminated by the executive council of the California State Federation of Labor, declared, "[W]e have no grievance against the Japanese *as long as they remain in Japan*" [emphasis added]. The message was clear: stay out of our white man's country; you are not wanted here.

In light of the fact that the California legislature would not be in session in 1920, the anti-Japanese forces placed an initiative, Proposition 1, on the ballot for the 1920 elections in an effort to close the loopholes in the 1913 Alien Land Law. Various organizations, including the California Oriental Exclusion League, the Los Angeles Anti-Asian Association, the Fourteen Counties Association in the Sacramento Valley, the Americanization League in the San Joaquin Valley, and the Alien Regulation League in the Imperial Valley, organized a campaign to push the measure through. Long-established nativist groups such as the Native Sons and Daughters of the Golden West and the American Legion, as well as the California State Grange that represented the interests of farmers and the California State Federation of Labor that looked out for the well-being of workers, joined the anti-Japanese campaign. The initiative passed with 668,483 votes for and 222,086 votes against it. Ironically, however, U.S. Senator James D. Phelan, who had staked his re-election campaign on his virulently anti-Japanese stance, lost his reelection bid. Both the vote count and Phelan's loss showed that anti-Japanese actions were by no means universally supported in California but the majority vote allowed the initiative to become law.

The 1920 law that would go into effect on December 9, 1920, was longer and more complicated than the 1913 one. Section 1 of the new law repeated verbatim section 1 of its 1913 predecessor. Section 2 was

likewise similar to the 1913 version except the clause allowing ineligible aliens to lease land for three years was deleted. That meant that Issei could no longer lease any land at all. Section 3 stipulated that “any company, association or corporation . . . of which a majority of the members are aliens other than those specified in section one . . . or in which a majority of the issued capital stock is owned by such aliens” could not own or lease land except as prescribed by treaty. Section 4 forbade ineligible aliens or companies, associations, or corporations owned and/or controlled by them to serve as guardians “of that portion of the estate of a minor which consists of property which such alien or such company, association or corporation is inhibited from acquiring, possessing, enjoying or transferring.” Section 5 prohibited trustees from holding titles to land on behalf of ineligible aliens or their minor children.

The remaining sections authorized county superior courts to remove illegal guardians or trustees. Heirs to real property or shares of stock in landholding companies were not allowed to inherit the property or the stocks. Instead, the government would sell the land or the stocks and give the money to the heirs. Any real property acquired illegally would be subject to escheat and become the property of the state of California. Violations of the guardianship and trusteeship prohibitions would be considered misdemeanors punishable by a fine not exceeding \$1,000 and imprisonment not exceeding one year or by both a fine and a prison term. Two or more persons conspiring to transfer real property would be fined up to \$5,000 and/or imprisoned for not more than two years. Every transfer of real property to ineligible aliens would be void and subject to escheat. Guardians of minors would have to file annual financial reports at the office of California’s secretary of state as well as in the offices of the county clerks in the counties where the properties were located. Finally, the legislature reserved the right to amend the law. If “any section, subsection, sentence, clause or phrase of this act is for any reason held to be unconstitutional, such decisions shall not affect the validity of the remaining portions of this act.”

During the run up to the 1920 election, Issei farmers held emergency meetings under the auspices of the Japanese Agricultural Association and the Japanese

Association of America. They set up a land litigation committee and aimed to raise \$25,000 as a legal defense fund, half of which would be collected from the farmers themselves and the other half from Japanese in other occupations. They hired lawyers to help them file 11 lawsuits (nine in California and two in Washington) between 1920 and 1925 to contest the new alien land laws in California and Washington state—six of which reached the U.S. Supreme Court. The first case heard in the California Supreme Court in 1922, *Estate of Tetsubumi Yano*, gave the Issei hope. Hayao Yano, a resident of Sutter County, California, had purchased 14 acres and placed title in the name of his two-year-old U.S.-born daughter, Tetsubumi. He filed a petition in October 1920 (i.e., before the 1920 law went into effect in December) to serve as guardian of her and her estate. Sutter County’s Superior Court denied his petition and Yano appealed to the California Supreme Court, which reversed the lower court’s decision, declaring that section 4 of the law was unconstitutional because it denied equal protection to the child, an American citizen, who had the right to own property. Moreover, the justices said that the only ground for denying guardianship was when a guardian proved “incompetent,” which Hayao Yano was not.

A second case that offered some optimism to the Issei was *In re K. Okahara*, also decided by the California Supreme Court in 1922. The sheriff of Placer County had arrested K. Okahara and Toni Vicencio for violating the 1920 Alien Land Law but they filed for writs of *habeas corpus* and were released from jail. Then Okahara and Vicencio signed an employer-employee cropping contract in which Vicencio turned over 20 acres of farmland to Okahara for the purpose of planting an orchard and growing vegetables. They were to share equally the proceeds from the sale of the crops. The California Supreme Court decided that such a contract was legal. For an employee to do farm work, the justices reasoned, he must be allowed to enter the employer’s land to perform the work but that activity would not involve the transfer of any interest in the land to the employee. Neither could sharing the proceeds from selling the crops be considered a transfer of an interest in the land.

The relief following these two decisions, however, was short-lived for in November 1923 the Japanese lost four landmark cases in the U.S. Supreme Court: *Terrace v. Thompson*, *Porterfield v. Webb*, *Webb v. O'Brien*, and *Frick v. Webb*. Before the high court handed down its decisions in these cases, three important legal developments had occurred that affected the outcome of the cases. First, in the 1922 *Ozawa* case, the U.S. Supreme Court decided that despite Takao Ozawa's sterling qualifications (he came to the United States as a "school boy" and worked as a domestic servant when attending Berkeley High School, then attended the University of California, Berkeley for three years, worked for an American company, was a Christian, married a woman brought up in the United States, sent his children to Sunday school, did not register his children's births at a Japanese consulate, spoke English at home, and did not drink, smoke, gamble, or "associate with any improper persons"), he was not eligible to become a naturalized citizen because he was neither a free white person nor a person of African nativity or descent. Second, in 1923 the California legislature amended the 1920 Alien Land Law to prohibit cropping contracts (allowed under the 1920 law), to forbid an ineligible alien from occupying any agricultural land, and to make escheat proceedings retroactive. That is, even if a Japanese alien had bought a piece of land before the 1920 law went into effect, this land was still subject to confiscation from the date of purchase because the owner, as an ineligible alien, had no right to hold any agricultural land at all, regardless of when he might have bought it. Third, the California legislature also amended Section 175(a) of its Code of Civil Procedures to prohibit aliens who were ineligible for naturalized citizenship from serving as guardians of any estate consisting in whole or in part of land suitable for farming, though such aliens could still serve as guardians of the persons of their minor children. (This was obviously a reaction to the 1922 *Yano* decision.)

The first case the U.S. Supreme Court ruled on, *Terrace v. Thompson*, came on appeal from Washington State. In that state's 1889 Constitution, Article 2, section 33, drew a distinction between aliens who had officially declared their intention to apply for naturalized citizenship who were allowed to own agricultural

land, on the one hand, and aliens who had not made such declarations and thus were not allowed to own farm land, on the other hand. Washington passed its 1921 Alien Land Law to add a prohibition on leasing new land or renewing old leases, again dividing aspiring land or farm owners into declarants and nondeclarants. This law said nothing about aliens ineligible for citizenship; only after a second law passed in 1937 were aliens ineligible to citizenship barred from owning or farming agricultural land in the state of Washington. In contrast, California's laws differentiated aliens who were eligible versus those who were ineligible for naturalization but made no reference to declarants versus nondeclarants.

Frank Terrace was a European American who owned some land in King County, Washington that was "particularly adapted to raising vegetables." He and his family wished to lease that land for five years to a Japanese named Nakatsuka, "a capable farmer" who would be "a desirable tenant." When the Northwest American Japanese Association decided to challenge Washington's 1921 Alien Land Law, it found willing litigants in the Terrace family and Nakatsuka. Fearing the criminal penalties specified in the 1921 law, their lawyer, James B. Howe of Seattle, filed an interlocutory injunction to enjoin the state's attorney general, Lindsay L. Thompson, from enforcing that law against them. (An interlocutory injunction is a decree given provisionally during a legal proceeding to restrain someone from carrying out an intended action.) Attorney Howe claimed that the 1921 law violated both the United States and Washington State constitutions and the 1911 treaty with Japan. He stated that if his clients felt compelled, out of fear, to submit to the law, they would be "deprived of their property without due process of law and denied the equal protection of the law." The U.S. District Court in Washington ruled that the 1921 law did not violate the state constitution, the Fourteenth Amendment of the U.S. Constitution, or the 1911 treaty. Attorney General Thompson asked that the complaint be dismissed. Anticipating an appeal, he also questioned whether it was within the jurisdiction of the U.S. Supreme Court to grant Terrace and Nakatsuka the "equitable relief" they sought. Not to be stopped in their pursuit of justice, Terrace, Nakatsuka, and Attorney Howe took the case to the U.S. Supreme Court.

Justice Pierce Butler, who had become an associate justice only on January 2, 1923, delivered the opinion on behalf of the court on November 12, 1923. He discussed both the “due process” and the “equal protection” clauses of the Fourteenth Amendment as they related to the case. He noted that although the due process clause may indeed be invoked to protect the right of the Terrace family to use their land, as well as the right of Nakatsuka to earn a living in a commonly recognized occupation, that protection “does not take away from the State those powers of police . . . to promote the safety, peace, and good order of its people.” Justice Butler then expounded on the equal protection clause that “secures equal protection to all in the enjoyment of their rights under like circumstances.” However, he said that it “does not forbid every distinction in the law of a State between citizen and aliens resident therein.” According to him, a “perfect uniformity of treatment of all persons is neither practical nor desirable, . . . classification of persons is constantly necessary. . . . The rule established by Congress . . . furnishes a reasonable basis for classification in a state law withholding from aliens the privilege of land ownership as defined in the act.”

Justice Butler further argued that Washington’s 1921 Alien Land Law did not violate the 1911 treaty with Japan because “the treaty not only contains no provision giving Japanese the right to own or lease land for agricultural purposes, but . . . the high contracting parties [i.e., Japan and the United States] respectively intended to withhold a treaty grant of that right to the citizens or subjects of either in the territories of the other.” Justice Butler referred to a letter dated July 16, 1913 that Secretary of State Bryan had sent to Ambassador Chinda in which Bryan noted that it was “in accordance with the desire of Japan, the right to own land was not conferred. . . . the right to lease land for other than residential and commercial purposes was deliberately withheld by substituting the words of the treaty ‘to lease land for residential and commercial purposes’ for a more comprehensive clause.” It was indeed true that foreigners had no right to buy any kind of land in Japan though they could lease it for up to 99 years. That fact unwittingly undercut the Isseis aspirations to own farm land in the United States. The U.S. Supreme Court upheld

Washington’s 1921 Alien Land Law as well as the decision of the U.S. District Court in Seattle. Henceforth, any attempt by Japanese to own or lease farm land in Washington would be illegal.

Justice Butler’s reasoning in this case became the blueprint for the other three decisions that he also penned. In *Porterfield v. Webb*, decided on the same day as *Terrace v. Thompson*, a landowner named W. L. Porterfield who had 80 acres in Los Angeles County that were “particularly adapted to raising vegetables” wished to lease that land for five years to H. Mizuno, “a capable farmer and a desirous person to become a tenant.” The Central Japanese Association of Southern California had filed an interlocutory injunction in the U.S. District Court in Los Angeles to enjoin California’s attorney general, Ulysses S. Webb, from prosecuting Porterfield and Mizuno for criminal violations under California’s 1920 Alien Land Law. Porterfield and Mizuno were represented by attorney Louis Marshall of New York, an expert on Constitutional law who had experience arguing cases before the U.S. Supreme Court. The Japanese Association of America and the Central Japanese Association of Southern California had jointly retained him to deal with the land cases headed to the high court. Attorney Marshall argued that should Porterfield and Mizuno be compelled to submit to California’s 1920 law, “whether valid or invalid,” they would be “deprived of their property without due process of law and denied equal protection of the laws.” He contended that “the act is unconstitutional, because it deprives Porterfield of the right to enter into contracts for the leasing of his realty, and deprives Mizuno of his liberty . . . by debarring him from entering into a contract for the purpose of earning a living in a lawful occupation.” Justice Butler, however, determined that Attorney General Webb’s actions were not “arbitrary and unreasonable,” as Marshall had charged. Announcing that this case was similar to *Terrace v. Thompson*, Justice Butler upheld the constitutionality of California’s 1920 Alien Land Law and affirmed the decision of the U.S. District Court in Los Angeles. (Law professor Dudley McGovney has pointed out in an article published in 1947 in volume 35, issue number 1 of the *California Law Review*, that the two cases were not, in fact, identical because the basis for

dividing aliens into different classes was not the same. The California law, but not the Washington state one, based the distinction upon race alone.) Leasing land to Issei farmers from then on would be illegal in California. In subsequent years Japanese Americans would encounter Attorney General Webb repeatedly because he served for 37 years (1902–1938) in that office and was an indefatigable crusader against the Issei efforts to buy and lease farmland as well as their right to earn a living as commercial fishermen.

A week later, on November 19, 1923, Justice Butler delivered opinions in the other two cases, *Webb v. O'Brien* and *Frick v. Webb*. J. J. O'Brien owned 10 acres in Santa Clara County, California and wanted to sign a cropping contract for four years with an Issei named J. Inouye, "a capable farmer." The land litigation committee that the Japanese Agricultural Association and the Japanese Association of America had established jointly in the fall of 1920 acted on behalf of O'Brien and Inouye and applied for an interlocutory injunction to enjoin Santa Clara County's district attorney from taking action against them. The Santa Clara County Superior Court granted the petition but Attorney General Webb appealed and took the case to the U.S. District Court for the Northern District of California located in San Francisco, which reversed the earlier decision. O'Brien, Inouye, and their lawyers filed an appeal and took the case to the U.S. Supreme Court. Attorney Marshall argued that "a contract is necessary so that the owner may receive the largest return from the land, and that the alien may receive compensation therefrom." If O'Brien and Inouye were to be prosecuted, he said, they would "be deprived of their property without due process of law and denied the equal protection." Justice Butler declared that "the state has power to deny to aliens the right to own land within its borders" and the 1920 law did not violate the due process and equal protection clauses of the Fourteenth Amendment nor did it contravene the 1911 treaty with Japan. The justice reasoned that sharecropping violated the 1920 Alien Land Law because "the cropper has use, control, and benefit of land for agricultural purposes substantially similar to that granted to a lessee." In this case, too, the U.S. Supreme Court upheld the constitutionality of California's 1920 Alien

Land Law and its 1923 amendment, making cropping contracts illegal from then on.

The last case, *Frick v. Webb*, involved Raymond Frick who wished to sell 28 shares of stock in the Merced Farm Company, which owned 2,200 acres of land, to Satow Nobutada. Frick and Satow sought an interlocutory injunction from the U.S. District Court in San Francisco, which refused to grant them the injunction they asked for. Upon appeal, the case moved to the U.S. Supreme Court. Justice Butler opined that a state may "forbid *indirect* [emphasis added] as well as direct ownership and control of agricultural land by ineligible aliens. The right to carry on trade given by the treaty does not give the privilege to acquire the stock." Declaring that Section 3 of the 1920 alien land did not "conflict with the Fourteenth Amendment or with the treaty," the U.S. Supreme Court once more upheld the constitutionality of California's 1920 Alien Land Law, making Issei ownership of stocks in a landholding company henceforth illegal.

Only three options now remained for Issei farmers: (1) working for wages as farm laborers, (2) buying land in the name of young Nisei (U.S.-born second generation Japanese Americans), and (3) forming land companies in which a majority of the stock holders would be either Nisei or European American lawyers who were paid for this service. The Nisei-owned or European American-owned farms and landholding companies could then hire Issei as laborers, foremen, or managers and pay them wages but not a share of the crops or a portion of the proceeds from the sale of such crops. In the ensuing years, according to U.S. Census statistics, both the number of Japanese-operated farms, especially those cultivated by tenant farmers, and the acreage they farmed fell during the 1920s. The number of tenant-operated farms declined from 4,533 in 1920 to 1,580 in 1930. The number of farms where Issei served as managers, however, greatly increased from 113 in 1920 to 1,816 in 1930. As more and more Nisei came of age during the 1930s, the number of farms with Issei managers decreased from 1,816 in 1930 to only 249 in 1940, whereas the number of farms operated by owners and part owners increased from 560 to 1,487 between 1930 and 1940. The acreage of owner- or part

owner-operated farms increased from 26,152 in 1930 to 67,043 in 1940. It is clear that the Nisei “saved” their families from economic disaster, but it is incorrect to assert, as some historians and economists have done, that the antialien land laws had virtually no negative impacts on the livelihood of Japanese Americans. Even though some three-fifths of the Japanese-ancestry population continued to work on farms until the beginning of World War II, it will never be known what the increases, both in the number of farms and in the acreages they cultivated, would have been if the antialien land laws had never been passed.

The antialien land laws were also applicable to Chinese until 1943, when Congress rescinded all the Chinese exclusion laws and granted Chinese the right of naturalization; [Asian] Indians between 1923, when the U.S. Supreme Court, in *United States v. Bhagat Singh Thind*, denied Indians the right of naturalization, and 1946, when Congress made them eligible for citizenship; and Koreans until 1952, when they and Japanese finally secured the right of naturalization. There was only a handful of escheat cases against immigrant Chinese and Indians but none snared immigrant Korean farmers whose number was very small. In 1916 in Santa Barbara County, an escheat action was brought against Gin Fook Bin, who had a half interest in a residence on a 7,200 square foot lot. (This case, *People v. Gin Fook Bin et al.*, tried in Santa Barbara County’s Superior Court, was never published but a copy of the judgment is on file in the office of the county clerk.) After Eugene Fung, who owned the other half interest, died, Gin defaulted on the mortgage on the property and the individuals who held the mortgage asked the state to escheat it. The county won the case by arguing that Gin was an alien ineligible to citizenship and the United States had no treaty with China similar to the 1911 treaty with Japan that would have allowed him to buy non-agricultural real property. The house and lot were escheated and turned over to the mortgage holders.

In *People v. Indr Singh*, litigated in San Bernardino County’s Superior Court in 1927, a Sikh from Punjab province in India, Indr Singh, had purchased some land in the county in 1917. The county’s district attorney escheated his property in 1926 because the United States did not have a treaty with Great Britain,

at that time India’s colonial master, that allowed Indians to buy land in the United States. However, Attorney General Webb decided that the escheat action would not be carried out if Singh would sell his land to an eligible owner, which he did a few days later. In Imperial County in 1933 the district attorney filed suit against four Punjabi Indians and five European American absentee landowners for conspiracy to evade the 1920 Alien Land Law by forming the California-Nevada Farming Corporation. The Indian farmers were accused of cultivating and living on that corporation’s land illegally. In response, the Indians and European Americans became plaintiffs in *Singh et al. v. People* decided in 1934. According to historian-cum-anthropologist Karen Leonard who has studied this case, during the court proceedings the Indians “refused to state their race, nationality, and place of birth,” making it impossible for the court to prove they were ineligible aliens forbidden to own or lease agricultural land. Though they were convicted and sentenced to prison, they sought a new trial on a technicality, but no new trial ever took place. So the Indians did not have to serve time in prison.

Despite the 1923 landmark U.S. Supreme Court decisions, cases involving Japanese continued to crop up to challenge specific sections of the various alien land laws. In Sonoma County, California a farmer named S. Ikada wanted to buy 31 acres from Bartolomeu and Mary Souza. The Souzas declined to sell because they feared prosecution for violating the alien land law. Their attorney, W. A. Cockrill, offered to hold title to the land that Ikada wanted to buy, which reassured the Souzas. The sale went through but a grand jury indicted Cockrill and Ikada for conspiracy to violate the alien land laws and the Superior Court of Sonoma County convicted them in *People v. Cockrill* in 1923. They appealed to the state’s District Court of Appeal for the Third District headquartered in Sacramento but lost in that venue. The California Supreme Court declined to hear the case, so it was referred to the U.S. Supreme Court in 1925, where Justice Butler once again delivered the opinion. In *Cockrill v. People*, the justice stated that “Ikada furnished the money . . . and . . . took possession of the property. [So] Cockrill had no interest in the land.” He concluded that the 1920 law did not violate either

the Fourteenth Amendment or the 1911 treaty and that “[p]ayment by such aliens for agricultural lands taken in the name of persons not of that class reasonably may be given a significance as evidence of intent to avoid escheat.” The high court affirmed the decision of the lower court.

In San Diego County, the Superior Court charged landowner George Morrison, along with Issei farmers H. Doi and H. Ozaki, for conspiracy to violate California’s 1920 Alien Land Law and its 1923 and 1927 amendments. Attorney Jacob Marion Wright of Los Angeles, a lifelong fighter against inequality, represented the accused. The California Supreme Court, in *People v. Morrison*, found the defendants guilty of conspiracy and sentenced them to two years’ imprisonment because according to the 1927 amendment that had been codified in California’s Code of Civil Procedure, “the acquisition, possession, enjoyment, use, cultivation, occupation, or transferring of real property or any interest therein, or the having in whole or in part the beneficial use thereof by any defendant . . . and the complaint, indictment or information alleges the alienage and ineligibility to United States citizenship of such defendant, the burden of proving citizenship or eligibility to citizenship shall thereupon devolve upon such defendant.” Attorney Wright appealed both cases. The more interesting case involved Morrison and Doi, which made its way to the U.S. Supreme Court.

In the court’s 1934 decision, *Morrison v. People of State of California*, Associate Justice Benjamin N. Cardozo, who delivered the opinion, wrote that although the 1911 treaty with Japan permitted Japanese to buy land for residential or commercial uses, it did not give them the right to buy, lease, control, or otherwise use farmland as individuals or corporations. The existing statutes did not violate the Fourteenth Amendment, the justice proclaimed, when they put the burden of proof on the alien to show whether he was eligible for citizenship. The proof required was “within limits of reason and fairness”; requiring an alien to present such proof would not be “an impairment of his immunities under the Federal Constitution.”

Citing dozens of cases as legal precedents, Justice Cardozo then focused on Section 9 of the 1920 Alien Land Law that stated, “every transfer of real property,

or of an interest therein . . . shall be void . . . [and] shall escheat to the state if the property interest involved is of such a character that an alien mentioned in section two hereof is inhibited from acquiring, possessing, enjoying or transferring it, and if the conveyance is made with such intent to prevent, evade or avoid escheat.” The key issue Justice Cardozo considered was whether a conspiracy had occurred. He pointed out that the burden of proving a potential tenant’s eligibility or ineligibility for citizenship rested solely on the tenant (in this case, Doi) and not on the farm owner (in this case, Morrison). Yet, both men had been convicted. He declared, “Plainly as to Morrison, an imputation of knowledge is a wholly arbitrary presumption” because the law “does not make it a crime to put a lessee into possession without knowledge or injury as to race and place of birth.” Such a transaction would be a crime only if there had been a “willful conspiracy to violate the law. Nothing in the people’s evidence gives support to the inference that Morrison had knowledge of the disqualifications of his tenant.” Moreover, Doi also “was not a conspirator, however guilty his own state of mind, unless Morrison had shared in the guilty knowledge and design.” In other words, a conspiracy could be said to have occurred only if two or more individuals were involved. Justice Cardozo reversed the judgment of the California Supreme Court. He handed down a split decision, striking down Section 9(a) of the 1920 law that prohibited the “taking of property in the name of a person other than” that of an alien ineligible to citizenship (in this instance, Cockrill) if the ineligible alien (in this instance, Doi) had paid for the land or had leased it, as unconstitutional. However, he upheld the constitutionality of Section 9(b) that targeted shares of stock held in the name of a company, association, or corporation if the stocks had been paid for by an alien ineligible to citizenship. That decision let European Americans who sold or leased land to Japanese aliens off the hook, but the ineligible aliens themselves would still be subject to prosecution.

The Japanese did win a few cases outright. In 1925 in *State of California v. Tojuero Togami*, the California Supreme Court decided that leasing land on which to build a health resort and sanitarium would not violate the alien land law because the use to which the

land would be put was not agricultural—the 1911 treaty with Japan explicitly allowed Japanese to buy, lease, or use land for residential and commercial purposes. In *People v. Kosai*, a 1925 case heard in the Washington Supreme Court, the court ruled that making a gift of land to a U.S. citizen even when that citizen was a child did not violate Washington’s 1921 Alien Land Law. The following year, the same court decided, in *People v. Ishikawa*, that in an escheat proceeding the officials who initiate the action must prove that fraud had been committed when an ineligible alien makes a gift of land to his U.S.-born child. Because the court had already ruled that such gifts were not illegal, the justice dismissed the escheat. In *People v. Fujita*, decided in 1932, the California Supreme Court, like its counterpart in the state of Washington, also ruled that buying land as a gift to U.S. citizens—a class of persons that included U.S.-born minor children of Japanese ancestry—was not illegal. In *Jordan v. Tashiro*, the U.S. Supreme Court decided in 1928 that buying land to build a Japanese hospital in Los Angeles was allowable under California’s alien land laws because the land would be used for a commercial purpose.

In the years between 1913 and 1942, relatively few escheat actions were taken because California Attorney General Webb lacked the financial and personnel resources to prosecute, and county district attorneys were busy with other matters and saw no reason to help Webb because they would gain nothing from putting time and energy into such cases. Before 1920, only 11 escheat actions (nine in California and two in Washington) were recorded. Between 1920 and 1940, only 28 cases (16 in California, 8 in Washington, 1 in Oregon, and 3 in Arizona) were recorded. (The actual numbers might have been considerably larger because the only cases that were recorded or published were those in which the verdicts had been appealed.) However, soon after World War II began, California Attorney General Earl Warren, who had succeeded Webb in 1939, asked the legislature to allocate \$200,000 to his office. He claimed that it was necessary to escheat Japanese-held land to minimize the possibility of Issei sabotage on behalf of their homeland, Japan. Offering an incentive to county district attorneys to take action, Warren promised them that

half of the proceeds received from escheat proceedings would be given to the counties in which the escheated land was located. Warren filed 20 escheat actions in one fell swoop in early 1942 before he became too busy to do so as he ran for office as governor of California, an election he won. Robert W. Kenny, who succeeded Warren as California attorney general when Warren became governor, filed another 40 escheat actions before 1945 even though he did not share Warren’s enthusiasm for such prosecution. More often than not, the Japanese lost their land when title was held in the names of their U.S. citizen children but the land had been paid for by the Issei parents. A few families were able to retain their land by settling with the state. To quiet title to their properties, they paid huge sums of money to the state, often almost equal to the amount they had originally paid to buy the land.

One family refused to give in to such blackmail and they won a significant victory. Kajiro and Kohide Oyama had bought six acres in San Diego County and gifted it to their son Fred when he was six years old in 1934. Fred’s father then petitioned to become guardian of both Fred’s person and his estate. The Superior Court of San Diego County approved his request. In 1937 Kajiro Oyama bought another two acres adjoining the original six acres, also in Fred’s name. The San Diego Superior Court again approved this purchase. Unfortunately, Kajiro Oyama failed to file the annual reports mandated by Section 5 of the 1920 Alien Land Law. In early 1942, the Oyamas, along with some 120,000 Issei and Nisei living on the West Coast, were “evacuated” and incarcerated in concentration camps. Although they were thus imprisoned, Attorney General Kenny escheated their eight acres.

In a California Supreme Court hearing, attorneys A. L. Wirin, Fred Okrand, and Saburo Kido represented the Oyamas. Wirin was a civil rights attorney closely connected with the American Civil Liberties Union in Southern California who, for 40 years, defended many individuals, including Japanese, who had been wronged one way or another; Kido was a Nisei lawyer born in Hawaii and one of the founders of the Japanese American Citizens League who served as the organization’s national president in the early 1940s when Japanese Americans were still in

concentration camps. California Attorney General Kenny, Deputy Attorney General Everett W. Mattoon, San Diego County's District Attorney Thomas Whelan, and Deputy District Attorney Duane J. Carnes served as counsel for the state. In its 1946 decision, *People v. Oyama*, delivered by Associate Justice Douglas L. Edmonds, the California Supreme Court ruled that both parcels of "the land conveyed to Fred Y. Oyama" had rightfully been "escheated to the state as of the date of the respective deeds" and that, in doing so, the defendants had not been deprived of due process and equal protection, as the Oyamas' lawyers had argued. Wirin et al. had also argued that because an amendment to U.S. naturalization laws had been enacted to allow aliens who had served "honorably" in the U.S. military during World War II to become naturalized citizens, it meant that had Kajiro Oyama joined the army, he could have become a citizen. Justice Edmonds, however, pointed out that the amendment applied only to those who had already served and not to individuals who might have served or who planned to serve in the future. That is to say, the amendment did "not abolish ineligibility to citizenship of aliens regardless of race." To rebut the claim of the defendants' lawyers that the statute of limitation had passed for the escheat proceeding to occur, Justice Edmonds pointed out that an amendment to the alien land laws had been enacted in 1945 that stipulated, "No statute of limitations shall apply or operate as a bar to any escheat action now pending or hereafter commenced pursuant to the provisions of this act." He concluded that the "property in question passed to the State of California by reason of deficiencies existing in the ineligible alien, and not in the citizen Oyama. The citizen is not denied any constitutional guarantees because an ineligible alien, for the purpose of evading the Alien Land Law, attempted to pass title to him. It is the deficiency of the alien father and not the citizen son which is the controlling factor." For that reason, the court ruled that the escheat proceeding was constitutional.

The Oyamas appealed and took their case to the U.S. Supreme Court. Before the high court was able to consider the case, Californians had voted down Proposition 15 that was on the ballot in the November 1946 elections. Supporters of this proposition had

gathered the requisite number of signatures to put it on the ballot in an effort to validate the various amendments to the 1920 Alien Land Law. Since the 1920 law had been passed as an initiative, its amendments needed to be validated via another initiative. But the people of California voted down Proposition 15, with 797,067 for and 1,143,780 against the measure. They let the world know that a majority of them no longer supported the antialien land laws. After all, the United States and its allies had just won a world war against German Nazism and Italian and Japanese fascism. Both ideologies contained strong racist undercurrents. Consequently, it would be hypocritical for Americans to continue to support laws tinged with racism.

The U.S. Supreme Court heard the *Oyama* case in October 1947 and made its decision in January 1948. That decision is perhaps the most interesting among all the alien land law cases ever argued before the high court, the lower federal courts, and the various state and county courts. In this round, attorney A. L. Wirin continued to represent Kajiro and Fred Oyama *pro bono*; he was joined on the defense team by attorney Dean G. Acheson of Washington, D.C., who would soon be nominated by President Harry Truman and confirmed by the U.S. Senate to become U.S. secretary of state. California's Assistant Attorney General Everett W. Mattoon and Deputy District Attorney of San Diego County Duane J. Carnes, two of the officials who had represented the state of California in *People v. Oyama* before the California Supreme Court in 1946, again represented the state.

What makes *Oyama et al. v. California* (1948) so interesting is that in addition to the six-to-three majority opinion delivered by Chief Justice Fred M. Vinson, there were two concurring opinions that offered additional reasons for overturning the alien land laws—reasons that the chief justice did not discuss—as well as two dissenting opinions. Attorneys Wirin and Acheson presented three issues for the high court to consider: (1) Fred Oyama, an American citizen, had been deprived of equal protection guaranteed by the Fourteenth Amendment to all persons, regardless of their citizenship status, (2) His father, Kajiro Oyama, had likewise been denied equal protection, and (3) the escheat proceedings had contravened the due process clause of the Fourteenth Amendment. Chief Justice

Vinson determined that Fred Oyama had indeed been deprived of equal protection and that the discrimination against him was “based solely on his parents’ country of origin.” Fred Oyama, he said, “faced at the outset the necessity of overcoming a statutory presumption that the conveyances financed by his father and recorded in Fred’s name were not gifts at all.” Fred, therefore, faced obstacles that “do not beset the path of most minor donees [recipients of donations or gifts] in California. . . . The father’s deeds were visited on the son; the ward became the guarantor of his guardian’s conduct.” Fred “was saddled with an onerous burden of proof which need not be borne by California children generally.” The case “presents a conflict between the State’s right to formulate a policy of landholding within its bounds and the right of American citizens to own land anywhere in the United States. When these two rights clash, the rights of a citizen may not be subordinated merely because of his father’s country of origin.” For these reasons, the chief justice reversed the decision of the California Supreme Court and decided that Section 9(a) of the state’s 1920 Alien Land Law was unconstitutional. (Section 9[a] had already been struck down in *Morrison v. California*, so he was simply reaffirming that decision.) However, Chief Justice Vinson did not address the broader question of whether the entire alien land law was unconstitutional.

The first, relatively short concurrent opinion was written by Associate Justice Hugo Black, with Associate William O. Douglas joining him, who noted that “by this Alien Land Law California puts all Japanese aliens within its boundaries on the lowest possible economic level.” Justice Black noted that the United States “had recently pledged ourselves to cooperate with the United Nations to ‘promote . . . universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.’” He then asked pointedly, “How can this nation be faithful to this international pledge if state laws which bar land ownership and occupancy by aliens on account of race are permitted to be enforced?”

The second, very long, detailed, and passionate concurrent opinion was written by Associate Justice Frank Murphy, joined by Associate Justice Wiley B.

Rutledge. Justice Murphy reviewed the history of discrimination against Asians in the United States so thoroughly that he might very well have been giving a lecture in an Asian American history course. He began by declaring, “The California Alien Land Law was spawned of the great anti-Oriental virus which, at an early date, infected many persons in that state. The history of this anti-Oriental agitation is not one that does credit to a nation that prides itself, at least historically, on being the friendly haven to the tired and the oppressed of other lands.” He then noted that of the 73 recorded escheat actions taken against the Japanese, 59 were begun after Pearl Harbor “during a period when the hysteria generated by World War II magnified the opportunities for effective anti-Japanese propaganda. Vigorous enforcement of the Alien Land Law has been but one of the cruel discriminatory actions which have marked this nation’s treatment after 1941 of those residents who chanced to be of Japanese origin. The Alien Land Law, in short, was designed to effectuate a purely racial discrimination . . . It is deeply rooted in racial, economic, and social antagonisms.” He asked “whether there is a rational basis for the particular kind of discrimination involved” and said the answer was “no.” He continued, “the discrimination stems directly from racial hatred and intolerance. . . . Racism has no justifiable place whatever in our way of life, even when it appears under the guise of ‘plenary power’”—that is, the absolute power of Congress to pass laws. He observed that even though the nation’s naturalization and citizenship laws drew a racial distinction between who could and who could not become citizens, “it does not follow . . . that California can blindly adopt those distinctions for the purpose of determining who may own and enjoy agricultural land. What may be reasonable and constitutional for Congress for one purpose may not be reasonable or constitutional for a state legislature for another and wholly distinct purpose.”

In response to anti-Japanese agitators who claimed that “if ineligible aliens could lease or own farms, it is within the realm of possibility that they might acquire every square foot of land in California which is fit for agriculture,” Justice Murphy cited demographic statistics to show that Japanese formed only a minute percentage of California’s total population and the land

they farmed in 1940 was only 0.7 percent of the arable acreage in the state. Therefore, “such a contention is statistically absurd.” As for the charge that “American farmers cannot compete successfully” against the Issei and Nisei farmers, the justice said, “The success thus achieved through diligence and efficiency . . . does not justify prohibiting the Japanese from owning or using farmlands. Free competition and the survival of the fittest are supposedly vital elements in the American economic structure . . . Certainly from a constitutional standpoint, superiority in efficiency and productivity has never been thought to justify discrimination.” In Justice Murphy’s eyes, “the basic vice, the constitutional infirmity, of the Alien Land Law is that its discrimination rests upon an unreal racial foundation. It assumes that there is some racial characteristic, common to all Japanese aliens, that makes them unfit to own or use agricultural land in California. There is no such characteristic.” The accusations against the Japanese “merely represent social and economic antagonisms which have been translated into false racial terms. As such, they cannot form the rationalization necessary to conform the statute to the requirements of the equal protection clause of the Fourteenth Amendment.” Justice Murphy concluded, “The Alien Land Law does violence to the high ideals of the Constitution of the United States and the Charter of the United Nations. It is an unhappy facsimile, a disheartening reminder, of the racial policy pursued by those forces of evil whose destruction recently necessitated a devastating war. . . . the penalty of unconstitutionality should be imposed upon the Alien Land Law.” Obviously, the Second World War was very much on his mind.

The first dissenting opinion was penned by Associate Justice Stanley F. Reed, joined by Associate Justice Harold H. Burton. They believed that there has to be a “balancing of constitutional rights; on the one hand, the right of California to exclude ineligible aliens from land ownership and, on the other hand, the right of their citizen sons to hold land.” The Oyamas’ land had been escheated “because of the father’s violation of the law before it reaches the son.” According to Justice Reed, Fred was not singled out for discrimination because “a grantee is a party to a sale of land which the state attacks as being within the proscribed

class must overcome the presumption . . . [regarding] the legality of the transfer.” Fred must bear a burden “not because of descent or nationality but because he has been a party to a transaction which the state challenges as illegal.” Fred was not being discriminated against because “placing more burdens upon some than upon others is not in itself unconstitutional.” The second dissent, written by Associate Justice Robert H. Jackson, stated “[t]hat there is a discrimination in this situation no one will deny.” According to him, “if the Oyama lad . . . received this land from a citizen, he would take it as free of presumption . . . The only discrimination which prejudices young Oyama is the one which makes his father ineligible to own land or be a donor of it.” Justice Jackson closed by stating, “While I think that California has pursued a policy of unnecessary severity by which the Oyamas lost both land and investment, I do not see how this Court . . . can strip the State of the right to make its Act effective.” Unlike Chief Justice Vinson who prioritized individual rights over state rights, Justice Jackson thought state rights could trump individual rights.

In the aftermath of the Oyama decision, Attorney General Kenny dropped all pending escheat proceedings. Still, the standing of the 1920 Alien Land Law and its various amendments remained unclear. The Japanese American Citizens’ League decided to mount a test case in an attempt to challenge the constitutionality of these laws once and for all. Accordingly, an Issei named Sei Fujii, publisher of a bilingual community newspaper in Los Angeles, Kashu Mainichi, who had graduated from the University of Southern California’s Law School, purposely bought a small parcel and took title in his own name in 1948. The Los Angeles County Superior Court instituted an escheat action against Fujii’s property. The United States had unilaterally abrogated the 1911 treaty with Japan in 1939 as war clouds gathered in East Asia (Japan had invaded China in 1937) and had given Japan six months’ notice that the termination would go into effect in 1940. Issei therefore could no longer rely on the right to buy or lease land for residential or commercial uses that the treaty had guaranteed them for almost three decades. Fujii was represented by Attorney Jacob Marion Wright, a long-time crusader for justice who,

over the course of several decades, represented many other Issei and Nisei. Owen E. Kupfer, a lawyer who often teamed up with Wright, also served as defense counsel. California's Attorney General Edmund G. "Pat" Brown, Assistant Attorney General Everett W. Mattoon, and Deputy Attorney General John F. Hassler represented the state of California. Chief Justice Phil S. Gibson of the California Supreme Court delivered the opinion in *Fujii v. California* in 1952.

The chief justice first analyzed the United Nations Charter and then the Fourteenth Amendment. He disagreed with the plaintiff's lawyers that the United Nations Charter had invalidated and superseded California's Alien Land Law: "It is not disputed that the charter is a treaty, and our federal Constitution provides that treaties made under the authority of the United States are part of the supreme law of the land and that the judges in every state are bound thereby. A treaty, however, does not automatically supersede local laws, which are inconsistent with it unless the treaty provisions are self-executing." He thought the United Nations Charter was not a self-executing treaty and would thus require corollary national or state laws to be passed before the charter can become operative. He said that the charter had been "framed as a promise of *future* [emphasis added] action by the member nations. . . . without infringing upon their right to order their national affairs according to the own best ability, in their own way, and in accordance with their own political and economic institutions and processes. . . . The charter represents a moral commitment . . . [but] the charter provisions relied on by plaintiff were not intended to supersede existing domestic legislation, and we cannot hold that they operate to invalidate the Alien Land Law."

Having dismissed the relevance of the UN Charter, Chief Justice Gibson then turned to the claim made by Fujii and his lawyers that the "statutory classification of aliens on the basis of eligibility to citizenship is arbitrary . . . and unreasonable." After reviewing numerous earlier cases, including the rulings in the various alien land law cases that the high court, as well as lower courts, had dealt with, he decided that "[c]onstitutional principles declared in recent years are irreconcilable with the reasoning of the earlier cases and lead us to conclude that the statute violates the

equal protection clause of the Fourteenth Amendment." He considered "the right to acquire, enjoy, own and dispose of property" to be a civil right. He then opined, "By its terms the land law classifies persons on the basis of eligibility to citizenship, but in fact it classifies on the basis of race or nationality." He recalled how Associate Justice Roger J. Traynor had proclaimed, in *Korematsu v. United States*, a case challenging the constitutionality of the internment of Japanese Americans during World War II, that "the classification . . . on the basis of race . . . is 'immediately suspect' and will be subjected 'to the most rigid scrutiny.'" Chief Justice Gibson then argued that it was a "fallacy" to equate the alien land laws to the federal prohibition on the naturalization of Asian aliens because the two types of law are not the same—that is, a naturalization law is different from a property law. "Accordingly, if a state wishes to borrow a federal system of grouping, it must justify the adopted classification in its new setting, and the state's use of the distinction must stand or fall on its own merits." Thus, "there can be no justification for a classification" that denied property rights of certain aliens "not because of anything they have done or any beliefs they hold, but solely because they are Japanese." By a four-to-three decision, the California Supreme Court struck down California's antialien land laws as unconstitutional.

As it turned out, the 1952 *Sei Fujii v. State of California* case, decided on April 17, 1952, might not have been necessary had it been heard in the California Supreme Court *after* December 24, 1952 because on that date the 1952 Immigration and Nationality Act (commonly called the McCarran-Walter Act) passed by Congress on June 27, 1952 went into effect, removing racial barriers to naturalization. The Chinese in 1943 and the Filipinos and Indians in 1946 had already gained the right of naturalization. The 1952 Act made it possible for Japanese and Koreans to become naturalized U.S. citizens also.

Several years before the U.S. Supreme Court struck down California's anti-alien land laws, the Oregon Supreme Court had already struck down that state's antialien land law. In *Kenji Namba v. McCourt*, decided in 1949, the court ruled that Oregon's 1923 Alien Land Law was unconstitutional. In contrast,

even after the *Fujii* decision, the California legislature did nothing to repeal its various antialien land laws until 1956. That year Proposition 13, the goal of which was to repeal California’s alien land laws, was placed on the ballot in the 1956 elections. The proposition passed; so it was the voters, and not California’s legislators, who finally got rid of those discriminatory laws. Not only that, but Proposition 13 also mandated that the legislature appropriate money to compensate those who had lost their land via escheat actions. The legislature had actually passed a law in 1951 to offer redress to U.S. citizens and another law in 1953 to offer redress to *all* the individuals who had been plaintiffs, defendants, or appellants in the various alien land law cases. However, no funds had been appropriated until Proposition 13 forced the legislature to do so. In Washington State the Seattle Chapter of the Japanese American Citizens’ League spearheaded the movement to repeal that state’s antialien land laws by forming a Committee for the Repeal of the Alien Land Law. However, a Washington State Senate Joint Resolution No. 4 to repeal the law placed on the ballot in the 1960 elections was roundly defeated. The JAACL immediately began a new round of organizing so that it could try again in 1962 but Senate Joint Resolution No. 21 on the 1962 ballot, also for the purpose of repealing the state’s anti-alien land law, again failed to pass. A new effort four years later finally succeeded via an amendment to the Washington state constitution placed on the ballot for the 1966 elections. In time, other states with anti-alien land laws also removed them from their statutes. As of May 2012, Florida is the only state remaining that has not yet repealed its anti-alien land law. In the 2008 elections, Amendment 1 on the Florida ballot to repeal the law was voted down, but the Alien Land Law Committee of the Greater Orlando Asian American Bar Association is continuing the fight with the support of the Florida State Bar. Only when that effort succeeds will the last vestige of decades-old, racially discriminatory, and unconstitutional antialien land laws be thrown into the dustbin of history.

“Aliens Ineligible for Citizenship”

Naturalization is that process through which a noncitizen becomes a citizen. The word, “naturalization,” shares a common Latin root with “nativity,” “nationality,” and “natural,” all denoting “birth”: a “naturalized citizen” is a person whose legal status is the same *as if* he were “naturally born” in his new country. The procedures governing naturalization, including an oath of allegiance, all suggest a person’s “rebirth” as an American citizen, a movement from nonmember to member.

In the United States, Congress passed the first Naturalization Act in 1790, and this has been a model for subsequent naturalization statutes ever since. All applicants for American citizenship had to attest to “good moral character” and prove at least two years of residency in the United States and at least one year of residency within the state where they were petitioning for citizenship. They also had to show that they were “free white persons.” “Good moral character” typically meant a clean criminal record, or at least no

serious criminal convictions. (Before the Revolution, colonial assemblies had complained that Britain was sending too many “criminals” and “paupers” to the New World.) The residency requirements were not always strictly enforced, but the idea was that a naturalized citizen should have acclimated to their new country before exercising full political rights.

The third requirement was the most open to interpretation: “free white person” excluded slaves of African nativity, former slaves, and white persons who were still indentured, people who were not “free.” At the same time, several legislators understood “free white person” to be a rather progressive term that could include a wide range of people from Europe that some Americans did not think were fit for American citizenship, especially Jews, Catholics, Germans, Irish, Italians, and Eastern Europeans. Benjamin Franklin, for example, did not particularly care for the large number of German immigrants in Pennsylvania, many of whom seemed to retain their peculiar customs and language even after living in the “English colony” for years. In Boston and New York, many state and local officials looked down on the Irish, insisting that these impoverished immigrants would destroy democracy if they were allowed to vote. States on the East Coast complained bitterly about the Irish well into the nineteenth century.

Still, in other places, especially in the South and in the West, Germans and Irish could pass into American citizenship relatively easily, and most southern states interpreted and implemented the federal naturalization law as though it should include immigrants who were not strictly “WASPs,” or White, Anglo-Saxon, and Protestant. In districts with large numbers of African American slaves, where “free whites” were especially necessary to police and supervise the slaves, and could perhaps one day enlarge the slaveholding interest themselves, these “suspect whites” became American citizens. Even Native Americans—particularly those who had mixed ancestry, or who had converted to Christianity and held private property—could be recognized as “free white persons” under the Naturalization Act of 1790. They moved from “Indians not taxed” to American citizens who volunteered in state militias, voted for state and federal officials, and held property, including chattel slaves.

In addition, by 1792, 12 of the 13 new states refused to allow “paupers” to vote, and immigrants who were so poor that they had to rely on charities, including churches and almshouses were also typically denied the privilege of naturalization. State governments put considerable pressure on ship captains and freight companies, imposing “head taxes” and other measures designed to curtail the migration of “paupers” from Europe to the United States. Although property qualifications for political rights would decline, the first federal immigration rules were designed to prevent the landing of poor people, convicts, and other “undesirables.” These rules were common throughout the nineteenth century. In 1875, in response to a California statute directed against “lewd and debauched women,” the Page Act forbade the migration of “contract laborers,” ostensibly to make sure that all persons from “China, Japan, or any Oriental country” should enjoy a “free and voluntary” migration to the United States. Another section of the Act declared that “the importation into the United States of women for the purposes of prostitution is hereby forbidden.” Federal judges observed, though, that in San Francisco, these rules were typically directed at Chinese women, while the “bedizened and painted harlot of other countries . . . parade our streets and open her hells in broad day, without molestation and without censure.”

The Page Act was but a harbinger of things to come. Debates about the political position of Asians took a more urgent turn after the American Civil War, after the Radical Republicans successfully ratified the Thirteenth, Fourteenth, and Fifteenth Amendments, and then, in 1870, they revised the naturalization statutes to include “persons of African nativity.” These rules were designed to guarantee that newly freed black slaves would enjoy their new political rights as American citizens.

But in 1878, Judge Lorenzo Sawyer in *Ah Yup* observed that although “persons of African nativity” and “free white persons” were eligible for naturalization, Chinese were neither, and so were ineligible for citizenship. He noted that the debates in Congress about revisions to the naturalization statutes clearly favored the exclusion of the Chinese for citizenship, and so, after nearly three decades of immigration from

China to the United States, all Chinese were now “aliens ineligible for citizenship.”

The idea that the Chinese were neither white nor African was extended to other groups in other federal cases. In 1889, a federal court said that Hawaiians were not white; still another said in 1894 said that the Japanese were not white; two separate courts in 1916 and 1917 said that Filipinos were not white; and in 1921, a Korean petitioner was denied the privilege of naturalization because yet another federal court said that Koreans were not white. Deciding who was or wasn’t white was often a tricky thing: Armenians were from literally Asia, for example, but because they were assimilated into white society and had a long history of Christianity (among other reasons), the federal courts eventually declared that they were white in 1909, and again in 1925. In 1880, a federal court declared that a biracial person (half white and half Native American) was not white, and in 1912, three separate federal cases came to the same conclusion: biracial people were not white. Syrians and other people from the Middle East were sometimes white, sometimes not; Asian Indians were sometimes white, sometimes not. In 1942, Arabians in a Michigan federal court were declared white; in 1944, Arabians in Massachusetts were declared nonwhite and thus ineligible for naturalization.

Whether an immigrant was “white” or not white had severe consequences, and not just for purposes of acquiring citizenship. Local governments used the term, “aliens ineligible for citizenship,” in a broad set of statutes, for example, to exclude Asians from employment in the public sector—police departments, fire departments, work in city government, and so on, were restricted to American citizens or persons eligible for citizenship. In 1922, Congress passed the Cable Act, which provided that any woman who married an “alien ineligible for citizenship” would acquire the status of her husband, thereby rendering her ineligible for citizenship, or stripping her of American citizenship altogether. Curiously, “aliens ineligible for citizenship” could serve in the American armed forces, but with the exception of Filipino veterans after World War I, other Asians were still ineligible for citizenship even after their honorable discharge. (Congress finally allowed all veterans of World War I to naturalize in 1935.) Politically and economically, “aliens ineligible

for citizenship” were to be kept apart from mainstream American life, and many hoped that such aliens would return to their home countries rather than remain in the United States.

In the early twentieth century, one of the most severe economic disabilities against “aliens ineligible for citizenship” came in the form of “alien land laws,” prohibiting such aliens from owning or even leasing agricultural lands. California was the first state to pass such a rule in 1913, followed by an even stricter version in 1920 that provided for confiscations of land held in violation of the rule. Other states followed: by 1943, Texas, Nebraska, Montana, Idaho, Washington, Minnesota, Missouri, Oregon, New Mexico, Arizona, Louisiana, Wyoming, Arkansas, and Utah had all passed alien land laws that prohibited “aliens ineligible for citizenship” from leasing or owning agricultural land. All of these rules were upheld by the United States Supreme Court in a set of cases in 1923. All worked to limit or eliminate Asians from the lucrative agricultural economies of the United States: in places like Fresno, California, which had both a large Japanese and Armenian immigrant population, nativists were pleased that the Japanese were rendered “ineligible for citizenship,” even as they were annoyed that the Armenians were allowed to pass into American citizenship. Ultimately, however, race-based exclusions in the immigration law forbade all Asians from coming to the United States, first in 1917, and then again in 1924. The “Asiatic Barred Zone” included Turkey and Armenia in the West, India and all of the islands north of Australia in the South, and Mongolia and China in the North and East.

From the mid-1920s through World War II, “aliens ineligible for citizenship” in the United States were technically not “stateless,” but they suffered from many of the symptoms of “statelessness” common to many different ethnic and religious groups throughout the world in the twentieth century. A Japanese immigrant, for example, could never vote in local, state, or national elections, and if he’d lived in the United States for two or three decades, he didn’t and couldn’t vote in Japanese elections either. After so many years, the Japanese consulate did not necessarily “protect” such a person, nor could he necessarily demand help from American officials. Some people

truly had no government: Koreans were subjects of the Japanese emperor after 1910 because Korea as a political entity had ceased to exist. Korean nationals couldn't petition for American citizenship, and although the Japanese state purportedly protected all Korean nationals, a great many Koreans hated the Japanese state, and so many Koreans in the United States did consider themselves "stateless," much in the same way that Jewish residents of Germany or Russia were stateless. Before World War II, Nazi Germany implemented a series of rules that would formally dispossess all Jewish persons of their property, and also eliminate all Jewish from the professions and from other mainstream areas of economic, social, and political life in the Third Reich.

In the United States, Congress gradually amended naturalization rules to allow for Asians to pass into American citizenship during and after World War II. In 1943, Chinese immigrants were allowed to naturalize, in recognition of American alliances with the Nationalist Chinese during the war. In 1946, Asian Indians and Filipino immigrants were allowed to naturalize. In the McCarran-Walter Act of 1952, race-based discriminations in the naturalization statute were completely repealed, even though Senator Pat McCarran of Nevada insisted on retaining immigration restrictions against Asians in that rule. President Truman objected to these restrictions and vetoed the bill; Congress passed the rule over his veto.

The term, "alien ineligible for citizenship," no longer carries a strictly racial meaning; but politically, it remains a forceful concept. The category still exists in practice: persons with serious criminal records and others with questionable moral character are ineligible for citizenship, as are communists, anarchists, and terrorists. More significantly, the category includes an ever-growing population of undocumented aliens—persons who entered the United States "without inspection," persons who received no formal permission to be here. There may be 12 million such persons in the United States now and this population continues to grow. Already, many of these persons are on the margins of American economy and society, and so we continue to live in a society where immigration status remains a major, serious axis of inequality.

Allen, Horace Newton (1858–1932)

Horace Newton Allen was an American medical doctor and a Protestant missionary during the tumultuous era from 1884 to 1905 of Korean history. During this period, Allen served as one of the most influential advisor to Kojong, the last King of the Joseon Dynasty. Allen was a determined critic of Japanese imperialism in Korea, but Japanese victory over China (Sino-Japanese War of 1894–1895) and Russia (Russo-Japanese War of 1904) sealed the fate of the nation first as a protectorate (1905) and then as a colony of Japan through outright annexation (1910). When Allen openly criticized Theodore Roosevelt administration's support of Japan during the Russo-Japanese War, the U.S. government recalled Allen in 1905 and terminated his diplomatic career. In addition to his role as a diplomat, Allen played a crucial role in bringing American economic interests into Korea after the Korean-American Treaty of 1882 established diplomatic relationship between the two nations. Along with David W. Deshler, Allen is also recognized as a key figure in organizing Korean immigration to Hawaii.

Allen was born in Delaware, Ohio, on April 23, 1858. After graduating from Ohio Wesleyan University in 1881, he received his medical degree from Miami Medical School in Cincinnati, Ohio in 1883. Like many other ambitious and educated young American men in the postbellum era, Allen sought to make his mark in the "new frontier" of East Asia. One year after joining the Board of Foreign Missions of the Presbyterian Church in China, Allen arrived in Korea as a physician in the United States Legation on September 20, 1884. His close tie to Kojong began when he successfully administered treatment to Queen Min's nephew, Min

Young Ik, when he was injured during the ill-fated Gapsin Coup that sought to overthrow the Joseon Dynasty. Grateful for his service and impressed with Western medicine, the royal family supported Allen in building the first Western medical facility in Korea that has evolved to become Yonsei University's College of Medicine and its Severance Hospital where his legacy remains prominent to this day.

The Korean-American Treaty of 1882 was followed by similar treaties with Great Britain, France, Germany, and other Western nations and paved the way for opening up Korea's economy to foreign interests. Allen relied on his privileged access to the Korean court to advance American economic interest. In addition to convincing the king to grant a monopoly over Unsan gold mine to his close friend James Morse, he played a crucial role in securing other lucrative concessions to a cadre of Americans friends and business partners including Leigh S.J. Hunt and Solat J. Fassett (mining), Walter D. Townsend (railroad, oil, and lumber), and Lucius H. Foote (pearl and fishing), the first American government minister to Korea. With the support of these American business leaders, the U.S. government appointed Allen as the American minister and consul general for Korea in 1897.

In March 1902, on his return trip from Washington, D.C., to Seoul, Allen met with representatives of the Hawaiian plantation owners in San Francisco and then with the Hawaiian Plantation Association in Honolulu. In Hawaii, the passage of the Organic Act of 1900 abolished the contract labor system and allowed the plantation workers to organize and strike for better wages and working conditions. In Hawaii, the Chinese Exclusion Act of 1886 resulted in Japanese workers dominating the plantation work force. Allen advised the plantation owners of the availability of large numbers of Koreans who were in desperate poverty and their willingness to migrate to Hawaii. Allen's letter to Governor Sanford E. Dole outlined Allen's assurance that Koreans would make an ideal work force in Hawaii. It was probably not lost on plantation owners that Koreans suffered at the hand of Japanese economic domination and that ethnic antagonism between the two groups would be useful in disciplining the Japanese workers in Hawaii.

In Korea, Allen advised the king that sending impoverished Koreans to Hawaii would lessen the burden on Korean government and that remittances would help family member who remained behind. Once he secured government approval, he also relied on the extensive network of protestant missionaries to whip up emigration fever, promising in Hawaii a haven for religious liberty and economic advancement. In November 1902, Allen successfully lobbied the Korean government to grant his friend and business partner, David W. Deshler, who owned a steamer service between Incheon and Kobe, Japan, the concession to transport Koreans to Hawaii. On December 22, 1902, the arrangements made by Allen and Deshler would result in the first shipload of 121 immigrants who left Incheon for Hawaii. They were inspected by Japanese physicians in Kobe, and sailed for Honolulu on *S. S. Gaelic*.

When Allen openly protested U.S. government's policy of nonintervention in Russo-Japanese War that cleared the way for Japan's imperial domination over Korea, Washington recalled him as the U.S. minister and consul general. He died in Toledo, Ohio on December 11, 1932. Along with Horace Grant Underwood, the Presbyterian missionary who founded Yonsei University, Horace Allen left a lasting imprint of U.S. influence during the final days of Joseon Dynasty.

American Coalition for Filipino Veterans (ACFV) Incorporated

The American Coalition for Filipino Veterans (ACFV) Incorporated has been identified as the largest national lobbying organization for World War II Filipino veterans in the United States. The organization first formed in 1996 in Arlington, Virginia among a group of veterans in their 70s and 80s, whose goals involved obtaining

full recognition of their service during the war and full benefits from the Department of Veterans Affairs (DVA). These veterans discovered that organizing around recognition and benefits was necessary because although the 1990 Immigration Act provided the means to naturalization and American citizenship for the veterans, the Act did not make them eligible for benefits that American veterans receive such as old age pensions or Medicare and were thus limited to Supplemental Security Income. The lack of proper recognition and benefits from the United States government for the service of these veterans have rendered many of them poverty-stricken and thus unable to financially petition for family members to immigrate to the United States.

In the mid-1990s, the organization began to coordinate efforts among other advocacy groups for the Filipino veterans and their families, as well as work tirelessly to garner the support of congressional members. The leaders organized campaigns, conferences, and forums, among other campaign strategies, to encourage Filipino American communities to become involved in helping the veterans achieve their objectives. The leaders also utilized media networks effectively to publicize its campaigns and causes. The organization now has officers, representatives, and members all over the United States, in states such as California, Washington, Hawaii, Nevada, Pennsylvania, New Jersey, New York, and Florida, as well as in the Philippines.

The organization has achieved some important victories for the veterans in their movement toward equity. The first victory is the Supplemental Security Income Extension Act of 1999, which allowed the veterans returning to the Philippines to continue to receive SSI payments with reductions. The Act was to provide sustenance to nearly 7,000 elderly naturalized veterans who were unable to petition family members to immigrate to the United States because of lack of funds and thus decided to return to their homeland to reunite with them. Eric Lachica, director of ACFV and son of a naturalized World War II Filipino veteran, argued that the extension of the SSI payments with reductions will simultaneously save the government money and do the right thing by continuing to support its veterans.

Another important victory is the passage of the American Recovery and Reinvestment Act signed by

President Barack Obama on February 18, 2009. It contained a provision for compensation for the veterans in the form of lump sum payments in the amounts of \$15,000 for the veterans with U.S. citizenship and \$9,000 for those with Philippine citizenship. This provision is entitled the Filipino Veterans Equity Compensation Act and is argued to be reparations for the legacy of the 1946 Rescission Act. This would not have been possible without the efforts of Representative Xavier Becerra (Democrat, California), Representative Bob Filner (Democrat, California), the late Senator Daniel Inouye (Democrat, Hawaii), Senator Daniel Akaka (Democrat, Hawaii), and other members of the Congressional Asian Pacific American Caucus as well as the efforts of other advocacy groups such as the National Alliance for Filipino Veterans Equity and Justice for Filipino American Veterans.

This legislation is considered by many as having met the demands for justice among the Filipino veterans and their families but this lacks full consensus. The Filipino Veterans Equity Movement, which began in the 1990s, initially sought to repeal sections in the 1946 Rescission Act that deny equal benefits regardless of the veterans' nationality. Because the number of elderly living veterans decreases daily, however, they and their advocates have become open to compromises so long as the measures would provide benefits and considerable support for the veterans and their families. The first proposal of lump sum payments in 1998 from long-time advocate Alex Esclamado was criticized by the ACFV as "lacking in principle." The movement leaders believe that these World War II Filipino veterans, naturalized or not, should receive benefits fitting for American veterans. The compromises met in the 2009 legislation were lump sum settlements and the different amounts given to those with American citizenship and Philippine citizenship.

The organization is now working on other issues that have come up since the 2009 legislation. One is the lack of expediency in the Army's National Personnel Records in St. Louis, Missouri in releasing the funds of the Filipino veterans, now in their 80s and 90s, and many of whom are naturalized American citizens. The army's bureaucratic documentation requirements for verification of the Filipino veterans' service during World War II are the issue. In one case,

the Army did not accept the authenticity of 94-year-old veteran Celestino Almeda's 1945–1946 documents from the Philippine Commonwealth Army of the United States, which ironically had been the basis of citizenship acquisition in the United States in the 1990s (ACFV). The organization has been requesting President Obama to issue an executive order to the Secretary of the Army to attend to this matter.

The victories of ACFV are not limited to the material realm. The thoughtful work of its leaders since the mid-1990s has greatly benefited the Filipino veterans and their families, won the support and involvement of community members, and gained recognition for their plight and stories, which have previously remained unknown and unacknowledged by the public. The ACFV has helped organize demonstrations such as the one that occurred on July 12, 1997 when the veterans and their advocates chained themselves to the iron fences at the White House Garden, chanting "We want justice!" Other campaign strategies included hunger strikes and "die-ins" in front of the DVA headquarters. With the help of ACFV, the veterans have been able to share their stories of sacrifice for the United States and the Philippines.

American Missionaries in Postwar Japan

At the conclusion of World War II in the Pacific Theater, American occupation troops waded ashore in Japan charged with not only rebuilding a war-torn

country but also with ensuring that the tide of militarism would never again rise in Japan. To that end, General Douglas MacArthur was appointed to lead the Occupation as Supreme Commander for the Allied Powers, or SCAP, a name that came to be used to describe the entire Occupation Authority in Japan. The United States set the twin goals of democratization and demilitarization for the Occupation in the "Initial Post-Surrender Policy for Japan" document issued in late August 1945. In MacArthur's mind, bringing Christianity to the Japanese would serve both of these objectives. Using the broad powers mandated to him, Douglas MacArthur made Christianizing Japan a central goal of the Occupation and did nearly everything in his authority to facilitate the return of Christian missionaries in Japan.

Although the American government claimed that in the spirit of creating a democratic Japan, the Occupation would promote freedom of religion and thereby remain neutral on religious matters, Douglas MacArthur did not share this vision. Ostensibly, he would maintain that position, but in both public and private exchanges he proclaimed his support for the promotion of Christianity in Japan even if that support contravened official policy. Many Americans believed that Japan's expulsion of Christian missionaries in the late sixteenth and early seventeenth centuries had been one of the factors that led the nation down the path to militarism and conquest. To the leader of the Occupation, Japan's defeat in World War II had left a spiritual vacuum in the country and Christianity represented Japan's best hope for recovery and stability in the future. If Japan became a Christian nation, MacArthur believed that it would not only guarantee peace and democracy within Japan, but would also make the nation a beacon of anticommunism and a loyal friend of the United States.

For MacArthur and those who answered his call, Christianity and democracy were nearly interchangeable concepts. The Supreme Commander believed that Christianity and its values formed the basis of all good peace-loving democracies. Moreover, Christianity represented both the very antithesis of communistic atheism, and a chance to align Japan with American values and to incorporate it into the U.S. sphere of influence. If Japan was to be transformed in this way,

the nation needed Christian faith as a foundation. Thus, Christian missionaries in Japan served the goals of the Occupation and were often perceived as a de facto arm of the Occupation government.

American Christian missionaries coming to Japan, and religious groups in general would find that they had a powerful ally in the Supreme Commander, who was not afraid to use his broad authority to show favoritism toward them or to step beyond the boundaries of religious neutrality. Despite the apprehension of some of his subordinates on this issue, the General pushed ahead and brought those under his command in line to support missionary efforts as well. With the exception of suppressing State Shinto and its negative wartime associations with militaristic ultranationalism, MacArthur believed that as long as he did not obstruct the development of other religions in Japan, that his advocacy for Christianity fell within his mandate to establish and preserve freedom of religion.

However, the dominating faith of Japan had to be dismantled before Christianity could thrive. The earliest steps toward opening the door to Christianity in Japan came on December 15, 1945, when the Occupation Authority issued a directive outlawing State Shinto, which allowed other religions to take root. Emperor Hirohito followed this directive with a proclamation in January 1, 1946 renouncing his divinity.

Within the Occupation, MacArthur designated a unit called the Religions and Cultural Resources Division (RCR) to handle matters relating to the return of Christian missionaries. Many members of this division were themselves religious leaders and missionaries brought in to assist the effort. The RCR kept both a Protestant and Catholic religious advisor on staff to provide guidance, consult with military and civilian leaders, and advance the work of Christian religious groups now welcome in Japan. For MacArthur personally, the Occupation forces themselves would be the first line of Christian influence in Japan. The leader of the Occupation encouraged his troops to pray, read the Bible, and exemplify Christian morals and values for their former enemies. Military chaplains were encouraged to spread the word of God to the Japanese and to seek converts as part of their Occupation duties.

Occupation troops would not have to serve alone as stewards of Christianity for long, as Catholic, Protestant, and nondenominational groups rushed to answer the call to return to Japan. At the start of the Occupation, there were only about 100,000 Catholics and 200,000 Protestants among the Japanese populace. Arriving missionaries pursued numerous different approaches including direct ministry, motion pictures, and the distribution of religious literature to raise these numbers.

Early in the Occupation, only military personnel were allowed to enter Japan. A cadre of American religious leaders on a survey mission representing the various Christian faiths in the United States was the first nonmilitary group permitted to enter Japan. These ecumenical leaders came from the World Council of Churches, the International Missionary Council, and the Federal Council of Churches. After flying in on a military aircraft, they were welcomed into Japan in October of 1945. Other Catholic and Protestant leaders would follow and be lodged by the Occupation in the Imperial Hotel of Tokyo or in U.S. Army facilities.

Because of Japan's state of disarray and poverty immediately after the war, missionaries relied heavily upon assistance from the Occupation Authority to carry out their work. Starvation brought on by a very low-calorie daily diet posed an especially serious problem. To alleviate Japanese hunger, missionaries received permission from SCAP to import food as well as supplies, clothing, and other necessities. Until they could import their own vehicles, fuel, and housing materials, Occupation forces stepped in and provided for these needs.

Father Bruno Bitter, S.J., led the Rehabilitation Committee of the Catholic Church in Japan, which served as the primary body working to establish a strong Catholic footing in Japan. He also served as an advisor to SCAP. Father Bitter hoped to distribute Bibles, prayer books, and other religious texts in Japan, most of which had to be shipped over from the United States and were not widely available in Japanese. To remedy this problem, Bitter secured access through MacArthur to facilities in Japan that would allow him to set up printing presses in-country for these items. With MacArthur's blessing and assistance, Bitter shipped over the raw materials for the

printing operation and accelerated his production and distribution of these Japanese-language materials for the people. To steadily churn out literature, Bitter called upon Catholic professors in the United States and Japan to write columns in these works, all the while assuring them that they had the complete support of MacArthur and his Occupation government.

At the higher levels of Church leadership, the Supreme Commander maintained a long-running relationship and correspondence with Cardinal Francis Spellman, who served not only as Archbishop of New York, but also as Military Bishop of the American Armed Forces. MacArthur arranged for Spellman to travel to Japan shortly after the war ended to give a mass and treated the affair as a state visit from a dignitary. Cardinal Spellman would travel back to Japan in 1948 to observe the work of the American missionaries and assess their progress. He believed that their pursuits were greatly aided and inspired by the sponsorship of the Supreme Commander's office. Whenever Spellman visited Japan, he enjoyed unique access to the highest levels of the Occupation government, including MacArthur himself. The Supreme Commander, as a matter of course, often shielded himself behind an impenetrable bureaucratic wall. However, he welcomed these meetings and sought the Cardinal's counsel and encouraged him to return again in 1950. This exchange illustrated MacArthur's preference for the advice of religious leaders and their privileged capacity to influence the religious tone of the Occupation.

One of the prime examples of that preference came as Catholics in Japan prepared to celebrate the quadrennial anniversary of the arrival of St. Francis Xavier in Japan. In homage to Catholicism's legacy in Japan, a series of festivities were planned to commemorate this event. To underscore the importance of the occasion, which took place in May of 1949, Rome arranged to have the relic of Xavier's right arm shipped to Japan. The presence of such a relic would undoubtedly draw many to the celebration, but the Supreme Commander generated more enthusiasm by encouraging Catholics from the United States and Europe to make a pilgrimage to Japan to attend. He also drew parallels between the work of Xavier and that of the missionaries toiling in Japan at the time. By ennobling the

event, he enhanced the legitimacy of the proceedings for the Catholic Church by ensuring a high turnout.

Protestant organizations like the Southern Baptist Convention would send traditional preaching missions to Japan and would write to Supreme Headquarters to request assistance for their work. Word came down from MacArthur and his staff that SCAP would provide whatever resources necessary to aid the mission of organizations like the SBC. In fact missionary leaders often sought the favor of the Allied command and received unprecedented access to military resources and material. Several times, they were given blanket assurances of assistance, which they did not hesitate to exploit.

Prior to 1948, standard Occupation policy dictated that all missionaries seeking entrance into Japan had to have prior experience in the field. This restriction did not impose incredibly harsh limits on who was granted permission to enter, but by 1948, SCAP altered these rules to enlarge the stream of missionaries arriving in Japan. From that point on, missionaries without experience were welcomed in Japan. Once again, rules were loosened to facilitate the missionary endeavor. Although over 1,000 missionaries answered the call to serve in the first years of the Occupation, as of 1951 the number of missionaries operating in Japan had swelled to 2,500.

The Christianizing crusade in Japan incorporated not only missionaries on the ground, but those groups who focused solely on the dissemination of religious literature as a means of conversion. Their rationale was that spreading the written word of God to as many people as possible could have a longer and more far-reaching impact. Notable groups who pursued this course included the American Bible Society and the Pocket Testament League. Under the auspices of SCAP these groups would send millions of Bibles and religious texts to Japan.

Founded in the United States during the nineteenth century as a part of the time period's religious revivalism, the American Bible Society believed in individual engagement with religion through Scripture study. In 1948, the American Bible Society informed MacArthur that it could not sustain its rate of production and shipment of religious texts for Japanese consumption. Alarmed, the Supreme Commander fired back a

telegram warning the ABS that any decline in the availability of those texts could have disastrous consequences for the Christian movement in Japan. To stave off this eventuality, he offered military transport and facilities to aid their cause. Setting the goal of bringing over 10 million Bibles into Japan, MacArthur paved the way to make this dream a reality. Perhaps an even starker example of his determination in this matter was his encounter with the Pocket Testament League.

The Pocket Testament League's origins also lie in nineteenth-century America. They shared a similar goal with the ABS of spreading Christianity widely through immersion in religious texts like the Bible. As with the ABS, MacArthur challenged the League in 1949 to set higher goals than they had originally intended for their distribution numbers in Japan. He reiterated the goal of over 10 million Bibles for Japanese consumption. To make this possible, MacArthur promised the PTL unfettered access to Occupation resources and concurrently issued an order to his troops to assist the League in any way they might require. Many within the PTL took this as the issuance of a blank check and therefore requested use of transport, storage, and housing facilities, which they mostly received, enabling them to meet their goal.

Missionary groups like the Foreign Missions Conference of North America made up of Presbyterians, Baptists, Methodists, and Lutherans made less traditional overtures for Christianity in the form of religious films. These projects were considered a welcome addition to missionary efforts and so in the summer of 1948, SCAP granted access to filmmakers shooting a film called *Toru*. The movie featured a Japanese war veteran who returned to Japan to find his home destroyed and family dead, whereupon he renounced Shinto. This set the stage for his exposure to Christianity and democracy. As a theme, many of these films aimed to show the Japanese people the fallacy of their past faith contrasted with the promise and opportunity provided by Christianity.

Meanwhile, hoping to secure a Christian presence among the next generation of Japanese leaders, groups like the Lutheran International Walther League in 1949, lobbied to erect Christian youth centers, in this case near the University of Hokkaido campus. It stood to reason that the leaders of Japan's tomorrow would

be educated and so many Christian groups flocked to schools and college campuses to create outreach programs and gain converts. SCAP approved of these initiatives, reasoning that the youth of Japan needed proper guidance in a divided world of competing ideologies. To the IWL and the forces of the Occupation, there was no better guide than Christianity.

This rationale was implemented on an even grander scale in the plans to build a Christian university in Japan. A school such as this offered the chance to secure an influential block of Japanese citizens as a force for Christianity. The establishment of International Christian University involved a massive fundraising campaign to acquire land and begin construction. Inside Japan and back in the United States, the campaign attracted many highly placed supporters like Ichimada Hisato, governor of the Bank of Japan, and former Ambassador Joseph Grew as well as Douglas MacArthur himself, who consented to serve as the campaign's honorary chairman. Catholics already had Sophia University in Tokyo, and Protestant groups moved to match this accomplishment. The ICU endeavor's nobility seemed beyond question once it had added the Supreme Commander to its list of advocates. Numerous Protestant groups united behind this quest. The university was opened in Tokyo in 1953 and remains so to this day.

To many, it seemed that the Japanese people responded to these approaches. Prominent Japanese Christian evangelist Kagawa Toyohiko, who had studied at Princeton Theological Seminary, rose to high stature in postwar Japan as a leader of Japanese Protestant Christianity. The Occupation forces deemed him so important that they overlooked some of his wartime activities, which supported Japanese militarism and war aims. Kagawa embodied what Christian missionaries hoped to create in Japan and his leadership of Japanese Protestantism superseded his sometimes controversial rhetoric.

It seemed that Christianity had even made inroads at the highest levels of the Japanese Government. In May 1947, Katayama Tetsu became the first Christian prime minister of Japan. His actual devotion to the Christian cause was debatable. Nonetheless, the Supreme Commander and Christians the world over lionized him and proclaimed that his election heralded

the religious reorientation of the Japanese people. Katayama's tenure lasted less than 10 months, which dampened the fervor accompanying his brief rise to prominence.

The greatest prize to be won for Christianity remained the Emperor and his family. In the early years of the Occupation, this matter remained shrouded in mystery as the Emperor demonstrated no visible religious preference. Contrary to its earlier patterns, Occupation forces adopted a hands-off policy when it came to Imperial conversion. They did not fear casting their support behind other proselytizing endeavors, but apparently sought to avoid the appearance of manipulating Japan's constitutional sovereign. A huge development occurred in 1948 when the Empress and her daughters began taking religious lessons from a Presbyterian minister. Furthermore, the Emperor called for an audience with several members of the missionary community and held religious discussions with them. Although many in the nation and Occupation held their breath, a Christian emperor was not to be. Rather, Christianity seemed at most a delightful curiosity for the Imperial family. This in some way mirrored the reactions of many in Japan toward Christianity. Others took a more disapproving opinion of Christian missionaries.

Even with the backing of General Douglas MacArthur, American missionaries in Japan did not gain converts in the large numbers they had expected. By the end of the Occupation in 1952, only 200,000 Japanese identified themselves as Protestant and 157,000 as Catholic. This meant that the Protestant population remained exactly the same as it was before the war and that Catholics had made only modest gains from its 100,000-member starting point. In short, less than one half of one percent of the 83 million citizens of Japan at the time considered themselves Christian.

Reasons for the ineffectiveness of this campaign vary and no one factor has been shown to be conclusive. Some scholars believe that Shinto and Buddhism were more deeply historically engrained in the Japanese psyche, and so they gravitated toward those religions. Many Japanese viewed Christianity as an unsavory foreign influence, symbolic of American control. Following centuries of religion endowing persons or concepts in Japanese society with divine

importance, some Japanese adopted a more secular lifestyle. American missionaries may also have mistaken mild curiosity on the part of the Japanese population for genuine interest in conversion, which bloated their conversion estimates. Lastly, the zeal of many of these missionary groups led in some cases to divisiveness and competition, which sullied their image in the eyes of the Japanese. Japan would not be won for Christianity, a religion whose popularity remains somewhat limited to this day.

American-Style Concentration Camps

With its entry into World War II, the federal government decided that Japanese Americans on the West Coast of the United States needed to be confined in camps because of military/security risks that this population supposedly posed. This suspicion has since been shown to be unfounded, and in the Korematsu and Hirabayashi *coram nobis* cases of the 1980s the federal government had to acknowledge that its lawyers had deceived the Supreme Court during the 1940s in this regard.

Because it is now regarded as one of the most significant violations of civil and constitutional rights by the government against its own citizens, the imprisonment of over 120,000 persons of Japanese descent in American-style concentration camps during the 1940s is a critically important topic in U.S. history. Even though some scholars have incorrectly speculated that further attention is redundant, the truth is that key issues remain unresolved, and the larger significance of this period continues to be theorized in interesting ways.

To begin with, the terminology used to describe what happened is clouded by misleading words. Following Daniels, we choose to call the episode one of *mass incarceration*, not “evacuation”; Japanese Americans were *prisoners*, not “internees.” They were forced by the U.S. Army into *Wartime Civil Control Authority (WCCA) camps*, not “assembly centers,” and later, under the jurisdiction of the War Relocation Authority, or WRA, they were held in *American-style concentration camps*, not “relocation centers.” The words we use to describe what happened are critical, and so it is important to begin by eschewing government euphemisms.

Contrary to popular belief, the events that led up to mass incarceration did not begin with the bombing of Pearl Harbor. There was, in fact, a history of anti-Japanese sentiment long before that. Historical research reveals that both formal and informal discrimination against Asian immigrants goes back to the earlier anti-Chinese movement of the nineteenth century. In response to Japan’s military activities in countries like Korea and Manchuria, domestic intelligence operations focusing on the Japanese American community began as early as the 1920s in Hawaii and in the 1930s on the U.S. mainland. After the Pearl Harbor attack, the FBI, Navy, and Army consolidated their lists, and the FBI raided select homes and imprisoned more than 2,000 Issei (first-generation immigrants) in Justice Department “internment camps” (a technical term that appropriately designates camps where aliens are imprisoned), thus depriving the community of key leaders.

Afterward, the head of the Western Defense Command, General John L. DeWitt, established military zones, imposed curfew, and passed over 100 additional orders restricting people of Japanese ancestry. Early removal was cruelly enforced in sites such as Terminal Island, south of Los Angeles in February 1942, and in Bainbridge Island in Seattle’s Puget Sound in March 1942. Individuals and families in these locations, including some mothers whose husbands had been arrested by the FBI, were forced to leave within 48 hours. On February 19, 1942, President Roosevelt signed Executive Order 9066, which did not name people of Japanese ancestry specifically but allowed the Army to detain any person

or group construed as a threat to national security. The Japanese American Citizens League, or JACL, urged compliance with removal and incarceration to prove the community’s loyalty to the United States. Although wholesale resistance was not possible, many blamed the JACL for overaccommodating because, by the end of the war, not one person of Japanese ancestry had been convicted of either sabotage or espionage.

In very quick order, the Army, under the guise of the Wartime Civil Control Administration, or WCCA, rounded up over 110,000 Japanese Americans on the West Coast and confined them in 16 temporary camps euphemistically called “assembly centers.” These temporary camps were often located on local race tracks or fairgrounds. Within a year, people were transferred to one of ten more permanent camps that were set up in desolate parts of the interior. These camps were managed by a civilian agency, the WRA.

Initial conditions in the WRA camps were harsh. Pregnant women and people with any kind of infirmity were put at risk because medical personnel and supplies were very limited. Even those who were able-bodied resented the camps. In addition to being ripped off and run out of their homes and communities by government authorities, people’s distress had to do with conditions that ranged from inadequate facilities to poor food, overcrowding and an egregious lack of privacy. There was dissent over such things as low wages, rigid rules and regulations, as well as the exclusion of Issei elders from the limited amount of self-government the WRA allowed. From the beginning, there were many forms of popular resistance on the part of ordinary individuals. As a result, life in camp was often tense. To make matters worse, misguided WRA policies did little or nothing to help the overall situation.

One of the bungled government moves was the implementation of the compulsory “loyalty questionnaire” in 1943, which attempted to identify so-called “disloyal” persons. Anyone who was deemed suspicious was subsequently sent into “segregation” at the WRA camp at Tule Lake. In many cases, the people identified as disloyal were merely trying to stand up for their rights. Second-generation Nisei with pro-American sentiments were encouraged to either join the military if they were eligible or to resettle to the

interior states of the U.S. mainland even though the war was still in progress. Approximately, one-third of the WRA camp residents did resettle before the war ended. In terms of military service, more than 30,000 Japanese American men and women served in one capacity or another by the end of the war, joining different branches of the U.S. Army, including the famed 442nd Regimental Combat Team and the 100th Battalion, the Military Intelligence Service, and the Women's Army Corps, among others.

Resettling, as a whole, during and after the war presented many critical challenges to each generation. What sparse research there is indicates that many had to endure poverty and discrimination during the 1940s and even into the 1950s. By the 1970s, progressive Nisei who were influenced by the Civil Rights Movement and the creation of Asian American Studies programs, joined forces with their third-generation children. Together the two generations formed a plethora of grassroots organizations and galvanized the larger community to expose the injustices that the WRA camps had wrought. In the end, the passage of the Civil Liberties Act of 1988 was a tangible victory after a hard-fought battle for Redress (an apology) and Reparations (monetary payment for damages done). Only about half of those imprisoned received payment, however, because many Issei were deceased by the time the bill was signed and were thus rendered ineligible for monetary compensation.

What issues surrounding mass incarceration remain for students and researchers to address in the new millennium? Three thematic areas stand out:

1. The utility of particularistic accounts—that discuss each camp in isolation—is now very limited. At one level, this is because the basic features of the WCCA and WRA camps have already been described. Concomitantly, past accounts have been guilty of overgeneralizing about Japanese Americans as a whole. As a result we lack information about intragroup diversity. Japanese American women's experiences in camp, in terms of background and generation, are a narrative that remains underexplored. Class issues in camp adjustment and resettlement are understudied.

Mixed-race children have received little attention, and GLB (Gay, Lesbian, Bisexual) individuals have been virtually ignored.

2. South of the border, the U.S. State Department worked with the Peruvian government to seize over 1,800 persons of Japanese ancestry, who were taken from their homes and communities and confined in the Department of Justice internment camp at Crystal City, Texas. In Mexico, on the other hand, Mexican authorities sought to concentrate people of Japanese ancestry in the northern states as well as in Baja California to two cities in the central Mexican highlands. Although policies varied from country to county, many of the initiatives against Japanese Latin Americans appear to have been unduly influenced by the U.S. State Department.

Because the Nikkei (persons of Japanese ancestry, overseas) seized in 13 Central and South American countries and sent up the United States have never been adequately compensated, the issue of full-scale Latin American Japanese and Redress/ Reparations continues into the new millennium. Here, "The Crusade for Justice," a Northern California community-based organization, has done an outstanding job. To date, the full story of Japanese Latin Americans, who were subject to rendition (i.e., seizure) has never been written; full compensation for losses has been denied and so justice is still very much pending.

3. The gradual passing of the Nisei generation is pushing a wide range of issues to the forefront. Scholars like Donna Nagata, artists and writers, as well as community members, have asked "what is the long-term impact of the camps" on subsequent generations? The answer is not yet clear, in part because discussion over the best methodologies of measurement is ongoing. That in itself is an important area of continuing study, if only because there is variation within generation cohorts. Thus it is hard to say, with authority, what the Nisei generation's response to the camps actually

was. It depends on many things, including the gender, age, and background of the individual involved; what camp the person was in; and even what transpired with their family and at a personal level in the difficult years of resettlement once the war was over.

Concomitantly, there is also debate over what memories of incarceration are presented, who presents them, and how best to record and communicate them. Museums and historical societies, the foremost of which is the Japanese American National Museum, have engaged the issue of preservation for over three decades now. Recent legislation such as Public Law 109–441, which provide federal funds to preserve actual camp sites and buildings, have energized the camp-specific organizations such as the Friends of Minidoka and the Heart Mountain Wyoming Foundation. Preservation, however, inherently entails issues of representation, and so the construction of memorials and “interpretive learning centers” have raised a wide range of issues having to do with representation, including terminology, context, diversity, and impact.

Similarly, community-based organizations like the Nikkei for Civil Rights and Redress (NCR) have successfully drawn attention to how the persecution and challenges facing Muslim Americans bear an unfortunate resemblance to those faced by the Issei and Nisei during the 1940s. NCR’s response to a number of the issues raised, herein, has precisely to do with making the history of mass incarceration relevant to our lives today. In other words, the Japanese American experience of mass incarceration must not be reduced to a static history lesson. This vital piece of American history has ongoing significance. Its continued study is vital to the understanding of minorities, domestically and globally, today.

Angel Island Immigration Station

From 1910 to 1940, over 1 million people passed through the port of San Francisco on their way into or out of the United States. The Angel Island Immigration Station, located in the San Francisco Bay, served as the processing and detention center for an estimated 300,000 immigrants. One of almost 20 immigration stations operating around the United States in the early twentieth century, the immigration station on Angel Island was the main Pacific gateway into and out of the country. The majority of the newcomers came

from China, and the immigration station's history of detaining Chinese immigrants is most well known. But there were also immigrants from over 80 different countries who passed through Angel Island, including Japan, India, Korea, Russia, Mexico, the Philippines, Australia, New Zealand, and Germany. Of the 300,000 estimated detainees, there were approximately 100,000 Chinese, 70,000 Japanese, 8,000 South Asians, 7,500 Russians, 1,000 Koreans, 1,000 Filipinos, and 400 Mexicans. Many came for work or to join family already here. Others hoped to find refuge from the revolutionary violence, colonialism, or persecution ravaging their homelands.

Like Ellis Island, the Angel Island Immigration Station was one of the country's main ports of entry for immigrants in the early twentieth century. But although Angel Island was popularly called the "Ellis Island of the West," it was very different from its counterpart in New York. Mainly a processing center for European immigrants, Ellis Island was characterized by American immigration laws that restricted, but did not exclude, European immigrants. In fact, one of the goals of Ellis Island was to begin the process of turning European immigrants into naturalized Americans. Angel Island, on the other hand, was the chief port of entry for Asian immigrants and was characterized by American immigration policies that excluded Asians and barred them from becoming naturalized citizens. Most European immigrants processed through Ellis Island spent only a few hours or at most a few days there, whereas the processing time for Asian, especially Chinese, immigrants on Angel Island was measured in days and weeks.

Building the Immigration Station

Although the immigration station on Angel Island did not open until 1910, its history is rooted in the United States' passage of the Chinese Exclusion Act of 1882. This law barred Chinese laborers, allowed only members of elite "exempt" classes to enter, and required the inspection of newly arriving Chinese immigrants. Those who met the admission requirements were allowed to enter the country; those who did not were detained until they could be deported or until a final decision on their cases was made. For many years,

Chinese immigrants were detained in the two-story "detention shed" built on the Pacific Mail Steamship Company wharf in San Francisco. Numerous complaints about the unsafe and overcrowded conditions at the shed convinced federal government officials to construct a permanent immigration facility. With the successful operation of Ellis Island in mind, lawmakers suggested that San Francisco build a similar immigration station on an isolated island. Angel Island, the largest island in the San Francisco Bay, was seen as a logical choice. Architect Walter J. Matthews modeled the San Francisco facility after its New York counterpart, designing a station that grouped together buildings that were devoted to specific functions, such as administration, medical, and detention. The Angel Island Immigration Station opened January 21, 1910. The first immigrants arrived for processing the next day.

Immigrant Experiences on Angel Island

Although the station was designed to address the port of San Francisco's unique position as the primary entry point for Chinese into the United States, an increasingly diverse group of immigrants began to arrive on Angel Island during and after World War I. A complex set of immigration laws regulated their entry and treated immigrants differently based on their race, nationality, gender, and class. Contract laborers, anarchists, those "likely to become a public charge," and others were excluded under general immigration laws. A diplomatic accord, known as the "Gentlemen's Agreement" between the United States and Japan, also effectively ended the immigration of Japanese and Korean laborers beginning in 1908. The 1917 Immigration Act's "Asiatic Barred Zone" barred South Asians. The Quota Act of 1921 and the Immigration Act of 1924 limited total annual admissions and set temporary quotas for each immigrant group based on their national origins. The economic depression of the 1930s sharply curtailed all immigration into the United States, and at the same time, there was an increase in arrests and deportations of immigrants already in the country, particularly Filipinos and Mexicans. As the United States continued to close its door to an ever-widening group of immigrants, regulation of immigration on Angel Island became a complex, multifaceted

process. The Angel Island Immigration Station also played a key role in removing and deporting immigrants already in the United States, particularly during the Filipino repatriation campaign of the 1930s.

The Angel Island Immigration Station employed a large staff of immigrant inspectors, stenographers, guards, clerks, deckhands, transportation employees, engineers, telephone operators, plumbers, carpenters, laundrymen, guards, and cooks. Missionaries and representatives of immigrant and social service organizations made regular visits to the immigration station to offer religious services, occasional cultural programs, English classes, and comfort and assistance to immigrant detainees. Methodist deaconess Katharine Maurer, known as the “Angel of Angel Island,” served Angel Island immigrants for 28 years.

There were some common inspection, medical, and detention procedures that immigration officials followed for all new arrivals. However, immigration

regulation on Angel Island also varied—sometimes dramatically—across groups. There was a strict policy of racial segregation separating whites and Asians, and international relations, histories of colonialism, and domestic hierarchies of race, ethnicity, class, and gender in U.S. immigration policy all influenced how different immigrant groups came to Angel Island and how they fared once there.

Chinese immigrants were judged solely through the terms of the Chinese exclusion laws, which barred Chinese laborers, but allowed for certain “exempt” classes, like merchants and U.S. citizens to enter or re-enter the country. Japanese, Koreans, and South Asians eventually became excluded by race-based laws, such as the Gentlemen’s Agreement and the “Asiatic Barred Zone” in the 1917 immigration law, but they were also subjected to class-based and general immigration laws that barred “persons likely to become a public charge” and others. Until 1935,

Chinese and Japanese women and children wait to be processed as they sit in a wire mesh enclosure at the Angel Island internment barracks in San Francisco Bay in the late 1920s. (AP Photo)

Filipinos could enter the country without an entry visa as U.S. nationals and were rarely brought to the immigration station. For Russian immigrants, class, nationality, and political convictions, but not race, were the criteria for exclusion. Immigrants with wealth, education, and powerful friends from all backgrounds almost always faced less scrutiny than their fellow countrymen and entered the country after only minimal inspections. Women of all backgrounds were judged by evidence of their morality, their role in their families, and their race. Women traveling alone or who had checkered sexual pasts encountered more difficulties than others traveling with their husbands who were deemed to be “respectable.” For some immigrants, race, class, and gender-based laws worked together to either open the gate to America or keep it closed.

Immigrants actively challenged their treatment on Angel Island and their exclusion from the country, but the ways that they did so also differed. Some, like the Chinese, Koreans, and Russians, were able to marshal strong ethnic organizations to come to their defense. Chinese were the most active litigants and routinely hired the best lawyers to represent their cases to the U.S. government. Jewish refugees relied on a highly organized network of religious and other organizations to come to their defense. Others like the Japanese depended on their home governments as a counterweight to American discrimination. Many, such as Mexicans and Filipinos, called on family and friends to verify their claims for admission. Others, like South Asians, had fewer ethnic organizations and an unresponsive, or even hostile, home government that facilitated their exclusion from the United States.

Immigrant Detention

An estimated 70 percent of all passengers arriving in San Francisco were brought to Angel Island; the remaining passengers, including returning residents and citizens, were landed directly from the steamships. Of those detained on Angel Island, nearly 60 percent were detained up to three days. This rate of detention contrasts dramatically with those for Ellis Island, where only 10 percent of all arrivals were detained for legal reasons and another 10 percent were detained for medical treatment. Disparities in immigrant

detention on Angel Island also existed. Seventy-six percent of Chinese applicants were ferried over to the island, compared to 38 percent of non-Asians. Compared to other groups, Chinese also had the highest rates of detention. Chinese comprised 70 percent of those who spent any time on Angel Island, and their average detention was 10 days. Quok Shee, who was detained there from September 1916 to August 1918, holds the record for the longest known detention at the immigration station.

Immigrant detainees were housed in two separate buildings. Whites and Asian women were generally housed in separate detention quarters in the administration building. A separate “European” recreation yard was attached. Asian men were housed in a separate two-story detention barracks building that could house 300 to 400 males and 100 females at one time. It had its own recreation yard for Asian detainees.

Immigrant detainees faced a mundane routine of anxious waiting that could last days, weeks, and even months and years. There was little privacy or recreation, and detainees vehemently complained about the overcrowded and unsanitary conditions and the poor quality food at the station. Some Chinese detainees, who faced higher rates of detention and longer detention periods than other groups, expressed their frustrations through poetry written or carved into the barracks walls.

One poem written by an anonymous Chinese detainee, expresses the common feelings of frustration, anger, and sadness that many detainees felt on Angel Island.

I clasped my hands in parting with my
brothers and classmates.
Because of the mouth, I hastened to cross the
American ocean.
How was I to know that the western
barbarians had lost their hearts and reason?
With a hundred kinds of oppressive laws,
they mistreat us Chinese.

Chinese were the most prolific writers at the immigration station. Researchers have discovered 310 Chinese poems and inscriptions. But other immigrants also left their mark on the detention barracks walls.

There are almost one hundred additional slogans and inscriptions in Japanese, Korean, Russian, Punjabi, and English.

National Historic Landmark

The Angel Island immigration station was abandoned for many years after a 1940 fire destroyed its administration building. But in the 1970s, community activists organized to save the immigrant barracks from destruction after a California state park ranger discovered Chinese poetry carved into the barracks walls. Under the leadership of the Angel Island Immigration Station Historical Advisory Committee, the process of restoring the immigrant detention barracks began. Community historians and scholars also started interviewing former immigrant detainees, documenting the Chinese poetry found on the barracks walls, and preserving the history of the immigration station. In 1983, the immigration barracks was opened to the public as an interpretive center. The immigration station was designated a National Historic Landmark in 1998. State and federal funding supported additional restoration efforts. In 2009, the restored immigration barracks and immigration station site reopened to the public, and in 2010, the immigration station marked its centennial with events on and off the island.

No longer known just for its importance to Chinese American history, the Angel Island Immigration Station National Historic Landmark is now recognized for its centrality to American immigration in the past, present, and future.

Anti-Asian Miscegenation Laws

The first antimiscegenation act dates back to colonial America in 1661 when Maryland passed a law banning

interracial marriage between whites and blacks. Through this form of racial regulation, lawmakers sought to limit the interactions between free whites and slaves. Although the sanctions were never uniformly instituted at a federal level, over the course of the next three centuries, 38 states in the country exercised some variation of antimiscegenation laws. In the case of Asian Americans, the legislations lodged against the members of the Asian community were often rooted in fear of economic competition, the desire to protect the political interests of whites, and the social perception of the inability of Asian immigrants to assimilate. Mostly, marital jurisprudence was instituted as a way to prevent intermarriages between white women and Asian men.

Beginning in the 1860s, a series of antimiscegenation laws were instituted with the purpose of regulating marriages between the Asian immigrant population and the dominant white public. Historically, the mid-1800s witnessed the arrival of people of Chinese descent in large numbers. The quest for gold in the American West attracted many from overseas who came to America with hopes of securing wealth and fortune. As temporary workers, or sojourners as they were called, many of these Chinese men had arrived intent on finding riches and then returning home. As such, the American public and lawmakers did not view these Asian workers as capable of being assimilated into American society. Because the majority of the immigrants were male, the Chinese population experienced an overwhelmingly disproportionate male to female ratio. In 1870, for instance, there were 14 Chinese men for every Chinese woman. As a result, as bachelor communities dotted the maps of the American West, it raised concern on behalf of white America of the need to police their mobility and residency as well as their ability to marry.

Compounded by the increasingly anti-Chinese sentiments that emerged during the 1860s, the Chinese then became the first Asian ethnic group to encounter legal sanctions against their marriage to whites. In 1861, a physician from Nevada by the name of Dr. John S. Pugh requested legal acts to forbid and criminalize any Chinese-white marriages. With the passage of this prohibition by the leading Union Party, Nevada became the first state in the country to legally

interdict unions between a white person and an Asian person. Idaho, Oregon, Arizona, and Wyoming soon followed suit by enacting similar judicial limitations on mixed marriages. These legal steps taken to demarcate racial lines were part of a growing practice in the 1860s of extending the illegality of interracial marriages beyond whites and blacks. For instance, Section 3 of Arizona's 1865 Territory Laws states, "All marriages of white persons with negros, mulattoes, Indians, or mongolians are declared illegal and void" (Sohoni 2007: 8). For most of the nineteenth century, "Mongolian" and "Chinese" often appeared on state regulations to communicate the restrictions placed on Chinese bachelors.

During this period, political parties were fundamental to the successful passage of these laws. Unionists in Nevada and Oregon advanced proposals barring the Chinese whereas the Democratic parties in Idaho and Wyoming in addition to the Republicans in Arizona endorsed similar legislations. There existed little apprehension about the inclusion of the Chinese on this type of racial regulation. Many of the barriers set against the Chinese were enacted with the goal of preventing marriages between Chinese men and white women. To agitate public antagonism against this population, newspapers such as *Harper's Weekly* conferred onto Chinese men characteristics of sexual deviancy and licentiousness that necessitated policing.

The enactment of the Page Law in 1875, coupled with the emerging trend toward anti-Chinese miscegenation laws in the last decades of the 1800s, exacerbated conditions for the Chinese bachelor society. In that year, Congress passed the law denying entry to Asian contract laborers identified as "Chinese," "Japanese," or "Mongolian." Furthermore, the Page Law banned the immigration of Chinese women under the pretext of protecting American morality from the perceived threat of Chinese prostitution. This would in turn facilitate the passage of Chinese exclusion that began in 1882 and lasted until 1943. As a result of anti-Chinese hostility, political sentiments, and economic competition, the Chinese also became the first group denied entry and citizenship to the "land of the free" on the basis of race. As a result, the increasing efforts by Congress to limit the immigration of persons from Asian countries from gaining citizenship

combined with antimiscegenation laws helped to further complicate and retard the growth of the Asian American community throughout the nineteenth century.

Before the century's end, California and Utah would join the first five states in the country by each adopting a provision against Asian-white marriages. By this time, California was home to the largest Asian ethnic population in America. In 1880, lawmakers addressed the issue of interracial marriages between the members of California's existing Chinese community and their white citizens by formally banning such unions in Section 69 and Section 60 of the California Civil Code. Under Section 69, marriage certificates were denied to Chinese-white couples. Here, the term "Chinese" replaced "Mongolian" to preclude such marriages. Although Section 69 named the Chinese as unsuitable marriage partners, Section 60 of the same code, which was the antimiscegenation component, remained unchanged. Throughout the latter half of the nineteenth century to the beginning of the twentieth century, "Chinese" and "Mongolian" had been applied interchangeably to people of Chinese descent. However, until 1905, this practice was no longer effective as concerns over the growing Japanese population compelled legislators to remedy the disparity in the two sections by classifying people of Japanese and Chinese ancestry under the term "Mongolians."

With the increased visibility of the Japanese population, lawmakers took steps to ensure the exclusion of this group from immigration and incorporation into American society. Similar to their Chinese co-ethnics, the Japanese were confronted with restrictions on immigration in the form of the Gentleman's Agreement of 1908. Moreover, previous antimiscegenation laws against the Chinese were modified to encompass this second Asian group. In 1909, Montana enacted the first statute specifically naming Japanese people, in addition to the Chinese, among the list of individuals forbidden to wed whites. Other states also diligently cited "Chinese" and "Japanese" in their provisions. However, "Mongolian" became the preferred term for the 12 states with anti-Asian miscegenation laws in place.

The experiences of Filipinos offer a different narrative in the history of anti-Asian miscegenation.

As American nationals, they did not encounter the same immigration strictures as those placed on their other Asian neighbors. Furthermore, unlike the Chinese or Japanese, Filipinos did not fit under the category of “Mongolians.” Further ambivalence colored the status and identity of members of the Filipino community because many were of mixed ancestry, such as Chinese, Spanish, and Pacific Islanders. As a result, Filipino-white couples were able to acquire marriage licenses in places like Los Angeles County until California law was revised to restrict Filipinos. The case of *Salvador Roldan v. Los Angeles County* in the 1930s illustrates this point. Here, a Filipino man sued the city of Los Angeles, arguing that the ban on unions between whites and “Mongolians” was not applicable to Filipinos for they were part of the “Malay” race. Court judges ruled on the part of the plaintiff on the grounds that five racial groups (Caucasian, Mongolian, Ethiopian, American, and Malay) are in existence and Filipinos were not part of the Mongolian race. To counter this ruling, lawmakers revised their antimiscegenation laws to include people of “Malay” descent. California’s case was not the first episode in American history to demonstrate the lengths to which state officials would go to maintain the racial segregation of marriage. In the first decades of the 1900s, Nevada’s legislators strove to create a more expansive list of excluded partners. With the adoption of a Democratic plan, the revised law banned “any person of Ethiopian or black race, Malay or brown race, Mongolian or yellow race, or the American Indian or red race” (Pascoe 2009: 91) from marriages to whites. This had a more adverse effect on Filipinos, for Filipino men had a relatively higher rate of exogamous marriages, especially with whites, than did other Asians.

Although the first prohibitions on mixed marriages were proposed and passed in the Western states, 15 states stretching from the West to the East had adopted some form of miscegenation statutes against Asian ethnics well into the twentieth century. As with the Japanese and the Filipinos, the arrivals of new immigrants from other Asian countries like Korea and India forced state policy makers to modify and define their antimiscegenation statutes. As such, the language of antimiscegenation differed from state to state. By 1939, however, racial identifiers had expanded greatly

despite the fact that Asians and Asian Americans constituted a paucity number in comparison to the dominant white population. In addition to “Chinese,” “Japanese,” and “Mongolian,” terms such as “Malay,” “Corean,” “Yellow Race,” and “Asiatic Indian” appeared on interracial proscriptions throughout the country to accommodate and exclude the different Asian populations in America. In Virginia and Georgia in 1924 and 1927, respectively, these provisions did not directly list Asian Americans. Instead, they refused to recognize any marriages between a white person and a nonwhite person. Accordingly, only someone of pure white or Caucasian blood can be defined as a “white person” in Georgia’s laws. As a result, there existed different approaches toward the exclusion of Asian Americans through clearly articulated and implicit wording in these measures.

The persisting nature of anti-Asian sentiments in the twentieth century culminated in the passage of the Cable Act of 1922 at the national level. Although white men could annul their marriages to an ethnic spouse by citing the union as an act of transgression against existing antimiscegenation laws, denaturalization was employed against women in mixed marriages. Also known as the Married Women’s Independent Nationality Act, this federal law revoked the citizenship for any woman married to an “ineligible aliens.” As a result of the 1923 ruling in the *United States v. Thind*, only people of Asian ancestry were barred from citizenship and naturalization through heavy reliance on racial profiling. Under these conditions, the Cable Act particularly punished those women married to or considering marrying an Asian spouse. Asian women married to Asian men experienced further discrimination under the act. For instance, female immigrants from Europe or Africa who qualified for naturalization could regain their citizenship upon divorce or the death of their spouse. In contrast, Asian women who were citizens by birth could never reclaim their citizenship once they have entered into a union with an immigrant man due to the *Thind* ruling that denied Asians eligibility for naturalization. The Cable Act was revoked in 1936 after it was proclaimed that race could not be used to deny U.S.-born female citizens of their right to naturalization.

Anti-Asian miscegenation laws did much to curtail family formation for many members of the Asian

community. However, there were individuals who found ways to circumvent the existing strictures by leaving the state. A case in point, the engagement between a Japanese man, Gunjiro Aoki, and his white fiancée, Helen Emery, demonstrated the couple's efforts to undermine Section 69 and Section 60 in California. The couple traveled throughout the Pacific West and was finally able to marry in Seattle in 1909. Marriages with other nonwhites offered another means of securing the continuation of the family line, such as in the case of Punjabi-Mexican intermarriages in the Imperial Valley of California. Intra-racial marriages among members of the Asian American community was another method of securing a family, however, there was still a disproportionate number of Asian females as the Immigration Act of 1917 added further restriction to immigration from other Asian countries outside of Japan and China.

Much to the displeasure of opponents of intercultural marriages, antimiscegenation laws in California were finally eradicated in 1948 with the ruling in *Perez vs. Lippold*. In this particular case, existing marital laws prohibited Andrea Perez, a Mexican American woman from marrying her African American fiancé because of the ambiguity in classifying Mexican Americans as either "White" or as a minority. The Supreme Court of California ruled against the ban on interracial marriage on the grounds that a state's anti-miscegenation laws stand in direct violation to the First Amendment and the Fourteenth Amendment. As the first state to invalidate these stipulations on marriages, it set a precedent for the ultimate ruling of *Loving v. Virginia* in 1967. In this case, the Supreme Court justices abrogated all state proscriptions on intermarriages. Their ruling rested on the argument that such state-imposed barriers violate the Equal Protection clause. Furthermore, marriage is a freedom intrinsic to the individual, and not one that can be regulated and determined by the state.

Anti-Asian Violence, History of

The history of anti-Asian violence began with the first arrival of Asian immigrants in the United States and progressed through the nineteenth and twentieth centuries in successive phases of hostility. Intersected by political, economic, nativist, social, xenophobic, and even biological antagonisms, the most common form of hostility during the 1800s was organized anti-Chinese violence, harassment, and discrimination, followed by anti-Japanese and anti-Filipino movements respectively. The forms of anti-Asian violence ranged from spontaneous groupings responding to perceived local threats from Asian migration to highly organized and coordinated acts of violence against Asian communities. The three most common types of anti-Asian violence were individual murders, property destruction, and organized expulsions. Although the history of anti-Chinese violence became the model for other anti-Asian immigrant persecutions, the reasons for and manifestations of such violence vary.

The rise of anti-Chinese violence began in the 1850s during the Gold Rush days in California. Chinese miners were the primary victims of harassment and physical violence. Anti-Chinese violence spread to the fishing and agricultural communities up and down the West Coast including Washington and Oregon, and east into Wyoming, Colorado, and Idaho, which included murders, arson, mass expulsions, and mob violence. This period from the mid- to

late-1880s saw the height of organized anti-Chinese violence resulting in two major incidents involving federal intervention in Rock Springs, Wyoming Territory in September 1885 and in Seattle, Washington Territory from October 1885 through February 1886. Fueled by racial tensions and a contentious labor dispute with the Union Pacific Coal Mining's policy of paying Chinese miners lower wages than white miners, the Rock Springs Riot erupted killing at least 28 Chinese miners, injuring more than 15, and causing property damage that included Chinese homes in excess of over \$100,000. Several organized anti-Chinese movements occurred in the Washington territory most notably in Seattle. The Knights of Labor, an organization of white laborers, led a call to expel more than 300 Chinese from Seattle. A riot ensued and clashed with the police for several days. State militia and federal troops were called to quell the violence. Most of the Chinese residents were forced to depart the city.

One of the more prominent anti-Chinese leaders in California during the late 1870s was Denis Kearney. The Chinese became a convenient target of Kearney's vitriolic speeches that began and ended with "The Chinese must go!" Even though he was an Irish immigrant himself, he quickly became a champion of working class whites and unemployed laborers on an anti-capitalist and anti-government platform. They quickly focused their collective outrage on the Chinese who took their jobs away, the corporatists who hired the Chinese for lower wages, and a government that protected the Chinese more than the white citizens. Kearney participated in and rose up to the leadership of the newly formed Workingmen's Party of California. More a collection of factions than a unified and coherent labor movement, there were many internal disagreements and attempts to remove Kearney from leadership. But it was his incendiary calls for violence and anti-Chinese rhetoric that resonated with a large disenfranchised white majority, fueled its membership, and mobilized the organization into a political force and a violent entity.

Subsequent Asian immigrants who came after the Chinese in the early twentieth century also suffered similar patterns of anti-Asian violence. When Chinese immigration was closed with the passage of the

Chinese Exclusion Act in 1882, the onset of Japanese immigration marked not only the second wave of Asian immigration, but also the second phase of anti-Asian violence, this one targeting Japanese immigrants. Like the Workingmen's Party, the formation of anti-Japanese organizations fueled contempt for, and violence against, Japanese immigrants. One such organization was the Asiatic Exclusion League (AEL) formed in 1905, a broad coalition of labor unions in San Francisco whose anti-Asian platform influenced legislation restricting Asian immigration, specifically that of Japanese and Korean immigrants. The AEL focused their efforts to prevent the next influx of Asian immigrants, using the very same racist representations of Chinese immigrants to denigrate Japanese and Korean immigrants as threats to white laborers, as an inferior racial stock, as culturally and linguistically unassimilable, as carriers of disease, peddlers of drugs, harboring criminals, and overall, as a perpetual menace to the American way of life.

Japanese and Korean farmworkers were subjected to similar violent hostilities and forced expulsions that the Chinese experienced in the 1800s. However, some anti-Chinese and anti-Japanese movements were transnational, cross-border phenomena. Anti-Chinese and anti-Japanese movements in Cananea, Sonora in Mexico and across the border in Salt Lake River in Arizona demonstrate that organized anti-Asian immigration, exclusion, and violence occurred on both sides of the border. Similar to the American experience, discourses of the racial inferiority of Asians dominated Cananea, representing the Chinese, and by extension Asians in general, as undesirable. But anti-Chinese hostility was at its height specifically in Sonora, Mexico; in the early 1930s, Sonora was the only Mexican state where a combination of resentment, extreme anti-Chinese legislation, and political and violent force were used. In fact, Sonora was the only Mexican state to forcibly remove Chinese immigrants from its territory even though it was ethnically diverse, and economically prosperous with its mining and railroad industry. Additional factors contributed to a general anti-Asian sentiment that included a categorization that placed Asians at the lowest end of the racial hierarchy; the anti-Mexican experience of Canaan miners in San Francisco's Gold Rush, which was

reproduced against Chinese immigrants in Cananea; and the rise of Mexican nationalism in the late nineteenth and early twentieth centuries that, on the one hand, sought a racially inclusive Mexican nation, and on the other hand, was predicated on the exclusion of any difference, indigenous, Asian, or otherwise. A combination of social and political mobilization and violence took its toll on the Chinese community, and by 1932, over 3,000 Chinese were expelled from Sonora, which ended the Chinese presence in the state. Some fled to neighboring states such as Sinaloa, Chihuahua, and Baja California Norte where they were met with anti-Chinese organizations, but the mass expulsion was never repeated. The incident clearly influenced the neighbors in the U.S. state of Arizona who were facing an emerging “problem” of Japanese migration.

Thus, inspired by the expulsion of Chinese immigrants two years earlier in Sonora, Mexico, white farmers in Salt River Valley in Arizona formed the Farmers’ Anti-Oriental Society in 1934 amid alarms over increasing Japanese migration from the Imperial Valley in California. The farmers viewed the Japanese as an economic threat, a condition made worse under the Great Depression, and as part of a racial conspiracy to takeover farmland from whites.

Like the anti-Chinese movement in Sonora, Mexico, the Farmers’ Anti-Oriental Society demanded the Japanese leave by August 25, 1934. A gathering of over 600 white farmers and a parade of 150 cars were organized to ensure that the ultimatum was obeyed. Federal authorities attempted to defuse the situation but were met with a reluctant Arizona governor and a vitriolic response from the farmers. On September 14, 1934, the first of several assaults was reported on the properties of the Salt River Valley Japanese farmers. Six days later, dynamite was used to blow up three dams on three separate Japanese farms, though again no one was hurt. The government of Japan pressured the United States to intervene. In return, federal officials pressed Arizona’s governor and legislature to control the mob violence. The attacks, however, continued with neither the governor of Arizona stopping them nor the farmers signaling retreat. In fact, it became quite clear that the governor’s silence was an act of tolerance of the attackers. The attacks continued

through the year as anti-Japanese terrorism and harassment in Salt River Valley escalated and eventually waned. The threats, demonstrations, occasional violence, and political pressure persisted, at times becoming volatile, resulting in the decrease in size of the already small community by approximately 30 percent, as families and individuals moved elsewhere. The majority of the Japanese community however, despite the attacks against themselves and their property, remained.

The final period of anti-Asian violence was directed against Filipinos beginning in the early 1900s, but a notable event occurred in 1930 in Palm Beach near Watsonville, California. The first large group of 2,000 Filipino laborers arrived in California in 1923. They were mostly single men in their teens and mid-20s, and by 1933, the population rose to an estimated 65,000 with one-fifth living in Los Angeles. Like the Chinese and Japanese immigrants, Filipinos worked in the lowest and most exploitative sectors of the industry in agriculture, canning, and service-oriented jobs. Anti-Filipino violence once again ensued from a similar intersection of economic, political, and nativist factors.

However, discourses of race, sexuality, and masculinity were also salient features that provided a different current to the manifestation of anti-Filipino violence. In taxi dance halls and other recreational centers, downtown Los Angeles’s Little Manila from the 1930s until World War II, was a site of a vibrant “street culture.” In essence, the bodies of Filipino workers were sources of “enjoyment, style, and sensuality” and the dance hall became a transracialized masculine space whereby Filipinos and Mexicans could proclaim their “sensuality and virility” in a life and space away from the day’s toil.

However, the nights of sexual autonomy and expression created conflicts between Filipino, Mexican, and white laborers. For over a week starting January 11, 1930, Watsonville, California was the site for what was the most explosive demonstration of anti-Filipino violence. A white mob totaling up to seven hundred men went around town, raided the dance hall, beat and shot all Filipinos in sight, ransacked and burnt the homes of Filipinos, and assaulted and wounded as many Filipinos as possible. Fueled in part by a Filipino

masculinity and sexuality that was produced by men who were flashier, danced better, and spent their money more lavishly than their “fellow Nordic farmhands” the racial animosity and violence was a gendered and sexualized competition over white women. This “counterimage” of Filipinos as “brown hordes” subverted white male expectations of masculinity and sexuality, thus animating anti-Filipino violence.

This discursive construction is significant as are the political, economic, social, and even biological institutions that gave rise to anti-Asian movements and anti-Orientalism. Furthermore, it is essential to deconstruct the intersectional and often myriad reasons why these movements targeted Asian immigrants so easily and frequently provide a more complicated understanding that anti-Asian movements cannot be solely explained by racist attitudes alone. Such movements are interconnected with class privilege and domination, laborers and labor unions, rising unemployment and powerful monopolies, the tightening grip from ruling political elites and the weakening of democracy, the rise of eugenics and its influence on immigration policies, and the economic instabilities caused by the Great Depression. Moreover, this confluence of social, economic, and political factors is transnational, suggesting that anti-Asian movements are not a phenomenon solely limited to the United States.

Anti-Hate Crime Laws

The case of Vincent Chin is central to understanding the relationship between Asian American communities and federal and state hate crime legislation. It was the

case that first raised the issue of anti-Asian violence and the need for national awareness and political mobilization. It was not only a tragedy but also a cautionary tale about the importance and limitations of the law.

Vincent Chin was involved in an altercation with Ronald Ebens and Michael Nitz at a local strip club because he was mistakenly thought to be Japanese when he was actually Chinese. The attack occurred at the height of anti-Japanese sentiment spurred on by rising unemployment and recession because of the deindustrialization of Detroit's automotive manufacturing base. Chin's killers chased him down and brutally beat him with a baseball bat. He died four days later from the resulting injuries. What should have been a straightforward case of murder became the rallying cry for justice when both Ebens and Nitz were freed on \$3,000 bail and three years probation. The case generated national outrage and produced a panethnic and multicultural coalition to seek justice for Vincent Chin led by American Citizens for Justice and community activist Helen Zia. Their pressure successfully led to a federal trial that convicted Ebens on charges of violating Vincent Chin's civil rights. However, on appeal, the court reversed the conviction and Ebens was set free. Neither Ebens nor Nitz spent a day in jail for the murder of Vincent Chin.

Though justice in Chin's case was never served, it did provide lessons for future civil rights efforts. Ronald Ebens's and Michael Nitz's acquittal of violating Vincent Chin's civil rights occurred because of the narrow application of federally protected activities under the Civil Rights Act of 1964. The law, which states that individuals who willfully intimidate or interfere with the activities of another based on race, color, religion, or national origin will be federally prosecuted, is often referred to as the first anti-hate crime legislation. However, the statute also established federally protected activities as a constituent requisite before federal intervention can ensue. These activities include, for example, attending school, applying for employment, using the accommodations of a hotel or other public service, attending a theater, and so on. In other words, without evidence of an explicit bias-motivation based on race, color, religion, or national origin, in conjunction with the interference of a federally protected activity, federal intervention is not

possible. Such a narrowly defined mandate often had the effect of leaving the investigation and prosecution of hate crimes to individual state or local law enforcement.

As a result, Vincent Chin's murder, as well as those of Matthew Shepard and James Byrd, Jr., became frequently cited examples of the apparent flaws in the justice system. From community protests to the floors of Congress, the names of Vincent Chin, Matthew Shepard, and James Byrd, Jr. were invoked to demonstrate the need for additional federal legislation to address the issue of hate violence in the United States. Nearly 30 years after Vincent Chin's death, several major hate crimes legislation have been passed beginning in 1990 with the Hate Crimes Statistics Act, continuing in 1994 with the Violence Against Women Act and Hate Crime Sentencing Enhancement Act, in 1996 with the Church Arson Prevention Act, and most recently with the passage of the Matthew Shepard and James Byrd, Jr., Hate Crimes Prevention Act signed into law by President Barack Obama in 2009. This law essentially improves upon the 1964 Civil Rights Act, and augments federal coverage and intervention by adding the categories of gender, sexual orientation, gender identity, and disability to its list of coverage, and removes the prerequisite that the victim be engaged in a federally protected activity, thus giving greater federal leeway to investigate and prosecute hate crimes where local law enforcement are either unable or unwilling to do so. It also provides funding and requires the FBI to track statistics on hate crimes based on gender and gender identity. The Act is particularly noteworthy for including transgendered persons.

However, although the 2009 law is generally seen as a bookend to a series of federal anti-hate crimes legislation, there still remain a number of gaps at the state level with specific implications for Asian American communities. In short, what federal laws do not cover matters for Asian American communities.

The intensity and frequency of hate violence is often dependent on several factors: demographic changes in homogeneous communities, economic inequality, education and community relations, the persistence of negative or stereotypical media representations, the domestic and international political

environment, and finally, the relative strength of not only hate groups but also political extremists. These factors alone do not cause hate crime, but a combination of them can provide an environment ripe for it. Not only are these social, political, historical, and economic conditions significant in the rise or fall of hate violence, but individual states and local governments also have a vital function to address when and where hate violence occurs. In other words, the ability of law enforcement and community agencies to combat hate violence at the local level is still dependent on the strength of individual state hate crime statutes.

As the recent 2012 Census indicates, Asian American communities are now more geographically dispersed beyond areas of historically high concentrations of Asian Americans such as Hawaii, California, the New England region, and New York City. States in the South and Midwest have seen the most growth with South Asians in North Carolina, Hmong in Minnesota, and Thai and Vietnamese communities in Iowa, for example. As the face of the nation continues to change and new Asian American communities emerge, the important question to ask is not whether anti-Asian violence will strike, but how community organizations and local law enforcement agencies will respond. On an individual state level, the most pressing concern is whether the state has even enacted anti-hate crime laws. Despite federal laws regarding the collection of statistics and even the recent Hate Crimes Prevention Act, local law enforcement and local courts are the first to respond and the first to act if a hate crime has been committed. Many states have weak versions of hate crime statutes that are too vague to be enforced or that fail to include coverage of different identities reflective of the communities within the state, particularly those of sexual orientation and gender identity. As of 2011, Indiana and South Carolina have the weakest coverage whereas Wyoming has no hate crime statute. Both situations negatively impact the ability of Asian American communities to challenge hate and, more important, often leave victims and their families with little recourse for action.

A persistent problem with understanding the extent and scope of anti-Asian violence is the continued underreporting from victims because of immigrant status, linguistic barriers, fear of retaliation, shame of

being a victim, fears of the police, the general lack of awareness about hate violence and laws protecting victims and communities. These issues are especially acute in recent immigrant communities and will continue to prove to be a challenge for law enforcement. Without education and outreach services, support for improved police-community relations, and bilingual officers, accurately recording the actual extent and reach of anti-Asian violence for the purposes of statistical analysis and policy making can be difficult.

Addressing hate violence against victims who are undocumented citizens presents particular challenges. Fearing detention and deportation, undocumented citizens often fail to report such violence. However, the benefits of the U Visa Program may be an important yet unused tool for protecting the identity of undocumented immigrants and assisting law enforcement agencies in the investigation and prosecution of a hate crime. At present the U visa grants an undocumented immigrant amnesty from deportation if they have suffered from crimes of the following nature: abduction, felonious assault, sexual assault, and others. Although hate crime is not specifically labeled as a category, it could be included under “other related crimes.” The U visa could potentially give undocumented Asian immigrants greater confidence in prosecuting their assailants and protection in reporting hate crimes perpetrated against them.

Federal and state anti-hate crime statutes are also ambiguous in reference to bullying, especially among Asian American youth. Higher peer harassment rates were reported for South Asian and Southeast Asian students from white and African American students, whereas African American and Latino students reported high incidents of discrimination and harassment by adults such as teachers and police officers in an educational setting. The harassment of Asian American students ranges from repeated verbal abuse to physical threats, robberies, and physical assaults. Evidence suggests that bullying ought to be classified as a hate crime because both phenomena share similarities, including the effects of victimization and the intentional selection of Asian American students as easy targets. However, the No Child Left Behind Act of 2001 complicates this classification, in that a school could be declared “persistently dangerous” if there is a

pattern of repeated violent offenses and activities. Each state defines what constitutes “persistently dangerous” and often hate violence and/or bullying are included. The provision allows a student who is the victim of a violent crime to transfer to a “safe” school. However in doing so, the incident may precipitate a loss of funding to the school, which encourages school administrators to underreport the number of offenses committed on school grounds to avoid being shut down. Therefore, Asian American youth who have been victimized, or who go to school in an environment of fear, are often caught in a complicated legal and political dilemma that offers very little recourse or protection. When federal and state anti-hate crime laws do not include bullying among the list of criminal activities, when school officials do not comply with the provisions offered in the No Child Left Behind Act (NCLBA), or when school officials are politically pressured to dismiss anti-Asian incidences to avoid the more severe consequences of NCLBA, Asian American youth victims and their families are often left with few choices.

Hate crime statistics also indicate repeat victimization in Asian American communities. Repeat victimization is a type of “crime pattern” that includes “hot spots, crime series, and repeat offenders.” The pattern occurs when a crime incident targets the same or similar victim within a specific time period, usually a year. Repeat victimization is the aggregate of the initial and subsequent offenses experienced by the victim or target. However, although data supporting the incidence of repeat victimization is strong, the estimates are conservative because victims may not report subsequent incidents, relocate to a different area, or fail to recall multiple events. Although interviews with offenders indicate strong repeat victimization, such studies are unreliable because of questions about the offenders’ veracity. Like the incidences of bullying and peer-to-peer racial harassment of Asian American youth, initial data regarding repeat anti-Asian victimization show both strong anecdotal and statistical evidence for its existence. In light of this evidence, more needs to be done to enhance local law enforcement effectiveness; in fact, the failure to identify, document, and analyze repeat victimization over time

can lead to exacerbating already fragile police-community relations.

Even though statistical gathering on the national level is limited because individual states are not compelled by law to report hate crimes, the available data have been extraordinarily useful as a longitudinal measure of the national incidence of hate violence. Without such statistics, the prevalence of minority-on-minority violence could not have been ascertained. Perhaps the most challenging limitation of statistical data reporting is that such data is based upon single identity victims, not multiple or intersectional. In other words, only one animus is recorded even though a victim may have been targeted for multiple reasons such as being Arab and Muslim, Chinese and female, lesbian and Filipino, and so forth. The inability to count crimes according to intersectional lines may inflate one incidence of hate violence according to race, but deflate the incidence according to another.

Finally, federal hate crimes legislation is inextricably linked to its role in the politics of identity-making and the construction of difference. Ironically, although such legislation is important for the investigation, prosecution, and incarceration of violent offenders, it also affords the state the opportunity to lump all Asian Americans together under the category of race. The centrality of the state defines and legitimates difference. Yet that construction occurs within a racialized and gendered hegemonic formation. Social issues such as immigration coupled with a xenophobic discourse often position the state as both the instrument through which “illegal immigration” must be policed when protecting discourses of anti-immigrant hysteria. Similarly, political speech of a caustic and vitriolic nature is situated as both protected speech under the First Amendment and is also a factor in the production of hate violence. Hate crimes legislation as it currently stands does not include hate speech as a criminalized activity because of First Amendment protections even though hate crime statistics data consistently indicate that such incidents constitute two-thirds of all hate incidents reported annually.

In other words, the very laws designed to combat, challenge, provide legal recourse, and to symbolically send the message that such acts will be punished have

become ways in which identity is locked into place as it were under the color and language of law. Thus, lumping Asian Americans together as one subset of a racial category occludes the ways in which the community is also distinguishable and intersected by immigration status, generation, ethnic, and religious differences. Accounting for these differences may offer a more nuanced understanding of the phenomena of hate as caused by interlinked relationships of domination. Laws combating discrimination and hate violence still operate within a limited black-white model, which often discounts the ways in which immigration and language, nativism, poverty, and inequality also intersect and highlight the distinct experiences of Asian Americans. For example, anti-immigrant rhetoric and policies, the nation's War on Terror, and even the manifestation of "patriotic racism" as a post-9/11 phenomena reveal complexities about how hate violence emerges, as well as limitations regarding what the law can do to provide legal recourse for victims, families, and communities.

Anti-Japanese Movement in Hawaii

The anti-Japanese movement in Hawaii took place primarily between 1900 and 1941 and was centered on racial discrimination questions of Americanism and loyalty. How much or how little the Japanese were Americanized into the culture of Hawaii became an excessive concern. The burning issue was could Japanese immigrants and their children be taught to become 100 percent Americans and fit into the colonial structures which perpetuated the status quo? Or indeed, was a Jap a Jap?

In Hawaii, the "loyalty" factor of the Japanese reached a point of paranoia during the Oahu sugar plantation strikes of 1909 and 1920. Historically, the plantation of Hawaii, based on the production of sugar, depended on a system of contracted year-round laborers who would be paternalistically cared for and given meager wages for back-breaking toil. As a consequence, the system sought cheap foreign workers to fit compliantly into the closed economic system of the managerial haole (white) ruling class of Hawaii. To maintain control, a policy of divide and rule was implemented. Laborers were expected to remain in "stables" (ethnically separated plantation camps). Ethnic divisiveness, racial competitiveness, and jealousy were encouraged to prevent labor unionization among the varied ethnic groups. In this isolated, protected, and paternalistically oppressive environment, Hawaii's Issei, first-generation Japanese, became a concentrated, immobile community with a separate language, religion, world view, and cultural milieu. Although ethnically intact, the community was economically locked into a laboring class of lower economic status. Because land for independent farming was not available in land-scarce Hawaii, the economy did not offer mobility except for professionally trained haoles and Chinese merchants. In the labor strikes of 1909 and 1920, the Japanese protested their economic

situation but the sugar planters and government officials, rather than considering their demands, could not understand why the Japanese were becoming so obstinate and radicalizing an otherwise manageable labor force. Because both the 1909 and 1920 strikes were promulgated by the Japanese, supported by the Japanese language newspapers, and run by predominantly Japanese strikers, the belief was that the Japanese wanted to control Hawaii's economic and political life, in collaboration with the designs of the Japanese Imperial government.

Before the Territorial Legislature in 1920, Governor Wallace Farrington made a speech on the topic of "Hawaii's Japanese Problem." In this message, Farrington stressed that the 1920 sugar strike was the result of Japanese aliens who were "malcontents and agitators." These radicals were seen as a direct threat to American ideals and values. According to Farrington, the activities of this definite portion of the Japanese in Hawaii, whose purpose was "so thoroughly at variance with normal American development," could not be simply ignored.

But, the Governor also warned that in Hawaii the problems of race could not be handled hastily. Hawaii was founded on a basis of racial equality and equanimity. Therefore, the Nisei, the children of the alien Japanese population had to be given the opportunity to prove that they were worthy and capable of being Americans. The Nisei "should be encouraged in every way to join the loyal American ranks and cooperate in the advancement of our American commonwealth."

Unlike Farrington, however, there were those in Hawaii who maintained that such a notion of the Americanization of the Japanese was an impossibility. Because of their racial pride and perpetuation of cultural and political ties with Japan, it was maintained that the Japanese could never, would never, be American citizens. They would forever remain an alien population, threatening the control of government and economy by their resistance to American democratic institutions. In a speech delivered to the Honolulu Rotary Club on October 27, 1921, Valentine S. McClatchy, publisher of the *Sacramento Bee* and a leading anti-Japanese agitator in California, addressed the problems that the population in Hawaii faced from the local Japanese. To the question of whether it was

"practicable to mold Japanese, whether immigrants or American born into good, dependable American citizens," McClatchy answered with a definitive "No."

Three reasons were given by McClatchy for the unassimilability of the Japanese: (1) because of racial characteristics, heredity, and Buddhist religion, Japanese were not oriented to America, (2) the government of Japan considered all Japanese *Jus sanguinis*, by blood to be Japanese citizens despite their residence, and (3) the fact that the immigrants developed Japanese language schools and sent their children back to Japan for an education showed that Japanese, individually and en masse, even when born under an American flag, would never be assimilated.

What was especially important about McClatchy's speech was the constant referent to California when talking about the Japanese in Hawaii. Although the Japanese American in California and the Japanese American in Hawaii considered themselves to be "different" and had a different history, to the outside forces that shaped their history, such a distinction was rarely made. Though separated by 2,000 miles of ocean and social systems that were distinctly contrasting, both the West Coast and Hawaii Japanese shared a common pressure and suspicion from their white neighbors before World War II.

Another example of the rhetoric that harassed the Japanese American community was an article "Will the Hyphen Win in Hawaii" by Nathaniel Peffer. Published in two parts by the ultraconservative *American Legion Weekly* in October 1922, the article was an "exposé" of how Americanism was being subverted by the Japanese. The article stated that the large population of Japanese became a threat in Hawaii because they were no longer content to stay in the plantation fields but persisted in bettering their lives through setting themselves up as mechanics, artisans, shopkeepers and small proprietors. In addition, those Japanese who remained on the plantation sought greater control and power by attempting to purchase large tracts of plantation land.

Such audacity, Peffer argued, was natural for any racial group who came to work in the fields and ultimately settled in the Islands. The solution to Hawaii's threat of racial foreign control by an un-American population was to bring in "every five years a huge

number of Chinese, say 50,000, to start at the bottom of the ladder, keep them there by compulsion and then send them back and bring another fresh load.”

Peffer also brought forth another area of concern against Japanese. Because the Japanese were growing in numbers they constituted a threat of having a large voting population. As one remedy for this problem, he suggested that the working conditions on the Islands be improved, greater industries provided, and techniques developed that would make it possible to recruit white workmen to the plantations. The safety of the Hawaiian Islands could be achieved only by preserving a racial balance that tilted its control to the haole.

Beyond what anti-Japanese propagandists were saying regarding the Americanization of Japanese, the official posture of the American judicial system on the matter added fuel to the anti-Japanese movement. This position was determined in a court brief filed by Takao Ozawa regarding “naturalization of a Japanese Subject in the United States of America.”

Ozawa was a Japanese immigrant living in Hawaii, who went to the courts to obtain citizenship despite a 1789 naturalization law that stated that naturalized citizens had to be “free, *white* and twenty-one years of age.” In his brief Ozawa argued that by any measure he was “white.” His culture, his children’s culture, and his wife’s culture had been cleansed of anything Japanese. The foods they ate, the utensils they used, the magazines and newspapers they read, the language they spoke were 100 percent American. Ozawa had even moved his family from a predominantly Japanese area of Kalihi to what was then a haole district of Kaimuki. As Ozawa judged his life, he was American, *ipso facto* a “white man” and therefore entitled to citizenship in the United States.

The Supreme Court, however, did not agree, and the Ozawa case stood as an example of the irony of the Americanization issue that confronted the Japanese before 1941. Pressured to become “American,” some did so with the knowledge that they would not be accepted as full-fledged Americans by white standards.

It could not be denied, moreover, at the territorial and community level, that the question of Japanese assimilation living and working in Hawaii was a very real one. According to historian Gary Okihiro, most

of Hawaii’s elite, that is, plantation owners, territorial government officials, and U.S. military leaders supported and propelled the anti-Japanese movement. From the time Japanese laborers were brought to the cane fields until the end of World War II, these people were motivated not only because of their concern about how to exploit Asian workers for the production of sugar but a fear raised by the military of Japanese imperialism.

For the U.S. military the question of Japanese living in Hawaii was far more serious than their ability to assimilate or their suitability for the plantation system. The defense of the islands, the danger of war, and alien domination were the issues. The large population of Japanese in Hawaii, their concentration in certain areas of Oahu, the main island, proliferation of Japanese language schools, Buddhist temples, religious shrines, and ethnic press constituted a serious military threat.

By 1942 and the advent of the war with Japan, the anti-Japanese movement reached a critical stage. Pearl Harbor came to represent not only the “Date of Infamy” in American military annals but a period in which every Japanese American was confronted with the question of loyalty. What in the 1900s to 1930s might have been rhetorical arguments, racial, economic, or military issues largely confined to magazines, newspapers, or public speeches in Hawaii became a frighteningly stark reality after December 7, 1941. America was at war with Japan.

On the mainland, December 7 resulted in the removal of Japanese Issei and Nisei into concentration camps scattered across the West Coast and the nation. The official reasons behind Executive Order 9066 authorizing the imprisonment of Japanese Americans were twofold. First, the government argued that the Japanese should be relocated for humanitarian reason. Japanese left to reside in mainland communities during the war could be victims of racial riots with local citizens taking up the war effort by retaliating against homegrown “Japs.” Second, the government argued that the Japanese community possibly contained an undeterminable number of disloyal persons who could be supportive of Japan’s war effort. The military viewpoint behind relocation deemed that finding the guilty culprits was too difficult; therefore, all Japanese should

be simply put into guarded concentrated areas, that is, “relocation” camps.

Unofficially, two other motives behind incarceration seemed equally forceful. Economically, removal of Japanese from productive farm areas would result in prime agricultural land being auctioned off to anxious Caucasian neighbors. Internment would turn a handsome profit to growers who had long coveted Japanese lands and markets. Racially, others on the West Coast had nothing to gain but prejudicial satisfaction that the despised Japanese population would be imprisoned and hopefully shipped back to Japan. Racist and economic opportunists formed powerful lobbies that agitated successfully for Japanese relocation.

In Hawaii despite the anti-Japanese movement, a mixture of factors mitigated against incarceration. Although some 1,400 primarily Issei and Kibei, Nisei born in Hawaii but educated in Japan, were detained and placed in internment camps as potentially dangerous saboteurs and community leaders, the bulk of the Island Japanese population was not affected. This was partially because of the loyalties and amity that they had established as a numerically significant group. The Japanese composed over 30 percent of Hawaii’s population at the time of war and had long-standing attachments and friendships in the Islands. Logistics also diminished the few voices calling for relocation of Hawaii’s Japanese. The Japanese were too big a population to move. They were too vital to the Island defense economy. Removing Japanese would seriously disrupt Hawaii’s labor market. As a result, prominent Islanders, both out of self-interest and paternalistic instinct, spoke out in favor of Japanese in Hawaii. Although the inability of the Japanese on the mainland to gain non-Japanese support resulted in their wartime incarceration, in the Islands the efforts of Nisei adaptation and the integral nature of the Japanese to the economy suppressed many of the fears and racial condemnation.

To be sure, in Hawaii where the population remained largely free from the concentration camps, there was a tremendous outburst of American loyalty and patriotism. The effort of Nisei in defense work and later in combat, the exploits of the 100th Infantry Battalion and 442nd Regimental Combat Team gave the Japanese American a wholly new image. They

had become a glorious group of valiant martyrs who, even though distrusted and hated by Americans, gave their energies and lives to defeat their ancestral homeland and war enemies.

News releases of military actions in Europe typified the new image:

The 100th Battalion performs valiantly in Italy against overwhelming odds . . . Due to heavy losses, 100th called the Purple Heart Battalion . . . The 442nd Combat Team, absorbing the 100th as its 1st Battalion, fights bitterly in France and Germany . . . The 442nd rescues troops of the Texas “Lost Battalion” . . . Valor of 442nd Nisei soldiers earns combat unit the plaudit of “Army’s Most Decorated Unit.”

The new image was certainly founded in truth. No one could deny that the Nisei soldier fought valiantly—the 100th and 442nd won seven Presidential Distinguished Unit citations, and nearly 6,000 awards were given to individual members. No one could deny that the Nisei gave their fair share of blood for American victory—the 442nd in their European campaign lost 650 men, with 3,506 wounded and 67 missing.

Praise came even from the Pacific war zone, where Nisei and Kibei Japanese language interpreters from Hawaii, part of the “Top Secret” Military Intelligence Service (MIS) served. After V-J Day General Charles Willoughby, Chief of Staff of Intelligence, would announce that “the Nisei shortened the war in the Pacific by two years.”

The war period (1941–1945) is probably the most important watershed in Japanese American history. It marks the culmination on the mainland of years of racial bitterness and hate with the wholesale incarceration of an ethnic group into concentration camps—one of the most tragic institutions in the history of American democracy. In Hawaii the war quelled the anti-Japanese movement; it ended years of questioning Japanese loyalty with a resolute but qualified, community support and acceptance of the Japanese American ethnic group.

After the war, the suspicions, the prejudice, the discrimination, the stereotypes, and the secondary status of the Japanese American would be replaced with

social admiration, open opportunities, and an aggressiveness of ethnic pride and purpose.

Anti-Trafficking Movement

On December 6, 1865, the United States adopted the Thirteenth Amendment, which states that neither slavery nor involuntary servitude shall exist within the United States or its jurisdictions. There is a disturbing reminder, however, that 150 years later slavery still exists as what is referred to as human trafficking or “Modern Day Slavery.” Implemented in 2000, the Trafficking Victim’s Protect Act is reflective of U.S. anti-trafficking policy priorities to prevent human trafficking, prosecute traffickers, and protect victims of human trafficking. Human trafficking is the recruitment, harboring, transportation, provision, or obtaining of a person for the purpose of a commercial sex act, labor, or servitude through force, fraud, or coercion, or in which the person forced to perform such an act is under the age of 18 years; or for the purpose of subjection to involuntary servitude, peonage, debt bondage or slavery. In spite of the mere 5.6 percent that Asian Americans constitute of the total U.S. population, Asians and Pacific Islanders comprised of the largest group of people trafficked to the United States. Fifty percent of the 14,500 to 17,500 individuals trafficked into the United States in 2004 were Asians. Asians are trafficked to the United States for economic, political, social, cultural, and environmental reasons. And the industries they are trafficked into are

those where there is a demand for their labor or sex—from the garment industry to massage parlors. And the traffickers are diverse: family members, friends, lovers, corporate companies, and organized crime syndicates. Asian Americans are a part of the anti-trafficking movement in two significant ways: (1) as a subject of U.S. anti-trafficking efforts as victims, and (2) active participants as leaders in U.S. anti-trafficking efforts.

Although the image of Asian women and girls sex trafficked into brothels in Asia is a part of the U.S. imaginary in the present, discourse of Asian sex slaves is not a recent phenomenon. At the turn of the nineteenth century, it was estimated that of the 20,000 Chinese in the Bay Area, women represented only 12.5 percent of the population, approximately 40 percent of whom were slaves—women and girls kidnapped and auctioned to slave merchants into a life in brothels. Others were lured by false promises or sold by their own families with the belief that they would become indentured servants or brides. Women in the sex industries rarely aged into their 20s or older; it was common for victims to die from diseases related to their prostitution and abuse, be murdered, or commit suicide. An infamous Chinese madam known as Ah Toy began importing women from China into California brothels in the 1850s. The Page Act of 1875 was implemented to prevent Chinese women migrating to the United States with the intention of becoming prostitutes. However, it was clear that there was a demand for their sexual services, where anti-immigration policies did not prevent the sexual slavery of Chinese women. In 1873 a church organization, Donaldina Cameron House, responded to women and girls sold into sex slavery in San Francisco, California. Secret passages at Cameron House where girls would escape from the building when their traffickers came to retrieve them may still be found at this historic site that continues to serve the Asian community in San Francisco.

Asians were also brought into the Americas through the coolie trade in which it was seen as featuring the worst aspects of slavery. Laborers sent to the Americas, Cuba, and Hawaii symbolized for abolitionists the enslaved plantation labor systems even after slavery ended. The trade was emblematic of the cruelty

of coerced labor. These laborers were primarily Chinese and Indian, but other laborers were also imported from the Philippines, Japan, and Korea. Similar to the Page Act, some argued for the Chinese Exclusion Act of 1882, making the case that it would prevent the slavery of Asian immigrants imported to the Americas as coolie laborers. However, it was not until 1938 that the United States would begin to improve working conditions for laborers with the passage of the Fair Labor Standard Act. Asians did not reap the benefits from U.S. changes to labor laws. By 1924 all Asians were discriminated against from migrating to the United States with the passage of the Johnson Reed Act, which placed a restriction on immigration. Asian labor exploitation was rendered an invisible issue until major cases hit the newspapers in the 1990s.

In 1995, the public was horrified when it came to the fore that 71 Thai nationals had been held in slavery for seven years in a garment factory in El Monte, California. The Thai women and men were forced to work as much as 22 hours each day in poor conditions, to live in unlivable conditions with 8 to 10 crowded into a room where rats crawled over them as they slept, and were under constant surveillance by their traffickers. Sixty-seven of those trafficked were women. They left behind families in impoverished rural villages in Thailand from which they emigrated. The case highlighted the problematic practices in U.S. laboring industries for Asian immigrants. After homeland security raided the factories, the Thai workers were treated like criminals and sent to a deportation center. In response to such dangerous practices of U.S. companies and the maltreatment of immigrants in the United States, Asian Pacific American Labor Alliance, the Asian Pacific American Legal Center, Coalition for Human Immigrant Rights of Los Angeles, the Korean Immigrant Workers' Advocates, Thai Community Development Center, and UNITE were among the organizations to advocate for the Thai workers. The organizing led to successful criminal and civil cases, and raised awareness surrounding the need to advocate for the human rights for Asian migrants. In 2010, Henry Ong, in collaboration with the Thai Community Development Center, created a successful play, "Fabric," based on the incident.

Asian Americans organizing to address violence include initiatives that point to the tensions within the Asian American community and the *Lakireddy Bali Reddy v. USA* case is a testament to such. In 2000, after a 17-year-old girl died from carbon monoxide poisoning in an apartment Reddy owned, newspapers unveiled to the public that Reddy had run a sex trafficking ring for 15 years. Reddy, an immigrant from India, received an MA in engineering from the University of California, Berkeley. From engineer to restaurant owner to real-estate magnate, Reddy was the largest property owner in Berkeley, receiving \$1 million per month in rental income. It also came to light that he trafficked girls ages 12 to 14 years old from India to Berkeley, where they were exploited for labor in his restaurants and apartment buildings, and served as sex slaves. The Indian girls were of a lower caste—"untouchables." In response to the Reddy case, an organization formed to educate the community about the violence against South Asians as well as violence within the South Asian community—Alliance of South Asians Taking Actions (ASATA).

Asian American survivors of human trafficking are also speaking out about their exploitation. Chong Kim experienced a life of human trafficking that started in 1994 when she was forced to perpetuate Asian stereotypes when being sex trafficked in Oklahoma and eventually in Nevada. Kim continues to speak out and is currently working on a film project to raise awareness about human trafficking. In 2010, the story of Minh Dang changed the perception of who Asian American sex-trafficked persons are—they are not all migrants. Dang is a second-generation Asian American raised in San Jose who was trafficked by her own parents. Her father and mother sold her for sex in which they told her that it was a part of her filial responsibilities. Minh estimates that her parents made \$2 million from sex trafficking her, which enabled them to buy two homes and send to remittances to Vietnam. Few Asian-run survivor organizations exist, but the work of the Coalition to Abolish Slavery and Trafficking in Los Angeles has a survivor Caucus that was conceived in 2003.

Not only are survivors informing the movement but also most notably are how they are impacting U.S. national agendas in policy, organizing, and direct

services. The Polaris Project is the U.S. National Human Trafficking Resource Center that provides the national hotline for human trafficking, direct services, and leads U.S. anti-trafficking advocacy for policies. In 2002, Katherine Chon, a Korean American, and Derek Ellerman, a biracial Asian American founded the Polaris Project. They embarked on a journey to mobilize what would become the leading national agency in the United States to fight human trafficking after they had read a newspaper article about six Asian women brought to work in massage parlors that were fronts for brothels in the United States. They were inspired to do something about human trafficking after reading that the investigating officer stated that the case was like slavery. They named their initiative after the Underground Railroad that helped slaves run away from the South in the nineteenth century abolition movement by following the North Star—Polaris Project.

Asian Americans continue to define the anti-trafficking movement as legal advocates, social services providers, refugee organizations, scholars, teachers, students, writers, and artists. And these efforts are not only addressing the U.S. responses to human trafficking but also have global impact.

Aoki, Richard (1938–2009)

Educator, counselor, Marxist, and Field Marshal in the Black Panther Party, Richard Aoki was born in San Leandro, California, to Nisei parents. He attended the University of California and received a bachelor's in Sociology and a master's degree in Social Work. For more than four decades he worked as a community

activist, educator, and advisor in a number of progressive organizations and educational institutions. His grandparents came to California around 1900. His grandfather, Jitsuji, a socialist, manufactured noodles and was active in the Japanese Methodist Episcopal church, where his children performed in plays and social affairs. He also spoke at Buddhist meetings, however, suggesting his sophistication.

Aoki grew up in West Oakland and, during the World War II, Topaz, Utah, a relocation center that was among his first memories and where his parents split up. He lived in the camp with his brother and their father until 1945. His father was a “no-no boy,” one who protested this mistreatment and violations of their civil rights, refusing to swear loyalty to the United States and enlist in the military. In 1945 the Aokis moved back to Oakland, Richard residing with his brother, father, uncle, and grandparents for 10 years.

Given the family’s samurai heritage, it is understandable that he acquired and devoted himself to the concept of bushido, service, for his entire life. Home schooled until adolescence by his father, a University of California, Berkeley alum, he became acquainted with his father’s and his grandfather’s libraries—another vital part of his Japanese and American heritage.

West Oakland included a number of African Americans in addition to Japanese Americans and other ethnic groups, and he learned from his black friends about the lynchings and brutalities that took place down South. In Oakland he witnessed the notorious behavior of the local police, many of whom were recruited from the Deep South and who were particularly vicious in their mistreatment of African Americans and the poor generally. This was the main issue taken up by the Black Panthers in 1966.

In junior high school, both Richard and his brother received superior scores on their tests, and Richard was valedictorian of his class. He also excelled at Berkeley High School, completing a three-year program in two-and-a-half years and was eligible to attend the University of California.

He also rebelled as a teenage delinquent, committing numerous acts of petty theft. Rather than enroll in the university, however, and convinced of the imminence of war, at 18 he volunteered to serve in the U.S.

Army—partly to help out his mother and brother financially.

After eight years of active and reserve service, he left the military after learning of its human rights violations in Vietnam. Somewhat conservative at the outset of the 1960s, he gradually moved from being a loyal supporter of the war to becoming an antiwar protestor by 1965. He supported civil rights causes although he toiled at different working class jobs and was most impressed by the left-wingers that he met. They recommended progressive books, and he read voraciously. Identifying as he did with the oppressed and impoverished, he eventually adopted Marxism and joined the Socialist Workers’ Party.

At the same time, Black nationalism, and the Nation of Islam and its main minister, Malcolm X, who broke with the organization under considerable controversy, influenced him profoundly. Aoki followed closely the political evolution of Malcolm X, and he differed with the socialists on the issue of the viability of black nationalism. He also supported the Cuban Revolution and, during his lifetime, wars of liberation in Africa, Asia, and South America as well as at home. Though he admired the Fidelistas, he ended up closer to Maoism in his theoretical position.

Around 1964 he enrolled in Merritt Community College along with Huey Newton and Bobby Seale. These Oaklanders, also admirers of Malcolm X, set out to form the Black Panther Party in 1966. They consulted Aoki on their 10-point platform and a variety of political issues. He knew their families and admired Newton and Seale, as well as their principled program, and provided invaluable advice on strategy and tactics as well as educational and political issues. He questioned whether an Asian American might join them. Newton responded that Aoki was oppressed and a person of color, so he was therefore eligible. He rode along with the Panthers when they stopped to witness police arrests, and he became a Field Marshal early in the Party’s history.

That same year, 1966, he enrolled at UC Berkeley and worked with several campus organizations, including Tri-Continental Progressive Students Association, composed of Third World students. These meetings and associations expanded his evolving political consciousness and his knowledge of

international politics. He received his bachelor's in Sociology and his off-campus activism continued. He co-founded *Black Politics*, a journal of liberation, dedicating the first issue to the defense of Huey Newton, who was arrested for killing a police officer following a traffic stop in 1967.

By 1968 he worked with young Asian American students, founding the Asian American Political Association (AAPA), one of the first organizations of its kind on college campuses. They supported the Panthers, opposed racism, militarism, and U.S. imperialism and, most important, joined with the Mexican, black, and Native American student associations to form the Third World Liberation Front, which started a campus strike in the winter of 1969 that lasted for 10 weeks. Students of color, with the assistance of their campus and off-campus allies, demanded a Third World College in what was the longest and most expensive confrontation in the campus's history. Eventually the university agreed to support a Department of Ethnic Studies with four components for the respective ethnic groups.

When attending graduate school he was elected president of the School of Social Welfare's 1970 class at the time sitting in the Berkeley city jail. He also was a teaching assistant for the first Asian American Studies course at Berkeley and, after the strike, served as coordinator for the Asian American Studies program.

Community Organization and Public Administration was his major in Social Welfare, and he devoted his entire professional life to serving the community. In 1971, he returned to Merritt College, which also allowed him to link up again with the Panthers. He spent most of his career at Alameda County College, where he was teacher, counselor, and administrator for over 20 years, helping nontraditional students meet their career goals.

After retirement, Aoki continued his community work, opposing the wars in Asia, imperialism and racism, and supporting multiracial coalitions, prison reform, and Panther reunions. He was the subject of an autobiography and a documentary. His support for the Panthers and revolutionary nationalism never wavered, and he considered his work in the Party the most important political activity in his life.

Ariyoshi, George R. (1926–)

George R. Ariyoshi is an American politician, lawyer, and businessman. Notably, Ariyoshi was the third governor of the State of Hawaii, serving between 1974 and 1986. He was also the first Asian American as well as Japanese American to be elected into the office of governor.

George Ryoichi Ariyoshi was born on March 12, 1926, in Honolulu, Hawaii to Japanese immigrant parents. In his youth, Ariyoshi lived with his family in a small two-room house in China Town and his father was a semiprofessional Sumo wrestler who operated a tofu shop. After graduating from high school in 1944, Ariyoshi served briefly as an interpreter for the U.S. Army Military Intelligence in Japan. After the war, Ariyoshi started his studies at the University of Hawaii but later transferred to Michigan State University, graduating in 1949 with a bachelor of arts. He would also obtain a law degree from the University of Michigan. After law school, Ariyoshi returned to his native Hawaii to pursue private law practice. In 1969, Ariyoshi served as a member of the American Bar Association House of Delegates. He would also serve as president of the Hawaii Bar Association and the Hawaii Bar Foundation.

In 1954, Ariyoshi was elected into the Territorial House of Representatives. This was the beginning of Ariyoshi's illustrious political career. Four years later in 1958, Ariyoshi was elected into the Territorial Senate. After Hawaii became the fiftieth state in 1959, Ariyoshi would also serve as one of the first Senators in the Hawaiian State Senate until 1970.

In 1970, John A. Burns was reelected as governor of Hawaii with Ariyoshi as his lieutenant governor. Ariyoshi would step in as the governor for Burns in 1973 after Burns became terminally ill. In 1974, Ariyoshi ran for his first term as governor and took office as the first Asian American (and Japanese

American) to ever capture the gubernatorial office. Ariyoshi would eventually serve a total of three terms as governor (reelected in 1978 and 1982), spanning his service between 1973 and 1986—a total of 13 years.

During Ariyoshi's tenure as governor, his administration would be known for its ability to resolve crisis and to pull the Hawaiian community together. He would also be known for conservative fiscal policies, the steady development of Hawaii's tourism, and progressive approaches to trade. As for Ariyoshi's own political style, it is what he once described as "quiet and effective," which had also at one time been his campaign slogan. A staunch Democrat, Ariyoshi believed that the dominance of the Democratic Party in Hawaii had transformed his state into one that is open, equal, prosperous, and diverse. Barred by term limits, Ariyoshi left the governor's office in 1986 and was succeeded by John Waihee.

As a person of Japanese descent, Ariyoshi worked hard to bridge the differences between those in the Japanese American community with the mainstream American public—a rift that was the result of World War II. In his autobiography *With Obligations to All*, Ariyoshi described the struggles that many Japanese Americans (including his own family) experienced between the need and desire for the "American" or "Japanese" way of life. Nonetheless, Ariyoshi had come to terms with such struggles and professed that everyone, including himself, must accept who we are as an individual. For Ariyoshi, the idea of being "American" is one that is multifaceted and unique depending on one's particular heritage. In other words, being American has different meanings for different individuals.

Although Ariyoshi retired from politics after 1986, he remained active as a businessman and has been continuously involved in the Hawaiian community. Ariyoshi served for many years as a member on the Board of Governors of the East-West Center. The George R. Ariyoshi Fund, a scholarship that provides financial support for students, was also established at the East-West Center through the grants from the Hawaii Pacific Rim Society. Furthermore, drawing on his experience in the Hawaiian legislature and the

governor's office, Ariyoshi had been a regular contributor at *Hawaii Business* (magazine). Ariyoshi's articles mainly featured leadership lessons from his days as governor and helped to bridge the understanding between business and politics.

In George R. Ariyoshi's distinguished political career, he never lost an election. His overall contribution to the American society is one that is exemplary regardless of race or ethnicity.

Artists in New York (1900–1940)

The waves of immigration from Asia to the United States in the nineteenth and early twentieth centuries led thousands of Asians to the West Coast. Relatively few of them continued to the East Coast, but among them were ambitious, adventurous artists who wanted to work in the inspiring milieu of the New York art world.

What defines artists as Asian American? A simple standard is that they either emigrated from Asian countries, or a significant part of their ancestry was Asian—one or both parents. Those who emigrated made up most of the artists in the period under question here, the first half of the twentieth century—and by the law

of the United States they were not permitted to become American citizens until after 1943, a situation that affected their lives and their careers as artists. Like all immigrants, these artists carried with them the traditions of their ancestors as they assimilated in varying degrees to the customs of their new homes. The dialogue between inherited practices and newfound ideas played out in various ways in their art. Some of them adopted Anglo/European styles exclusively; some were multistylistic, using Western traditions and techniques at times and working in the vocabularies of their ancestral cultures at others; and some developed unique fusions of East and West. In general the painters were very comfortable working in ink or water-soluble paint on paper. Those who studied in the United States became adept at painting with oil on canvas, and they often included subjects with an Asian reference into their works.

Asian artists who traveled to the United States in the early twentieth century found a culture already sympathetic to Eastern art, thanks in part to the craze for Japonisme that hit Paris and the rest of Europe in the late nineteenth century. Asian artistic practices influenced leading artists like the Impressionists in Paris and James McNeil Whistler, the American expatriate, in London. They spread to the United States where there were active collectors of Asian art and also art workers like the half Chinese critic, Sadakichi Hartmann, and the artist and teacher, Arthur Wesley Dow. In Dow's widely circulated instructional book, *Composition*, he advocated the Western adaptation of Asian artistic traditions, which he taught to his many students, including Georgia O'Keeffe. Dow worked in Boston with Ernst Fenollosa, who had spent years in Japan and who was one of the creators of the great collection of Japanese art at the Boston Museum of Fine Arts.

Among the first artists to come to the United States from China was Li Tiefu (1869–1952) who studied at prominent art schools in New York in the 1910s and learned how to use oil paint in a realistic, Western style before he returned to China in 1930. Other artists who studied on the East Coast in the first decades of the twentieth century and took Western-style painting back to China were Feng Gangbo (1884–1984) and Wong Chiu Foon (1896–1971). In contrast, Yun Gee

(1906–1963), born in Guangdong province, spent a substantial part of his career in the United States and painted in avant-garde styles that were radical for the time. His *Where Is My Mother* (1926–1927) is an essential document of the Asian American experience, rendered in the modernist, boldly colored geometric style he encountered in art school in San Francisco. Gee used this abstract style to express a personal allegory of immigration: his face, with its conspicuously Chinese features, dominates the composition at the lower right, streaked with tears as he misses his mother, back in China, rendered as a blocky abstracted female figure at the top left. The angular boats that come between them represent his voyage, and the faces that recede into the composition next to him indicate that he was only one of many who experienced the yearning of the immigrant. His signature, against the right edge of the canvas, expresses the fusion of cultures: spelled with the letters of the Western alphabet, it is aligned on the vertical axis of Chinese script.

Yun Gee is today one of the most respected of the Chinese immigrant artists, but the Asian American art world of the first half of the twentieth century was dominated by the Japanese, as immigration law discriminated against the Chinese decades before the Japanese also became targets of exclusion. As a result there were sufficient quantities of Japanese artists to organize into groups on both the East and West coasts. The leading Japanese artist was Yasuo Kuniyoshi (1889–1953), who came from Okayama to Seattle in 1907, and then moved to New York to be an artist. His artistic style, a unique combination of elements of Western realism and oil painting technique with aspects of folk art and Japanese traditions, propelled him to success in the 1920s. On his way to recognition he participated in several exhibitions with other Japanese artists in the 1920s. One opportunity for artists of Asian origin to exhibit was with The Society of Independent Artists, founded by Marcel Duchamp and others in 1917 to be a venue where any artist could exhibit without the oversight of a jury.

Like the Society of Independent Artists, The MacDowell Club was formed to give artists opportunities to show outside conservative juried exhibitions, and it hosted an exhibition of Japanese artists in

1917. Many of the artists in that group went on to organize shows in 1922 and 1927, including Kuniyoshi and artists less well known today, like the sculptor Kamamura who specialized in cows, an animal then exotic to the Japanese, and others who are almost totally forgotten, like George Tera.

Several of these artists studied at The Art Students League and painted scenes of life in New York, though often through Asian eyes. For example, Toshi Smimizu (1887–1945) painted scenes of Chinatown, which is adjacent to the Lower East Side. The Lower East Side tenements, crowded with thousands of poor immigrants from Europe, inspired the painters of the Ash Can School, several of whom taught at the Art Students League. Shimizu followed his teachers to downtown Manhattan, but found his imagery in Chinatown, a few blocks west.

In the 1920s many Asian American artists, like their American contemporaries, went to Paris to absorb the dynamic new modern art culture developing there, meeting artists from Asia who had gone straight from their native countries to the French capital. Kuniyoshi had two extended stays and Isamu Noguchi (1904–1988) had the rare opportunity to work as assistant to the great sculptor, Constantin Brancusi. Kuniyoshi's idiosyncratic *Self Portrait as a Golfer* (1927) reflects the influence of the School of Paris figuration. But at the same time the artist emphasized his Asian features and posed himself wearing Western golf togs when standing like a samurai holding a golf club in place of a sword, in a major painting full of multicultural references.

Japanese artists who went to Paris returned to New York to hard times and political upheaval. Once the

Japanese American artist Isamu Noguchi poses with one of his sculptures in New York City, 1938. (AP Photo)

Depression was felt full force, the government established relief programs to help artists in exchange for their work—but these programs were controversial, and in 1937 Asian Americans, who were not eligible to be American citizens, were expelled from them.

The artists who were adventurous enough to leave their native countries for the United States were independent spirits, and many of them had leftist political views. In the mid-1930s they organized three exhibitions at the progressive ACA Galleries protesting their exclusion from the government projects. These shows included both Japanese and Chinese artists, an unusual stepping up to visibility of the Chinese who tended to work within the Chinese community and not to have a presence in the established New York art world. They were led by Chu H. Jor, who studied at the Art Students League before founding the Chinese Art Club in Chinatown in 1935, to promote art awareness in his community. Unfortunately, little is known about the actual art made by Jor and his colleagues. His Japanese contemporaries working in New York are better known today, although here also there are many artists whose names have come down to us but whose works have yet to be discovered.

Eitaro Ishigaki was active in the ACA shows, which included non-Asian artists. Ishigaki's biography is typical of several of his compatriots: he came from Japan to the West Coast, became interested in art in San Francisco, and then moved to New York where he studied at The Art Students League and had a career before returning to Japan for his last years. He was one of the most leftist of the Japanese American artists, a founder of the John Reed Club and active in several liberal art organizations. For the Works Projects Administration he painted two large murals in a courthouse in Harlem on the subjects of American independence and the freeing of the slaves. He was removed from the project when it was decided that only United States citizens were eligible for government aid; assistants completed the murals. Then they were criticized because his treatment of several presidents was considered unflattering and were destroyed three years later.

Ishigaki's Harlem mural about the freeing of slaves touched on a topic that was sensitive in the 1930s, when lynchings of African Americans were

horrifyingly prevalent in the South. Liberal American artists responded with protest images, again encouraged by the ACA Galleries. Japanese American artists could easily empathize with their black contemporaries, another minority facing discrimination, and they made works that joined in the protest. Among them were Ishigaki, painter Hideo Noda, the young sculptor, Leo Amino (1911–1989), who would become best known for his innovative abstract plastic sculptures from the 1950s, but who in the 1930s made a somber, assemblage sculpture of an inert body hanging from a tree. The young Noguchi dramatically suspended a contorted, life-sized figure from a rope in his *Death (Lynched Figure)* (1934).

As global political and economic tensions grew in the 1930s, leftist artists organized The American Artists Congress; signatories to its first call for support in 1936 included Ishigaki, one of the organizers, Kuniyoshi, who would become an officer, Japanese artists Thomas Nagai, Noguchi, Sakari Suzuki, Chuzo Tamotzu, and Chikamichi Yamasaki, and Hawaiian born Isami Doi. The Japanese invasion of Manchuria in 1931 further politicized Asian artists in the United States. Yun Gee made a series of drawings and paintings critical of Japanese military aggression, as did some of the Japanese artists in New York, including Ishigaki, and Kuniyoshi actually held an exhibition of his works as a benefit for the Chinese. The ACA gallery continued its activism in this regard, for example, hosting a show of a traveling exhibition of Chinese graphic art, some of it political, in 1938.

The Japanese bombing of Pearl Harbor in December 1941 was a traumatic event for Asians in the United States. Kuniyoshi wrote, "A few short days have changed my status in this country although I myself have not changed at all." Japanese living in the United States, and already barred from becoming citizens, were suddenly classified "enemy aliens." Those on the West Coast were put in internment camps, whereas those in the East were spared thanks to their far smaller numbers. Even so, Isamu Noguchi took the radical action of voluntarily being admitted to Poston camp in Arizona with the desire to help his compatriots. His optimism was short-lived, and after six difficult months he negotiated his release.

The years after the war were a period of readjustment. In 1946 Dong Kingman, of Chinese descent, famous for his cityscape watercolors, moved from San Francisco to New York, finding new inspiration in views of the metropolis. Abstraction replaced representation as the prevailing artistic language, as the Abstract Expressionists rose to dominance, Kenzo Okada among them, with many more Asian Americans following suit. Several major Abstract Expressionist artists made rapidly brushed, black and white paintings and drawings, with clear affinities to Asian calligraphy, spurring ongoing debates about the degree of influence from Asia.

After the war immigration laws gradually relaxed, allowing a flow of younger Asian American artists into the country. The range of countries of origin expanded with greater global travel, and significant artists entered the New York art world from the Philippines (Alfonso Ossorio), Hawaii (Reuben Tam), and elsewhere. Women began to play a significant role in the scene as well, as pioneering performance artists like Yayoi Kusama and Yoko Ono made works using actual people. The New York art world grew and more and more Asian Americans participated, including sculptor Fumio Yoshimura, conceptual painter On Kawara, video art pioneer Nam June Paik, and painters such as Martin Wong and Byron Kim. There were many others too, and today with easier global travel and increased communication it is a new world with some artists having studios in several countries, East and West, as types of artistic creativity evolve, even as the old dialogues between traditions persist, even in new forms.

Asian American Campaign Finance Scandal of 1996

The Asian American Campaign Finance Scandal of 1996 was a major political incident that brought unprecedented attention to the purported influence of the Chinese government on American electoral politics. Alternatively named "Chinagate," the incident would eventually expand to include other Asian governments and business interests and tarnish Asian American political participation by linking it with subversive foreign influence. As the circle of those who benefitted from controversial and illegal campaign donations expanded to include both of the major political parties. The Monica Lewinsky scandal broke in January 1998, politicians and the media lost much motivation and interest in pursuing the scandal. The Department of Justice concluded their five-year investigation in 2001 and brought the scandal to a close.

In the run up to the 1996 presidential campaign, there was a perception that the Chinese government was actively seeking to influence the U.S. government. The rising China-U.S. trade gap and renewed tensions across Taiwan Strait added to the broad and growing concern that China, with its vast financial resources, would seek to influence American elections to protect

their economic, political, and military interests and to improve its national image. The presidential campaign was already estimated to be the most expensive campaign ever, and politicians and political pundits warned that temptation to accept illegal foreign contributions would be high. A final ingredient in this mix was the practice of “bundling” political contributions where highly connected individuals gathered funds from multiple sources and then bundled them into a single large donation that made tracing the identity of individual donors less obvious and more difficult.

Against this backdrop, a group of Asian Americans began to provide their access to American politicians in exchange for large sums of money from foreign governments, business interests, and private individuals. Six key figures in the controversy—Charlie Yah-lin Trie, John Huang, James Riady, Johnny Chung, Ted Sioeng, and Maria Hsia—were accused of conspiring to funnel large sums of foreign contributions to influence U.S. political campaigns. What is clear is that all six had extensive personal connections and business interests in Asia and their ability to make large campaign donations granted them easy access to the highest levels of U.S. government and other political institutions. The Democratic Party, the party of incumbent President Bill Clinton, was the largest beneficiary of financial donations with the largest share going to the Democratic National Committee (DNC) and the campaign funds for President Bill Clinton and Vice President Al Gore.

Because federal election campaign laws require the public disclosure of the names of campaign donors, the media, armed with a list of suspicious names, played the key role in defining the scandal. From October 7 to December 5, 1996, William Safire of the *New York Times* wrote six columns that defined the scandal as a case of Asian Americans attempting to influence the presidential race by funneling Asian money into the Clinton campaign. All of the major newspapers in the country ran front-page stories and editorials that often conflated Asians with Asian Americans—most often by using the term “Asian” to refer to both U.S. citizens and Asian nationals. For the Republicans who were trying to wrestle away power from President Bill Clinton, this was political red meat that called for public displays of outrage and calls for official

investigations. For the Democrats, the political optics of the party receiving millions of dollars from the Chinese Communist Party led them to put as much distance as possible between themselves and anything related to Asia, including Asian Americans.

The House of Representatives and the Senate, both controlled by the Republicans, launched exhaustive investigations: the House investigation, headed by Representative Dan Burton (R-Indiana), was the most expensive investigation to date at \$7.4 million, surpassing the cost of Watergate investigation in inflation-adjusted dollars (\$7 million). Eager to clear their name, the Clinton White House and the Democratic Party gave full support behind investigations by the Department of Justice. Collectively, these investigations clearly demonstrated that foreign entities did give money to key figures of the scandal, and the money did end up in various political campaigns.

What remained unclear, however, is the motivation of the key figures in the scandal. Were they acting as agents of the Chinese government? Or, were they simply ambitious individuals who were playing loose with facts and perceptions to ingratiate themselves to those with money and power? Collectively, they were a motley crew. James Riady and John Huang were connected to Indonesia-based Lippo Bank that had offices in the United States and funneled millions of dollars to the DNC. Maria Hsia channeled other funds that Huang and Riady raised through the Hsi Lai Buddhist Temple near Los Angeles to contribute to the DNC, the presidential campaign, and Patrick Kennedy’s campaign for Congress. Johnny Chung used his ties to Chinese aerospace and military contractors to donate \$366,000 to the DNC. Charlie Trie, the most colorful figure, befriended President Clinton when then governor frequented his Chinese restaurant in Little Rock and bundled hundreds of thousands of dollars to donate to Clinton’s legal defense fund and for the president’s birthday party in New York in 1994. The findings of the investigations hardly depict the work of a sophisticated international spy ring: Charlie Trie’s donation to Clinton’s defense fund was made in part with consecutively numbered money orders with the same handwriting that had supposedly come from multiple contributors; Maria Hsia used the Temple’s nuns and monks to write the large checks to

the DNC; and Johnny Chung visited the White House 49 times in between bundling money from companies with known ties to the Chinese military.

The bipartisan nature of the scandal was revealed when the investigations discovered that significant sums of money ended up in Republican campaigns. Ted Sioeng, an Indonesian businessman, had donated to the Republican State Treasurer Matt Fong's campaign. In addition, House Speaker Newt Gingrich solicited a donation from Sioeng in 1995 to support his think-tank. Moreover, the House investigation found that Congressman Chang-jun "Jay" Kim (R-Diamond Bar) had received and concealed \$230,000 in illegal donations, including foreign donations from South Korea, back in 1992 during his first successful congressional campaign. In an ironic twist, the Republican Jay Kim would be the sole elected official found guilty of violating federal election laws in a scandal that began with the prospect of Chinese money being funneled to the Democratic Party. After pleading guilty, Jay Kim was sentenced to two months of house arrest but was allowed to remain in office until he was defeated in the Republican primary in 1998.

After a five-year investigation, the Department of Justice concluded their investigation of the scandal in 2001. Despite the intensity of the initial allegations of espionage and treason, the investigations resulted in convictions on violations of federal campaign laws, making political contributions in someone else's name, and making false statements to the Federal Election Commission. All of the punishments were relatively mild, consisting of months of home detention, a couple of years probation, hundreds of hours of community service, and thousands of dollars in fines. James Riady was the lone exception with an \$8.6 million fine, but like other key figures in the scandal, he evaded any prison time.

If the key figures of the Asian American Campaign Finance Scandal of 1996 walked away largely unscathed, the same cannot be said of Asian Americans and their political participation. Ling-Chi Wang has argued that the media, the government, and the political parties racialized the scandal: Asians and Asian Americans were conflated in the narrative of the scandal, and this conflation "de-naturalized" Asian Americans in the eyes of the American public. Once

again, Asian Americans were portrayed as perpetual foreigners whose political activities were tied most intimately to advancing the interest of Asia even at the expense of the United States. At the height of the scandal, Asian American political involvement was viewed with suspicion and hostility, and their political donations were strictly vetted to look for foreign money and ulterior motives. Wang argues that the scandal played a key role in Clinton's reluctance to appoint an Asian American to the Cabinet (Norman Y. Mineta was appointed Secretary of Commerce in 2000 in the last year of the Clinton presidency).

In addition to this broader attack, the scandal highlighted the class-based inequality in political access within the Asian American community. Asian American community-based organizations and political advocacy groups were astounded by how financial contributions opened the door to political access. Although the political interests of poor, working- and middle-class Asian Americans were met with indifference among elected political leaders and major political parties, wealthy Asians and Asian Americans had no trouble accessing even the highest levels of U.S. government and other political institutions. Investigations reported Johnny Chung visited the White House 49 times, only to be outdone by John Huang's 78. Maria Hsia hosted fundraising events attended by Al Gore, and James Riady met President Clinton six times. For many Asian American political activists, it was difficult not to be cynical in light of money's tight grip on American democracy. For Asian Americans, the Campaign Scandal of 1996 delivered bitter lessons on their precarious membership in American politics and the decisive role of money in determining their access.

Asian American Comparative Collection (AACC)

The Asian American Comparative Collection (AACC) is in the Laboratory of Anthropology, a unit of the Department of Sociology/Anthropology at the University of Idaho, Moscow. The AACC is a teaching, study, and research collection whose purpose is to investigate, interpret, understand, and appreciate the history, culture, archaeological sites, and artifacts of past and present Americans of Asian and Asian Pacific Islander ancestry.

Founded in 1982 by Dr. Priscilla Wegars to support the University's excavations of archaeological sites related to Asian immigrants in the Pacific Northwest, the AACC strives to obtain an actual example, or, where that is not possible, an image, of every artifact of Asian manufacture that is likely to be found on such sites or in related museum exhibits.

As part of the Laboratory of Anthropology, the AACC assists in the Laboratory's mission of enabling students to practice anthropology, archaeology, ethnography, and linguistics before entering the professional community. In addition, the AACC aids the work of the University of Idaho's Office of Multicultural Affairs (OMA), particularly with respect to assistance with the University of Idaho's Asian American Pacific Islander Association (AAPIA). For example, every spring OMA and AAPIA sponsor celebrations of Asian Pacific American Heritage Month on the University of Idaho campus. The AACC loans books, artifacts, and videos to AAPIA student members for on-campus exhibits and film showings.

The AACC provides opportunities for university students to use AACC materials for class projects and to undertake internships and directed studies on materials in the Collection. Faculty members have used AACC resources to inform both classroom lectures and published research. The AACC serves the public through outreach efforts such as lectures, discussions,

slide presentations, exhibits, artifact loans, tours, reference services, artifact identifications, a website, a newsletter, volunteer opportunities, and other activities as needed and requested. Additionally, the AACC partners with the local Palouse Asian American Association (PAAA) and the Lewis-Clark Center for Arts & History's Beuk Aie Temple exhibit, in Lewiston, Idaho, raise awareness of the Asian Pacific American presence in, and contributions to, the Pacific Northwest.

The AACC specializes in the following major areas: (1) artifacts, images, and bibliographical materials that enhance understanding of the economic, cultural, community, and historical contributions of people of Asian ancestry who immigrated to the West during the mid-nineteenth to mid-twentieth centuries; (2) items illustrating the experiences of people of Japanese ancestry confined in internment and incarceration camps in Idaho and elsewhere during World War II; (3) items necessary for appreciating the peoples, homelands, and cultures of late twentieth- and early twenty-first-century Asian and Pacific Islander immigrants to this region, and for understanding their transformation from Asians to Asian Americans; and (4) items documenting past and present anti-Asian sentiment, stereotypes, and propaganda.

Recently, the AACC has broadened its scope to advocate accurate terminology, sensitive museum exhibits, and nonracist geographic names. The AACC also works to destroy legends, myths, and stereotypes; to promote accurate usage of Asian languages; and to involve the Asian American community in taking ownership of its own history.

Asian American Identity

See Authenticity in Asian American Identity

Asian American Labor in Alaska

The U.S. Census estimates that by the turn of the century, Asians, Native Hawaiians, and Pacific Islanders composed 4.5 percent of Alaska's total civilian workforce. These include workers of Asian Indian, Chinese, Filipino, Japanese, Korean, and Vietnamese descent, along with Native Hawaiians and Pacific Islanders.

Asian laborers, however, have been part of the state's workforce since the 1860s. Whaling ship records dating back to 1865 identify crewmembers as "Manila men" or individuals from the Philippines who served on exploratory and fur-trading vessels.

The first major wave of Asian laborers arrived later in the nineteenth century to work in Alaska's booming fish-canning industry and in smaller numbers at gold mines. In 1870, a gang of 13 Chinese salmon cannery hands was brought in by the Hume Brothers cannery on the Columbia River; within a decade Chinese workers numbered nearly 3,000, scattered among several dozen canneries. In 1880, the discovery of gold in the Silver Bow Basin valley also attracted Chinese laborers who cost mining companies considerably less than their European counterparts. These were immigrants who had originally taken part in the forty-niner rush in California, moved on to the Cassiar rush in Canada, and eventually ended in Alaska.

The influx of Chinese workers was stemmed by the Chinese Exclusion Act of 1882, which outlawed new immigration from China and prevented Chinese workers from returning to the United States. Within a few years, the effects of the statute were felt by canneries that had depended on cheap labor provided by the Chinese. Japanese workers came to fill the unmet demand. In time, the newcomers gained the acceptance of their predecessors, with some rising to become foremen and labor contractors themselves. They never fully displaced Chinese laborers and their hierarchy, but the Japanese did comprise a significant percentage of the labor force.

The mining companies also felt the effects of the Chinese Exclusion Act and sinophobia sweeping the West Coast during the latter half of the nineteenth century. Intense animus from the white community drove Chinese immigrants out of communities from California all the way to Alaska. In 1886, the citizens

of Juneau demanded that the Treadwell Gold Mining Company discharge all its Chinese employees.

In 1898, Spain ceded the Philippines to the United States under the Treaty of Paris. Filipinos became American nationals and were free to migrate to America. Filipino men seeking their fortunes eventually found their way to the canneries and mines of Alaska.

Filipino American cannery workers first appeared in the canneries in 1911. Along with other Asian cannery workers, Filipinos performed line jobs in the plants, primarily processing salmon. The tasks of Asian crews included sorting, gutting, cleaning, and packing fish. White crews were assigned the maintenance and operations of canneries. Filipino miners in turn labored at Alaskan mines from 1914 through the closing of mining operations, where they worked primarily as ore sorters.

From late 1907 through early 1908, President Theodore Roosevelt negotiated the Gentleman's Agreement with Japan, an informal pact that effectively ended the influx of Japanese immigrant workers into the United States. In exchange for ending the segregation of Japanese school children in San Francisco, Japan put a stop to emigration of its citizens to the United States.

By the 1920s, as both the Chinese Exclusion Act and the Gentleman's Agreement went into full effect, Filipinos arrived in significant numbers, replacing most of the Japanese and Chinese laborers in the canneries.

Filipino American workers were called "school-boys," as many came up from the West Coast during the summer months to work at the canneries, aspiring to earn enough money to pursue an education. The men never did make enough though because of the abusive contracting system at the plants.

Filipinos were recruited by an elite group of Asian labor contractors hired by the canneries. These contractors were responsible for managing and paying the wages and expenses of workers. Unscrupulous recruiters used the system to abuse and create harsh working conditions for the laborers.

Labor contractors exploited the new recruits' limited language proficiency and ignorance of American wage scales. The new immigrants compared what they

were offered with what they had earned in the Philippines, giving them the impression that they were fairly and adequately paid. Filipino workers also unwittingly signed contracts that bound them to work in the canneries for long periods of time. In the meantime, contractors profited handsomely on the difference between actual and estimated labor costs and kickbacks from merchants who sold cannery gear to the laborers. Moreover, some contractors did not pay workers at the end of a season, leaving them stranded and penniless. By the 1930s, however, Filipino cannery workers who called themselves “Alaskeros” had become the dominant Asian group and a few became contractors themselves.

The Great Depression, which began with the stock market crash of 1929, saw wages for low-skilled jobs like those in the canneries precipitously drop. The harsh economic times coupled with abuses at the hands of labor contractors led Alaskeros to unionize and fight for their rights.

On June 19, 1933, the Cannery Workers’ and Farm Laborers’ Union (CWFLU) was organized in Seattle to represent workers in Alaska’s salmon canneries who were primarily Filipino. The CWFLU was also chartered as Local 19527 by the American Federation of Labor (AFL) later that year. At about the same time, Asian and other waterfront workers in San Francisco had formed their own union, the Alaska Cannery Workers Union.

The Asian labor movement eventually galvanized after a couple of setbacks. On December 1, 1936, CWFLU’s president, Virgil Duyungan, and its secretary, Aurelio Simon, were murdered by an agent of a labor contractor. Soon thereafter, the discriminatory practices of the AFL led the CWFLU to break their affiliation with the federation and shift allegiance to the Congress of Industrial Organizations (CIO). On November 4, 1937, Seattle and San Francisco unions joined the United Cannery, Agricultural, Packinghouse, and Allied Workers of America (UCAPAW) under the CIO. CWFLU becomes UCAPAWA-CIO Local 7. By 1938 the contracting system at Alaska’s canneries had been abolished.

The 1940s were turbulent years for the labor movement. World War II brought about the internment of Japanese immigrants and Japanese Americans,

thereby limiting union activity largely to Filipino American workers. Union membership declined as cannery workers enlisted in the military or found jobs in the defense industries. Those left dealt with political strife within and among unions. The war also brought about government-imposed emergency controls, including a ban on strikes and a wage freeze. By the summer of 1950, Local 7 had become Local 37 of the International Longshoremen and Warehousemen Union (ILWU).

The 1950s were equally volatile. The communist witch hunts implicated the cannery workers union and began to take its toll. One of Local 37 leaders, Ernesto Mangaoang, and 30 other Filipinos were placed in jail on November 17, 1949 under the suspicion of being communists. After close to three months of incarceration Mangaoang was released and ordered deported for his “subversive” acts.

Mangaoang was dogged by the deportation orders and court cases the next few years. His case made its way to the United States Supreme Court, and in 1953, his defense attorney, John Caughlan, argued that Mangaoang could not be deported as a subversive alien because he came to the United States when the Philippines was still an American territory. The Supreme Court ruled in Mangaoang’s favor and the landmark decision established residency rights for thousands of Filipino Americans who came into the country before the Philippines gained its independence from the United States in 1946. Although Mangaoang was a hero to the rank-and-file members of the union, he was ousted by the leadership in the fall of 1954.

The Immigration and Nationality Act of 1965 abolished the national origins quota system that had been in place since the 1920s and opened the doors for immigrants from Asia, Africa, and Latin America.

During the 1970s, Alaska’s canneries attracted Filipino and other immigrants. The younger newcomers found little in common with the union’s older leadership. Silme and Nemesio Domingo and Gene Viernes first established a separate organization, the Alaska Cannery Workers Association (ACWA), and later fought to reform Local 37 from within alongside other reform-minded members. By the fall of 1980, the reform forces had gained control of the union.

On June 1, 1981, Silme Domingo and Gene Viernes were shot and killed in the union hall. Before dying, Domingo named two Filipinos, Pompeyo Benito Guloy, Jr. and Jimmie Ramil, as the murderers. Local 37's president, Tony Baruso, became a suspect. The Philippine government under Dictator Ferdinand Marcos was also implicated in the killings. Guloy and Ramil were convicted of the crime that fall, although it took a decade for Baruso to be charged, tried, and convicted of planning the murders. In 1987, the union changed its name again to IBU/ILWU, Region 37 reflecting a merger of the Longshoremen's Union with the Inlandboatmen's Union of the Pacific.

Today, Asian Americans, Native Hawaiians, and Pacific Islanders belong to the broad and diverse workforce of Alaska. They tend to be concentrated in administrative, service, and blue-collar occupations, though they are also among managerial and professional ranks.

Asian American Legal Defense and Education Fund (AALDEF)

The Asian American Legal Defense and Education Fund (AALDEF) was founded in 1974 and is a national organization that protects and promotes the civil rights of Asian Americans. It is a nonprofit organization that is supported by contributions from foundations, corporations and individuals from across the world. It is a founding member of the Public Interest Law Center in New York. In 1992, AALDEF and its sister organizations, the Asian Law Caucus in San Francisco and the Asian Pacific American Legal Center in Los Angeles, founded the National Asian Pacific American Legal Consortium (NAPALC), located in Washington, D.C.

AALDEF combines litigation, advocacy, and education to organize Asian American communities across the country. AALDEF focuses on issues affecting Asian Americans including: immigrant rights, civic participation and voting rights, economic justice

for workers, language access to services, Census and redistricting policy, affirmative action, youth rights and educational equity, housing and environmental justice, and the elimination of anti-Asian violence, police misconduct, and human trafficking.

It has a 21-person staff, including 11 lawyers and over 300 volunteers, including pro bono attorneys, community workers, and students. AALDEF provides legal resources for community-based organizations and facilitates grassroots community-organizing efforts. It also conducts free, multilingual legal advice clinics for low-income Asian Americans and new immigrants, educates Asian Americans about their legal rights, comments on proposed legislation and governmental policies; and trains students in public interest law and encourages them to use their legal skills to serve the community.

AALDEF has nine central litigation and social justice campaigns:

- (1) Economic justice for workers in the restaurant, garment, hotel, nail salon, construction, and domestic service industries, where wages may be as low as \$1.40/hour without overtime pay. In 2008, AALDEF helped 36 Chinese immigrant delivery workers win an unprecedented \$4.6 million judgment against two Saigon Grill restaurants in New York City.
- (2) Immigrant rights and post-9/11 civil liberties campaign advocates for fair immigration policies that promote family reunification, enforce protection for all workers, and calls for the recognition of the human rights of undocumented immigrants in the United States.
- (3) The voting rights and civic participation project aims to improve access of Asian Americans to the electoral process by monitoring polling stations for anti-Asian voter discrimination and challenging redistricting plans that go against communities of interest. In 2000, AALDEF conducted the largest exit poll to date surveying over 5,000 Asian Americans who cast their votes in New York City.
- (4) Educational equity and youth rights initiative responds to school dropout rates and post-9/11 racial and ethnic profiling of Asian American students to advocate for policies that address the diverse needs of Asian American students. This initiative seeks to challenge the model minority stereotype surrounding Asian American students, which prevents them from receiving adequate attention and resources to aid school retention and improve academic access and performance.
- (5) Anti-trafficking initiative provides legal representation to trafficked women and youth in the United States. In 1993, AALDEF stepped in to represent the Chinese immigrants who were trafficked on the Golden Venture ship, which ran aground in Far Rockaway, New York.
- (6) Housing and environmental justice project fights against displacement of low-income residents due to gentrification. In 1986, AALDEF won a major ruling in New York's highest court in *Chinese Staff and Workers Association v. City of New York*. This victory successfully blocked the construction of the Henry Street Tower, a proposed luxury high-rise condominium in Chinatown.
- (7) Affirmative action campaign supports programs and policies that promote equal opportunity and racial diversity in the workplace and in higher education.
- (8) Anti-Asian bias project provides legal assistance to Asian Americans who are victims of bias in the workplace, at school, and in their neighborhoods.
- (9) AALDEF's Twenty10 Project seeks to secure a more accurate count of Asian Americans in the 2010 Census through policy advocacy, community education, and organizing. This data is influential in decisions to allocate funds for government programs in education, employment, healthcare, and transportation and housing benefits.

With their nine programs, AALDEF continues to be the leading social justice agency on the East Coast concerned with the civil rights of Asian Americans.

Asian American LGBT Activism

See LGBT Activism

Asian American Movement (AAM)

The Asian American Movement (AAM), as the collective action of ordinary people in a sustained and widely distributed struggle to effect social change, emerged in the late 1960s. The AAM was largely student-based and urban but also included multiple generations of activists from diverse socioeconomic backgrounds. It took place throughout California, particularly the San Francisco Bay Area and Los Angeles, and New York City, but it also extended from Hawaii to Denver to Boston. The AAM is distinguished from earlier activism—labor strikes, opposition to exclusion and racist legislation, and support for homeland issues—by its pan-Asian focus, bringing together mainly Chinese, Japanese, and Filipinos but also Koreans, South Asians, and Southeast Asians united against racism. Influenced by Black Power and Third World revolutions, the AAM drew heavily from an anti-imperialist, antiracist politics that emphasized solidarity with United States and international Third World struggles. The Movement created numerous community service programs, many of which exist to this day. It inspired a rich outpouring of music, visual art, poetry, and other creative works; forced a more complex discussion of race and activism; generated a radical vision for a transformed society; raised the political consciousness and practice of an entire generation; and motivated future generations to struggle for justice.

Still, Asian American activism remains virtually invisible within mainstream scholarly and public

communities. Two frameworks—the logic governing U.S. race relations and the tendency toward liberalism—help explain the erasure of the AAM. First, the model minority image was popularized in two respected national newsmagazines (see the January 9, 1966, issue of *New York Times Magazine*, and the December 26, 1966, issue of *U.S. News & World Report*). The dominance of this image promoted hard work, frugality, self-reliance—and not resistance—as pathways to upward mobility. That the articles were published in 1966, the same year that birthed Black Power and the Black Panther Party, created a divide between the black protest tradition and an alleged Asian American political passivity. Second, social movement studies created a “good sixties/bad sixties” binary that privileged the pre-1968 civil rights and early New Left movements. In addition, although the field of Asian American studies has produced the bulk of AAM studies, particularly between the late 1960s and late 1970s and since the mid-1990s, the field has not developed anything like the substantive focus on Black freedom movements created in black Studies, history, and related areas. Even as more analytic AAM studies have been published since 2000, there is little by way of a historiographical analysis of the AAM, though a notable exception is Fujino.

The AAM may well have started with the coining of the term, “Asian American,” by the Asian American Political Alliance (AAPA) and its cofounder Yuji Ichioka in Berkeley in May 1968. From the start, pan-Asian formation was a political strategy—rather than an assumption of any shared cultures, traditions, or histories—to unite small numbers of disparate groups to contest a common racial oppression. Social demographics enabled this unity when the baby boom generation, sharing a common language, media, and youth culture, met on college campuses. In addition, the growth of Third World anticolonial movements and the rise of Black Power created the political conditions that linked pan-Asianness to Third World solidarity and internationalism.

Berkeley’s AAPA inspired political youth formations nationwide. Until then, the numerous Asian American organizations on college campuses and in the community were primarily social or cultural in focus. In September 1968, UCLA’s Oriental Concern

(started as Sansei Concern in April 1968) convened an “I am Yellow, Curious” Asian American conference. In January 1969, UC Berkeley’s Chinese and Japanese American clubs sponsored “The Asian Experience in America/Yellow Identity” symposium that gave direction to the emerging AAM. George Woo, fiery speaker and ICSA and Chinatown activist, chastised students for developing an identity devoid of community responsibility. Most attendees were eager to engage in community work and to support the San Francisco State’s Third World strike, then two-months strong, though some questioned whether racism affected Asian Americans and whether confrontation was necessary. In the end, participants passed a resolution supporting the Third World strike and the general movement for Asian American studies. The next day, AAPA held a strategic planning meeting. To their surprise, the attendees, representing 13 campuses throughout California as well as New York and Hawaii, voted to form AAPA chapters nationwide. This loose formation of AAPA groups was instrumental in developing the nationwide AAM.

Berkeley’s AAPA illustrates how the overall AAM, although embracing diverse politics, was shaped in the milieu of Black Power and Third World radicalism. There was widespread unity about providing community service and on opposing racism. The majority also embraced an anti-imperialist politics linked to Third World solidarity and internationalism. To some, anti-imperialism meant a focus on economic inequalities among people and between nations. Others applied a Marxist analysis of capitalism and a Leninist analysis of imperialism. The AAM youth contested their parents’ generation’s views on race and mobility, represented by assimilationist aspirations to move toward whiteness. In the monthly newspaper *Gidra*, produced at UCLA and known as the “voice of the Asian American Movement,” Amy Uyematsu called on the AAM to adopt Black Power’s desire for self-determination over integration and for giving power to the most oppressed. She inverted the anti-black racism expressed by many Asian Americans by seeking solidarity with blacks in the fight against racism. AAM activists were already immersed in Black Power struggles, most notably Yuri Kochiyama, connected with Malcolm X and associates in Harlem;

Richard Aoki, the highest-ranking Asian American in the Black Panther Party; and the San Francisco Chinatown street youth of the Red Guard Party.

Though the AAM was a broad, multifaceted movement that resists simple quantification, it is also reasonable to identify five major issues of Asian American organizing. First, as seen in the Yellow Identity symposium, the Third World strikes for ethnic studies, launched at San Francisco State College in November 1968 and UC Berkeley in January 1969, sparked the AAM. The students had four major goals in establishing Third World studies. First, they centered the experiences and perspectives of racial groups through ethnic studies classes. Second, they increased access to higher education for racially and economically marginalized students through special admissions programs. Third, as Chinatown and other working-class youth entered college, students reevaluated the relationship between campus and community. They transformed courses to focus on community service and empowerment, rather than on corporate training for individual upward mobility. Fourth, they demanded self-determination through control of the curriculum and the hiring of faculty. Asian American and ethnic studies programs soon developed at UCLA, UC Santa Barbara, City College of New York, and elsewhere around the nation.

Second, as reflected in George Woo’s call for a community focus, the AAM prioritized providing direct services to and empowering Asian American working-class communities. From the Asian Community Center (ACC) in San Francisco (emerging from Berkeley’s AAPA), to the *Gidra* newspaper collective in Los Angeles, to I Wor Kuen (IWK) in New York (emerging from Columbia’s AAPA), there was a strong emphasis on “serve the people” programs. IWK, in its first newspaper issue, rebuked the government for failing human rights demands for decent health care, housing, education, and jobs, and sought to empower the Chinatown community to creatively meet its own needs. The ACC credited Mao with the phrase “serve the people” and the Black Panthers with the idea of providing services to ameliorate social problems, although revealing contradictions about the self-serving interests of resource-rich governments and corporations. From the ACC’s Everybody’s

Bookstore, to the East Bay Japanese for Action services for seniors emerging from Berkeley's Asian American studies, to IWK's establishment of New York Chinatown's first health clinic, to East Wind's efforts to take over the Resthaven mental health facility in Los Angeles Chinatown, to Yellow Brotherhood's self-help drug program, to Asian Sisters' childcare, to widespread efforts to resist the redevelopment of Little Tokyos, Chinatowns, and Manilatowns, the AAM was ripe with community service programs. The best known of these community struggles was the San Francisco International Hotel campaign, which for 10 years (1968–1977) galvanized the AAM around housing rights for Filipino and Chinese seniors.

Third, protests against the Vietnam War dominated U.S. activism and ignited worldwide struggles. The war fought in Asia held special meaning to a movement developing pan-Asian unity. Moving beyond the liberal peace movement's focus on American interests, AAM activist situated the war in terms of racism, genocide, and U.S. imperialism. At the home of leading AAM activist Yuri Kochiyama, Malcolm X stated as early as June 1964: "The struggle of the Vietnamese is the struggle of all Third World people. It's the struggle against imperialism, colonialism, and neo-colonialism." This analysis was widely promoted in the AAM. The Los Angeles Asian Coalition expressed in a 1973 *Gidra* article: "In Vietnam, corporations are financing a war to create new markets and develop a cheap labor force, at the expense of democratic rights of Vietnamese people." AAPA in Berkeley expressed "solidarity with the Vietnamese people and the NLF [National Liberation Front opposed to both the South Vietnamese and U.S. governments], and demand[ed] an end to imperialism, political repression, and the exploitation of all Third World peoples." Asian Americans for Action (AAA) in New York City printed their position on the Vietnam War, demanding an immediate withdrawal of troops and support for Vietnamese self-determination. AAA further linked Vietnam with U.S. expansionism throughout the Pacific Rim and led the AAM's efforts, in solidarity with Japanese antiwar activists, to repeal the U.S.-Japan Security Treaty and remove the U.S. military from Okinawa. Kochiyama, who worked with AAA, expressed the interconnectedness of U.S.

militarism in Asia: "The bases set up on Okinawa are invasion bases to Asian countries (especially Vietnam, Cambodia, Laos, Thailand, and Korea), to attack, supply military arms and ammunitions, and to transport supplies, and to train and entertain US soldiers."

A 1971 *Gidra* article, "GI's and Asian Women," posited that the dehumanizing images of Asian women promoted their use as sex objects, while perpetuating racism against all Asians, making it easier for U.S. soldiers to kill "gooks" in Vietnam. As long as U.S. military aggression occurs in Asia, the author cautioned, racism will continue against Asian Americans. Black and Chicano activists also denounced the hypocrisy of the United States for fighting for freedom and democracy abroad although ignoring inequalities at home. By raising the incarceration of Japanese Americans and the atrocities of Hiroshima, AAM groups called attention to the existence of anti-Asian racism as well as U.S. imperialist policies in Asia. AAM activists had moved the antiwar movement from focusing primarily on protecting American lives to a discussion of ending racism and imperialism in the United States and abroad.

Fourth, in the midst of U.S. postwar prosperity and the transformation of Japan from archenemy to subordinate ally, Asian American upward mobility in jobs, education, and residence served to obscure their working-class past and present. Although the mainstream Japanese and Chinese American communities reveled in their newly acquired model minority status, AAM activists raised awareness of the deplorable labor and living conditions of working-class Chinese, Filipino, and Japanese communities. AAM activists traveled to Delano in Central California to support Filipino and Mexican farm workers in the famous grape strike by Cesar Chavez's United Farm Workers of America (UFW). In 1965, Filipino workers, older and with more political and labor experience, started the strike, though Mexican farm workers predominated in numbers. AAM activists also supported Chicano students who pressured colleges to refrain from purchasing grapes in solidarity with the nationwide consumer boycott. Whether renovating the International Hotel or helping to build Agbayani Village, a UFW retirement home, AAM activists demonstrated solidarity with working-class elders.

There was a strong focus on labor issues and history in Asian American studies courses, AAM publications like *Gidra* and *Bridge*, and the newspapers of AAPA, AAA, and other AAM organizations. Perhaps most influential were Carlos Bulosan's semiautobiographical novel, *America Is in the Heart*, detailing the agonizing struggles of Filipino laborers of the 1930s and '40s, and Karl Yoneda's essay "100 Years of Japanese Labor History in the USA," published in the major Asian American studies textbook, *Roots*. That Bulosan and Yoneda were both connected with communism/socialism and militant labor organizing illustrates the ways capitalist critiques shaped the AAM. Through a combination of political struggle, life experiences, and study, many AAM activists gained a class consciousness and a few even dropped out of college to live out their working-class politics, to dignify manual labor, and to organize in Asian American communities. Wei Min She activist Steve Louie became a dock worker and East Wind activist Mo Nishida, with a bachelor's degree in chemistry, chose manual labor and residence in Los Angeles Little Tokyo to stay close to the rhythms of this community. In 1974 in New York Chinatown, Asian Americans for Equal Employment was founded to protest the lack of Chinese construction workers in the building of Confucius Plaza, a 44-story, 760-unit public housing cooperative that included a school, day-care, stores, and community space. Also in 1974 in San Francisco Chinatown, Wei Min She and the Asian Community Center organized support for 135 mainly Chinese garment workers at the Jung Sai sewing company to protest years of harassment, speed-ups, and sweatshop conditions.

Fifth, although the AAM focused heavily on race, class, and nation, the very act of women participating in political struggles, for the first time in large numbers, inspired an awareness of gender inequality in society and within the movement itself. Like other women of color, Asian American women felt alienated from the predominantly white liberal feminist movement by its inattention to race and class. Instead, they sought to work alongside "our brothers" against sexism because "[i]t is the social system [of capitalism], not men, which is the enemy." Drawing from Black and Chicana feminism, the Asian American women's

movement promoted a politic of intersectionality to address the "triple oppression" of sexism, racism, and class inequality. In consciousness-raising rap sessions, Asian American women told moving stories about the ways sexism affected their lives and shared frustrations, anger, hopes, and struggles in supportive spaces. They developed small and intensive study groups to examine the historical roots of women's oppression. One particularly poignant moment occurred at an AAM meeting when one man introduced himself and then said, "[T]his is my wife; she has nothing to say." The women exploded in anger—a response that likely would not have occurred outside of this developing feminist consciousness. As they protested being relegated to "women's roles" and marginalized from leadership, they pushed several AAM publications, notably *Gidra*, *Bridge*, and *East Wind*, to devote special issues to women's liberation. Student-based women's collectives at UC Berkeley and Stanford University published Asian American women's anthologies. Berkeley's *Asian Women* articulated a feminist analysis of Asian women's subordination linked to capitalism and racism. Articles centered on opposition to the Vietnam War, including a delegation's report on the influential Indochinese Women's Conference in Vancouver, and on how the U.S. government's use of toxic chemicals in Vietnam and the sterilization of Third World women created a situation of "genocide." Though there was less attention to sexuality than in current women's anthologies, *Asian Women* criticized the inequality of birth control (sterilization and IUDs to Third World women and the Pill to middle-class U.S. women), advocated women's control of their own bodies and sexuality, and supported gay rights. That *Asian Women* became the main textbook in Asian American women's courses suggests the impact of the journal's radical critiques of racism, patriarchy, capitalism, and imperialism on the AAM.

AAM organizations also started their own women's collectives to support women's issues and leadership. Recognizing that mothering placed strains on women activists that limited their participation and leadership, groups like I Wor Kuen developed a child-care system where all activists, parents and non-parents, men and women, had to rotate childcare duties and numerous collective households provided support

for childcare and household work. The intensity of children's needs and sexism in society, however, made it near impossible for AAM activists and organizations to fully reconcile the gender inequality in parenting and movement leadership. Still, the collective leadership models embraced by the AAM and Asian American women's advocacy enabled women's participation in ways not previously seen. Notably, Asian American women provided the major leadership in I Wor Kuen and its later incarnation as the League of Revolutionary Struggle. AAM activists also started centers to serve women's needs. In Los Angeles, recognizing that women constituted one-third of drug overdoses and that women drug users faced sexual assault and other vulnerabilities, Asian Sisters gained federal funding to provide a drug treatment program. In 1972, Asian Sisters established the Asian Women's Center to expand its services to include childcare, health, education, and counseling. Replicating the AAM's collective leadership model, the Center operated through egalitarian coordinating committees and collectivized salaries to expand its staff.

In 1977, after a 10-year battle, the elderly tenants were evicted from the International Hotel. Their eviction and the hotel's later demolition symbolize the end of the AAM. Not only did the prolonged struggle and loss deflate the AAM in a period of overall social movement decline and professionalization of activists, many AAM organizations, located at the I Hotel, lost their offices. Although the most vibrant phase of the AAM ended, just as the I Hotel activists resurrected the new International Hotel and International Hotel Manilatown Center at the site 30 years ago, the AAM continues.

One most important legacy of the 1960s–70s AAM is the infrastructure of community-based organizations. The Asian Law Caucus in San Francisco, established in 1972 as the AAM's first legal organization, continues to this day serving Asian American working-class communities. In the 1980s, the Asian Law Caucus reopened the landmark case of Fred Korematsu and successfully overturned his 1940s conviction for evading evacuation orders. Many new organizations also emerged. Though too numerous to name, these include several South Asian women's organizations fighting domestic violence, the Korean Immigrant Workers Advocates organizing Korean and

Latino workers in Koreatown restaurants, and the Nikkei for Civil Rights & Redress (formerly the National Council for Redress/Reparations) that issued immediate calls for nondiscrimination against Arabs and Muslims in the wake of 9/11 and organized widespread support for Japanese American Ehren Watada, the first commissioned officer to refuse deployment to Iraq. In the mid-1990s, the Asian Immigrant Women's Advocates launched a nationwide campaign for Chinese immigrant garment workers denied back wages from Jessica McClintock. The three-year struggle helped spark the anti-sweatshop movement on college campuses nationwide and a labor consciousness in a new generation of youth. In these ways, the AAM continues to the present, providing direct services, organizing for political and economic rights, developing political frameworks for contesting multiple inequalities, inspiring a radical vision of liberation, and engaging new and veteran activists in the struggles for justice.

Asian American Muslims

Asian American Muslims refer to adherents of the religion of Islam who are of Asian American descent. In fact, the term "Asian American Muslim" is rarely

used in scholarly research and the mass media, because this term concerns two complex and shifting concepts/categories—Asian American and American Muslim—that are developed based on different and sometimes competing social, economic, and political goals.

In the U.S. Census, Asian Americans usually refer to U.S. citizens or residents who originate from the peoples of the Far East, Southeast Asia, and South Asia, such as Chinese, Filipino, Indian, Vietnamese, Korean, Japanese, and others; whereas, Asians from other parts of the Asian continent, such as Siberia, central Asia, Asian Minor, the Arabia peninsula and the Persian Gulf area, are usually not considered “Asian” but classified as “white.” Therefore, if not otherwise noted, Asian American Muslims normally refer to Muslims originated from the East Asia, South Asia, and Southeast Asia. However, although Arab Americans are usually not considered Asian in the United States, the earliest Muslim immigrants to the United States at the end of nineteenth century were mostly Arabs from the Greater Syrian region of the falling Ottoman Empire and often categorized as “Turkey in Asia” or “other Asian” in the U.S. Census. Because racial categories evolve constantly, the boundaries of Asian American Muslims may shift in the future.

History

At the end of nineteenth century, Arabs from various parts of the Ottoman Empire began to appear on the American shore. Among these Arab immigrants, the majority were Christians who fled their homeland to the New World to escape religious persecution under the Ottoman Empire and the worsened economic conditions in the Mount Lebanon area. Along with these Christians, a smaller number of Arab Muslims also arrived, including *Sunni*, *Shi’a*, *Alawite*, and *Druze*. However, eager to be distinguished from Muslim “Turks” who were often stigmatized, these Arab Muslims identified themselves as Syrians. In fact, both Christian and Muslim Arabs were initially (and to a large degree are still) viewed by outsiders as a single community. Official U.S. immigration records listed them as “Turkey in Asia” or “Other Asian.” These Arab Muslims are probably the earliest Muslim immigrants to the United States who were considered

Asian in terms of race. The racial categorization of Arab Americans has gone through significant changes during the last 100 years. After first being labeled as “Turkey in Asia,” or “Asiatic,” or “colored,” they later became “white.”

These early Muslim immigrants from the Asian continent are characterized as sojourners who came only for economic betterment and intended to go home when conditions improved. Many of them were uneducated men. Most found employment as unskilled laborers in factories, mines, and in peddling. Some later became small shopkeepers and even large merchants. Some sent for their families, whereas others married locally to Christian women. These immigrants mostly settled in major urban areas such as New York, Chicago, Boston, Detroit, and Toledo. Instead of seeking to assimilate into mainstream American society, as more and more Arabic-speaking immigrants and refugees came to the United States, Arab Muslims formed ethnic communities around the metropolises, especially the Detroit area.

During the same period of time, a small number of South Asian Muslims also set their feet on American soil. A few peasants from the present-day Pakistani Punjab area arrived around 1900. However, as Asian immigration was stopped by the National Origins Quota Act of 1924 and the peasants ended up marrying primarily Mexican American women, these immigrants failed to establish large ethnic communities as the Arabs did. Although the United States enacted the Luce-Celler Act extending citizenship through naturalization to Indians, this legislation was still limited by the quota system set in 1924 legislation and thus produced few immigrants. Large numbers of Indian and Pakistani immigrants (among them a large number of Muslims) would begin to arrive only after the major changes in U.S. immigration legislation in 1965. Scholars believe that Muslim identity did not play an important role for these early Muslim immigrants. People preferred to use ethnic terms to identify themselves, such as “Arab” and “Asian Indian.” For these early Muslim immigrants, identities associated with tribal or ethnic affiliations or places of birth were more important than their Muslim identity.

The Immigration and Naturalization Services Act of 1965 abolished the national-origin quotas that had

been in place in the United States since the Immigration Act of 1924. This act dramatically changed the face of American society by allowing immigrants from all over the world who were not allowed previously to enter the United States. Many believe that the 1965 legislation turned the United States into a multicultural nation from a nation primarily comprised of white Europeans and African Americans. Since the implementation of the law, the relative proportion of the white population has been in steady decline. Hispanics have replaced African Americans as the largest racial minority in the United States. There has been enormous growth of immigration from non-European nations, especially Asian countries, since the implementation of the law as well. In addition to changes in the demographic composition of American population, the change of immigration policy also drastically changed the American religious structure. The Protestant-Catholic-Jewish religious landscape described by sociologist Will Herbert in the 1950s soon turned into a prospering religious market where various religious traditions brought by immigrants compete. When Buddhists and Hindus were building their temples, and Sikhs were constructing Gurdwaras, Muslims also started establishing Islamic centers and mosques across the country.

Soon after the passage of the Immigration Act of 1965, immigration statistics and the Census show a sharp rise in the number of immigrants from India and Pakistan in the late 1960s, from Bangladesh after 1970–1971, and from Afghanistan after 1979. Although the law prohibited the Census Bureau from asking about religious affiliation in its regular surveys, based on the high percentage of Muslims in South Asian countries, scholars believe that a large number of Muslims also entered the country. This significant increase in the number of South Asian Muslims changed the face of the American Muslim community as well as the racial/ethnic relation and power structure within the diverse community. Today, Asian American Muslims are predominantly South Asian in origin. South Asian Muslim also becomes one of the three largest ethnic groups representing Islam in the United States, the other two being Arab Muslim and African American Muslim. With the establishment of many Islamic organizations across the country, Asian

American Muslims now become more and more visible in American society.

Demographics

Because the law prohibited the Census Bureau from asking about religious affiliation in its regular surveys, precise demographic composition of Muslim population is hard to obtain. Therefore, we can only obtain rough estimates of the population of Asian American Muslims.

According to a survey conducted by the American Muslim Council—one of the largest Muslim lobbying organizations in the United States—the major Muslim racial and ethnic groups are African American (42%), South Asian (24.4%), Arab (12.4%), and white (2%) (Nu'man, cited in Schmidt 2004). Yet, a widely cited Muslim ethnic group breakdown is based on a more detailed Faith Communities Today (FACT) survey conducted by the Hartford Theological Seminary (2001). According to this survey, regular mosque attendees are made up of South Asians (33%), African Americans (30%), Arabs (25%), Africans (3.4%), Europeans (2.1%), white Americans (1.6%), Southeast Asians (1.3%), Caribbeans (1.2%), Turkish (1.1%), Iranians (0.7%), and Hispanics/Latinos (0.6%). The FACT survey also reports that converts make up 30 percent of the U.S. Mosque participants. Among the converts, 64 percent are African American, 27 percent are White, 6 percent are Hispanic, and 3 percent are classified as others. However, this survey gathers data from mosques and excludes the “un-mosqued” Muslims. A more recent national survey conducted by the Pew Research Center (2007) presents a somewhat different picture. According to its report, 38 percent of the interviewees describe themselves as white, 26 percent as black, 20 percent Asian, and 16 percent other or mixed race.

Though Islam is the fastest-growing religion in the United States, the Muslim population is still very small, making up roughly 0.6 to 2.4 percent of the U.S. population, or 1.1 to 8 million based on available studies. Thus, Asian American Muslims are but a tiny fraction of the U.S. population. Yet, its importance both to the Muslim community and the Asian American community is not to be ignored.

Members of the Patel family from Gujarat, India, sit around a table during their traditional Eid al-Adha meal in Clifton, New Jersey, October 26, 2012. (Robert Nickelsberg/Getty Images)

The majority of Asian American Muslims are from the South Asian countries such as Afghanistan, Bangladesh, India, Pakistan, Iran, and others. There are also a small number of Southeast Asian Muslims, mainly from Malaysia and Indonesia, and Chinese Muslims (or *Huihui*), mostly arrived in Southern California in the years around 1949 when the Chinese Communist Party (CCP) seized power. Except Iranian American Muslims who are largely *Shi'ites*, Asian American Muslims are predominantly *Sunnis*.

South Asian Muslims

South Asian Muslims, mainly from India, Pakistan, Bangladesh, and Afghanistan, have a largely shared cultural, social, and political history and are usually deemed as one diasporic group in the United States. They mostly arrived after the passage of the

1965 Immigration Act and have been growing steadily during the last half century. Because of the 1965 Immigration Act that gives priorities to professionals, most new South Asian immigrants were well educated and highly skilled professionals ready for employment or post-graduate students who later sought employment in the United States and became citizens or permanent residents. According to the 1990 U.S. Census, immigrants from India had the highest median household income, the highest percentage of bachelor's degrees, and the highest percentage of professional employment. Studies indicate that South Asian Muslims, especially Pakistanis and Indian Muslims, are usually of higher socioeconomic status than Muslims of other ethnic background. This advantage coupled with their mastery of the English language enable South Asians to assume leadership roles in many local Muslim communities as well as national Islamic organizations.

Scholars argue that South Asian Muslims' experiences in the United States are very different from those of Arab Muslims and African American Muslims. Throughout their long-time interaction with Hindus in the Indian subcontinent, South Asian Muslims are more or less influenced by the Hindu culture, especially in the aspects of food, clothing style, entertainment options, wedding ceremonies, and so on. In addition, South Asians are often categorized as Asian Americans—an important pan-ethnic identity developed in the U.S. racial and ethnic politics. Like other Asian Americans, as “model minority,” South Asian Muslims face different opportunities and challenges than Arab Muslims, who are more deeply involved in the Arab American struggles, and African American Muslims, whose utmost concern has been racial discrimination. Ethnic mosques that have been widely established in the United States deepen such differences among various ethnic groups within the American Muslim community. Some worry that the growing impact of South Asians at various levels may create conflict as they develop their own vision of how Islam should be practiced in the United States. The friction between indigenous African Americans, who are often “new Muslims,” and new immigrants, who are “new Americans,” also create barriers for Muslims from divergent backgrounds to come together and form a unifying “American Muslim” community.

Thus, it is important to understand the tension between Asian American identity and American Muslim identity, as the former emphasizes on racial and ethnic relations; whereas the latter centers on the relations between Muslims minority and non-Muslim majority, which is critical in the post-9/11 American society. How South Asians negotiate their multiple identities has far-reaching impact on the development of both Asian American and American Muslim communities, especially on the latter. Research on American Muslim community is growing but still small in scale and number.

Ahmadis among South Asian Muslims

I include a short description of *Ahmadis* in this section is because *Ahmadis* played a role in spreading Islam in

the United States, especially through their contact with African American Muslims.

The *Ahmadiyya* movement began in the Punjab area in 1889 by Mirza Ghulam Ahmad, who claimed that he was the *mahdi*—or the rightful leader from the Prophet's family. The movement began to send missionaries to the United States in the 1920s. These missionaries published the first English-language Muslim newspaper in the United States and provided English translations of the Qur'an to African American Muslims and taught them about the five pillars of Islam.

After the Pakistani government declared *Ahmadis* as non-Muslims in 1974, *Ahmadi* immigrants in the United States encountered vehement opposition from mainstream *Sunni* Muslims and are often stigmatized. The relationship between *Ahmadi* immigrants and African American *Ahmadis* has not been easy either. Unlike African American *Ahmadis* who often concentrate in inner cities, immigrant *Ahmadis* usually live in the suburbs and have better socio-economic conditions. Yvonne Haddad and Jane Smith's 1993 book, *Mission to America: Five Islamic Sectarian Communities in North America*, carefully examines the history of *Ahmadi* community in the United States.

Other Asian American Muslims

Other major Asian American Muslim subgroups are Southeast Asian Muslims and Chinese Muslims. However, because of their small numbers, these ethnic Muslim groups are rarely documented in the literature.

Southeast Asian Muslims mostly come from Indonesia and Malaysia. According to the 2000 U.S. Census, there are about 70,000 Indonesia Americans in the United States. Although Indonesia is the most populous Muslim-majority country in the world with a Muslim population of more than 200 million, Indonesian American Muslims are rarely documented because of their small number—they are only part of the 1.3 percent Southeast Asians reported in the FACT survey. Out of about 46,000 Malaysian Americans (2000 U.S. Census), of whom many are Chinese Malaysians in ethnicity, Malaysian Muslims are also very few in number. According to anecdotal accounts,

Malaysian Muslim students on university campuses in the 1990s were active members of the Muslim Student Associations (MSA) and some even played leadership roles in the MSAs.

The presence of Islam in China dates back to 650 C.E. Prior to the 1950s, Muslims in China of various ethnic backgrounds are generally identified as *Huihui*, meaning returning. Since the 1950s, the Chinese government applied a nationality system, according to which 10 ethnic groups are now recognized as followers of Islam. *Hui Zu*, or *Hui* people, the largest ethnic Muslim minority in China, are mostly indistinguishable from *Han* Chinese—the majority—in terms of facial appearance and language. In the years before and after 1949 when the Chinese Communist Party came into power, a small number of *Hui* people fled to the United States, many by way of Taiwan. Among them many were *Hui* officials or *Hui* generals in the Kuomintang government, such as Ma Bufang and Bai Chongxi. Like other Chinese immigrants during that period of time, many Chinese Muslims also settled down in California. During the 1980s, as the result of the loosened emigration policy, more Chinese Muslims made their ways to the United States, among whom many were first generation college students in their families. Now, Chinese American Muslim community in the Los Angeles area still actively holds various community activities and is planning on establishing a Chinese mosque. Aminah Beverly McCloud, an Islamic scholar at Depaul University, is probably the first scholar that writes about Chinese American Muslims, although only briefly.

Asian American 1.5 Generation

See 1.5 Generation Asian Americans

Asian American Political Alliance (AAPA)

The Asian American Political Alliance (AAPA) was the one of the most influential organizations of the Asian American Movement. At a time when pan-Asian unity was uncommon, AAPA coined the very term "Asian American" that has since become common nomenclature in U.S. society. AAPA, first formed at the University of California, Berkeley (UC Berkeley) in May 1968, inspired the formation of a loose network of AAPA organizations nationwide, which were among the most important student formations of the early Asian American Movement.

Yuji Ichioka and Emma Gee, themselves a pan-Asian couple, recruited student leaders at UC Berkeley and politically minded individuals from on- and off-campus to form an Asian American caucus of the Peace and Freedom Party. But at that first meeting,

held at the couple's home, an independent organization evolved. Influenced by the radicalism of the Peace and Freedom Party, Black Power, and the New Left, AAPA viewed itself as "a people's alliance to effect political and social change" and sought to "develop an American Society [sic] which is just, humane, equal, and gives the people the right to control their own lives." Their program, "AAPA Is," asserted that "American society is historically racist and is one which has systematically employed social discrimination and economic imperialism, both domestically and internationally, to exploit all people, but especially non-Whites." This one sentence, printed in the first issue of their newspaper (Nov.–Dec. 1968), revealed three key components of AAPA's program. First, AAPA asserted that Asian American oppression was rooted in racism, imperialism, and economic exploitation under capitalism. Though less emphasized, AAPA also struggled against sexism and included lengthy articles on women's liberation in their newspaper. The organization embraced leftist politics and sought a fundamental transformation of society that was ideologically aligned with Black Power. Second, from its beginning, the new pan-Asian unity promoted by AAPA was intricately linked to Third World radicalism and justice for "all people." AAPA's gaze was thus expansive and inclusive. Third, the AAPA paid attention to local, national, and global issues and analyzed their interconnections. In addition, AAPA connected the personal with the political in attending to various aspects of oppression—social, psychological, economic, and political. They stated that, "[O]ur concept of 'political' encompasses the complete redefinition of traditional politics, so that the necessity for personal involvement and interaction with others as human beings is realized." AAPA thus emphasized small group work, so that "trust" and "an understanding of another's actions" could facilitate their political endeavors.

Two early AAPA projects focused on opposition to U.S. militarism and the struggle for ethnic studies. Given that several Japanese American members, or their parents, had been incarcerated during World War II, AAPA emerged as one of the earliest groups to promote Japanese American redress. In the first issue of its newspaper, the group also denounced Title II of the McCarran Act of 1950, which authorized

the detention of any person *suspected* of being a threat to national security. Recognizing that the U.S. government might again incarcerate people without any evidence and that this time the main target would be Black militants, AAPA forged Afro-Asian solidarity. The group also strongly protested the Vietnam War. Unlike many U.S. antiwar groups that focused on saving American lives, AAPA stressed self-determination for Vietnamese people and defended "all oppressed peoples and their struggles for liberation." AAPA also supported the new Draft Help center in San Francisco Chinatown, informing working-class immigrants of their deferral rights and opposing fighting in "a war against other Asians in a nation that is being exploited by America."

AAPA exerted leadership in the Third World strikes at San Francisco State College (SF State) and UC Berkeley, which spurred the development of Asian American and ethnic studies programs throughout the nation. Inspired by Berkeley's AAPA, an AAPA chapter emerged at SF State that played a pivotal role in that campus's five-month strike. At UC Berkeley, AAPA created the campus's first Asian American Studies course, offered in winter 1969. When Berkeley's strike for ethnic studies began that same quarter, AAPA provided the major Asian American leadership. In January 1969, Asian American student groups from throughout California and beyond attended the Yellow Identity symposium at UC Berkeley and committed themselves to supporting the two-month old San Francisco State strike and the general movement for ethnic studies.

Though unplanned, the Yellow Identity delegates also agreed to form AAPA chapters at their respective campuses. This was similar to, but less structured than, the Chicano student gathering at UC Santa Barbara, where participants agreed to form MEChA organizations and created *El Plan de Santa Barbara* to guide the establishment of Chicano Studies. Various AAPA chapters made significant political contributions. At Columbia University, for example, AAPA helped form I Wor Kuen in New York's Chinatown, which later became the first nationwide revolutionary Asian American organization. At Yale University, AAPA helped create the first Asian American Studies journal, *Amerasia Journal*. At UC Berkeley, AAPA dissolved in September 1969 primarily because the organization's very success led to its demise. Many

AAPA members went onto develop UC Berkeley's Asian American Studies program. They taught the very first Asian American Studies courses, developed curriculum, hired (and fired) faculty members, and linked the university to the community. The other sector of Berkeley's AAPA went directly into the community, many working to stave off the destruction the International Hotel, home of working-class Filipino and Chinese seniors, as developers sought to make San Francisco into the "Wall Street of the West."

Though Berkeley's AAPA was short lived, it inspired the formation of AAPA organizations throughout the nation that collectively built the Asian American Movement. By coining the term, "Asian American," Berkeley's AAPA helped to develop a political and pan-Asian identity used to galvanize Asian Americans in the struggle against racism. AAPA raised the political consciousness of youth across the nation and created concrete community services for youth, workers, and the elderly. Former AAPA members might well be correct when they say that the Asian American Movement started in Berkeley with the birth of AAPA.

Asian American Sites and Museum Exhibits (Pacific Northwest and Great Basin)

During the late nineteenth and early twentieth centuries thousands of Chinese, Japanese, and other Asian people migrated to the Pacific Northwest and Great

Basin. By working abroad, these immigrants, at first mostly men, hoped to earn enough money to support their families at home, and to provide themselves with a comfortable retirement. Other migrants wanted to enrich themselves by providing services that catered to the Asian, and often, Caucasian, population; these included laundries, fruit and vegetable gardens, stores, restaurants, and other businesses. The nationally significant sites and repositories described here are only a small sample of those that exist. Not included are Asian art museums or classical Chinese or Japanese gardens.

Because most of the first Chinese immigrants worked as miners, it is not surprising that many mining-related sites remain. For example, gold discoveries in 1862 on northeastern Oregon's Granite Creek eventually led to the Chinese establishing mining claims there. The Ah Hee Diggings site near Granite consists of some 16 acres of hand-stacked rock tailings (often mistakenly called "Chinese Walls"), Chinese habitation features within the tailings are a "mess hall"/living site on a neighboring terrace and an associated ditch system.

Another spectacular, well-preserved Chinese mining site in northeastern Oregon, on Union Creek between Granite and Baker City, contains hand-stacked rock tailings; a rock-lined, terraced ditch or ground-sluicing trench; and a Chinese habitation area. The terraced trench has three tiers of walls with a total height of between 15 and 20 feet.

In Oregon's Applegate Valley, near Medford, Gin Lin, a Chinese mining boss, purchased mining claims in 1881. Visitors can take a self-guided tour of his hydraulic workings. Placer and hydraulic mining features along the Lower Salmon River in Idaho date to the 1880s and 1890s and contain reservoirs, ditches, terraces, rock walls, and tailings piles. Living sites, some with chimneys, include semisubterranean dwellings and rock shelters. Raft trips provide the best access to these sites. One somber Chinese mining site, in Hells Canyon on the Snake River, is Chinese Massacre Cove. There, in 1887, Caucasian thugs massacred over 30 Chinese miners at Deep Creek. This site is most accessible via jet boat from Lewiston.

Early Chinese immigrant gardeners turned marginal land into lush, productive plots by terracing hilly areas and improving the soil. Remnants of Chinese

vegetable gardens survive in many locations; place names, such as “China Gardens,” provide clues to their former presence. Chinese gardens near Warren, Idaho, date between 1869 and the 1920s.

Many communities had Chinatowns where today there is little or no Asian presence. In larger cities, however, much remains. Seattle’s International District was, historically, the home of Chinese, Japanese, and Filipino immigrants. Places of particular interest include Canton Alley, Hing Hay Park, and the Panama Hotel. Seattle’s Wing Luke Asian Museum is a pan-Asian facility that maintains a permanent exhibit illuminating the history of Asian and Pacific Islander immigration to, and settlement in, Washington State.

Japanese immigrants to the Pacific Northwest came in fewer numbers than did the Chinese. Most of the sites associated with Japanese Americans relate to the shameful internment and incarceration of the West Coast’s citizens and permanent resident aliens following Japan’s attack on Pearl Harbor in December 1941. The Minidoka National Historic Site, established by the War Relocation Authority, is in southern Idaho, near Jerome. It housed more than 9,000 Japanese and Japanese Americans who were forcibly removed from the Seattle and Portland areas. Portions of a stone guardhouse and a stone visitors’ waiting room remain. Near Delta, Utah, the former Topaz incarceration camp housed some 8,000 people of Japanese descent from the San Francisco area. Visitors can still see roads, rock walls, garden remnants, concrete slabs, and miscellaneous artifacts.

The only World War II internment camp in the United States for Japanese alien road workers was located near Lowell, Idaho, at Canyon Creek. Today, little remains of the Kooskia Internment Camp, but many photographs, at the University of Idaho, Moscow, evoke the internees’ experiences from mid-1943 to mid-1945.

Numerous museums and other repositories, such as the University of Idaho’s Asian American Comparative Collection (AACC), have exhibits or collections of artifacts related to Asian immigrants. The National Archives-Pacific Alaska Region in Seattle, Washington, houses many records from Oregon, Washington, Idaho, and Alaska, documenting how

the United States immigration policy impacted Asian and Asian American travel, immigration, and business.

Chinese merchants established stores to provide Chinese immigrants with familiar foodstuffs, smoking materials, and other items imported from their homeland. The stores often served as post offices, hiring halls, social centers, and opium-smoking establishments. One Chinese store that can still be visited is now the Kam Wah Chung Museum in John Day, Oregon.

Between 1888 and 1890 the Chinese community of Lewiston, Idaho, collected money to buy land and build a new temple. The temple building was demolished in 1960, but the temple furnishings eventually became the property of the Lewis-Clark Center for Arts & History, a unit of Lewis-Clark State College. Following a lengthy cleaning and restoration process, the gilded temple altar, original altar furnishings, exquisite painted glass lanterns, wooden sign boards, and other temple accoutrements became part of a three-room exhibit on the history of the Chinese in Lewiston.

The Mai Wah Society in Butte, Montana, owns a building that once housed the Wah Chong Tai Co. store and the Mai Wah Noodle Parlor. The World Museum of Mining has buildings with exhibits depicting a Chinese apothecary shop and a Chinese laundry.

Museums related to Japanese Americans include the Oregon Nikkei Endowment in Portland, which honors Oregon’s Japanese Americans. The Great Basin Museum in Delta, Utah, houses numerous artifacts from the World War II Topaz incarceration camp for Japanese Americans.

Some Idaho facilities relevant to Asian Americans in the West include the Pon Yam House in Idaho City; Polly Bemis’s home on the Main Salmon River; and The Historical Museum at St. Gertrude, in Cottonwood. Local inquiry, books, and the Internet will surely reward the visitor with other site and museum gems that are “worth a visit,” or even “worth a journey.”

Asian Americans and Pacific Islanders (AAPIs) in Higher Education

Asian American and Pacific Islanders (AAPIs) are one of the fastest-growing racial groups in American higher education. Paralleling a steady stream of AAPI immigrants and refugees entering the United States, AAPI college enrollment increased over six-fold from 169,300 to 1.3 million between 1976 and 2009. AAPI college enrollment is projected to increase 30 percent between 2009 and 2019.

Access. AAPIs viewed as an aggregate show a fast-growing population within American higher education; however, access to higher education continues to be a challenge for marginalized AAPI sub-groups. Over half of Vietnamese, Hmong, Laotian, and Cambodian adults (25 years or older) have neither enrolled in nor completed any postsecondary education. Comparable challenges can be found among Pacific Islander populations—approximately half of all Native Hawaiians, Guamanians, Samoans and Tongan adults have not enrolled in any form of postsecondary education.

Enrollment. Two out of three AAPI students are enrolled in just 200 higher education institutions located in just eight states. Nearly half of all AAPI college students are enrolled in California, New York, and Texas. AAPI college students enroll in a broad range of postsecondary institutions. The largest sector (47.3 percent) of AAPI college enrollment is in the community college sector and 38.4 percent of AAPI's

enroll in public four-year institutions. AAPI students attend public institutions of higher education and in some states, like California and Nevada; over half of all AAPI college students are attending public community colleges. Consistent with other racial groups, more than two-thirds (69 percent) of AAPIs attending four-year institutions are enrolled in public institutions. AAPI enrollment at public two-year community colleges has been increasing at a faster rate than AAPI enrollment at four-year colleges. AAPI enrollment at public two-year colleges increased 73.3 percent compared to 42.2 percent in public four-year colleges and a 53.4 percent increase in private four-year colleges. Between 1990 and 2000, the largest growth of AAPI two-year college enrollment occurred in the Midwest (86 percent) and South (75.2 percent).

Representation. Viewed as an important pathway to mobility, AAPIs invest heavily in higher education. Although AAPIs represent just 6 percent of the total United States population, AAPI's account for approximately 6.5 percent of undergraduate enrollment, 6.2 percent of graduate enrollment, 12 percent of professional school enrollment, 8.4 percent of faculty members, 3.4 percent of administrators, 1.4 percent of chief student affairs officers, and 1 percent of college presidents.

AAPI women are underrepresented as faculty in contrast to the large and growing number of AAPI women students. The low percentages of AAPIs in higher education among administrators reflect the pipeline problem. The pipeline for AAPI women narrows at higher levels of faculty and administration.

Although AAPIs appear to be well represented among the faculty, there are challenges to looking at data on AAPIs because the population is highly heterogeneous and data are rarely disaggregated to distinguish between ethnic groups, generation status, or national origin. It is important to note that parity at the entry levels does not translate into parity at the higher academic levels.

Admissions. In the 1980s, American institutions of higher education received an influx of strong applications from Asian American applicants; however, their low acceptance rates led to suspicions that institutions were setting quotas for Asian American students and led to investigations. The investigation found that admissions policies were adjusted so that standards for

admittance of APA college students would be higher. This controversy over APA admissions has endured as AAPI postsecondary enrollments continue to rise.

APAHE. In 1987, at a conference in Oakland on the admissions debate during the height of the five-year fight against discriminatory admissions policy facing AAPI applicants, Asian Pacific Americans in Higher Education (APAHE) was formed as the first organization to address higher education issues facing AAPI students, staff, faculty, and administrators in California. APAHE became a national organization in 2000. Since 1997, APAHE has partnered with LEAP (Leadership Education for Asian Pacifics) to offer the annual Leadership Development Program in Higher Education (LDPHE), developing a pipeline that aids in the increase of visible AAPI leaders in higher education.

Online network. In the early 1990s, as Asian Americans proceeded to graduate and professional schools, they found online support in the form of the Asian American Graduate and Professional Student Organization (AAGPSO) and Association of Asian American Studies (AAAS) email networks. AAGPSO formed in 1992 from a student organization at Ohio State University and the AAAS email network formed out of AAGPSO mailing list members at the national AAAS conference in 1994 establishing an electronic community for Asian American studies. The email networks allowed for students isolated on their campuses to establish intimate online conversations, collaborations and relationships with AAPI graduate and professional students across the country.

Asian American, Native Alaskan, Pacific Islander Service Institutions (AANAPISI). In 2007, AAPI's were included as the newest type of minority serving institutions (MSI) in higher education. The AANAPISI program provides grants to eligible institutions of higher education to improve academic quality, increase self-sufficiency, and strengthen capacity to make a substantial contribution to American higher education resources. Eligible institutions have over 10 percent AAPI student enrollment and 50 percent of their degree-seeking students are recipients of federal financial aid. There are 116 institutions in the United States that meet the AANAPISI eligibility criteria. As of 2011, there are 52 AANAPISI designated institutions of higher education in the United States.

And to date, 15 of the designated institutions receive funding through the AANAPISI grant.

Early students. Yung Wing, a member of Delta Kappa Epsilon fraternity, became the first Chinese American to graduate from an American university—Yale University—in 1854. He pioneered the Chinese Educational Mission that brought 120 government-sponsored students from China to study in America from 1872 to 1881. Tsuda Umeko, the youngest member of the Iwakura Embassy, a Japanese diplomatic mission, attended Bryn Mawr College from 1889 to 1892 before becoming an advocate for Japanese women's education and founding Tsuda College in 1900. In 1903 the first large wave of Filipinos to immigrate to the United States arrived—the *pensionados* were students on government scholarship.

Early Asian students in America were actively involved in student organizations ranging from student newspapers to sports teams. Many of these Asian American students were welcome in traditional Greek-letter student organizations. Two of the four early Japanese students who graduated from Rutgers, Kusakabe Taro (Class of 1870) and Matsudaira Tadanari (Class of 1879), were elected into Phi Beta Kappa. Early Chinese students, Mun Yew Chung, Yale Class of 1883, was a member of Delta Kappa Epsilon fraternity; Yan Phou Lee, Yale Class of 1897, was elected to Phi Beta Kappa; Ngan-Chan Yang a student at Colgate University in 1909 was a member of Beta Theta Pi; Hu Shi a 1910 Cornell University graduate was elected to Phi Beta Kappa; Ching Ye "C.Y." Tang, the first Chinese student at Beloit College and a member of the class of 1918, was a member of Theta Kappa Epsilon; and James Yen, Yale Class of 1919 was a member of Beta Theta Pi fraternity. Although their numbers remained small their participation was welcome.

AAPI Student Organizations. AAPI college student organizations serve the interests (e.g., academic, athletic, social, cultural, philanthropic, political, professional, and spiritual) and advocacy needs of their members. As the numbers of AAPI students increased in American higher education so did the need for AAPI student organizations. Push and pull factors are at play as AAPI students are met with a campus climate that is not always inclusive or welcoming.

Early Asian American student organizations included the Chinese Students' Alliance of America, which was created by students from Berkeley, Oakland, and San Francisco in 1902. Filipino Students at the State Normal School (now San Diego State University) established the Filipino Students' Club in 1903. The Ithaca Chinese Students' Alliance (now recognized as the Chinese Students Association) was founded in 1904 at Cornell University. The first Chinese American fraternity and the Chinese Students' Christian Association were founded in 1909; and the first Chinese American Greek-letter fraternity in the United States, Rho Psi, that was established at Cornell University in 1916.

At Stanford University, white students expelled a Chinese student from a residence hall in the 1920s, which led to the establishment of their own residential Chinese Club House. In response to this type of social exclusion, early Chinese American college students created and participated in the nationwide Chinese Students' Alliance and the Sigma Omicron Pi Chinese sorority, which was founded in 1930 by Chinese American women at San Francisco State Teachers' College. Chinese student organizations developed at every campus across the country where Chinese students enrolled, serving Chinese students from the People's Republic of China and Taiwan. Japanese American student organizations filled the void for college students who faced institutional racism and a lack of support networks. Organizations such as the Nisei Bruin Club at UCLA, the Nisei Trojan Club at the University of Southern California (USC), and the Japanese Men's Student Club and Japanese Women's Student Club at UC Berkeley afforded Japanese Americans resources and opportunities from which they were excluded in mainstream campus clubs.

After the late 1960s, large numbers of Asian students began to enter colleges and universities, and Asian American student organizations were created around the United States. The political awakening of college students in the late 1960s and early 1970s coincided with the formation of Filipino college student organizations such as Pilipino American Collegiate Endeavor (PACE) at San Francisco State University in 1967, Pilipino American Alliance (PAA) at UC Berkeley in 1969, *Samahang Pilipino* at

UCLA in 1972, and *Kababayan* at UC Irvine in 1974. By the mid-1970s, the Southeast Asian student organization formed following an influx of refugees from Vietnam, Laos, and Cambodia. Between 1976 and 1979, Vietnamese American student organizations were founded at a variety of institutions, including USC in 1976; Virginia's George Mason University, UC San Diego, and UCLA in 1977; the University of Maryland College Park in 1978; and UC Irvine and Virginia Tech in 1979.

Numerous AAPI student organizations formed as regional or national organizations to benefit the campus-based organizations and students through unity, collaboration, and shared resources and networking. These organizations facilitate communication between and among various institutions of higher education although empowering and developing young leaders and advocating for social justice. When institutions do not have the critical mass necessary to create a campus organization, AAPI regional college student organizations play an important role in the collegiate lives of AAPI college students. The organizations range from regional pan-Asian organizations like Asian Pacific Student Union (APSU), East Coast Asian American Student Union (ECAASU), Midwest Asian American Student Union (MAASU), the Asian Greek Council (AGC); and the National APIA Panhellenic Council (NAPA) to ethnic-specific regional and national organizations like Southern California Pilipino American Student Alliance (SCPASA), Mid-Atlantic Union of Vietnamese Student Associations (MAUVSA), South Asian Awareness Network (SAAN), the Southern California Korean College Students Association (SCKCSA or *Chongdae*) to regional or national student conferences like Korean American Student Conference (KASCON), Union of North American Vietnamese American Student Associations' (UNAVASA) conference and the National Asian American Student Conference (NAASCON).

Today, these student organizations range from ethnic-specific organizations to pan-AAPI organizations, preprofessional organizations to campus ministries, a cappella to dance, Greek letter organizations to advocacy organizations, as well as campus-based, regional and national AAPI student organizations. Students who seek peer support and a forum for

cultural identification create AAPI student organizations. Campus-based student organizations as well as regional and national organizations utilize the collective voice of AAPI students to address and advocate on behalf of AAPI student issues such as admissions policies, campus climate, Asian American studies, off-campus Asian American community, resource centers, funding, and increased faculty and staff representation. AAPI student organizations may assume institutional responsibility over advocacy, education, programming, support, mediation, and the overall quality of life for AAPI students through heritage weeks, special programs, social activities, and dissemination of information regarding ethnic minority issues through newsletters and forums.

Asian Pacific American Studies. An interdisciplinary academic discipline that examines all aspects of Asian American and Pacific Islander experiences began in the 1960s as a result of student protests and community advocacy. In December 1968, students at San Francisco State College (now San Francisco State University) called for ethnic studies and open admissions. It was the first campus uprising involving Asian Americans as a collective force, and it marked the beginning of the Asian American movement. Asian American studies programs can be found up and down the state of California and across the country at institutions like the University of Washington, University of Illinois at Urbana-Champaign, University of Colorado, Cornell University, State University of New York at Binghamton, and Columbia University. In 2010, Syracuse University introduced a minor in Asian American studies—addressing ongoing advocacy efforts from Asian American student organizations dating back to 1997. In addition, Asian American organizations continue to advocate for increasing the number of courses offered at Princeton University as recently as 2009. Throughout the country, Asian American student organizations continue to demand that programs are established (Rutgers University) whereas others fight to save existing programs from budget cuts (California State University, Los Angeles). The Association of Asian American Studies (AAAS) was founded in 1979 to advance the highest professional standard of excellence in teaching and research in the field of Asian American studies.

Asian American and Pacific Islander Student Services. Institutions of higher education have responded to the increasing needs of Asian American and Pacific Islander students by providing programs, services, and facilities to address the cocurricular needs of AAPI students. These offices and centers offer intentional institution-based community building, educational programs, academic collaborations, service learning, student empowerment, personal and student group advisement, resources, leadership development, as well as individual and collective advocacy at institutions including Brown University, Colorado State University-Fort Collins, Indiana University, Loyola Marymount University, Northwestern University, Oregon State University, Pomona College, Rutgers University, Stanford, the University of Connecticut, and the University of Iowa.

Asian Americans for Action (AAA)

In April 1969, Asian Americans for Action (AAA or “Triple A”) formed as the first pan-Asian political organization in New York City and initiated the East Coast Asian American Movement (AAM). On a park bench over lunch, Kazu Iijima and Minn Matsuda, Japanese American women with long histories of activism, conceived of a social or cultural organization for their Japanese American children. But they recruited by “pouncing on any Asian we saw” at anti-war rallies and among politically conscious students. At the first meeting, attended by some 18 people, most of whom were strangers to one another, the group discussed the goals, structure, and direction of the new organization. Not surprisingly, they decided to focus on social justice as well as identity formation—a decision that delighted Iijima. Without prior knowledge of West Coast AAM developments, including the information that the Asian American Political Alliance (AAPA) in Berkeley had created the term “Asian American” a year earlier, AAA independently adopted the same pan-Asian term. Kazu’s son, Chris Iijima,

had encouraged a panethnic focus. The group chose the name, “Asian Americans for Action,” reflecting its pan-Asian identity and action orientation.

New members began appearing at every meeting and, for the first time, East Coast Asian Americans were working in an all-Asian environment. Kazu Iijima recalled the excitement and intensity of the times: “We met not only every Friday from 8 PM to past midnight, but also several times a week as subcommittees to plan actions and for study. From the start, it was almost frenetically action oriented.” AAA’s opposition to racism and imperialism, global and local linkages, and Third World solidarities both influenced and reflected the themes of the larger AAM. AAA’s newsletter, first issued in June 1969, was read throughout the nation, with groups like Berkeley’s AAPA reprinting AAA articles and UCLA’s *Gidra* writing about the New York AAM. In turn, AAA reported on West Coast news and reprinted material from *Gidra* and elsewhere. There were also exchanges, with West Coast activists visiting elder mentors like Kazu Iijima and Yuri Kochiyama. Moreover, the premiere AAM band, A Grain of Sand, comprised of Joanne (Nobuko) Miyamoto, Charlie Chan, and Chris Iijima, traveled across the country sharing music and ideas.

Inspired by Black Power and “recognize[ing] the black struggle as the most critical struggle at this point,” AAA applied a radical analysis of racism and imperialism to Asian and Asian American issues. With the Vietnam War taking center stage not only for the AAM, but the entire U.S. New Left, AAA prioritized the struggle against U.S. intervention in Vietnam. They called for the “immediate withdrawal of all U.S. and allied troops,” endorsed draft refusal, and supported the “Vietnamese struggle for self-determination.” The Vietnam War also motivated AAA’s position on U.S. foreign policy, which they viewed as “economically motivated” and “imperialist” protecting the economic interests of U.S. industries. AAA further linked Vietnam with U.S. expansionism throughout the Pacific Rim, and led the AAM’s efforts to repeal the U.S.-Japan Security Treaty and end U.S. military control of Okinawa. AAA met with leading Japanese antiwar activists; helped organize rallies against the Treaty, where AAA members were arrested; and published articles critical of U.S. militarism in Okinawa, strategically positioned to deploy

troops to defend U.S. geopolitical interests in East Asia, the Philippines, and the Middle East. They also kept alive the memories of Hiroshima and Nagasaki, with annual events and editorials and speeches connecting U.S. militarism with atrocities in Hiroshima, Okinawa, and Vietnam. In addition, AAA coorganized a conference on U.S. Imperialism in the Pacific Rim and published articles on U.S. nuclear weapons testing in Micronesia, the military regime in Indonesia backed by the U.S. government, and revolutionary struggles in the Philippines, Thailand, and elsewhere.

AAA was unique in its cross-generational composition. Some were middle-aged Nisei, the children of Japanese immigrants, including Yuri Kochiyama, who, through interactions with Malcolm X, had made a dramatic political transformation in the mid-1960s. Iijima was disappointed that those in the antifascist Japanese American Committee for Democracy, with whom she had worked in postwar New York, did not respond to their call. But many students, mostly Chinese Americans, from the City College of New York and Columbia University's AAPA joined AAA. The cross-generational and panethnic formation generated lively debates. The youth, influenced by the growing militancy of the Movement, particularly the Black Panthers and the Weatherman faction of Students for a Democratic Society, pushed for more confrontational tactics. The older generation felt the nascent organization lacked the financial and legal resources to deal with the likely arrests. The Nisei activists, having themselves been forced into concentration camps, placed primary focus on rallying against imperialism and militarism. In 1970, most of the youth, including Chris Iijima, left AAA to form I Wor Kuen, a group with radical politics similar to AAA's, but providing direct services to the Chinatown community—a move supported by AAA Nisei. Although internal tensions existed, there was a large degree of openness to different viewpoints. The students had respect for the Nisei, many of whom had years of political experience, and the older generation showed interest in the new ideas developing among the youth.

In 1972, activists, primarily from AAA, established the United Asian Community Center. Managed by Bill Kochiyama, Yuri's husband, and assisted by Tak Iijima, Kazu's husband, the two-story Center became a hub of political activity, used every single night by AAM and

other activists of colors, with 250 people crammed in for parties. In 1976, AAA transformed into the Union of Activists, reflecting the period's movement toward multinational formations. In 1978, the organization dissolved. In its 10 years, AAA brought isolated New York Asian Americans together, organized political protests, raised radical critiques through their newsletter and speeches, connected with the West Coast AAM and other activists of color, and sparked the East Coast AAM. As Kazu Iijima reflected, "It was the most stimulating, mind-boggling and liberating time of my life—it enlarged and changed my thinking beyond my wildest expectations."

Asian Ethnic Banks

The following statement from The National Association of Chinese American Bankers 12th Convention can be applied to Asian ethnic banks in the United States in general:

Since the 1960s, Chinese banks and thrifts have been emerging in increasing numbers throughout

the United States, especially on the west coast. However, the general public, the business community, and government officials are only vaguely aware of these new banks and thrifts. So the National Association of Chinese American Bankers was started to establish an identity for this burgeoning group of financial institutions. (p. 9)

A little known phenomenon until a decade ago, the Asian ethnic banking sector in the United States has experienced rapid growth, along with increasing Asian immigrants and transnational financial flows. Common characteristics of Asian ethnic banks include the following:

- Ownership, management and employment, and/or primary clientele are Asian Americans and/or other ethnic Asians;
- Many are community banks with stated missions of offering access to banking services by immigrants and other minorities, and community and commercial development in their neighborhoods;
- Locating in high-concentration Asian (American) residential and business areas, taking deposits from and lending heavily in those areas;
- Utilizing relationship banking and ethnic assets with capabilities of various Asian languages, familiarities with Asian cultural backgrounds and business practices from executives to tellers at branches to develop and conduct business;
- Asian ethnic banks vary dramatically by size, although many are very small banks, some nevertheless grow big and have cross-state branch networks (mainly through cross-state mergers and acquisition of other Asian American banks) and transnational presence.

Definition and Current Condition

Asian ethnic banks are defined broadly as:

- banks offering insured deposits in the United States, which currently are wholly or partially

owned and controlled by Asian Americans in the United States, or that were previously owned by Asian Americans; and

- banks offering insured deposits in the United States, which currently are wholly or partially owned by ethnic Asians or their business ventures in nations outside the United States, or that were previously owned by overseas ethnic Asians.

This definition includes all federal or state chartered commercial banks, saving banks, and thrift and loans that are at least partially owned and/or controlled by Asian Americans or overseas ethnic Asians but excludes Edge Act offices of overseas banks. Foreign-owned banks from Asia are included only when they offer insured deposits by establishing their U.S.-chartered subsidiaries. As such, the definition excludes the formerly Hong Kong-based Hong Kong Shanghai Banking Corporation, now London-based and known as HSBC, as it is a global bank not an Asian bank operating in the United States. Such a broad definition guarantees maximum inclusion of all banks that are owned by, and cater to, Asian American communities. It also prevents confusion between U.S.-chartered banks and local branches or representative offices of Asian country chartered banks that are subject to different sets of regulations in the United States, because only U.S.-chartered banks are permitted to operate with full range of banking activities.

There is no accurate count or a complete list of all Asian ethnic banks in the United States, as such information would require comprehensive surveys in all major metropolitan areas regarding bank ownership and organization information, in addition to banks that can be identified through FDIC, Federal Reserve Board, Federal Financial Institutions Examination Council (FFIEC), local Asian Ethnic Yellow Pages, individual bank websites, as well as published and unpublished research. The only publicly available nationwide list is the “Minority Owned Financial Institutions and Their Branches” released and periodically updated by the FFIEC. It includes those entire self-reported minority banking institutions, including those owned by African Americans, Caucasian Women, Hispanic, Asian Americans, Native Americans, Eskimos,

Aleuts, low-income credit unions, and other minorities. The most recent data, dated March 31, 2009, reveals there are a total of 43 Asian American owned banks, headquartered in states of California (14), Florida (1), Georgia (3), Hawaii (2), Illinois (8), Michigan (1), Mississippi (1), New Jersey (2), New York (2), Texas (6), Washington (1), and Guam (2), respectively. These 43 banks range from one-office institutions to banks with more than 20 branches, and account for 35 percent of the total 123 minority-owned banks in the nation. Their total assets and total deposits amount to \$15.8 trillion and \$12.7 trillion, respectively. Overall, as a financial sector, Asian ethnic banks are doing better than other minority-owned banks, as their average assets (at \$366 million) and deposits (at \$295 million) are, respectively, 18 percent and 36 percent higher than other minority-owned banks on average. Such differences are more prominent at branch levels, when the average of total assets and deposits at \$74 million and \$60 million for total assets and deposits, respectively, per Asian ethnic bank branches are 1.75 times and double that of their counterparts in other minority banks. However, these data present severe undercounts for Asian ethnic banks in total numbers, but more so their financial capabilities, given their self-reporting nature for FFIEC purposes. In New York City alone, there are seven additional Chinese American banks reported. Moreover, some of the largest well-known and publicly trade Asian American banks are not included in the FFIEC minority banks list. For instance, amid the global financial crisis and severe recession, Los Angeles area-based Cathay Bank, reported total assets of \$11.4 billion at the same time (up from \$10.4 billion a year ago) and total deposits of \$7.3 billion (from \$6.3 billion a year ago); similarly East West Bank reported growth as well with total assets of \$12.6 billion (from \$11.7 billion a year ago) and deposits of \$8.5 billion (from \$7.6 billion). Likewise, San Francisco area-based United Commercial Bank, the largest Asian American bank in the nation, reports total assets of \$13.4 billion (an increase from \$12.7 billion) and deposits of \$9.1 billion (versus \$8.1 billion a year ago; FDIC data). They are still considered small, compared to American megabanks, but nevertheless much bigger than other Asian ethnic banks and other

minority-owned banks. In general, Asian ethnic banks have carved a niche for themselves, capitalizing overall higher household income, having higher saving rates, and featuring transnational financial connections across the Pacific among Asian Americans. Their emergence and growth, however, have faced many challenges even as they embrace opportunities by immigration and capital flows. The discussion here primarily focuses on the Los Angeles, New York, and San Francisco areas.

History and Trajectory of Asian Ethnic Banking Sector Development

With a humble start, it took the Asian ethnic banks four decades to reach their present stature as an important minority banking sector. The evolution and rapid growth of a burgeoning Asian banking sector is closely associated with the globalization of capital and personnel, changing domestic socioeconomic and political climates including financial regulations, as well as local contexts of economic restructuring and demographic cycles in different metropolitan areas.

Initial “Indigenous” Development. Like other minority-owned banks, the first wave of Asian ethnic banks emerged to serve their coethnics, often as a result of mainstream banks’ discrimination against immigrants, minorities, and their neighborhoods. Despite the prevalent notion that Asian immigrants rely only on family savings and informal financial mechanisms such as rotating credit associations, formal financial institutions owned by Asian immigrants and native-born Asian Americans nevertheless set roots more than a century ago. The earliest known Asian ethnic financial institution, *Nichibei Kinyusha* (the Japanese American Financial Company), was established by Japanese immigrants in 1899 then turned to a California state-chartered bank, the *Nichibei Ginko* (Japanese American Bank), in 1903. Another Japanese bank followed suit two years later. They were both located in downtown Los Angeles, where Japanese immigrants concentrated.

The earliest known U.S.-chartered Chinese bank, Bank of Canton of California in San Francisco, started by transnational capital. Setting feet in the United

Bank of Canton of California in San Francisco. (Library of Congress)

States, it was reportedly founded and controlled by one of the four richest Chinese families at the time. During this period, even native-born Asian Americans with fluent English and an American education had difficulties securing loans from mainstream institutions. Such difficulty was even more profound for new immigrants without any previous credit history in this country. In the 1950s, a group of Chinese Americans saw a desperate need for senior citizen housing in Chinatown for a generation of aging Chinese Americans in Los Angeles and wanted to start forming their own bank to get the issues resolved. However, they encountered tremendous obstacles in the almost 10-year application process. On April 19, 1962, Cathay Bank, the first state-chartered Chinese American Bank in Southern California, opened its door in the heart of Chinatown, with only \$550,000 in start-up capital and seven employees. The oldest Chinese American Bank in New York was established in 1967, and Bank of the Orient started operations in San Francisco in 1971. The formation of Los Angeles's second Chinese

American financial entity went through similar difficulty, and a charter was finally granted in 1972, when East-West Federal Savings came into existence. It became the first federally chartered Chinese American thrift institution and the predecessor of East West Bank.

The 1965 Immigration and Nationality Act granted a 20,000 annual immigration quota to all Asian countries, with preferences given to family reunification and professional, skilled labor. This resulted in continuous and steady immigrant flows from Asia and Asian diaspora worldwide, which in turn increased a potential customer base for newly founded, formal Asian American financial institutions. Soon after the establishment of East-West Federal Savings, a handful of other Chinese American banks were founded in the 1970s in Los Angeles: International Bank of California (1973); Far East National Bank (1974); First Public Savings (1977); and Trans National Bank (1978). The first Korean American bank in LA, the California Korea Bank, was also founded in 1974. Among these formal institutions, Far East National Bank was the first federal chartered Chinese American Bank in the nation. The founders of these banks were mostly local longtime Chinese American residents, or recent Chinese or Korean immigrants. Their capital sources included savings by these Asian Americans and resources pooled from non-Asians. Some of these non-Chinese were business associates of the Chinese American bank founders.

Capturing and Facilitating Bubble Economic and Ethnic Residential/Business Growth. However, it was not until the 1980s that new Asian ethnic banks mushroomed. They include the following Chinese American banks: in Los Angeles: General Bank and Omni Bank (both started 1980); Monterey Federal Bank, Standard Saving Bank, and Trust Savings and Loan (all 1981); Golden Security Thrift & Loan Association and United Pacific Bank (both 1982); Grand National Bank, United American Bank, and United National Bank (all 1983); Eastern International Bank and Los Angeles National Bank (both 1985); and First Central Bank (1986). Chinese Americans also injected capital to the preexisting First Women's Bank

Of California in 1984 and the American International Bank in 1986, transforming them into two Chinese American ones. In New York, there are the United Orient Bank (1981); Abacus Federal Savings Bank, Asian Bank National Association, Chinatown Federal Savings Bank, and East Bank National Association (all established in 1984); Great Eastern Bank (1986) and Amerasia Bank (1988); in the San Francisco Bay Area, the Metropolitan Bank (1983) and United Commercial Bank (established with a different name in 1986). LA's Korean American banks established during this period include: Hanmi Bank (1982); California Center Bank (1986); Seoul Bank of California, later California Cho Hung Bank (1988); and United Citizens National Bank, later Nara Bank (1989). The reasons for such proliferation of new Asian American financial institutions during this period were multifaceted. First, rapid growth of Asian American population provided ready customers and markets for these banks. Second, the composition of Asian immigrants also changed dramatically as a result of changes at the international scale. Because of the economic takeoff in the Newly Industrialized Countries (NICs) in East Asia, many of them came with financial resources. They immigrated to the United States for different reasons than economic or social advancement—they were seeking financial and political “safe haven” because of geopolitical changes in the international arena. These wealthy Asian immigrants had the financial abilities to form banks and to make initial capital accumulation easier, and they could also rally support from their home countries if necessary. Third, in the early 1980s, U.S. domestic banking regulations were relaxed, making new banks easier than previously to establish. Some Asian immigrants saw the banking business as a way to obtain good return on their investments.

Riding on the Tide of Globalization of Capital and Flows of Population, Even When Weathering Financial Crises. Since the 1990s, the Asian ethnic banking sector experienced increasing foreign ownership and continuous infusion of foreign capital as reflections of financial globalization, a trend started initially in the 1980s. New banks founded during this period include the following: Asian Pacific National Bank (1990); First Continental Bank, Preferred Bank

(1991); China Trust Bank of California (1994), Ever-Trust Bank (1995), and FCB Taiwan California Bank (1997); and a new Korean bank, Saehan Bank, was established in 1991. A group of Chinese Americans also purchased Pacific Business Bank in 1994. In the San Francisco Area, both Affinity Bank and Gateway Bank started in 1990, and First American International Bank started in New York in 1999. One new trend during this time was the purchase of preexisting local banks by Asia-based foreign corporations or businesspeople, especially by Taiwanese and Indonesian Chinese. The trend of increasing foreign ownership can be attributed to the relaxation of Taiwan's rigid rule of foreign exchange control in 1986, which created the possibility for exporting capital out of Taiwan and generated free capital outflow; the increasing roles of developing countries in trade, and the strategic locational advantage and relaxing of retail banking regulations, in California in particular, contributed to such proliferation.

The Asian ethnic banking sector went through restructuring in the last decade since the late 1990s in the contexts of Asian financial crisis, domestic financial consolidation, and peer competition. On one hand, new banks emerged in the 2000s, including either single-ethnic or pan-Asian ones. For instance, the list includes Pacific Commerce Bank (2002), First Choice Bank, Saigon National Bank (both 2005), Pacific Alliance Bank, Premier Business Bank (both 2006), American Plus Bank, Golden Coast Bank (2007) in Southern California; and Indus American Bank was established in New Jersey in 2005. Pan-Asian banks are likely to emerge in those metropolitan areas such as Atlanta, Chicago, or Houston. But the Asian ethnic banking sector has also experienced expansion through merger and acquisition of other Asian or mainstream banks. The largest three Asian ethnic and publicly traded banks in the nation, United Commercial, East West, and Cathay, respectively acquired nine (1986–2007), nine (1994–2007), and eight (1996–2007) other banks. All acquisitions ended in 2007, a sign of the increasingly difficult time the banking sector has experienced since then. It remains to be seen how the current financial crisis and global recession will further reshape the Asian ethnic banking sector.

Asian Immigrant Women Advocates (AIWA)

Asian Immigrant Women Advocates (AIWA) is a grassroots community organization that strives to empower low-income and limited English-speaking Asian immigrant women workers to lead collective movements for social and economic justice. An estimated 8,000 women, the majority of whom are Chinese and Korean immigrant women working as seamstresses, electronics assemblers, hotel cleaners, and homecare workers in the San Francisco Bay Area, have participated in AIWA's signature leadership development program, the Community Transformational Organizing Strategy (CTOS). As the organization's "methodology of the oppressed," CTOS combines political education with hands-on skills and capacity training at every stage of social movement practice. Rooted in the conviction that Asian immigrant women have the potential and the right to influence the decisions that shape their lives, regardless of their English

language ability, prior educational level, or socioeconomic status, CTOS participants through a systematic and intensive process of individual transformation based on their everyday struggles around low wages, job insecurity and job loss, family care and household burdens, health care and housing, public safety, and anti-immigrant sentiment and racism.

When AIWA was first established in 1983, few organizations existed that addressed the rampant violations of low-paid work in garment factories, electronics assembly shops, hotel cleaning and restaurant work—sites that employed a disproportionate number of Asian immigrant women. Garment and electronics assembly workers were notoriously difficult to organize because of flexible subcontracting systems that continually eroded wages and working conditions. Traditional unions plagued by xenophobia, racism, and sexism commonly viewed immigrant women workers as "unorganizable," leaving them unprotected against widespread wage theft and employer abuse. To challenge these overlapping conditions of inequality and discrimination, Young Shin helped create one of the first and most enduring immigrant women workers' centers aimed specifically at improving the living and working conditions of low-income Asian immigrant women workers. AIWA's activities evolved from offering basic English language education, guided by the principles of popular education, to organizing political education seminars on topics such as early Asian immigrant history, the Civil Rights Movement and English language oppression, to launching spirited collective action campaigns against corporate retailers, municipal authorities, and state governments.

One of its most well-known collective action campaigns, the Justice for Garment Workers Campaign (1992–1995) catapulted AIWA from a small, local immigrant workers' center into one of the nation's leading voices against sweatshop labor abuses. In May 1992, 12 seamstresses walked into AIWA's Oakland Chinatown office to seek assistance recovering thousands of dollars in unpaid wages from their bankrupted employer, Lucky Sewing, an ethnic-owned subcontracting shop that produced garments for corporate brands such as Jessica McClintock. Although the nonpayment of wages was not an

uncommon story for garment workers, AIWA saw it as an opportunity to support a courageous group of garment workers to challenge the relations of power and domination in the garment industry that perpetuated sweatshop labor conditions for immigrant women. To expose how the system of subcontracting squeezed the labor of garment workers, AIWA staff organized a field trip to the Jessica McClintock boutique in San Francisco's Union Square. When women spotted the dresses that they had previously sewn with extravagant \$175 price tags, Shin recalls, "it did not take too much calculation nor explanation to see that someone was making a huge profit while these seamstresses were not even paid at all" (Shin 2010). Although Jessica McClintock was not legally responsible for compensating the former Lucky employees, AIWA launched a three-and-a-half-year public shaming campaign and consumer boycott that pressured corporate retailers such as Jessica McClintock to recognize the moral and fiscal hazards of profiting from sweatshop labor.

AIWA, which was staffed by a small and committed group of 1.5- and second-generation Korean and Chinese American women, activated a dense network of students, community members, religious leaders, and social justice activists to participate in weekly protests in front of Jessica McClintock boutiques in San Francisco and around the country. Asian American students and community activists, many of whom had mothers and grandmothers who worked in garment sweatshops and had become politically activated after learning about the 1968 ethnic studies strike at San Francisco State University and the struggles of Filipino farmworkers in the Central Valley, became the driving force of the public campaign. According to Helen S. Kim, one of AIWA's key campaign organizers, AIWA was able to generate enormous support among Asian Americans on college campuses across the country because "even if their direct family didn't work in the sweatshops, they could certainly identify with both the discrimination and lack of opportunities [for first generation immigrants]" (Chun, Lipsitz, and Shin 2013b). The support of movement allies was especially important in light of the fact that many garment workers themselves, including the women from Lucky Sewing, feared blacklisting if they participated in public rallies. Through consistent and escalated

public pressure, AIWA and Jessica McClintock finally came to a cooperative agreement in February 1996, with the assistance of Robert Reich, the Secretary of the U.S. Department of Labor, in which a Garment Workers Education Fund and a toll-free multilingual and confidential hotline for garment workers was created to help them report workplace violations. In 1997, AIWA secured the participation of three more clothing retailers, Esprit de Corp, Byer California, and Fritzi of California, to establish hotlines that allowed garment workers employed by subcontractors to report labor violations.

AIWA's Justice for Garment Workers campaign contributed to the development of a vibrant student- and consumer-led anti-sweatshop movement for corporate responsibility, both in the United States and transnationally. It also politicized a new generation of Asian American youth who chose nontraditional careers as union and community organizers and non-profit lawyers, community advocates, counselors and policy makers. However, it also exposed a growing schism in the dynamics of movement participation and leadership. Although first-generation immigrant women workers formed the heart of the public campaign, gaining the courage to testify at public hearings and to speak out at public rallies and marches, they played limited roles in important aspects of campaign strategy and decision-making. Moreover, given the importance of broad-based mobilization in support of the campaign's public shaming tactics, much of AIWA's time and resources were spent on escalating the public drama, rather than developing the capacity of immigrant women to advocate on their own behalf. Returning to its core mission of grassroots community organizing, AIWA shifted its organizational priorities from waging issue-based mobilization campaigns to developing low-income Asian immigrant women workers as active and visible leaders for social change.

Since 2000, AIWA has pioneered innovative efforts to cultivate the voice and visibility of Asian immigrant women workers in occupational health and safety reform. AIWA's Environmental Justice Project in San Jose educated and trained workers and employers employed in the high-tech assembly industry about the dangers of toxic chemicals, the need for adequate ventilation at work sites, and the necessity of posting

warning signs in additional languages other than English. Building on its Peer Health Promoter Network, which involved members in identifying and challenging occupational health and safety hazards, AIWA established a Garment Workers' Clinic in Oakland Chinatown. The Clinic not only provided basic health services and screening of occupational injuries to immigrant garment workers, but it also created new collaborations that placed immigrant women garment workers in more horizontal and collaborative relationships with medical professionals from the University of California, San Francisco (UCSF) and public policy officials from the California State Occupational Safety and Health Administration (OSHA). Immigrant women used their situated knowledge as workers who had accumulated years of backaches, repetitive stress injury, eye strain, and headaches working to design a model ergonomic garment work station. AIWA's Ergonomic Improvement Campaign (ERGO campaign) convinced subcontracted garment shops to upgrade their work stations through the installation of ergonomically engineered chairs, tilt tables, foot rests, and took kits at workstations aimed at combating the painful injuries workers routinely suffered as garment workers. By promoting the grassroots expertise of immigrant women workers, AIWA has defied conventional wisdom about the limits of grassroots community organizing and created an avenue for the marginalized and disenfranchised to bring about successful industry and policy reform.

AIWA has also cultivated an intergenerational approach to community organizing through its youth component. Much like its CTOS model for immigrant women, AIWA's youth component, Youth Build Immigrant Power (YBIP), invests in the leadership development of second-generation Asian Americans through political education, skills and capacity training, and collective action campaigns. Between 2006 and 2008, AIWA youth waged a precedent-setting language access campaign that resulted in the creation and hiring of the first-ever bilingual community assistant for Cantonese-speaking students and families at a high school with the district's highest concentration of Asian immigrants. AIWA youth also worked in coalition on the A-G Campaign to improve college access for high school immigrant students from non-

English-speaking households. Their efforts included the development of orientation materials for English Language Learner (ELL) students, which was translated into six different languages.

AIWA believes that the experiences of Asian immigrant women and their families at the intersections of sexism, racism, class oppression, nativism, and language discrimination equip them with evidence, ideas, insights, and ambitions that can help solve serious social problems. AIWA members begin to embrace collective engagement and public action as vehicles for social change, not only because of their participation in political education seminars about English language oppression and the Civil Rights Movement, but also as a result of their exposure to the leadership of other immigrant women and youth. The CTOS model trains veteran members to teach classes, facilitate trainings, and lead strategy sessions with new recruits who then become veterans training others. New members also witness veteran leaders speaking out at public rallies and marches, giving presentations in high school and university classrooms, making demands to elected politicians and government officials, collaborating with public health experts and other recognized public leaders, and winning prestigious awards in front of multiracial, cross-class, and multilingual audiences—all providing immigrant women and youth with actual examples of the benefits of working together in a collective project for social transformation.

AIWA's classes, leadership trainings, and policy advocacy campaigns have created opportunities for immigrant women to challenge gendered hierarchies in the family and the broader community. Traditional expectations from family members have served as a barrier to more meaningful forms of political participation for immigrant women. Some husbands viewed time at AIWA classes and meetings as time lost from the cleaning, cooking, and caretaking at home they expected women to do. Some English language-dominant children were ashamed of their mothers' limited English language skills and treated them disrespectfully as a result. Other children armed with computer skills viewed their mothers as lacking intelligence because they did not know how to use computers. However, as immigrant women prioritized

activities that enhanced their human and political development as immigrants and workers, they began to challenge their devaluation as wives and mothers. Their sole responsibility was no longer caretaking and their sole identity was no longer someone who could not speak English or use a computer; they were also responsible for leading English classes, training their peers, and tackling occupational health and safety reform. Rather than simply acquiring new skills, women engaged in CTOS training took steps to renegotiate the terms of their relationships as wives, mothers, daughters, and sisters in such a way as to accommodate their evolving identities as people engaged in deliberative talk, face-to-face decision making, and dignified self-representation and self-activity.

To persuade other movement organizations to prioritize the importance of grassroots leadership development, AIWA has begun documenting and sharing its CTOS model. Drawing on its extensive membership database and in-depth focus groups with AIWA members and leaders, AIWA is asking how its organizing has transformed immigrant women into agents of meaningful democratic change, what has succeeded and what has failed, and what aspects of the CTOS model can be replicated among other aggrieved groups. Sharing common experiences and struggles with other community organizations such as Koreatown Immigrant Workers Alliances, Mujeres Unidas y Activas, Restaurant Opportunities Center, Asian Health Center, Asian Pacific Environmental Network among others is a crucial part of propelling this paradigmatic shift. “For us to really create a just and equal society,” states Shin, “everyone needs to participate. Yet, I see every day that immigrant women are not involved . . . We need a shift in values, we need to make the social investments necessary to promote the leadership potential of disenfranchised immigrant women” (2010).

Asian Law Caucus

The Asian Law Caucus is a nonprofit San Francisco-based legal organization that focuses on advancing justice and advocating for the civil and human rights of the community’s low-income minority and immigrant populations. The Asian Law Caucus was founded with the intent of assisting Asian American and Pacific Islanders who were in need of representation for legal issues involving immigration, workers’ rights, housing rights, and denial of fundamental rights. When the Asian Law Caucus opened its doors, it was the first and only organization in the United States that was made up of young Asian Americans fighting for basic and equal rights for other Asian Americans and people of color who lacked the funds, resources, and/or language skills to access the nation’s legal system.

The Asian Law Caucus was born out of the tumultuous years of the late 1960s and early 1970s when Asian Americans were becoming a strong presence in civil rights protests for racial and social equality, representation, and recognition for their contributions to the nation. The Asian Law Caucus was founded in 1972 by a very young group of civil rights activists

and recent law school graduates. The Caucus was and currently still is located in San Francisco. The majority of the organization's founders (including Dale Minami, Garrick S. Lew, and Michael Lee) were newly barred Asian American attorneys who had recently completed their legal education at Boalt Hall School of Law at the University of California, Berkeley. Many of the founders are remembered for their work on major civil rights cases such as the overturning of Fred Korematsu's 1944 criminal conviction for not complying with Executive Order 9066 during World War II.

Today, the Asian Law Caucus focuses on immigrants' rights, housing rights, employment and labor issues and disputes, criminal justice reform, national security and civil rights, voting rights, and access to education. All of these practice areas are significant to legal questions and problems that Asian American and minority and immigrant populations often face. These groups of people often come into contact with the legal system because of their presence or length of stay in the United States, persistent racial inequalities that people of color continue to face, and the difficulties many minority groups have with access to legal assistance that is affordable (or free) and familiar with their native languages, cultures, and the struggles of newcomers and/or the impoverished.

The Asian Law Caucus recently celebrated its 40th anniversary. Today, the mission of the organization remains primarily the same as it was back in 1972. However, the Caucus continues to expand its focus areas to accommodate new legal issues and injustices that currently impact its surrounding community. Today, one of the organization's endeavors is working with the growing number of undocumented Asian American youth. The ASPIRE (Asian Students Promoting Immigrant Rights through Education) program assists and supports undocumented Asian American youth as they strive to attain equal rights and better educational opportunities for themselves and their peers. With the backing of the Asian Law Caucus, the ASPIRE program presents a space for young adults who live under the constant threat and fear of deportation to have a safe place to communicate and collaborate with others who are similarly situated. The youth in the ASPIRE program then give back to

the community through peer education and continuing the cycle of outreach and advocacy for policy changes.

Another way the Asian Law Caucus is engaged in groundbreaking advocacy for change is through working directly with elementary and secondary teachers and schools. The Caucus is contributing to youth education through their new Fred T. Korematsu Institute for Civil Rights and Education. Dedicated to one of the Caucus's early clients and a lifelong equal rights activist, the Institute, founded in 2009, provides resources and educational tools for spreading Fred Korematsu's legacy and including Asian American contributions in our historical and national civil rights narratives. The Institute has created a free and easily accessible teaching curriculum, promotes independent films that center on civil rights activism, attempts to incorporate Fred Korematsu into museums and archives, and works to inform the nation about the new California holiday, Fred Korematsu Day of Civil Liberties and the Constitution. Fred Korematsu day, first celebrated on January 30, 2010, is extremely significant as it is the only national holiday named after an Asian American. Celebrated three times thus far in California, the governor of Hawaii, Neil Abercrombie just signed legislation for Fred Korematsu Day to be celebrated in the islands beginning January 30, 2013.

Though founded with the intent of providing attorney and legal services, The Asian Law Caucus is not limited to members of the legal field. The Caucus brings together Asian American and Pacific Islander community members through various types of employment, internships, and volunteer opportunities for those who wish to get involved in fighting for justice within their community regardless of whether or not they possess a law background. Educators, community and political activists, youth organizers, translators, and student volunteers are just some of other types of opportunities available for those who wish to work for the Caucus and its many outreach programs. As a community resource, the Asian Law Caucus has been able to incorporate the growing and changing needs of the San Francisco Bay Area's diverse Asian ethnic population into its practice areas and focus work. Though many of the organizations original members have gone on to begin their own law firms, that is,

Minami & Tamaki, LLP and the Law Offices of Garrick S. Lew & Associates, they are still strong supporters of the organization and its mission. The Asian Law Caucus continues to grow and thrive today as was evidenced by its recent 40th anniversary dinner. Over 800 supporters, members, workers, volunteers, attorneys, community members, and of course, the founders, came together in San Francisco for a night of remembrance, celebration, and tribute to what began as a tiny grassroots organization that has become an integral part of San Francisco and its Asian American community.

Asian Music in America

Asian music in America can refer to a wide variety of musical practices, ranging from traditional music originating in South, Southeast, and East Asia to contemporary genres derived from international popular styles. Even in the face of such diversity, however, certain commonalities in concerns and themes can be adduced, especially when considering the larger social and historical forces at work in Asian America during the three major periods: from the nineteenth century to the 1960s, when virulent anti-Asian sentiment and the resulting restrictive immigration laws stemmed the growth of Asian (primarily the Chinese and Japanese) communities; from the 1960s to the end of the twentieth century, which saw the removal of major

immigration hurdles and the consequent expansion of the flow from many parts of Asia; and finally, at the turn of the new millennium, the present time, which is experiencing intensifying globalization, with commercial and cultural exchange between the United States and Asia on a rapid ascent.

Pre-1965

The Chinese first migrated to North America in significant numbers in the late nineteenth century to work in the mining industry and in the construction of the transcontinental railway. They eventually settled in large cities, most notably in San Francisco, New York, and Los Angeles. Because most of these early immigrants were men and further legislative restrictions on immigration made it increasingly difficult for Chinese women to enter the United States, these Chinatowns in effect became bachelor societies, comprised of aging men separated from or without families, who sought recreation in the urban nightlife. The Cantonese opera, in particular, became an important locus for social gatherings and for the revivification of cultural nostalgia. Opera troupes from China visited regularly, with some touring singers—such as Mei Lanfang (1894–1961)—meeting with great fanfare, and others choosing to settle and continue their stage careers in the United States. Along with musical revues featuring exotic dancers and illicit attractions such as opium and gambling dens, the Chinese opera became an important part of Chamber of Commerce plans to promote Chinatowns as tourist destinations rife with wondrous and strange sights and sounds.

The second large influx of Asian immigration came from Japan in the late nineteenth century. Facing economic hardship at home, thousands of Japanese farmers migrated to the West Coast and Hawaii. The first-generation, or Issei, Japanese Americans continued to practice Japanese folk and traditional *gagaku* music, convening in community music studios and performing for traditional festivities such as the annual *Bon* festival. Second-generation, or Nisei, Japanese Americans tended to identify more strongly with American mainstream culture. Even within the oppressive confines of the World War II internment camps, Nisei youths formed swing bands and played the

popular American tunes of the day. In the postwar period, a handful of Nisei musicians signed with major labels and achieved moderate mainstream success. Hawaii-born singer and actor James Shigeta (b. 1933) maintained a transpacific career in the United States and Japan and appeared on television and in films at a time when most Asian roles were played by white actors in yellowface make-up. California-born singer Pat Suzuki (b. 1930), discovered by Bing Crosby and subsequently signed by RCA Victor, was nominated for a Grammy Award in 1960 for her album *Broadway '59*.

Although Asian musicians worked in relative obscurity in the United States, Asians were well represented musically in popular and art music, films, and stage works of the time. In films with exotic, stereotyped characters, such as the wily villain Fu Manchu, gongs and other foreign sounds signal the alien presence of Asianness. Recordings of popular songs, like Jean Schwartz and William Jerome's "Chinatown, My Chinatown" (1910), further helped to cement the association of musical orientalism in the American popular imagination with pentatonic themes, gongs, and lyrical references to the strange and dangerous allure of Asian cultures. These effects were liberally exploited by the celebrated Broadway duo of Richard Rodgers and Oscar Hammerstein II in three orientalist musicals: *South Pacific* (1949), *The King and I* (1951, set in historical Siam), and *Flower Drum Song* (1958, set in San Francisco's Chinatown). Based on Chinese American author C. Y. Lee's novel, *Flower Drum Song* was especially noteworthy for its time for using a predominantly Asian and Asian American cast, including Pat Suzuki for the Broadway run and James Shigeta in the 1961 film version. Several key figures working in experimental music also found inspiration in Asia, in its philosophy (Zen Buddhism and Hinduism for John Cage, 1912–1992) and musical traditions (gamelan and *gagaku* for Henry Cowell, 1897–1965, and Lou Harrison, 1917–2003; Noh theater for Harry Partch, 1901–1974), and facilitated the introduction of these Asian musical practices to American audiences.

After 1965

The 1960s proved to be a watershed decade for Americans of Asian descent, starting with the 1965

Immigration Act, which removed many of the preexisting legal barriers to immigration from Asia, and closing with the Asian American movement, which emulated the cultural nationalist ethos of the Black Power movement and gave birth to the idea of a pan-ethnic Asian America. Music played a key role in the transition, as third-generation Japanese and Chinese American musicians absorbed and adapted the countercultural messages of the Woodstock generation for their own cause. Folk groups like Yellow Pearl, with its influential album, *A Grain of Sand: Music for the Struggles of Asians in America* (Paredon Records, 1973), helped to convey the lessons of the Asian American movement and radicalize youths on college campuses and beyond.

Jazz also provided a rich musical vein for the exploration and construction of a new Asian American identity. Influenced by the political rhetoric of the Black Arts Movement proponents like Amiri Baraka and the Association for the Advancement of Creative Musicians, Asian jazz musicians experimented with combining Eastern and Western instruments and genres (Hiroshima, 1974–; Jon Jang, b. 1954; Mark Izu, b. 1954; Glenn Horiuchi, 1955–2000; Francis Wong, b. 1957), wrote polemical essays situating Asian American jazz within emerging critical race theories (Fred Ho, b. 1957), composed works inspired by significant events in Asian American history (Anthony Brown's Asian American Orchestra, 1997–), and established independent labels (Asian Improv Records, 1987–) and jazz festivals (San Francisco Asian American Jazz Festival, 1981–2006) for the propagation of this music. Although only Hiroshima achieved any kind of mainstream success, these jazz musicians and institutions figure significantly in the history of the Asian American movement, having contributed to some of the first attempts to define Asian American cultural nationalism. Many of these musicians have continued to provide support for subsequent generations of Asian American artists (such as the 2010 Grammy Award winner, Indian American jazz pianist Vijay Iyer, b. 1971).

Since the passage of the 1965 Immigration Act, the Asian population in the United States has grown in size and diversity, as preexisting Asian American communities expanded and immigrants from other

Indian American jazz pianist Vijay Iyer performs at a jazz festival in Skopje, Macedonia, October 23, 2011. (Mite Kuzevski/Demotix/Demotix/Corbis)

parts of Asia arrived in large numbers. Aspiring to middle-class respectability in their new country, many of these post-1965 immigrants stressed to their children the value of education, which often included proficiency playing Western classical music. Asian countries that had undergone Western (and Japanese) colonization, in particular, had absorbed all too well the cultural hierarchy of the West, which accords prestige to the musical system of Bach and Beethoven above all other musical traditions, and immigrants from these countries were especially well primed to pass these lessons on to their children. Although some Asian classical musicians moved to the United States as young children or adults (Yo-Yo Ma, b. 1955; Midori, b. 1971; Lang Lang, b. 1982), others were born and developed their skills entirely in the United States (Kent Nagano, b. 1951; Sarah Chang, b. 1980). Indeed, disproportionately large numbers of domestic and international Asian membership are reported in

youth orchestras in urban centers and conservatory programs across the country. The highly visible representation of Asians in a musical tradition associated with Old World, elite values have, in effect, reinforced the “model minority” stereotype attached to Asian Americans since the late 1960s.

Although some Asian Americans participate in Western high art music, many second-generation youths turn to popular music as part of their assimilation process into the American mainstream. Hip-hop, in particular, has had a significant impact on Asian American youths in the post-1965 era. Inspired by the Afrocentric messages of Public Enemy and other political rappers of the late 1980s to early 1990s and with their consciousness raised by the newly offered ethnic studies classes at universities, late twentieth-century Asian American college students took to the mic and rhymed about political issues meaningful to their generation. The only Asian group from this time

period to sign with a major label (Ruffhouse Records), Mountain Brothers (1991–2003)—a trio of Chinese American emcees, downplayed their ethnicity to reach a wider audience, but ultimately, the distance between the increasingly narrow construction of blackness purveyed by commercial hip-hop and mainstream stereotypes of Asian youths as studious and unhip proved to be too great to overcome.

The final event to note from the last decade of the twentieth century is the opening of Claude-Michel Schönberg and Alain Boublil's *Miss Saigon* on Broadway in 1991. The musical, based loosely on Puccini's *Madame Butterfly* (1904), tells the story of a doomed love affair between an American soldier and a Vietnamese bargirl at the end of the Vietnam War. The Asian American community came together to protest the hiring of Caucasian actors for some of the more prominent Asian and Eurasian roles and for continuing to perpetuate a narrative of Western domination over the East. The phenomenal commercial success of *Miss Saigon* eclipsed the effort of Asian American playwrights to present alternatives to mainstream misconceptions of Asians. David Henry Hwang's revised production of *Flower Drum Song* (2002), for example, met with lukewarm critical and popular reception.

The New Millennium

The growth of the Asian population in the United States has been even more marked at the turn of the millennium. At the same time, the intense globalization of commerce and communications, made possible by rapidly evolving technology, has created a generation of Asian American youths who are more cosmopolitan and polycultural than ever. The transnational scope of millennial Asian Americans is particularly evident in the ways that they have turned to peer-to-peer file-sharing and social networking on MySpace, YouTube, and Facebook as a means of transmitting and consuming musical hybrids such as K-pop, J-pop, Canto-pop, and Pinoy rock. Major record companies from Asia, such as South Korea's S. M. Entertainment, have been actively pursuing the American market by organizing international tours featuring their biggest pop stars. In turn, a handful of Asian American musicians, such as Leehom Wang

(b. 1976) and Jay Park (b. 1987), have achieved superstardom in Asia and count fans on both sides of the Pacific.

Stateside, Asian American artists continue to struggle to define themselves against mainstream perceptions of them as perennial foreigners and model minorities. Although a few Asians have reached the pop charts as part of popular groups (e.g., Mike Shinoda of Linkin Park, apl.de.ap of Black Eyed Peas, Chad Hugo of The Neptunes), solo artists have not fared so well (not counting part Asian, and therefore racially ambiguous, musicians like Bruno Mars and Nicole Scherzinger). The reception of two particular Asian American artists highlights the challenges Asian artists face: in 2004, William Hung (b. 1983) became an overnight pop sensation when he sang off key and danced off beat to Ricky Martin's "She Bangs" on *American Idol*, embodying the prevailing stereotype of Asians as nerdy and comically alien. The Chinese American emcee Jin (b. 1982), on the other hand, who had earned underground legitimacy by winning seven freestyle battles in a row on BET's *106 & Park*, failed to translate the media attention on him as a cultural anomaly into actual dollar figures. Following the anemic sales of his first album, *The Rest Is History* (Ruff Ryders, 2004), Jin retired from music temporarily and then resurfaced in Hong Kong as part of a new wave of Asian hip-hop. Although Hung became famous for his lack of musicality and conformity to stereotypes, Jin failed to achieve widespread popularity in the United States because his persona and skills stood in an antithetical relationship to what the American public expected of an Asian male.

The Far East Movement (FM 2003–), an all Asian hip-hop quartet from Los Angeles, finally accomplished what no other Asian American musician had previously done, when its 2010 single "Like a G6" hit the number one spot on the Billboard charts. Although FM has collaborated with other Asian artists on both sides of the Pacific, it tends to minimize its associations with Asianness in promotional photos and videos, which show its four members hidden behind dark sunglasses, obfuscating their ethnicity, and music, which eschews any obvious Asian referents in the lyrics or the sound. FM's success suggests that Asian Americans can achieve mainstream popularity

only by hiding from view the uncomfortable fact of their racial difference.

On the other hand, in various music identified under the umbrella term “world music” (a marketing term that became current in the 1980s), Asianness—understood as enticingly exotic—has become a strong selling point. Traditional musical genres that had already been in the United States for several decades have recently enjoyed a surge in interest. Taiko, for example, which was imported into the United States in the context of the cultural nationalist movement of the 1960s, now number dozens of university and community ensembles, and has recently been featured in films, music videos, and television commercials. Various versions of Indonesian gamelan orchestras, first introduced to American audiences by ethnomusicologists and musicians like Mantle Hood and Lou Harrison, have prospered in university music departments across the country, even though the number of Indonesians in the United States has remained relatively small. South Asian classical musicians have long lived in the United States, establishing studios and schools such as the Ali Akbar College of Music (1967–) in the San Francisco Bay Area, but recently, more popular forms of South Asian music like bhangra and Bollywood songs are being embraced by Indian American youth culture and have even crossed over into the mainstream charts (i.e., Missy Elliott, “Get Ur Freak On,” 2001; Jay-Z with Panjabi MC, “Beware of the Boys,” 2003). Other ethnic musical traditions—from the Filipino *kulintang* to the Korean *pungmul*—are likewise enthusiastically supported by student organizations on college campuses.

Crossover projects in the classical music realm have also garnered significant levels of institutional support and media attention. In 1998, Chinese American cellist Yo-Yo Ma established the ambitious Silk Road Project, which showcases traditional musical practices from the old trade routes connecting East and West, encourages collaborations across national boundaries, and awards commissions for new works by artists originating in this part of the world. The Silk Road Project is now officially affiliated with and housed at Harvard University. Chinese-born composer Tan Dun (b. 1957) has built a successful career by

creating similar East-West hybrids. His commissioned work for the Metropolitan Opera, *The First Emperor* (2006), for example, exhibited his signature modernist style combining Western classical elements with an Asian storyline, instrumentation, and stylized ritualism.

Thus at the start of the new millennium, Asian American musicians find themselves compelled to grapple with how to position themselves in relation to a rapidly changing world—to emphasize or obscure their difference, to address an almost exclusively Asian (and increasingly virtual) audience or a generalized “universal” (and therefore “postracial”) audience.

Asian Pacific Heritage Month

Following two decades of national upheaval during the Civil Rights Movement of the 1960s and the antiwar demonstrations protesting the Vietnam War in the 1970s, commemorative heritage celebrations such as the Bicentennial Celebration of 1976 were part of the U.S. political elites' attempts to restore American patriotism. All ethnic Heritage Months began as Heritage Weeks and were expanded in the 1970s into months. National Hispanic Heritage Week was declared by President Nixon in 1968; President Ford urged Americans to celebrate Black History Week in 1975; and President Carter designated Asian Pacific Heritage Week in 1979. Beginning in the 1990s, weeks were expanded into Black History Month (February), Native American Awareness Month (November), Hispanic Heritage Month (mid-September through mid-October), and Asian Pacific

U.S. Department of Defense poster promoting Asian Pacific American Heritage Month, ca. 1989. (Department of Defense)

American Heritage Month (May). Presidents used presidential proclamations and executive orders to recognize particular groups of citizens and exhort the American public, especially educational communities, to observe the week with appropriate ceremonies and activities.

Jeanie F. Jew, president of the Organization of Chinese American Women in 1976, is credited for being the “creator” and the primary writer of all legislation calling for the creation of Asian Pacific Heritage Week/Month. Jew observed the lack of Asian Pacific American representation in the Bicentennial Celebration and enlisted the support of Representatives Frank Horton (R-NY) and Norman Mineta (D-CA) about introducing legislation that called for broader national attention to be paid to the concerns, contributions, and history of Americans of Asian and Pacific Islander descent. The first 10 days of May coincided with two significant moments in Asian Pacific American history: the first Japanese to arrive in the United States on May 7, 1843, and contributions by Chinese laborers to the building of the transcontinental railroad, completed on May 10, 1869 (Golden Spike Day). Thus in June 1977, Horton and Mineta introduced House Resolution 540 asking the president to proclaim the first 10 days of May as “Asian/Pacific American Heritage Week.” Senators Daniel Inouye and Spark Matsunaga followed by introducing a Senate Joint Resolution 72 on July 19, 1977, making similar request of the president. This resulted in the introduction of House Joint Resolution 1007 on June 19, 1978, followed by House approval on July 10, 1978 and Senate approval on September 19, 1978. On October 5, 1978, President Carter signed Public Law 95-419 designating Asian Pacific Heritage Week to occur from May 4 to 10, 1979. Through Presidential Proclamation 4650 issued March 28, 1979, Carter designated the first Asian Pacific Heritage Week in 1979. For the next 10 years through annual presidential proclamations, Presidents Carter, Reagan, and Bush renewed the designation. Not until 1990 did Congress ask the president to expand the week to the month of May with Public Law 101-283 (amending Public Law 95-419). Through Presidential Proclamation 6130 issued May 7, 1990, President Bush designated May 1990 as the first Asian/Pacific American Heritage Month.

Congress passed Public Law 102-450 in 1992 permanently designating May of each year as “Asian/Pacific American Heritage Month.”

Asian Pacific American Heritage Month celebrations occur every year across the United States in colleges and universities, Asian American and Pacific Islander cultural organizations, and federal government departments. They often include enriching and educational events pertaining to Asian and Asian American culture. Most common events and activities include but are not limited to sharing different types of Asian food, learning about facts and figures about the population, celebrating the accomplishments of notable Asian Americans, Asian ethnic dances and other performances of Asian folklore and culture, and presentations and discussions about experiences of Asians in Asia and the United States.

Asian Religions and Religious Practices in America

The diversity of religious beliefs and practices among the ethnic groups falling under the rubric term “Asian” is so great as to almost defy categorization. Asian American religion includes Mahayana and Theravada Buddhists, Hindus, Christians, Muslims, and Confucianists, as well as more ethnically specific religionists, such as Vietnamese Cao Daiists, Chinese Qi Gong practitioners, Japanese Soka Gakkai adherents, Indian Hare Krishnas, and many, many others. Regardless

of the religion, the religious behavior of immigrant groups is typically distinctive because immigrants are affected by the social and cultural contexts of at least two countries—their source and receiving nations. In addition, immigrants to the United States must adjust to the highly racialized social conditions here, and later generations are likely to experience reduced but seldom entirely broken ties to their parents’ cultures. Given their cultural and generational complexity, as well as the varied circumstances in which Asian Americans find themselves, we should not expect all Asian groups to conform to a single pattern of religious behavior. On the contrary, Asians have responded very creatively to the conditions they encounter and have adapted their religious institutions as needed. Apart from any spiritual or supernatural outcomes that may or may not occur, Asian American religious organizations have often been employed in *ad hoc* and sometimes unexpected ways. More precisely, *different* religious organizations have deliberately or inadvertently served as *different* means to *different* ends.

Given such diversity of adaptive response, the scholarly evidence on Asian Americans complicates assumptions of a universal pattern of religion’s functionality vis-à-vis immigrants’ adjustment or assimilation. After all, the Asian American community includes the most religious ethnic groups in America—Filipinos and Koreans—and the ethnic group whose members are least likely to say they have religion—the Chinese. Nonetheless, certain commonalities exist, and the study of how Asian American religious practices both differ and converge informs the study of religious behavior, especially among immigrants.

Existing Research—Herberg and Beyond

It is surprising that the early research on post-1965 immigrants paid little attention to religion. The publication of Stephen Warner and Judith Wittner’s (1998) *Gatherings in Diaspora* led to a dramatic reversal, and there has followed a great deal of research on immigrant religion, much of it concerning Asian immigrants. Scholarly writing on Asian American religion largely responds to what has been called the “dominant storyline” in the study of immigrant religion, initiated

by Will Herberg. Accordingly, religious adherence, regardless of the religion involved, is positive for successful incorporation into American society and generally helps make immigrants and their children into Americans. Researchers have analyzed the various roles religious organizations and practices play in immigrants' adjustment to life in the United States, but there has been a tendency to focus on the provision of social services, the creation of ethnic ties, the emergence of ethnic niche economies, and other aspects that are highly relevant yet nonetheless tangential to Herberg's central concern: the process of *cultural* assimilation, in which immigrants, and especially their children and grandchildren, are Americanized.

But if Herberg's thesis has sometimes been taken to suggest a narrow and ethnocentric concern for whether religion makes immigrants more or less "American," the questions he raised have led subsequent scholars to interesting findings about the complex and paradoxical functions of religion in immigrant communities. Religion often serves a dual role of defending an immigrant group's native culture *and* fostering cultural assimilation. As Fenggang Yang has demonstrated, religious organizations, such as the Chinese American Christian churches he studies, are institutions that maintain Chinese culture even as congregations selectively appropriate aspects of American culture. Religion often serves as a site for the creation of adhesive identities that simultaneously resist and facilitate cultural change, and this has important consequences for the construction or reconstruction of immigrant communities. Thus, rather than merely attempting to pin down the effects of religion on assimilation, a more pressing scholarly concern is how the process of adjustment affects group identity and community, especially because religious identity is usually, yet not always, more important to people in diaspora than in their home countries.

The study of Asian American religion benefits from the rich tradition of comparative research that characterizes the study of immigrant religion and is a legacy of Herberg's comparison of Protestants, Catholics, and Jews. Moreover, research on Asian American religion has helped address Herberg's failure to adequately consider the issue of race and has increased understanding of Asian religions that were

to Herberg "exotic cults" with little potential to facilitate assimilation. In addition to the many scholarly treatments of individual ethnic groups, the study of immigrant religions is graced by several outstanding volumes of collected essays that present findings on different immigrant groups, Asian or otherwise. Such extensive comparative research finds that first- and second-generation Asian Americans follow some of the patterns seen among other ethnic groups. Like others, they tend to be more overtly religious (i.e., to score higher on such measures of "religiosity" as time spent in prayer or meditation, knowledge of religious texts, and so on) than people in their sending countries. They may hold doggedly to their native religious traditions or may turn to a new religion (usually Christianity), but in either case, they tend to pay more attention to religion. Although Asians as a whole are less overtly religious than immigrants from other continents, they follow the same general pattern of higher rates of religious participation and greater religiosity subsequent to immigration. For some non-Christian Asian Americans, the greater religiosity may involve a defensive response resulting from interaction with Christians. For instance, the Hindu respondents in Prema Kurien's research discuss the difficulties of life in a predominantly Christian nation, and this may contribute to their claim that "We are better Hindus here." Carolyn Chen and Sharon Suh report, respectively, that many Taiwanese and Korean Buddhists explain their serious attitude toward Buddhism as arising in part from the evangelizing pressure of Christians, although these interviewees' assertions of cause and effect may be overstated, given that the same pattern of greater religiosity holds among virtually all groups, including Christians.

Survey Research—Issues and Findings

Survey research on Asian Americans has been hampered by a lack of careful distinction between the different Asian ethnic groups. Unfortunately, this has been the case in several recent large-scale surveys of religious life, such as the 2008 Religious Landscape Survey of the Pew Forum on Religion and Public Life. This survey finds that Asians are the most likely ethnic group to have no religious affiliation, with 23 percent

claiming no religion. Of those Asians with religion, most are Christian, with about 27 percent Protestant and 17 percent Catholic. The Landscape Survey finds the combined percentage of all Christian groups to be 45 percent, which is markedly lower than the 60 percent others have reported. By contrast, Hindus and Buddhists represent 14 percent and 9 percent of the Asian population, respectively. Although proportionately fewer Asians are Muslim, one-fifth to one-third of all Muslims are Asian.

However, survey questions on race and ethnicity that offer “Asian” or “Asian/Pacific Islander” as a single response option are highly problematic and should not be used because failure to distinguish between different groups of Asians sometimes suggests spurious relationships. For instance, the American Religious Identification Survey’s results from 1990, 2001, and 2008 show that, for Asians as a whole, the proportion claiming no religion has increased and the proportion of Catholics has decreased, almost in equal measure. These results might appear to suggest that some Asians have been rethinking their religious orientation, that there is some process of secularization at work. However, such results are mostly a mere reflection of the changing composition of the immigrant stream, especially the declining share of Filipinos relative to other groups, such as the Chinese; Filipinos are mostly Catholic and Chinese are far more likely to report “no religion,” which probably explains away most of the finding. The imprecise designation of ethnicity in large-scale survey projects has limited researchers’ capacity to analyze how Asians compare against each other and against other groups.

Explaining the Preference for Christianity

The high proportion of Christians among Asians is because of several circumstances. First, the greater visibility of Christianity in the United States than in Asian nations means that Asian immigrants are more exposed to Christianity after immigration. Yet because the members of different Asian groups do not convert to Christianity in equal numbers, other conditions clearly apply—the different rates of Christian adherents cannot be adequately explained merely on the basis of individuals’ experiences. As Fenggang Yang

has pointed out, adequate explanations of religious conversion must consider the social and cultural contexts of religious behavior. Hence, it is important to note that the large number of Filipinos in the United States inflates the percentage of Asian Christians. It is also the case that Christians from Asian nations are more likely than non-Christians to immigrate to the United States in the first place. For example, owing in part to missionary efforts, Korean immigrants to Hawaii in the 1903–1905 period were disproportionately Christian—some 40 percent. According to Bong Yoon Choy, this has likely influenced the emergence of Christianity as a source of community for Koreans living in the United States. The high proportion of Asian Christians also results from conditions of religious persecution in immigrants’ sending nations, because of individuals applying for refugee visas. This has been most common among Asians from Communist countries with restrictive or repressive religious policies. For instance, the repression of Vietnamese Catholics, who make up only 4 percent of the population of Vietnam, has led many to immigrate to the United States, where they comprise between one-fourth and one-third of Vietnamese Americans. Beyond outright persecution, some individuals may simply be motivated to seek a country where Christianity is more widespread and accepted than in their native countries. In addition, among some groups, missionary activity of the past may have created conditions that favor the emigration of Christians. For instance, Chinese immigrants are rumored to be disproportionately Christian upon arrival, especially among well-educated Chinese whose parents or grandparents received modern, missionary-sponsored educations in China, thus presumably increasing their families’ educational standing for generations to come and increasing receptivity toward Western culture. However, this has not been adequately researched. Lastly, religious organizations both in the United States and Asia facilitate contact and movement between countries, and most such organizations in the United States are Christian. Although these various conditions that promote the immigration of Christians are not shared by all Asian groups, taken together they help explain the high proportion of Christians among Asian Americans.

This high proportion of Christians among Asian Americans appears to be a recent development for some groups. Fenggang Yang reports that earlier Chinese immigrants were more likely to maintain their traditional religious practices. At the end of the nineteenth century, Chinese immigrant religion mostly centered on what were then called “joss houses,” a label used by non-Chinese for temples in which gods were propitiated in exchange for supernatural aid. Such temples supported the syncretic religious practices that characterize traditional Chinese religion. At present, there are fewer such temples than Chinese Christian churches, which represents a significant cultural shift.

Conservatism

Researchers almost unanimously report that Asian American religion is markedly “conservative.” Although the term has not been used with semantic consistency, the consensus seems to be that Asians tend to be conservative in the sense of a preference for clear normative and “traditional” expectations for behavior, whether these practices are native to the group or adopted after arrival. This may include turning to or defending “fundamentalist” religions (i.e., religions in which canonical texts are interpreted literally and in which morals, commandments, and other ethical teachings are rigorously enforced). At least for some groups, highly educated people are most likely to embrace conservative religious orientations. As to political preferences, religion is a significant influence, but does not appear to lead to political conservatism. Pei-te Lien’s study of politics and religion among Asian Americans finds that most Asians are Democrats, which is surprising given their *religious* conservatism. Some scholars also find that Hindu Indian Americans are the most politically liberal among Asians, despite the conservative preference they too show for traditional religion. Although there are many studies of the intersections between religion and politics in Asia, we still know far too little about how political orientation, voting patterns, voter registration, and so on differ for Asian Americans, taken as a whole, on the basis of religious orientation.

The Effects of Milieu and Expanding Immigrant Populations

Asian American immigrants and their families are highly concentrated along the coasts of the United States, particularly the West Coast and in Hawaii. This is important because religious practices are affected by the regional social milieu in which people live. Social class and particular subethnic or subcultural identities may also affect how Asians adjust to living in different parts of the country. For instance, Pierce, Spickard, and You find quite different trajectories for Japanese in Hawaii and the continental United States. Those on the continent were more likely to follow an assimilationist path than their Hawaiian peers, presumably because of the different conditions they encountered and the characteristics common among each stream of immigrants.

But wherever located, the Asian American population tends to be expanding. This presents unusual opportunities for religious organizations, many of which have had the luxury of high-growth rates with even minimal outreach, simply because of the rapid increase in the pool of potential members or converts. The increasing dispersion of Asian Americans likewise influences religious organizations in interesting ways; post-1965 immigrants tend to be less localized in their pattern of dispersion throughout the United States than was true of previous immigrant groups. This pattern is especially pronounced for those Asian Americans overrepresented in specialized professions. The growth of Asian American populations in areas like the American South and the Midwest naturally fosters the creation of new religious congregations, which are usually founded by laypersons as is common among the congregations of other immigrants. This pattern of dispersion also increases the likelihood of Asian Americans joining the congregations of other ethnic groups, most commonly ethnic whites, simply because Asian Americans may have no religious organizations of their own in some areas.

Religion, Community, and Diversity

Although some members of an ethnic group will reject the religion of their coethnics, and although a particular group may contain different religious institutions,

it is very common for religious organizations to serve as a focal point or shared site of community for Asian Americans. Buddhist temples have served as the basis of Japanese American community life. In some places, Christian churches have served as the central ethnic, nongovernmental social institution serving Chinese Americans. Temples and churches are especially important to Southeast Asian communities. Most significantly, Christianity is widely reported as central to the Korean American community. This phenomenon is even true in the case of religions that have traditionally emphasized family rather than group rituals. For instance, virtually all researchers of Hindu practitioners in the United States have pointed out the growth of congregational forms of practice among adherents in this country. Clearly, this functional role of religious organizations as community centers or, more generally, as an institutional counter to the centrifugal pressures that pull immigrants away from their shared cultures, often involves a process of adaptation of the religion itself, especially toward congregational patterns of religious organization that are more typical of religion in North America than in Asia.

Yet it is not the case that Asian American religionists are just assimilating or merely experiencing Protestantization of some sort; their presence and increasing visibility dramatically impacts the religious landscape of the United States in a variety of ways. As Pyong Gap Min points out, although there are more immigrants from Latin American countries than Asian nations, the new Asian immigrants have had a larger impact on religious diversity because, whereas Latin Americans are predominantly Christian, Asians adhere to a wide variety of religious traditions. This diversity appears to influence other ethnic groups, including ethnic whites, although whites have so far shown interest in just a few Asian religions, notably Buddhism.

In addition to the diversity that results from their simply being present in the United States, Asian American religious groups demonstrate just how diverse are the religious impulses of immigrant groups. For some, religion serves as a means of limiting association with the dominant culture, for others religion serves to facilitate such association. For instance, although it is true that most Korean Americans are Christian, not all join churches and some prefer other

religions. Although most of the research on Korean American religion has focused on Christians, Suh's study of Korean Buddhists finds them deeply aware of their marginalized status in relation to Korean Christians—there are only 89 Korean Buddhist temples compared to the 2,800 Korean Christian churches. Suh's study also finds that Korean Buddhists are quick to compare themselves to Korean Christians and have developed a distinctive discourse, or rhetoric, relevant to identity construction. They describe their Buddhism as an “authentic” Korean identity and yet, paradoxically, consider themselves more successful as Americans than their Christian coethnics, especially because they see Buddhists as more self-reliant and consider self-reliance to be a key American virtue. These rhetorical claims probably relate to deeper processes of adaptation and change observed among the Asian ethnic groups. For instance, Chen finds that Taiwanese immigrants, whether Christian or Buddhist, sometimes use religion to distance themselves from normative expectations, especially gender specific responsibilities.

The Younger Generation

Asian American conceptions of identity and of their place in American society differ greatly between different generations. A common area of tension in Asian congregations is between immigrant parents and their U.S.-born or U.S.-raised children. Because cultural differences between the United States and most Asian nations are particularly large (greater, for instance, than is the case among most European immigrants), the values and norms of first- and second-generation Asian immigrants are often quite distinct. It is common for the younger generation to feel misunderstood and disempowered and for their immigrant parents to fret over the Americanization of their children.

The large numbers of Asians at American colleges, especially prestigious schools on both coasts, have affected the religious milieu of post-secondary students. Particularly in California, many religious organizations serving college students have come to be disproportionately represented by Asians, even to the point that students from other ethnic groups may cease to be a meaningful presence in these groups.

The ethnic transformation of student religious groups at these colleges demonstrates the importance of social and cultural contexts in the response to Christian evangelism. Although evangelists are active on these campuses and target members of different ethnic groups, the response differs dramatically, with Chinese and Koreans most likely to join. This difference cannot be explained on the basis of individual preferences or the characteristics of particular institutions. Rather, social and cultural contexts affect some groups in important ways, but not all groups.

One of the most intriguing developments in Asian American religion is the emergence of pan-Asian Christian congregations. Russell Jeung's study of such churches raises the fascinating possibility that congregations composed of such diverse groups as South, East, and South East Asians may be a continuing trend, although the congregants at these churches are disproportionately of East Asian descent. Conversion in multiethnic contexts involves alternative conversion experiences and identity transformations, which may culminate in an experience of what Gerardo Marti calls "ethnic transcendence," in which membership in a multiethnic or multiracial congregation suspends or supersedes a previous identity. Thus, Asian American panethnic solidarity may be an outcome of congregational unity, although another and perhaps more likely outcome is that these churches will support the development of an East/South East Asian panethnic Christian community that attracts few South Asians and serves mainly U.S.-born individuals. Whereas panethnic Asian American congregations are a new development for Christians, Muslim congregations have all along had a very strong tendency to bring together people from different regions of Asian, such as Pakistan, Indonesia, and the Muslim regions of China. This unity is doubtless increased through shared reliance upon Arabic for prayer and other religious practices.

Present and Future Research Issues

Much recent relevant scholarly interest concerns the newly emergent global links and transnational religious developments. Whereas some scholars, Peggy Levitt and Robert Wuthnow and Stephen

Offutt, for instance, have developed useful theoretical perspectives on the relationship between religion and cross-national connections, others have focused on specific cases among Asian Americans. For example, Kenneth Guest's research concerns how Chinese Christian churches in New York and China together coordinate the channeling of resources, people, and ideas to and fro among the two nations. Also, Travis Vande Berg and Fred Kniss explain how the International Society for Krishna Consciousness (ISKCON), popularly known as Hare Krishnas, has recently been supported by immigration from India, whereas the American membership in the past was dominated by Caucasian "seekers." Such cross-national connections suggest the emergence of a transnational "religious economy" in which overseas evangelists may provide a receptive institution for subsequent migrants from the sending country.

We have a limited understanding of just how Asians are currently shaping the broader American religious landscape. Asian Americans have high interracial marriage rates, with about one-fourth of all Asians in such marriages, mostly married to ethnic whites. The outmarriage rates are highest for American-born Asians, of whom some 40 percent enter interracial marriages. These high interracial marriage rates have potential consequences for religious practice and conversion, especially in cases where families blend religious sensibilities or rituals. For instance, Todd LeRoy Perreira presents a case of a family in which both the mother's Thai Theravada Buddhism and the father's Catholicism are affirmed and embraced. Perreira presents a very memorable instance of their son's blended religion. After rituals in the wake of his sister's death, the son tells a monk that he has come to the temple to make a wish that his sister would become an angel, thus mixing the symbols and rituals of his two religions. The obliging monk smiles, offers a chant, and wishes the family a Merry Christmas. Such religious accommodation is doubtless *de rigueur* at the temple of Perreira's study, simply because the majority of families are interracial.

The jury is still out on whether Herberg's thesis that religion helps make immigrants into Americans applies well—or much at all—to Asian Americans. What is clear is that, as the years have mounted since

the 1965 change in immigration law, and as the population of Asian Americans has grown and diversified, it becomes increasingly inappropriate to tie the study of Asian American religion to the study of “immigrant religion.” Naturally, scholars will study the similarities and differences between Asians and earlier immigrant groups, such as the Irish, Polish, and Italian immigrants of the nineteenth and early twentieth centuries. Yet beyond merely making comparisons, it is likely that the great diversity and complexity of Asian America will lead to entirely new theoretical constructs and interesting scholarly questions to pursue.

Athletes and Christianity

The past 40 years has witnessed an increase in the number of Asian American athletes in American sports. In addition to their low population, Asian American athletes of earlier generations lived in an era when racial segregation and discrimination obstructed their access. One exception is Sammy Lee (1920–). The diver Sammy Lee, who came from a family of devout Christians, was the first Asian American to win Olympic gold medals for the United States (1948 and 1952) by overcoming enormous social and racial obstacles to achieve greatness. For example, in the 1930s, Sammy Lee as a non-white had access to the Los Angeles Swim Stadium and Brookside Pool only on Wednesdays or "International Day," the day before the pool was drained and refilled with fresh water. Because the pool was restricted for most days of the week, Lee often practiced his diving form in a sand pile.

Today, in an age of globalization and technology revolution when sports fans around the world can watch games streamed live on the Internet, the global religious impact of Asian American Christian athletes is far-reaching. For example, Jeremy Lin's steadfast articulation of his Christian faith is a central element in his story line. In mainland China where the government persecuted unofficial Christian churches and driven them underground, the feel-good story surrounding Jeremy Lin has surprisingly inspired open discussions about Christianity online and in public. Even a Christian seminary in China is developing a

course based on Lin's faith and basketball successes as a blueprint for students.

Interestingly, the rise of Asian athletes (and Asian Christian athletes) on the world's sports stage has produced a Christian narrative embraced by both Asian and Asian American Christians. Two of the more outspoken Asian Christians include Manny Pacquiao the Filipino boxer who is the first eight division boxing champ in the world and the South Korean golfer KJ Choi, winner of 18 PGA tournaments. Given the growing transnational influence between Asian Americans and Asian cultures, the influence of Asian and Asian American Christian athletes will continue to run deep and shape collective religious identities as they live out their God-inspired destinies.

Jeremy Lin, the point guard for the Houston Rockets, has become both a global phenomenon and an Asian American superstar. Jeremy Lin has done what had been a conundrum among advocates of the pan-Asian American movement: galvanizing a diverse Asian-ethnic base. Although successful Asian athletes in the United States who grew up in Asia, such as Yao Ming (basketball), Ichiro Suzuki (baseball), Se Ri Park (golf), or Chan Ho Park (baseball) were well-received by the Asian American community, Jeremy Lin was embraced as one of their own by Asian Americans, someone who grew up in America as a nerdy, scrawny Asian kid.

Besides Lin, other Asian American athletes, such as Anthony Kim (golf), Dat Nguyen (football), Kristi Yamaguchi (figure skating), Michelle Wie (golf), Michelle Kwan (figure skating), and many others have become successful in their respective sports, but none have captured the imagination and matched the celebrity of Jeremy Lin. Lin resonated with Asian Americans not only because he became an exceptional player by overcoming incredible odds through dogged perseverance but also because Lin truly reflected the experience and background of so many Asian Americans: a child of Asian immigrants with all its bicultural trappings and expectations.

In addition, Jeremy Lin's story introduced a religious dimension. The way Lin has discussed his Christian faith publicly and unreservedly has not been lost on his followers or the media. Since Michael Chang, no Asian American athlete has brought so

much attention to Christianity as Jeremy Lin as some of the headlines during his 2012 breakout season attest: “Asian American Christian Basketball Star” (*International Herald Tribune*, 2/11/2012), “The Jeremy Lin [Religion] Problem” (*NY Times*, 2/16/2012), “Jeremy Lin is the Knicks’ Faithful Phenom” (*NY Daily News*, 2/18/2012), “Faith, Sin and Jeremy Lin” (*Washington Post*, 2/17/2012), and many others.

Although outside observers seem perplexed by Lin’s unabashed enthusiasm for his Christian faith, many Asian Americans understand and appreciate Lin’s evangelistic witness. Various studies of Asian American Christians on college campuses reveal that they dominate many college campus Christian organizations despite the fact that Asian Americans account for only 4 percent of the U.S. population. At Harvard, Asian American Christian Fellowship became an anchor for Lin’s personal and spiritual growth. Prior to Harvard, Lin, like many second-generation Asian American Christians, grew up in an Asian ethnic church that profoundly shaped his character, identity, and religious enthusiasm. Although Christianity in Asia remains a small percentage of the total population, studies have shown that many Asian immigrants, especially Taiwanese, Chinese, and Korean, convert to Christianity in the United States and in general become more religious.

Since the passage of the 1965 Immigration and Nationality Act that enabled an unprecedented number of Asian immigrants to enter the United States, generations of Asian Americans in the post-1965 era are increasingly entering adulthood. Few Asian Americans today (especially if they are millennials or Generation Y) would remember Michael Chang. Chang was 17 years old when he won the 1989 French Open, becoming the youngest male champion in Grand Slam tennis history. A top-ranked tennis player for most of his career, Chang retired in 2003 and was inducted into the International Tennis Hall of Fame in 2008. During the 1989 French Open, Chang’s creative play on the court earned him many admirers but his unabashed declaration of his faith after winning the Open created uneasiness in many.

Chang’s public confession of faith, although it defiantly disregarded the unwritten rule of abstaining from religious expression as a professional athlete, also indicated how he felt compelled to stand up for

Christianity as a testament to his faith. Perhaps it is not surprising that the tennis court (or the football field, basketball court, boxing ring, gymnastics floor, or any other field of play) was viewed by Chang and other Asian American Christian athletes as a forum to articulate their personal Christian faith and using their sport as a platform became a medium through which Asian American Christian athletes professed their personal faith in God and raised awareness of Christianity. When a reporter asked Jeremy Lin if making his teammates better would be his best compliment, Lin commented that it would be secondary to bringing glory to God. The best compliment, according to Lin, that anyone could give him is that he plays for God.

Many professional athletes are frustrated by the burden of public perception, expectation, and scrutiny yet outspoken Asian American Christian athletes, such as Chang and Lin, publicly celebrate God and subsequently draw the ire of spectators who denounce their God-talk as out of place in a world of professional sports where intimidating and subduing one’s opponent and claiming athletic greatness through victory reigns supreme. Pro athletes understand the value of entertainment for the fans as part of their job but Asian American Christian athletes tend to regard their place in professional sports with a divine purpose. Far from viewing success and championships in pro sports as an end in itself, many evangelical Christians consider their athletic dedication as a way of worshipping God. Although pro athletes view their success as accomplished through hard work and training, Asian American Christian athletes, however, tend to perceive providential influence in the way events have unfolded in their career in sports.

Michael Chang’s unexpected run at the two-week 1989 French Open occurred during the same time as the Tiananmen Square Protests and Massacre in China and Chang did not see the timing of the two events as a mere coincidence. Convinced that God aided him in his victory, Chang believed that the French Open gave him a global platform in part to encourage the Chinese people through the crisis. In a similar way, Jeremy Lin would interpret his rising global fame (e.g., *Time* named him as one of their 100 Influential People in 2012) as divinely inspired for the purpose of bringing a Christian message to a global audience.

In the last two decades, the overall number of Asian American athletes, including mixed Asian Americans such as Tiger Woods (golf), Hines Ward (football), Apolo Anton Ohno (short-track speed skating), Ron Darling (baseball), and BJ Penn (MMA fighter), have increased in American sports. Many Asian American athletes are Christians but as public sports figures who are scrutinized in the limelight they remain cautious about bringing attention to their faith. However, many choose to openly identify themselves as Christian in the sports arena. For example, Troy Polamalu, an All-Pro safety with the Pittsburgh Steelers, makes the sign of the cross after every play and often credits God and his Christian faith when interviewed.

Authenticity in Asian American Identity

Questions of authenticity illustrate the porous boundaries of Asian American ethnic nationalism, particularly in relation to identity, language, and cuisine. Cuisine

best illustrates the strict dichotomies at work within questions of authenticity. To describe a restaurant as having “authentic” Japanese food gives the implicit expectation that the dishes there are not only delicious, but that the preparation, taste, and perhaps also the presentation of the dishes are comparable or equal to the gastronomic experience in Japan. Its opposite, the inauthentic restaurant, carries the couched understanding that the food is not tasty and furthermore is a diluted or corrupted version of the “real thing.” The dichotomies of good/bad, real/fake, and legitimate/counterfeit are embedded in the distinction between authentic and inauthentic food. When we apply the concept of authenticity to identity or language (which in terms of nationalism sees language as synonymous with national identity) these same embedded dichotomies are at work. In terms of identity, often the closer the degree to national heritage carries the implied understanding that it is, for example, possible to be more Chinese than someone else. For example, this graduated scale implies that a first-generation Chinese American is more Chinese than a second-generation Chinese American. Second-generation Chinese Americans are often referred to as American-born Chinese, or ABCs, in American English vernacular, which further highlights the supposed cultural removal from China and the supposed assimilation to the United States—consider the epithet “banana,” which supposedly describes someone who appears yellow/Asian but is “white” inside. This follows the simplistic assumption that the loss of cultural preservation correlates to the higher ordinal number of a generation. The assumption is simplistic because it relies on the essentialist argument that there is a fixed cultural definition of origin to which to compare—that there is a single definition of what constitutes “Chinese” or “American.”

The concept of authenticity in Asian American identity is problematic because it assumes the possibility of a unitary “true” identity in the panethnic designation “Asian American.” Any “authentic” Asian American identity is complicated by the heterogeneity of the Asian American populace, because the designation Asian American can include anyone with the heritage of any country on the Asian continent and in the Pacific and can encompass multiple generations and

people of mixed racial heritage. However, the construction of an Asian American identity, as opposed to single cultural designations such as Chinese American, Japanese American, Filipino American, and so on, was born out of the need for political and social recognition. Working toward achieving that recognition became a catalyst for Asian American ethnic nationalism. The model of Black Nationalism provided a useful template for organizing social change in the United States for Asian Americans. However, the template for ethnic nationalism carries the same paradoxical dichotomies within the concept of authenticity. The accusation that someone is an “Uncle Tom,” for example, labels that person as a race traitor who impedes the goals of equality and lacks loyalty to her/his group. In other words, being labeled inauthentic conveys treachery. The legacy of minstrelsy in the United States, from the minstrel shows of the early nineteenth century where white actors performed in blackface to elicit laughter from the audience using tropes of negative stereotypes of African Americans, illustrates the harm of racial misrepresentation. Minstrel shows and blackface reinforced false stereotypes of African Americans to white audiences, thereby making the stereotypes appear accurate and providing support for racist U.S. policies and practices toward African Americans. The contemporary accusation that a particular racial representation is inauthentic carries the weight of this legacy where inauthenticity is simultaneously false and treacherous.

Two controversies pertaining to authenticity in Asian American identity illustrate the porous boundaries surrounding Asian American ethnic nationalism. The first controversy involved a critique of commercially successful Asian American authors. The editors of *Aiiieeeee! An Anthology of Asian American Writers* (1974) had sought to define the cultural nationalist designation of Asian American within the field of literature. *Aiiieeeee!* was the first anthology of Asian American literature that brought literary works together under the nascent categorical name Asian American although limited to writers of Chinese, Filipino, and Japanese descent. With *Aiiieeeee!* and its follow-up *The Big Aiiieeeee!: An Anthology of Chinese American and Japanese American Literature* (1991), editor Frank Chin openly sought to define what

was authentically Asian American by delineating what constitutes a misrepresentation of Asian American identity. Frank Chin’s “Come All Ye Asian American Writers” in *The Big Aiiieeeee!* is a stinging critique of commercially successful and well-recognized Asian American works: Maxine Hong Kingston’s *The Woman Warrior: Memoirs of a Girlhood Among Ghosts* (1975), David Hwang *F.O.B.* (1980) and *M. Butterfly* (1988), and Amy Tan’s *The Joy Luck Club* (1989). Chin labels the writers and their texts as fakes, arguing that their texts corrupt classical Chinese tales with the subsequent effect of reinforcing negative stereotypes of Asians. Chin (1991: 3) argues these authors,

boldly fake the best-known works from the most universally known body of Asian literature and lore in history. And, to legitimize their faking, they have to fake all of Asian American history and literature, and argue that the immigrants who settled and established Chinese America lost touch with Chinese culture, and that a faulty memory combined with new experience produced new versions of these traditional stories. This version of history is their contribution to the stereotype.

Kingston, Hwang, and Tan’s works are figured as assimilationist narratives that compromise the cultural integrity of their Asian heritage and are “white racist.” Critiques of Chin’s argument assert that Chin relies stringently on a static idea of myth, legend, and the genre of autobiography and is therefore specious. Most scholarship about this controversy focuses on the rivalry between Chin and Kingston because these two prolific writers do not shy away from clarifying their differing ideologies regarding Asian American identity.

The second controversy highlights issues of authenticity in Asian American identity in the official recognition of an award that is specifically for Asian American literature. The fact that it is an *Asian American* award makes ethnic nationalist expectations unavoidable. In 1998, a Filipino American caucus of academics from Hawaii and the mainland publicly protested the Association of Asian American Studies fiction prize to Lois Ann Yamanaka for her novel *Blu’s Hanging* (1997) at the annual conference in Hawaii

where the award ceremony was to take place. That caucus's main objection surrounded Yamanaka's portrayal of Filipinos in the novel. The caucus argued that the representation of Filipino characters in the novel as sexually promiscuous and predatory only reinforced stereotypes of Filipinos as hypersexualized and upheld ethnic class hierarchies in Hawaii. The strength of the protest can be measured by the AAAS board's decision not to give out an official award that year and that the board members officially resigned. Although the resignations were a form of protest, nevertheless the award was in effect revoked from Yamanaka. The protest further stimulated questions of whether or not Yamanaka's text about Hawaii was being subsumed under the priorities of mainland Asian American ethnic nationalism. *Blu's Hanging* focuses on the world of the Ogata children in the island of Molokai struggling with poverty and the aftermath of the death of their mother. The text's regional sensibilities denounce simplistic ideas of Hawaii as a tropical paradise. The regional legacy of ethnic class hierarchies that stemmed from the Hawaiian plantation system and

uneven immigration policies toward different groups of Asian immigrants ran counter to the mainland pan-ethnic concept of Asian American identity that encompasses Hawaiians with Asian heritage. This second controversy highlights the difficulty of defining what constitutes authenticity in Asian American identity when considering both a regional and national perspective.

B

Bacho, Peter (1950–)

Peter Bacho is a Filipino American writer whose works are often set in his native Seattle. Bacho grew up in the Central District in Seattle, Washington, and his writings often reflect his working-class background, Filipino American experience, and familiarity with the Pacific coast. He has worked in journalism, law, and academia. He earned two law degrees in 1974 and 1981 from the University of Washington and worked as a law staff attorney for Ninth Circuit Court of Appeals in 1989. Bacho wrote editorial contributions for the *Christian Science Monitor* specializing in Philippine politics as well as other publications like the *Seattle Review* and *Tacoma News Tribune*. He is a professor of Asian American history and literature at the University of Washington, Tacoma and a professor of cultural studies at The Evergreen State College in Washington. Bacho was awarded the American Book Award from the Before Columbus Foundation and the San Francisco Bay Area Book Festival Honor in 1992 for his first novel *Cebu* (1991). He also won the Washington State Governor's Award and Murray Morgan Award in 1998 for his short story collection *Dark Blue Suit* (1997), and in 2005 Seattle University named Bacho the Distinguished Northwest Writer in Residence.

Peter Bacho's first novel *Cebu* (1991) opens with the protagonist Ben Lucero, a Filipino American Catholic priest, returning his mother's remains to the Philippines. *Cebu* shifts among multiple-generational perspectives. From Ben's perspective and the youths he administers to in his congregation, Bacho explores conflicts within Filipino American identity, urban violence, and the difficult negotiation between sexuality

and religious celibacy. From the perspective of Ben's mother Remedios and her best friend Clara, Bacho explores the aftereffects of trauma suffered during the Japanese occupation of the Philippines in World War II. This trauma causes Clara to lose any religious conviction she may have had, although it produces fervent piety in Remedios resulting in her vow that her first child would be a priest. However, this vow is rendered problematic in the text through Ben's constant wavering toward his religious beliefs and identity. His desire for Clara's assistant, Ellen, witnessing a crucifixion, experiencing the murderous violence against protesters at the U.S. Embassy in Manila, and the escalating urban violence in his own neighborhood when he returns to the United States unsettles Ben's convictions about his identity. From his experiences both in the Philippines and in the United States, Ben stands in as an alienated character not knowing whether to identify as Filipino or American, and the final unresolved encounter between Ben and one of his troubled young congregants complicates any measured success of Ben's role as a priest.

The sport of boxing is a prominent feature in Bacho's written works. Bacho was exposed to the sport as a child from his father and uncles and is trained in Asian martial arts and American boxing. Similarly, male authority figures guide Bacho's young male protagonists by introducing them to boxing. In *Cebu* Ben's father teaches him to fight like Sugar Ray Robinson. Ben's nickname is Angelo whereas his best friend's nickname is Muhammad; both monikers refer to the famous trainer Angelo Dundee and the boxer Muhammad Ali. In Bacho's subsequent work *Dark Blue Suit* (1997), a collection of interconnected short stories, boxing is highlighted as one of the few outlets

for the young working-class characters. This boxing philosophy is highlighted in the short story “A Manong’s Heart” where Bacho writes that Filipinos saw boxing as perhaps the only way out of poverty or one of the few paths that granted social mobility not only because of the financial gain of winning purses, but because “[t]he prize ring also provided that rare chance to be judged as an equal, which every Pinoy craved. The ring suspended society’s norms, those rules that embodied a racial and social order favoring color over ability, class over potential. In the ring, a Filipino could beat a white man with his fists and not be arrested” (1997). In *Dark Blue Suit* the restrictive racial and social order particularly affects the manong community of bachelor Filipino men who are utilized as cheap labor and given limited access to companionship due in part to strict immigration quotas that limited the influx of Filipina women to the United States and also due in part to racist antimiscegenation policies. Boxing was one of the few aspects in these men’s lives that did not restrict their participation or advancement. Bacho’s passion for boxing is best embodied in his first work aimed toward young adults, *Boxing in Black and White* (1999). In this work of nonfiction, Bacho provides analysis of the sport through the examination of 10 legendary fighters, their famous bouts, fighting styles, and overall cultural significance in relation to U.S. race relations.

Bacho’s novel *Nelson’s Run* (2002) departs from his usual focus on the experience of young Filipino American males, and instead takes the perspective of a privileged white man who seeks to indulge all his desires as a sex tourist in the Philippines. After sleeping with his father’s Filipina mistress, Nelson’s hedonism becomes directed toward the Filipina female body and the Philippines as a locale that exists only for his desires. In this satirical text Bacho critiques the sexual tourism industry in Asia as well as the postcolonial desire for whiteness in the Philippines.

Along with boxing, the Vietnam War and multiple heritages play a prominent role in Bacho’s works. His novel *Entrys* (2005) focuses on the experience of a multiple-heritage youth, Rico Divina, who is both Yakima and Filipino. After being wounded in the Vietnam War, Rico struggles in an environment hostile to his mixed-race identity, low-paying work, and has

little hope for any advancement. The central leitmotif and possible hope for Rico are in his fractured and error-filled writings (the eponymous entries instead of the correctly spelled entries) where he makes sense of his experiences. Bacho’s latest novel, *Leaving Yesler* (2010), is also a Vietnam-era text and is his second text marketed to a young adult audience. The protagonist, Bobby Vicente, who is part-black and part-Puerto Rican, is charged with the care of his ailing Filipino stepfather after his older brother dies in Vietnam. Bobby’s difficult transition from life in the Yesler Terrace Housing Project to his entry to college is aided by visitations from his dead mother and brother who appear to him throughout the text. As a coming-of-age story, *Leaving Yesler* focuses largely on Bobby’s negotiations with his sexuality and ethnic identity.

Baek, Cha Seung (1980–)

Korean Cha Seung Baek has been a peripatetic professional pitcher in the United States in the early twenty-first century. Born in Busan, the six-foot-four-inch Baek was drafted as a free agent by the American League’s Seattle Mariners in 1998. At that time, Baek was only 18 years old.

Baek spent four full seasons in the Seattle minor league organization. A starter rather than a reliever, Baek suffered an injury in 2002 that kept him off the mound. However, by 2004 he earned a spot on the Mariners’ pitching staff, winning two and losing four, and recording a mediocre 5.52 Earned Run Average (ERA). He did not return to the Mariners until 2006. At that time, he put together a fairly impressive stint with the Mariners, winning four of five decisions and achieving a respectable 3.67 ERA.

In 2008, Seattle sent Baek to the San Diego Padres of the National League. The move seemed to give

wings to Baek's flagging Major League career. He won only 6 of 15 decisions for the Padres, but his ERA was a deceptive 4.62, considering that the Padres in 2008 were a bad baseball team. Suffering from arm problems, Baek dropped out of Major League Baseball, although the Mariners did give him a tryout in the spring of 2010.

However, the Mariners could not find a spot for Baek, and he drifted into independent professional baseball—teams and leagues not directly affiliated with MLB. In 2010, he pitched for Yuma and Orange County of the Golden League. The 30-year-old righthander is unlikely to return to Major League Baseball.

Balcena, Bobby (1925–1990)

Balcena was the first Filipino American to play Major League Baseball. A son of Filipino immigrants, he was born in San Pedro, California in 1925. After World War II, Balcena was signed by the St. Louis Browns of the American League. Thus began Balcena's long and exceptionally distinguished career in the Minor Leagues.

A swift outfielder, Balcena's hustle often won him admiration from Minor League baseball fans who may never have seen a Filipino in their lives. Playing for Seattle of the Pacific Coast League in the mid-1950s, Balcena won the hearts of that city's vibrant Filipino community. Meanwhile, he earned two spring training camp invitations from the St. Louis Browns and then the team the Browns became—the Baltimore Orioles. But as of 1956, no major league franchise had given him a chance to officially play in “The Show.”

However, the Cincinnati Reds, desperate for help in the quest for the National League title in 1956, called Balcena up late in the season. Officially, Balcena appeared in but seven games and mostly as a pinch runner. He batted twice, struck out once, and got no hits.

Balcena returned to the minors where he toiled until his retirement from professional baseball in the early 1960s. After working many years as a longshoreman, Balcena died in his hometown of San Pedro in 1990.

Bangladeshi Americans

Early India Diaspora

Located in South Asia, the present-day People's Republic of Bangladesh was established after the partition of Pakistan in 1971. Early immigration of Bangladeshi to the United States could be traced to the first two decades of the twentieth century, when Bengal (Bengali region) was part of British India. Among the early arrivals were small groups of student activists and seamen working on British ships, apparently all male, some went to Canada first before coming to the United States. They settled mostly in San Francisco, Oregon, and Washington. During the period of Indian exclusion (1917–1946), it was extremely difficult for immigrants from the India subcontinent to bring their families to the United States. Some early immigrants from Bengal established families through

interracial marriages with Mexican immigrant women. A smaller number of them married white and black women.

The most well-known pioneering immigrant from Bengal is Tarak Nath Das (1884–1958), a prominent revolutionary leader of the anti-British movement for Indian independence and a renowned scholar of international relations. Born in West Bengal, Tarak first arrived in the United States in 1907. He later worked as a translator and interpreter at the Department of Immigration in Vancouver. An advocate for Indian independence from Britain, Tarak was the co-founder of the Indian Independence League and the editor of *Free Hindustan*, the first South Asian publication in Canada. He also founded the Hindustani Association in Vancouver and became known as a community spokesman. Returning to the United States in 1908, Tarak brought *Free Hindustan* to New York City and continued activism. He also received military training at the Norwich University in Northfield, Vermont. In March 1912, he cofounded the Hindi Association of the Pacific Ocean, later became known as the Ghadar Party. Two years later in 1914 he was admitted to graduate school at the University of California, Berkeley, where he taught classes and wrote his dissertation on international relations. He gained U.S. citizenship in the same year, and received his PhD later in political science from the University of Washington. His first book, *Is Japan a Menace to Asia?*, was published in 1917. Because his involvement in the Kabul expedition (a part of the Hindu-German efforts to launch a nationalistic revolution in India), he was brought to trial and sentenced to a 22-month prison term in 1918. After his prison term, Tarak married Mary Keatinge Morse, a founding member of the National Association for the Advancement of Colored People and the National Woman's Party. Tarak later accepted a professorship in Political Science at the Columbia University.

Because the India subcontinent was under British colonial rule until 1947, early immigrants from South Asia shared a common Indian national conciseness and identity. Many intellectuals like Tarak Nath Das were actively involved in the Indian independent movement regardless of their regional, linguistic, and religious distinctions. They were bitter about the

struggles that eventually led to the split of Pakistan and India. Early immigrants from Bengal are thus considered as Asian Indian immigrants. Relatively few Bengali immigrants of the colonial period had much to do with the statehoods created in South Asia, and few of them were related to the Bangladeshi American community.

Bangladeshi Immigration to the United States

The partition of Pakistan from India took place shortly after Indian Independence in 1947. For the following 24 years, Bengal (East Pakistan) was part of Pakistan. Islam was the dominant religion of the nation, but differences between West Pakistan and East Pakistan in terms of culture, language, economic development, and political representation soon became divisive issues. In 1971, Pakistan split into two nations when East Pakistan proclaimed its independence as the People's Republic of Bangladesh.

Before the establishment of Bangladesh, some small groups of students and professionals from East Pakistan came to the United States for personal reasons. Many more fled in the late 1960s and 1970 to escape the political turmoil during the independence movement. There were also groups of religious minorities who left their homeland to avoid religious discrimination. Most of these early arrivals were educated and relatively well-to-do. Since the establishment of Bangladesh, the number of immigrants steadily increased: a few hundred college students, professionals, and skilled workers arrived each year in the 1970s. By 1980, about 3,500 Bangladeshi were living in the United States. As some immigrants became naturalized U.S. citizens and eligible to sponsor family members, larger waves of Bangladeshi immigrants began to arrive. According to official government documents, from 1993 to 2000, between 3,291 and 8,681 Bangladeshi immigrants were admitted annually. The number continued to increase: between 11,487 and 16,651 arrived each year from 2005 and 2010. It is important to note that actual numbers are much larger, because individuals that came from the Bangladeshi diaspora might not be included in the statistics, and there were also many individuals who found ways to come without border inspection.

What we do know is that by the time Bangladesh became an official nation, the United States had already removed racial barriers in its immigration policies, making it relatively easier for people from South Asia to gain entry. Modern-day transportation also worked to shorten the distance between South Asian nationals and the United States. Moreover, British colonization of South Asia has had a long-lasting impact. Like their counterparts in India and Pakistan, educated Bangladeshis were familiar with the English language; some were world travelers before 1971 and settled somewhere else. Therefore, although Bangladeshi immigration to the United States does not begin until after 1971 and had a slow start, it progressed at a fast pace after 1980.

Bangladeshi American Population

According to the Census, there were 57,412 Bangladeshis in the United States in 2000. The number reached 147,300 in 2010, reflecting a 157 percent increase. This is the result of a growing number of new immigrants in the community. Between 2001 and 2010, the United States admitted 86,158 immigrants from Bangladesh, a number far bigger than the entire population of the ethnic group in 2000. The actual number of Bangladeshis living in the United States is bigger, although exactly how many individuals were undercounted in the Census is difficult to know. Undocumented immigrants, including both illegal entries and those who overstayed their visas, are most likely to be left out of the Census. According to one study, as many as 150,000 undocumented Bangladeshis were living in the United States in the first decade of the twenty-first century.

The majority of Bangladeshi Americans, about 73 percent of the population, were foreign-born, although about 50 percent of these immigrants gained citizenship status. About 92 percent of Bangladeshi Americans five and older spoke a language other than English at home, and 46 percent of the population group five and older had only limited English proficiency. This differentiated Bangladeshi Americans from their counterparts from South Asia. Limited English proficiency rate is relatively low for Indian Americans (22%), Pakistani Americans (28%), and

Sri Lankan Americans (22%). About 25 percent of Bangladeshi Americans lived in linguistically isolated households.

Students and professionals were the majority of the early Bangladeshi immigrant community. According to one study, 61 percent of the Bangladeshis who gained permanent residency by 1986 were students. Data available in 1992 indicates almost 91 percent of the Bangladeshis in the United States at the time were professionals. But this changed in the mid-1990s. Through the Diversity Immigrant Visa Program under the Immigration Act of 1990, many low-skilled Bangladeshis gained entry with various lottery visas. The 2010 Census estimated that 81 percent of Bangladeshi Americans had at least a high school diploma, and 47 percent of the population had at least a bachelor's degree. These statistics are lower than other South Asia immigrant groups (Indians, 91% and 68%; Pakistanis, 87% and 55%; Sri Lankans, 93% and 56%, respectively) as well as the general Asian American population (86% and 49%, respectively). Immigrants who had very little education or marketable skills depended on existing ethnic networks to survive. They went to cities with large settlements of Bangladeshis and stayed together. Their presence changed the profile of Bangladeshi America.

New York, New Jersey, California, and Texas are the most desirable states for the immigrant families, but many Bangladeshi Americans settled in cities elsewhere. In metropolitan areas of New York and New Jersey, Los Angeles, Miami, Washington, D.C., and Atlanta, the immigrants have built their ethnic enclaves, where businesses of both English and Bengali signs are quite visible. The Bangladeshi community in New York is spread out in the Jackson Heights area in Queens. Bangladesh grocery and clothing stores turned 74 Street into a busy commercial cluster.

Bangladeshi Americans had relatively low socioeconomic status. Per capita income for the group was \$16,784, which fell below that of other South Asian ethnic groups (Indians, \$36,533; Pakistanis, \$24,663; Sri Lankans, \$32,480). This was lower than \$28,342 per capita income for the Asian American population. About 20 percent of the Bangladeshi Americans lived in poverty, which was much higher than Indian

Americans (8%), Pakistani Americans (15%), and Sri Lankan Americans (9%). The poverty rate of Bangladeshi Americans was also higher than the Asian American population (11%) and the total U.S. population (14%). About 3 percent of Bangladeshi American households received public cash assistance.

Unlike some of the early Bangladeshi immigrants who were able to find good jobs in American companies, with no American diploma and marketable skills, a majority of Bangladeshis living in the United States are self-employed or working in the service sectors. Male Bangladeshi immigrants often found work driving taxis. In New York City, for example, 38 percent of the taxi drivers were South Asians in 2000. Bangladeshis entered the occupation following the footsteps of their counterparts from Pakistan and India. Their number was small at first. In the mid-1980s, Pakistani taxi drivers were the most dominant in New York. In recent years, however, the rate of Pakistani and Indian immigrants entering the occupation seemed to decline, whereas the number of Bangladeshi taxi drivers continued to grow. It was estimated that about 6,500 cab drivers in the city are of Bangladeshi origin. A typical Bangladeshi cab driver is between 35 and 55 years of age and married with families. Most of these taxi drivers have at least a high school education and almost a third of them have college degrees from Bangladesh. Besides cab-driving, many Bangladeshi immigrants, both men and women, worked in retail shops and service sectors. Bangladeshi immigrant professionals, most with degrees from U.S. colleges, are often employed by companies in engineering, medicine, and information technology. According to the Census, of those employed, 17 percent of Bangladeshi Americans were employed in construction, extraction, production, transportation, and material moving; 33 percent in sales and office work; 32 percent in management and professional occupations; and 17 percent in service. The unemployment rate of Bangladeshi Americans is 7 percent. Only 44 percent of Bangladeshi Americans were homeowners, which was the lowest percentage among major Asian American groups. In comparison, 66 percent of Americans, 59 percent of Asian Americans, 56 percent of Indian Americans, 55 percent Pakistani Americans, and 61 percent of Sri Lankan Americans were

homeowners. About 24 percent of Bangladeshi Americans lived in overcrowded housing. The rate of Bangladeshi Americans who had no health insurance was also high (23%), the same as that of Pakistani Americans but higher than Indian Americans (12%).

Communities

Immigrants who arrived in the 1960s and 1970s are important in the Bangladeshi diaspora. They were the first to become eligible to sponsor families, and they were the first to form community organizations. A few of the more than a dozen organizations of these immigrants were founded during the Bangladeshi independent movement. These early community organizations sponsored social and cultural activities and provided mutual support for individuals and families, although influence of their organizations was limited. Many early immigrants started on their own and settled in various locations throughout the United States. Scattered population made it relatively difficult to organize. In small cities and towns where Bangladeshis were few, the immigrants socialized frequently with their local community groups; some formed interracial families.

Ethnic community became increasingly important for Bangladeshi immigrants after 1980. Those who have arrived in the past two or three decades tend to live together in clusters in large cities. Astoria and Jamaica in New York City, for example, attracted a large number of individuals with limited resources. Most Bangladeshi immigrants are Muslims, but there are also adherents of Hinduism, Christianity, and Buddhism. The early arrivals are mostly Bengalis, but many other political and regional groups also came after 1980. Tribe members from the Chittagong Hill Tracts, for example, have their own cultures that are distinctively different from the Bengalis. They left Bangladesh to escape government repression after tribal resistance movement against resettlement of the region failed. There are also many groups of transmigrants who settled in the Middle East, Australia, or Africa before immigrating to the United States. Although regional, cultural, and religious differences shape internal dynamics of the Bangladeshi America, immigrants are closely bound together based on their

common affiliation with their homeland. Religion, for example, is important to most Bangladeshis, but it does not seem to be a divisive issue in the community. It is very common to see social gatherings participated by people of different religious backgrounds. Ethnic businesses provided jobs for the newcomers, and they received patronage from their fellow Bangladeshis in return. Together, the immigrants provided mutual support to each other and have had a great success in preserving Bengali culture and maintaining a Bangladeshi lifestyle through their own networks.

Although Bangladeshi America is relatively young and small compared to many other Asian ethnic groups, it contains a wide range of organizations. There are associations based on religious affiliations and on districts of the immigrants' native places. Organizations of residing cities and regions of the United States, and of professions and trades, however, are increasingly important. The Federation of Bangladeshi Associations in North America (FOBANA), an umbrella organization of all community associations, claimed to have a membership of 96,000. These organizations have facilitated community-based social, cultural, and economic activities. They helped fellow immigrants gain a strong sense of ethnic pride, and they maintain strong ties with their ancestral homeland.

Impact of 9/11

The terrorist attacks on September 11, 2001 have had a big impact on Bangladeshi America. Like all Americans, Bangladeshi Americans were shocked by the attacks, and many individuals in New York City witnessed the Twin Towers collapse in front of their own eyes. Among the thousands who were killed on 9/11 were at least six Bangladeshi Americans. The media treatment of the event from a religious standpoint, however, has created an unprecedented fear, and Muslim groups have experienced the most emotional and psychological stress. In the months following 9/11, there was an overwhelming fear of detention and deportation among Bangladeshi Americans. Even American citizens of the community were afraid that they or their families could become victims

of hate crimes. Women who wore *hijab* were targets for harassment on the street, and many Bangladeshi Americans also experienced workplace discrimination. The fear was so overwhelming that very few individuals were willing to speak up. Many individuals have tried to avoid the subject because they felt that they were identified as an enemy population and were targeted by not only the media but also by government policies and restrictions.

Generational Gap

Raising children in America is a big challenge for Bangladeshi immigrants. Many parents tried to preserve their culture by speaking Bengali at home, eating ethnic food, wearing traditional dress, and watching Bangladeshi or Indian films and television programs. They also try to instill traditional values and norms in their children. Socialization through their ethnic community is an important aspect of this effort. As some scholars have observed, although some families have had more success than others in slowing down their children's acculturation process, this parenting style has also worked to create tensions between the generations. This is especially because the second-generation often associate with the United States more than the Bangladeshi nation state, and they sometimes take different approaches to their affiliation with religion.

Conclusion

As a new Asian ethnic community, Bangladeshi America is growing at a fast pace. The increasing number of citizens in the community will facilitate more immigration of family members, and established ethnic business networks will continue to help newcomers adjust their life in America. Affiliation with their ancestral land has been and will continue to be very important. Although the second generation does not have the same strong emotional attachment to Bangladesh as that of their parents, the impact of globalization is yet to be fully seen. As economic development in Bangladesh continues to grow, economic and cultural transnationalism will become more and more important in Bangladeshi America in the years to come.

“Barred Zone”

See Immigration Act of 1917 and the “Barred Zone”

Barroga, Jeannie (1949–)

Jeannie Barroga was born in Milwaukee, Wisconsin. She came from a talented musical family. Her father was a familiar musical figure in the area’s lounge circuit. The family lived in an all-white neighborhood and the consequent cultural interaction or nonaction, served as an inspiration for Barroga’s writing. In an interview she remarked, “We were the first family of color they had ever seen. I was a very angry young child. In retrospect I can see I was reacting to cultural differences.” Barroga graduated from the University of Wisconsin, Milwaukee in 1972 with a degree in Fine Arts.

Moving to the San Francisco Bay area, she quickly found roots and began to pursue her playwriting interests. Her first play, *The Pigeon Man*, was produced in 1979. Ironically the play was about a white Midwestern family. She somehow had the notion that anything ethnic would be difficult to produce. It was only after she wrote her second play *Reaching for the Stars* (1983) that Barroga came to the realization that there was great dramatic potential waiting to be realized in

her own culture. The result was *Eye of the Coconut* (1987), which in reality was a comedy with layers of seriousness. It was first produced by the Northwest Asian American Theatre of Seattle.

Barroga is a prolific writer and has authored over 50 plays and completed a half-dozen cable television plays. Her landmark work was the play *Walls*, which premiered in 1989 at the Asian American Theater Company, San Francisco. The inspiration for the play came after a staged reading of one of her projects. The audience reacted sharply to a short scene featuring a Vietnam veteran meeting with his friends. Barroga never forgot the reaction to that one scene. A couple of years later, she was browsing through the text and photographs in Jan Scruggs’s book, *To Heal a Nation*. An idea was born and the play *Walls* resulted. It was a well-crafted play relating to the construction of the Vietnam Veterans War Memorial in Washington D.C. The pivotal character is Maya Lin, the young Yale student who won the competition to design the memorial. Her winning design was in the form of a dark granite wall with the names of all the fallen soldiers etched on the Wall. Barroga attempted in vain to contact Lin, hoping to interview her for the project. Consequently, she began to research the articles and interviews connected with the Vietnam Wall controversy. It was a tumultuous time in America. The characters in the play all go through a trying period of catharsis and understanding.

Barroga founded the *Playwrights Forum* in Palo Alto in 1983. The forum later merged with the *Palo Alto Theatre Works* to form the *Discovery Project* in 1986. She also served as the literary manager for the Oakland Ensemble Theater. The San Francisco-based Teatro Ng Tanan invited Barroga to take over as artistic director in 1990. She has also served on the panel for the Theatre Communications Group and The National Endowments for the Arts and the San Francisco Arts Commission.

Kenny Was a Shortstop (1991) is a short play about a newspaper reporter looking into the death of a young Filipino youth as a result of gang violence.

Talk Story (1992), first produced by the Kumu Kahua Theater in Hawaii, explores the Filipino experience, delving into the frustrations of a lack of identity. She uses her own family experience to illustrate points of reference. *Rita’s Resources* (1995) is a comedy of

immigrant experiences in America set in the 1970s. The play was premiered Off-Off Broadway by the Asian American Repertory Theater.

More recently, in 2005, Barroga’s new play, *Banyan*, was presented by the Asian American Theater Company. It was an attempt, albeit an ambitious one, at looking at the current chaos of the last decade in America.

Bartlett, Jason (1979–)

Jason Bartlett is a Major League Baseball (MLB) shortstop who was vital to the Tampa Bay Rays first World Series appearance in 2008. Filipino on his mother’s side, Bartlett was born in Mountain View, California, in 1979, but went to high school in Stockton and attended the University of Oklahoma.

Drafted by the San Diego Padres of the National League in 2001, Bartlett was obtained by the Minnesota Twins of the American League in 2002. Two years later, Bartlett made his MLB debut with the Twins. In 2005 and 2006, Bartlett came off the bench for the Twins. But in 2007, he served as the club’s regular shortstop.

By 2008, Bartlett was the regular shortstop for the Tampa Bay Rays, a youthful team seeking to challenge the supremacy of the New York Yankees and Boston Red Sox in the Eastern Division of the American League. During this effort, Bartlett generally proved to be a fine fielder and steady hitter. In 2009, Bartlett had a “career year,” batting an impressive .320 and hitting a surprising 14 home runs in addition to effectively holding down his shortstop position.

Bellingham “Anti-Hindu Riot” (1907)

On the evening of September 4, 1907, in Bellingham, Washington, a mob attacked and drove out over 200 immigrant laborers from India, referred to commonly as “Hindus.” The goal of the rioters was to force these South Asian workers from the mills and the city, using beatings and the threat of force to round up the men from their beds and mills. Overnight over a hundred were herded into the city jail in the basement of the City Hall on an agreement worked out with the police chief. Within a few days the goals of the mob were fulfilled; all of the South Asian millworkers had either left by train or steamship for points further south along the Pacific coast or on foot to cross back into Canada. Several of the South Asian workers were beaten, and according to spokesmen for the group, many took the threats seriously and were afraid for their lives. Although the local papers downplayed the injuries, six were badly beaten and hospitalized according to a *New York Times* wire dispatch.

The action was the first in a series of attacks on “Hindus” in Washington State and British Columbia, but it was not the first anti-Asian action in the Bellingham area. In October 1885, an anti-Chinese movement expelled the Chinese residents from the towns that would later combine to form Bellingham. There was a series of warnings and attacks in the days before the riot. After a massive Labor Day parade and gatherings of workers, unnamed speakers issued threats, and several violent incidents against East Indians broke out. On the day preceding the riot, workers at one mill had made a plan to attack the South Asians, claiming that white workers had been fired and replaced by Punjabi workers.

On the very morning of the riot, an editorial suggested that citizens had been unwelcoming toward the “Hindu” workers. Over the previous months, several

editorials and local news articles included warnings that conflict and antagonism were escalating. Police harassment and discriminatory treatment is evident from the local arrest records, showing that whenever a “Hindu” was arrested for “drunkenness,” a very commonly reported violation, he was fined before being released the next morning. In contrast, white violators were typically released with no fines.

The rioters were said to number at least 500, but accounts describe a mob that grew and separated into groups through the night, some attacking living quarters and others marching to lumber mills. Their composition was sometimes referred to as “white,” but according to newspapers some Filipino and black workers also participated. Some descriptions in the press emphasized participation of boys, but others described the rioters as persons of all ages, with mill-workers in the majority. The four persons arrested and jailed were described as working men, although police handcuffed two others described as boys but released them when surrounded by a mob. Those arrested during the riot were released and never indicted because of the prosecutor’s claim that no witnesses could be found to testify.

After the riot, press reports identified both immediate and long-standing grievances that were attributed as causes. The most commonly voiced reasons were the economic threats to mill jobs and wages, as the South Asian laborers were believed to be willing to work for lower wages than the prevailing rate for European Americans, therefore taking jobs from others. A further complaint was that immigrant workers spent little, lived very frugally, and saved much of their pay to send to families in India. Immediate grievances mentioned as triggering the violence were several South Asian men refusing to yield the sidewalk to women, boisterous fighting outside of taverns, and a white female tenant being displaced by “Hindu” men. The lumber mill owners who employed the South Asian workers were named as the ultimate culprits by the Bellingham City Council in a controversial resolution.

The reactions of the two local newspapers and most of the western U.S. press were similar. They disapproved of the lawlessness of the method, but celebrated the outcome of the eviction of these “undesirable” immigrants. Widespread public antagonism

toward the South Asian population was suggested by the reports of jeering, harassment, and in private correspondence. Following the riot, several ministers spoke out to criticize the lawlessness and lack of tolerance, and one newspaper, *Bellingham Herald*, published sermon excerpts. The mayor publicly denounced the riot, called for additional police deputy assistance, and pledged to protect the workers.

The response of organized labor was mixed. Most labor voices were supportive of the aims and outcome of the anti-Asian movement but not necessarily of the tactics. The following week the Central Labor Council of the city issued a resolution condemning the riots. Strong opposition to the riot also came from the IWW (Industrial Workers of the World), which had a very small presence in the Bellingham area. The IWW issued a statement denouncing the riot as injurious to the welfare of workers.

Most of the South Asian immigrants were young male Sikh farmers from the Punjab region of India who arrived by steamship in British Columbia beginning in 1906. Finding that employment opportunities were limited in the Vancouver and Victoria area, and hearing of employment opportunities and higher wages in Washington State, many crossed the border in 1906 and 1907. Bellingham, located only 20 miles south of the border and having some of the largest lumber mills in the world, was the closest destination, and several lumber mills offered jobs to willing immigrants during periods of boom in a very volatile economy. The appearance of these men varied, with some wearing the traditional turban over uncut hair and bearded, and others with cut hair under Western hats and trimmed moustaches. Although there were reports that a few South Asian women were living in Bellingham, these rumors were probably mistaken.

South Asian immigrants first entered Bellingham the previous year, when two men without immigration documents arrived on foot from Vancouver, B.C., and were arrested and turned over to immigration officials. Their appearance was described in detail as strange and curious, and one paper included an artist’s drawings of the two men. Their vegetarian customs were also seen as a curiosity when they refused the Bellingham jail food despite having gone for two days without eating.

By September 1906, at least 17 “Hindu” workers were reported to be living in Bellingham, and the expected arrival of many more South Asian immigrants became a frequent theme in the local press. One local paper devoted an entire page to the situation with a large banner headline about the “dusky peril” and several artistic depictions of the “Hindu.” At the same time, the first organized effort to expel the Asian immigrant workers occurred at one of the lumber mills.

In May 1907, another kind of opposition to the South Asians in Bellingham developed. The newspaper appeared to be the instigator, proclaiming that the “Hindus of Bellingham” were a public nuisance, and residents were in mortal fear for their lives. By this time their numbers had increased to 50 or 60, and the press repeated diatribes about them being dirty, offensive, and belligerent. Charges against the “brown intruders” and “dark skinned sons of India” included indecent exposure, stealing neighbors’ chickens, and dumping refuse around their housing, resulting in some calling for the deportation of the immigrants as undesirable citizens, a view repeated in subsequent editorials in various newspapers.

Several days following the riot in Bellingham, a larger race riot broke out in Vancouver in which a mob attacked Chinese, Japanese, and East Indian residents that seemed to have been triggered by the Bellingham events and agitation by the Asiatic Exclusion League. In the months following the riots in Bellingham and Vancouver, anti-Punjabi hostilities occurred in other locations in the Puget Sound region of Washington State, including Everett and Aberdeen, which caused many more South Asian immigrants to flee the region.

In 2007, on the 100th anniversary of the events, the Bellingham *Herald* published an apology for the paper’s role in the hostilities against the South Asian immigrants, and the mayor of Bellingham declared a day of remembrance and healing.

WHO IS POLLY BEMIS: TWO PERSPECTIVES

Bemis, Polly (Lalu Nathoy) (1853–1933): Perspective I

Idaho pioneer Polly Bemis, born Lalu Nathoy on September 11, 1853, attracted notice because of her singularity as a Chinese woman in the American West, but earned admiration, respect, affection, and legendary status for her pluck, keen wit, kindness, warm hospitality, and joyful and generous spirit.

Born in northern China, Lalu Nathoy’s name identifies her as Mongolian, her family among the many who settled in Han areas to farm in the mid-nineteenth century. During a prolonged drought, her father was forced to sell her to bandits in exchange for enough seed to plant another crop. She was then smuggled into America, sold for \$2,500, and taken to the Idaho gold mining camp of Warrens (now Warren) where she would be the only Chinese woman.

Many camps in Idaho Territory prohibited Chinese from holding claims or working as hired men. In 1869, whites in Warrens voted to allow Chinese in. The vast majority came from southern China, and they soon outnumbered whites but remained powerless, living

in tiny, windowless cabins below the camp's single street of saloons, dance halls, bunk houses, hotels, and stores. The few Chinese operating pack trains were from northern China and delivered supplies to all. Lalu's owner, Hong King, and her future husband, Charlie Bemis, each ran a dance hall/saloon/gambling house. According to Elsensohn, when a pack train brought Lalu in 1872, a white man helped her dismount with the words, "Here's Polly," then called Bemis outside and said, "Charlie, this is Polly." Thereafter Lalu was called Polly.

At what point Polly and Bemis became lovers is not known. By the 1880 Census, however, Polly was living with him and supporting herself by taking in laundry from white miners and running a boardinghouse that Bemis had built for her beside his own, a short distance from his saloon. Many of her boarders and their families became her lifelong friends, among them Bertha Long.

According to Bertha Long, "Bemis took [Polly] from the Chinese." Whether Bertha was referring only to Polly's owner or the Chinese community as a whole is unclear. Also unclear is whether Polly's limited interaction with the Chinese in the area was because her northern origins alienated her by language and custom or because of her relationship with Bemis and her boardinghouse being in the white section of the camp.

A. W. Talkington, who had been in Warrens when Polly arrived and in the years afterward, was emphatic that "[Bemis] did actually take Polly away from her Chinese owner," according to Elsensohn, who wrote a memoir of Polly Bemis in 1957. Legend has it that Bemis won Polly from Hong King in a poker game. Whether the legend has substance or should be dismissed, Polly's denial that she was a "poker bride" holds true, for she and Bemis lived together nearly two decades before they married.

Nor did the two marry, as some suggest, because Polly saved Bemis in 1890 after he was shot in the cheek, shattering the bone. The doctor, coming 87 miles by horseback from Grangeville, found and extracted one half of the ball and 14 pieces of bone, but feared the wound would prove fatal from blood poisoning because fragments remained. Polly cleaned the wound with her crochet hook, found the remaining

piece of bullet embedded in the back of Bemis's neck, cut it out with a razor, and then nursed him back to health.

The couple, obviously devoted, was prohibited from marriage by Idaho's antimiscegenation law. But a justice of the peace—who had for years been flouting the law with his Native American wife—formalized their union on August 13, 1894. Polly was then under threat of deportation because of the 1892 Geary Act, which required all Chinese residing in the United States to prove their legality, register, and thereafter carry a certificate of residence. By marrying, she prevailed in the case *United States v Polly Bemiss* [sic] and was granted a certificate of residence. A name in Chinese characters appears in the space for Polly Bemis's signature in her testimony for *United States v Polly Bemiss* [sic], 181 U.S. (1896), but the ink is blotted and the characters cannot be deciphered with any certainty.

Bemis had a two-story house built for Polly and himself on the Salmon River directly across from Crooked Creek, about 17 miles by trail from Warrens. Polly, caring for cows, horses, chickens, ducks, an extensive garden, and orchard, would pick up worms and slip them into her apron pocket so that, come three o'clock, she would be ready to go fishing. Bemis, ferrying travelers across the river, refused to accept payment, invited them to enjoy Polly's cooking and spend the night. Guests left loaded down with pies, cakes, fruit, and vegetables to be delivered to old friends, delicacies for the sick and injured. The Bemis ranch quickly became known as Polly Place, and a government survey party named the creek running through the property for Polly in 1911.

When prospectors poured into the canyon because of a rush for gold at Buffalo Hump in 1899, Bemis filed a mining claim that would protect the property. After their house caught fire in 1922, Polly and a neighbor dragged Bemis, then frail and ill, to safety. Everything was destroyed except three documents—the mining claim, the certificate of residence, and the marriage certificate—and some gold buttons Bemis had made for Polly that she changed from dress to dress.

For the next two months, Polly nursed Bemis at their neighbors' home across the river. After his death,

these neighbors took her to Warrens. Despite the efforts of friends to cheer her and enjoying visits to Grangeville and Boise, Polly, then 70, walked the 17 miles back to her Salmon River property. She gave Bemis's mining claim to her neighbors in exchange for their agreeing to build her a small cabin, which made it possible for her to live out her remaining days.

A few months before her death on November 6, 1933, Polly was taken to a nursing home in Grangeville. Friends and strangers—including a fifth-grade class—visited her. At her funeral, the city council served as pall bearers. In 1987, Polly's body was brought back and interred beside her cabin, now a museum and listed in the National Register of Historic Places. Her fame has spread far beyond the United States in a biographical novel, *Thousand Pieces of Gold*, which has been translated into many languages and made into a film.

Bemis, Polly (Lalu Nathoy) (1853–1933): Perspective 2

The Pacific Northwest's most famous Chinese woman resident, Polly Bemis, arrived in Idaho Territory in 1872 and died in Idaho in 1933. She became famous in her lifetime because of her unusual circumstances: she was a Chinese woman married to a Caucasian man; she continued to live on the remote Salmon River even after his death; and several myths and legends grew up around her, both in her lifetime and afterward.

The 1880 U.S. Census states that Polly was born in northern China, in or near "Peking," now Beijing. Other sources give her birth date as September 11, 1853. Nothing is known of her life in China, and even her original Chinese name is unknown. A 1921 interview reported that her parents sold her as a slave girl because they had no food. An old woman smuggled her into Portland, Oregon, and sold her for \$2,500 to an unnamed old Chinese man who took her to the gold-mining town of Warren, Idaho in a pack train.

Polly arrived there on July 8, 1872. A man, who helped her alight from her horse, reportedly announced, "Here's Polly," and that became her name. In the frontier West, non-Chinese people, who balked at learning Chinese names, commonly gave women American names, such as Polly, Mary, Annie, and Jennie; these were easier for the Caucasians to remember and pronounce.

Polly was brought to Warren as the concubine for a Chinese businessman. Although some have said that she was a prostitute, there is no evidence for that assumption. Her Chinese owner is often called "Hong King," but again, there is no evidence for that name. The 1880 Census lists her only as Polly, with no surname. A widow, she lived in the same household as Charlie Bemis, an unmarried Caucasian saloon owner. Chinese customs at the time can help explain why she self-identified as a widow. In China, wealthy Chinese men often had more than one wife, as well as one or more concubines. If such a man came to the United States without his wife, as was customary, he could buy a woman to be his concubine. According to Chinese custom, a woman in that sort of relationship, although not a wife, was "like a wife." Therefore, because Polly called herself a widow in the 1880 Census, her owner must have died or returned to China without her.

In 1890, an assailant shot Charlie in the face, and Polly nursed him back to health after weeks of faithful care. They married in 1894, possibly to afford Polly some protection from the 1892 renewal of the 1882 Chinese Exclusion Act. Their marriage certificate gives her name as Polly Hathoy, not "Lalu Nathoy" as some writers have suggested. Following their marriage the couple moved about 17 miles away from Warren, to a mining claim down on the remote Salmon

River. There Polly occasionally encountered wealthy people who were on boating expeditions. They enjoyed interacting with her because of her perceived novelty as a Chinese woman married to a Caucasian man.

Living on the Salmon River, Polly kept chickens and sold the eggs, and grew, sold, and canned a great variety of garden produce. By July 1921, when Countess Eleanor Gizycka interviewed her for an article that *Field and Stream* published in 1923, Charlie had been bedridden for about two years. In August 1922 the Bemis's house caught fire and burned to the ground. Polly and Charlie Shepp, a neighbor from across the river, rescued Charlie Bemis and got him to the neighbor's home, but he died in late October. Several days later another neighbor, Peter Klinkhammer, took Polly back to Warren and got her settled; she would live there again for almost two years.

When in Warren she twice visited larger communities. In 1923 she went to Grangeville, Idaho, for a week. Polly stayed in a Caucasian woman's home, where she had many callers. In Grangeville, she was fitted with glasses and had some dental work done. She took her first automobile ride and saw her first train, but her first motion picture fascinated her the most. In 1924 some friends took Polly to Boise, the state capital. There, in just one day, she saw her first high building, her first streetcar, her second motion picture, and rode in her first elevator.

Polly's neighbors on the Salmon River rebuilt her home. She moved in during the fall of 1924 and lived there for nearly 10 years. In early August 1933, a neighbor found her lying outside, nearly helpless; she probably had suffered a stroke. Friends got her to the hospital in Grangeville, where she died on November 6, 1933. Both before and after her death, Polly's life has been greatly romanticized by many people who have written about her. There is no evidence for the truth of the most persistent legend, that is, that she was "won in a poker game." As her life neared its end, both Polly and a long-time friend vehemently denied the rumor.

Polly is justifiably famous because she represents all the forgotten Chinese women who came to the United States during the late nineteenth century, women who arrived often unwillingly, without

knowing English, and with no prospect of ever returning home. These women faced racial prejudice from the white population and sexual discrimination from Chinese men. Polly lived in Idaho for over 60 years. During that time, her strength of character enabled her to rise above adversity, winning respect and admiration from everyone who knew her.

In June 1987, Polly's restored home was dedicated as a museum. Her remains were removed from Grangeville's Prairie View Cemetery and reburied adjacent to her restored home. There is no road to the site; visiting it means taking a jet boat upriver from Riggins, Idaho, or floating downriver for five days. Because Polly Bemis was inducted into the Idaho Hall of Fame in August 1996, it is especially important that we both celebrate the known facts about her and allow the stereotypical, undocumented legends to die out.

Bhutanese Americans

With a population of 19,439 in 2010, Bhutanese America is one of the smallest Asian American groups. The ethnic group is very young; only about 150 individuals were in the United States before 2008. The majority of the current population came from refugee camps in eastern Nepal in 2009 through the resettlement program under the auspices of the Office of the United Nations High Commissioner for Refugees. In addition, a very small number—a total of 74 individuals—from Bhutan were admitted to the United States as immigrants between 2001 and 2010.

Boat People

The plight of the Vietnamese boat people refers to the mass exodus of an estimated 1.5 to 2 million people by sea in the years following the Vietnam War. The war ended with the reunification of North and South Vietnam under a Communist dictatorship, prompting widespread fear of reeducation and political persecution. Several periods of mass exodus took place in Southeast Asia beginning in 1975. The first occurred in the weeks before and after the fall of Saigon in April-May 1975. The second, the most pronounced period of exodus by boat, occurred in the years 1978–1982. Most boat refugees were from South Vietnam, though individuals were also fleeing the bloodshed in Cambodia and Laos. Refugees continued to flee by the hundreds in intervening years, but a third period of mass boat exodus began again in 1988. Refugees arriving in this third period sparked international controversy when first asylum countries like Hong Kong and Malaysia began to refuse them under the claim that new arrivals no longer qualified as “political” refugees.

In the historical narrative of Southeast Asian migration, the period of the boat people is distinct from the first period of evacuation, which was primarily U.S.-led. The “first wave” that was U.S. sponsored evacuated from 10,000 to 15,000 refugees in mid-April 1975. In the last days of April, under Operation Frequent Wind, 80,000 more refugees were evacuated by U.S. cargo plane. Evacuees in this first and second wave were educated and from the middle and upper-middle classes, many holding diplomatic, military, or professional positions closely tied with the U.S. interests. The departure of 40,000–60,000 more refugees by boat or small ships were picked up by the U.S. Navy in the first two weeks of May 1975. This third wave of evacuation included soldiers, families of soldiers, and civilian supporters of the U.S.-backed South Vietnamese Army. Unlike the first two waves, this

third wave was comprised of less educated farmers, peasant soldiers, and families from the rural areas. Although this last group employed boats as a means of escape, their escape is chronologically grouped with the first period of evacuation. All three waves of this first period preceded the experience of the second period of migration, the mass exodus of the boat people.

Though numbers of refugees continually streamed out of the region, the exodus of the boat refugees comprised the second major period of forced migration out of Southeast Asia, from 1978 to 1982. From 1978 to 1980 alone, approximately 800,000 refugees fled Southeast Asia on small boats, fishing crafts, and makeshift rafts. The majority of evacuees in this second period were ethnic Chinese, reflecting Vietnam’s intensification of its economic restructuring programs. Ethnic Chinese had amassed ownership of 60 to 70 percent of the small businesses in Vietnam as a long-residing merchant class, an economic imbalance that reflected China’s extensive colonial history in Vietnam. Efforts to regain control of Vietnamese political and economic resources began prior to 1975 and included mandates forcing the ethnic Chinese to become Vietnamese citizens. In 1956, the Diem regime in South Vietnam prohibited ethnic Chinese from practicing medicine and working in other choice professions, a measure meant to highlight the benefits of full Vietnamese citizenship. After unification under Communist forces in 1975, political relations between Hanoi and China deteriorated and Hanoi adopted the nationalist position of the former Diem regime, requiring the Chinese in February 1977 to again become Vietnamese citizens or lose significant liberties. Those who refused lost their jobs and were forbidden to apply for civil positions. They also lost their right to settle freely and were forcibly relocated into New Economic Zones, areas of jungle that had been passed over as unusable land. On March 24, a group of government loyalists ransacked Cholon, the Chinese section of Saigon. The raid closed 30,000 wholesale and retail businesses and forced the city’s inhabitants into the jungles. Those who refused to relocate were shot and killed on the spot. By mid-April of 1977, such political and economic restructuring compelled a mass boat exodus.

Though a large majority of boat refugees were ethnic Chinese, the new Communist government aimed for political reform and nationalization rather than ethnic cleansing. Thus, ethnic Vietnamese, like ethnic Chinese, suffered in political reeducation camps and many thousands participated in boat evacuation. Between 1978 and 1980, approximately 400,000 of an estimated 800,000 boat refugees successfully made it to a country of first asylum. Those who did not die or were killed along the journey. Refugees suffered indescribable hardships in the open sea, often floating in rough waters for weeks, exposed to the elements without proper covering or provisions of food or water. Men, women, and children all made the voyage, and

Vietnamese refugees are rescued by the USS *Blue Ridge* in May 1984 after eight days aboard a tiny craft. Fleeing their homeland on crowded fishing boats and makeshift vessels, Vietnamese refugees became an ever-visible reminder of the Vietnam War for decades after the fall of Saigon in April 1975. (Defense Visual Information Center)

the elderly sometimes were compelled to join. Many refugees traveled for weeks locked under the decks of ships with tens of others, enduring intense heat and lack of air. Some would die of suffocation, remaining among the passengers until thrown overboard. Forced to keep completely still at the risk of detection, passengers sat in utter darkness, sullied by their own waste and stench. Many were unaccustomed to rough sea travel and grew sick from the extended journey. Due to the common practice of overcrowding, vessels sometimes sank from the weight of their passengers, drowning everyone on board. Some departing boats were simply discovered by Vietnamese gunboats and sunk on the spot. Vessels carrying upward of 600 people, two to three times the capacity, were not uncommon. Small multifamily boats were more inconspicuous, but also more vulnerable to pirate attacks. Families joined together for protection but most had no knowledge of nautical navigation. Refugees at sea were vulnerable to constant attacks by Thai pirates. Men were killed outright and women and children were kidnapped into slavery. Women and young girls were raped and infants thrown overboard. What little valuables the refugees carried were readily stolen. In response to the high number of deaths resulting from the dangerous conditions of the boat journey, the United States implemented the Orderly Departure Program in 1979 in concert with the United Nations High Commissioner for Refugees (UNHCR). The measure was established to provide a legal means of evacuation and reduce the risks of a clandestine journey. Boat evacuation, however, remained a common option.

The international community initially did not provide support for Vietnamese boat refugees. Large vessels refused to pick up the refugees, uncertain of their participation in an international political and military entanglement. On July 28, 1976, UNHCR made its first appeal, followed by a second, more dire appeal for all seafaring vessels to provide aid and all coastal nations in the ASEAN region to provide first asylum. In 1978, because of the exponential increase in arrivals, Thailand, Indonesia, and Singapore began to refuse boats, pushing them back to sea to prevent refugees from disembarking. In 1979, the UNHCR codified the automatic status of all Vietnamese boat people as refugees and implored first asylum countries

to give all arriving refugees temporary safe haven. The UNHCR mandate also guaranteed that refugees would be resettled in Western countries, alleviating fear from first asylum countries of economic and diplomatic burdens.

After a steady decline of boat evacuees from 1982 to 1988, numbers began to increase again without a clear indication of cause. The new influx was unwelcomed by asylum countries that challenged the refugee status of these new arrivals. In response, the UNHCR developed a 1989 Comprehensive Plan of Action and Memorandum of Understanding with Hanoi. Hong Kong and Malaysia implemented a review process to weed out “legitimate” refugees from individuals they deemed to be “economic refugees.” Unsurprisingly, the interview process established by Hong Kong supported its suspicions that 98 percent of new arrivals were not legitimate refugees. Expert opinion on the human rights implications of this process differed. Some have criticized UNHCR handling of this crisis, arguing that political and economic persecution is integrally related in the Southeast Asian case, whereas others argue that the new arrivals fail to evidence persecution, qualifying them as refugees. Under the Comprehensive Plan of Action, refugees arriving after March 15, 1989 in most instances (1988 in Hong Kong) were subject to an interview process to determine their status as refugees. Arrivals who did not meet classification standards would be repatriated under the established Memorandum of Understanding with Hanoi, which stipulated that refugees who volunteered to be repatriated would not suffer any political, economic, or social consequences. Hong Kong and Malaysia pushed the issue of repatriation to the detriment of the refugees. Camp conditions continued to deteriorate to dissuade refugees from waiting out their process and instead “volunteer” for repatriation. Media exposure of deteriorating camp conditions prompted an outcry against Human Rights abuses. Even under these unlivable circumstances, many refugees in the camps opted to protest rather than choose repatriation. Campers staged hunger strikes, organized rallies, and committed suicide in front of camp officials.

Countering the desperate circumstances of the refugees, rumors leaked that high- and low-ranking Vietnamese government officials and individuals in

Hong Kong and Singapore motivated by greed had contrived to charge refugees departure fees as early as 1978, knowing that arrivals to first asylum countries could not be guaranteed. The profits made from this enterprise were considerable, especially for individuals who played both sides, accepting money from individuals and receiving bribes for turning those same individuals in to authorities. Receiving countries argued that this fee structure was evidence that refugees were encouraged by Hanoi to migrate, disqualifying them as refugees. The logic of this argument ignores that refugees possessed no control over the process: if true, the financial scheme further victimized refugees.

Boggs, Grace Lee (1915–)

Grace Lee Boggs is a Chinese American philosopher and activist best known for her work as a movement organizer within the African American community for more than seven decades and a leading voice for social change within the city of Detroit. She has been characterized as a “legendary activist” by Amy Goodman through a series of interviews conducted for *Democracy Now!*

Grace, also named Yuk Ping or Jade Peace, was born in a room above her family’s Chinese American restaurant in Providence, Rhode Island, on June 27, 1915. She was the fifth of sixth children born to Chin Dong Goon and Yin Lan, both immigrants from China. She also had an older half-brother. During the 1920s, her family moved to New York City, where her father became the proprietor of two grand Chinese restaurants in the Broadway district of Manhattan. As he became known by the name of his restaurant, Chin

Lee's, Grace adopted Lee as her surname along with the rest of her family. From 1931 to 1935, she attended Barnard College, where she graduated with a philosophy degree and was reported to have been one of only three Asians in the all-women's school.

Continuing her studies in philosophy, Grace earned a PhD from Bryn Mawr College in 1940. She was supported by a fellowship established for visiting students from China, as the committee experienced difficulties recruiting international students owing to the outbreak of war overseas. As a student, she was strongly influenced by the social democratic critique of capitalism and American social relations that emerged during the Great Depression. Her dissertation focused on George Herbert Mead, one of the leading scholars of American pragmatism, and was published in book form in 1945. She also became an avid student of Hegel, whose concept of "thinking dialectically" became a maxim of Grace's philosophical and political work.

Concluding that race and gender discrimination precluded her from obtaining work as a philosophy professor, Grace accepted a job as a library assistant at the University of Chicago. Living in Chicago, she was introduced to left-wing activist circles. She also witnessed the rise of the first March on Washington Movement, a powerful advance for black civil rights that convinced her that her destiny in life was to be a movement activist. Grace joined the Worker's Party, through which she aligned with the Johnson-Forest Tendency led by the West Indian radical, C.L.R. James, and the Russian immigrant, Raya Dunevskaya. Utilizing her theoretical training and linguistic translation skills, Grace became a leading figure among the Johnsonites, who promoted Karl Marx's early humanist writings and emphasized the problem of alienation under capitalism. Through her two decades of work with James, Grace also came to know historic figures in the Pan-African liberation movement, such as Kwame Nkrumah and George Padmore.

The Johnsonites' organizing campaigns and publication *Correspondence* encouraged the self-governing capacities of marginalized sectors of the population, not only the industrial proletariat but also women and racial minorities. To advance these efforts, Grace moved to Detroit in 1953, where she met and within

months married James Boggs, an African American autoworker from Alabama. Following a dispute with C.L.R. James, the Boggsses moved in new directions, maintaining the Marxist critique of capitalism but recognizing the need to develop new ideas of revolution as high-technology transformed the nature of production. As James Boggs wrote in *The American Revolution: Pages from a Negro Worker's Notebook* (1963), automation was rendering the labor of workers expendable and creating a permanent class of "outsiders." Stifled by racism, denied political representation, and stung by police brutality, young African Americans would be particularly affected by deindustrialization and the demise of blue-collar jobs that had elevated millions of whites into the middle class.

Proponents of the urban pursuit of Black Power, the Boggsses stressed the vanguard role of African Americans through their theoretical writings, study groups, and organizational campaigns of the 1960s. Grace served as the coordinator of the Michigan Freedom Now Party, which put forward an all-black slate of candidates for various offices in 1964, and associated with leading movement figures, such as Ossie Davis, Ruby Dee, Albert Cleague, and Max Stanford. By this time, Grace had become a vocal advocate of Black Power and felt well at home within the black community. Along with her husband, she was cited in a *Detroit News* story as one of six people whose actions most likely provoked the Detroit rebellion of 1967. She was also the only non-African American author to be included in the seminal anthology, *The Black Woman* (1970), edited by Toni Cade Bambara. One police report characterizing Grace as a subversive noted (incorrectly) that she was probably "of Chinese and African descent."

In the aftermath of the urban rebellions of the 1960s, the Boggsses stressed the need for a vision of revolution that was constructive rather than destructive and advanced "projections over rejections." With longtime associates Lyman and Freddy Paine, they developed the concept of "dialectical humanism" and were central figures in the National Organization for an American Revolution during the 1970s and 1980s. As deindustrialization, suburbanization, and white flight continued to devastate Detroit, the Boggsses devoted their energies to new models of work, politics, and

community building that would prioritize self-reliance and cooperative enterprise among abandoned populations. Their radical politics increasingly targeted Detroit's ascendant black political class for its failure to confront corporate America and transcend the boundaries of mainstream political thought. Seeking to enlist young people in the movement to rebuild Detroit from the bottom up, the Boggses helped launch Detroit Summer in 1992.

With the 1998 publication of her autobiography, a stream of media interviews, and a series of lectures across the nation, Grace (widowed in 1993) became a more visible public figure during her 80s, serving as a model of lifelong activism and putting forward grassroots models of transformative social change. Remarkably, she has remained exceptionally active as a writer, speaker, and community organizer in her 90s.

Her many honors include honorary doctorates from the University of Michigan, Wooster College, Kalamazoo College, and Wayne State University; lifetime achievement awards from the Detroit City Council, Organization of Chinese Americans, Anti-Defamation League (Michigan), Michigan Coalition for Human Rights, Museum of Chinese in the Americas, and Association for Asian American Studies; Detroit News Michiganian of the Year; and induction into the National Women's Hall of Fame and Michigan Women's Hall of Fame.

Buddhism in Asian America

When studying Asian immigrants in America, one cannot neglect the intimate connections between religion and immigrants' lives and the significant role religion has played in Asian Americans' history. Buddhism is among the most influential immigrant religions in America.

The development of Buddhism in Asian America is truly a reflection of the dramatic struggles and progress of these Asian immigrants. Buddhism was first brought to North America by the Chinese who worked in the gold mines in California in the 1850s. However, because of the 1882 Chinese Exclusion Act, pretty soon many Chinese were forced to leave America and go back to China. The development of Chinese Buddhist temples was thus hampered. At the same time, Japanese started to migrate to North America, first bringing their Shinto temples to Hawaii and then to the American mainland. Along with the growing presence of Japanese immigrants, Japanese Buddhism started to spread. The 1893 World's Parliament of Religions in Chicago further boosted the growth of Japanese Buddhism and raised awareness of Buddhism among non-Asian Americans. This event brought more overseas Buddhist leaders to America and contributed to the establishment of the Honpa Hongwanji, a major branch of Japanese Buddhism. Buddhism was gradually not just allied to the Japanese but started to attract European American converts. However, not too long after this budding growth, the following Asian Exclusion Act in 1924 blocked more Asians including Buddhist monks from migrating to America. It thus delayed the growth of Buddhism in Asian America for several decades until 1965.

In responding to the 1965 Immigration Act, millions of Asian immigrants entered the United States annually, bringing new waves of Buddhism to Asian America together with other religions and enriched the American religious landscape. Compared with the nineteenth century early Buddhists in Asian America, the presence of post-1965 Buddhism has been truly diversified beyond the original Honpa Hongwanji Buddhism, with the growth of Chinese Buddhism and

other ethnic Buddhism branches. Among these new immigrants, the largest Buddhist groups came from places like China, Taiwan, Hong Kong, Korea, Singapore, and other East Asian countries. Most of them practice Mahayana Buddhism, which is also referred to as the “Greater Vehicle” Buddhism. They were followed by immigrants with fewer numbers from the dominantly Theravada (“Lesser Vehicle”) Buddhist countries—Sri Lanka, Thailand, Cambodia, Myanmar, Thailand, Laos, and other South and Southeast Asian Regions. The third branch, Vajrayana Buddhism, is predominant among immigrants from Inner Asia, especially Tibet, and has grown in its presence and salience in the United States especially by the frequent visits and teachings of the Dalai Lama.

Besides ethnic diversity and schools of origin, scholars use two other distinctive yet related concepts to describe Buddhist bodies in America: “Buddhism in America” and “American Buddhism.” The former is often referred as the ethnic Buddhism practiced among Asian immigrants and is largely defined by immigrant’s ethnic languages and cultures. The later concept, “American Buddhism,” is often referred to the Buddhism practiced by broader non-Asian Americans, especially European or African Americans. These two groups have grown simultaneously yet have followed different trajectories and face different challenges in North America.

The Buddhism practiced by Asian immigrants often functions as a significant agent to preserve ethnic culture and identity. The traditional ethnic Buddhist temples or centers tend to locate in ethnic enclaves and attract immigrants who work or live in the ethnic immigrant community. These temples often provide a strong sense of connection to the immigrants’ homeland culture. Thus, attending such ethnic religious organizations could help immigrants maintain a sense of cultural solidarity in the new land and a sense of continuity with the homeland. Furthermore, because of the uprooting experience of new immigration, those who were nominally affiliated with Buddhism may experience a new awakening of their religious faith. Hardship of assimilation and adaptation, language barriers, financial and employment difficulties, facing racial discrimination and prejudice, and the sense of alienation and lack of belonging could force them to

rethink their faith and draw new immigrants closer to their old faith. For immigrants who have experienced downward mobility compared with their social status in their home country, participating in and serving in an ethnic religious organization such as a temple can sometimes help regain a sense of social status and hierarchy among immigrant communities.

At the same time, during the past several decades, Buddhism in Asian America experienced unique challenges both socially and religiously in responding to larger social and global change. As most of the post-1965 Asian “Buddhists” come to America to pursue higher education and seek job opportunities, instead of coming as religious clergy or monks, many of them can be loosely defined as nominal “cultural Buddhists,” a similar concept with “cultural Christians” in America. These “cultural Buddhists” are the ones born into the broader Buddhism cultural heritage in Asia, yet not necessarily converting to Buddhism after a thorough or delicate religious or theological conviction. As these new immigrants came as highly educated professionals or technical workers and on average have higher economic success and are socially and financially better assimilated into American society compared with the pre-1965 immigrants, attending an ethnic temple to receive social support may become less of an urgency, and thus they could find the old Chinatown-style Buddhism less attractive. These ethnically rooted beliefs or practices may be even less appealing to the American-born immigrant youth, when ethnical religions such as Buddhism are often associated with “old,” “less modern,” or “superstition” in the homeland countries. When facing double minority status and struggling with integrating into American mainstream society, younger children of Asian Buddhist immigrants may feel reluctant and eventually less fervent in pursuing their family’s old faith. However, it is difficult to speculate on the scope of “nominal cultural Buddhists” versus “awakened convert Buddhists” among these Asian immigrants without empirical examination.

To do a better job in attracting newer immigrants and to sustain younger generations of immigrant children in a traditional faith, many ethnic temples offer nonreligious services such as ethnic language classes for children, serving traditional food, celebrating

nonreligious ethnic holidays, and providing opportunities to engage in community work. The different socio-demographic composition of post-1965 immigrants further influenced the trajectory of Buddhism's development in America. As many of these highly educated new immigrants do not live in ethnic enclaves anymore, building new meeting places or temples even in nonethnic white suburbs became an emerging and desirable issue for many Buddhist organizations.

Contrasting with Buddhism practiced by ethnic Asians, "American Buddhism" was originated from the Theosophical Society, one of the earliest American societies introducing philosophy and spirituality of the East to the United States, and has attracted more American intellectual elite groups than the ordinary population. The founder of the Theosophical Society, Henry Steel Olcott, was himself among the first white Buddhists. These non-Asian Americans who are interested in Buddhism tend to approach Buddhism through philosophical or intellectual approaches, instead of having strong ethnic or cultural roots. Some of these white Buddhists may participate in Zen or meditation practices, but often have little interactions with these Asian Buddhists, and do not join the ethnic Buddhist temples. Most of these non-Asian converts have come to Buddhism through activities such as reading a Buddhist book, attending Zen or meditation classes, or participating in other "Eastern" cultural activities. These philosophically interested yet institutionally loosely connected white Buddhists are often called "night stand" Buddhists. Meaning, once in a while they will read a book and put a Buddhist magazine on their nightstand, or attend a Yoga or meditation class, but may not go through a formal conversion process or practice monastery lifestyle.

Under religious competition, Buddhist organizations not only have to deal with how to sustain their younger generations in their faith but how to develop and grow under the competition with mainstream Judeo-Christianity religions in America. The most important aspect of institutional development of Buddhism in Asian America may lie in its organizational transformation under religious competition. To "fit in" the American religious market, Buddhist organizations have adopted different ways of reforms. In traditional Asian context, in contrast with religions

in the West, where an organized religious system or community is emphasized, religions such as Buddhism in Chinese societies do not require regular attendance at a fixed religious institution, or building up a regular network among fellow worshippers or with the priesthood. Worshippers only come for special rituals or holidays and remain anonymous during temple visit, and do not engage in frequent interactions with one another on a regular basis. Not only between temple clergy and worshippers, temples are also loosely connected with one another, often lacking a larger congregational system with hierarchical management. But once these Asian Buddhists migrated to America where the dominant religious culture is not Buddhism anymore, institutional accommodations became unavoidable. In the history of early Buddhism in Asian America, under religious competition, in responding to the active evangelism from Christian missionaries to the Japanese immigrants, Japanese Buddhist priests started to put in more effort in missionizing fellow Japanese immigrants. They made an effort to make Buddhism look appealing from an American perspective. They started to sing *gathas* modeled after Christian hymns, to use the name "church" instead of "temple" to more easily fit into American mainstream society and avoid hostility, and build the "Buddhist Church of America," which eventually grew into a national presence for both Japanese Americans and gradually receiving non-Asian Americans members as well. More monks came with highly educated backgrounds, and with many teachings and writings published in English, more Americans who are interested in Eastern philosophy or culture are attracted.

Besides the case of the Buddhist Church of America, there are other forms of religious assimilation and adaptation. To further accommodate American ways of "doing religion," Christian-style "sermons" are given in Buddhist temples on Sundays, pews are installed in worship halls, and "weekly scripture study" or "yoga/meditation" classes are offered; in the mean time, reducing the style and frequency of traditional Buddhist rituals such as repetitive chanting and memorizing sutras are emphasized. These sermons and classes are often given in both ethnic languages and in English so that both ethnic and nonethnic visitors can be accommodated. Many

Buddhist temples even adapted to give Buddhist wedding ceremonies following the patterns of Christian weddings. Temples provide nonreligious, culturally oriented activities such as English language classes, hosting cultural festivals, and giving cultural lectures. Under religious competition, Buddhist monks are encouraged to participate in community activities, organize disaster or relief work, and even conduct prison ministries following the Christian religion model. To accommodate unique social context in America, many temples even ordain female clergy to encourage and facilitate frequent contacts between monks and female Asian or non-Asian temple visitors. In all, rather than strongly holding onto the traditional monastery Buddhist life, the new Buddhist focus is on “Humanity Buddhism,” which is crucial to such institutional reformation. However, rather than viewing such changes as Americanization or Christianization, most Buddhists consider these kinds of institutional changes as a necessary process of modernization and adaptation to the new immigrant American contexts to “expand the Buddhist Law.”

The development and transformation of Buddhism is a further response to the globalization process. Large Buddhism organizations in Asia have extended their influence to North America and have become part of larger transnational Buddhist movements among Asian immigrants. Many Buddhist organizations even build regional bases in North America, facilitating rising activities in the United States and interactions with other international communities. For example, Fo Guang Shan (Buddha’s Light Mountain) Monastery, the largest monastery in Taiwan, has established 38 regional temples and centers in North America and has sent hundreds of Buddhist missionaries or monks to North America for religious and cultural exchange or teaching. Another influential Buddhist organization, Tzu Chi Charity, also founded in Taiwan, has grown into an international Buddhist organization and has chapters and offices in 47 countries. Because of frequent interactions with Asian American immigrant communities and the North American societies, Tzu Chi has established 99 branches in North America alone, and is actively involved with humanity and philanthropic relief work in North America. These Asia-based international Buddhist organizations

further shaped the global look and future development of Buddhism in Asian America.

Buddhist Churches of America (BCA)

Headquartered in San Francisco, California, the Buddhist Churches of America (BCA) represents over 60 independent temples and churches along with some 39 associations and fellowships spread throughout 12 states. Founded in 1899 under the name of the North American Buddhist Mission (NABM), the organization is an overseas branch itself of the Jodo Shinshu (True Pureland) Nishi Hongwanji (Western School) Buddhist sect in Kyoto, Japan. With over a 120-year history, the BCA is one of the oldest Asian American organizations and with a membership of approximately 16,000 lay and 50 active clergy, one of the largest Asian American religious organizations.

The religious foundation for the BCA stems from thirteenth-century Japan and the work of a Zen

Buddhist monk, Shinran Shonin, and his teacher, Honen Shonin. Theologically, Jodo Shinshu is part of the Amida or “other power” schools within the larger tradition of Mahayana or “large vessel” Buddhism. As such, the school espouses patterns of living and pursuing the Buddhist ideal of Enlightenment through practices and rituals that any person can use. In turn, the clergy adopt a lay lifestyle, following the real life example of the founder. Unlike priests or monks, the clergy are professional ministers who live and work within the lay community. They also have the freedom to marry and raise families.

The origin of the NABM and BCA stems from requests by Japanese immigrant laborers to the Nishi Hongwanji in 1897. Although the Jodo Shinshu sect is among the largest in Japan, its prevalence in the United States rests with more particular factors. Specifically, the pattern of Japanese immigration to the United States transpired so that four prefectures in Southwest Japan, Hiroshima, Yamaguchi, Kyushu, and Kagoshima account for nearly 80 percent of the sojourners (Kodama, 78). Because Jodo Shinshu Buddhism is a form of Buddhism that allows individuals to lead everyday lives, it is a populist, yet traditional, religion. As a result, its appeal and strongest support at that time came from rural Japan and from the above four prefectures in particular.

As a Japanese American religious organization, the BCA has been intrinsically tied to its ethnic community in particular and the immigrant experience in general. As each generation of Japanese Americans made their way through their American experience, so has the BCA. With the first generation, the Issei, the NABM dealt with issues of adapting to a new, often hostile society and the needs of an immigrant community. As a part of this, the NABM expanded beyond a religious tradition and became an integral part of the ethnic community. With the birth of the second generation, the Nisei, the organization continued to expand its role within the ethnic community by offering social services unavailable in the general society in light of a prevailing environment that was often hostile to the Japanese American community.

The traumatic events of World War II highlight the social environment for the NABM and BCA and factor the continued elements of accommodation and

assimilation for the organization. With the relocation of all Japanese Americans on the West Coast in World War II, all but four churches closed their doors. When in the relocation centers, the NABM restructured itself along general American religious models. It created an organization focused along lay leadership rather than the clergy and elected a new Board of Directors comprised of all U.S. citizens. Most visibly, the NABM changed its name from the North American Buddhist Mission to the Buddhist Churches of America.

In the postwar era the BCA reestablished itself as a part of the Japanese American religious community and continued to be a social resource for the Nisei and their children, the Sansei. It also took steps to simultaneously retain its ethnic identification, assimilate with the general religious economy, and develop an independent American Buddhist tradition. Thus, as an ethnic organization, the membership remained overwhelmingly Japanese American ranging from the second to the fifth generation of Americans. Also, approximately half of its clergy originates in Japan and the religious ties with Japan remained unchanged. In terms of assimilation, English became the primary language, new temples moved out of the ethnic enclaves, and the organization operates as a formal volunteer association. Finally, in terms of developing an independent Buddhist tradition, the most significant step has been the development of a seminary, the Institute of Buddhist Studies (IBS), to develop American trained ministers.

Today the BCA is in the midst of a religious and organizational context that has pushed it to strengthen and challenge its basic ethnic identification. With high levels of structural assimilation and low levels of immigration from Japan, the BCA finds itself with a membership that no longer requires it provide general social services as before. Yet this increasingly assimilated membership continues to look for ways in which to maintain their ethnic identity and have turned to ethnic organization such as the BCA to provide this.

In potential conflict with the continued ethnic identification of the BCA is the increasing awareness and popularity of Buddhism in the United States. With celebrities such as Tiger Woods professing their Buddhism, the problem of remaining identified as an ethnic religious organization is that it pigeonholes the

organization as being by and for Japanese Americans. In recognition of this, the organization has taken some steps. One was the selection of the first non-Japanese American president of the organization, Dr. Gordon Bermant in 2006. Another was the opening of the Jodo Shinshu Center in Berkeley, California in 2007. The Center, located near the University of California campus, offers a variety of programs from the Jodo Shinshu as well as other Buddhist traditions to the public and has provided the BCA with its most visible physical public presence as a general Buddhist organization. The question remains, however, as to whether the BCA will choose one over the other or somehow find a middle way between the two.

Bulosan, Carlos (1911–1956)

Born in the Philippines in 1911, Carlos Sampayan Bulosan was a Filipino American writer who published novels, short stories, poetry, and essays. Bulosan was the son of Ilokano parents and grew up in Binalonan, Pangasinan, Luzon in the central Philippines. He was educated in colonial public schools, where he learned English and was exposed to American culture. As a student, he became motivated to leave the Philippines to escape the colonial underdevelopment of his homeland.

At the age of 18 he immigrated to the United States, reaching Seattle, Washington, on July, 22, 1930. Bulosan arrived during the early years of the Great Depression, a time when there were very few jobs and anti-immigrant sentiments were on the rise. He soon left for California and became involved with the labor union movement instigated by left-wing political groups fighting to protect workers from wage cuts, unemployment, and adverse working conditions. Union organizers also challenged discriminatory legislation that sought to specifically exclude Filipinos from working in fish canneries, an occupation they heavily employed.

In 1936, Bulosan was admitted to a hospital in Los Angeles where he underwent several operations to treat his tuberculosis. He stayed in the hospital for nearly two years. Although Bulosan’s health was very poor—he lost most of the ribs on his right side and his right lung—this time in the hospital was when his literary aspirations began to take shape. He read one novel a day and was introduced to the classics of Western literature by two white, female patrons. After he left the hospital, Bulosan frequented the Los Angeles Public Library and continued his literary education. In his introduction to *America Is in the Heart*, the historian Carey McWilliams states that Bulosan had never written a single page when he came to the United States, but once he started, he wrote voraciously. Bulosan said, “I am trying to write every day in the midst of utter misery and starvation.”

During World War II, Bulosan had a vexed relationship with Filipino government officials and other intellectuals that were exiled and living in the United States. He revered and communicated with exiled Philippine President Manuel Quezon but was often critical of his policies. Bulosan’s working-class background in the Philippines, his criticisms of the Philippine government, and his leftist politics put him at odds with other Filipino American political figures and intellectuals such as Carlos P. Romulo, Bienvenido Santos, and José Garcia Villa. Bulosan rejected an offer to write a biography about Quezon and to produce a report on the lives of Filipino workers in the United States, which complicated Bulosan’s already tenuous relationship with other Filipino intellectuals. When he published *America Is in the Heart* in 1946,

he considered the novel a belated response to Quezon's request to write a report documenting the experiences of Filipino American workers.

A victim of the McCarthy era political climate in the United States, most people virtually ignored Bulosan's writing until Asian American activists and scholars rediscovered it in the late '60s and early '70s. Recent research by Marilyn Alquizola has brought to light that the FBI maintained an extensive file on Bulosan and considered him a potential threat to the welfare and safety of the nation because of his political beliefs and the subject matter of his writing. His file indicates that the United States government derailed attempts by Bulosan to find employment, contributing to his poverty and poor physical health. The file also shows the FBI encouraged other influential Filipinos to disassociate with him.

Bulosan's autobiographical novel *America Is in the Heart* is his most well-known work. Throughout the years, critics have noted the many inconsistencies between the events in the novel and Bulosan's actual life. Yet to read *America Is in the Heart* as pure autobiography overshadows his talent as a writer of fiction. He began writing the novel as a collection of tales and stories that he and his fellow countrymen experienced as they labored up and down the West Coast of the United States. The character "Carlos" in the novel symbolizes a collective group—that is, his fellow working-class laborers—rather than only a single person or Carlos Bulosan himself. Scholars of Asian American literature consider *American Is in the Heart* one of the most important works of pre-1980s Asian American fiction because of its groundbreaking and innovative representations of Filipino migrant workers. Bulosan is also considered to be a pioneer of Third World and postcolonial perspectives in Asian American writing. He was influenced by his early involvement in the Labor Movement and his exposure to various issues dealing with racism, discrimination, and class struggle. He often wrote about political subject matters and themes.

Some of his other publications include the short story collection, *The Laughter of My Father*, the mystery thriller, *All the Conspirators* (1998), and the chronicle of the Huk rebellion in the Philippines, *The*

Cry and the Dedication (1995). He died in Seattle on September 13, 1956.

Bunker, Christopher Wren (1845–1932) and Bunker, Stephen Decatur (1847–1920)

The notoriety of cousins Christopher Wren Bunker and Stephen Decatur Bunker stems from their birth: They were the eldest sons of the famous conjoined Chinese twins Chang and Eng Bunker from Siam, who had settled in Mount Airy, North Carolina, and were farming with a work force that included up to 33 slaves, 20 at the outbreak of the Civil War. Staunch Confederates, the Bunker families provided food and clothing to the troops and nursed the wounded. As soon as they turned 18, Christopher and Stephen each joined the cavalry.

Christopher was born on April 8, 1845 and Stephen in 1847. More than a year older than his cousin, Christopher was the first to enlist, doing so on April 1, 1863, in the Thirty-seventh Battalion, Virginia Cavalry; he was called up on September 14, 1863. The Thirty-seventh Battalion, organized in the second year of the war as Dunn's Partisan Rangers, had by then become regular cavalry, and when Stephen joined on July 2, 1864, it boasted 10 companies.

Of the two cousins, only Christopher was among the 2,600 cavalymen under General John

McCausland, who invaded Pennsylvania later that month of July. Sweeping aside Union cavalry, the Confederates took control of Chambersburg on July 30 and demanded payment within three hours of either \$100,000 in gold coin or \$500,000 in U.S. currency to spare the city. The inhabitants failing to raise the money, McCausland destroyed it.

From Chambersburg, the Confederates skirmished with pursuing Federals. Reaching the outskirts of Moorefield, West Virginia, the Confederates—certain they were far ahead—set up camp three miles outside the town in an area that was flat and militarily indefensible. Union cavalry, having successfully ambushed a Confederate scouting party and donned their gray uniforms, surprised and overwhelmed the camp's sentinels, then rode in without raising any alarm. In the mayhem that followed, Christopher became one of the many Confederates who were wounded, captured, and sent to Camp Chase, four miles west of Columbus, Ohio.

Under the charge of Colonel William F. Richardson, the military prison at Camp Chase was surrounded by a 12-foot-high wooden wall. Christopher, housed in a small wooden barrack with 197 other prisoners, slept on a straw-covered bunk and passed his waking hours reading the Bible and carving boats and musical instruments out of wood. Packages from home supplemented his meager rations. His father, Chang, also sent him money with which he could buy items from the prison store. Nevertheless, Christopher was reduced at least once to eating a cooked rat, and on September 9, 1864, he was hospitalized with “variola,” a virus that could have been either smallpox, which was then raging through the camp, or the less serious chicken pox. Finally, on March 4, 1865, he was exchanged for a Union prisoner of war, and his family welcomed him home on April 17, 1865.

His cousin Stephen narrowly missed the debacle at Moorefield. But on September 3, 1864, he was wounded in fighting near Winchester, Virginia. According to Judge Jesse F. Graves, who wrote an unpublished biography of Eng and Chang, Stephen “bore himself gallantly,” going back into action despite his wound. Stephen’s two sons claim that shortly before the end of the war their father was wounded a second time and then captured by the

Union Army. Both Stephen and Christopher lived out their remaining years as farmers in the area where they were born. Christopher died on April 2, 1932 and Stephen on March 25, 1920.

Burlingame Treaty of 1868

The Burlingame Treaty of 1868 was an agreement between the United States and China. Anson Burlingame was a former Massachusetts congressman. After losing his bid for the governorship of the state, he was appointed by President Lincoln as the U.S. minister to the Qing government of China. The United States secured its first treaty with China in 1844 (Treaty of Wangxia). After the Second Opium War (1856–1860) between China and a joint force of Britain and France, China was forced to sign the Treaty of Tianjin and give out more concessions to Western powers. With a charming personality, Burlingame expressed his genial sympathy for China and won the confidence of the Qing rulers.

In 1867, under tremendous pressure from foreign powers, China asked Burlingame to head a delegation to the United States and Europe to negotiate new

treaties with Western nations. Burlingame resigned his post as the U.S. minister and accepted the new appointment from the Chinese. Representing China, he signed a treaty with the United States in July 1868. Known as the Burlingame Treaty, the pact secured great privileges for American merchants and missionaries in China. Two articles of the treaty also provided terms for Chinese immigration to the United States. The first provided that both signatory countries should recognize the inalienable human right to change domiciles and allegiance, as well as the mutual advantage of free migration. The second granted Chinese people visiting or residing in the United States the same privileges, immunities, and exemptions enjoyed by the citizens or subjects of the most-favored nations. These provisions became a major

obstacle for the federal government to ban Chinese exclusion. In 1880, the United States and China entered a renegotiation. The result, also known as the second Burlingame Treaty, granted the United States the unilateral right to limit Chinese immigration, clearing the way for exclusion laws.

Cambodian Americans

Cambodian History to the Mid-Twentieth Century

Cambodian Americans originally came from a country located in Southeast Asia, nestled between the countries of Laos, Vietnam, and Thailand, and the Gulf of Thailand. The immense empire, the Kingdom of Cambodia, stretched over most of Southeast Asia dating back to between 802 and 1431 AD. Its inhabitants had ties to Indian civilization and Hinduism. In this era, magnificent temples were built principally during the reigns of Kings Jayavaram VII and Suryavarman II. Unfortunately the kingdom, then known as Kambuja, began to deteriorate after Jayavaram's supremacy and the temples were nearly destroyed by Kambuja's Thai and Vietnamese neighbors. Kambuja's power steadily diminished until 1863, when France colonized the region, combining Cambodia, Laos, and Vietnam into a single protectorate known as French Indochina. In 1953, Cambodia obtained independence from France by the effective political maneuverings of King Norodom Sihanouk.

Religion, Ethnicity, and Linguistics

Theravada Buddhism is considered Cambodia's official religion, and is the foundation of Cambodian culture; it is practiced by at least 95 percent of the population. Islam, animism, and Christianity also are practiced. Ninety percent of Cambodia's population is ethnically Cambodian. Other ethnicities include Chinese, Vietnamese, hill tribes, and Cham.

Khmer is the official language and is spoken by the vast majority of the population. The written language looks very much like written Thai or Lao, as their alphabets were derived from the Khmer alphabet. Some French is still spoken in urban areas, and English is increasingly popular as a second language. With the recent impact of globalization and transnational influences and exchanges, and open-market enterprise in Cambodia, there is an increased trend and need for the use of English and other languages such as Mandarin, Korean, and Japanese by Cambodians. This is particularly true for young Cambodians, who will need to participate in the development of Cambodia's civil society and the twenty-first century's global economy.

In-Country Demographics

According to the 2008 Cambodian Population Census, the current population is estimated at approximately 13,395,682, with a ratio of 51.36 percent females to 48.64 percent males. The same report also indicates an annual population growth rate of 1.54 percent, with a 2.21 percent increase in urban areas compared to 1.38 percent in rural areas. Cambodia has a fairly young population, with 61 percent younger than 24 years of age, and 76.7 percent younger than 39.

The Khmer Rouge Era (1975–1979)

Cambodia's most grim period—and indeed, one of humanity's darkest hours—happened under the Khmer Rouge, a Communist group that seized control of the country on April 17, 1975, and held it until ousted by

the Vietnamese on January 6, 1979. Under the Khmer Rouge, nearly a quarter of the population of Cambodia was killed, either directly through executions or indirectly as a result of torture, starvation, slave labor, or disease. An estimated 1.7 to 2 million Cambodian men, women, and children perished under the Khmer Rouge. Led by Pol Pot (Saloth Sar), the Khmer Rouge was attempting to transform Cambodia into a utopian society by creating a “pure Cambodia,” a Communist state free of all imperialist influence and social stratification. The Khmer Rouge controlled Cambodia through the regime known as Democratic Kampuchea (DK). The DK’s goal was an ethnically and ideologically pure agricultural society. People with urban backgrounds became enemies of the state, whereas subsistence farmers living in rural areas became personified ideals of the new social order. Essentially all symbols of the West were destroyed. The political differentiation of social classes prescribed by the DK’s ideology was a form of social engineering strategy that ensured their patterns of political authority.

The brutalities the Khmer Rouge inflicted on its own population have left Cambodians survivors around the world tormented by the deep personal losses of loved ones, traditions, and all forms of cultural familiarity—from music and art, to swimming in a river with friends, or simply never having met one’s grandparents or other older relatives. For many, there was also a significant loss of personal property. Survivors and their now-adult children continue to struggle to adapt to daily life. These challenges are exacerbated by the lingering psychoemotional consequence of the genocide and the painful acknowledgment that Cambodian society is still a fragile one. Today, Cambodia’s tenuous political structure is based on a multiparty democracy under a constitutional monarchy.

Cambodians in the United States

The forced migration of Cambodian refugees to the United States and other host countries resulted from the collapse of the Lol Nol government in April 1975 when the Khmer Rouge seized power, aiming to build a utopia through social engineering. The first wave of Cambodian refugees arrived in the United States during the Khmer Rouge regime between 1975 and

1979, supported by federal government programs involving private voluntary agencies (known as “volags”). Volag sponsors assisted refugees with housing, food, and other basic requirements needed for acclimation into a new environment. Prior to sponsorship, refugees were resettled in Camp Pendleton, California, for processing.

Many of those who remained in Cambodia and survived the cruelty of the Khmer Rouge escaped to Thailand or Vietnam in 1979 as “displaced persons”—defined as individuals who flee their home country with a (very often legitimate) fear of persecution by their own governments because of their political ideologies or activities, religious affiliation, or association with groups the government finds threatening. Displaced persons often, although not always, fall under the United Nations’ definition of refugees.

Also in 1979, the second wave of Cambodian refugees began to arrive in the United States; unlike the first wave of refugees, these refugees had personally experienced the crimes perpetrated by the Khmer Rouge. A majority of displaced Cambodians entering the United States in this second wave did so under the 1980 U.S. Refugee Admissions Policy. The 1980 Refugee Act paved the way to establishing the Office of Refugee Resettlement (ORR), which worked closely with the American Council of Voluntary Agencies for Foreign Service, along with numerous local community colleges and other educational institutions, to help the refugees settle in to American life. This initiative also led to other resettlement programs to deal with the influx of Cambodian refugees (as well as refugees from Vietnam and Laos). For example, the Khmer Guided Placement Project (KGPP), or the Khmer Cluster Project, aimed to resettle 300 to 1,000 Cambodians each in a dozen locations with inexpensive housing, ample entry-level jobs, and a community of existing Cambodian families, all focused on minimizing dependency on the welfare system. This project eventually led to a Cambodian Working Group that created Cambodian Mutual Assistance Association Projects (CMAA) to efficiently help the resettlement of Cambodian refugees.

During the 1980s, Asian immigration to the United States doubled the population of Asian Americans, who by 1990 numbered 7,273,662

(2.9 percent of the total U.S. population). The Immigration Act of 1990 sought to diversify immigration to America, which effectively worked against countries with many potential immigrants. This act created a flexible cap of 675,000 immigrants each year, and was created in part to attract more skilled workers and professionals, as well as to attract immigrants from previously underrepresented countries. Both considerations made immigration only more difficult for most Cambodians.

Between 1975 and 1994, 157,518 Cambodians resettled in the United States; of these, 148,665 were refugees, 6,335 were immigrants, and 2,518 were humanitarian and public-interest parolees. As of 2006, there were nearly 239,000 reported Cambodian Americans in the United States (in fact, the population was probably underreported, because of a cultural distrust of formal institutions and reluctance to participate in the Census). According to the same source, the Cambodian American population was highest in California (86,700), Massachusetts (22,106), Washington (13,055), Texas (11,646), Minnesota (7,790), Pennsylvania (6,787), Virginia (6,153), New York (5,720), Rhode Island (5,030), and Georgia (4,592). The Cambodian population estimate in the United States increased to 307,888 (out of nearly 14.7 million Asians) according to the 2010 American Community Survey, and the 2010 Census reports that there are approximately 14.7 million Asian Americans in the United States, representing 4.8 percent of the country's total population of 308.7 million people.

Ongoing Challenges for Cambodian Americans

The Cambodians who survived the Khmer Rouge and the difficult journey to the United States faced additional, significant, challenges after resettlement. These challenges continue to the present day, and are as diverse as they are widespread in the Cambodian American community. In broad terms, these concerns include issues related to immigration and deportation, physical and mental health, and education.

Immigration and Deportation Concerns. In 1996, Congress enacted two major immigration laws—the Antiterrorism and Effective Death Penalty

Act (AEDPA) and the Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA). These eliminated judicial prudence from the refugee removal process and expanded the categories of mandatory deportation, including the deportation of legal permanent residents (LPRs). Cambodian refugees with non-citizenship status are especially vulnerable to the impact of these laws, up to and including deportation.

The 2010 Leitner Report on U.S. deportation policy and the Cambodian American community highlighted the unsympathetic effects of these laws and continued policies that work against the rights of Cambodian refugees (including the separation of families, deportation of nonviolent offenders and the mentally ill, and disruption of the entire community). After the 9/11 terrorist attacks, increased anti-immigrant sentiment paved the way for the U.S. government to aggressively execute its immigration laws; this led to a signed treaty regulating deportation between the governments of Cambodia and the United States in March 2002. Under these two immigration laws, the United States has deported more than 87,000 LPRs total. Between June 2002 and September 2009, the United States has returned 212 such refugees to Cambodia, including a man in his 80s; approximately 1,500 others have orders for deportation.

The signed treaty essentially gave the U.S. government the authority to repatriate any noncitizen of any status who is convicted of an “aggravated felony” in the United States. Once repatriated or deported, a person cannot return to the United States under any circumstances. If these were all dangerous criminals, the laws might sound reasonable, but after the passage of AEDPA and IIRIRA, the definition of “aggravated felonies” shifted dramatically. For example, LPRs are considered aggravated felons if they are convicted of possessing more than 30 grams of marijuana. The impact of these laws has dire consequences, especially for LPRs convicted of “crimes involving moral turpitude”—crimes that traditionally include acts of dishonesty or other “morally questionable behaviors,” including such minor offenses as public urination or riding the subway without a ticket.

The Leitner Report discusses how these U.S. policies conflict with international refugee law and the principles of proportionality and addresses the main

problems with the deportation process. The report highlights the main issues of deportation, makes recommendations for immigration reform, and addresses the difficult aftermath of deportation for deportees/returnees, especially those with mental illnesses and disabilities, and for their families remaining in the United States.

Mental and Physical Health Concerns. Many Cambodians face significant health challenges as well. In fact, research by leading scholars (such as R. G. Blair, G. N. Marshall, L. Nou, C. A. Stevens, Eunice C. Wong, and others) shows that Cambodians experience higher rates of physical, mental, financial, and social distress than other Southeast Asians. These challenges are worse for older individuals and women, but virtually all Cambodians face significant challenges in fully integrating into mainstream American society.

In Nou's 2006 study of Cambodian refugees in Massachusetts, respondents revealed major stressors that they believed put people at risk of developing psychological distress. Three separate social-psychological themes related to stress were identified: cultural dissonance, emotional state of mind and well-being, and personal needs and obligations. They also offered suggestions to healthcare providers serving the Cambodian community, such as greater advocacy services, bilingual and culturally sensitive staff, and integrative medicine, and noted a widespread lack of understanding about human anatomy and healthy lifestyles among Cambodians.

Surviving the Khmer Rouge genocide affected both the individual and collective psyches of the Cambodian people, damaging their memories for life and altering their present and future identities in lasting ways. At the individual level, respondents reported having psychosomatic and psychological symptoms associated with fatalistic thinking, social isolation, and hopelessness in one's life. Thoughts of suicide and feelings of "having a lost soul" were common. At the community level, respondents said that a lack of improvement in poverty and education at the individual, community, and national level causes embarrassment and confusion in identity for Cambodians. They shared culturally based reactions to mental health problems arising out of their experiences; these include

depression, headaches, constant worrying, and having somatic complaints and feelings of being crazy. Respondents recommended putting Khmer Rouge war criminals on trial for their crimes as one healing solution to the perpetuation of the Cambodian trauma. The results of this study are consistent with the findings of other scholars studying the psychosocial well-being of Cambodian refugees.

One shocking physical health disparity among Cambodian Americans is the prevalence of hepatitis B and liver-related deaths. Research has shown that hepatitis B infections account for 80 percent of liver cancer deaths in the Asian American community overall. Cambodians in particular are 25 times more likely to develop symptoms of chronic hepatitis B infection than the general U.S. population, and more than 10 times as likely to be diagnosed with liver cancer.

Among Southeast Asian refugee populations, Cambodians are particularly at risk for developing serious mental health problems because of pre- and postmigration stressors because of their extreme levels of trauma exposure. A 2005 study by G. N. Marshall et al. found that 62 percent of 490 respondents met the standard criteria for PTSD over the preceding year and 51 percent met the criteria for major depression; comorbidity rates were also high: 71 percent of the individuals with PTSD also had major depression, and 86 percent of those with major depression also had PTSD. Depending on which symptoms are measured and how, serious mental health concerns affect as much as 86 percent of the Cambodian refugee population.

These staggering rates of serious mental health challenges are less surprising when we consider that Cambodian refugees have experienced an average of 16 traumatic events during the Cambodian Rouge regime—including food deprivation, physical injury or torture, incarceration, and witnessing killings. This is the highest number of traumas experienced among all Southeast Asian refugees. Research has shown that of all Southeast Asian refugee populations, Cambodian Americans have the highest incidence of illness and the highest risk of developing psychological distress (such as generalized anxiety disorder, panic attacks, major depression, schizophrenia, and PTSD). These conditions have prevented almost all

first- and second-generation Cambodian Americans from leading normal lives. For example, the study by Hinton et al. focuses on the family-directed anger of traumatized Cambodian Refugees. The generational conflicts parents have with their children often have negative somatic and PTSD-related effects on the well-being of parents. Furthermore, health conditions of survivors worsen over time because of the strong cultural stigma attached to discussing mental health concerns—even with close family and friends—and seeking mental health treatment and services.

In turn, this lack of intrafamily communication further divides the family as a cohesive and supportive unit. Parents struggle with significant psychosomatic and psychological symptoms that leave little mental energy for anything else—even their children—whereas those same children struggle to assimilate to American culture and define their Cambodian identity. Thus, the effects of the Khmer Rouge are passed from the first generation of survivors to the second. Speaking at a community forum for genocide survivors, Lakhena Nget, a young Cambodian American woman, summarized this legacy as follows:

My ethnicity is what embroidered my character. [...] My clothes sit heavy off my back and hips, they are my Cambodian identity. Dirt, water and blood is not homogenous with my clothes; it needs to be taken off, examined, washed, and set back to its rich vibrant colors. Dirt is the injustice, water is the institution, and blood is what my people faced three decades ago when 1.7 million of us bled to death from disease, slave labor, starvation or the least painful of them all, instant execution from the bullet to the brain. Still today, many of my people wish they were the ones executed.

According to one participant in Nou's 2006 study, many of the issues in the Cambodian community in the United States reflect a breakdown in social cohesion and well-being. This participant fears that the new generation lacks good role models within the community who can preserve the Cambodian identity, and that the population will fall further into poverty and deprivation as a result of this absence. Another respondent indicated that social stress in the

Cambodian community is linked to a loss of trust in each other; loss of identity resulting from tumultuous, destructive politics throughout Cambodia's history; and Buddhism's lack of moral education and emphasis on ceremonies, instead. This research also discovered widespread agreement among Cambodian Americans about other negative stressors (specifically, having limited English proficiency, intergenerational conflicts within the family, lack of transportation, anxiety over personal safety, and ongoing unemployment and financial worries). Many of these specific negative stressors correspond with major postmigration stressor categories identified in earlier research (e.g., family, unemployment, job, financial, accommodation, cultural, loneliness, and boredom).

There is a critical need for further research on the underlying reasons for the significant physical and mental health disparities between Cambodians and other Asian American populations. To be optimally effective, research into Cambodian American health should address indigenous healing systems and cultural beliefs surrounding physical and mental illness and health. Two common problems with research in this area have been the tendency to treat all Asian Americans/Pacific Islanders as an aggregate group (implying similarities that might not exist), and the small sample sizes caused by the geographic concentration of these individuals in only certain states.

The negative psychoemotional impact of the Khmer Rouge era is already apparent in second-generation survivors, who are now adults (and, often, parents themselves). Failing to address psychological problems following trauma exposure jeopardizes health and mental health recovery, and without interventions there are cultural and societal consequences for individuals and communities alike.

Educational Concerns. Cultural and contextual nuances affect the successful adjustment of Cambodians in formalized education as well. Dinh et al. examined acculturative and psychosocial predictors of academic-related outcomes among Cambodian American high school students in Massachusetts. They pointed out the importance of considering the effects of demographic characteristics (e.g., gender, socioeconomic status, and access to resources) to understand

the contextual challenges that may exist in the lives of Cambodian American youth. One result suggested that immersion in Cambodian culture as well as immersion in mainstream American culture can facilitate academic success, again pointing to the benefits of adopting a bicultural identity on academic performance.

When considering the profile of Cambodian Americans, the academic success rate of Cambodians is particularly troubling when compared to other Asian groups. According to the U.S. 2000 Census data for the current Cambodian adult population ages 25 and over, 52.9 percent lack a high school diploma, 26.2 percent have no formal education whatsoever, and only 9.1 percent have acquired a college degree. Clearly, these educational shortfalls have a direct impact on the earning potential among Cambodian Americans, as indicated by the Census as well.

The Search for Justice

At the time of this writing, the single most pressing judicial concern facing Cambodians around the world is the ongoing prosecution of the former leaders of the Khmer Rouge for crimes against humanity, genocide, and war crimes. This long-awaited legal process, conducted in cooperation with the United Nations, is currently underway in the Extraordinary Chambers in the Courts of Cambodia (ECCC). One remarkable aspect of these proceedings is the inclusion of witness testimonials; thousands of victim-survivors of the Khmer Rouge regime have bravely submitted their first-hand accounts of the atrocities they and their families endured more than three decades ago. For a community that suffered nearly inconceivable loss for speaking out under the Khmer Rouge, this act alone is tremendously empowering.

However, speaking out is only part of the answer to the challenges that continue to haunt Cambodians around the world. Having the opportunity to be engaged throughout the ECCC's proceedings is also critical to the healing process. The results of the ECCC's trials will determine the extent to which the ECCC can foster healing and reconciliation for Cambodians. A successful outcome in the ECCC will reestablish the rule of law in Cambodia, decisively ending the entrenched culture of impunity. This is a

critical step in the promotion of psychological health among all individuals affected by the Khmer Rouge trauma—no matter where they currently reside—and the social health of Cambodia for generations to come.

Conclusion

Cambodian Americans' standing within the Asian American community is often associated with lingering social, cultural, economic, and historical conditions that affect their well-being and adjustment. Researchers and practitioners working with this vulnerable population are encouraged to conduct not only an exhaustive literature review of the history of Cambodian resettlement but also to engage with community leaders and constituents in Cambodian communities in the United States. By doing so, researchers and practitioners would gain deeper insights into the underlying sociocultural issues that affect Cambodians' current realities, ambitions, and well-being—but most critically, they would increase the likelihood of producing research that might be essential to Cambodians as they struggle to escape a tragic past and create a healthier, more promising future for their community.

Cambodian Community in Lowell, Massachusetts

Asian Americans have been among the fastest-growing ethnic groups in the United States having settled in different regions of the country with the largest percentages concentrated on the West and East Coasts of the United States. The label Asian American is used to include different people from countries of Asia that covers regions from South Asia to Southeast Asia and the Far East. Because of this regional variation, Asian Americans are a diverse group of people with a complex and distinct social, cultural, and political history. In this essay one particular group of Asian Americans from Southeast Asia—Cambodians who settled in Lowell, Massachusetts—is described so that one can understand the unique circumstance of their entry into the United States, the strengths and challenges they face as a community, the hardships that marked their collective lives as new ethnics, their cultural distinctiveness, and their economic and cultural contributions in revitalizing the city.

Lowell, Massachusetts, provides a fascinating case study of a Cambodian community in the United States, not only because this city is known for its receptivity to immigrants ever since it was established in the second decade of the nineteenth century as a manufacturing town, but more recently Lowell has provided refuge to war-torn refugees escaping the horrific atrocities committed against them by their own people in Cambodia. The legacy of the war still afflicts many long after it ended and adds to the complexity of their ethnic immigrant experience as Asian Americans.

Brief History

The Refugee Act of 1980 was a significant piece of legislation that allowed Cambodians to enter the United States as refugees eligible for government assistance to aid their settlement. The aftermath of the war in Vietnam embroiled neighboring countries in Southeast Asia, creating a refugee problem that the United States could not ignore. When large numbers of Cambodians entered Thailand to escape the violence that plagued their native land, the Thai government, faced with an intolerable condition of a burgeoning refugee population in their midst, demanded that the United States government redress the situation they had created as a result of their (United States) involvement in the region. The Refugee Act of 1980 provided a legal basis of entry for Cambodian people defined as refugees with provisions of support for basic life necessities and economic self-sufficiency. With the passage of this Act large numbers of Cambodians were admitted to the United States on humanitarian grounds. Lowell was one of the areas of initial settlement for these refugees. The Democratic governor of Massachusetts, Michael Dukakis, sympathetic to the plight of these refugees, had signed an executive order establishing the Governor's Refugee Advisory Council (GAC). Under his administration state agencies in Massachusetts were instructed to provide public assistance to refugees as residents of the state. Job opportunities, available housing, and public resources for refugee assistance were factors that made Lowell an attractive place of domicile for these newcomers. This first wave coupled with secondary migration along kinship lines soon increased the Cambodian population so much so that that in January 1990 Lowell was said to have 18,000 Cambodian residents, becoming the largest group of Asians in Lowell and indeed in Massachusetts. Their presence is very visible throughout the city. Signboards in the Khmer language alongside English signboards hang over shops and businesses owned by Cambodians in many parts of Lowell.

The New People

Cambodian refugees from Southeast Asia came largely in the third wave of immigration. The Southeast Asian immigrants to the area were different from their

predecessor a century before, although some of the processes and challenges they faced were strikingly familiar. Ethnically and racially the Cambodians were distinct from the local residents in town—mainly of European descent. The area residents had little to no knowledge about the Cambodians and thus harbored many misconceptions and prejudices against them. Indeed, the authorities in Lowell had to circulate pamphlets to educate the locals to dispel the misconceptions that at worst were unflattering and false.

The Cambodian refugees and immigrants had to learn new ways of doing things. As one Cambodian leader, Pere Pen, observed, coming to the United States for Cambodians was like instantly making a leap of several centuries without being prepared for it. Their attitudes about housing, clothing, food, family rules of behavior, and so forth had to be readjusted to the environment of the Northeast. Although there were groups of people and institutions that aided them because of their refugee status, Cambodians faced many difficult challenges of resettlement especially in interfacing with the larger institutions of the society such as schools and social service agencies. Language was an issue both at home as well as outside. Not knowing English and the rules of engagement with school officials, the burden of communication was placed on their children who became the power broker for their families. Although the members of the Cambodian community were relieved to be in this country far from the maddening violence of their homeland, freedom was nevertheless a double-edged sword that led to a lot of intrafamily conflict. Teenagers in particular were caught in between two cultures. Gender relations were also affected. Adolescents wanted to be like their peers, whereas their parents wanted them to follow the cultural norms they had learned growing up in Cambodia. Many times children got involved in undesirable activities; the absence of supervision and cultural literacy among elders at home contributed to and compounded the problem. Economically stable families with two parents were able to mentor their children and encourage them to pursue their aspirations and dreams of success. Economically disadvantaged parents in single-parent households could not provide similar encouragement to their children from a lack of

resources. All parents regardless of their station in life valued opportunities of education available to children in the United States.

It has been three decades since Cambodian refugees first came to this country and this region. Children born here or who came to this country at a very young age speak and think very much like their American peers despite their different ethnicity. They think of themselves as Americans first and think their hyphenated identity is something that is bestowed on them by others. Of course these second-generation individuals are multicultural. They share the rules of behavior and culture of mainstream American society; however, they also have a lot in common with their parents and community members. This is inevitable as the

immigration of people and immigration of ideas are processes that feed into each other and occur simultaneously. United States is more multicultural than is recognized by ordinary citizens.

Religion and Rituals

Buddhism is the principal religion in Cambodia. Theravada Buddhism is the school of Buddhism that has been prevalent in Cambodia. Most Cambodians in Lowell are Buddhists although many have converted to denominations of Christianity that aided them in the refugee camps of Thailand and were instrumental in sponsoring their relocation to the United States. Even so, Buddhism provides its followers with

a framework of ethics and rules of behavior to guide them in the business of living. Like immigrants before them, these newcomers sought a place of worship that catered to their spiritual and religious needs, and they started their own temples and monks have played a very significant role in community life. The first Buddhist temple was started in 1980 in an ordinary apartment. There are now two Buddhist temples in Lowell and its surrounding vicinity. However, the temples themselves have been a source of internal and external friction.

The internal friction within the temple community revolves around basically three issues. One has to do with the role of the monks and the services they provide to their community members. There are those who espouse “engaged Buddhism” wherein Buddhist religious practices are used to alleviate the suffering and problems of others. Senior monk Sao Khon has been an advocate of this approach and has used his expertise to address problems pertaining to youth violence related to gang activities. The other issue revolves around the homeland politics. The transfer of funds from the temple (contributions made by ordinary people) for community-building programs in Cambodia has divided monks and Khmer community leaders in Lowell. Yet a third source of conflict involves the larger community where a parcel of land (12 acres) has been bought for construction of a third Buddhist temple. The local residents of the neighborhood in an area known as the Pawtucket Boulevard are against the building of a temple in their neighborhood. They are concerned about the “noise and disturbance of peace” that this would entail. Community leaders point out that the agitation has more to do with ethnic hostility and ignorance of their religion than the issue of peace and tranquility.

As people travel and migrate to distant lands they bring their customs and traditions with them. Cambodian refugees and immigrant are no different. The Cambodian New Year and the Water Festival are two cultural events observed by the new residents of this region with a lot of fanfare. The first time the Cambodian New Year was publicly celebrated was in front of the City Hall in Lowell in the mid-1990s where the mayor of Lowell was also present. The celebration involved introductory speeches by local

officials, dance performances by Cambodian girls and boys, and tables full of food. There was also an entertainment program organized in a large auditorium of the University of Massachusetts Lowell campus in the evening that brought people of all ages in celebration of the New Year. The Cambodian New Year is around mid-April. Visiting the temple, wearing of new clothes, cleaning homes, and offerings of food and gifts to parents are some of the things traditionally done in celebration of New Year in Cambodia. In Lowell restaurants are now booked for the Cambodian New Year celebration and band parties are organized in them. People attending these band parties pay for the available food and entertainment.

The 2012 Cambodian New Year celebration was a big event. It was held on the 12-acre parcel of land earmarked for building the new Buddhist temple. There was a huge tent erected in the center with a stage for artists-musicians and dance performers to entertain the large audience. The main tent was surrounded by smaller tents with tables displaying different items for sale or to offer prayers to departed ancestors and/or seek wish fulfillment for personal gains. One of the tables was for soliciting donations for building the temple. I met two of my students taking and recording donations made by visitors to this table. It is from them that I learned there was a major push to raise funds for the new temple, which was expected to be the biggest Buddhist temple in the United States and modeled along the lines of the Angkor Wat. As I was preparing to leave, my students insisted that I eat lunch and directed me to a table with trays of food. The most amazing aspect of this event was that all the attending guests to the celebrations were not charged any money for the food they ate. I later learned that community members bring food to offer to the monks and also to share it with those attending the event. Free food at a festive celebration is a novelty that one is unlikely to find elsewhere.

The Water Festival is another important cultural event that is observed by the Cambodians in Lowell, and it marks a significant achievement in maintaining their cultural identity so many thousand miles away from their homeland. The Water Festival was first hosted by the Cambodian Mutual Assistance Association (CMAA) in partnership with the University of

Massachusetts Lowell. It was this event that earned Lowell the title of All American City in 1999. The event is organized in August and is fashioned after the annual boat race that takes place in Cambodia in November. The Water Festival is a celebration of water and its essential role in sustaining life. The presence of the Merrimack River that passes through Lowell allowed this event to be organized, and it is the largest Cambodian festival held outside of Cambodia. This event also brings people from different walks of life of the larger community and beyond to participate in the culture and festivities that has been imported by Cambodian immigrants to this region. As many as 60,000 people attend this celebration every year. It has the semblance of a large community fair where different stalls offer different merchandise, ethnic and otherwise. Mouth watering and visually appealing Southeast Asian ethnic foods—from grilled chicken and pork to vegetables—prepared fresh are sold and people wait in lines to be served these delicacies.

Economy and the Community

Migration is never an easy process and one of the challenges Cambodian immigrants confronted upon settlement in this region was accessing economic opportunities. Rates of unemployment and poverty are high among Cambodians according to the Census data 2007–2009. Cambodians are among the poorest immigrant group in the United States with an annual per capita income of \$15,840. Only one ethnic group, the Hmong, is below them nationally. The Cambodian economic profile in Lowell is a mixed one. There are Cambodian social workers, teachers, nurses, and police officers who have made it in the United States. Driving down from the Lowell Connector to the University of Massachusetts Lowell south campus, one can see several small businesses with signs in Khmer and English language on both sides of the road—grocery stores, jewelry stores, restaurants, travel agencies, insurance and law offices. A business directory website of the Cambodian American League of Lowell, Inc.—Cambodian American.com—lists a variety of businesses that Cambodians are engaged in. These include restaurants, beauty and hair salons, jewelry stores, insurance and real estate companies, liquor

stores, electronic and video stores, and travel agencies. This is a testimony to the different kinds of economic enterprises Cambodians are engaged in. Many of these businesses are managed or owned by women. Circulation and sharing of funds for business ventures among Cambodians have been reported by both community leaders and scholars. Because of the lack of access to bank credit or lack of knowledge of existing business practices in the host community this is the only option available to many of these new ethnics. Starting ethnic businesses where the culture and rules of business operation are at variance from mainstream American culture is problematic for Cambodians. Cambodians lack of familiarity with the American system has been noted as an impediment to accessing crucial capital required for starting and sustaining a business venture. In one instance a successful restaurant owner was denied credit by the bank because of the ratio of food cost to sales until it was discovered that the owner had a large family who ate at the restaurant. The restaurant owner also fed families in need of food, which contributed to his food cost. This was a cultural factor not taken into account in the traditional American business model. The loan was finally approved with the intervention of an academic from the surrounding area who explained the cultural ethnic practice to the bank official. Some leaders in the community have noted the absence of infrastructural support available to Cambodian businesses.

The importance of social capital and economic opportunities among immigrants has received much scholarly attention. Social and economic development is mutually interdependent. Several years ago a reporter from the *Lowell Sun*, a local newspaper, had predicted the contributions Cambodians will make in revitalizing the economy of Lowell. In some ways her prediction has come to fruition if one looks at the numbers of community members sustained by community businesses. The storefronts in downtown Lowell are strewn with new immigrant entrepreneurs. Without these new enterprises, Lowell would be more or less a ghost town. People buy from and support businesses of their community members. One area where this is particularly true is food business. Southeast Asians shop in Southeast Asian grocery stores because of the availability of food items they enjoy and are

accustomed to. Indeed many other Asians also patronize these stores because of the vegetables and other food items available in these stores. The importance of these consumers has not gone unnoticed by mainstream businesses. Market Basket, a big grocery chain store in this part of Massachusetts has begun to keep items that cater to these ethnic clients in their stores in Lowell.

In other ways the Cambodian community is also making an economic impact on the city of Lowell. The cultural events initiated by Cambodians in Lowell attract a lot of outsiders from the city and beyond. Tourism can serve as an economic magnet attracting tourist dollars that pumps money into the city's coffers. The impact of the Water Festival being one such instance.

Recently efforts have been made by Lowell City officials in cooperation with community leaders to capitalize on Cambodian culture as a commodity—to bring in tourist dollars to the city. Working with the Massachusetts Institute of Technology (MIT), they are exploring ways to make Cambodian neighborhoods a tourist destination following the models provided by Boston's North End or Chinatown. The project is labeled Little Cambodia. The effort of those involved in initiating the project is to retain the authenticity of Cambodian tradition and culture while at the same time bring in business, jobs, and services that will increase the city's tax base. Many local Cambodian residents are excited about the project and have promised to contribute money toward its success. Many business owners are also interested in this project reported Rasy An, the executive director of CMAA of Greater Lowell, Inc., in a published news article. A number of ideas are under consideration by city officials to beautify and boost the neighborhood's public image. Of course there is also a concern that commercialization of culture may destroy or negatively affect that which is a genuine and essential aspect of their cultural ethos.

Cambodians in Lowell are faced with a new beginning as they have made “the host country their home country.” There are challenges they are facing going through the “birthing” process of being in this new world after leaving the old behind. In a recent conversation, the CMAA executive director candidly spoke of the different challenges facing the community and

the paucity of resources to deal with it. He emphasized the need for economic resources to address the needs of the community, but the economic crunch engulfing the city and the region is making it hard for him to do so. At the same time the presence of Cambodians is noticeable throughout Lowell; it is indeed remarkable what this community has achieved in this short span of time. Their large number is a source of strength, and the various community organizations formed by its leaders are used to give voice to their aspirations. They are not “just victims” but resilient people. Although the city officials and community leaders are working on the blueprint of making Lowell Little Cambodia, the reality is that Lowell already is so by default, an ethnic enclave for people who live there.

Cameron House

Founded in San Francisco's Chinatown on September 1, 1874, the Chinese Mission Home grew out of the contemporary American movements for settlement houses in the United States and missions throughout

the world. A California outgrowth of the Philadelphia-based Women's Foreign Missionary Society, the founding group had originally formed to establish an orphanage in Shanghai. However, when the board could not sustain support for the orphanage, they shifted their goals to helping the victims of "slavery" in San Francisco: Chinese women forced into prostitution. Although saving Chinese prostitutes was the main goal, even from its inception the Chinese Mission Home served a broader range of women and the burgeoning Chinese American community.

The Home was never an official government institution, but in its battle to end Chinese prostitution and its later programs of community service, the Home worked closely with San Francisco authorities. On their missions to save individual prostitutes who had managed to make their plight known to the Home, police officers often accompanied Home staff. The Home's most famous leader, Donaldina Cameron, persuaded authorities to pass laws allowing judges to grant her temporary custody of girls who could otherwise have been claimed by their exploiters. Additionally, before the establishment of Angel Island in 1909 (and after its abandonment in 1940) Chinese women seeking admission to the United States were often paroled to 920 Sacramento Street, the site of the Mission Home, while immigration authorities decided the cases. Moreover, testimony from Miss Cameron often helped secure favorable outcomes in legal cases, so Chinatown residents and prospective immigrants, as well as immigration officials, often sought the help of the Home. Even during the exclusion when immigrants were detained on the Angel Island, workers from the Home visited and provided what aid they could offer. After Chinese Exclusion ended in 1943, new arrivals from China, such as students in need of temporary housing or wives who had to travel from San Francisco to New York, received logistical aid and occasionally temporary lodging from the Home.

The Home provided other services to the Chinese American community. As a missionary enterprise, it held Bible study meetings and helped run the Vacation Allied Church School. It also provided more secular training through Red Cross and language classes held at the Home's various sites. Indeed, in 1909 the Home both successfully lobbied the Board of Education for

an Oriental School for girls and provided the initial classroom space. During the Exclusion Era, when Chinatowns were male dominated, the girls educated and "saved" by the Home were coveted as prospective brides. Opportunities for employment in Home programs provided an alternative to marriage for some Chinese women, such as Donaldina Cameron's assistant and interpreter, Tien Wu, or those who decided to return to China as missionaries. Indeed, to this day, the Chinese Mission Home, rechristened Cameron House in 1947 to honor Donaldina's service from 1894 to 1934, provides youth programs, social services, and job opportunities for San Francisco's Asian community.

Campaign Strategy

Although Asian Americans have long been active as politicians, particularly in the Western Pacific, much of what we know about a discernibly Asian American campaign strategy is based on recent history—in the last 20 years, in particular, as Asian American communities have grown, voting rights have been extended and issues have arisen that have compelled more Asian American candidates to engage the electoral process as a means of defending group interests. The process of competing for public office in the United States is, in one sense, more liberal than in many countries in Asia, where restrictive rules, hierarchical party organizations, and family dynasties often prevent the average citizen from making an effort.

At the same time, because American elections are comparatively more open, they are also dramatically more expensive. The costs are exaggerated because elections tend to be first-past-the-post majoritarian—that is, voters vote for one person and the person who gets the most votes wins. This compels candidates to spend more money appealing to a patchwork of constituencies to build a winning coalition. These two structural facets contributed, along with discriminatory systems of voting and party selection procedures, to maintaining a white hegemony over local, state, and national offices through the first half of the twentieth century. As Asian American electorates have grown in numbers and in socioeconomic status since the 1970s, Asian American candidates have been increasingly able to craft strategies capable of penetrating these barriers and win mainland offices, from school board majorities to governorships. In Hawaii, figures like Daniel Inouye and Spark Matsunaga found success even earlier, but the difficulty that candidates of Asian and Pacific descent have had in elections for the mayoralty of Honolulu is a reminder of how structural barriers can continue to deny access even in contexts where Asian Americans constitute a numerical majority and have a rich organizational heritage.

The barriers embedded in the electoral process have, as a result, tended to favor Asian American candidates that possess an “entrepreneurial spirit”—capable of building their own grassroots networks for fundraising and mobilization. At the local level, where Asian Americans have more often competed, and had a higher rate of success, these networks often develop among professionals and elites within ethnic and panethnic community organizations—business and legal councils, churches, civic nonprofits. Research has shown that at the same time Asian American political networks are not necessarily confined geographically; the “community” is linked nationwide. Therefore, as the costs of competing increase, Asian American candidates can tap into a broader network capable of providing further financial, logistic, and moral support. This risks allegations of “carpetbagging” and invoking the age-old “forever foreign” stereotype in the media and among non-Asian voters, as in the case of Mike Woo’s campaigns for city council and mayor of Los Angeles. But it is also a strategic asset that has allowed Asian American

political entrepreneurs—particularly those in areas where Asian American electorates may be small and dispersed—to become increasingly competitive.

Along with networking, messaging is another important element of campaign strategy. L. Ling-chi Wang (1996) has written that, because of the “forever foreign” tag, Asian American candidates “must go out of their way to prove to the voters that . . . they represent no Asian American interest” and that denying their race and ethnicity “is a precondition for gaining legitimacy and acceptance by white voters and winning elections.” Scholars who have looked at these dynamics in predominantly black and white urban contexts coined the term *deracialization* to refer to this strategy—one where minority candidates deemphasize the particulars of group politics by focusing on pocket-book and safety issues as part of an effort to “transcend race” and appease out-group voters who may otherwise be hostile. Yet because of the triangulated status and multiethnic composition of Asian Americans, and the diverse, multiracial, and immigrant contexts in which candidates often compete, the dynamics can be more complex. In the face of electorates that are either predominantly non-Asian and/or potentially polarized by race, Asian American candidates may indeed limit explicit references to race or ethnicity and articulate an overarching message to appeal to a broad range of voters. Gary Locke’s successful first campaign for governor of Washington in 1996 is often seen as exemplary in this regard, premised as it was on the “American Dream” of an immigrant family and the values of individualism, work, and education.

At the same time, because of the need for unified coethnic and panethnic support to combat resource disparities, Asian American candidates do not entirely discard racial and ethnic appeals; rather, they selectively and often symbolically employ them in literature, campaign appearances, and through ethnic media. The simultaneous management of in-group and out-group messages is referred to as *toggling* and, in constituencies like Little Saigon in Orange County, California, where significant numbers of Asian immigrant voters reside, skillful toggling has been a factor behind the surge in the number of Vietnamese American officeholders since 2000 and the majorities they attained on the city council of Westminster and

the school board of Garden Grove Unified School District. Akin to Locke, Vietnamese American politicians have employed American Dream mythology as part of their “mainstream” message, but in an effort to mobilize older first-generation voters, it is often fused with the symbol of the South Vietnamese flag and, in Vietnamese, with the rhetoric of group history and empowerment. Even in Locke’s case, direct appeals were made to bring more Asian Americans “to the table” and to invoke the ethnic pride of Chinese Americans so that he could solidify his base of support and counter the barriers inherent in being the first Asian American gubernatorial candidate in predominantly white Washington State.

Although these examples may suggest a potential “Asian American campaign style,” it is important to recall that competitive context, partisanship, professional consultants and candidates themselves ultimately determine the strategy of any campaign. Where a Vietnamese American Republican in Orange County, like former State Assembly member Van Tran, may rely on nationalist symbols and rhetoric, a Hmong American Democrat in Minnesota, like former State Senator Mee Moua, may emphasize racial justice, social welfare, and gender issues. Where they overlap is with their connection to the immigrant and minority experience in the United States and their cultural heritage in the Asian Pacific.

It is also important to recognize that Asian Americans play a role in campaign strategies beyond running for office. Prominent Asian American political consultants have been instrumental in designing successful strategies to elect candidates and pass voter initiatives in California, Hawaii, and nationally. Groups like 80/20, cofounded by former Delaware Lieutenant Governor S. B. Woo, have sought to build a national Asian American swing voting bloc to draw the attention of the major political parties to Asian American interests during presidential campaigns. In instances where Asian Americans are instead drive-by targets of racist political campaigns, such as an advertisement run during the 2012 Super Bowl that depicted a Chinese American woman speaking broken English and riding a bicycle in a staged Chinese countryside, groups like APIA vote are instrumental in organizing a campaign in response through the media and direct action.

Cao, Lan (1961–)

Lan Cao is often considered as the first Vietnamese American author to craft a work of fiction on the Vietnamese American experience in relation to the Vietnam War. Though a legal professional by training and practice, she has showed great interest in both creative writing and popular history. Her novel, *Monkey Bridge*, defines her efforts to represent a South Vietnamese perspective on the war and to promote reconciliation and understanding between Vietnam and the United States in the American context of diversity and multiculturalism. In the process, Cao also seeks to articulate the Vietnamese American experience as both a unique and an important part of Asian American histories, sensibilities, and discourses.

Cao was born in South Vietnam in 1961 and grew up during the period when the U.S. military intervention escalated in Vietnam. After Cao emigrated from Vietnam to the United States in 1975, she received her BA in political science from Mount Holyoke

College in 1983 and her JD from the Yale Law School in 1986. Since Vietnam normalized its diplomatic relations with the United States in 1995, Cao has led several delegations of American legal professionals to visit her country of origin. She is currently teaching international business and trade and international law at William and Mary College in Williamsburg, Virginia.

Published in 1997, *Monkey Bridge* revolves around the endeavor of a teenaged Vietnamese American girl Mai Nguyen to solve the mystery of her grandfather's disappearance during the fall of Saigon on April 30, 1975. In unfolding the events that are structured around the mother and daughter relationship and the changing life patterns of Vietnamese Americans in their country of adoption, the novel explores not only the social, linguistic, and cultural differences between Vietnam and the United States, but it also prepares for the revelation that Mai's grandfather was actually a Vietcong soldier who had fought Americans and would make a conscious decision to stay behind in Vietnam. In dramatizing the family secret, Cao resorts to the rhetoric of multiculturalism, which has expanded to surpass political and ideological differences and aims to humanize the Vietcong soldier as a complicated character who could save the lives of the American soldiers in a special force squad because of his son-in-law's friendship with the squad leader on the one hand, but who could kill a Vietnamese landlord in cold blood because of his class consciousness on the other hand. Moreover, Cao also revisits the historical fact that the Communist leader Ho Chi Minh had been fascinated and inspired by the American Declaration of Independence and redefines the Vietnamese Communists as nationalists who had shared the political ideals and visions of the American founding fathers. In this sense, the Vietnam War is reinterpreted not only as a political mistake made by American politicians but also as a case of cultural misunderstanding of the Vietnamese Communists by the American general public. Cao concludes her novel with Mai's determination to excel as a woman and to meet the challenge of the future as she enters a liberal arts college, which in a way evokes Maxine Hong Kingston's work, *The Woman Warrior*.

In addition to creative writing, Cao has also cultivated interest in Asian American popular history and culture. She coedited the book, *Everything You Need to Know about Asian American History* and offered definitions and interpretations of some major events and concepts in Asian American history. As a legal professional without formal training in Asian American studies, Cao wrestles with Orientalist assumptions and generalizations about Asian American culture and history and often caters to the taste of the American general public in the book.

Today, while continuing to write reviews on literature and culture, Cao teaches international business and trade as well as international law at William and Mary College in Virginia.

Cao Zishi (1847-1902)

Cao Zishi (Dzau Tsz-zeh, Dzau Sier Whoa, a.k.a. Charles K. "Charlie" Marshall) sojourned in the United States from 1860 to 1868 and was one of a few Asian participants in the American Civil War. Subsequently, as a missionary of the Methodist Episcopal Church, South, he became a prominent developer of educational and medical mission work in China.

Cao was born in Jiaxing, Zhejiang, China, in 1847. He was the sixth child and youngest of five sons in his family. His father was a physician. His mother died when he was three years old, and he almost died shortly thereafter from smallpox. When he was four years old, his fourth brother was sold to a person living

in Shanghai, and his other siblings left the home in subsequent years. At 10 years old, Cao began to attend primary school but had to discontinue studies after half a year when his father became terminally ill. He was the only child at home to witness his father's funeral. His older brothers then returned home to divide the family assets. After staying with one of his father's friends for about seven months, he ventured out on his own. Meeting his second older brother, he learned about his fourth older brother, whom they set out to find in Shanghai. They could not find him and his second older brother abandoned Cao.

Alone in Shanghai, Cao visited a temple. There he met a former friend of his father who invited him to stay. He then met another friend of his father named Li, who informed him of an American missionary in Shanghai, Rev. James William Lambuth (1829–1892) of the Methodist Episcopal Church, South (1829–1892). Lambuth was looking for Chinese boys who wished to go to America to be educated. Cao expressed interest and Li introduced him to Lambuth. Lambuth took to Cao and arranged for him to stay in his chapel, where he studied both English and Chinese.

In 1859, the wife of Rev. Lambuth, Mrs. Mary Isabella McClellan Lambuth (1833–1904), took Cao with her to America. (Mrs. Lambuth, cousin of Civil War Union general and 1864 president candidate George B. McClellan, and a relative of Grover Cleveland, had been born in upstate New York and migrated to Mississippi to become a teacher to the Lambuth family before marrying her husband.) Apparently when Mrs. Lambuth visited her adopted home state of Mississippi, Cao took the name Charles K. Marshall from a Methodist lay leader and planter of Vicksburg, Mississippi. Mrs. Lambuth left Cao in the care of former China missionary Rev. David C. Kelley, who operated a school in Lebanon, Tennessee and was entrusted with Cao's education. In 1861 Cao was baptized by the Methodist Bishop of Georgia J. O. Andrew (who in 1844 by inheriting slaves through marriage had been the cause of the Southern Methodists' separation, the beginning of cultural alienation between the North and the South).

Upon the onset of the Civil War in 1861, David C. Kelley gathered an undesignated regiment from Huntsville, Alabama, and returned to fight in the Tennessee

Cavalry of the Confederate States of America under the command of Nathan Bedford Forrest. Cao served as an attendant of Kelley. Housed with the black slaves of the other officers, he acquired a strong backwoods mode of expression and Southern vocabulary.

Prior to the February 16, 1862, capture of Fort Donelson, in Nashville, Tennessee by Union Army General Ulysses S. Grant, Cao accompanied Kelley and the Confederate Army in the terrifying evacuation of Fort Donelson. In 1862 Kelley separated from Forrest and stayed in the Army of Mississippi.

In a decisive event in the American Civil War, Vicksburg, Mississippi fell to Union Army General Ulysses S. Grant on July 4, 1863. Meanwhile, J. W. and Mary Lambuth and family had returned to America in 1861, accompanied by another Chinese boy Nee Bau, who took the name John Lambuth after J. W. Lambuth's father, John R. Lambuth. The Lambuths went to their home in Pearl River Community, Madison County, Mississippi in 1862. One daughter, Nettie, died on March 2, 1863, and another daughter, Nora Kate, was born July 29, 1863. In the winter of 1863–1864, the Lambuths, with their son Walter and newly born daughter Nora Kate and accompanied by the two Chinese, Cao Zishi and Nee Bau, left their old home. Taking a carriage and an ox wagon, they made a several month trek to Mary Lambuth's native home in Cambridge, New York.

As his autobiography lists the dates of his Civil War service as from 1861 to 1865, it might be inferred that Cao returned to the service of Kelley in Tennessee after the Kelleys sailed for China in 1864, for the duration of the Civil War. In 1864, Kelley rejoined Forrest's Cavalry in McDonald's battalion.

Although Cao claimed to be a Confederate Civil war veteran many years afterward, evidence is lacking that he personally took up a combat roll. As Kelley was trained as a physician, possibly Cao did emergency medical work during the Civil War.

When the Civil War ended, Cao served as a printing apprentice in Macon, Georgia. Attending a foreign mission conference, he decided to return to China as a missionary. For his missionary preparation, he continued his education in theology and medicine. He moved to New York, where he worked in hotels, candy stores, and tea stores.

Cao enrolled as a sailor to work his way on the half-year journey from New York to Shanghai, where he arrived on June 19, 1869. Upon arrival he applied to become a missionary with the Methodist Episcopal Church, South. He married the sister of Rev. Y. K. Yen of the Shanghai Episcopal Mission. They were sent to work in Soochow (Suzhou) in 1870. There he started a school for boys, which later evolved into Buffington Institute, a precursor to Tong Wu University in Suzhou (now known as Tong Wu University Taiwan and Suzhou University). In 1872 Cao rendered assistance to Rev. and Mrs. Hampden DuBose, who had arrived in Suzhou to establish a Southern Presbyterian mission station.

Cao was ordained in 1876. He undertook medical training under missionary Walter R. Lambuth in Suzhou and also conducted mission work in various towns in the vicinity of Shanghai and Suzhou in Jiangsu Province. He assisted W. R. Lambuth and W. H. Park in the establishment of a mission hospital for men in Suzhou 1883. Together with Dr. Mildred Phillips who had arrived in 1884, Cao established Soochow Women's Hospital in 1887. In the late 1880s, Cao returned briefly to Missouri to further his medical education. He assisted Dr. Park at the Suzhou men's hospital for several years and then undertook his own medical work in Nauzing. His six children were prominent in Sino-Protestant circles; all of them studied in the United States, and his youngest daughter, Li Yui Tsao, became a medical doctor. He died in 1902.

Cayetano, Benjamin (1939–)

When he became governor of Hawaii in 1994, Benjamin Cayetano also became the highest-ranking Filipino American to hold public office in the United States. Cayetano served as Hawaii's governor until his retirement from public office in 2002. He now spends his time engaged in private business, writing his memoirs, and teaching at the University of Hawaii.

Born on November 14, 1939, in Honolulu, Hawaii, to Filipino immigrants, Cayetano showed promise as a young student but ran with a rough crowd and fell into a habit of delinquency that caused his grades to suffer. Cayetano's penchant for hanging out at pool halls and fighting even landed him in jail. Yet despite these problems, Cayetano graduated from Farrington High School in 1958 and promptly married his sweetheart. The couple soon had their first child. The responsibility of a family produced a change in Cayetano. He labored diligently in various jobs, as a junkyard laborer, truck driver, and electrician's assistant. But he realized that in the face of widespread discrimination on the island, he needed to advance his education if he was to have more career options and opportunities.

Cayetano packed up his family and headed for Los Angeles where he found a job as a draftsman and enrolled in Los Angeles Harbor College. In 1966, Cayetano was admitted to the University of California, Los Angeles, graduating with a BA in political science in 1968. Not content to stop there, Cayetano received his JD from the Loyola University School of Law in 1971. With degrees in hand, Cayetano returned to Hawaii, and he was soon admitted to the bar and began

Benjamin Cayetano, Filipino American Democratic governor of Hawaii from 1994 to 2002. (Office of Governor Benjamin Cayetano)

private practice as a trial attorney. Shortly after beginning his practice then-governor John A. Burns tapped Cayetano to head the Hawaii Housing Authority, an appointment that launched Cayetano's political career.

In 1974, Cayetano successfully ran for Honolulu's Pearl City district seat in the state House of Representatives. He served in the state House until 1978 and then won a state Senate seat, which he held until 1986. Cayetano's performance in office earned him the distinction of being one of *Honolulu Star-Bulletin's* 10 most effective legislators for four consecutive years. When serving in the state legislature, Cayetano continued to practice law as a partner in the firm Schutter, Cayetano, Playdon, and served on a number of judicial panels and as an advisor to the University of Hawaii Law Review. Cayetano introduced a number of important legislation during his time in office including the introduction of a bill to create the Pacific International Center for High Technology Research at the University of Hawaii.

Cayetano continued to serve the state of Hawaii from 1986 to 1994 as lieutenant governor, but achieved one of his greatest political successes in 1994 when he became the first Filipino American governor in the nation's history. As a new governor, Cayetano confronted one of the worst financial crises in the state's history and responded by reforming the civil service, reducing the size of government, and reducing taxes but his slim margin of victory in 1998 rested on promises of pending improvements and his future support of business interests.

Despite a weak economy, Governor Cayetano stressed the importance of education and rather than making budget cuts to education, he actually succeeded in boosting teachers' salaries. He found ways of improving teachers' quality through a 2001 contract focused on rewarding teachers not just on the basis of seniority, but also of professional development and growth. Cayetano was also instrumental in reforming the Bishop Estate, a multibillion-dollar trust fund set up to benefit the education of Hawaiian children that had become rife with mismanagement. Education, however, was not Cayetano's only focus when in office and Hawaii continues to enjoy two daily newspapers because of Cayetano's successful efforts to prevent the buyout of the *Honolulu Star-Bulletin* by the larger *Honolulu Advertiser*. Hawaii's economy was also witnessing growth and improvement by the end of Cayetano's second term.

Cayetano left office in 2002 after suffering defeat at the polls by his Republican rival Laura Lingle. His long record of public service earned him numerous notable distinctions including the Distinguished Leadership Award from UCLA's John E. Anderson Graduate School of Management, and the Award for Ethics in Government from the Hawaii Chapter of the American Society of Public Administration. In 1996, Harvard University's Foundation for Intercultural and Race Relations awarded him for leadership and contributions to American government and intercultural relations, and in 1998, he received UCLA's Edward A. Dickson Alumnus of the Year Award for lifetime achievement. After leaving office Cayetano remained amazed at both his good fortune and the privilege he had in serving the people of Hawaii. He remains

engaged in private business and teaches at the University of Hawaii.

Cha, Theresa Hak Kyung (1951–1982)

Theresa Hak Kyung Cha was born in Busan, South Korea, in 1951. At the age of 10, she immigrated to the United States with her family. Cha studied film at the University of California, Berkeley and later went to the *Centre d'Etudes Americaine du Cinema* in Paris, where she studied under several notable figures including Jean-Louis Baudry. Working through multiple mediums of prose, poetry, ceramics, performance, film, video, sculpture, audio, and slide projections, Cha blurs the boundaries between traditional categories. In 1982, the same year that her prose work *Dictee* was published, Cha's life was abruptly ended; she was raped and murdered on her way home.

Since its publication by Tanam Press in 1982, scholarly interest in the text as well as Cha's *oeuvre* has increased. This critical momentum prompted the republication of *Dictee* in 2001 by the University of California Press. In the same year, the University of California, Berkeley's University Art Museum held a retrospective of Cha's work. In 2002, Cha's work was shown at the University of California, Irvine's University Art Gallery and Beall Center for Art and Technology. This art exhibit was coupled with a discussion panel of notable scholars and artists including

Laura Kang, Lisa Lowe, and Yong Soon Min. Since then, Cha's work has been exhibited in Austria, South Korea, and Spain, and *Dictee* has been translated into Korean and Japanese.

Although *Dictee* is generally regarded by scholars as Cha's autobiography, it is not so much an autobiography but a compilation of multiple fragments of voices, images, languages, and memories, which echoes loss. In *Dictee*, Cha engages in articulating severance and loss. The fragmentary nature of text and image in Cha's *Dictee* allows for multilocality and multilinguality. Throughout her multilingual, multigeneric work, Cha strives to articulate loss and oppression associated with war and colonization and to recover Korea's national history from the perspective of women. Through the stories, photographs, and images of individual women, Cha engages in a political process of critiquing Japanese colonialism, Korean patriarchy, American imperialism, and French religious colonization. Cha employs female figures to frame her text in recollecting different events in Korea's history. The protagonist of Cha's multivalent and nonlinear text is a female subject who inhabits a diasporic space of both power and limitation.

Cha's *Dictee* conceptualizes a diasporic mode of identification in which there simultaneously exists nostalgic desire for home and difficulty of such correspondence. Her work as a writer, filmmaker, and performance artist grappled with issues of dislocation and exile that marked her life. Escaping from the Japanese colonization of Korea, Cha's grandparents migrated to China where her mother, Hyung Soon Huo, was born. Cha was born in Busan, South Korea in 1951 at the height of the Korean War (1950–1953). She was born in the midst of the chaos of the war during which South Koreans, including Cha's family, constantly relocated from one place to another to find refuge from the advancing North Korean army. In 1961, Cha migrated to the United States with her family. Both Cha and her mother are foreigners in Korea as well as the land in which they live.

Throughout her *oeuvre*, Cha highlights the distance that separates her from her motherland, her from the audience, the audience from the text, and languages from each other, whereas at the same time signaling a longing for belonging. In her performance

piece *A Ble Wail* (1975), Cha states that she seeks to create “the dream of the audience” through her work. Cha emphasizes the fluidity of movement between the artist, her artwork, and the audience although acknowledging the tensions and misinterpretations that exist between them. Cha’s interest in the audience’s response is also demonstrated in her art piece, *Audience Distant Relative* (1977). This dream of the audience to work through the apparatus, not only of film, but the multigeneric work of *Dictee* is what creates both frustration and pleasure gained from this work of art. Reading the literary text of *Dictee* also engages the audience with more than the literary; through its reference to film, poetry, folklore, history, and geography, *Dictee* develops correspondences with different genres of work and challenges us to reflect on how things are represented and our positions in the apparatus of legibility and visibility.

Cham in America

The Cham in America or Cham Americans are residents in the United States who are ethnically Cham. The Cham are descendants of the Champa Kingdom, a seafaring kingdom that occupied present-day Vietnam since the second century. Champa began to disintegrate after conquest by the Vietnamese beginning in 1471 and disappeared from world maps after the formation of the Vietnamese state.

History

The Cham emigrated from Vietnam and Cambodia to the United States as war refugees in the late 1970s. The Chams were part of the two million refugees that left Vietnam, Cambodia, and Laos between 1975 and

1990. In South Vietnam, Cham people were recruited into the Army of the Republic of Viet Nam (ARVN) during the war. At the end of the Vietnam War in April 1975, many Cham people escaped the country because of fear of persecution after the Communist victory.

In Cambodia, the Khmer Rouge targeted the Cham ethnic minority for genocide from 1975 to 1979. The Cham are the largest indigenous ethnic minority in Cambodia; their descendants escaped Vietnamese incursions into Champa centuries earlier. The Cham comprised 10 percent of the Cambodian population, approximately 700,000 prior to 1975. The Khmer Rouge’s genocidal policies toward the Cham included outright executions and massacres, banning of Islam (the main religion of the Chams), destruction of mosques, splitting up of families, banning of the *hijab* (Muslim scarf), forced consumption of pork upon pain of death, and the banning of the Cham language and names. It is estimated that up to 500,000 Cham Muslims perished during the Khmer Rouge era including the majority of Cham Muslim leaders. Thousands of Cham survivors fled Cambodia because of these atrocities.

Because of the political and violent upheavals in Vietnam and Cambodia, the Cham diaspora was further scattered to various parts of the world including Thailand, Malaysia, France, Australia, and the United States where they often sought political asylum. In the United States, the government resettled the Cham across many states so as not to strain the resources in any one area, similar to other Southeast Asian refugee populations.

Demographics

The Cham are one of the least-documented Asian American ethnicities despite living as war refugees in the United States since the late 1970s. The demographic data on the population is challenging to compile because of the lack of data and research published on the Cham American diaspora. The Cham are not yet recognized as a racial or ethnic group as of the 2010 U.S. Census. There is no clear estimate of the Cham population in the United States; but according to a *2006–2008 American Community Survey* report, there were 891 Cham speakers in the United

States. The Cham language is classified under the Malayo-Polynesian linguistic family. First-generation Cham Americans are often multilingual in Asian languages (Vietnamese, Khmer, and Malay) and engage in transnational practices. Rough estimates of the Cham population in the United States range from 3,000 to 10,000. The United States is home to the largest Cham diaspora outside of Asia.

The Cham population although initially distributed in various locations in the United States in the early resettlement phase is now concentrated on the West Coast. The largest concentrations of Cham people are located in California, particularly in Orange County (Santa Ana, Anaheim, Fullerton, and Pomona), Sacramento (and other cities in the Central Valley), and the Bay Area (San Jose and San Francisco). Outside of California, the largest Cham communities are located in the surrounding Seattle-Olympia area in Washington State, numbering a few hundred.

Religion

The Cham in America are adherents of mainly Islam and Hinduism. There is a small population of Hindu Chams in America who have roots in central Vietnam. The majority of Cham Muslims in America migrated from South Vietnam (Mekong Delta) or various parts of Cambodia. These Muslims are followers of the Shafi'i school of Sunni Islam, which is the branch practiced in most of Southeast Asia. Cham weddings are major social functions that attract hundreds of people and are an opportunity for the community to maintain cultural, religious, and familial ties. There are two cultural festivals known as the *Kate* that take place annually in Northern California (San Jose and Sacramento), which is a practice dating back to the existence of the Champa Kingdom to honor the Cham goddess Po Nagar and ancestors.

Chan, Jeffery Paul (1942–)

Jeffery Paul Chan is an American scholar, critic, and activist. He is professor emeritus of Asian American studies and English at San Francisco State University (SFSU). Chan was born in 1942 in Stockton and raised in Richmond, California. He is a third-generation Chinese American; his father was a successful dentist and his grandfather, a Nevada railroad worker. After attending the University of California, Berkeley, for a short time, he moved to Spain to attend the University of Barcelona where he tutored English and studied Spanish culture. Upon returning to the United States, he received his BA in English and subsequently obtained his MA in creative writing from San Francisco State University. He has also studied folklore at the University of California. He taught at San Francisco State University for 38 years before his retirement in 2006.

Chan is well known for his work on behalf of ethnic studies and Asian American studies curricula. Between 1967 and 1968, Chan participated in the San Francisco State University faculty and student strike, where his ability to communicate and organize effectively allied him with a number of student groups who

were fighting for changes in course offerings, greater opportunities for underprivileged applicants, and the recognition of an ethnic studies curriculum. At the time of the strike, Chan had been asked to teach English part-time; he turned down the offer and instead chose to strike, though he was kept on staff at SFSU. The strike ultimately led to the formation of the Ethnic Studies Department and Chan returned to SFSU and began teaching English. Years later, Chan played a founding role in the Asian American Studies Department at San Francisco State University, eventually serving as department chair between 1970 and 1972 and 1975 and 1984. He was also the founding director of the Combined Asian American Resources Project, Inc.

Chan has championed the inclusion of Asian American literature as a serious field of study within the academic study of literature. In addition to various short stories and essays, Chan, along with Frank Chin, Lawson Inada, and Shawn Wong edited the landmark 1974 anthology of Asian American literature, *Aiiieeeee! An Anthology of Asian-American Writers*. Prior to the publication of *Aiiieeeee!*, Asian American writers and their works had received little mainstream recognition, particularly those writers who focused on nonstereotyped portrayals of the Asian American experience. By recovering and spotlighting the works of writers such as Diana Chang, Carlos Bulosan, and John Okada, Chan and his colleagues sought to reclaim the forgotten histories and stories of these writers. Rejected by mainstream publishing houses, *Aiiieeeee!* was first published by Howard University Press, a historically African American press. The title itself serves as a reference to a popularly stereotyped expression of the “yellow man” when wounded or upset. *Aiiieeeee!* is considered by many Asian Americanists and literature scholars as a foundational text in establishing Asian American writers and their works as legitimate foci of research; the works of many of the authors included in the anthology have since become critical components of the study of Asian American literature.

In addition to his work as an editor and critic, Chan has penned five short stories for various journals, including *Aion*, *Amerasia*, *Yardbird Reader*, and *Bamboo Ridge*. His pieces have also been published in anthologies such as *Asian-American Authors* and *The Big Aiiieeeee!* Much of his writing deals with Chinese

American masculinity and identity and how both are shaped and complicated by the immigration experience; his stories are often told from the vantage of a male character. Because much of Chan’s writings and editorial selections have focused on the experiences of Asian American men, especially his earlier works on recovering and reasserting Asian American masculinity, he has been a controversial figure in the study of Asian American literature.

Chan, with his colleague Frank Chin, is also noted for coining the term “racist love.” Differentiating between unacceptable and acceptable stereotypes, racist love refers to the perpetuation and eventual adoption of acceptable stereotypes by those being stereotyped. When Asian Americans conform to stereotyped expectations of behavior and other norms as established by white Americans, the positive image of Asian Americans that results is racist love, as opposed to racial hatred. The term has been controversial among Asian American scholars.

Beyond his writing and editorial work, Chan has also served as a consultant specializing in Asian Americans for the publishing house Harcourt Brace Jovanovich (now Houghton Mifflin Harcourt), as well as a member of the National Council of Teachers of English, Task Force on Racism and Bias, and Textbook Review Committee. He has also written for Marin County, California’s *The Independent Journal* as a drama critic. His own playscript, *Bunny Hop*, has been produced by the East/West Players in Los Angeles.

Chan, Kenyon

Dr. Kenyon S. Chan is a former president of the Association of American Studies and the chancellor of the University of Washington at Bothell (UW Bothell).

He is a pioneer in the field of ethnic studies, having helped found the Asian American Studies Department at California State University, Northridge (CSUN) in 1990. After eight years as chair of the department and director of the Liberal Studies Program at CSUN, he became dean of the Bellarmine College of Liberal Arts at Loyola Marymount University (LMU). In 2003, Chan left LMU to serve as vice president for academic affairs and dean of the college at Occidental College, where he was also interim president from 2005 to 2006. In 2007, Chan accepted his current appointment at UW Bothell.

Chan is a three-time alumnus of the University of California, Los Angeles (UCLA), receiving a bachelor's degree in sociology in 1970, a master's degree in special education in 1972, and a doctorate in educational psychology in 1974. His research has explored the effects of social and psychological factors on academic performance, and particularly the effects of race on the emotional development of minority students. Chan's publications include studies of Asian American students (several coauthored with his wife, Shirley Hune), as well as an article discussing the growth of Asian American studies as an academic field of study.

An interdisciplinary scholar, Chan taught and conducted research in a number of fields, including education, psychology, and ethnic studies. From 1973 to 1981, he was an assistant professor of education at UCLA. In 1983, he joined the clinical faculty in behavioral sciences in the School of Medicine at UCLA. In 1990, he left UCLA to become founding chair of the Department of Asian American Studies at CSUN. In addition to his roles as dean and vice president at Occidental and LMU, Chan also taught psychology at both institutions.

As one of the highest-ranking Asian Americans in higher education, Chan has often addressed the underrepresentation of Asian Americans in leadership positions on college campuses. Among his goals as chancellor of UW Bothell is the aggressive recruitment of new faculty members of color, as well as the increasing of financial aid to low-income and minority students. In 2007, Chan was honored as a Top Contributor to the Asian community by the Northwest Asian Foundation.

Chan was born in Richmond, California, a working-class community with a small Asian American

population. His father owned a grocery store but was often mistreated by his patrons, sparking Chan's eventual interest in race and social justice.

Chan is married to Dr. Shirley Hune, a professor in the College of Education at the main campus of the University of Washington in Seattle. Hune received her doctorate in American studies from The George Washington University, and has been a faculty member at the City University of New York and at UCLA, where she served also as associate dean of the Graduate Division.

Chan, Sucheng (1941–)

Chan was born in China in 1941 and moved to the United States with her family in 1957. At the age of four, she simultaneously contracted pneumonia and polio. This condition would have a profound impact on the rest of her life. Because she was unable to walk for over four years, she could not play outside with other children. Instead, she became an avid reader of books on all subjects. This love of reading would later flower into a life of scholarship on a broad array of subjects. Chan graduated from Swarthmore College with a major in economics; she received her MA in Asian studies from the University of Hawaii and her PhD in political science from the University of California, Berkeley. When teaching Asian American studies at UC Berkeley, however, she trained herself to be a

historian. Her childhood experience of reading books on a variety of subjects allowed her to make this transition.

As a scholar, Chan is the most productive Asian American historian of her generation. She is the author or editor of 18 books, 5 of which have received awards. In addition, she has published over 30 articles or book chapters. What is most impressive, however, is both the depth and breadth of her work. A brief look at some of her most important books will attest to this. *This Bittersweet Soil: The Chinese in California Agriculture, 1860–1910* (1986) is a sweeping study of Chinese immigrants and their contributions to the building of California's agricultural legacy. Traveling the length of the state to visit county archives, Chan documented for the first time the great extent to which Chinese shaped the California's countryside to help create its centrality to the country's agricultural industry. Her survey text *Asian Americans: An Interpretive History* (1991) broke new ground by offering a comparative history of Asians in America, their relationship to each other and to other immigrant groups, all within the international context of American and European imperialism. Chan's other important books include *Entry Denied: Exclusion and the Chinese Community in America, 1882–1943* (1991); *Quiet Odyssey: A Pioneer Korean Woman in America* (1994); *Hmong Means Free: Life in Laos and America* (1994); *Claiming America: Constructing Chinese American Identities during the Exclusion Era* (1998); *Survivors: Cambodian Refugees in the United States* (2004); *In Defense of Asian American Studies: The Politics of Teaching and Program Building* (2005); *The Vietnamese American 1.5 Generation: Stories of War, Revolution, Flight, and New Beginnings* (2006); *Chinese American Transnationalism: The Flow of People, Resources, and Ideas between China and America during the Exclusion Era* (2006); and *Chinese Americans and the Politics of Race and Culture* (2008). Throughout her scholarly career, Chan has neither written about just one group of Asian Americans nor placed their experiences and histories solely in America but has always situated them in a transnational narrative between Asia and America.

In addition to her scholarship, Chan received two teaching awards, and was the first Asian American

woman to be appointed as a provost in the 10-campus University of California system. She served as provost of Oakes College at the University of California, Santa Cruz. After that, she took a position at the University of California, Santa Barbara where she transformed the Asian American Studies Program there into a full-fledged department, where she served as program and department chair for nine years. During this time, she initiated the Asian American History and Culture series for Temple University Press, the longest-running series devoted to Asian American Studies with a university press, and she still serves on the editorial board of that series. Chan retired from full-time teaching at age 60 in 2001 because the postpolio syndrome from which she has suffered for many years made it impossible to continue teaching. However, Chan's devotion to the field of Asian American Studies has not ended with her retirement. After careful consideration, she decided to donate a large portion of her personal library and papers to the Immigration History Research Center housed at the University of Minnesota. Chan chose this location because she believed that there were sufficient collections of historical documents of the Asian American experience on the West and East Coasts, and so chose the Midwest to house her collection so that more people would have access to the invaluable collection of books, papers, and primary documents.

Chan is now Professor Emerita of Asian American Studies and Global Studies at the University of California, Santa Barbara. She continues to research and write and to mentor younger faculty in Asian American history.

Chandrasekhar, Subrahmanyan (1910–1995)

Subrahmanyan Chandrasekhar, or Chandra, as he was widely and affectionately known, was a theoretical astrophysicist trained in India and England who immigrated to the United States in 1936 and won the Nobel Prize in 1983. His life story suggests some possible reasons why South Asian scholarly and scientific migration streams, initially focused on Great Britain, may have expanded to include the United States during the twentieth century.

Chandra was born on October 19, 1910, the third child and first son of an academically distinguished Brahman family in Lahore, India (now Pakistan). His paternal grandfather, Ramanathan Chandrasekhar, was only the third person from his region to obtain a bachelor's degree. One of Ramanathan's sons, Chandrasekhara Venkata Raman, became an experimental physicist and conducted foundational research on the scattering of light photons that earned him the Nobel Prize in 1930.

Chandrasekhar's father, Chandrasekhara Subrahmanya Ayyar, took a different path to success under British rule. For most male middle or upper-middle class Indians of Ayyar's generation, the point of education was to land a secure job in the British colonial administration of India. C. S. Ayyar worked in the upper levels of Indian Civil Service, first in Calcutta and then in Lahore, where Chandra was born. Chandra's mother, Sitalakshmi (née Balakrishnan), was also a scholar who translated Ibsen's *A Doll House* into Tamil even as she bore and raised 10 children.

With such an exceptional family background in scholarship, Chandra was particularly well positioned for academic achievement. After a few years of home schooling and after the family moved back to Madras in 1921, Chandra enrolled in the Hindu High School in the Triplicane district, believed to be the best school in the city. Regarded as a prodigy, especially in mathematics, Chandra graduated from high school in 1925 and then from the Presidency College of the University of Madras, with a BSc in physics, in 1930. As an undergraduate, Chandra came into contact with such visiting luminaries of European physics as Arnold Sommerfeld and Werner Heisenberg, and entered into

correspondence with Ralph H. Fowler, an astrophysicist at the University of Cambridge, who arranged Chandra's first scientific publication in the prestigious *Proceedings of the Royal Society*.

In recognition of his exceptional scientific promise, the government of India created a scholarship for Chandra in 1930 to attend graduate school in England, which he chose to use to study with Fowler at Cambridge. During his journey to England, at least partially to distract himself from the grief of parting with his family, Chandra concentrated on his work. Extending earlier researches on stellar evolution, Chandra discovered, to his surprise, that only stars below a certain mass would become white dwarfs and thus reach what was widely believed to be the final stage in the life of stars. Indeed, Chandra's finding raised the possibility that there might be further stages of stellar development, that stars whose mass exceeded that limit might go on collapsing indefinitely.

Chandra returned to this topic after he completed his PhD in astrophysics in 1933. He spent several months removing the assumptions that he had made aboard ship to simplify his calculations and replace them with the detailed and tedious computations required to put his theory on a solid foundation. By the January 1935 meeting of the Royal Astronomical Society, Chandra was ready to present his results. Before the meeting, Chandra learned that one of his professors, with whom he had had long discussions about his work, would be speaking immediately after Chandra did, and the title suggested he might be commenting on Chandra's work. Sir Arthur Stanley Eddington was, by the 1930s, the most distinguished astrophysicist in Great Britain. His word carried great weight in astronomical circles. Perturbed because Eddington had refused to discuss what he would say, Chandra read his paper and then sat down to listen.

The great man stood up and proclaimed that Chandra's theory was ridiculous. Using colorful but vague language, he suggested, though he did not explain how or where, that Chandra had made a fundamental error in his physics. Humiliated, Chandra was prevented from responding to Eddington's criticisms, ill-defined though they were. At successive meetings, the leadership of the astronomical community continued to refuse to allow Chandra to defend his theory.

Chandra's social and scientific marginality played important roles, however. By and large, the astronomers believed Eddington because of his eminence, as opposed to the journeyman outsider challenging astronomical orthodoxy. The physicists, on the other hand, who knew that Eddington's criticisms were incorrect, cared little about astronomy, and cared less to be involved in the controversy. Even Fowler, who knew that Eddington was wrong, refused to defend his former pupil. Dejected and confused, with academic politics inhibiting a return to India and recommending against staying in England, Chandra decided to accept a fortuitously timed offer of a permanent position at the University of Chicago's Yerkes Observatory in Williams Bay, Wisconsin.

Before taking up his new post, Chandra returned home for a visit, where he was reunited not only with his family but with Lalitha Doraiswamy, a young woman whom he had known since his college days. Lalitha came from a nationally prominent family that, like Chandra's, valued high educational achievement. After graduating from college, she had earned a master's degree in physics and was teaching at the time of Chandra's return to India, but she gave up her scientific career, against Chandra's urging, after the two were married.

On their way to America, the newlyweds stopped off in England to pack up Chandra's things, but then encountered a snag in their plans. U.S. immigration law forbade the entry of natives of any country in Asia. Racist from conception to execution, America's immigration policy belied its claims to openness, even in the case of so gifted a scientist as Chandra. When Chandra informed his new employers of the quandary, Otto Struve of Chicago's astronomy department, himself an immigrant, contacted the university's legal counsel. The lawyers found a loophole for Chandra, who had taught at Cambridge after the completion of his degree and was thus eligible for an immigrant visa. But for Lalitha to be granted an immigrant visa, the U.S. Immigration and Naturalization Service required a letter from someone in England who knew her personally and could vouch for her good character. Fortunately, an Oxford professor, Sarvepalli Radhakrishnan (later president of India), was a family friend, and agreed to write the letter. Their legal troubles resolved, the two

boarded ship and arrived in Williams Bay just a few days before Christmas, 1936.

At the Yerkes, Chandra's primary task was to develop a graduate program in astronomy and astrophysics, which he did, transforming the observatory and the University of Chicago into a national center for the study of the heavens. As his reputation as a teacher spread, the Yerkes began attracting promising graduate students from all over the world. He and Lalitha became naturalized citizens in 1953.

Chandra formally retired from the University of Chicago in 1980. In 1983, some five decades after he made the initial discovery, Chandra was awarded the Nobel Prize in Physics for what had come to be called the "Chandrasekhar limit" on the mass of a star that could become a white dwarf. His death, in 1995, according to one of his memorialists, "heralded the end of the era that developed the basic physics of the star. He was the most prolific and wide ranging of those who applied hard physics to astronomical problems."

Chang, Diana (1934–2009)

Diana Chang was a Chinese American novelist, poet, and artist. She was born in 1934 in New York City to a Chinese immigrant father and an American-born mother of Chinese and Irish descent. The family

moved to China when she was an infant and Chang spent her younger years in various cities including Beijing, Nanking, Peking, and Shanghai. She attended the Shanghai American School during World War II under Japanese occupation and matriculated at St. John's University in Shanghai in 1941. She left after one year to join the *Shanghai Evening Post*, where she served as a feature writer and on the editorial staff. Because of her objection to Japanese supervision of the paper, she eventually left her post and Shanghai for the United States, returning to New York. Chang attended Barnard College as a transfer student in the class of 1949. As an English major, she excelled in her studies, publishing her poem "Mood" in the prestigious journal *Poetry* during her first year at Barnard. Chang also studied existential philosophy, and took a particular interest in the work of Danish philosopher Soren Kierkegaard. She graduated cum laude in 1949 and was inducted into Phi Beta Kappa.

Chang was awarded a Fulbright fellowship to study in France, where she studied French poetry at the Sorbonne. Upon returning to the United States, she worked as an editor at various publishing houses before quitting to devote herself to writing full-time.

Chang's first and best-known novel, *The Frontiers of Love*, was published in 1956 to critical acclaim; it is considered to be the first published novel by an American-born Chinese American. The novel examines intersections of race, war, and socialism during World War II. The novel's setting in Japanese-occupied Shanghai and its shifting references to both Asian and Western cultural markers reflect a larger theme of exploring stereotypes, ethnicities, and characters' biracial identities. More than any of Chang's subsequent novels, *The Frontiers of Love* explores miscegenation and Eurasian identities at a time when geopolitical conflicts rendered these identities both unstable and confusing. It was republished by the University of Washington Press in 1974 with an introduction by writer and critic Shirley Geok-lin Lim.

In 1979, Chang was invited by Barnard to teach English. She joined the faculty as an Adjunct Associate Professor of English and taught creative writing and interdisciplinary courses in art.

Following the success of *The Frontiers of Love*, Chang published five more novels over the next two

decades: *A Woman of Thirty* (1959), *A Passion for Life* (1961), *The Only Game in Town* (1963), *Eye to Eye* (1974), and *A Perfect Love* (1978). Her later novels rarely focused on issues of biracial identity, and instead involved self-described "WASPs" exploring issues of self-identity.

After completing her final novel, Chang focused on poetry and later, painting. She eventually produced three volumes of poetry: *The Horizon Is Definitely Speaking* (1982), *What Matisse Is After* (1984), and *Earth, Water, Light* (1991). Her art has also been exhibited in solo and group shows. In addition to the Fulbright Fellowship, Chang was also the recipient of the John Hay Whitney Fellowship. She lived in Water Mill, New York, until her death on February 19, 2009.

Chang, Iris (1968–2004)

Iris Chang, a Chinese American author and activist, had written three nonfictional works during her short lifetime and brought attention to important issues in Chinese and Chinese American histories. As exemplified by her second book, *The Rape of Nanking*, Chang had not only examined some forgotten events in their specific historical contexts such as the Nanjing Massacre, but she had also investigated the ways in which such events would continue to impact Chinese and Chinese Americans today.

Born into a Chinese immigrant and scientist family in Princeton, New Jersey, on March 28, 1968, Chang grew up in Urbana-Champaign, Illinois. She received her BA in journalism at the University of Illinois at Urbana-Champaign in 1989, and her MFA at the Johns Hopkins University in 1991. Before Chang became a freelance writer, she worked briefly for the *New York Times* and *Chicago Tribune*.

In 1995, Chang published her first book, *Thread of the Silkworm*, and started her journey of interrogating some important events in Chinese and Chinese American histories. Focusing on the case of the political persecution of Dr. Tsien Hsue-shen during the 1950s, Chang documents how the Chinese American scientist had built his career from a graduate student born and raised in China to the Robert Goddard Professor of Jet Propulsion at California Institute of Technology and questions why the U.S. government had harassed and interrupted the life and work of the talented scientist for five years before his final deportation in 1955. Chang points out the irony that U.S. institutional racism drove away several hundred talented Chinese American scientists and engineers who would help China to update its scientific research, modernize its industrial infrastructure, and develop its missile and nuclear programs from scratch.

Chang's second book, *The Rape of Nanking: The Forgotten Holocaust of World War II*, was released in 1997 to mark the 60th anniversary of the Nanking Massacre and to tell the world that the holocaust had been downplayed and forgotten by the Japanese government because of cold war politics, and that injustice had continued to be inflicted on the victims and the Chinese people. In detailing the horrifying atrocities that varied from decapitation of Chinese POWs to gang rape of Chinese women committed on a large scale by the Japanese Imperial Army in the former Chinese capital of Nanjing in December 1937, Chang raises questions on who should be responsible for these war crimes. She points to Japanese Emperor Hirohito and calls attention to why the Japanese government has continued to downplay the holocaust and how Japanese historians have systematically trivialized the massacre by disputing the exact number of the victims as if it would change the nature of the massacre. For the justice and dignity of the victims and their families, Chang campaigned around the world to demand that the Japanese government apologize for its wartime crimes and suggested that any denial or trivialization of the holocaust would constitute a second rape.

In 2003, Chang's third book, *The Chinese in America: A Narrative History*, was published. This work not only traces the Chinese American experiences to the nineteenth century and details the legal

exclusion and racial violence experienced by Chinese Americans, but it also reveals the author's increasing concern and anxiety over Chinese Americans being caught in the rising tension between China and the United States starting at the end of the Cold War. Drawing from personal accounts of Chinese American individuals and showing strong emotions toward her subject matter, Chang reflects on the future of Chinese Americans with pessimism and resorts to the basic American values of life, liberty, and pursuit of happiness as the final protection of Chinese Americans.

As Chang was doing research on her fourth book concerning the Bataan Death March, the devastating nature of her subject matter finally took its toll on her body and mind. She suffered from severe depression and had to be admitted into Norton Psychiatric Hospital in Louisville, where she would be diagnosed with reactive psychosis and placed on medication for three days before her release. On the morning of November 9, 2004, Chang took her young life with a revolver on a rural road in Los Gatos, California, and ended her painful struggle for historical truth, social justice, and human dignity. In 2005, the Nanjing Massacre Memorial Hall in the city of Nanjing, China, dedicated a statue and a wing to Chang, whose love, courage, and integrity would be remembered by people of Chinese descent and people cherishing truth and justice.

Chang, Michael (1972–)

Michael Chang is a former professional Chinese American tennis player. He won numerous awards,

Michael Chang at the 1989 French Open. (Simon Bruty/Getty Images)

most notably a Davis Cup and a Grand Slam singles title. Chang was known for his exceptional speed and unbreakable determination on the court. He was ranked in the top ten players during the 1990s, and eventually rose to be ranked the number two player in the world.

Michael Te Pei Chang was born on February 22, 1972, in Hoboken, New Jersey. Chang's parents were both native Chinese who had fled to Taiwan after the Communist takeover in 1949. The two then independently moved to the United States in the 1960s before getting married.

Chang started to play table tennis at age six with his older brother Carl before he learned to play tennis. Even at an early age, Michael's family noticed his remarkable competitiveness. At age eight, he smashed his racket after losing to his father in a tennis match. When Michael lost a second-grade spelling bee, he forced himself to write the word he had incorrectly spelled 300 times to make sure he would never forget it.

Like his brother Carl, Chang showed prodigious tennis talent at an early age. The family moved from Minnesota to San Diego, California, so the two brothers could play tennis year round against more advanced competition. He won a number of titles as a junior player and gained international recognition as a teenager. And by 16, Chang's talent had attracted Reebok and Prince Racquets endorsements. He dropped his college plans, earned his GED, and made tennis his number one priority.

His first year as a professional tennis player brought Chang his most significant victory of his career: the 1989 French Open. The 15th-seeded Chang had survived three rounds with his elite athleticism; however, he next faced Ivan Lendl, the undisputed top ranked tennis player in the world. Even his father, Joe Chang, did not believe he had a chance and boarded a plane back to the United States to his job in San Diego before the match began.

Lendl won the first two sets, but Chang won the third and looked to have momentum in the fourth. However, Chang began to get cramps in both calves. As the pain increased, he drank water and ate bananas at every break. He began screaming from the pain as he returned Lendl's shots.

Chang managed to take the fourth set, but as the fifth set progressed, the pain was so severe that he began to consider forfeiting the game. However, Chang did not allow himself to quit. Twenty years later, Chang recounted, "If you quit the first time, the second, third, and fourth times are that much easier to do the same thing."

Instead, Chang tried to change his style of play to circumvent the pain. He hit high lobs, known as "moon balls," and began to serve underhanded with success. Not only had he won over the crowd, Chang had also broken Lendl mentally. Lendl grew increasingly frustrated as he yelled at the audience and began double faulting repeatedly. Chang beat Lendl and would go on to become the youngest-ever player and the first American since 1955 to win the French Open.

Chang remained at the pinnacle of professional tennis for the next 10 years. In addition to his explosiveness on court, Chang developed a reputation for being one of the best tennis baseliners. He won 32 titles, including 8 Masters championships, and was

consistently ranked in the top 10 of the world. Although Chang never again won a Grand Slam, he reached to the finals in the 1995 French Open, the 1996 Australian Open, and the 1996 U.S. Open. Chang's career peaked in 1996 with a number two world ranking.

From 1991 onward, Chang's coach was his own brother Carl. Chang was a member of the U.S. tennis team, which won the Davis Cup in 1990 (Chang's comeback win against the number-seven-ranked Horst Skoff was the decisive victory of the event). However, Chang's signature athleticism was hurt by wrist and knee injuries in 1998. Also during this time Chang attempted to increase his strength by bulking up with weight training. Although he became stronger, the increased bulk caused him to lose much of his speed. His ranking plummeted from out of the top 10 to the top 50 in 1998, and in the next five years he would win only one more tournament title.

Chang retired from professional tennis in 2003. He then completed his master's degree in theology at Biola University. He currently spends his time working with the Chang Family Foundation, a nonprofit dedicated to promoting service and Christianity through tennis. In 2003, Chang also married Amber Liu, a professional tennis player. The two had a daughter in 2006.

Chang's stunning victory in the 1989 Grand Slam and his long and successful career helped disprove numerous negative Asian American stereotypes regarding athletic achievement. His muscular 5'9" frame paired with his unshakable resolve and public Christian faith demonstrated the potential of Asian Americans on the international athletic stage.

Chang, Sarah (1980–)

Sarah Chang is a violinist of Korean descent, who at a young age was hailed as a child prodigy and is known today as one of the most gifted artists in the classical music world.

Born in Philadelphia and raised in Vorhees Township, New Jersey, Chang comes from a musical family: her father is a composer and her mother a violinist and music teacher, both of whom moved to the United States from South Korea in 1979 to pursue musical studies. Chang started learning the violin at age four using the Suzuki Method for music pedagogy. She began to perform in public a year later and was admitted to the Pre-College Division of the Juilliard School to study with the prominent violin pedagogue Dorothy DeLay who trained many world-famous violinists such as Cho-Liang Lin, Nadja Salerno-Sonnenberg, Anne Akiko Meyers, Midori, Gil Shaham, and Hyo Kang—a renowned violinist who immigrated from Seoul.

Chang's performance career began at an extraordinarily young age. When she was eight years old, she auditioned for Zubin Mehta and Riccardo Muti and made her professional debut performing Paganini's First Violin Concerto with the New York Philharmonic Orchestra. In 1991, when she was 10, she recorded her first album, *Debut*, released by EMI Classics, which became the beginning of her exclusive recording career with the label. The *Gramophone Magazine* chose her as the Young Artist of the Year in 1993. By the age of 15, Chang was performing well

over 100 concerts annually and appearing with most of the major orchestras, conductors, and accompanists in Europe and the United States. In 1999 she won the Avery Fisher Prize, given by the Lincoln Center for the Performing Arts in New York to solo instrumentalists who have demonstrated outstanding achievement in music. In addition to her solo performances, Chang has also worked extensively as a chamber musician, collaborating with artists such as Martha Argerich, Leif Ove Andsnes, Stephen Kovacevich, and Lars Vogt.

As a young child, Chang's extraordinary virtuosity and artistic maturity brought her international fame as a *wunderkind*. Although musicians who make their debut at such a young age often have difficulty making the transition from being treated as prodigies to creating their own identity as mature artists, Chang appears to have experienced no such crisis. Her performances and recordings have been consistently productive and highly acclaimed throughout her career. She is especially renowned for her technique and artistry in the violin concertos of Paganini, Mendelssohn, Tchaikovsky, Strauss, and Sibelius. As of 2012, she has recorded 20 CDs and performs throughout the world.

Chang's talent and accomplishments have been widely recognized well beyond the classical music world. She became the youngest person to date to be honored in Hollywood Bowl's Hall of Fame in 2004. In 2006, she was listed as one of 20 Top Women in *Newsweek* Magazine's "Women and Leadership, 20 Powerful Women Take Charge" issue. In 2008 Chang was honored as a Young Global Leader by the World Economic Forum for her professional achievements, commitment to society, and potential in shaping the future of the world. In 2011, President Obama appointed her to the Presidential Commission on Russian Relations and also as State Department Special Cultural Envoy.

Although Chang was born and raised in the United States and has never lived in Korea, she characterizes her upbringing as very Korean and feels a strong connection to the country and its culture. She visits Seoul regularly for concerts with the London Philharmonic Orchestra and to Guangzhou, China, to perform with the Symphony Orchestra as part of the Asian Games Opening Festival. In 2002, she was invited to perform

in Pyongyang, North Korea, with a South Korean orchestra.

Chang is an illustrious example of the prominence of Asians and Asian Americans, especially Koreans, in the world of classical music in recent decades. Early in her career, along with Japanese violinist Midori and others, Chang became an icon of the precocious Asian American who excels in classical music, a stereotype that prevails within and beyond the Asian American community. The strength and the depth of her artistic voice have belied the stereotypical notion that Asian musicians are technically proficient yet lacking in expressivity.

Chang and Eng (The Siamese Twins)

Chang and Eng—the original Siamese twins—are the most famous conjoined twins in history. They are among the most analyzed, racialized, and classed Asian Americans, and their experiences echo notions of civilization and normality, emancipation, and capitalism in nineteenth-century America. Despite being perceived as biologically and racially “alien,” the twins became popular entertainers and successful entrepreneurs, met with crowned heads of state, and inspired scores of literary works as varied as a satirical sketch by Mark Twain to a contemporary monologue by Garrison Keillor. After retiring from show business, against all odds, they became gentlemen farmers, married sisters, and fathered more than 20 children. Moreover, their life history reveals their agency, indomitable spirit, and their different connections with Siam, China, and the United States.

The twin brothers were born in 1811 in a fishing village in Samut Songkhram, a coastal province in Siam (Thailand before 1939). They were joined at the lower part of their chest by a five-to-six inch long band

Chang and Eng, the original “Siamese twins” who headlined in P.T. Barnum’s “freak shows” during the mid-nineteenth century, ca. 1870. (Hulton-Deutsch Collection/Corbis)

of flesh. The term “Siamese twins” originated because of them. Nevertheless, in Siam, they were known as the “Chinese twins,” the offspring of a Chinese immigrant father and a Chinese Siamese mother.

Chang and Eng went to work at a very early age. At age seven, they helped their mother, Nok, support the family, after their father and five siblings died during a cholera epidemic. At age eight, they bought a small boat and became fishermen; they later worked as peddlers, buying cheap goods and reselling them at a floating marketplace. In 1825, King Rama III summoned them to his palace. Dressed in their finest clothes, and each with his hair braided into a queue, a Qing Dynasty male hairstyle, they met the king and the royal family and received a number of expensive gifts from them. The twins later sold these gifts and used the money as capital to expand a new business they had recently begun: selling preserved duck eggs. The business was a success. In a single year they sold

12,000 eggs. Because of their business acumen, they and their family lived a comfortable and peaceful life.

The twins’ life course changed dramatically after Robert Hunter, a British merchant, “discovered” them. Hunter and Captain Abel Coffin, an American, viewed the twins as a bankable commodity that could be exported and consumed by the public. The United States and Great Britain, at that time, entertained ethnocentric ideas about “freaks” and “uncivilized others” to justify claims of cultural superiority, normalcy, and civility. Captain Coffin convinced Nok that he and Hunter should be allowed take her sons to exhibit in America and Great Britain for two-and-a-half years. Hunter and Coffin later claimed that they paid Nok \$3,000, but the twins said that their mother received only \$500.

On March 31, 1829, at age 18, Chang and Eng left Siam on a ship bound for America. They began learning to speak English on board. After a voyage of more than four-and-a-half months, the twins arrived in Boston on August 16, 1829. Within a week, Chang and Eng were put “on exhibition.” To promote the show, Coffin used doctors’ reports, newspaper stories, posters, and handbills to kindle public interest. He regarded himself as the twins’ master, and the twins as his hot property. The twins were an immediate sensation, and their performances made an unexpectedly large amount of money.

After touring the United States for two months, they continued on to Great Britain. Before their ship set sail, Coffin purchased a \$10,000 life insurance policy on Chang and Eng and brought along embalming chemicals to preserve the corpse, in case they died during the journey. Coffin made sure that he would continue to profit from the twins either dead or alive. He also bought tickets for the twins as his servants, at half price, to save \$100. When Chang and Eng complained about being put in the steerage of the ship and being given second-rate food to eat, Coffin told them he had bought them first-class tickets, but that the first-class dining room was too crowded for them. The truth was that this hard-nosed businessman really did not care very much about the twins’ comfort and health, because his risk was covered by the insurance policy.

Wherever Chang and Eng were put on exhibition, spectators could look at them and ask them questions. Sometimes they would perform somersaults or back flips, play chess or badminton with a member of the audience, and occasionally they would lift the heaviest man in attendance and carry him around on stage. Racism was on exhibition as well. Some viewed the twins as exotic monsters. One writer of verse “complimented” them in a poem, addressing them as “my yellow friends.” The twins’ manners and intelligence, however, changed some people’s view. One American journalist wrote that he admired the twins and described them as the world’s greatest travelers.

Doctors, too, were fascinated by the twins. Medical experts and leading surgeons in major U.S. and European cities weighed in with their opinions, trying to understand if the twins were one or two, and if they could be safely separated. For the first few years, the twins did not want to be separated, regarding themselves as one. In their letters, they referred to themselves as the singular “I” until 1832. When Sir Astley Cooper, a professor at the Royal College of Surgeons in London, was asked if the twins could be separated, his response was “Why separate them?” From a medical point of view, he considered separating the twins too risky; from a business standpoint, he understood that separating the twins would be ruinous, since they could no longer be exploited as “freaks.” Profits could be maximized not just through labor but by making use of difference.

After touring for 14 months in England, Scotland, and Ireland, Chang and Eng came back to New York and continued their tour in America. In 1832, when they turned 21, the twins announced that they would end their relationship with Captain Coffin. Mrs. Coffin asked them to stay until her husband returned from the East Indies and reminded them how much she had done for their comfort, and how much she loved them. The twins asked Charles Harris, their manager and friend, to write Mrs. Coffin on their behalf, and say that they believed the only thing she loved about them was the money they had made for her.

There were several reasons why the twins struck out on their own. First, they regarded the Coffins as being too stingy with traveling expenses and allowances, even though the Coffins received a

disproportionate amount of their earnings. Second, they claimed that the Coffins had worked them too hard and treated them as inferiors. Third, they disliked being told what to do. Most important, they believed that they had the legal right to leave when their contract expired. The twins protested their mistreatment and exploitation; they fought for respectability, humanity, and freedom.

After leaving the Coffins, Chang and Eng continued to tour until 1839, when they visited Wilkesboro, North Carolina, a rural community close to the Blue Ridge Mountains. They instantly fell in love with its natural beauty and the people there. By that time, at age 28, they had saved up about \$10,000, enough money to embark upon a new career, quitting the emotionally draining and physically exhausting exhibition circuit. On October 17, 1839, they paid \$300 for 150 acres of land in Trap Hill, Wilkes County, North Carolina.

Five days before they bought the land, Chang and Eng applied for American citizenship in Wilkes Superior Court. They did not have a family name, for ordinary Siamese did not use surnames until 1913. Fortunately, in North Carolina, a family name was not required to become an American citizen. Chang and Eng shrewdly integrated themselves into the American political and economic system by becoming citizens, owning land, and voting on at least one occasion for opposing candidates. Later, the twins converted to Christianity and adopted the surname Bunker.

Like other wealthy gentlemen farmers in North Carolina, Chang and Eng bought and owned slaves. Slave labor was the backbone of the plantation economy. They grew wheat, rye, Indian corn, sweet potato, oats, peas, beans, and potatoes, as well as fruit. Chang and Eng produced tobacco and became known for being “scientific” farmers, skilled at breaking horses, and excellent carpenters, building their own house and helping construct a church. Even after adopting an American lifestyle, for many years each wore his hair in a queue, the key marker of being Chinese at that time. Although they never touched China’s soil, they followed certain cultural practices prevalent among overseas Chinese. At the same time, they also identified with Siam and the United States. Siam

was where they were born and grew up. The United States was where they became American citizens, celebrities, and subjects of intense public scrutiny.

In 1843, Chang and Eng proposed marriage to Adelaide and Sallie Yates from Trap Hill, North Carolina, after having known the two sisters for nearly five years. The news about their courtship and marriage was met with overwhelming disapproval; some residents could not bear the thought that each “normal” girl would have to sleep with her future husband and her brother-in-law at once. By proposing marriage, Chang and Eng contested prevailing notions of marriage, privacy, and racial purity. In North Carolina, the law banned marriages between whites and blacks and whites and Indians, but there was no law forbidding “Orientals” from marrying whites. Despite the enormous pressure on them, the two sisters would not give up the idea of marrying the twins, at one point, even planning to elope. Finally, a double wedding was held for them at a local Baptist Church. At age 32, the twins again defied all the odds and got married.

Chang and Eng had kept in touch with their natal family, although they never made it back to Siam for a visit. When they had finally decided to go, their plans were disrupted by the Civil War, in which two of their sons fought for the South.

At the end of the Civil War, they sustained a severe financial setback, when Confederate currency became worthless and their slaves were freed. But instead of dwelling on this loss and worrying about how to support their large families, at age 54, Chang and Eng went back on the road and performed across the United States and Europe. Because many people had seen them perform decades before, they took their manager’s advice and repackaged themselves. First, they brought two of their children with them to display how the marriage between Siamese twins and two sisters could produce “normal” children. Second, they advertised that they were to consult with the best doctors in Europe to determine the possibility of being separated. The tour was a financial success. Returning to the United States from Russia in 1870, Chang suffered a stroke. By that time, Chang and Eng had a net worth of about \$30,000.

The twin brothers died on the same day at age 62 at home just outside of Mount Airy, North Carolina,

in 1874. They had been married for 31 years. Eng’s widow, Sallie Bunker, died at age 70 in 1892. Chang’s widow, Adelaide Bunker, passed away at age 94 in 1917. Their descendants, estimated to be between 1,500 and 1,800, are spread throughout the United States and beyond.

The twins’ legacy lives on. They continue to be remembered and to receive honors to this day, not just by their offspring, but by authorities in Thailand and United States. In 1994, a statue of their likeness was erected in Samut Songkhram, Thailand. In July 2001, Surry County, North Carolina, honored Chang and Eng by dedicating “the twin bridges” to them as a memorial for their contributions to the county and to western North Carolina.

Chang-Díaz, Franklin Ramón (1950–)

Franklin Chang-Díaz is a research scientist and former National Aeronautics and Space Administration (NASA) astronaut. He is the only Latin American to fly on a space mission and, having flown on seven spaceflights, is tied with Jerry L. Ross for the most trips to space. He logged over 1,601 hours in space and 19 hours and 31 minutes in space walks. Chang-Díaz invented a rocket-based plasma propulsion technology known as Variable Specific Impulse

Magnetoplasma Rocket (VASIMR). After retiring from NASA, he became founder and CEO of Ad Astra Rocket Company. He holds dual United States and Costa Rican citizenship, having become a naturalized American in 1980 and was conferred as Honorary Citizen of Costa Rica in 1995.

Franklin Ramón Chang-Díaz was born in San José, Costa Rica on April 5, 1950. His parents are the late Ramón Chang-Morales, who was Costa Rican with Chinese ancestry, and María Eugenia Díaz de Chang. After finishing high school in Costa Rica, Chang-Díaz moved to the United States to pursue a longtime childhood dream of becoming an astronaut. He stayed with a relative in Hartford, Connecticut and attended high school there to learn English. Following graduation from Hartford High School, he attended the University of Connecticut, where he received a Bachelor of Science in Mechanical Engineering in 1973. He went on to earn a doctoral degree in Applied Plasma Physics at the Massachusetts Institute of Technology, where he conducted research on controlled fusion and fusion reactors. Chang-Díaz continued his research on control systems for fusion reactions, inertial and magnetic containment fusion, and rocket propulsion using high-temperature plasmas at Charles Stark Draper Laboratory.

Chang-Díaz had a 25-year career at NASA, during which time he continued his research on plasma propulsion technology and flew on many space missions. He began training and evaluation as an astronaut candidate in 1981. Prior to his first space flight, he was responsible for flight software checkout at the Shuttle Avionics Integration Laboratory and worked on early research on designs for a Space Station. He also was part of the support crew and orbit capsule communicator for a 1983 Spacelab mission and was the leader of the astronaut support team at Kennedy Space Center. He flew on seven NASA space missions as an astronaut: Space Transportation System (STS) 61-C (1986), STS-34 (1989), STS-46 (1992), STS-60 (1994), STS-75 (1996), STS-91 (1998), and STS-111 (2002). From 1983 to 1993, Chang Díaz was a visiting scientist with the MIT Plasma Fusion Center, where he continued to work on a plasma propulsion program that would allow space shuttles to travel further and much faster. From 1993 to 2005, he was the director

of the Advanced Space Propulsion Laboratory at the Johnson Space Center.

Throughout his career, Chang-Díaz has promoted the development of science and space technology in Latin America. With his brother, Ronald Chang-Díaz, he was instrumental in the development of the First Space Conference of the Americas in 1990. He also helped to found the Chaga Space Project, a collaborative international effort to study the potential inhibitors of the microgravity environment of space on tropical diseases such as Chagas disease. He is also involved in efforts at economic development in Costa Rica.

After leaving NASA, Chang-Díaz founded Ad Astra Rocket Company, which works on the development and commercialization of applications of VASIMR technologies. He is married to Dr. Peggy Marguerite Stafford and has four daughters.

Chao, Elaine L. (1953–)

The year 2001 marked the first time that an Asian Pacific American woman served on a president's cabinet in the nation's history. Appointed by George W. Bush to head the Department of Labor, Elaine Chao, an immigrant from Taiwan, became the only member of Bush's original cabinet to serve out all eight years of the president's administration, becoming the longest-serving Secretary of Labor since World War II. Chao is currently with the conservative think tank the Heritage Foundation, a post she held prior to her appointment as secretary of labor.

Born on March 26, 1953, in Taipei, Taiwan, Elaine Lan Chao immigrated to the United States at the age of eight with her mother and sisters. Chao's family was reunited in Queens, New York where her father had been studying at St. John's University.

Elaine Chao speaks to reporters after President-elect George W. Bush named her as his choice for secretary of labor on January 11, 2001 at the Bush-Cheney transition headquarters in Washington, D.C. (Department of Labor)

Working three jobs to support his family, Chao's father eventually built a successful shipping enterprise and moved the family from Queens to a more affluent neighborhood on Long Island. Her father's hard work and success instilled in Chao a belief in values of fortitude, meritocracy, as well as a faith in the importance of education.

When Chao first arrived in America she spoke no English. She was a diligent student, however, graduating near the top of her high school class. After high school, Chao attended Mount Holyoke College where she received a bachelor's degree in economics in 1975. Remaining in Massachusetts, Chao continued her education studying at Harvard's School of Business and eventually earning her masters in business administration in 1979.

Having completed her degree, Chao took a job as a senior lending officer with New York's Citicorp, a

position she held from 1979 to 1983. Chao got her first taste of public service when she was selected to be a White House Fellow working in the Office of Policy Development from 1984 to 1986, specializing in transportation and trade issues. Chao performed well in her post despite the challenges involving PAN flight 103, the Exxon Valdez spill, the San Francisco earthquake, and Hurricane Hugo presented. Chao returned to private industry in 1986, accepting a position as vice president of Bank of America's Capital Market Group, a post she held until 1988.

In 1988, Chao reentered public service as the deputy administrator of the Federal Maritime Administration, but she held the post only until 1989, at which time she was appointed deputy secretary of the Department of Transportation. Chao soon left her position with the Department of Transportation in 1991 to head the Peace Corps. Although some criticized the decision to put a conservative like Chao at the helm of the Peace Corps, Chao defended her appointment by arguing that her firsthand experiences with life in a developing country made her an ideal director. During her one year with the Peace Corps, Chao proved instrumental in establishing programs in the newly independent states of the former Soviet Union.

Following George H. W. Bush's 1992 electoral defeat, Chao stepped down as the director of the Peace Corp and accepted a position as the head of United Way. Chao is credited with cleaning up an organization rocked by scandal. The financial improprieties of her predecessor William Aramony had cost the organization millions of dollars in donations, and there was similar outrage of Aramony's exorbitant salary of \$390,000. Chao slashed her own salary and engaged in an aggressive campaign to rebuild public trust in the organization. Among other reforms, Chao implemented new financial management controls and comprehensive reviews of services and programs. Having restored public confidence and fiscal responsibility, Chao announced her resignation from the United Way in 1996 and soon took a position as a distinguished fellow at the Heritage Foundation, a conservative think tank in Washington D.C. By 1998, Chao had been appointed chairwoman of the Foundation's Asian Studies Center Advisory Council.

Chao's biggest accomplishment came in January 2001 when she was appointed to a cabinet

secretary level position in George W. Bush's administration. As the Secretary of Labor, Chao became the first Asian Pacific American woman to serve on a president's cabinet and was the only member of President Bush's cabinet to serve out the entirety of his administration. When serving as Secretary of Labor Chao successfully updated white-collar overtime regulations under the Fair Labor Standards Act, which had been on the agenda of every administration since 1977. The reforms provided greater overtime protections for many low-wage workers. The Department also revamped its worker-training program to improve assistance to dislocated and unemployed workers and made the protection of soldiers' civilian reemployment rights a top priority. In a similar vein, Chao's Department updated the Family Medical Leave Act, implementing for the first time job-protected leave rights for American military families to care for wounded soldiers.

Since President Bush's departure from office, Chao has returned to her position as a distinguished fellow at the Heritage Foundation. She is the recipient of numerous awards for professional accomplishment including 31 honorary doctorate degrees from colleges and universities from across the nation. Chao won the Outstanding Young Achiever Award from the National Council of Women in 1986 and the Harvard University Graduate School of Business Alumni Achievement Award in 1993. Chao is married to Senator Mitch McConnell of Kentucky.

Charr, Easurk Emsen (1895–1986)

Easurk Emsen Charr (Cha Ui-sok) was a Korean immigrant whose fascinating life reflected the many twists and turns of Korean American history. His autobiography, *The Gold Mountain: The Autobiography of a Korean Immigrant, 1895–1960*, initially self-published through a vanity press, has become a classic in Asian American literature. In addition, Charr's name has an important place in U.S. naturalization laws: in the Petition of Easurk Emsen Charr (1921), the Federal District Court of Missouri ruled that the naturalization law that granted citizenship to veterans who served during World War I did not apply to Asians and denied Charr's petition to become an American citizen. This court case would provide an important precedent for U.S. Supreme Court cases, including *Ozawa v. United States* (1922) and *United States v. Thind* (1923) that excluded Asian immigrants from naturalized citizenship. Korean immigrants could not become naturalized citizens until the passage of the McCarran-Walter Act of 1952.

Charr was born in 1895 in the northernmost part of Korea along the Yalu River at a time when Japanese imperialism, domestic political unrest, and American missionary influence were intensifying. When Charr's family was living under the protection of "Big Uncle," the eldest brother of Charr's father and the patriarch of the extended family, the entire extended family converted to Christianity under the influence of the American Presbyterian missionary Reverend Horace Grant Underwood, who played a key role in establishing Yonsei University. Charr's contact with the Presbyterian missionary in Korea would have a profound impact throughout his life. In 1904, at the tender age of 10, Charr set off to Hawaii, without his parents, with the determination that he would eventually make it to *Mee-Gook* (the United States) to secure a proper Christian education and to return to Korea as a missionary.

After six months of working at a sugar plantation in Hawaii, his family raised enough money to pay Charr's passage from Honolulu to San Francisco. In San Francisco, George Shannon McCune, a Korean-born Presbyterian missionary whose father George M. McCune was one of the most influential American missionaries in Korea, wrote a letter of introduction and helped Charr enroll in Park College Academy, a Presbyterian high school in Parkville, Missouri. Although Charr's education was interrupted by poor health and military service, he eventually received his high school and college degrees, completing his bachelor's degree in 1923. During his leave from Park College Academy, he lived in Claremont, California, and registered for the draft at nearby Pomona as the United States declared war on Germany and Austria. Charr was eventually drafted into the U.S. Army on April 15, 1918, when he had returned to Parkville. He served in the Medical Corps at various military bases and hospitals near Washington, D.C., until he was honorably discharged on November 15, 1918.

In 1921, when Charr had returned to Parkville to resume his study, he applied for naturalized citizenship after reading in a newspaper that the Federal Court in Los Angeles had granted a Japanese American world war veteran naturalized citizenship. Supported by a Park College administrator, Dean Sanders, and a sympathetic lawyer, Cameron Orr, Charr filed a petition for naturalization at a Circuit Court in St. Joseph Missouri. To his surprise, he received the court decision not from the Circuit Court in St. Joseph but from the Federal District Court in Kansas City. To Charr's dismay, his petition was denied on the grounds that his "Oriental" status made him ineligible for American citizenship regardless of his veteran status. In Charr's autobiography, he is reluctant to charge the U.S. government with racism—in a heartbreaking understatement, he reflects on the differential treatment between white and Asian veterans and notices, "There was inconsistency there, I thought." There is no mention of appealing the decision.

After graduating from college, he enrolled in the University of Kansas Medical School and then the University of Illinois, Chicago, School of Pharmacy but did not obtain degrees from either institution. When in Chicago, he met his wife, Evelyn Nien-wha Kim, a Korean nursing student living in Dubuque,

Iowa on a student visa. In 1928, the couple married, and their daughter, Anna Pauline, arrived two years later. In 1932, their lives, however, would be interrupted by the Great Depression as Charr lost his job as a draftsman at Rand McNally in Chicago, and the family moved to San Francisco where Charr worked at his cousin's barber shop. In 1932, as the nation turned increasingly hostile toward immigrants, Evelyn—with a new-born baby, Philip—faced a deportation order as her student visa was long expired. Charr was aware of Evelyn's precarious status, and he had repeatedly attempted to become a naturalized citizen and adjust her status. However, each time, naturalization officers denied his application on the same grounds: as an Asian, Charr was an "alien ineligible to citizenship" regardless of his veteran status.

With Evelyn now detained in Angel Island and facing a deportation date of November 11, 1932, Charr, as a veteran and a Legionnaire, sought and gained the support of the American Legion to gain an order of stay for Evelyn's deportation order. After intense pressure from friends and supporters that included officers of the American Legion, administrators and alumni of Park College, and leaders of the Presbyterian Church, he was able to secure an indefinite stay for Evelyn's deportation order. The same effort finally resulted in Charr obtaining his long-coveted American citizenship on January 6, 1936, as the U.S. Immigration Office reinterpreted the naturalization laws covering world war veterans to include Asians. With his citizenship, Charr applied for the Federal Civil Service examination and started his civil service career on November 7, 1939 as a draftsman for the U.S. Department of Agriculture. He would later work for the Department of Interior and his assignment with the Bureau of Indian Affairs would leave him a lasting impression of America's continuing struggle with race and racial inequality. His work took him from Northern California to Nevada, and his last assignment was in Oregon where he retired and passed away in 1986 at the age 91. He ends his autobiography with an explanation for why he did not return to Korea (there was no one left to return to), a long list of his children's American accomplishments, and a blessing for the United States of America, his country, his home.

Chaudhary, Satveer (1969–)

Satveer Chaudhary is a lawyer and former Minnesota state legislator. Elected in 1996 as state representative for District 52A, encompassing the northern suburbs of Minneapolis and St. Paul, Chaudhary was the first Asian American member of the Minnesota legislature. In 2000, he became the first Indian American state senator in U.S. history, and in 2002, was the youngest member of the State Senate at age 33.

Satveer Chaudhary was born on June 12, 1969, in Minneapolis to immigrant parents from India of Jat heritage. A lifelong resident of the region he represented, Chaudhary grew up in and currently resides in Fridley, Minnesota. He earned a bachelor's degree in political science from St. Olaf College in Northfield, Minnesota in 1991, a law degree from the University of Minnesota Law School in 1995, and he also studied British and American foreign policy at Oxford.

After an unsuccessful bid in a July 1995 special election for the Minnesota House of Representatives, Chaudhary was elected to the legislature in 1996. During his service from 1997 to 2000, in addition to numerous committee appointments, he was chair of the House Driving While Intoxicated (DWI) Subcommittee, and vice chair of the House Civil and Family Law Committee. As a legislator, Chaudhary considered himself to be a representative of the “mainstream,” rather than an ethnic community. He had particular interest in the issues of education; fish, game, and wildlife habitat preservation; and economic development.

In 2000, Chaudhary was elected to the Minnesota State Senate, where he served from 2001 to 2010. He was vice chair of the Environment and Natural

Resources Committee (2007–2010) and a member of the Crime Prevention, Education, Finance, Transportation, Capital Investment, Judiciary, Agriculture, and Veterans committees. From 2003 to 2006, Chaudhary served as the majority whip for the Democratic-Farmer-Labor (DFL) Party of Minnesota. He was instrumental in establishing a sister-state partnership between both traditionally agricultural states of Haryana, India and Minnesota in 2007—the first such relationship between a U.S. state and an Indian state.

Chaudhary's tenure in the senate was marked with controversy over ethical concerns. In 2008, a senate ethics panel investigated charges that Chaudhary had a conflict of interest when he approached Arctic Cat and a carpenter's union to sponsor his cable television show despite dealing with legislative issues that would impact those special interests. Though the panel found that Chaudhary had not violated ethics rules, in 2010, he found himself in the midst of another conflict of interest scandal. Hours before the passage of a fish and game bill in the House, Chaudhary requested that Representative David Dill insert language that would restrict walleye fishing on Fish Lake Reservoir, where Chaudhary also owns a cabin. The incident was an embarrassment for both Representative Dill and Senator Chaudhary, and it was a consideration for Governor Tim Pawlenty when he vetoed the bill.

In June 2010, as Chaudhary was up for reelection, the DFL voted to revoke their endorsement of his candidacy in favor of Barbara Goodwin. In addition to the Fish Lake issue, Chaudhary had also recently endorsed Mark Dayton for governor over the officially DFL-endorsed Margaret Anderson Kelliher. In July 8, 2010, news broke that Chaudhary and his wife, Dee, owed \$252,000 in unpaid taxes from 2007 to 2008. Chaudhary admitted the owed taxes, but attributed them to a stock option issue at the company from which his wife later filed a wrongful termination suit. He lost an appeal to regain the endorsement of the DFL party and was defeated by Goodwin in the primary. Chaudhary currently runs a private law practice in Saint Louis Park, Minnesota, that specializes in immigration law and legal issues for hunters and anglers.

Chawla, Kalpana (1961–2003)

Kalpana Chawla was an Indian American research scientist, Federal Aviation Administration (FAA) certified flight instructor, and National Aeronautics and Space Administration (NASA) astronaut. In 1997, Chawla became the first Indian-born woman and first Indian American in space, and the second person of Indian ancestry in space. She flew on two space missions and logged 30 days, 14 hours, and 54 minutes in space. Chawla was licensed as a certified flight instructor with airplane and glider ratings, and as a commercial pilot for various planes and gliders. Chawla died in the Space Shuttle Columbia disaster in 2003.

She was born in Karnal, Haryana, India, on July 1, 1961. Chawla earned a bachelor of engineering in Aeronautical Engineering at Punjab Engineering College in Chandigarh in 1982. In 1982, she moved to the United States to attend the University of Texas at Arlington, and in 1984 received a master of science in Aerospace Engineering. Chawla went on to study at the University of Colorado at Boulder, where she

earned a doctor of philosophy in aerospace engineering in 1988.

Prior to becoming a NASA astronaut, Chawla worked as a research scientist. From 1988 to 1996, Chawla worked at the NASA Ames Research Center studying powered-lift computational fluid dynamics. In 1993, she joined Overset Methods, Inc., as vice president and research scientist and conducted simulations of moving multiple body problems and worked on problems of aerodynamic optimization.

In 1995, Kalpana Chawla reported to the Johnson Space Center to begin training and evaluation as a NASA astronaut candidate. In addition to flying on two space missions, Chawla worked at the Astronaut Office in the EVA/Robotics and Computer Branches, and later as a crew representative for shuttle and station flight crew equipment, and lead for the Astronaut Office's Crew and Habitability section.

In 1997, Chawla was mission specialist and prime robotic arm operator for her first space flight, Space Transportation System (STS)-87. This mission, the fourth U.S. Microgravity Payload flight, was intended to research the effects of the weightless environment of space, to study the Sun's atmospheric layers, and provide trials for tools and procedures for assembly of a space station.

In 2000, Chawla was selected as a mission specialist for STS-107, which was delayed multiple times because of scheduling conflicts, technical, and structural problems. The Space Shuttle Columbia's 28th mission was launched on January 16, 2003. On the science and research mission Chawla conducted microgravity experiments and was responsible for advanced technology development, and astronaut health and safety. On February 1, 2003, the shuttle disintegrated over Texas during reentry into the Earth's atmosphere, and Chawla and all other crew members were killed.

Chawla is survived by her husband. She was posthumously awarded the Congressional Space Medal of Honor, the NASA Space Flight Medal, and the NASA Distinguished Service Medal.

Chay Yew (1965–)

Born in Singapore and educated at Pepperdine University in Malibu, California, Chay Yew has been a consistent force in Asian American playwriting. His provocative plays address the issues of racism, homophobia, and censorship. Growing up in Singapore, Yew was greatly influenced by popular American culture. However, he was in for a rude awakening when he arrived in California to pursue his interest in theater. Frustrated by casting biases, he moved to Boston University to pursue an MFA program in communications. Even here, he found to his disadvantage the bias associated with race and sexual orientation.

Returning to Singapore, Yew wrote his first play *As If He Hears* (1999). The play created controversy, as it was initially banned by the government in Singapore. The authorities felt that it was too sympathetic toward the character of the gay social worker. Eventually, a revised version of the play was passed by the censors. Realizing that he would be addressing mostly controversial projects, Yew cultivated the art of writing between the lines, when it was deemed necessary to do so. It was the play *Porcelain* (1992) that pushed Yew into the limelight. Staged in England, it played to sold out houses and rightly received the 1993 London Fringe Award for Best Play. The play examined the life of a gay Anglo Asian character faced with the dilemma of acceptance and love over the course of a doomed relationship.

A Language of Their Own (1995) involved the lives of four characters, three Asian American and

one Caucasian. The marginalization of the individual was the context here and Yew explored this with reference to gay men. Initially to be staged in Los Angeles, the play with its strong gay themes moved to New York, where it premiered at the Joseph Papp Public Theater in 1995. The play was successfully received with the actors Alec Mapa, Francis Jue, and B. D. Wong in the cast. It won both the GLAAD (Gay and Lesbian Alliance Against Defamation) award for Best Play and the George and Elizabeth Marton Playwriting award.

Half Lives (1996) dealt with an Asian American going to Singapore and marrying and returning to America with his pregnant girlfriend. The son born in America grows up to be a homosexual and the play focuses on the family coming to terms with the situation. This was followed by *Red* (1998), which looked at the Cultural Revolution in China and its crackdown on the artists' community. In the same year Yew wrote *A Beautiful Country* (1998) where the Asian American experience was looked at through the eyes of a drag queen. Two other plays followed, *Here and Now* (2002), first staged by the Actors Theater of Louisville, and *A Distant Shore* (2005), which took a poetic, erotic look at fate, passion, and globalization. This play premiered at the Kirk Douglas Theater in Los Angeles.

Chay Yew is also very well known as a director of the works of other playwrights. He has directed many solo performances and also directed plays with large casts. Significant among his directorial efforts have been Philip Kan Gotanda's *Sisters Matsumoto*, which he staged for the East West Players of Los Angeles in 2001. In 2002 he directed *The Laramie Project* for the Tectonic Theater Project, which examined the ruthless murder of Matthew Shepard in Laramie, Wyoming. The 2003 world premiere of *Ainadamar*, a play about Federico Garcia Lorca and the Catalan actress Margarita Xirgu with libretto by David Henry Hwang was another Chay Yew directorial undertaking.

Yew has adapted Lorca's *The House of Bernarda Alba* for the National Asian American Theater Company in 2000. He also adapted Anton Chekov's *The Cherry Orchard*. The locales were set in China and the play was retitled, *A Winter People* (2002).

Chen, Chin-Feng (1977–)

In 2002, Chin-Feng Chen became the first Taiwanese baseball player to play Major League Baseball (MLB). He was born in Tainan, Taiwan, the same hometown of other famous Taiwanese players such as Chien-Ming Wang and Hong-Chih Kuo. In 1999, Chen signed a Minor League contract with the Los Angeles Dodgers with a bonus of USD\$680,000. His courageous decision to accept the challenge of playing Major League Baseball motivated numerous Taiwanese players to chase their dreams of playing in the United States. After his contract with the Dodgers expired in 2005, he returned to Taiwan to be with his family. He then joined the La New Bears in Taiwan's Chinese Professional Baseball League (CPBL).

Chen did not leave an impressive record in Major League Baseball. Nevertheless, for Taiwanese baseball fans, he is an invaluable player because he brought hopes and victories for the national team in many games. His most momentous game was in the 2001 World Cup, which took place in Taiwan. Chen's two home runs helped Taiwan beat Japan to win the bronze medal. This victory was significant because the CPBL had been troubled by scandals of gambling and match-fixing since 1997. Disappointed baseball fans had lost their passion for baseball, the so-called national sport of Taiwan. Chen's two home runs revived people's interest in the game. Just as important, after Chen joined the CPBL, he was never involved in any rumor or scandal of gambling and match-fixing. In light of his courage, integrity, and as an inspiration for upcoming Taiwanese baseball players to compete in the Major Leagues, it would not be an exaggeration to say that

Chin-Feng Chen is one of the most important Taiwanese baseball players after 2000.

Chen, Joan (1961–)

Shanghai-born Chinese American actress and film director, Joan Chen has been well known in both Asia and Hollywood since the 1980s. Chen was born into a family of doctors in Shanghai, China, in 1961. In 1976, as a student of a performance training program at Shanghai Film Company, the 15-year-old Chen was chosen to play a leading role as a young female soldier in *Youth*, a feature film directed by famous Chinese director Xie Jin. This role opened her way to a career in acting, though her parents had expected her to become a doctor. Chen continued to act after she went to college at the Shanghai Foreign Language Institute. Chen gained fame in China in 1979 when her performance in a popular movie, *Little Flower (Xiao hua)*, won the highest honor in film acting, the Hundred Flowers Award for Best Actress. Because of her success at such a young age, *Time* magazine later referred her as “the Elizabeth Taylor of China.”

Her acting career took a downturn in 1981 when Chen gave up all the opportunities in China and came to the United States to continue her education. She attended the State University of New York at New Paltz first. Later, at California State University at Northridge, Chen studied drama and filmmaking. For almost five years, the American entertainment world seemed to take little notice Chen's talent; she worked as receptionists in Chinese restaurants, and occasionally played small roles in films or television shows, including a show in which she got to speak only one word. Chen met and married her first husband, Jimmy Lau, during that period. Good fortune eventually

Chinese American actress Joan Chen speaks at a press conference, January 23, 2013. (AP Photo/Bryan van der Beek)

reached her in 1986, as Hollywood film producer Dino De Laurentiis noticed her in a parking lot of Lorimar Studios and offered her the role of May-May in *Tai-Pan*, a Hollywood film directed by Daryl Duke. This exposure allowed Chen to land another role as a tormented Chinese empress in the highly acclaimed *The Last Emperor*, directed by Bernardo Bertolucci in 1987. Although Chen's role in the film was small, the success of *The Last Emperor*, with nine Academy Awards, became a turning point in Chen's career in America. Since then she has appeared in many American films and TV series, including David Lynch's *Twin Peaks*, Oliver Stone's *Heaven & Earth*, Clara Law's *Temptation of a Monk*, Stanley Kwan's *Red Rose, White Rose*, David Henry Hwang's *Golden Gates*. In 1992, Chen was chosen by *People* magazine as one of the 50 most beautiful people in the world.

Chen started to produce and direct films in 1998. The Chinese film *Xiu Xiu: The Send Down Girl*, which

is based on a novel by her friend Yan Gelding, is her first successful attempt. The film received six "Golden Horse" awards from Taiwan. Later in 2000 she directed an English film *Autumn in New York*, starring Richard Gere and Winona Ryder. In 2004, after disappearing from big screen for about four years to give birth to two daughters, Chen returned to acting as a mature woman and became active in both China and the United States. She was mother and daughter in Hou Yong's family saga *Jasmine Woman* (2004) and a mother figure in Zhang Yang's *Sunflower* (2005). A number of her movies were released in 2007. Her role as a Chinese mother and singer in Tony Ayre's film *The House Song Stories* won her four awards, including the Australian Film Institute Award for Best Actress and the Golden Horse Award for Best Actress in Taiwan. She also appeared in Ang Lee's *Lust, Caution* and in Jiang Wen's *The Sun Also Rises*, for which she received an Asian Film Award for Best Supporting Actress. As a movie star for more than 30 years, Chen has created more than 50 characters in different films. Because of her positive impact on young Asian Americans, the *Goldsea Asian American Daily* has selected her as one of the 130 (rank 45) "Most Inspiring Asian Americans of All Time."

After her first marriage failed, Chen married a Hong Kong-born cardiologist, Peter Hui, in 1992, and settled in San Francisco.

Cheng, Lucie (1939–2010)

Lucie Cheng was a former director of the Asian American Studies Center at the University of California, Los Angeles (UCLA), and a professor

emeritus in the Department of Sociology at UCLA. A groundbreaking scholar in the field of gender and ethnic studies, Cheng served from 1972 to 1987 as the AASC's first permanent director, hiring a number of core faculty and establishing the nation's premier master's program in Asian American studies.

Cheng was born on February 11, 1939, in Hong Kong. Her father, Cheng She-Wo, was a famous journalist and publisher who founded Shih Hsin University, a private university in Taiwan that was originally intended to be a journalism institute, and *Lih Pao Daily*, an independent Taiwanese newspaper. Cheng spent her childhood in Hong Kong and Beijing, eventually settling with her family in Taipei following the Chinese Civil War. Though she began her undergraduate studies at the National Taiwan University, Cheng would eventually receive her bachelor's degree from the University of Hawaii (UH) in 1962. She went on to complete two master's degrees from that institution, the first in library science in 1964 and the second in sociology in 1968, before receiving her doctorate in sociology from UH in 1970.

Upon receiving her doctorate, Cheng joined the faculty of UCLA as an assistant professor of sociology. Two years later, she was appointed to direct the university's then newly founded Asian American Studies Center. During her 15-year tenure as director, Cheng was responsible for the hiring of several core faculty, including professors King-kok Cheung, in English and Asian American literature; Russell Leong, editor of *Amerasia Journal* and professor of literature and creative writing; Valerie Matsumoto, in history; Robert Nakamura, an endowed chair of Japanese American studies and a professor of Asian American film; and Paul Ong, in urban planning and social welfare. AASC also began its master's program in Asian American studies under her direction, producing its first graduate in 1978.

As a scholar and proponent of Asian American studies, Cheng made significant contributions to Chinese American history, international migration, and Asian American gender and labor. In 1979, she authored an enormously influential article, entitled "Free, Indentured, and Enslaved: Chinese Prostitutes in 19th Century America," challenging the earlier presumption that the majority of Chinese women working in the United States as prostitutes in the nineteenth

century were enslaved. Rather, the article argued, many were entrepreneurs who were able to use their capital to open businesses both in China and in the United States—though, Cheng wrote, this freedom was indeed crushed soon after by white racism and the patriarchal exploitation of sex workers by Chinese men. Her argument, a glimpse at the agency of Chinese women in early American society, was groundbreaking for its analysis of a group that had long been ignored by mainstream scholarship.

Among her other influential publications were *Labor Immigration Under Capitalism*, an early work authored with Edna Bonacich that examined Asian Americans in the context of international labor migration, and *The New Asian Immigration in Los Angeles and Global Restructuring*, a volume of articles edited with Bonacich and Ong that examined Asian immigration to the United States after 1965.

In 1985, Cheng became the founding director of UCLA's Center for Pacific Rim Studies and eventually left her post as director of the AASC in 1987. She would serve as the director of the CPRS for five years. In 1997, Cheng retired from her duties at UCLA and returned to Taipei, where she spent much of her youth. She continued to write for and serve as editor of *Lih Pao Daily*, duties she assumed in 1991 following the death of her father. Cheng was also highly involved in the university her father had founded, Shih Hsin University, establishing a Graduate School for Social Transformation Studies and the Cheng She-Wo Institute for Chinese Journalism.

On January 27, 2010, Cheng died in Taipei following a long bout with bone cancer. She was remembered not only for her significant scholarly contributions, but also for her leadership in a then-fledgling academic field. Among her many accomplishments as director was the forging of an early alliance between China and UCLA; though the United States had then suffered a chilly relationship with China, Cheng was able to establish a groundbreaking student exchange system through the AASC. She was survived by her brother, Cheng Si-Wei; sister, Cheng Chia-lin; and a niece and nephew.

Chern, Shiing-Shen (1911–2004)

Shiing-Shen Chern was one of the most prominent mathematicians in the world in the twentieth century, a pioneer especially in the field of differential geometry, and an influential leader of the Chinese American scientific community. He made major contributions to the development of mathematics and science in China and the United States as well as strengthening the scientific relations between the two countries before his death in 2004.

Shiing-Shen Chern was born in Jiaxing, a scenic town in Zhejiang province in southern China, on October 26, 1911, which fell amid a republican revolution that overthrew the thousands-year-old imperial system. Chern's father, Chen Baozhen, was a classically trained Confucian scholar who later became a civil servant. Chern learned Chinese and mathematics at home until 1920 when he enrolled in a middle school. Two years later, he went with his father to Tianjin in northern China and became interested in mathematics as a student in the Fulun Middle School there. In 1926, Chern enrolled at the new Nankai University in Tianjin. A course with Jiang Lifu, a Harvard-trained mathematician, got Chern interested in geometry. Upon graduation from Nankai in 1930, Chern first went to Qinghua (Tsinghua) University in Beijing, where he received a master's degree in 1934, and then to the University of Hamburg, Germany, where he finished his PhD dissertation on the applications of the great French mathematician Elie Cartan's theories in differential geometry. Chern spent a fruitful year with Cartan himself in Paris before returning to China on July 10, 1937, just days after the Japanese invaded China.

Chern was hired as a professor of mathematics at Qinghua University, which moved from Beijing first to Changsha and then to Kunming in southern China to escape the advancing Japanese army. At Kunming, Qinghua joined Beijing University and Nankai to form the Southwest Associated University (SAU) for the rest of the war years. There, in 1939, Chern married Zheng Shining, who had studied biology and who was the daughter of another mathematics professor Zheng Zhifan at Qinghua. Wartime isolation cut off much of Chern's contact with the outside world, but he was able to continue his research by studying Cartan's papers and working on problems they had discussed in Paris. His own publications in this period not only established him as a leading mathematician in China but also attracted international attention. In 1943, Chern received an invitation to visit the famed Institute for Advanced Study in Princeton in the United States.

The two years Chern spent in Princeton (1943–1945) represented the most productive in his life. Building on his profound understanding of mathematical problems and on discussions with other leading mathematicians, Chern made two of the most original and influential contributions to modern mathematics. First, he discovered an "intrinsic proof" of the generalized Gauss-Bonnet theorem. The classical theorem gives a formula that governs the relationship of geometric properties of a closed, two-dimensional Riemannian manifold (a region on a curved surface). Chern's work not only provided a proof of the theorem that was superior to earlier proofs, it also opened the possibility to generalize the theorem to higher dimensions. It was a monumental achievement and Chern later viewed it as his best piece of work. Then, capitalizing on insights from this work, Chern developed what became known as the "Chern characteristic classes," powerful analytical tools to classify so-called fiber bundles, a fundamental object of study in differential geometry. Mathematically simple and elegant, Chern's two discoveries together marked a turning point in the development of modern differential geometry.

At the end of World War II in 1945, Chern returned to China to be acting director of the new Institute of Mathematics of the Academia Sinica,

sponsored by the Nationalist government, at first in Shanghai and then in Nanjing. In late 1948, however, the Nationalists began to lose control of mainland China to the Communists in a civil war and the Institute of Mathematics faced an uncertain future. Once again Princeton came to Chern's rescue. J. Robert Oppenheimer, the physicist who had spearheaded the making of the atomic bomb during World War II and who was now director of the Princeton institute, invited Chern to return and he accepted. Chern brought along his wife, son Bolong, and daughter Pu (who later became a physicist and married the well-known Chinese American physicist Paul Ching Wu Chu) when departing for the United States on December 31, 1948.

Chern's coming to the United States in 1949 fostered a renaissance of differential geometry in the country. After a half-year stay at Princeton, he took up a professorship in mathematics at the University of Chicago and helped make it into a new center of mathematics in the world. During this period Chern also had a chance to work with the Chinese American physicist Chen Ning Yang, one of his former students at Kunming, with whom he would later share the Nobel Prize in Physics in 1957.

In 1960, after a decade at Chicago, Chern moved to the University of California, Berkeley, where he trained dozens of doctoral students, including the Chinese American mathematician Shing Tung Yau who would later win the coveted Fields Medal, and mentored numerous postdocs. Chern was naturalized as a U.S. citizen and elected a member of the U.S. National Academy of Sciences in 1961. He received the U.S. National Medal of Science in 1975 and the prestigious Wolf Prize in mathematics in 1983. Chern continued to be productive even after retiring from Berkeley in 1979. In 1981, he helped found and became the first director of the National Science Foundation-sponsored Mathematical Sciences Research Institute (MSRI) at Berkeley, a position he held until 1984.

"Retiring" once again in 1984 from the MSRI, Chern shifted his effort to a new endeavor: the founding and operation of the Mathematical Institute at Nankai University, his alma mater in Tianjin, China, and the development of mathematics in China in general.

Ever since the reestablishment of U.S.-China relations in the early 1970s, Chern had been active in promoting scientific exchanges between the two countries. Because of his and Yau's efforts, Beijing was made host to the 2002 International Congress of Mathematicians. In 2000, when his wife of more than 60 years died, Chern moved to a residence built for him in the Nankai Institute where he continued to be active in mathematical teaching and research. Chern died on December 3, 2004, in his Nankai home in Tianjin.

Cheung, King-Kok (1954–)

King-Kok Cheung is a literary critic specializing in Asian American literature and a professor of English at the University of California, Los Angeles (UCLA). Her areas of expertise include Asian American literature, comparative American ethnic literatures, comparative heroic traditions, and renaissance British literature. She is also the associate editor of *Signs: Journal of Women in Culture and Society* and coeditor of *The Heath Anthology of American Literature*. Cheung has received numerous awards, including fellowships from the American Council of Learned Societies, the Andrew W. Mellon Foundation, the Center for Advanced Study in the Behavioral Sciences at Stanford University, and the Chinese American Literature Research Center at Beijing Foreign Studies University. She has received a Fulbright Lecturing and Research Award, and two Fulbright Senior Specialist Awards.

Cheung has edited numerous anthologies, published dozens of articles and book chapters, and is the author of *Articulate Silences: Hisaye Yamamoto, Maxine Hong Kingston, Joy Kogawa* (1993). Her other notable publications include *Asian American Literature: An Annotated Bibliography* (1988), “*Seventeen Syllables*”: *Hisaye Yamamoto* (1994), *An Interethnic Companion to Asian American Literature* (1997), and *Words Matter: Conversations with Asian American Writers* (2000).

Born and raised in Hong Kong, Cheung matriculated into St. Stephen Girls’ College in Hong Kong in 1973 before moving to the United States to study at Pepperdine University, where she graduated as valedictorian with a BA in English in 1975, and her MA in 1976. She received her PhD in 1984 from the University of California, Berkeley, where she studied Milton and early modern British literature under Stephen Greenblatt in the English Department. Shortly thereafter, she joined UCLA as faculty. In addition to her faculty position at UCLA, Cheung has also taught at Harvard University, the University of Kansas, the University of Hong Kong, Hanover University, Beijing Foreign Studies University, and Minzu University of China. She was the director of University of California Study Center, Beijing from 2008 to 2010.

Cheung’s journey from an early modern British specialist to one of the most prominent figures in Asian American Studies was entirely serendipitous. When she joined UCLA in 1984, Asian American Studies at the university was still in its nascent stages. Though Cheung did not have a background in Asian American literature, because of her ethnic background she was asked to teach a class on Asian American literature. Interested in the prospect, she agreed to the assignment, which eventually led to her development as one of America’s leading experts in the field.

Cheung is best known for her groundbreaking book, *Articulate Silences: Hisaye Yamamoto, Maxine Hong Kingston, Joy Kogawa*. Published in 1993, *Articulate Silences* critiques Anglo-American feminist critics and misogynistic Asian American male scholars who renounce Asian American silence to subvert Orientalist strategies and stereotypes. The tendency of these critics who denigrate silence whereas valorizing

speech is a move that at once suggests the univocality of speech/silence while simultaneously ignoring the many ways silence can emerge as strategy or action, not only as the passive byproducts of racist oppression.

Troubled by the Eurocentrism of such critiques, which frequently interpret Asian American silence as a form of submission and an absence of speech or action, Cheung’s analysis reveals that silence can be productive, and can function either as self-determined action or discourse. Reading through the works of Yamamoto, Kingston, and Kogawa, who were experiencing a literary renaissance in America at the time of the book’s publication, Cheung asserts, “the silences imposed on themselves and their peoples, whether in the form of feminine and cultural decorum, external or self-censorship, or historical or political invisibility; at the same time they reveal . . . that silences—textual ellipses, nonverbal gestures, authorial hesitations . . . can also be articulate” (1993: 4). These silences are powerful acts of agency, and at times, proud instantiations of good etiquette or codes of conduct; at other times, they function as forms of resistance. Reviewed positively in trade journals, *Articulate Silences* opened a new field of study within Asian American literature that had not previously been examined: the positive, active forms of silence and their cultural implications.

Cheung’s commitment to developing transnational, non-Western approaches to examining and teaching Asian American and ethnic literature has resulted in a number of challenges to Eurocentric approaches throughout the past two decades. In addition to questioning “globalizing feminist assumptions,” she has called for the “decentering of Western ideals and dominant modes of seeing” (1990: 20), eliciting transnational perspectives on studying and teaching literature and racial issues, as well promoting exchanges between Anglophone and Sinophone aesthetic and political domains. Recently, Cheung has been teaching in China with a commitment to bring Asian and Ethnic American literature to transnational audiences.

Chiang, Yee

See Yee Chiang

Chin, Frank (1940–)

Born in Berkeley, California, Frank Chin is fifth-generation Chinese American. He was educated at the University of California, Berkeley, and the University of California, Santa Barbara. He is considered one of the founders of Asian American Theatre having started the Asian American Theatre Workshop in San

Francisco, which became the Asian American Theater Company in 1973. Chin's play *The Chickencoop Chinaman* (1972) was the first play by an Asian American to be produced at the American Place Theater in New York. Despite its weaknesses, "the action not being strong enough and a somewhat awkward structure," Jack Kroll of *Newsweek* found *The Chickencoop Chinaman* one of the most interesting plays produced that year. He referred to the play as a "Chinese *Look Back In Anger*." In California the play won *The East-West Players Playwriting Award*, but ironically it took quite a while before it was produced on the California stage. In 1974, Chin's second major play, *The Year of The Dragon* was staged. This play was televised by PBS on their *Theater in America* series. In the same year Chin, along with Lawson Fusao Inada, Shawn Wong, and Jeffery Paul Chan, edited the seminal Asian American anthology *Aiiieeeee! An Anthology of Asian-American Writers* (1974). A second volume entitled *The Big Aiiieeeee! An Anthology of Chinese American and Japanese American Literature* followed in 1991. In the same year Chin received a Rockefeller Playwrights Grant and a National Endowment for the Arts Creative Writing Grant.

Chin looked at theater with a strong, acerbic view of social activism. "I was looking for an Asian American theatre in the same way as Shaw and Joyce were looking for an Irish theatre. I failed, because Asian American actors have no integrity. They want to be famous. They don't want to play the stereotype. Real art has to make the difference between the real and the fake." He went on to state, that "Assimilation is not a natural process, it's a euphemism for racial extinction."

Two themes commonly prevalent in Chin's work are the "Subjugation of the Asian American and the Destruction of his/her cultural identity by Racism and Stereotyping" and the "Insistence upon the acceptance of Asian Americans as Americans. The Asian American is not just a sojourner or outsider, but an inside participant in the spoiled American dream."

Consequently, Frank Chin has come to be known as a very vocal critic of well-known Asian American writers Maxine Hong Kingston, Amy Tan, and David Henry Hwang. Chin feels that the very use of the stereotype is an anti-Asian tool and serves only to falsify Asian American culture. However, his basis for this

view seems too specific for an average reader to make use of. He goes on to say that “they are unable to tell the difference between the real and the fake, or even where the phrase ‘the real and the fake’ comes from.” He very strongly maintains that Asian Americans have been subjugated by the deconstruction of their cultural identity by stereotyping and racism. Asian Americans should be accepted as Americans, as an “inside participant of the American dream.”

In 1989, Frank Chin published a collection of stories titled *The Chinaman Pacific and Frisco R.R. Co.* It was published by the Coffee House Press in Minneapolis. This collection of short stories, by turns tough and funny, explored the world of Chinese immigrants against the mainstream culture. The individual characters are complex, but nevertheless sincere and convincing, and they capture the subtle and funny paradoxes of the Asian American experience.

The 1990s saw a distinct shift in Frank Chin’s writings as he turned to classic Chinese texts (Kwan Kung in Chinese folklore) for inspiration. Two examples are *Donald Duk* (1991) and *Gunga Din Highway* (1994). *Donald Duk* is the story of an 11-year-old boy and his struggle for acceptance and to find his own cultural identity. In *Gunga Din Highway* the characters possess the more forceful and virile tendencies of the heroic tradition. In 1998, Chin published *Bulletproof Buddhists and Other Essays*. Here, Chin explores various cultural locations from Singapore to the California-Mexico border seeking engaging evidence to find “real” Chinese values.

Chin, Vincent (1955–1982)

Vincent Jen Chin was beaten to death by two white autoworkers in Detroit, Michigan, when the nation was gripped in an economic depression marked by rampant anti-Japanese hostility. Though the killers, Ronald Ebens and Michael Nitz pleaded guilty to the crime, they were sentenced only to probation and fines. The Asian American community in Detroit organized in protest to demand equal justice and in the process created a national civil rights movement, for the first time giving a name to anti-Asian violence and racism. The Vincent Chin case was the first federal civil rights prosecution involving an American of Asian descent and has become a landmark of civil rights and Asian American history. The civil rights movement and network that emerged continues as a legacy to Vincent Chin’s tragic death.

In the years leading up to the summer of 1982, Detroit was a city in crisis with the collapse of its famed automobile industry. Auto executives, politicians, and union workers found a common enemy to blame: the Japanese. Anything that “looked Japanese,” became a potential target. Japanese cars were vandalized and their owners were shot at on the freeways. On TV, radio, and street corners, anti-Japanese slurs were commonplace. Bumper stickers threatened, “Honda, Toyota—Pearl Harbor.” Asian American employees of auto companies were warned not to go onto the factory floor because angry workers might hurt them if they were thought to be Japanese.

In this racially charged climate, a 27-year-old man named Vincent Chin was to be married in June 1982.

Vincent grew up in Detroit and was a recent graduate of Control Data Institute, a computer trade school. He worked as a draftsman during the day and a waiter on weekends.

On June 19, 1982, Vincent's friends took him out for his bachelor party. They went to Fancy Pants, a striptease bar only blocks away from the abandoned buildings where Henry Ford manufactured the Model T. Two white men sat across the bar from Vincent: Ronald Ebens, a plant superintendent for Chrysler, and his stepson, Michael Nitz, a laid-off autoworker. According to court testimony, Ebens seemed annoyed by the attention the Chinese American was receiving from the nude dancers. Vincent's friends overheard Ebens say "Chink," "Nip," and "fucker." One of the dancers heard him say, "It's because of motherfuckers like you that we're out of work." Vincent replied, "Don't call me a fucker," and a scuffle ensued. Both groups were ejected from the bar.

Outside on the dark streets of Detroit, Ebens and Nitz hunted for Chin. They spotted Vincent waiting for a bus in front of a crowded McDonald's on Woodward Avenue, Detroit's main thoroughfare. Creeping up from behind the Chinese American, Nitz held Vincent Chin down as his stepfather swung his Louisville slugger baseball bat into Vincent's skull four times, "as if he was going for a home run." Two off-duty police witnessed the attack. Vincent died four days later. His 400 invited wedding guests attended his funeral.

Soon after, the *Detroit Free Press* featured the bridegroom's beating death on its front page, telling of Vincent's life and hopes for his marriage, but offering no details of his death. Detroit's Asian Americans, so unaccustomed to any media coverage, took immediate notice. But the community was small and unorganized, with only 1,213 Chinese reported in Detroit by the 1980 Census. There were few pan-Asian organizations or advocacy groups to turn to in those days.

On March 18, 1983, a new headline appeared, reporting that two killers who pleaded guilty and no contest to savagely beating a man to death received three years' probation and \$3,780 in fines and court costs to be paid over three years. The sentencing judge, Charles Kaufman, reasoned: "These aren't the kind of men you send to jail," he said. "You fit the punishment to the criminal, not the crime."

The light sentence shocked people throughout Detroit, where African Americans—more than 60 percent of the population according to the Census, routinely received harsher sentences for lesser crimes. Local *Detroit Free Press* columnist Nikki McWhirter harshly criticized Judge Kaufman, writing, "You have raised the ugly ghost of racism, suggesting in your explanation that the lives of the killers are of great and continuing value to society, implying they are of greater value than the life of the slain victim . . . How gross and ostentatious of you; how callous and yes, unjust . . ."

The *Detroit News* reporter, Cynthia Lee, herself a Chinese American from Hawaii, interviewed members of the Chinese American community, who voiced their disbelief. "You go to jail for killing a dog," said Henry Yee, a noted local restaurateur who was described as "the unofficial mayor of Chinatown."

The reaction within the Detroit area's small, geographically dispersed Asian American population was immediate and visceral. Informal networks of Asian Americans frantically worked the phones, trying to find some way to vent their frustrations and perhaps correct the injustice.

Vincent's background was typical of many second-generation Chinese in the late twentieth century, especially those from Guangdong province. His father, David Bing Hing Chin, worked in laundries from the time he arrived from China in 1922 until his death the year before Vincent was slain. After serving in the U.S. Army during World War II, he earned his citizenship and the right to bring a wife, Lily, from China in 1948. Lily, too, worked in the laundries and restaurants of Detroit.

In 1961, Lily and David adopted a cheerful six-year-old boy from Guangdong province in China and named him Vincent. He grew up into an easy-going young man who ran on his high school track team and also wrote poetry. Vincent was energetic and knew how to stand up for himself on the tough streets of Detroit. But friends and coworkers had never seen him angry and were shocked that he had been provoked into a fight.

Vincent was part of a generation whose immigrant parents had suffered and sacrificed. Asian Americans understood his life and saw his story as their own.

Theirs was the classic American immigrant story of survival: work hard and sacrifice for the family, keep a low profile, don't complain, and, perhaps in the next generation, move closer to the American dream. For Asian Americans, along with the dream came the hope of one day gaining acceptance in America. The injustice surrounding Vincent's slaying shattered the dream.

Most Asian Americans had experienced being mistaken for other Asian ethnicities, even harassed and called names as though every Asian group was the same. The climate of hostility made Asian Americans feel unsafe, not just in Detroit, but across the country as the Japan-bashing emanated from the nation's capital and amplified through the news media. If Vincent Chin could be harassed, brutally beaten to death, and his killers freed, many felt it could happen to them.

After the news of the sentences of probation to Vincent's killers, his mother Lily wrote a letter in Chinese to the Detroit Chinese Welfare Council; translated into English, it read: "This is injustice to the grossest extreme. I grieve in my heart and shed tears in blood. My son cannot be brought back to life, but he was a member of your council. Therefore, I plead to you. Please let the Chinese American community know, so they can help me hire legal counsel to appeal, so my son can rest his soul."

One week after the sentencing, on March 20, 1983, about 30 people crammed into the back dining room of the Golden Star Restaurant in Ferndale, just north of Detroit on Woodward Avenue. Vincent had worked at the Golden Star as a waiter, not far from where he was beaten to death.

At first, the attorneys present said that little or nothing could be done once a sentence had been rendered. Hitting an impasse, an uneasy quiet fell over the gathering, broken only by the low sounds of Lily Chin weeping off to the side of the room. This reporter raised a hand. "We must let the world know that we think this is wrong. We can't stop now without even trying." The weeping stopped. Mrs. Chin stood up and spoke in a shaky but clear voice: "We must speak up. These men killed my son like an animal. But they go free. This is wrong. We must tell the people, this is wrong."

With Mrs. Chin's words as a moral turning point, the group decided to press forward. The lawyers recommended a meeting with the sentencing judge, Charles Kaufman.

Without an advocacy organization to manage the community response, the informal gathering decided to get organized. On March 31, 1983, more than 100 Asian Americans from the metropolitan area packed a Chinatown community hall in Detroit. The main order of business was to create an organization that could file petitions and legal actions, raise money, and organize the outcry for a response.

The group voted to name itself American Citizens for Justice (ACJ), which allowed for broad-based membership and a vision for justice beyond a single case. ACJ became the first explicitly pan-Asian grassroots community advocacy effort with a national scope. Japanese, Filipino, and Korean American groups immediately joined in support. Soon white and black individuals volunteered as well.

That night, the new pan-Asian American organization drafted its statement of principles:

ACJ believes that:

1. All citizens are guaranteed the right to equal treatment by our judicial and governmental system;
2. When the rights of one individual are violated, all of society suffers;
3. Asian Americans, along with many other groups of people, have historically been given less than equal treatment by the American judicial and governmental system. Only through cooperative efforts with all people will society progress and be a better place for all citizens.

ACJ's first mandate was unambiguous: to obtain justice for Vincent Chin, a Chinese man who was killed because he looked Japanese.

Knowing that there was little public awareness about Asian Americans or the reasons for the outrage, ACJ embarked on educating the public and the news media on the community's concerns. In those days before fax machines or the Internet, each press release was hand delivered. ACJ held its first news conference

at the Detroit Press Club on April 15, 1983. The entire spectrum of local media appeared—it was big news to see Asian Americans coming together to protest injustice. To the reporters and the people of Detroit, Asian Americans seemed to emerge from out of nowhere. ACJ's task was to educate them quickly, in sound bites, about Asian Americans.

African American organizations such as the Detroit-Area Black Organizations quickly endorsed ACJ's efforts. The Detroit chapter of the NAACP, the largest chapter in the country, issued a statement about the unequal justice. Several prominent African American churches gave their support, as did the Anti-Defamation League of B'nai B'rith and the Detroit Roundtable of Christians and Jews. ACJ sought and won the support of other communities as well, including from Latinos, Arab Americans, and Italian Americans, women's groups as well as political leaders from the president of the Detroit City Council to Congressman John Conyers.

A private investigator, hired by ACJ to uncover the facts leading to Vincent's death, reported that a dancer at the club named Racine Colwell overheard Ebens tell Chin, "It's because of you motherfuckers that we're out of work." At a time when bilious anti-Japanese remarks by politicians, public officials, and the next-door neighbors spewed forth regularly, Asian Americans knew exactly what Ebens meant. A strip dancer with nothing to gain from her testimony had produced the link to a racial motivation that the community was waiting for. ACJ attorneys and leaders realized it was enough to charge Ebens and Nitz with violating Vincent Chin's civil rights on account of his race.

ACJ began to publicize its findings of racial slurs and comments made by Vincent Chin's killers and to call for a civil rights investigation. There was an immediate backlash. Non-Asians, most particularly those in a position to make policy on civil rights and race matters, openly resisted claims by Asians of racial discrimination and prejudice. Calls by angry whites into radio talk shows were furious that racism was brought into the picture. "What does race have to do with this?" one caller told the *Detroit News* hotline. "Don't white people have civil rights?" asked another.

White liberals were the most skeptical. When a constitutional law professor met with ACJ attorneys about the legal issues in a potential civil rights case, he told them to forget it. Civil rights laws, he said, were enacted to protect African Americans, not Asians. Asian Americans cannot seek redress using federal civil rights law; besides, he said, Asians are considered white.

The American Civil Liberties Union of Michigan initially dismissed the outcry from Asian Americans as a law-and-order, "mandatory sentencing" movement. Later, as the community outrage continued, its executive director absolved Judge Kaufman of bias and instead blamed the prosecutors for failing to appear at sentencing. The Michigan ACLU wasn't interested in the civil rights aspects of Chin's slaying.

Nor did the Detroit chapter of the National Lawyers Guild, which defined itself as part of the political left, find any connection between Vincent Chin's killing and racism. But their West Coast chapters, more familiar with Asians' history with racial violence, proffered a national endorsement to ACJ's efforts. A near mutiny broke out in the Detroit chapter, but the national body prevailed.

In spite of the backlash, local, national, and international support for ACJ's efforts was growing daily. The legal twists and turns garnered steady local news coverage, and the mobilization of Detroit's Asian Americans was a new phenomenon for reporters. The Vincent Chin case became national news when the *New York Times* published a story and other national media coverage soon followed.

It was the first time that an Asian American-initiated issue was considered significant, national news. Ethnic media from the Asian American community as well as foreign language news from China, Hong Kong, Taiwan, and Japan followed the case closely. To capture the mounting frustration of the community, the ACJ organized a citywide demonstration at Kennedy Square in downtown Detroit.

Waving American flags and placards that demanded equal justice, hundreds of scientists, engineers, and housewives marched alongside waiters and cooks from Chinese restaurants across the region. The restaurant owners shut their doors during the busy

weekday lunch rush to allow for their employees and their own families to participate in the demonstration. Children came in strollers and seniors in wheelchairs. Chinese, Japanese, Koreans, and Filipinos marched in pan-Asian unity. Support statements were made by the city's major African American and religious organizations, local politicians, and even the UAW. At the rally's emotional end, Mrs. Chin appealed to the nation. Through her tears, she said haltingly, "I want justice for my son. Please help me so no other mother must do this." Finally, the demonstrators marched to the Federal Courthouse singing "We Shall Overcome," and hand delivered to the U.S. Attorney a petition with 3,000 signatures seeking federal prosecution of the killers for violating Chin's civil right to be in a public place.

ACJ spelled out an analysis of Asian Americans as racial scapegoats for the ills of the modern American economy, naming anti-Asian violence as issue damaging to democratic principles that should concern all Americans. This set the framework for Asian American organizing nationally and was a first step toward placing Asian Americans in the center of domestic and international economic, political, and social policy contexts. In Los Angeles, San Francisco, Oakland, New York, Chicago, and Toronto, pan-Asian coalitions were being built to support the campaign and to address anti-Asian violence in the local community.

Around the United States, Asian Americans began to track anti-Asian hate crimes and news of other cases spread: in Lansing, Michigan, a Vietnamese American man and his European American wife were harassed and repeatedly shot at by white men shouting racial slurs. In Davis, California, a 17-year-old Vietnamese youth was stabbed to death in his high school by white students; in New York, a pregnant Chinese woman was decapitated when she was pushed in front of an oncoming subway car by a European American teacher who claimed to have a fear of Asians. After an escalating number of anti-Asian attacks in the Boston area, a pan-Asian group called Asians for Justice was formed. As these new groups raised public awareness about the particular kind of racial hostility against Asians, they prompted more people to come forward to file hate crime reports. The growing list of

cases underscored the existence of racial violence against Asian Americans.

After an FBI investigation, in November 1983 a federal grand jury indicted Ronald Ebens and Michael Nitz for violating Vincent Chin's right to enjoy a place of public accommodation.

The federal civil rights trial began in Detroit on June 5, 1984 in the courtroom of Judge Anna Diggs Taylor, one of the first African American women to serve on the federal bench. The two weeks of testimony included the words that dancer Racine Colwell overheard, "It's because of you motherfuckers that we're out of work." On June 28 the federal jury found Ebens guilty of violating Vincent Chin's civil rights; Nitz was acquitted. The jury foreperson later stated that Racine Colwell's testimony was the key. Ebens was sentenced to 25 years by Judge Taylor.

On appeal, the case against Ebens was sent for retrial in 1986 on grounds of pretrial publicity and evidentiary errors associated with tapes made of witnesses when ACJ was first investigating the case. The new trial would be held in Cincinnati, where there was less chance that prospective jurors knew of the case.

When the jury selection process for the new trial began on April 20, 1987, potential jurors were interrogated on their exposure to Asians. "Do you have any contact with Asians? What is the nature of your contact?" as though they might be infected by a deadly virus. Out of about 180 Cincinnati citizens in the jury pool, only 19 had ever a "casual contact" with an Asian American.

The jury that was eventually seated looked remarkably like Ebens—mostly white, male, and blue collar. This time the jury foreperson was a 50-something machinist who was laid-off after 30 years. And this time the jury reached its not guilty verdict on May 1, 1987, five years after Vincent Chin was killed.

A civil suit was then filed on Lily Chin's behalf against Ebens and Nitz for taking Vincent's life; a judgment of \$1.5 million was levied against Ebens, who soon evaded the judgment by moving out of state several times, finally settling in Henderson, Nevada. Nitz, whose judgment was substantially lower, eventually paid off the amount. Neither man spent a day in jail.

After the legal proceedings ended, Lily Chin left Detroit in 1988 to stay with relatives in New York and San Francisco. Eventually she moved to her birthplace in Hoiping (Kaiping), Guangdong province, China, after spending 50 of her 70 years in the United States. However, when she became ill with cancer, she returned to Detroit for medical treatment. Lily Chin died on June 9, 2002, and was buried in Detroit next to her husband and her son Vincent.

The legacy of the Vincent Chin case has lived on. An Academy Award-nominated documentary, *Who Killed Vincent Chin?*, was released in 1987. The case has been retold in songs, plays, sculptures, numerous books, and another documentary was produced in 2008, *Vincent Who?*

Dozens of local and national Asian and Pacific Islander advocacy organizations have formed from the increased political consciousness arising from the Vincent Chin case. The tragedy and injustice of Vincent Chin's murder marked the awakening of the grassroots political consciousness to stand together as a pan-Asian community for equality and justice.

China Daily News, The (CDN)

The China Daily News (CDN; Meizhou Huaqiao Ribao) was founded July 7, 1940, by a group of Chinese Americans to "reflect ordinary Chinese

Americans' opinions and to get objective information about China's domestic situation, especially about the conditions of the overseas Chinese community." The majority of the 380 shareholders are members of the New York Chinese Hand Laundry Alliance (CHLA). Most held one or two shares (\$10 each); only five or six owned shares worth more than \$200. According to its introduction, "This paper is founded by overseas Chinese in the United States. Among the overseas Chinese in this country, many have acquired U.S. citizenship. To them, to love and defend [their] motherland is a bound duty (*tianzhi*), and to be loyal to the United States is an obligation (*yiwu*)." Three weeks later an editorial made the same point: "So we regard overseas Chinese concern about their motherland as a natural expression of normal human feelings (*renqing zhi zhiran*), and their efforts to permanently develop their settlement [in the U.S.] as a rational development (*shilizhi dangran*)."

Throughout the 1940s, *CDN* persistently encouraged its readers to vote in local, state, and national elections. It provided information about the backgrounds and platforms of competing candidates and ran editorials and commentaries analyzing issues and the result of elections to help readers understand the American electoral system. It had a monthly CHLA column (*yilian zhengkan*) providing information and advice about the hand laundry business, presented the plans and the work reports of the CHLA executive committee, carried eulogies for deceased members, and even contained some poems in classical Chinese style composed by laundrymen. In addition, in almost every issue CHLA members expressed their political opinions in short articles.

A key figure of *CDN* was Eugene Moy (Mei Cantian), a self-made intellectual fluent in both Chinese and English and sharp in his analyses and criticism for which he was admired as the "Lu Xun of the overseas Chinese community." Moy served as the paper's editor-in-chief for many years, and his "Old Moy Column," a 500-word commentary on every aspect of Chinese life in the United States, became one of the most popular features of the paper.

CDN was persecuted by U.S. authorities for its pro-China stand in the early 1950s. One of the charges against the newspaper was that it carried advertisement

of the People's Republic of China's Bank of China. In 1954 the court fined *CDN* \$25,000 and sentenced Eugene Moy to two years in jail (later reduced to one year). Donations from its loyal readers and supporters from all over the United States helped pay the fine and save the newspaper; but from the mid-1950s on, *CDN* became less political and less influential in the Chinese community. In 1989, differences among its managers and editors on how to respond to the Chinese Tiananmen Democracy Movement led to the closure of the newspaper. Some of its staff later founded *China Express* (*Qiao Bao*).

China Lobby

The term "China Lobby" refers to a broad network of Chinese and Americans who tried to influence the people and policy makers in the United States with interests that coalesced around the goal of overthrowing the Chinese Communist government on behalf of the Nationalist regime of Chiang Kai-shek in Taiwan. This lobby activity was conducted by more than one lobby group, which included an organization of Chinese Nationalist officials and American Conservatives who promoted anticommunism in the United States and paid American supporters of Chiang's regime and their coordinated activities by Chiang's government and family members.

The lobby has been given credit for foreign aid provided to Chiang from a reluctant Truman administration during the Chinese civil war, continued diplomatic recognition of Chiang's regime as a legitimate government of China after the Communist Party

takeover in 1949, and preventing the People's Republic of China from being admitted to the United Nation.

Americans most commonly associated with the China lobby were the noted publisher Henry R. Luce; Alfred Kohlberg, a retired New York importer; Frederick C. McKee, a wealthy Pittsburgh manufacturer and philanthropist; Republican Representative Walter H. Judd of Minnesota; and Republican senators William F. Knowland of California and Joseph R. McCarthy of Wisconsin.

The China Lobby's widespread influence during the Cold War was an outgrowth of its activities in World War II. The outbreak of the Asia-Pacific War forced the United States build an alliance with China against Japan, and many groups emerged to raise money for China. Famous groups like the United China Relief and the American Bureau for Medical Aid to China (ABMAC) reminded the American people of their Chinese allies and their brutal treatment by Japanese military aggression, the necessity of aiding China, and touching stories of Chinese resistance and heroism. Although failure of the civil war and loss of popular support had reduced the confidence of the American government toward Chiang's regime, popular antipathy toward the Chinese Communists and the start of Korean War with the intervention of the People's Republic of China worked to help Chiang's government regain support from U.S. policy makers.

At the height of the Cold War, threats from the Soviet Union beat out the influence of interest groups on behalf of Chiang's regime. Facing the reality of the Soviet-China split and the death of influential lobbyists like McCarthy, Kohlberg, and Sokolsky, the Nixon administration decided to recognize the People's Republic of China, which facilitated the process of admittance of Mao's government to the United Nations. These events signaled that the days of the China lobby had passed.

Although the efforts to overthrow the Communist Party were not successful, the new lobby activities across the straits continued. With the passage of the Taiwan Relations Act (TRA), which relied on Taiwan's diplomatic activities in the United States and democratization of Taiwan by the end of the 1980s, support for Taiwan continued in the United

States. Taiwan is one of the closest military allies of the United States in the East Asia region. At the same time, the Chinese Communist government also lobbied in Washington and gained a powerful network within the American business community. According to Warren Cohen, the U.S.–China Business Council, the Emergency Committee for American Trade, and major corporations, like Boeing, made a lot of effort to persuade Congress of common interests between mainland China and the United States.

Chinatown, New York

Chinese began to arrive in the United States in substantial numbers soon after the news that gold was found in California in 1848. By 1850, there were already 4,018 Chinese men (and 7 women) in San Francisco, and a Chinatown had emerged. But the first permanent Chinese settlement in North America was actually in New York City, which became the most important seaport on the East Coast after the completion of the Erie Canal in 1825 and was a major international port of call. Many Chinese merchant sailors came through and made it their home when away on sea duty—some as early as 1808.

In 1840, Chinese rooming houses appeared on Cherry Street below Chatham Square, where the core of a Chinese community began to appear. In addition to the sailors, the community included members of a stranded Chinese opera troupe (after their sponsor ran out of funds), cooks, domestic servants, peddlers, tea merchants, doctors, and cigar makers who had been trained in Cuba. The New York State Census of 1855 registered 39 Chinese in lower Manhattan, along with 42 boarders on a ship docked off the West Side piers. In 1856 the *New York Times* estimated the city’s Chinese population at 150.

In the mid-nineteenth century the Chinese on the East Coast were tolerated and were, along with blacks

and the Irish, relegated to the bottom of the social order. At least one quarter (about 50) of all Chinese men who lived in New York between 1820 and 1870 were married to or lived with Irish women. Nevertheless, the Chinese population in New York was small and grew slowly to only 747 by 1880. (In comparison, there were 33,149 Chinese men in San Francisco in 1860; by 1870, 25 percent of the able-bodied male population in California was Chinese.) After the passage of the Exclusion Act in 1882, many whites in Western states wanted to drive out the Chinese by violent means, forcing them to escape from small isolated areas in the countryside to larger cities for protection. Others moved to metropolitan areas in the Midwest and on the East Coast, where their smaller numbers were less likely to attract hostile attention. By 1890, a viable Chinatown in New York appeared on Mott, Park, Pell and Doyers streets, east of the notorious Five Points district, with approximately 7,000 Chinese residents.

Aside from grocery stores and restaurants, Chinatown boasted fish peddlers, bakeries, teahouses, barbershops, temples of worship, and theaters. But the majority of the Chinese in the city were operators of hand laundries who typically lived and worked in their storefront establishments outside of Chinatown. They would visit Chinatown only on weekends and holidays to shop for provisions, meet friends, and find entertainment.

Most Chinese in the United States before World War II, came from one of the seven districts on the rural outskirts of the city of Guangzhou. The majority of the Chinese in New York were from Taishan, the poorest among the seven counties.

The indifference of American law enforcement obliged the Chinese to govern themselves. Chinatown’s social and political structure replicated that found in its residents’ home province. There were village, county, dialect, and surname associations, in addition to secret fraternal organizations usually identified as tongs. All these associations came under the umbrella of the Chinese Consolidated Benevolent Association, the unofficial “mayor’s office” for Chinatown. However, without the power of sanction, serious disputes could be resolved only by violence, which allowed the fighting tongs to gain the upper hand in the community.

Immigration restrictions permitted very few Chinese women to enter the country legally, except for merchants' wives. The gender imbalance among the Chinese in America in 1900 was 27 males to 1 female. The population could increase only through the "paper son" system, whereby Chinese with American citizenship could claim to have fathered children in China (titles could be purchased), who were eligible to enter the country.

In the dreary lives the Chinese in America were forced to lead, Chinatown was a home away from home and provided a much-needed emotional outlet. Although short on women and children, they celebrated holidays faithfully, as if their entire families were there.

Politics from the 1930s to 1950s

As few Chinese could vote they were largely ignored by the American political establishment. In response, they devoted their attention to the politics in China, believing that in helping it become a strong nation enjoying international respect they would also improve their own image and standing in the United States.

Traditional associations controlled by merchants tended to support whichever government was in power in China—first the imperial government, then various reformers, warlords, and factions preceding and following the establishment of the Chinese republic, and finally Chiang Kai-shek after his Nationalist government consolidated the republic in 1927. The common immigrants, on the other hand, were critical of the Nationalist government's corruption and failure to resist Japanese aggression. This led to an emergence of voices and organizations within the Chinese community that were willing to challenge the conservative practices of the established associations. In 1932, a group of unemployed Chinese, with the backing of the Chinese Anti-Imperialist Alliance, set up an Unemployed Council in Chinatown to help Chinese working people access the benefits of the New Deal programs, such as getting emergency aid for food and shelter, during the Great Depression. The Chinese Hand Laundry Alliance (CHLA) worked with and got assistance

from the American Left and progressive unions, including the *Daily Worker*, the International Workers Order, the Unemployed Council, and the Friends of China Committee, when the Chinese hand laundry businesses, the mainstay of Chinese livelihood in the city and the Chinatown economy, came under racial attack from the white laundry industry. The liberal members of the Chinese community were particularly appreciative of the support the American Left extended to China in its struggle against Japan as a part of their fight against fascism.

Once the Nationalist government finally decided to fight against the Japanese in 1937, New York's Chinatown became united and raised a huge amount of funds to support the resistance in China. A total of 30,000 Chinese in the New York metropolitan region contributed \$1 million dollars in just six months time, according to the General Relief Committee. The community also waged a "people's diplomacy campaign" to convince the American public to boycott Japanese goods. Movie stars Loretta Young and Frances Farmer took part in a demonstration on Fifth Avenue organized to ask American women not to buy Japanese silk stockings. But when World War II ended, the Nationalist government resumed civil war, and by the end of the 1940s, even some die-hard conservatives in the community, such as the leaders of the Chih-kun Tong Association, had lost patience with its policies.

Unfortunately, the community suffered a big blow when U.S.-China relations deteriorated after China fell to the Communists in 1949 and the two countries fought each other in the Korean War (1950–1953). In its aftermath, a Cold War battle was waged on the American domestic front over the fear of Communism from within, and Chinese in general were suspected of disloyalty. The Immigration and Naturalization Service (INS) instituted a "confession program" in Chinatown, offering legalized status to those who confessed illegal entry into the country, but in fact using it to weed out the Chinese "radicals" who had opposed the Nationalist policies and to bar future Chinese immigration. By the mid-1950s, the only voices that could be heard were those of the Chinese Consolidated Benevolent Association (CCBA) and the KMT, who claimed to represent the whole Chinese community.

The New Chinatown

World War II, when China was an ally of the United States, changed white American attitudes toward the Chinese and, along with the gains of the Civil Rights Movement, allowed younger, American-born Chinese better access to mainstream jobs and a chance to move away from Chinatown to less crowded urban neighborhoods. As young families moved, leaving only the elderly and the bachelors behind, it seemed that Chinatown was about to disappear. However, then came the passage of the 1965 Immigration Act, which allowed relatives of American citizens of Chinese descent to immigrate in significant numbers. A new wave of working-class immigrants arrived in unprecedented numbers and repopulated the old ethnic ghetto.

Middle-class Chinese immigrants with savings and entrepreneurial skills (mainly from Hong Kong) also arrived to escape the political chaos in Asia. They transferred their assets and invested in Chinatown, where it was easy to start a restaurant or a grocery store in the Cantonese-speaking milieu. Before long, sewing factories emerged as the most popular business to invest in because of the large pool of newly arrived female immigrants. As the aging Jewish and Italian immigrants originally employed in New York's garment industry reached retirement age, garment manufacturers transferred their production to Chinatown and let Chinese subcontractors handle the troublesome hiring, firing, and management of the non-English speaking workforce, which saved them a lot of trouble and money. Between 1969 and 1982 New York lost 40 percent of garment jobs, whereas the number of Chinese women employed in the industry during this period increased to 20,000.

Chinatown women now had less time for cooking, but their earnings from garment work supplemented their family incomes and gave a boost to the local restaurant trade, which employed most of their husbands. Chinese food also became very popular with non-Chinese Americans after Nixon's visit to China in the early 1970s, particularly with the advent of Yuppies (young urban professionals), who had the means and the sophistication to try exotic cuisines.

During this boom, bilingual services became widely available to Chinatown residents for the first

time. Banks, the phone company, the local hospital, and even municipal offices began employing bilingual staffs. Under pressure from Chinatown activists, social services and senior citizen and daycare centers were now staffed by Chinese.

The 1970s were Chinatown's "Golden Age." New waves of immigrants kept pouring in, providing cheap labor and attracting investment, services, and white-collar jobs. This in turn led to more investment, jobs, and immigrants. The cycle kept repeating, turning Chinatown into a vibrant, full-service, multiclass community. Some sociologists have postulated that, like Cubans in Miami, new Chinese immigrants could now find jobs and opportunities for upward mobility right inside their "ethnic enclaves," whose supportive environment enabled them to obtain property ownership and become part of the American middle-class without ever having to venture out to look for jobs or even having to learn English. But the central premise of the enclave economy is cheap labor. The seamstresses who work at piece rates make more money the faster they work. Waiters and shop clerks are expected to work more than 10 hours a day, six days a week, with no compensation for overtime or sick leave. Once new immigrants start working in the enclave, their opportunities to learn English and find work outside are effectively blocked. As the workers grow older they have to find less strenuous jobs for less pay. The prospect for working-class immigrants who remain in Chinatown is downward mobility.

The End of Chinatown's Golden Age

The growing number of new immigrants expanded the need for residential housing, retail space, and factory facilities to accommodate them. It did not take long entrepreneurs realized that real estate was where the money was and before the level of activity in Chinatown real estate attracted the interest of financial institutions. Not only did Chinese American-owned banks begin to aggressively extend mortgage loans for the purchase of Chinatown properties, but foreign capital began to pour in from East Asian countries. By 1986, 27 local, national, and foreign banks had operations in New York's Chinatown. The enormous

amount of capital invested in construction and real estate inevitably changed the basic character of Chinatown. Induced by the rising prices, investors and speculators bought buildings merely to hold onto them long enough to sell at a profit. The rental income could no longer keep pace with the price of buildings, and the landlords were forced to drive out the original tenants and jack up rent, causing uncertainty for residents and community businesses alike.

By the 1980s, Chinatown—New York’s urban ghetto of cheap Chinese tenements in lower Manhattan—no longer had any reasonably priced housing for the poor. Higher rents also forced restaurants, factories, and neighborhood retailers to close. The prosperity gained in the 1970s vanished. Real-estate speculators had killed the goose that laid the golden egg.

Illegal Immigrants and the Sweatshops

The extreme hardship Chinatown residents experienced after the influx of speculative capital discouraged further immigration of their relatives from Hong Kong. But when the United States and the People’s Republic of China normalized relations in 1978, immigrants started to arrive from the mainland. The first wave came mostly from the coastal provinces of Fujian and Zhejiang, changing not only the composition of the theretofore Cantonese community but also its way of life and doing business.

China first started its experiment with liberalizing the economy in the late 1970s along coastal areas in southern China by opening special development zones to attract foreign investment. Millions of people flocked from the country’s interior to coastal cities to take advantage of new opportunities, but many, especially those from areas with a long history of emigration, decided to try their luck abroad. With centuries-old emigration and business ties to Southeast Asia, residents of rural counties that surround Fuzhou City in Fujian Province were particularly well placed to take part in the new exodus with financial assistance from their overseas relatives.

As the powerhouse of global economy and the mythic country of wealth and fortune dreamed of by every would-be Chinese emigrant, the United States

emerged as the favorite destination. But without prior emigration to the United States to secure legal immigration status, the Fuzhounese had to enter the country illegally, with help from “snakeheads,” the human smugglers. The numbers of those willing to take the risk were so huge that human smuggling quickly became a lucrative international business. In 1989, Fuzhounese paid “snakeheads” or, rather, incurred debt in the amount of \$18,000 a person to be smuggled into America, and were willing to do whatever it took to pay it back on arrival. By 1993, when the infamous smuggling ship *Golden Venture* ran aground off Long Island shore, the cost for its human cargo had risen to \$33,000 a person. The public outcry that followed the incident greatly contributed to the passage of the harsh 1996 Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA). Unfortunately, IIRIRA did not stop human smuggling; it only raised the cost and sophistication of the smuggling networks. By 2010, the smuggling fees had risen to above \$70,000 per person.

The repayment of smuggling debts is enforced through threats of gang violence, directed against both the indebted immigrants and their family members in China. The illegals are thus forced to take any jobs and work under any conditions. Understanding their vulnerability, employers pay them less and require them to work longer hours. The illegals are subjected to conditions that break every legislated labor protection clause in the country, but the employers are rarely held accountable because federal labor and corporate laws are too weak to stop this kind of abuse.

The abundance of cheap illegal labor has lowered labor standards for legal working class Chinese immigrants as well. Some are fighting back. Chinese restaurant workers, rejected by mainstream American unions, organized an independent Chinese Staff and Workers Association to challenge their employers. Militant Chinese garment ladies nominally represented by IGLWU, pushed its fight against sweatshop conditions and for better representation. Even workers without legal status have occasionally gone on strike to fight for back wages at the risk of deportation.

But the decline of the garment industry in America because of cheap imports from China has crippled one of the two pillars of the Chinatown economy. With the

ever-increasing number of new immigrants and under attack of gentrification, the life in ethnic enclaves is a constant struggle for survival.

Gentrification of Chinatown

As New York City expanded, its old Chinatown, once occupying a marginal location, found itself at the center of a most desirable downtown, adjacent to Wall Street and sharing the zip code with SoHo and Tribeca—the city’s most expensive real estate at the beginning of the twenty-first century. With the city’s policy makers viewing its ethnic flavor as conducive to developing it as a tourist destination, an aggressive campaign has been waged by developers backed by investors, some of whom are overseas Chinese, to relax the zoning restrictions and allow high-rises of commercial offices and residential condos to be built on its already crowded streets. This latest wave of speculation is threatening to displace the majority of its remaining working class residents and small businesses. Most of the community organizations are not geared up to combat this kind of problem. By working with developers to get small concessions of “affordable housing” from the construction of luxury office and condominium buildings, the influential Community Development Corporations have become the handmaidens of gentrification.

Dispersal

The first wave of real estate speculation in Manhattan’s Chinatown in the 1980s forced its poorer residents and small businesses to look for cheaper housing elsewhere, such as in Flushing in Queens or Sunset Park in Brooklyn. Before long “satellite Chinatowns” appeared in different parts of Brooklyn and Queens.

As more immigrants continued to arrive, more Chinese businesses opened in these satellite Chinatowns and most of the properties in and around them were purchased by Chinese. Within a decade, the property values quadrupled and the once inexpensive “new” neighborhoods became unaffordable to the less-fortunate newcomers. The search for cheap housing has sent wave after wave of new Chinese immigrants further afield, creating a series of mini-Chinese

communities scattered among non-Chinese neighborhoods but still connected to the original Chinatowns. With each extension the integrity and intensity of the character of the Chinese community has been diluted—places like Bensonhurst and Avenue U in Brooklyn—can be identified only by a small cluster of new Chinese groceries and restaurants.

Another factor pushing the working-class Chinese to move away from Manhattan’s Chinatown is the continued decline of garment manufacturing because of imports. Finding alternatives is a question of survival. Chinese women have managed to get jobs as hotel room cleaners and as homecare assistants servicing Chinese-speaking senior citizens, where skills and English language requirements are minimal. Men have found work in construction, although many have moved to the dispersed middle class suburban Chinese communities to work as restaurant personnel, homecare assistants, store clerks, construction workers, and delivery boys.

Even though New York’s Chinatown is not exactly disappearing—rather, it is being reconstituted in a more complex, dispersed way—in the twenty-first century the working-class Chinese immigrants seem poised to break out of the ethnic enclaves into the general labor market and may well end up repeating the integration cycle of European immigrants.

Chinatown Gangs in the United States

Chinatown gangs in the United States have a varied and sensationalized history within the American discourse. From sinister portrayals as the Chinese “Yellow Peril,” to hyperviolent refugees from Southeast Asia, Chinatown gangs have been popularly featured in literature, television, film, and newsprint for more than half a century. Reflective of demographics in Chinatowns across the country, Chinatown gangs appear to continually grow in their diversity beyond southern Chinese immigrants, also including those that are U.S.-born, from Taiwan, and from Southeast Asia. Robust understandings of the gangs continue to be elusive and what is known often focuses on long-standing southern Chinese communities in San Francisco and New York. Studies and documentation of Chinatown gangs vary, from small youth street “crews” to transnational crime syndicates with origins in the revolutionary Triad organizations during the Qing Dynasty.

Origins

Prior to the influx of Chinese immigrants resulting from the 1965 Immigration and Nationality Act, there were very few youth of Chinese descent living in the United States. Thus, there was little recorded on what is usually considered gang activity in Chinatown communities, although there was some criminal group activity that was primarily engaged in by adults (see Tongs and Tong War). This lack of activity and

documentation began to change in the decade after 1965, when thousands of immigrant families and their children began to arrive in the United States, often first settling in Chinatowns.

Located in the urban core, Chinatown residents were often limited in terms of English-language capacity, as well as financial, social, and cultural capital. This most likely facilitated “underground” social and economic practices by adults that were both new and established. As the children of many working-class Chinatown immigrants experienced high marginalization and disenfranchisement in schooling, social services, and law enforcement institutions, they were also pulled into practices tied to Chinatown gangs that had been noted by law enforcement to some degree since the 1950s. Here the term gang is defined as a cohesive group of people affiliated under certain terms of leadership, geography, and loyalty. These groups often engage in illicit practices that can sometimes be understood as self-defeating forms of resistance, similar to those of working-class Chinatown youth during the 1970s.

Aside from similar class backgrounds, Chinatown gang youth had family origins in southern China, typically from Guangdong (Canton) province where many Chinese immigrants to the United States were historically from. Following the Vietnam War and the United States involvement with Cambodia and Laos, Chinatowns experienced an influx of Southeast Asian refugees and immigrants, many of whom were also ethnic Chinese with ancestral roots in Guangdong (i.e., Chaozhou or Chiu Chow). In recent decades, further diversification of Chinatown gangs has resulted from immigrants from Taiwan and northern China that sometimes settle in Chinatowns but speak different dialects from those in the south, including Mandarin. Other factors that have impacted the gangs are the gentrification of Chinatowns across the country, which has pushed together communities that have historically lived apart, as well as subsequent generations of Asian and Chinese youth born in the United States, many of whom are of racially and ethnically “mixed.” Another factor in the changing demographics of Chinatown gangs is the emergence of suburban Chinatowns, such as in the San Gabriel Valley in Los Angeles County.

Differences in Approaches

Because of the “underground” nature of Chinatown gangs, it is difficult to accurately account for their practices, development, size, and reach. A significant factor that has influenced understandings of Chinatown gangs is twentieth-century portrayals of Chinatowns within the U.S. news and entertainment media. The discourse has often framed Chinatowns as havens of immorality, rife with gambling, narcotics, and human trafficking tied to prostitution and undocumented immigration. Chinatown gangs continue to be viewed as violent and organized perpetrators of such crimes, somewhat like the Italian Mafia in terms of their level of organization and interstate activities. This portrayal has influenced academic institutions and the criminal justice system as Chinatowns and Asian gangs have increasingly become the subject of study and policing since the 1970s in cities such as Boston, Philadelphia, Chicago, and San Francisco.

Within the “organized crime portrayal” of Chinatown gangs, they are discussed as organizations with ties to the tongs, which were originally fraternal support associations first established in the 1800s that eventually became involved in criminal activity. In recent decades, Chinatown gangs are believed to have carried out some of the business activities of the secret tong societies. Teenage and young adult street gang members, mostly males, have been thought to take orders somewhere along the chain of command within criminal tong hierarchies. If they do not take orders from tongs, the gangs at least have to placate them to conduct their activities with less interference from the existing Chinatown infrastructure. These exchanges and networks have been explicitly documented in the research about New York, particularly with Manhattan Chinatown.

In addition to the ties between Chinatown gangs and the tongs, connections have also been made to the triads that originated as revolutionaries during China’s Qing dynasty. Although many Chinatown street gangs appear not to have been strongly affiliated with the triads when they arose in the 1970s, 1980s, and 1990s, it is thought that these affiliations began to solidify largely because of human trafficking and the lucrative drug trade from Asia with narcotics such as

heroin. Ties have been documented between North American gangs and Chinese triads in east and Southeast Asia, but it is unclear to what extent these exist in the United States. Nevertheless, with the tongs, there has been much speculation of transnational criminal conspiracies within the U.S. media and criminal justice system. At times this speculation has been sensationalized to paint portraits of vast and sinister undergrounds in Chinatowns, reminiscent of the historical exoticization and demonization of Chinese and Asians as the evil “Yellow Peril.”

Debates continue within the criminal justice system and social science research on what are primary factors of gang development in places like Chinatown. Different theories persist on the role that tongs, triads, and organized crime play. However, there is agreement on how issues of class, language, and schooling are critical factors in youth joining Chinatown gangs, and how there seems to be a reduced public presence of Asian gangs on a national level, due in part to the arrests of some major gang leaders during the 1990s.

Chinese American Baseball

Chinese Americans have used baseball as a means of developing and maintaining a sense of community. Through baseball, they have crossed often treacherous cultural boundaries to play with and against people of varied racial and ethnic identities. And some American ballplayers of Chinese ancestry have competed effectively at the highest levels of professional baseball.

In the late 1800s, "all-Chinese" teams surfaced occasionally on the U.S. mainland. It is hard to gauge whether such teams were organized to allow Chinese immigrant young men a chance to bond together in a country that supported Chinese exclusion or whether they were assembled by white entrepreneurs hoping to profit from the supposed novelty of Chinese playing the "American National Pastime." However, by the early twentieth century, legitimate community teams emerged in Chicago and the San Francisco Bay Area. In Los Angeles, a Chinese American team, often known as the Los Angeles Chinese, opposed some of the best semiprofessional teams in the region during the 1920s. Likewise, in the 1930s, Oakland's Wa Sung team frequently dominated its semiprofessional competition. After World War II, Chinese American teams showed up briefly in San Francisco and Oakland.

Meanwhile, Honolulu had become a hotbed of Chinese American community baseball. In the early 1900s, the Chinese Athletic Club (CAC) team and the Chinese Alohas called on the services of some of the best ballplayers in the city. In 1912, the CAC, with the financial help of Chinatown merchants and *haole* boosters anxious to promote Honolulu on the mainland, assembled an "all-Chinese" team that journeyed across the Pacific and engaged in over 100 games against college, community, semiprofessional, and professional teams. In 1914, the Chinese Athletic Union (CAU) established a team that would, in 1915, effectively represent Hawaii in the Far Eastern Games, as well as compete in the Philippines. For several decades thereafter Hawaiian Chinese organized their own

leagues, while supporting a team called the Chinese Tigers that competed in the Hawaii Baseball League.

Despite its troubling relationship with institutionalized discrimination in the United States, baseball has drawn people across often dangerously shifting cultural borderlands. As it turned out, Hawaii proved more receptive than the mainland to constructing flexible cultural boundaries on its many baseball diamonds. One important reason was demographics. Because haoles comprised a numerical minority on the islands, it was foolish for white baseball coaches to cut talented Asian Hawaiian athletes if they wished to win. Thus, superb Hawaiian Chinese ballplayers of the early twentieth century such as En Sue Pung, Lai Tin, and Vernon Ayau not only played for Chinese nines but also teams populated by non-Chinese. Lang Akana, who possessed Chinese and indigenous Hawaiian ancestry, competed for several diverse Hawaiian teams from the 1900s to the 1920s. When Akana's playing career ended, he managed the "Hawaiiis" in the Hawaii Baseball League—a team supposedly comprised of ballplayers of indigenous Hawaiian descent.

The U.S. mainland, at the same time, witnessed fewer such interactions, but they were not unknown or necessarily unwelcomed. In the 1910s, the University of Chicago fielded a Hawaiian Chinese named William Achi, whereas Lehigh suited up first baseman Al Yap, another Hawaiian who would play semiprofessional baseball in and around Philadelphia during the late 1910s and early 1920s. Lee Gum Hong, a hard-throwing pitcher, competed for Oakland High School in the 1920s. Al Wong, who teamed with Lee Gum Hong on the Wa Sung nine, stood out on predominantly European American semipro teams in the San Francisco Bay Area.

Indeed, semiprofessional baseball on the early twentieth-century mainland deserves special attention. Frequently just as talented as minor league and organized baseball teams, the more famous semipro teams offered athletes opportunities to compete against top-notch white, Latino, and African American ballplayers. At the same time, these semipros could find in baseball the means to supplement their incomes as factory workers, office clerks, or shopkeepers.

The aforementioned Al Yap was one of these ball-players. Yap arrived on the mainland in 1915 as a member of the then-famous and often misnamed “Chinese University of Hawaii” baseball team originally representing the CAC and that barnstormed the mainland from 1912 to 1916. A scion of a prominent Hawaii Chinese family, Yap decided to attend Lehigh rather than return to the islands after the 1915 tour ended. He then spent several years as an itinerant amateur and semiprofessional baseball in eastern Pennsylvania. Within a year, Yap was joined on the East Coast by “Chinese University of Hawaii” teammates Lai Tin, Vernon Ayau, Apau Kau, Andy Yim, who was really a Japanese Hawaiian named Andy Yamashiro, and part-Hawaiian Fred Markham. All of these young men prospered on semipro teams on the East Coast. Lai Tin, later known as Buck Lai, particularly stood out as a semiprofessional luminary for several East Coast teams, most prominently the famed Brooklyn Bushwicks.

Starting out as an ostensibly amateur traveling team, the “Chinese University of Hawaii” eventually blurred whatever distinctions that might have existed between amateur, semiprofessional, and professional. Sharing the gate receipts, the Hawaiians played and usually won well over 100 games a year against college, commercial, semiprofessional, and professional teams. In 1912, the team was entirely comprised of young men of Chinese ancestry. In 1913, Fred Markham joined the team most appropriately described as the Travelers. From 1914 through 1916, more non-Hawaii Chinese joined the club, including Hawaii Japanese such as Yamashiro and the talented Moriyama brothers. As the Travelers came to have fewer Chinese players, Hawaii’s Chinese community distanced itself from them and assembled the aforementioned CAU nine.

Several of these Hawaiian ballplayers attracted interest from mainland professional teams. Outfielder Lang Akana was signed by the Pacific Coast League’s (PCL’s) Portland Beavers for the 1915 season, but a threatened boycott by white PCL players moved the team owner to release the outfielder. Lai Tin was inked as well by the Chicago White Sox of the American League. At this time, he, too, remained outside of organized baseball’s fold, either because, according to the press, he was not good enough for the Major Leagues or he did not want to play with a team of haoles.

However, a few of the Travelers did make it into organized baseball. Vernon Ayau, a deft shortstop, played in the Pacific Northwest League in 1917, and Andy Yamashiro, curiously competing as Andy Yim, did fine as an outfielder in the Blue Ridge League. Getting another chance to play organized baseball in 1918, Buck Lai started as a third baseman for the Bridgeport Americans of the Eastern League after the Philadelphia Phillies cut him. Lai would have one more shot at the big leagues when the New York Giants invited him to camp in 1928. Once again, Lai was not seen as big league material.

Apau Kau was an often dominating pitcher for the Travelers. Organized baseball teams expressed interest in obtaining his talents. As mentioned earlier, he did decide to linger on the East Coast after the last trek of the Travelers in 1916. Apau Kau pitched semiprofessionally for a Philadelphia department store in 1917. He subsequently joined the U.S. military when World War I flared for Americans. In the fall of 1918, Sergeant Apau Kau lost his life on a European battlefield.

Other ballplayers of Chinese descent would find their way into organized baseball. Pitcher Lee Gum Hong appeared for the PCL’s Oakland Oaks in 1932, seemingly more out of an effort to lure fans to watch a mediocre team in the throes of the Great Depression. In the 1940s, George Ho was a peripatetic minor leaguer from New York City. More recently, Ray Chang has played minor league baseball for organizations such as the Boston Red Sox and Pittsburgh Pirates. Significantly, since his parents were born in China, he competed for China in the World Baseball Championship in 2009.

Pitcher Ron Darling remains the most famous ballplayer of Chinese ancestry. The Hawaiian born Darling became a stalwart member of the New York Mets’ pitching staff in the 1980s. Winning as many as 17 games for the 1988 Mets, Darling subsequently took the mound for the Toronto Blue Jays and the Oakland Athletics. He presently does baseball commentary for TBS and the Mets.

Encountering racial and gender barriers, Kim Ng has served as assistant general manager for both the New York Yankees and the Los Angeles Dodgers. In the process, the former college softball player experienced ethnic taunts from a member of the New York

Mets' front office. Moreover, she has been interviewed but not yet hired for general manager positions. Even the Dodgers passed over her and hired an assistant general manager from the rival San Francisco Giants.

As Ng's career suggests, the Chinese American experience with baseball has been ambivalent. Undoubtedly, baseball has offered them joy and chances to represent their communities, cross-cultural borders, and achieve fame and, in Darling's case, a relative fortune. But it would be understandable to wonder if the sport could not have been more generous to the likes of Lang Akana, Buck Lai, and Kim Ng.

Chinese American Childhood

During the nineteenth century, the vast majority of Chinese children emigrated from Canton with the intention of providing financial support for their family living in both the United States and China. Among

these early immigrants were young teenage boys who usually accompanied their father, uncle, or older sibling with the intention of working in America. Chinese girls were less likely to immigrate, although many of those who did come over (knowingly or not) worked as prostitutes. Some merchant-class Chinese men sent for their wives and children with the intention of living as a complete family unit in America. However, this arrangement was less common during the pre-1920 period. Although most scholars describe the earliest period of Chinese American history (1850–1920) as the period of "bachelor society," there was a small but significant presence of Chinese children living in America. In San Francisco's Chinatown, home of the largest Chinese American population at the time, Chinese children constituted on average no more than 11 percent of the local Chinese American population. Children were statistically even more rare in smaller rural Chinatowns across the nation. The stringent enforcement of the 1882, 1892, and 1902 Chinese Exclusion Acts further significantly hampered the development of Chinese American family life.

The various incarnations of the Chinese Exclusion Act specifically sought to limit the influx of Chinese laborers and prostitutes. Young Chinese immigrants, therefore, experienced intensive scrutiny by immigration officials. Children who exhibited the markers of merchant-class status gained relatively easy entry. Immigration officials were also much more likely to admit especially young children or whole families immigrating as a unit. However, teenage Chinese youth traveling alone or with a more ambiguous class status endured intensive interrogation and medical exams to ensure their right to enter the country as children of exempt-class immigrants. An elaborate system of by-passing immigration restrictions developed via the paper son/paper daughter system, which allowed Chinese child laborers and prostitutes to circumvent the exclusion laws. Families in China purchased false paperwork, which would allow a young man to claim a familial relationship with a merchant (or a U.S. citizen) living in the United States. The child then had to memorize extensive information about his paper family before facing interrogation by immigration officials. The elaborate system of paper families developed into a complex game by the early twentieth

century in which Chinese immigrant children, their families, and their paper families attempted to deceive immigration officials to bypass America's discriminatory race and class-based immigration policies. The Chinese Exclusion Act was strictly enforced until its repeal in 1943.

Chinese children in late nineteenth- and early twentieth-century America frequently labored alongside their families. These children often worked long hours in the family business in addition to juggling school and household responsibilities. Over time, however, they found themselves caught in the larger national debate over the potential hazards of child labor. Although the success of the Progressives at passing laws limiting child labor in the 1910s, and although as families became more economically self-sufficient, they relied less and less on the labor of their children to help provide financially for the family, child labor never completely disappeared in Chinatowns. Both working-class and middle-class Chinese immigrant families continued to encourage their children to work after school to help the family business, supplement the family income, and instill values of thrift and hard work.

Chinese American culture has always placed a great deal of emphasis on the importance of education. Yet the struggle for equal education varied from place to place. In many cities and towns in California, Chinese children faced segregated schooling or were denied access to a public education all together. From 1871 to 1885, San Francisco denied Chinese children any kind of public education and Chinese families turned to missionaries and private tutors to educate their children. By 1885, the Chinese American community had successfully won their right to a public education in the case of *Tape v. Hurley*. However, the California state legislature opted for a segregated system of education for Chinese children. Although Chinese community organizations and individual families challenged the legality of segregated schools, over the next several decades the "Chinese School," or "Oriental School" as it was later called, served as the official segregated elementary school for Chinese children in San Francisco's Chinatown until 1947. Chinese children growing up in towns in the San Joaquin Delta also attended segregated Chinese

schools. In other areas of the United States, Chinese American children attended integrated schools because the small number of Chinese immigrants rarely justified the expense of separate schools. However, in the South, where racially segregated schools existed for black children, Chinese families also tried to fight for an integrated public education for Chinese children. In 1924, Lum Gong, a Chinese merchant living in Mississippi, sued the local school district after school officials denied his daughter's attendance at the white school. When the case eventually reached the United States' Supreme Court, the justices determined that Chinese, would have to attend the segregated schools for black children if they wished to obtain a public education.

Some Chinese youth found themselves the objects of reformers' attentions. Protestant churches founded mission schools to provide Christian education to Chinese youth. Local child-saving organizations and a few churches such as the Methodist and Presbyterian churches, established homes to rescue and house orphaned, abused, or abandoned Chinese women and children. The children often became the objects of legal contention as missionaries and social reformers battled Chinese community members for guardianship rights. By the early twentieth century, youth gangs had emerged in Chinatowns across the nation. Chinese children who found themselves in trouble with the law frequently ended up in the juvenile court system for their transgressions, facing possible sentence to local juvenile halls or state reform schools. A few continued their life of crime and eventually became adult members of criminally associated tongs. Local community efforts to crack down on gambling, prostitution, and opium smoking helped to quell the tong violence of the early twentieth century. A resurgence of Chinese gang activity erupted in American Chinatowns during the 1970s. Chinese youth gangs continue to pose problems for law enforcement today. Adult organized crime groups often turn to Chinatown youth gangs to assist in elaborate schemes involving drug trafficking, assault, extortion, and the protection of gambling houses and brothels.

Chinese American family life reflected the influences of both Chinese and American culture. China-born parents typically raised their children according to

Chinese child-rearing models, which allowed for the pampering of young children until about age seven when parents began to institute strict discipline to help build strong character. Chinese culture also clearly defined distinct roles for male versus female children, which required men to serve as wage earners whereas women were responsible for domestic duties. Mothers often passed on Chinese stories, rituals, and traditions through both their daily interactions and the celebration of various feasts and festivals with their children. Chinese children in America experienced Chinese culture through the food, language, holidays, and clothing traditions practiced by their family and community. However, through school and church Chinese children experienced American culture. Some families rapidly converted to Western customs to express a desire to assimilate into American society. Others maintained a prominently Chinese identity out of cultural pride and/or an intention of eventually returning home to China. Most families, however, found a way to create a uniquely Chinese American identity by selectively adapting customs from both cultures.

A larger second-generation of American-born Chinese American children came of age beginning in the 1920s and contributed to the transformation of Chinese American communities nationwide into more family friendly communities. Chinese American children growing up during this period continued to face discrimination and segregation in public places, at school, and in the workforce. In addition, American-born children often struggled with a feeling of cultural dualism created by living on the margins of two worlds. On the one hand, they felt tied to their Chinese heritage through the traditions of their family, community, and Chinese culture schools. On the other hand, their education in American public schools, participation in Christian churches, and social interaction with Euro-American peers and culture, helped to cement their self-identification as Americans. Generational conflicts inevitably developed between American-born Chinese children and their China-born parents over issues such as education, recreational activities, work, and dating. Many Chinese children born in America resented the strict child-rearing practices of Chinese culture and longed for the apparent freedom enjoyed by their Euro-American peers.

American-born Chinese children also often served as cultural mediators for their parents, translating English into Chinese or explaining American customs to their parents. This role reversal sometimes upset the dynamics of the family power structure and further heightened intergenerational tensions.

World War II opened up a range of economic opportunities for Chinese families with the removal of racial restrictions in military service and employment in the war industries. Many Chinese American children raised in the post-war period enjoyed a more affluent lifestyle than their pre-war predecessors. Chinese American families who could afford the transition moved out into the suburbs and challenged policies of residential segregation in the process. This sudden migration of Chinese American families created a clear distinction between uptown and downtown Chinese. The Chinatowns of the urban cities never completely disappeared and remained home to recently arrived Chinese immigrants and families too poor to move into the suburbs. Chinese American children in the suburbs enjoyed the material gains of their new affluence but also faced a heightened pressure to further the family's social mobility by succeeding academically. Middle-class American families often went to great lengths by hiring tutors or enrolling children in standardized test preparation courses to ensure their children's academic success.

Changes in the nation's immigration laws in 1965 encouraged a dramatic increase in the number of Chinese child immigrants arriving from mainland China, Taiwan, and Hong Kong. This new Chinese American population was culturally and linguistically distinct from their Cantonese predecessors. The 1965 immigration policy instituted preferences for professionals and skilled workers who were affluent enough to bypass Chinatown's ghettos and move straight to the American suburbs. Provisions in the 1965 act and later immigration acts also provided for the immigration of refugees from Southeast Asia. Many of these immigrants contributed to the repopulation of America's inner-city Chinatowns in the 1970s and 1980s. Although the new immigrant is demographically different from their Cantonese predecessors, these children and their families have carried on the struggle to obtain access to decent housing, healthcare, and quality education and bilingual programs.

In recent decades, the overall socioeconomic success of Chinese Americans has contributed to their image as model minorities. Unfortunately, this image has created undo pressure on Chinese American youth who fall short or fail altogether to conform to the stereotype. Many Chinese American children feel compelled to live up to the image of the model minority by working twice as hard as their peers to achieve academic success. The stereotype obscures the realities of historical policies of segregation and exclusion while masking the problems faced by immigrant, urban, and working-class Chinese youth.

Chinese American Community Organizations

Community organizations play very important roles in historical Chinese America. Shortly after they settled in the United States, Chinese immigrants began to organize among themselves. Some of the historical organizations were formed on ties originated in native places of the immigrants, whereas others were based

on political, economic, and social interests shared by members of the ethnic community. At a time when affiliation with the larger society was extremely difficult, most Chinese Americans were eager to become members of their community organizations. Without support from their community networks, newcomers would face great difficulties in finding jobs, and they would have no means to voice their grievances.

Historical Associations

Clan and Family Associations. Clan and family ties bound groups of immigrants together from the very beginning. Memberships of clan or family associations were often defined by a common surname or lineage, which kept the immigrants attached to their native villages. These associations, often featured with the surname of group members, were especially important to the immigrants of the late nineteenth and early twentieth centuries. They helped immigrants find work. Most newcomers were introduced to the occupations of their fellow clan members. Such practice enabled clan and family associations to develop their own occupational specialties. Clan members also tend to concentrate in certain areas. The Lees, for example, were most prominent in Philadelphia by the turn of the twentieth century, as were the Chins and the Toms in New York City.

Huiguan. A district association is called a huiguan, which traces its origin to immigrants' native place in China. Members of a huiguan are from a given district, and they share a common dialect. Combining all the clans and social groups from the same region, huiguan provided its members with many benefits that were crucial to the survival of the immigrants. Newcomers could find temporary lodging inside their huiguan buildings, where they met fellow villagers and also obtained job information. Chinese merchants, some of whom came earlier, served as officials of these associations. They would meet the incoming steamers at the port of entry regularly, lead fellow newcomers to the associations, and provide them with job information and necessary supplies. Huiguan officials would also arbitrate disputes among group members, help form rotating credit groups, and ensure the payment of debts. Membership dues and other funds collected

were used to finance projects of common interests and concerns. The Sanyi huiguan (Sam Yup Benevolent Association), for example, helped send 188 older members back to their home villages in China in 1882. Huiguan also provided medication and temporary shelter to the sick, raised special funds for the elderly, maintained cemeteries, and paid burial expenses for the poor. It also shipped the exhumed bones of the deceased to their home villages for final burial. Both clans and the huiguan sponsored social activities regularly. Many huiguan had branches established outside of San Francisco.

Chinese Consolidated Benevolent Association. The Chinese Consolidated Benevolent Association (CCBA) is a federation of various community associations. First established in the 1870s, the CCBA was known to the mainstream American media as the Chinese Six Companies. The association mobilized the community to challenge discriminatory legislation after 1882, and it was recognized by both the Chinese government and mainstream American society as the voice of the Chinese American community. By 1947, 30 branches of the CCBA were established in Chinatowns throughout the country.

Hierarchically above clan and the district associations, the CCBA functioned as the governing body of the entire ethnic community. It worked with affiliated organizations and mediated disputes among them. The CCBA built Chinese language schools and financed the Chinese Hospital in San Francisco. Those who planned to return to China were required to obtain exit permits issued by the CCBA. Under the leadership of the CCBA, the community protested the treatment of the Chinese in the United States. It contested many discriminatory laws in court and won a few important battles. It also promoted trade with China. More than anything else, the CCBA gave individual Chinese living in the United States a sense of community under difficult circumstances.

To secure funds for legal battles and building public infrastructure, CCBA collected membership dues through district associations. A substantial amount of income also came from fees charged for issuing exit permits. Individual Chinese could not purchase tickets from American steamship companies without an exit

permit issued by the CCBA. Registration drives launched by the CCBA in the early twentieth century were quite successful, when the community was united to lobby Congress to amend immigration laws. As more and more immigrants settled down and established their own businesses, there was an increasing desire for family unification and community building, and the CCBA provided the much-needed leadership for the entire community.

Chinese American Citizens Alliance. The Chinese American Citizens Alliance (CACA) was organized by second-generation Chinese Americans. During the exclusion Chinese immigrants were denied the right to naturalization, but those who were born in the United States were entitled to U.S. citizenship under the 14th amendment of the U.S. Constitution. The CACA emerged as one of the most influential organizations in the community because its members could vote. First known as the United Parlor of the Native Sons of the Golden States in San Francisco in 1895, the group was reorganized and renamed the Chinese American Citizens Alliance in 1904. It grew at a fast pace in the following two decades, with chapters in Oakland, San Francisco, Los Angeles, Fresno, and San Diego. From the 1920s to the 1940s, when the court refused to review immigration laws, the CACA played a leading role lobbying Congress and pushed for the 1930 amendment for the admission of Chinese wives of U.S. citizens. Legislative efforts of CACA for family unification continued in the 1950s and early 1960s. The CACA's newspaper, the *Chinese Times*, has been one of the most important community newspapers within the Chinese American community. First established during the exclusion, it is the only community-based newspaper that survived World War II and the Cold War.

Tong. Tong is a type of Chinese fraternal organization. Members of the tongs were bound together through secret rites and sworn brotherhood. One of the early tongs, Zhigongtang (Chee Kung Tong), was a secret society originated in China, with the goal to overthrow the Qing Dynasty and restore the Ming Dynasty. Unlike most family and district associations, the tongs were antiestablishment in nature. They controlled the immigrant underworld and divided

territories over gambling, opium smoking, and prostitution. Fights between two tongs were known by the mainstream media as tong wars.

Chinese Hand Laundry Alliance. This is a laundryman's guild in New York. In March 1933, the Council of Aldermen of the City of New York proposed an ordinance: all public laundries were subject to a security bond of \$1,000 and an annual license fee of \$25. In addition to the exorbitant fees, which was beyond the reach of most Chinese laundrymen, the proposal also made U.S. citizenship a requirement for every public laundry owner. Because Chinese immigrants were ineligible for citizenship, the latter requirement alone made it practically impossible for them to stay in business. When the CCBA refused to take immediate actions, more than one thousand Chinese laundrymen organized the Chinese Hand Laundry Alliance (CHLA). The CHLA launched its own campaign against the proposed ordinance, hired lawyers to challenge the ordinance, and eventually won its battle in court. The victory allowed the organization to grow quickly. In most of the 1930s and 1940s, the CHLA was a major organization confronting the CCBA in New York (see the Chinese Hand Laundry Alliance of New York [CHLA]).

Chinese Workers' Mutual Aid Association. The Chinese Workers' Mutual Aid Association (CWMAA) was a San Francisco-based labor organization. It was founded in September 1937 by a group of workers who had worked at Alaska salmon canneries in the previous summer. The CWMAA had strong ties with American trade unions. It also had close ties with the American Communist Party and was sympathetic to the Chinese Communist movement. The association held seminars to study Marxist theory and published essays supporting the Communist revolution in China. In the late 1940s, the CWMAA was a major voice against the CCBA in San Francisco. Membership declined in the early 1950s.

Chinese Patriotic Youth Club. The Chinese Patriotic Youth Club (CPYC) (*Niuyue huaqiao qingnian jiuguo tuan*) was the largest youth organization in New York. Founded in 1938, the organization

attracted both male and female community members and had close ties with the CHLA. The CPYC sponsored social and recreational programs and held Mandarin, music, and photography classes. Its chorus was popular among the young Chinese Americans. The *Chinese Youth* was the magazine of the CPYC.

Min Qing (Chinese Democratic Youth League). Min Qing was first organized in 1942 as the Chinese Youth League in San Francisco. Members of Min Qing included both young men and women of all social backgrounds. Many Min Qing members were immigrants, and a few women assumed leadership positions. Min Qing created a variety of social and recreational programs. It offered Mandarin, music, and photography classes, and formed chorus, dancing, and drama teams. It also helped new immigrants learn English. The youth organization published its own magazine, *Minqing*, which became an outlet for self-taught young writers in the community. Min Qing also maintained a library, providing reading materials in classic Chinese literature and history, as well as Marxist theory that had become popular among students in China.

Social Hierarchy

Clan and family associations, huiguan, and the CCBA above them form the basic structure of community establishment. Membership in these associations was reserved for male only. Merchants, who possessed wealth and connections in the immigration networks, assumed leadership positions. These merchants enjoyed more power and prestige than merchants in China. Until the early twentieth century the ranks of government officials in China were determined according to their performance in imperial examinations. The imperial examination system was abolished in 1905, but the scholar-gentry class continued to enjoy elite-class status in China. Following Chinese traditions, some district associations tried to recruit scholars to serve as presidents of huiguan. This practice ended in 1925 when the U.S. government tightened immigration regulations. The absence of a scholar-gentry class helped merchants gain elite status in the community. Chinese merchants were the first to come to the United States. They were powerful

members of the community because many of them brought over a large number of clan members and helped them find jobs. Exempted from exclusion, they were able to bring in their families. All important positions in the community power structure, including presidents of family associations, huiguan, and CCBA were eventually held by merchants.

The community power structure received strong support from the Chinese government. The Chinese Nationalist Party, the Guomindang, established headquarters in several Chinatowns in the United States and actively recruited Chinese immigrants. Heads of huiguan and CCBA were often appointed as party officials.

Internal struggles never ceased, however. Beginning in the late 1920s, the CCBA's position as the voice of the Chinese American community was challenged, as internal struggle among different district associations for representation and control of the association intensified. Within the CCBA, Ning Yang, a huiguan of immigrants from Taishan county in Guangdong province, had the largest membership. Because Ning Yang had contributed a significantly larger portion of the CCBA's budget than any other groups, it demanded more power than other district associations. In 1927, *Young China Morning Paper*, a Guomindang-controlled newspaper run by immigrants from Zhongshan district, criticized Ning Yang's president for abusing his power at the CCBA. These comments triggered a bitter battle between the two regional immigrant groups. Ning Yang called its members to boycott the newspaper, but the newspaper was backed by the Guomindang's headquarters in San Francisco, which threatened to expel anyone from the party who boycotted the newspaper. To protest, Ning Yang adopted a non-cooperative attitude in the CCBA. It rejected the latter's new measures to collect funds and questioned the effectiveness of its leadership. Without the consent of its biggest district association, CCBA could not conduct its routine business and had to give in. The result was to assure Ning Yang its dominance in the organization. In its 1930 new bylaws, Ning Yang gained control over CCBA by occupying about half of the seats on the board. The head of Ning Yang also got to serve as president of the CCBA every other term, whereas the other half terms were filled by presidents of the other six district associations.

Challenges also came from outside of the community power structure. After the community lost its legal battle against the Geary Act in the 1890s, for example, CCBA found it difficult to maintain control for many years. Progressive forces of the community, including intellectuals, workers, and youth groups questioned CCBA's legitimacy as community spokesperson. In the 1940s, some community members were disillusioned by the nationalist government in China, and they also thought that the merchant-dominated community power structure had little interest in providing protection for ordinary Chinese Americans. Beginning in the 1930s, workers and young Chinese Americans formed their own organizations without permission from the CCBA. These organizations attracted many young immigrants, intellectuals, and workers; they worked to reduce the influence of the ethnic power structure.

The community was further divided in the late 1940s and early 1950s, largely over China politics. Although the Cold War provided the community establishment with new ammunition to crush its opponents, its reputation also declined in the process. Because the United States had no diplomatic relationship with the newly established People's Republic of China from 1949 to 1979, it was difficult for Chinese Americans to travel to their ancestral homeland. The CCBA therefore lost its income from issuing exit permits. Changes in postwar years, especially desegregation, family unification, and access to the mainstream job market meant that affiliation with a clan or huiguan was not as crucial to the survival of individual Chinese. Today, the CCBA still claims to be the spokesperson of the community, but the power and reputation of the organization has been greatly reduced.

Chinese American Funerary Rituals

Chinese immigrants to the United States carried with them their cultural beliefs regarding death and the nature of the afterlife. Combining elements of Confucianist, Taoist, and Buddhist philosophy, many Chinese immigrants believed that proper funeral and burial ritual determined not only the happiness of the deceased in the afterlife but ensured the future happiness, health, and material well-being of the living relatives. Failure to properly care for the deceased through appropriate death rituals, both at the time of death and for years after, had the potential to turn the departed into wandering ghost spirits capable of wreaking havoc on the lives of the living. Discontented ancestors could be responsible for a sudden loss of income, a failure to have children or produce a male heir, misfortune, illness, or even death in the family.

Although funerals among early Chinese immigrants in America were rarely as formal or elaborate as funeral ceremonies at home in China, some individuals still went to great lengths to ensure the observance of traditional rituals. Shortly after death, relatives laid out various types of food and drink offerings near the body of the deceased. Relatives formally announced the death to the community and sometimes hired a geomancer to determine the appropriate time and place of burial. Mourners prepared for the funeral procession by dressing in white and blue, the traditional colors of death. The chief mourner (usually the eldest son or other close relative) led the procession with visible displays of grief. Sometimes women were hired to conduct ritual wailing and mourning rites. Bands accompanied the procession playing music both to notify the community of the solemnness of the occasion and to frighten away any lingering ghost spirits. The explosion of firecrackers, offerings of food and drink, the burning of incense, and the scattering of perforated symbolic money was also intended to appease the deceased and discourage ghost spirits from harassing the living. Many Chinese American cemeteries included specially constructed burners where mourners burned symbolic money, clothing, or consumer goods for use by the deceased in the afterlife. Some families hired Buddhist, Taoist, or Christian priests

and ministers to chant incantations or perform burial rituals at the funeral home and gravesite. Chinese American funerals may have included all of these elements or only a select few depending on the wealth and status of the deceased.

Although the practice of secondary burial was common among the Cantonese in China as a means of preserving the bones and caring for the dead, exhumation and reburial took on new meaning in the United States. Several years after death, community leaders or Chinese district associations hired individuals to exhume, package, and ship the bones to China for reburial. The purpose of this practice was to ensure that relatives back home carried on the appropriate death ritual. As more and more families chose the United States as their permanent home, the practice of exhumation and reburial in China declined in popularity. However, this practice has seen a temporary resurgence today with the increase in the number of Chinese immigrants who have actually reversed the tradition by exhuming deceased relatives in China and reburying them in the United States.

Fengshui or geomancy refers to the practice of positioning graves and homes in a manner that is most likely to accrue the benefits of positive energy (*qi*). In China, families often hired consultants to determine the appropriate placement of the grave as well as the best time of burial. Proper placement of the grave was considered essential to the deceased's well-being and happiness in the afterlife. Although there are various schools of thought and diverse means of siting graves, generally the deceased's head would be buried up against the slope of a hill or an artificially constructed omega-shaped ridge to ensure that negative energy flowed away from the grave. Ridges, hills, or mountains at the back of the grave ensured that dangerous spirits passed by the grave. Water passing alongside the foot of the grave dispersed positive energy. The overseas Chinese may have had limited say in the site selection of the earliest cemeteries as discriminatory laws and practices often dictated the location of Chinese cemeteries outside the main part of a town's cemetery. However, scholars have noted that some Chinese cemeteries appear to be sited in accordance with the principles of *fengshui*. Today, the death

industry is big business and the locations of many modern Chinese American cemeteries have been carefully chosen according to the principles of *fengshui*. Individual families also frequently hire geomancers to determine the location of gravesites in Chinese American cemeteries today.

In addition to the funeral and burial rituals practiced by individual families, a number of other traditions and ceremonies exist to provide for the deceased well beyond the funeral. The family continued to care for their deceased ancestor through the use of spirit tablets. Spirit tablets placed in temples, company houses, or family homes included the names of deceased ancestors. Family members laid out occasional offerings of food, drink, and incense before the tablet in memory of the deceased. Annual community-wide festivals (*Qingming*—the Pure Brightness Festival and *Yulanpen*—the Hungry Ghosts Festival) existed to care for the spirits of the deceased through ceremonial offerings and tributes designed to appease the deceased and any wandering ghost spirits.

Traditional Chinese elements of death ritual have remained even as Chinese Americans have adopted aspects of Western or Christian funeral and burial rituals. Although some families have completely adopted American funeral customs, other families mix Christian or Western funeral practices with various aspects of Chinese death ritual. A typical funeral ceremony today might include a Chinese-style procession to the cemetery coupled with the Western traditions of mourners dressed in black and the presence of Christian ministers. The post-1965 immigration of new Chinese immigrants from Hong Kong, Taiwan, mainland China, and Southeast Asia has further diversified Chinese American funeral rituals while helping to perpetuate Chinese-style death rituals in America.

Chinese American Youth in Multiethnic Chicago

Existing literature on immigrant youth usually focus on their ethnic identity formation or their school performance. Such research often attributes the liberal college environment as the primary setting of identity formation and reduces youths experiences of growing up in localized communities to secondary background information. Although recognizing the connection between community infrastructure and identity formation of immigrant youth, this study finds that class is a salient factor in mediating the racialized experiences of different groups of Chinese American youth. Unlike the majority of middle-class suburban youth who discover their Asian American panethnicity through meeting many of their coethnics for the first time on college campuses, working-class youth from multiracial urban neighborhoods tend to develop multilayered identities, which are based on the articulation of race, class, gender, and masculinity. This research was conducted between 2003 and 2005. To protect the identity of my research subjects, all the names used here are pseudonyms. I use the term “Chinese American youth” to include both the 1.5 generation (foreign-born youth arriving in the United States prior to age 13) and the second generation (youth born in the United States to immigrant parents). I treat Chinese American youth as a distinct group because the majority of them spent their childhood or adolescence in the United States and their experience of becoming American is significantly different from their immigrant parents.

Chicago’s Chinatown differs from those of San Francisco, Los Angeles, and New York in many ways. Although the latter attract scholarly attention for their sweatshop workers, illegal immigrants, and economic potential, there are no similar studies on Chicago’s Chinatown, which solely depends on the restaurant industry. Moreover, although Chinatowns in the two coastal areas are undergoing economic depression and population decline, Chicago’s Chinatown is expanding southwest to its adjacent Bridgeport neighborhood. Altogether, the Chinese population in Armour Square (where the historical Chinatown is located) and Bridgeport account for almost half of all

Chinese in Chicago. This concentration of Chinese immigrants in Chicago differs from other Asian immigrant groups in the city, such as Filipinos, Asian Indians, and Koreans, who have more dispersed residential patterns and much higher rates of suburbanization. In addition, Chinese Americans also display the most striking class polarity among all Asian immigrant groups in Chicago. Although highly educated Chinese professionals and managerial staff can afford to settle directly into middle-class suburbs, new Chinese immigrants with limited English language skills often end up in ethnic enclaves like Chinatown, depending on the ethnic job market for survival.

The rapid expansion of the Chinese population from Chinatown to Bridgeport began around the 1980s and 1990s, largely because of the 1989 Tiananmen Incident in China and the 1997 return of the British colony of Hong Kong to mainland China. Today Bridgeport's population is roughly 26 percent Asian American (mainly Chinese Americans), 30 percent Latino (mainly Mexican Americans) and 41 percent white (Census 2000). African Americans constitute only 1.05 percent of Bridgeport's population. They nonetheless continue to play an important role in the neighborhood's racial imagination. For example, in 1997, a 13-year-old African American youth Lenard Clark was beaten into a coma by three white youths while biking in a park near Bridgeport. It was reported that the offenders later bragged how they had taken care of the "niggers" in their neighborhood.

Because of their exposure to the white world through schools and peer groups, and their fluency in the English language, Chinese American youth, particularly males, are easy targets for hate crimes or interracial harassment in Bridgeport. Although hate crimes against Chinese Americans are not as violent as those against African Americans—interracial harassment against Chinese Americans usually takes the form of verbal assaults, threat of physical attack or criminal damage of properties, in several cases Chinese Americans are obviously categorized as either black or close to the black pole of the black/white racial dichotomy. For example, in 1998 an 18-year-old Chinese American was attacked by some white youth. They beat him up while yelling things like "You've ratted out. I'll beat you like a fucking nigger.

I hate nigger and Chinaman." Somehow they believed he was a witness of the Lenard Clark case in 1997, and they threatened him not to tell the police. In a more recent case in 2002, a Chinese high school student was walking at the borderland of Bridgeport and Chinatown when a car came by with three white teens in it. They said, "Hey, are you a nigger?" Before he could say anything, they jumped out of the car and one of them punched him in the eye. The racialization of Chinese Americans as blacks illuminates the continuity between Bridgeport's historical racism against blacks and its current anti-immigrant sentiment. It also invokes among Chinese American youth an acute awareness of their nonwhite racial status.

In contrast to their parents' relative silence on the topic of race and their prejudice against African Americans, the majority of Chinese American youth are more vocal in expressing their indignation toward racial discrimination. Many of the youth in this study develop their American identity through dealing with interracial harassment from whites, learning racial etiquette on the street, and witnessing the extreme poverty of their immigrant families. For working-class Chinese American youth, becoming American means becoming nonwhite American, becoming minority American, and becoming racialized American. Paul, who was once beaten up by some white youth when biking home from a party at night, told me bluntly, "I think there is racism going on in this neighborhood and I can feel it all the time. Some people see themselves superior to us. They think we are inferior. They jumped me because they thought I was not as good as them. They didn't know I was born here and could speak English as well as them. All they saw was my Asian feature." Steve, another college student, told me that he felt threatened after the beating of Lenard Clark in 1997, "I know I will never be like whites because of the way I look. I feel more affinity towards African Americans. At least we are both minorities, we both look different. I don't mind talking to African Americans."

Both Paul and Steve mentioned their Asian feature as the major reason for their vulnerability to white harassment. On the other hand, this phenotypical difference from whites helps facilitate cross-racial socialization between Chinese and African American youth.

John told me that his best friend at grade school was a black Moslem, “we were both the marginalized at school. We suffer things together and we defend each other. Even nowadays, he is still my best friend.” Because of their shared experience of racialization with African Americans, some Chinese American youth are very critical about first-generation Chinese immigrants’ prejudice against African Americans. Lisa, a 17-year-old high school student, explained to me, “Well, just because some people did bad things doesn’t mean all people from the group are bad. I always speak for black people when they got picked at Chinese stores. I was raised by black teachers in Haines School and my best friend is a black kid. They taught me so much about things in the streets. Like you should wear your pants that way or the gangs will be after you.”

Lisa’s optimism aside, there are still layers of complexity in Chinese American youths identification with African Americans. Steve related to me one childhood incident, “I remember when I was in grade school I got so fed up with all the harassment that I went home and told my parents, ‘I don’t want to be Chinese. I want to be Black!’” I asked Steve why he wanted to be black. He answered immediately, “because Blacks are physically strong and they can fight back.” Looking back, Steve admitted that he had internalized some of the stereotypes Chinese immigrants hold against blacks, “Chinese tend to think of Blacks as violent. You hear stories in Chinatown about people getting robbed by Blacks. You read the newspaper, you watch TV. It seems all the crimes are committed by Blacks. I want people to be afraid of me, so that they won’t bother me.” Steve’s story illuminates the contradiction in some Chinese American youths identification with African American. Although he recognizes the structural marginalization shared by Chinese and blacks, Steve’s desire to be black is largely based on the criminalization and stigmatization of black masculinity by the mainstream media.

Despite their critique of first-generation Chinese immigrants’ negative attitudes toward African Americans, the majority of the Chinese American youth in this study still see their future closely tied up with their immigrant families. Unlike middle-class suburban youth who usually enjoy carefree adolescent lives, youth from working-class background are often

burdened with various family responsibilities growing up. Many feel the obligation to take care of their aging parents and to provide them a better living environment. Although sympathizing with the marginalization of African Americans and even maintaining personal relationships with some black friends, few second-generation Chinese Americans see in black American-ness the promise of a brighter future. Lisa’s dream is to become a lawyer and help her “own people.” John’s strategy against white discrimination and harassment is to be a smart kid, “My mom used to tell me, ‘they can take anything from you, but they can never take away your brain power.’ So I try to beat their body power with my brain power.” John’s choice to invest in “brain power” also betrays his hesitation to embrace a stereotypical black masculinity, which is characterized by excessive bodily power.

Besides John’s pursuit of academic excellence, there are also youth in Chinatown and Bridgeport who did not make it to elite universities. Some of them are school dropouts who joined their parents in the ethnic restaurant business; others drifted to petty crimes and gang activities, usually motivated by a narrowly defined sense of ethnic pride in face of interracial harassment. The criminalized masculinity displayed by these youth represents one extreme version of resistance on the part of Chinese American youth. On the other end of the spectrum, there are also youth in Chinatown and Bridgeport who easily blend in with Mexicans and blacks and thus have little experience of harassment from whites. Jason, a 21-year-old student from a Chicago city community college, told me that he never had any problem with race growing up. Jason attributes this to his non-Chinese looks and non-Chinese behavior, “I don’t look like Chinese. I talk a lot in class and I socialize with people. It was those nerdy ones, those quiet ones who got bullied a lot at school. Some people mistook me as Mexican. I easily blend in with my Black friends too.” The fact that Jason allows people to mistake him as Mexican—without offering any objection, without asserting his Chinese identity—may indicate a conscious performance of Mexican masculinity as a shield against white racism.

The racialization of Chinese American youth in Bridgeport and Chinatown takes on a gendered dimension because boys have a higher chance of

experiencing interracial harassment on the street than girls. From Steve's longing for black masculinity, to John's theory of brain power versus body power, to some Chinese American youths display of a criminalized Chinese masculinity, to Jason's performance of Mexican masculinity, working-class Chinese American youth have exhibited a variety of gendered and classed responses to their racial subordination in Bridgeport. Although some of these reactions run the risk of reinforcing existing racial stereotypes against Asian Americans and African Americans, they nevertheless demonstrate these youths efforts to negotiate racial and class marginalization in a predominantly black and white racial structure.

Chinese Americans

Chinese American is the largest Asian ethnic group in the United States since 1990. Today's Chinese America includes immigrants and their descendants from present-day China, Taiwan, Hong Kong, and Macau, as well as ethnic Chinese immigrants, Han Chinese in particular, and their descendants from Southeast Asia and many different parts of the Chinese diaspora. There are many Chinese American subgroups. In recent years, there have been efforts to create a new Census category for those from Taiwan. The term Chinese Americans, however, is broadly defined to include all ethnic Chinese subgroups. The 2000 Census counted nearly 2.9 million persons of Chinese ancestry in the United States. In 2010, the population reached nearly 3.8 million, comprising 25.9 percent of the Asian American population and 1.2 percent of the U.S. population. The United States now is the fourth-largest Chinese diaspora, after Indonesia, Thailand, and Malaysia.

Early History of Chinese Diaspora

Chinese immigration to the United States is part of the Chinese diaspora. Beginning in the seventh

century, people from the Fujian province in southeastern China crossed the Taiwan Straits, and some settled on the island of Taiwan and the Penghu Islands. In the eighth century, people from both Fujian and the neighboring province of Guangdong reached Southeast Asia via ships called *junks* for seasonal trade. Although private maritime trade was prohibited by the imperial government, Chinese maritime activities expanded over several centuries. Gradually, permanent settlements of Chinese were found in many parts of Southeast Asia. In the early fifteenth century, the imperial government also financed expeditions to the east coast of Africa.

Overseas trade and Chinese emigration reached a new level in the sixteenth century. In 1567, the imperial government lifted the ban on private maritime trade. Trade volume surged. This occurred at an important juncture in world history: a few decades earlier, Columbus's expeditions reached the Americas. In Southeast Asia, Chinese merchants traded with merchants from Europe and participated in market activities that linked Europe, Africa, Asia, and the Americas. Trade and commerce facilitated interactions between Chinese and people of other nationalities. Many Western merchants and trading companies employed Chinese workers, allowing some Chinese to venture to more distant locations around the world. Sailors engaged in the Manila galleon trade (1565–1815) were perhaps the first Chinese to touch shore of the New World; Chinese artisans building ships for a British sea captain arrived in Hawaii in 1789, 11 years after Captain Cook's first voyage to the islands.

The Chinese imperial government, however, had showed little interest in maritime expansion and commerce. After the overthrow of the Ming Dynasty and the establishment of the Qing Dynasty (1644–1911) by the Manchus from northeast China, the new emperor of China prohibited emigration and imposed a trade ban to prevent Ming loyalists from seeking sanctuary overseas and fomenting anti-Qing activities. The bans were not strictly enforced, however. Merchant junks sailed to many colonial port cities such as Manila and Batavia (Jakarta). Following trade and commerce were small groups of emigrants seeking

work and business opportunities outside their homeland.

Increased overseas trade and commerce took place at a time of rapid population growth in China. The Chinese population doubled in the eighteenth century, from 150 million to 300 million. By 1850, when large numbers of Chinese began to arrive in the United States, China's population had reached to about 380 million. Land shortage forced many farmers to migrate to port cities or overseas. There is no evidence, however, that the imperial government promoted emigration to lessen the country's population pressure. What we do know is that the growth of the Chinese economy had made commerce with the outside world increasingly important. As participants of trade and commerce in a rapidly growing and more integrated world market, more and more Chinese emigrants gradually reached different parts of the world.

The expansion of the Chinese diaspora around the globe is the result of trade, commerce, and other transnational exchange activities over several centuries. By 1990, an estimated 37 million Chinese and their descendants were found in the Chinese diaspora, including some 136 countries worldwide. By 2010, the diaspora population was about 40 million. Ethnic Chinese are most populated in Southeast Asia, especially in Indonesia, Thailand, and Malaysia. Relatively few Chinese migrated to North America before 1965, but their number increased drastically in recent decades.

Immigration to the United States

Emigration of Chinese to the New World is part of the worldwide expansion of the Chinese diaspora. The Manila galleon trade between 1565 and 1815 provided the first links. Working on merchant ships, Chinese sailors and stewards sailed across the Pacific Ocean between Manila in the Philippines and Acapulco of New Spain (present-day Mexico). Some Chinese shops were found in Mexico City by the seventeenth century. In 1785, three Chinese, the first documented Chinese arrivals, landed on American soil: seamen Ah Sing, Ah Chuan, and Ah Gun, aboard the *Pallas*, sailed into Baltimore harbor from Canton.

When the captain of the ship took off to get married, they were stranded ashore and lived in Maryland and Philadelphia for almost a year, working for a merchant, Levi Hollingsworth. It is unknown whether they eventually returned to China. In 1788, a British captain, John Meares, brought as many as 40 Chinese carpenters and smiths to build ships at Nootka Sound of Vancouver Island. Another Chinese from Macao was found in Monterey, California, in 1793, under the name Jose Augutin de los Reyes in a church record. When Dutchman Van Braan Houckgeest of the Dutch East India Company came to the United States and settled near Philadelphia in 1796, he brought with him five Chinese servants. It was said that inside the mansion of the Spanish governor Pablo de Sola, Ah Nam from Chinshan in Guangdong province was a cook in 1815. Between 1841 and 1848, a few Chinese appeared in various records. Little is known about these individuals, however, because they left no written records. It is unclear how long they had stayed or whether they had families.

Chinese presence in Hawaii began as early as 1789, more than a century before the islands became part of the United States. Returning to China from Nootka Sound in British Columbia, where they built the 40-ton *North West America* for John Meares, some Chinese artisans stopped at the Hawaii islands. Soon after, sailors working on American and British trading ships would visit the islands regularly for water and food supplies. A few of them probably settled on the islands. Sandalwood trade between China and Hawaii facilitated more Chinese settlements. Sandalwood, which grows on the islands and has a unique fragrance, became quite popular in China. The Chinese called Hawaiian archipelago “the Sandalwood Mountains (Tanxiangshan).”

Early settlers quickly discovered a familiar native crop on the islands: sugarcane. Migrants from Guangdong province, which had been one of China’s major sugar-producing regions, played a crucial role in the development of Hawaii’s sugar industry. They began cultivating sugarcane on the islands. In 1802, Chinese sugar masters brought boiling pans and other primitive sugar-making equipment to the islands. Several sugar mills were in operation in Maui and Hawaii by 1830. The number was increased to a dozen or so a decade

later. Sugar was soon sold in stores operated by Chinese merchants in Honolulu. The Chinese were also the first to develop the plantation system; they recruited contract laborers from China to work on the plantations. Sugar production stimulated economic growth and attracted more independent migrants. Between 1852 and 1900, before the annexation of the islands by the United States, about 50,000 Chinese were living in Hawaii.

Large waves of Chinese immigration to the U.S. mainland did not occur until the mid-nineteenth century. In January 1848, gold was discovered in John Sutter’s mill northeast of Sacramento in California. News of the strike spread quickly, attracting migrants from different parts of the globe. Weeks after the discovery of gold, three Chinese—two men and a woman—were brought from China to San Francisco by American missionary Charles Gillespie. These men were the first Chinese working in the gold mines. The year after, in 1849, 325 Chinese arrived through the port of San Francisco; a year later, 450 arrived. The new arrivals soon increased to a few thousand and then tens of thousands each year. By 1900 there were 89,863 Chinese living in the United States, and more than half of them, 45,753 individuals, resided in California. San Francisco, the port of entry, was called by the Chinese as *Jinshan*—the Gold Mountain.

One important historical event that shaped overseas Chinese emigration of the nineteenth century is the first Opium War (1839–1842) between Britain and China. The war ended with China’s defeat and the establishment of a treaty system that gave Western powers dominance over China’s seaports. Although migration overseas was prohibited by the imperial government, the treaty system not only allowed foreign presence in China’s treaty ports, but also made Westerners immune from Chinese laws. Westerners could now recruit Chinese laborers and ship them abroad. Before the Opium War, Guangzhou (Canton) was the only port designated for foreign trade and shipping in China. Licensed Chinese merchants in the port city enjoyed the privilege of trading with foreign merchants, and many Chinese worked for foreign merchants. The Treaty of Nanjing that concluded the Opium War opened several new trading ports and opportunities for more Chinese to interact with the

outside world. Chinese emigration accelerated after the Opium War, and their destinations included Southeast Asia, Peru, Hawaii, and the Caribbean Islands, and a relatively small number of them came to North America.

Most Chinese who migrated to the United States came voluntarily. The migrants paid their own way, taking loans from their kin networks to finance their trips. Those who could not afford to do so purchased tickets on credit from Chinese middlemen, with an agreement to pay off the debt after they arrived in the United States. A small number of emigrants might have signed contracts agreeing to work for a specified time period in America in exchange for the voyage. From 1850 to 1882, more than 322,000 Chinese entries to the United States were recorded (including individuals who made multiple entries). By 1882, when the Chinese Exclusion Act was enacted, about 125,000 Chinese lived in the United States.

Early Economic Contributions

In California, the majority of Chinese laborers worked in gold mining at first. They used simple tools such as buckets, pans, and rockers to wash off the soil and rocks and collect the heavier gold dust and nuggets that settled at the bottom. This primitive method required little investment. Some miners were later employed as laborers by mining companies that used heavy equipment (see Chinese Mining). In 1850 and 1852, the California state legislature passed and then reenacted the Foreign Miners' Tax law. The original law was directed against Mexican miners. But after 1852, the Chinese became the main target of the law. Chinese in California gold mining, however, persisted for almost three decades. Following news of discoveries of gold in Nevada, southwest Oregon, British Columbia, the upper Columbia River basin, Idaho, and northeast Oregon between the mid-1850s and 1870s, Chinese miners were spread out in the American West. In addition to gold mining, Chinese immigrants were also found working in the quicksilver mines in California; the coal mines in Utah, Wyoming, and Washington; and the borax deposits in California, Nevada, and Oregon.

The presence of large number of Chinese miners in California provided opportunities for the development of a variety of small businesses. Chinese merchants sold to mine workers small household items, herbal medicine, and food ingredients, some of which were imported from China. Chinese farmers and fishermen supplied the miners with produces, meats, fish, and eggs. There were also eateries and houses for entertainment, including gambling and prostitution. Laundry services also emerged, catering mainly non-Chinese customers, even though washing clothes was not a traditional occupation for men in China.

After gold mining declined, more than 10,000 Chinese, many former miners, were hired by the Central Pacific Railroad Company between 1865 and 1867 to build the western half of the first transcontinental railroad. They performed both skilled and unskilled tasks, some of which were very dangerous. Their compensation, about \$28 a month and later increased to \$35 per month without boarding, was about 30 percent lower than their white counterparts. Many Chinese workers were buried by avalanches in the winter of 1867; their bodies were not dug out until the following winter. On May 10, 1869, when the transcontinental railroads were about to join at Promontory, Utah, a crew of Chinese and Irish workers was selected to place the final section of rail track in front of a band and a cheering crowd of observers. Chinese workers also contributed to the construction of western sections of the Southern Pacific and Northern Pacific and several branch lines. Railroad construction facilitated the expansion of Chinese settlement in many parts of California, Washington, Oregon, British Columbia, Utah, and Texas.

After the completion of the transcontinental railroad in 1869, thousands of Chinese found work as common laborers and farmhands, providing indispensable labor for the transformation of agriculture in California. In the Sacramento-San Joaquin Delta, Chinese laborers turned swamps into valuable rich farmland. A small number of them leased land and became tenant farmers or landowners. The farmers grew vegetables and fruits to be sold to local residents, concentrating on labor-intensive crops. During the anti-Chinese movement and after the enactment of

the Alien Land Laws, it became increasingly difficult for Chinese to stay on the farms. Many Chinese were forced to leave rural areas and move into Chinatowns in San Francisco. In Santa Barbara, California, where labor was scarce, however, Chinese immigrants found long-term employment. Many Santa Barbara farmers hired Chinese to pave roads, build houses, experiment with a large variety of crops, and perform domestic chores. Residing in farmhouses on the premises of their employers, these Chinese had frequent interactions with the local farmers. With the assistance of the farmers and ranchers, a small number of Chinese laborers were able to bypass the Alien Land Laws to become landowners; some eventually established families.

Along the California coast Chinese immigrants built small fishing communities. Chinese fisheries developed in the San Francisco Bay area and Louisiana, and were said to have exported about a million pounds of dried shrimp and shellfish annually in the 1880s. Chinese were also the first to establish abalone fisheries in California, and they also dominated salmon canneries in the Pacific Northwest and Alaska.

In San Francisco, Chinese factory workers played an important role in the early stages of California's industrial development. Cheap Chinese labor enabled California manufacturers to compete with the more established industries on the East Coast. Chinese workers dominated the labor force in woolen-mills and the cigar industry. By the mid-1870s, the majority of shoemakers and garment workers were also Chinese. A relatively small number of Chinese were also hired by Chinese-owned cigar, shoe, and garment factories. Some scholars have argued that industrial development in California might be delayed for at least a decade without the affordable Chinese labor. The Chinese population in California was less than 10 percent of the state population, but they formed about 25 percent of the labor force. The large presence of Chinese in factories caused an alarming concern. The Anti-Chinese movement, led in part by Denis Kearney, president of the Workingman's Party, shaped the labor union movement as well as politics in California. The movement forced Chinese workers out of manufacture jobs.

Anti-Chinese Hostility

California welcomed Chinese immigrants initially. In 1861, a joint committee of the California legislature praised the Chinese for their contribution to the state's economy. Labor shortage bolstered Chinese immigration. But hostilities surfaced shortly after their arrival. Like the indigenous people of the New World, the Africans enslaved in North America, and the Mexicans of conquered land, Asians were viewed as members of another inferior race in the eyes of those who deemed the superiority of the white race and of Western civilization. As the first Asian group to arrive to the United States, the Chinese became the targets for racial prejudice and discrimination.

The media played an important role in promoting the racist attitudes of the public. The Chinese were portrayed as an inferior race, opium addicts and starving masses of a decayed ancient civilization. They were deemed inassimilable to the Western culture and undesirable to American society. In the 1850s and 1860s, acts against Chinese immigrants were carried out largely by small groups of individuals. An 1862 committee report of the California state legislature showed that 88 Chinese miners were murdered, including 11 killed by collectors of the Foreign Miners' Tax. In the economic downturn of the 1870s, antagonism against the Chinese grew into organized activities; employers were pressured to fire Chinese workers from their factories.

In cities as well as in rural areas in California and throughout the West, Chinese laborers and farmers were subjected to harassment and mob violence. In 1871, a violent attack on Chinese in Los Angeles Chinatown resulted in 15 Chinese being lynched and an additional 6 being wounded. The mob looted a Chinese residence, searching for gold and other valuables. They also cut off the fingers of a Chinese herbalist to get his rings. In 1876, anti-Chinese violence broke out in Chico, California. Because the owner of a soap factory hired a few Chinese workers and leased land to them, arsonists burned the factory building and a barnhouse to the ground. Several homes and businesses of the Chinese were also set on fire. Four Chinese were murdered and another two were injured.

In 1877, a San Francisco mob attack left 21 Chinese dead, and eight years later, arsonists set fire to several Chinese dwellings in the city that claimed 13 lives. In the mid-1880s, anti-Chinese violence took place all over the American West: at Snake River Canyon in Idaho; in Denver, Colorado; in Portland, Oregon; and in Squaw Valley, Coal Creeks, Black Diamond, Tacoma, Puyallup, and Seattle in Washington. A mob congregated in Seattle's Chinatown in 1885 and forced some 350 Chinese to evacuate their homes. They loaded the Chinese into wagons and took them to the docks to be shipped away. In the same year, a massacre at Rock Springs, Wyoming, took the lives of 28 Chinese.

Shortly after their arrival, many local, state, and national laws were passed to make it difficult for the Chinese to live in the United States. In some cases, state and federal courts not only endorsed discriminatory legislation, but they also took additional measures against the Chinese. The Foreign Miners' Tax laws of 1850 and 1852 had imposed economic hardships on Chinese miners and encouraged violence against them. In 1855, when a George W. Hall was convicted of murdering a Chinese, the California Supreme Court reversed the conviction, arguing that the conviction was based on evidence provided by Chinese witnesses. This ruling deprived the Chinese of the right of testifying in court against white suspects. In the 1870s and early 1880s, the San Francisco board of supervisors passed more than a dozen ordinances to restrict Chinese laundry operations. Although these ordinances usually did not mention race or nationality, they always found ways to single out the Chinese based on unique ways that the Chinese conducted businesses. In 1878, the California state supreme court declared that Chinese immigrants are ineligible for citizenship because they were neither white nor black.

Anti-Chinese agitation in California also had some impact on Hawaii, where the 18,000 Chinese composed about a quarter of the Hawaiian population. Although sugar plantation owners were satisfied with Chinese laborers, they were concerned that the Chinese might become too dominant. Between 1882 and 1886, some restrictive measures against the Chinese were issued. Opponents of Chinese labor argued that the increase of Chinese on the islands

posed challenges to the survival of native Hawaiians, and they blamed Chinese immigrants for introducing diseases to the indigenous population.

Chinese Exclusion

Chinese exclusion (1882–1943) is a historical time period during which the immigration of Chinese laborers was legally prohibited. In the 1860s and 1870s, anti-Chinese agitation gained momentum in national politics, as exclusionists launched a political campaign to ban Chinese immigration. A major obstacle of Chinese exclusion was the Burlingame Treaty between the United States and China (see the Burlingame Treaty, The), which provided that both China and the United States should recognize the right of their people to change domiciles and allegiance, and that Chinese people visiting or residing in the United States were entitled the same privileges, immunities, and exemptions enjoyed by the citizens or subjects of most-favored nations. These treaty obligations made it impossible for the United States to exclude the Chinese. In 1880, the United States renegotiated the treaty with China. With the second Burlingame Treaty, the United States gained the unilateral right to limit Chinese immigration, clearing the way for exclusion laws.

Chinese exclusion began in 1882, after the first Chinese exclusion act was enacted on May 6, 1882. The original exclusion law suspended the immigration of Chinese laborers for 10 years. It also stipulated that no state or federal court were allowed to grant citizenship to Chinese. Now Chinese immigrants were legally defined as “alien ineligible to citizenship.”

Suspension of Chinese laborers did not apply to those already in the United States at the time or those arrived within 90 days after the law was enacted. Because of treaty obligations, Chinese teachers, students, merchants, tourists, and their servants, as well as diplomats were exempted from the restriction. Members of these exempted classes were required to present valid certificates issued by the Chinese government to gain entry.

The exclusion law included a number of amendments, each of which added more restrictions and closed loopholes. An 1884 amendment required

certificates for Chinese who left the country to reenter. The 1888 amendment, known as the Scott Act, cancelled all certificates previously issued by the government, making it impossible for those who had left to return. An 1892 amendment, known as the Geary Act, extended the exclusion for another 10 years and required all alien Chinese, including merchants, to carry certificates of residence. The amendment of 1902 extended exclusion for another 10 years. And finally, in 1904, another amendment made the exclusion permanent.

It was extremely difficult for Chinese to have families in the United States during the exclusion. The 1882 exclusion act targeted Chinese laborers and did not mention women, but that was only because the 1875 Page Law had already prevented them from coming to the United States. In those days, women in China did not work for wages and therefore could not be considered as laborers. But immigration authorities would not let wives of Chinese laborers join their husbands in the United States. In the case of Ah Quan, a U.S. circuit court ruled in 1884 that a wife of a Chinese laborer could be allowed to enter only if she could prove that she was in the United States before June 6, 1882. Moreover, it decided that wife and minor children belonged to the same class of the husband or father. In another case concerning a woman named Ah Moy, also decided in 1884, the federal court concluded that a woman should be accorded laborer status upon her marriage to a laborer, even if she had never worked outside the home. Thus, Chinese laborers already in the United States could no longer bring in their wives. For a few years after 1882, Chinese laborers were free to visit their wives in China. But the Scott Act of 1888 voided all returning certificates, making it impossible for Chinese laborers to come back if they decided to visit their families in China. Because of this Act, the Chinese American community was known as a “bachelor society” with gender imbalance until after World War II. As of 1890, there were nearly 27 males for each female. In 1940, the male to female ratio was 3:1.

Strict enforcement of exclusion effectively halted Chinese immigration. Under the exclusion Chinese population in the United States had a negative growth, from 107,488 in 1890 to 77,504 in 1940. Under

exclusion some Chinese immigrants developed ways to circumvent the exclusion laws. Some claimed to be family members of exempted classes or descendants of U.S. citizens. Some gained entry as imposters of children of merchants or U.S. citizens, who are known as paper sons or paper daughters.

Chinese exclusion ended on December 17, 1943, when a new law was enacted to repeal all exclusion acts. Chinese Americans, however, had mixed feelings about the repeal. The repeal took place in the midst of World War II, when the United States and China were allies. During the war Japanese propaganda launched an “Asia for Asiatics” campaign to undermine the U.S.-China alliance. Tokyo broadcast programs used Chinese exclusion as an example to tell its targeted audience in China that the United States could not be trusted. As a goodwill gesture, the U.S. government finally repealed all exclusion laws. But only a token annual immigration quota of 105 was granted to the Chinese. Chinese immigrants, however, finally became eligible for naturalization.

Community Organizations

Chinese immigrants formed many organizations. Shortly after they settled in the United States, they began to organize among themselves. Some of the historical organizations were formed on ties with native place affiliations, and there were also political, economic, and social interest groups. The exclusion helped the immigrants bind together. At a time when affiliation with the larger society was difficult, most Chinese joined their ethnic organizations for mutual support.

Clan and family ties formed the basis for early organizations. These associations define membership by a common surname or lineage. The fact that members of these associations often shared knowledge of specific trades and introduced newcomers to jobs in these trades allowed them to develop their own occupational specialties. Clan members also tend to concentrate in certain areas or neighborhoods. However, district-based associations called *huiguan* are more important than clan and family associations. Members of a *huiguan* are from the same district, and they share a common dialect and cultural practices. *Huiguan*

provided its members with many benefits. Newcomers could find temporary lodging inside the association buildings, where they could also obtain job information. Huiguan officials provided supervision to its affiliates, arbitrating disputes, helping to form and set terms for rotating credit associations, and ensuring the payment of debts. Huiguan also sponsored projects to assist the poor, sick, and the elderly. They maintained cemeteries and paid burial expenses for those who could not afford to do so. Above clan, family, and district associations is the Chinese Consolidated Benevolent Association (CCBA). First established in the 1870s, the CCBA was known to the American media as the Chinese Six Companies. The association mobilized the community to challenge discriminatory legislation after 1882, and it was recognized by both the Chinese government and mainstream American society as the voice of the Chinese American community. By 1947, 30 branches of the CCBA were established in Chinatowns throughout the country. The CCBA functioned as the governing body of the entire ethnic community. It worked with affiliated organizations and mediated disputes among them. The CCBA built Chinese language schools and financed the Chinese Hospital in San Francisco. Those who planned to return to China were required to obtain exit permits issued by the CCBA. Under the leadership of the CCBA, the community protested against the treatment of the Chinese in the United States. It contested many discriminatory laws in court and won a few important battles.

One unique community organization is the Chinese American Citizens Alliance (CACA), which was formed by second-generation Chinese Americans. During the exclusion Chinese immigrants were denied the right to naturalization, but those who were born in the United States were entitled to U.S. citizenship under the Fourteenth amendment of the U.S. Constitution. From the 1920s to the 1940s, when the court refused to review immigration laws, the CACA played a leading role lobbying Congress and pushed for the 1930 amendment for the admission of Chinese wives of U.S. citizens. The CACA's newspaper, the *Chinese Times*, has been one of the most important historical community newspapers within the Chinese American community.

Organizations that controlled the Chinese American underground were called tong. Tong is a Chinese fraternal organization with secret rites and a sworn brotherhood. Although tong members also belong to their huiguan and family associations, their organizations were antiestablishment in nature.

In the 1930s and 1940s, a number of progressive organizations appeared in the community. Most noticeable are two labor organizations: the Chinese Hand Laundry Alliance (CHLA) in New York and the Chinese Workers' Mutual Aid Association in San Francisco (CWMAA); and two youth organizations: the Chinese Patriotic Youth Club in New York (CPYC) and Min Qing (Chinese Democratic Youth League). These organizations are independent from the community power structure. Because these associations expressed sympathy toward the new government in China, many of their members were targeted during the McCarthy era.

World War II

World War II marked a turning point in Chinese American history in significant ways. Most apparent is a new image of the Chinese in the eyes of Americans. For Chinese Americans, World War II began in 1931, when the Japanese invaded Manchuria in northeastern China. In the early 1930s, Chinese American communities staged many anti-Japanese demonstrations in large cities across the United States. After the Japanese attacked Chinese troops at Lugou (Marco Polo) bridge near Beijing on July 7, 1937, Chinese living in different parts of the world were mobilized to support the war of resistance in China. The war brought increased coverage of heroic Chinese resistance to Japanese aggression. Deteriorated U.S.-Japan relations, especially after the Pearl Harbor attack, brought China and the United States together against a common enemy. On December 22, 1941, an article appeared in *Time* magazine to help Americans differentiate their Chinese "friends" from the Japanese. According to the article, the facial expressions of the Chinese were more "placid, kindly, open," whereas those of the Japanese were more "positive, dogmatic, arrogant." This change in attitude of the larger society

would significantly change the lives of the Chinese in America for the better.

Another significant change was accelerated by the shortage of workers during the war. In May 1942, defense establishments in the San Francisco Bay Area began advertising jobs in local Chinese newspapers. The Kaiser shipyards in Richmond announced that they would hire Chinese regardless of their citizenship status or English skills. In a recruitment speech, corporation president Henry J. Kaiser urged Chinese to work in his shipyards to support the war effort. To encourage the Chinese to participate in the wartime labor force, some shipyards provided Chinese-speaking instructors. Thousands of Chinese American men and women, who had no opportunity to work outside Chinatowns before the war, joined the labor force in the defense industry. These jobs brought economic benefits to many families. It enabled Chinese Americans to integrate into a previously segregated job market. During the war, 15,998 Chinese Americans served in the military, including 1,621 in the navy. There were 214 Chinese Americans who gave their lives when serving in the U.S. military. Their wartime experiences forever changed the lives of many Chinese Americans.

The repeal of Chinese exclusion changed the relationship between Chinese Americans and the larger society. Although the immigration quota for Chinese was only symbolic and very small, the significance of the repeal act could not be overlooked. The law changed the status of Chinese from inadmissible to admissible, enabling Chinese to benefit from general immigration regulations. After 1945, thousands of Chinese women joined their husbands under the War Brides Act. These women played an important role in the transformation of the Chinese American community.

Community Transformation and the Cold War

The Repeal Act of 1943 made alien Chinese admissible, and Chinese veterans of World War II became eligible to send for their families under the War Brides Act. In a five-year period between 1945 and 1950, thousands of Chinese women immigrated to the United States. The coming of war brides indicates that the Chinese American community began to transform from a bachelor society to a family society.

Beginning in the mid-1950s, nearly half of the Chinese American population was born in the United States. Improved access to the mainstream job market and higher education also enabled an increasing proportion of Chinese Americans to climb up to middle-class status.

If changes of American attitudes toward the Chinese were positive because of the U.S.-China alliance during the war, attitudes toward the Chinese in the decades of the Cold War became more complex. U.S. foreign relations continued to have a huge impact on the treatment of Chinese in this country in the post-war years. With the newly established People's Republic of China, or "Red China" as it was called by the media, and especially after the Chinese intervention in the Korean War in late 1950, the hostility toward the Chinese once again intensified. China politics and American foreign policy divided the Chinese American community. When an Emergency Detention Act passed Congress in 1950, invoking a theory of Communist conspiracy and leading to a presidential declaration of an "Internal Security Emergency," many Chinese Americans feared that they would be interned to camps, as experienced by Japanese Americans during the war.

Fear mounted in most part of the 1950s, when the FBI and the Immigration and Naturalization Service joined forces to investigate subversive individuals and crackdown on immigration fraud. On December 1955, Everett F. Drumright, the American consul general in Hong Kong, submitted to the State Department a "Report on the Problem of Fraud at Hong Kong," alleging that the PRC was planning "a criminal conspiracy to evade the laws of the United States" through well-organized networks in Hong Kong, New York, and San Francisco, and that these networks had become the main channel for youngsters who had been educated in Communist schools or who had served in the People's Liberation Army to emigrate to the United States. The report was well circulated in the midst of the McCarthy era, reinforcing the fear of Communism in America and signaling the beginning of an all-out crackdown on Chinese immigration networks.

Playing up the theme of Communist infiltration, the INS was able to make its work closely related to that of the FBI and link immigration fraud with

subversive activities. The government's campaign to crack down on illegal immigrants gained the support of the media, which created the impression that every Chinese in America was a suspect. During the period of exclusion, Chinese Americans had confronted a more aggressive and powerful campaign against them, but they were able to organize among themselves to circumvent the laws. Beginning in the late 1940s, however, a new dynamic had been created in the community. Open rivalries between supporters of the Nationalist government, which retreated to Taiwan, and sympathizers of the People's Republic of China sent an open invitation to authorities to intervene in what had previously been seen as internal affairs. For the first time, the FBI and INS were able to create a network of Chinese informants. Members of labor unions, youth groups, and other progressive individuals were the first targets. Under the pretense of searching for possible Communist agents, investigators prowled the streets of Chinatowns in San Francisco, Chicago, Boston, New York, Seattle, and other cities, questioning suspected paper family members and ringleaders. They searched Chinese residences and raided business establishments.

One of the tactics that INS agents used, which turned out to be quite effective, was to coerce individuals to admit false claims and give out names of their collaborators. When individual immigrants were indicted and their cases went to trial, the INS would already have obtained leads from informants or other sources through confession. No evidence of espionage was ever used against any of the Chinese who were indicted. All the criminal charges had been founded on false testimony or violation of immigration laws. These investigations went after far more than members of a few progressive groups; they almost shutdown Chinatown businesses throughout the United States.

In mid-1956, the INS began to advertise the so-called Confession Program to further halt immigration document fraud among the Chinese. Document fraud is the legacy of the exclusion era. After the repeal, a quota of only 105 Chinese was allotted annually, compelling many individuals to use false documents to unite with their family members. The Confession Program was an all-out effort to stop illegal Chinese immigration. The program did not have formal polity

but was announced at meetings of civic leaders and Chinese Americans. Under this program, Chinese who in the past had fraudulently established U.S. citizenship were urged to come forward. In meetings held in Chinatowns, government officials maneuvered to convince the audience that the Chinese were the ones who could benefit from the program. Without written policy, there was no guarantee that collaboration with the government would allow the involved individual to stay in the United States. As a result, deportation proceedings were filed against some individuals even though they had appeared as government witnesses. Should they refuse to cooperate, some were told that they and their family members might face criminal charges. The Confession Program had a disastrous impact on Chinese American families. Family members were coerced to testify against each other; in some cases, parents were brought to court testifying against their own children. Paper families were rooted out one after another, and the number of slots closed was featured in the service's annual reports. All together, 13,895 Chinese participated in the program, leading to the exposure of 22,083 individuals and the closing of 11,294 slots. The Confession Program ended in 1965.

Chinese Immigration after 1965

The 1965 Immigration Act has impacted the pattern of Chinese immigration and community development in fundamental ways. The law abolished the old quota system, providing 20,000 quota admissions to each nation, and giving priorities and preferences to family members of American citizens. As the oldest Asian ethnic group in the United States, most Chinese in the United States in the 1960s were U.S. citizens and therefore could send for family members and relatives under the new law. The United States did not have diplomatic relations with the People's Republic when the law was enacted. As a result individuals from the Chinese mainland could not travel to America for several decades. Once diplomatic relations normalized between the United States and the People's Republic in 1979, immigrants began to come from China, Taiwan, and Hong Kong. Although official U.S.-Taiwan ties were cut, the island was granted its own quota, a number equivalent

to that of a nation. Hong Kong, a former British colony, initially received a quota of only 200, but the allotment was raised several times to 300, 600, and then 5,000 in 1987. During the run-up to its 1997 return to China, the United States increased Hong Kong's immigration quota to 10,000 in the 1990s and in the three years before 1997, to 25,600. In other words, between 1979 and 1997, the quota allotment for ethnic Chinese was more than twice that of a single nation, and during the three-year period three times that of a single nation. In addition, ethnic Chinese also came from Southeast Asia and other parts of the Chinese diaspora. The INS and later the CIS statistics recorded more than 2 million immigrants admitted to the United States from China, Taiwan, and Hong Kong between 1961 and 2010.

Large waves of new immigrants have enlarged the size of the Chinese population at a fast pace. In 1970, the Chinese population increased 84.3 percent from the previous decade; the two decades that followed enjoyed increased rates of 85.3 percent and 104.14 percent respectively. The rate of growth slowed thereafter, however, to 47.25 percent for the decade ending in 2000 and 38.25 percent by 2010. Some speculators believe that opening the tourist industry to visitors from the PRC and adding Taiwan to the Visa Waiver Program would further widen the door to Chinese immigration. The outcome, however, remains to be seen.

The presence of large numbers of immigrants played a large part on the demographic composition of Chinese America. Beginning in 1940, partly because of the decline of new immigrants during the exclusion, the proportion of U.S.-born Chinese (51.9 percent in 1940, 53.0 percent in 1950, 60.5 percent in 1960, and 53.1 percent in 1970) surpassed that of foreign-born. But this was reversed again in 1980, when the Census recorded 63.3 percent of Chinese as foreign-born. In 1990, foreign-born Chinese constituted 68.3 percent of the population, and the proportion increased to more than 70 percent in 2000. Foreign-born Chinese in 2010 was estimated at 67 percent. Unlike the immigrant laborers who originated from the Cantonese-speaking regions in southeast China, the new immigrants are from different parts of China, Asia, and the rest of the world. Their diverse regional backgrounds and their

differences in former national allegiance are in sharp contrast to that of the pioneer Chinese immigrants from rural Guangdong. The new immigrants have also come from diverse socioeconomic backgrounds. Some arrived with little education, few job skills, and no savings; others came with a good education and marketable skills to find work, or with family savings to start their own businesses. Few of those from the PRC in the 1980s and 1990s came with financial resources, but changes occurred fast in the past two decades. In 2011, 75 percent of applicants seeking visa through the EB-5 Investor Program were Chinese (the program requires \$500,000 investment in projects listed by United States Citizenship and Immigration Services). A significant number of the post-1965 immigrants came to study in colleges and universities; many later obtained permanent resident status.

Contemporary Chinese America

Large waves of new immigrants have made Chinese America the fastest-growing Asian American community. There were only 77,504 Chinese residing in the United States in 1940. Between 1960 and 2000, the population doubled every decade. The 2000 Census shows a record high of close to 2.9 million Chinese, and the number reached 3.8 million in 2010. The population includes Chinese and their descendants originated from the People's Republic, Taiwan, Hong Kong, Southeast Asia, and Chinese diaspora throughout the world, as well as mixed-race Chinese Americans.

Unlike the old days, when the majority of the Chinese were restricted to segregated Chinatowns in large cities, Chinese Americans are now settled in every states. The West, especially California, remains to be the top choice of residence for Chinese Americans, but the number of Chinese lived in eastern, southern, and midwestern states increased at a fast pace. By 2010, the New York City metropolitan area, consisting of New York City, Long Island, and overreaching parts of New York, New Jersey, Connecticut, and Pennsylvania, has emerged as the center with the largest Chinese American population, followed by the San Jose-San Francisco-Oakland Area and the Greater Los Angeles Area. In addition to California, New York,

Hawaii, New Jersey, Massachusetts, Illinois, Washington, Pennsylvania, Maryland, and Virginia each attracted a large number of Chinese population. Accompanying the rapid growth of the Chinese American population, many ethnic business districts have emerged in the New York, Los Angeles, San Francisco, and Houston metropolitan areas and suburbs, as well as other cities and towns throughout the United States.

Today, more than half of Chinese Americans speak English proficiently, but many U.S.-born Chinese are unfamiliar with the Chinese language. Several Chinese dialects are spoken within Chinese America; some are hard to understand by people outside the group. To overcome their linguistic differences, Mandarin (instead of Cantonese), the official language of China and most parts of the Chinese diaspora, along with English, have become the standard language in public gatherings and business circles.

Chinese Americans made significant progress after World War II, especially after the Civil Rights Movement. Signs of social mobility were first exhibited in the 1980 Census statistics, which indicate the improved socioeconomic status of Chinese Americans and their above-national-average college graduation rate. This finding has been confirmed in subsequent Censuses. There is also a perceived correlation between social mobility and educational achievements. As several studies have disclosed, compared to the general American population, Chinese Americans are more likely to be admitted to prestigious colleges and universities, they are more likely to graduate from college in less time, and they are more likely to receive higher school grades and nationwide test scores. Chinese Americans have been well represented in national and international scholastic competitions.

Often seen as related to educational attainment level is the role of Chinese American families. National data reveal that Chinese American children are more likely to grow up in two-parent households and in families with fewer children. According to survey results released by the Pew Research Center, about 59 percent adult Chinese Americans in 2010 are married, which is much higher than the national average of 51 percent. Meanwhile, the fertility rate for Chinese

American women ages 18 to 44 (5.8 percent) is much lower than that of American women of the same age group (7.1 percent).

Although the improved socioeconomic status of Chinese Americans helped to change their image in the United States, it is important to note that Chinese America is far from a homogeneous middle-class group. During the exclusion, merchants enjoyed the privilege of free entry, which gave them an edge, in addition to their economic advantage, over the laboring class. A segmented ethnic economy built on segregation, however, limited not only employment opportunities for the laborers but also possible business expansion for able entrepreneurs. Although there were shopkeepers and labor contractors as well as laborers, incomes and lifestyles of the former were not significantly different from the latter. After 1965, more and more Chinese Americans gained access to the mainstream job market and became middle-class professionals. Chinese American entrepreneurs also found new ways to launch business ventures utilizing a steady supply of immigrant labor and a greatly enlarged ethnic-based consumer market. Surveys of the U.S. Census Bureau reported 290,197 Chinese-owned businesses in the United States in 2002. The number was increased to 423,609 in 2007. Social and economic transformations made it possible for many Chinese Americans to achieve social mobility. The process, however, also created a gap between upper- and middle-class Chinese Americans and the poor, especially with the large presence of undocumented individuals.

If progress after the Civil Rights Movement is apparent, it is imperative to recognize uneven development within Chinese America. This requires a careful analysis of statistical evidence. Taking the level of educational attainment as an example, the 2010 Census reveals that 51.8 percent of Chinese Americans have attained at least a bachelor's degree, which is higher than the rate for Asian Americans and the general American population (49.9 percent and 29.2 percent respectively). Chinese American students are also quite visible in elite institutions. Some individuals, however, are not as fortunate as others. According to some studies, race and class still matter in education. Although some Chinese students could

attend Ivy League colleges and universities, others have to settle in less prestigious public institutions because of socioeconomic situations of their families. There are also discrepancies in terms of gender. Although 54.7 percent of male Chinese obtained a bachelor's degree, only 49.3 percent female Chinese did so.

The same applies to earnings of Chinese Americans. The Pew Research Center reported that median annual personal earnings for full time Chinese American workers as \$50,000, which is higher than for Asian Americans overall (\$48,000) and for U.S. adult overall (\$40,000). It also reported that median annual income for Chinese American household as \$65,050, which is higher than that of U.S. households overall (\$49,800). However, only 62 percent of Chinese Americans own a home, compared with 65 percent of the U.S. population overall. And we should also take into consideration that the size of average Chinese American household (2.9 persons) is bigger than that of average American household (2.6 persons). More important to note is the fact that 14 percent of adult Chinese Americans still live in poverty, which is higher than the national rate of 13 percent. We must also take into account the large presence of undocumented Chinese immigrants who are more likely to be left out in the Census and other statistics.

The growth of Chinese America has been greatly affected by immigration. What direction Chinese immigration will take in the decades to come is yet to be seen. International migration is caused by many factors. Worldwide economic development and globalization could impact Chinese migration in complicated ways and could pull it in multiple directions. Although the number of Chinese immigrants continued to grow by the decades, the rate of growth has declined in the first decade of the twenty-first century. Meanwhile, an increasing number of Chinese came for business opportunities or as international students. Opportunities in Europe, Australia, Africa, and other American nations as well as in Asia also attracted large waves of Chinese migrants in recent years. China's own economic growth is also a big factor. Moreover, it must be noted that an increasing number of Chinese Americans of different age groups have returned to China, Taiwan, and Hong Kong. These new

developments would impact the Chinese American community in the decades to come.

Chinese Americans and World War II

World War II was a significant period in Asian American history. Unlike Japanese Americans who suffered during the war because of their ancestral ties to Japan, Chinese Americans benefitted from the alliance between the United States and China. Chinese immigrant communities in large cities, commonly known as “Chinatowns,” were often the sites of anti-Chinese sentiments and actions held and carried out by white Americans. With America’s entry into World War II in late 1941, however, American Chinatowns underwent an important transformation. With the start of the war effort, Chinese Americans were able, in a variety of ways, to demonstrate their patriotism for the United States and their heartfelt Chinese

Chinese American Luella Louie, a defense industry worker in World War II. (Luella Louie family collection)

nationalism. Like so many other Americans, Chinese American men and women entered the workforce and the armed forces in unprecedented numbers. These actions allowed for Chinese Americans to interact with other Americans in venues and occupations that were previously unavailable to them. Thus, the economic and social changes brought on by their participation in the war effort can be seen as a turning point in Chinese American history. Upon becoming allies in the war against Japan, American images of Chinese and Chinese Americans changed for the better. The sinister mask of Fu Manchu was replaced by the tragic photograph of the lone baby sitting and crying in the bombed-out railroad station in Nanjing, and the image of the weak and ineffectual Chinese was replaced by posters of heroic Chinese men and women fighting to defend their country from Japanese invaders. This shift in China imagery was even evident in the cover of *Time* magazine. In 1938, Chiang Kai-shek and his American-educated wife, Song Mei-ling (Madame Chiang Kai-shek), were named *Time*’s “Man and Wife of the Year,” an image that was in sharp contrast to earlier (and later) impressions of the Chinese.

But much more important than imagery were the new social and economic opportunities open to Chinese Americans, and they were eager to take advantage of them to claim their place in American society. This was most evident in the variety of occupations that Chinese Americans took during the war. Finally able to leave jobs that were dictated by the Chinatown economy or other limited choices such as laundries and restaurants, Chinese Americans joined other Americans, many for the first time, in the shipyards, aircraft factories, offices, and other white-collar professions. The long-range effects of the war can be gleaned from information found in the national Censuses for 1940 and 1950. Although the general increase from 36,992 Chinese employed in 1940 to 48,409 in 1950 may not appear significant, when specific areas of occupational mobility are examined, the importance of the 1940s for Chinese Americans becomes more significant. The most obvious and far-reaching changes occurred in the employment of Chinese in professional and semiprofessional fields and in the total number of Chinese American women

employed. In the professional ranks, there was a threefold increase among males (1940: 812—1950: 2,541) and a fourfold increase for females (1940: 221—1950: 914). In other fields, males continued to show incremental increases, but the gains for women in these areas, in terms of proportional advances, were substantial. In the area of managers, officials, and proprietors, the increase for males was over a thousand (1940: 7,250—1950: 8,920), and for women, the increase was more than double (1940: 253—1950: 658). In clerical and sales positions, the increases for women were similar to that in the professional fields. Males increased by over a thousand (1940: 3,422—1950: 4,512), but the women's gains were fourfold (1940: 750—1950: 3,210).

In the service sector, the changes were also indicative of an expanded labor market for Chinese Americans. For service workers (not including domestic workers), there was an increase of nearly three thousand males (1940: 10,515—1950: 13,000), whereas the number of women in the service sector almost doubled (1940: 562—1950: 940). And in the area of domestic help, less than half the number of Chinese American men took those positions in 1950 than they had in 1940 (1940: 1,954—1950: 746), whereas the number of female domestic workers increased (1940: 287—1950: 514). In total, there were 11,417 more Chinese Americans in the labor force in 1950 than in 1940 and nearly half of them were women (5,367). Although these figures do not explain the reasons for the increase of Chinese Americans finding gainful employment, they do indicate that Chinese Americans had made occupational advances during the decade. Males were able to leave domestic service jobs in notable numbers (with some women taking their place) and presumably found better occupations. Most noticeable, however, was the dramatic rise in the number of Chinese American men and women who entered the professional and semiprofessional ranks. These numbers and the nature of the occupations in which Chinese Americans found employment also point to their participation in the American economy that extended beyond the confines of Chinatown. Therefore, with these gains for Chinese American men in professional and managerial positions, and the substantial increase in the employment of Chinese

American women in the public sphere, Chinese Americans, by mid-century, were poised to enter the postwar American middle class. Although it is well known that the advances gained by women and minorities during the war were frequently temporary and that many remained in the service industries, the gains for Chinese Americans were nevertheless significant. In addition, with the aid of the GI Bill of Rights, many went on to finish college educations, which further expanded the occupational options open to Chinese Americans.

The armed forces was another very important avenue by which Chinese Americans, citizens and noncitizens alike, came to find a new position in American society. For noncitizens, even those who had entered the country illegally as “paper sons,” service in the military generally offered the opportunity to become an American citizen, a right that many of them had been denied since childhood. Approximately 12,000 to 15,000 Chinese Americans wore the uniforms of American service personnel during the war. Although most served in the army or the Army Air Corps, others went into the navy, marines, and coast guard. Actually, fewer served in the navy because it wasn't until May 1942 that Chinese Americans were allowed to enlist in the navy for positions other than mess stewards and cabin boys. Chinese Americans not only served in all branches of the military during World War II, but also served in all types of units: combat infantry, engineering, intelligence, transport, fighter and bomber squadrons, and support units.

Although most Chinese Americans served in integrated units with white soldiers, about 1,200 served in all-Chinese American units stationed in the Burma-China-India (CBI) theater. These units belonged to the Fourteenth Air Service Group (14th ASG) under the umbrella of the Fourteenth Air Force, and were thus part of the famous “Flying Tigers.” In addition, there was an all-Chinese American unit of the army, the 987th Signal Company. The official reasons for the formation of these all-Chinese American units are uncertain. Many of the veterans of these units have reported that they were led to believe that the Chinese American units were formed at the request of Madame Chiang Kai-shek for propaganda purposes, but there are no available documents to support this belief. Instead, it seems more likely

that these all-Chinese American units, mainly with Caucasian commanding officers, were created in early 1944 (the 987th was activated in 1943) in the hopes that they would facilitate better relations with the local population in China. Although this may have worked in some cases, most of the Chinese Americans in these units who spoke Chinese, spoke one of the dialects from the Cantonese-speaking region of China, and these units were sent to more western and northern regions, where different dialects were spoken, meaning that some personnel had to be trained in other dialects, some units depended on interpreters, or more often, they simply did not establish any relations with the local population. Whatever the reason for their formation and their eventual efficacy, these units represented a “middle ground” in army race relations. Although the personnel were predominantly Chinese American, they trained on integrated bases, shared facilities with white personnel, and worked closely with predominantly white units. In other words, they were not like the segregated units into which African Americans and Japanese Americans were placed, but they were racially defined and organized. In many ways, these military units were similar to the position Asian Americans now occupy in American society, an ethnoracial group that is perceived as being between American whites and African Americans.

The politics of World War II also brought about important legislation that had a direct impact on Chinese Americans. In 1943, after 61 years, the Chinese Exclusion Acts were finally repealed and Chinese immigrants were allowed to apply for citizenship. However, Chinese Americans had to play a secondary role in pushing for repeal. The Citizens Committee to Repeal Chinese Exclusion was made up of well-connected white Americans such as publisher and editor Richard J. Walsh and author Pearl S. Buck. They took the lead in pushing Congress to repeal the exclusion acts because they believed that if Chinese Americans were too visible in the effort, the push for repeal would appear to be driven by special interests rather than by Americans in general. The congressional debates over repeal revealed that many members of Congress, especially those from western states, still maintained that Chinese immigrants were a threat to American values, lifestyle, and labor. On the other hand, supporters of repeal praised Chinese

Americans as good, loyal, and law-abiding citizens, using language similar to that used in the 1960s to portray Chinese Americans as a “model minority.” Along with the lifting of the exclusion acts and the ban on citizenship for Chinese immigrants, China’s annual immigration quota to the United States was sent at 105. Although this small number, based on “race” rather than country of origin, was seen as mainly a token gesture, the mere fact that exclusion was finally lifted and that Chinese immigrants could become American citizens signaled a new era for Chinese Americans. Another important piece of legislation that would have a great impact on Chinese America was the 1947 amendment to the War Brides Act of 1945. The original racial restrictions of the Act were removed in 1947, which allowed for nearly 6,000 Chinese women, accompanied by 600 babies, to enter the country. These two bills allowed Chinese Americans, at long last, to immigrate, marry, and create families at a rate similar to their fellow Americans.

Although the end of World War II eventually brought about a Communist victory in China and, soon after, the Korean War, during which America’s relationship with China and Chinese Americans again soured, World War II offered Chinese Americans a number of opportunities to move into American mainstream society. These opportunities, however, should be seen as both revolutionary and evolutionary. Although the postwar era has certainly not been a period of unhindered success for Chinese Americans, the war did allow for Chinese Americans to slowly move beyond Chinatowns into the broader range of American social life. As employment and residential restrictions gradually loosened during and after the war, Chinese Americans enjoyed a newfound acceptance in American society. The increase of Chinese American men and women in the professional ranks and the numbers of Chinese American women in the public sphere were indeed significant developments for the Chinese American community. The repeal of the Chinese Exclusion Act ended 61 years of immigration restrictions on the Chinese, but still only allowed for 105 Chinese to enter the country per year. It would not be until the passage of the 1965 Immigration Act that Chinese were placed on an equal footing as other aspiring immigrants. Although it may be an

exaggeration to claim that the war “emancipated the Chinese in the United States,” the social and cultural transformations that took place across the country during and after the war also developed in very important ways among Chinese American communities.

The war years and the accompanying social changes also contributed to the strengthening of a modern Chinese American identity that had emerged in the 1930s with the coming of age of the second generation. By acknowledging their familial and emotional ties to China while claiming their place in America by serving in the military and supporting the war effort at home, Chinese Americans were able to see themselves as Americans. No longer relegated to low-paying jobs dictated by race and ethnicity, the resulting social transformation brought on by World War II marked the opportunity for Chinese Americans to advance into the American middle class. The gradual rise in the social position of Chinese Americans during this period perhaps reveals the roots of the “model minority” image of Chinese Americans, an image that would not fully flower until the 1960s. Through the hindsight of historical inquiry, it is now evident that the war left Chinese Americans at the threshold of social mobility and increased assimilation. But in the years immediately following the war, Chinese Americans were simply happy to emerge from the shadows of exclusion.

Chinese Christians in America

Christianity, with Evangelical Protestants as the predominant majority, is the most practiced religion

among the Chinese immigrants in the United States. Christian churches have become the predominant religious institutions in the Chinese American community. Christianity, especially Evangelical Protestantism, has played an increasingly significant role in the lives of Chinese immigrants. One of the important characteristics of Chinese Christians in America is that they are mostly converts in the host country because Christianity is not a traditional Chinese religion. However, the presence of Chinese Christians in America is almost as long as the history of Chinese immigration. The first Chinese Christian church was established by a returned medical missionary from China with the support of the Presbyterian Board of Foreign Missions in San Francisco in 1853. Since then the Christian population among the Chinese immigrants has increased steadily. However, there is no national data on how many Chinese Christians are in the United States. According to a *Los Angeles Times* survey of Chinese Americans in Southern California in 1997, 32 percent claimed to be Christian with 6 percent Catholics, and 20 percent Buddhist, and the remainder no religious affiliation. Nationally, the reasonable estimate of the Chinese Christian population in America is somewhere between 10 and 35 percent.

The life of Chinese Christians in America is centered on the Chinese Churches. The Chinese Christian church has roughly experienced a two-stage development corresponding to the two-stage Chinese immigration history. The first stage of Chinese immigration was from the late 1840s to the 1950s. The overwhelming majority of the Chinese immigrants were from the rural area surrounding the Pearl River delta; hence the earliest Chinese American population was relatively homogeneous. Most of them spoke Cantonese and were male laborers; some of them were merchants. In this first stage the Chinese laborers and merchants lived mainly in Chinatowns and worked in Chinese restaurants, hand-wash laundries, gift shops, and as domestics. Unlike European immigrants who brought their Judeo-Christian religious tradition to America, the Chinese Christians were mainly converts in the host country. After the establishment of the first Chinese Christian church in 1853, other denominations also started their missions for the Chinese immigrants and established the Chinese churches

subsequently. For example, Methodists started their mission in 1868, and Baptists, Congregationalists, and Episcopalians in 1870. In this earlier period all the pastors of the Chinese churches were Caucasian and Chinese Christians served only as their assistants. The Sunday services were mainly in English with Chinese translation. The main goal of these mission churches was to Christianize the Chinese in the United States and send them back to China to help missionaries there. These earlier Protestant missions were not successful in their effort of converting the Chinese. The percentage of the Chinese Christians was minuscule. The Catholic mission in this time period was hampered because of the Catholic Church's active involvement in the anti-Chinese movement in California. However, the Chinese mission churches were helpful to the Chinese immigrants' adaptation to the host society in that the churches gave them the opportunity to learn English, American values and lifestyle, to meet non-Chinese Americans, and to receive social services. In this earlier period when Chinese immigrants faced racism and social exclusion, some Chinese immigrants intentionally embraced the Chinese church as a parallel white institution to elevate their racial status in American society. The Chinese churches also played an important role in supporting the revolution in China in the earlier part of the twentieth century.

Although 1943 saw the repeal of the Chinese exclusion law and the establishment of the annual quota of 105 Chinese immigrants, the Chinese did not come in large numbers until 1965, when the Immigration and Naturalization Amendment Act passed, which also marks the beginning of the second stage of Chinese immigration.

Starting from the earlier part of the twentieth century, a new trend began to emerge in the Chinese Churches in the United States. Some Chinese Christian churches gained financial and leadership independence within the denominations, and a few churches even became nondenominational and independent, although the majority of the churches were still supervised by Caucasians. By 1952, there were 66 Chinese Protestant churches in the United States, among which 47 were denominational, 5 were interdenominational supported by several denominations or a council of churches, and

14 were independent. During this period, most Chinese churches were small in size with an average membership of 155.

Since the 1950s, the number of Chinese churches has begun to increase. The Chinese church started evolving into the next stage. Since the late 1950s and earlier 1960s, Chinese students have established many campus Bible study groups in American universities. As the students adjusted their status to permanent resident under the new immigration law of 1965, many Bible study groups developed into churches. Most of the churches established in this period were founded by the new immigrants themselves. Many churches were nondenominational. The churches were mainly conservative evangelical theologically and independent and congregational organizationally. This form of Protestantism has become the most practiced religion among the Chinese immigrants since then. Because Chinese Christians in the United States are from different parts of the world (mainly Taiwan, Hong Kong, China, and other Southeast Asian countries, such as Singapore and Malaysia), speak different languages, and have different cultural backgrounds, most Chinese Christian churches have at least two Sunday services. One is in the native language of the first-generation immigrants, either Mandarin or Cantonese; the other service is in English for the second generation and 1.5-generation immigrants. If a church provides only one Sunday service, the church also provides an English translation. Some churches have three congregations and three Sunday services based on language—Mandarin, Cantonese, and English. In recent years, some second-generation Christians also participate in pan-Asian American churches.

Not all Chinese Christians participate in the Chinese churches of members with mixed backgrounds. Some Taiwanese immigrants participate in Evangelical Formosa Churches in the United States. In 1970, the first Evangelical Formosa Church was formed in Los Angeles, California. Up to the year 2000, there are 51 churches and 26 of them in the United States. The main language in the Evangelical Formosa Churches has been Taiwanese and English. However, in recent years, some churches also use Mandarin, the most popular language in Taiwan.

Similarly, in New York Chinatown, Fuzhounese immigrants established a Chinese church consisting of predominantly immigrants, legal and illegal, from Fuzhou, the capital city of Fujian Province on China's southeast coast. The language of the church is mainly Fuzhounese. Since the late 1980s tens of thousands of mostly rural young Fuzhounese have flooded into the United States. The Fuzhounese church located in New York Chinatown, the main point of entry for the Fuzhounese youth immigrants, has helped these most vulnerable and marginalized members of American society survive, and served as a location to access social, financial, and emotional support. The mainland Chinese began to convert to Protestantism in unprecedented numbers after the June 4, 1989, Tiananmen Square incident. The church with the majority members of the mainland Chinese also began to emerge. However, the majority of the Chinese mainland Chinese Christians participated in the churches with members of mixed backgrounds.

Post-1965 immigrants have more diverse social class backgrounds, from low-skilled workers to highly educated professionals. However, a typical Chinese church may have more middle- or upper-middle-class professionals, with advanced degrees in different fields, such as mechanical engineering, electronic engineering, and chemical engineering.

Chinese Christians in America have been strongly influenced by the larger American evangelical subculture. Chinese Christians read popular evangelical literature both in Chinese and in English, including books, magazines, and videos. The pastors of Chinese Christian churches were educated at evangelical theological seminaries in the United States, such as Trinity Theological Seminary and Fuller Theological Seminary. American evangelical leaders, such as Billy Graham, Rich Warren, and Chuck Swindoll, are among the most frequently mentioned names in the Chinese churches. The Chinese Christian saints, like John Soong, Watchman Nee, and Wang Mingdao, are also respected as role model, for the Chinese Christians.

Most Chinese churches have three regular weekly activities, Sunday services, Friday night fellowship meetings, and prayer meetings. Sunday services for the first generation use English Chinese bilingual hymn books, and sing classical hymns translated from

English and some hymns adopted from mainland China and Taiwan or Hong Kong, and others from the Chinese music ministries in the United States, such as Melody of My Heart, Stream of Praise Music Ministry. The first generation worship has a choir. The second-generation worship style is more contemporary, which features a worship team and a band. The songs are from the mainstream American evangelical community.

As mentioned earlier, most Chinese Christians in America are converts. This is the result of active and institutionalized efforts of proselytization by Chinese churches and parachurch organizations, both Chinese and American. In fact, proselytization becomes the most important function of the Chinese Christian church. In the United States Chinese conversion is communally informed, although individual choice remains important. Personal networks and social activities of Christian churches are important mechanisms to attract non-Christians and through which the social needs of immigrants are met. For example, Carolyn Chen finds that Taiwanese immigrants become more active in proselytizing after coming to the United States. Chinese festivals, such as Chinese New Year, become an important time for evangelism. Chinese Christians actively invite their non-Christian friends to participate in church activities. Many churches also host an annual evangelistic conference, which becomes an important channel for converting non-Christian Chinese. Parachurch organizations, such as China Outreach Ministry (COM), International Students Inc., and OMF International, have played a vital role in converting Chinese immigrants. For example, COM has developed systematic programs for evangelizing Chinese students, scholars, and their family members. When new students and scholars first arrive in the United States, they pick them up from the airport and subsequently help them settle down. They also organize year-round activities, such as sightseeing, sports activities, and English-learning programs as attractions. Chinese American friendship dinners have been frequently used to evangelize the Chinese.

Chinese Christian publications have also played a significant role in evangelizing and nurturing the Chinese Christian spirituality. Since the late 1990s, Chinese Christians have started to publish more

magazines, books, and video and audio products in the United States. For example, China Soul for Christ Foundation, Christian Life Press, Inc., Overseas Campus Magazine, Ambassador for Christ, Inc., are among the most prominent organizations serving the Chinese Christians in the United States. Their publications become increasingly influential in the Chinese Christian community.

Chinese Christians in America have not only actively proselytized Chinese in the host country, but also started their mission to proselytize Chinese around the globe. Chinese Christian Mission was established in October 1961 with the goal of reaching the world with the gospel, through literature, broadcasting, and sending missionaries. Other organizations, such as the Great Commission Center International and Gospel Operation International for Chinese Christians, have the similar goals. These missions mainly focus on Chinese around the globe, although they have also expanded their mission to reach out to non-Chinese globally.

Many Chinese churches and Chinese parachurch organizations have supported the Christian churches in mainland China in different ways. Many church pastors went to China for training the house church leaders and sometimes also brought with them financial support.

The conversion to Evangelical Protestantism means a change of world view. Most Chinese immigrants have an atheistic world view and are hostile to the Christian faith because of traumatic modern Chinese history, which was filled with sad stories of Chinese people's suffering from Western colonialism and imperialism. Historically, Christianity has been stigmatized in the Chinese culture as a relic of Western imperialism. "One more Christian, one less Chinese" was an old saying directed against Chinese converts. However, today at least for the Chinese Christians, Christianity is no longer a foreign religion. Christianity as a world religion is not owned by any specific ethnic group. Most Chinese Christians believe the twenty-first century is the century for evangelizing the Chinese. In their words, salvation has come to the Chinese. The traditional Chinese culture emphasizes the hierarchical social relations, which constrains the

Chinese from expressing love in an explicit way. For example, parents rarely hug their children and vice versa. The basic doctrine of the Christian religion is love—"God is love," and "love your neighbors." This doctrine has great impact on Chinese Christians. It becomes the driving force of serving people. For example, most Chinese churches have a fund for helping people in need. The doctrine of the egalitarian status before God has fundamentally changed the Chinese view of human relations. Although the Chinese still respect older people and people of higher social status, the fundamental belief that people are equal becomes unshakable among Chinese Christians.

Conversion not only means the change of world-view but also means the change of leaving a family-centered social network and entering a religious community. The Chinese Christian community also becomes influential in the construction of Chinese immigrants' identity. The Evangelical Protestant church provides the social space for immigrants to reconstruct a new community; it provides a new family through which immigrants find the meaning in their new life and achieve a sense of selfhood. The religiously empowered communities enable the immigrants to gain a freedom from traditional Chinese expectation, which is centered on Confucian values or traditional family, kinship ties; at the same time, it is to discover their "authentic selves," which transcend familial and societal definitions. For most Chinese Christians, the Christian identity becomes the most important identity. This does not mean that Chinese immigrants think the Chinese identity is no longer important. On the contrary, their Chinese identity remains strong. The Chinese Christian community becomes the most important social space for them to reproduce and celebrate the Chinese culture. For example, in the Chinese church, people talk in Chinese; eat Chinese food; decorate the church with Chinese characters along with other Chinese culture symbols, such as painting; and celebrate Chinese festivals, such as Spring Festival and Mid-Autumn Festival. Some Chinese churches also have Chinese language schools. Chinese Christians also selectively preserve Chinese cultural values, such as emphasizing filial piety and educating their offspring.

Chinese churches have also played a pivotal role in connecting Chinese immigrants to the larger community through religious activities. Most Chinese Christian churches have Caucasian members. Some of them are retired missionaries, others are spouses of Chinese Americans, and still others are friends of the Chinese church members. The Chinese churches also cooperate with Caucasian churches and support Caucasian parachurch organizations, such as Campus Crusade for Christ, Navigators. For example, some Chinese churches and Caucasian churches and parachurch organizations cosponsor evangelistic conferences.

Chinese Confession Program

Officially launched by the Immigration and Naturalization Service (INS) in 1956, the Chinese Confession Program was part of the government's effort to halt immigration document fraud among the Chinese.

Document fraud is largely the legacy of the exclusion era. Chinese laborers were legally barred for a long period of 61 years. When exclusion laws were

strictly enforced, Chinese immigrants developed ways to circumvent government regulations. The INS had long suspected that a large number of Chinese had entered the United States using false documents; many claimed to be family members of exempted classes or descendants of U.S. citizens. Although exclusion laws were repealed in 1943, because only 105 Chinese were allowed to enter each year, some individuals continued to use false documents to send for their family members.

Decades of practices during the exclusion further complicated the problems. Because many Chinese had been documented under false names, they used fake identities in public and had to change identities of their family members accordingly. Such practices were open secrets within the Chinese American community. Gaining entry as imposters, providing false testimony for their fellow immigrants, or selling paper slots were not considered immoral acts by Chinese Americans because of the difficulties in establishing families in the United States at the time.

Beginning in the early 1950s, in the name of investigating Communist activities, the INS gained public support to crack down Chinese document fraud. The agency recruited Chinese informants and coerced some Chinese into admitting false claims. INS officers would approach individuals in Chinatown. Frightened, some Chinese admitted that they had entered the United States using false identity and had created fake documents. These confessions exposed more people who had provided legal assistance, language interpretation, and witness testimonies. Criminal charges were then filed against these individuals. The purpose, as the INS put it, was to uncover and stop illegal Chinese immigration.

Immigration officials, however, could not ignore the fact that the initial cause of the widespread fraud in Chinese immigration was a reaction to the Chinese exclusion. Because so many Chinese had been involved in illegal immigration activities, it was practically impossible for the government to investigate every case and press charges against all of those involved.

In mid-1956, the INS began to advertise the so-called "Confession Program." No official policy or guidelines were issued at the time; instead, the

program was announced through informal and unwritten publicity to civic leaders and Chinese Americans. Under this program, Chinese who in the past had fraudulently established U.S. citizenship were urged to come forward and then adjust their status under the Immigration and Nationality Act of 1952. In meetings held in Chinatowns, government officials maneuvered to convince the audience that the Chinese were the ones who could benefit from the program.

As part of its internal policy, the INS tried to make the principles of the Confession Program as ambiguous as possible. The government said in public that it had no desire to entrap Chinese Americans, but officials gave no promises to any prospective confessors either. The Chinese were told only that they should seriously consider the fact that they could adjust legal status under the new law, and that confessors would have more to gain than to lose. With no written policy, government officials were able to decide arbitrarily whom it would allow to stay and whom it would deport. As a result, deportation proceedings were filed against some individuals even though they had appeared as government witnesses in criminal investigations involving other Chinese. Should they refuse to cooperate, some were told that they and their family members might face criminal charges.

Based on leads from informants, anonymous sources, and letters and coaching materials seized by government agencies, INS agents approached their targets in public gathering places in Chinatowns. Chinese American war veterans, who were eligible for relief under the law, were the first prey. In one case, for example, the INS suspected a Chinese who claimed to be a native-born U.S. citizen was actually born in China. The person had brought a number of people as his children and grandchildren to the United States and claimed an additional 17 persons as his family members in China and Hong Kong. To prove their cases, investigators approached family members who had served in World War II or the Korean War. The veterans were told that they were eligible for relief and would not be in danger of deportation if they told the truth. The entire family eventually went to the INS office and made full confessions.

This group confession was by no means voluntary. The individuals not only had to reverse their own early

sworn testimonies, but they also had to provide information that would put relatives and friends in jeopardy. Some family members were faced with deportation proceedings. The process to receive relief was also convoluted. The veterans were naturalized first, but their wives had to wait until the husbands' status was adjusted before they could apply for adjustment. Most damaging was that after they admitted their fraud, they could no longer sponsor family members who were still in China.

Each time a group of Chinese veterans was naturalized, the INS would furnish a press release to the Chinese American community. The government tried to advertise what it called the humanitarian aspect of the program, which is to free those otherwise law-abiding individuals from the constant pressure of living with a lie, although its obvious purpose was to permanently terminate the machinery that facilitated a steady influx of illegal aliens. The Chinese community press printed these news releases as they were, but made no attempt to call upon its readers to participate in the Confession Program.

The Confession Program had a disastrous impact on families. In late 1955, acting on an FBI request, the INS investigated Lee Ying, the co-owner of the World Theater in San Francisco, who was identified as a Communist sympathizer. Ying had entered the United States as a paper son of Hui Suey. Under pressure, Hui Suey admitted that Lee Ying was really his son-in-law. The confession implicated other family members who had made false claims, including Hui Suey's wife, his two sons, and his daughter. Although Hui Suey had cooperated fully with the investigators, he could not protect his family. A week after his father-in-law testified, Lee Ying was arrested and his home searched. The arrest warrant charged that he did not possess a valid immigration visa. On January 30, 1957, the grand jury in San Francisco filed four criminal indictments against him for document fraud and giving false testimony. Lee Ying eventually accepted voluntary deportation. Poon Bok Shing, another Chinese who admitted document fraud, committed suicide the same day he confessed to INS agents. To escape any contact with INS investigators, many Chinese went into hiding. Some changed their addresses and telephone numbers, and others closed down their businesses.

Encouraging Chinese Americans to testify against each other, the Confession Program tore some families apart. In some cases, parents were brought to court testifying against their own children. To avoid the problem, some Chinese would immediately inform their family members after being pressured to confess.

Although relatively few Chinese were deported, the INS viewed the Confession Program as one of its greatest accomplishments. Paper families were rooted out one after another, and the number of slots closed was featured in the service's annual reports. All together, 13,895 Chinese participated in the program, leading to the exposure of 22,083 individuals, and the closing of 11,294 slots.

The 1965 Immigration Act, however, opened a new chapter in Chinese immigration. The new law established a new quota system, giving each nation the same immigrant quota and providing special protection for the families. American citizens are granted the privilege to send for their family members outside the quota, and their relatives could enter as quota immigrants. This historical legislation enabled those who had participated in the Confession Program to claim immediate family members and relatives in China using their true identities.

On February 2, 1966, the INS announced that it would no longer solicit confessions, but some Chinese Americans went for voluntary confessions to take full advantage of the new immigration law.

Chinese Cuisine in the United States

Food is an integral part of Chinese culture and followed closely every wave of Chinese immigrants to the United States from mid-nineteenth century to today. Though Chinese culinary culture consisted of a

variety of different regional flavors, early Chinese cuisine in America was Cantonese as pioneer Chinese immigrants came from Guangdong Province. As an Asian cuisine, a common Cantonese meal included staple foods like rice and side dishes like meat stir-fried with vegetables though noodles, sweet potato, or other staple foods were also common in their diet. Compared with spicy Sichuan or Hunan cuisine, Cantonese was mild and mellow. Stir-frying, steaming, boiling, roasting, clay pot slow-cooking, or deep frying were some of the major cooking methods. In addition to green onion, ginger, garlic, salt, sugar, soy sauce, rice wine, Cantonese cookery employed a variety of tasty sauces such as oyster sauce, plum sauce, or cha shao sauce. Cantonese cuisine had a long list of palatable dishes. In 1865, for example, 30 wealthy Chinese merchants of San Francisco held a grand banquet to local American merchants and government officials. The menu of the banquet consisted of 325 dishes including shark's fins; bird's nest soup; stewed seaweed; stewed mushrooms; bamboo soup; fried fungus; reindeer; scorpions' eggs; stewed bamboo; baked duck's eggs; steamed spare ribs; roasted pig, duck, or goose; a variety of different fish; and many kinds of cookies, cake, and fruits. Cantonese cuisine incorporated almost all edible meats, including animal intestines, chicken feet, duck tongue, or pig's ear. Although pork, chicken, and beef were the major meat ingredients, Cantonese cuisine also included frogs, snakes, dogs, or a variety of birds such as deep-fried marinated pigeon. However, such diet did not mean an exotic eating habit but reflected their long and rich culinary culture and knowledge that many animals were edible and most parts of a pig, chicken, or cattle could be made into palatable meats. In general, Cantonese people consumed more staple food, vegetables, and herbs than meat as most Chinese did.

Ever since the Gold Rush era, Chinese restaurants served not only the Chinese but all American customers. As more and more Chinese restaurants appeared in American cities, Chinese cuisine became a familiar ethnic food in America culinary culture. Before the 1960s, the most famous Chinese food was chop suey, which was actually an invention in the United States. In the late nineteenth century, some Chinese restaurants in America did offer a humble dish called Chao

Zasui, which was a mix of animal intestines stir-fried with ginger, rice wine, and garlic to eliminate the odor. Wong Chin Foo, one of the earliest Chinese American journalists in New York, described it in 1888 as “A staple dish for the Chinese gourmand is Chow Chop Suey, a mixture of chicken’s livers and gizzards, fungi, bamboo buds, pig’s tripe, and bean sprouts stewed with spices. The gravy of this is poured into the bowl of rice with some sauce, making a delicious seasoning to the favorite grain.” But the chop suey that most American customers were familiar with was totally different from Wong’s version. Ten years later, journalist Louis Beck published his book *New York’s Chinatown*. In Beck’s observation, chop suey consisted of “A Hash of Pork, with Celery, Onions, Bean Sprouts, or other vegetables and it was a fifteen-cent dish.” In Beck’s version of chop suey, meat had replaced intestines in the cookery. Celery, onions, and bean sprouts or other vegetables became major ingredients. Obviously, Chinese restaurants began to Americanize their menu and adapted their dishes to American tastes. When Li Hongzhang, a high-ranking Qing government official, visited the United States in 1896, a Chinese immigrant spread the news that chop suey was Li’s favorite food. Soon chop suey became a hit dish and hundreds of Chinese chop suey houses appeared in New York City. The immigrants quickly generated chicken chop suey, beef chop suey, pork or seafood chop suey, and even vegetable chop suey. Similar creative cookery applied to chow mein or egg foo young, two other favorite foods of American diners. As sweet and sour pork, butterfly shrimp, beef broccoli, and many other Americanized Chinese dishes joined the list, Chinese cuisine became a popular ethnic food and a trend in American society.

Beginning in the 1920s, Chinese cuisine became further localized. For example, the chow mein sandwich became a hit local food in Fall River, Massachusetts. This invention was a hamburger-sized bun with fried chow mein placed in between. Many Chinese and non-Chinese restaurants in Massachusetts served hot chow mein sandwiches with brown gravy. In a predominantly Catholic area in Providence, Rhode Island, chow mein sandwiches was so popular that some restaurants offered meatless versions on Friday for Catholic customers. St. Paul sandwich in St. Louis,

Missouri was another Chinese creation. Like a regular sandwich, the bread was slathered with mayonnaise; optional pickle, sliced tomato, and icy lettuce could be added. But deep-fried egg foo young patty was the key to the sandwich. The egg foo young patty consisted of several whipped eggs, bean sprouts, and minced white onions. If customers wanted to go beyond the basic version, they could ask for optional additions such as shrimp, beef, chicken, or ham. As Chinese cuisine became an important American ethnic food, Italian American food entrepreneur Jenò Paulucci began to mass produce chop suey and chow mein in canned and frozen food. His initial market was the Scandinavian-settled section of Duluth in northern Minnesota, but soon his food empire, Chun King Corp., was able to reach many grocery stores across the nation. In 1957, Paulucci patented his canned Chinese food by packaging chow mein or chop suey in one can and vegetables in another. In the 1950s and 1960s numerous Chinese restaurants named themselves as chow mein houses.

In the 1970s and early 1980s, Chinese food in America began to change again with the arrival of new immigrants from Taiwan, Hong Kong, and mainland China. Most of them settled in suburban cities like Monterey Park in Southern California or Flushing, Queens in New York. The new immigrants brought new tastes to America. Instead of chop suey or egg foo young, they preferred genuine Chinese cuisine. President Richard Nixon’s visit to China in 1972 also aroused a great interest in Chinese food in American society. Peking duck emerged as a well-known dish, and chop suey lost its historical appeal. Food and menus in Chinese restaurants began to follow culinary trends in Asia. In 1987, a *Los Angeles Times* restaurant review listed the top ten Chinese restaurants in Monterey Park and Alhambra. Wonder Seafood Restaurant was one of them. Dishes on its menu included abalone and duck hot pot, crystal shrimp with sweetened walnuts, and ground pigeon topped with plum sauce. But Ricky Wu, co-owner of the restaurant claimed that his true culinary masterpiece was a three-snake soup, made from cobra, rattler, and a third snake for which Wu said there was no English name. Another famous dish at Wu’s restaurant was “Fo Tiao Qiang,” which means “Buddha jumped over the wall” because “he smelled the soup, and it smelled so delicious.”

This famous dish in Fujian was cooked in clay pot contained abalone, conch, soft-shell turtle, and a host of seafood and other ingredients.

On the East Coast, Hunan cuisine became popular with both Chinese and American customers. In 1974, the local ABC news station in New York did a segment on Peng Yuan Restaurant. Reporter Bob Lape visited Chef Peng in the kitchen and taped how he made General Tso's chicken, a famous dish in Hunan cuisine. After the segment ran, about fifteen hundred people wrote in and asked for the recipe. The enthusiasm of New York residents for this dish reflected a new trend in Chinese restaurant business in America. However, few people realized that those Hunan, Sichuan, or Shanghai-flavored restaurants were brought over to America by immigrants from Taiwan instead of mainland China, which did not have diplomatic relationship with the United States and could not send immigrants until after 1979. For several decades since 1949, the year when the Nationalists were defeated by the Communists, there was no social and cultural contact between Taiwan and mainland Chinese. When Taipei became a metropolitan city with thousands of all kinds of restaurants, people in Taiwan essentially made Chinese regional cuisines based on their collective memory about Chinese food. Cultural preservation simultaneously became a cultural invention. Though representing Hunan, Sichuan, or Shanghai flavor, those regional cuisines in America were in fact developed or even re-invented in Taiwan. With Taipei as a capital of Chinese cuisine, Hunan and other regional cuisines migrated to America and other places following Taiwanese immigrants. Pushed by Hong Kong immigrant entrepreneurs in the late 1980s, Cantonese-flavored restaurants started to regain their popularity with dim sum food. Such restaurants in New York or California offered an unlimited number of appetizer-type steamed, roasted, or baked small dishes for customers to select. Meanwhile, many immigrants from mainland China began to run restaurants that featured northern cuisines such as Shangxi pancakes, baked bread, or handmade noodles or Fujian cuisine. Chinese cuisine in America has become more diverse in its content and cooking styles than ever. By the 1990s, when people in American metropolitan

cities like New York or Los Angeles planned to eat Chinese, they had to decide which regional flavor they would pick.

Chinese Exclusion Acts (1882–1943)

On May 6, 1882, President Chester A. Arthur endorsed the Chinese Exclusion Act, suspending the immigration of Chinese laborers for 10 years. The law marked the beginning of a 61-year Chinese exclusion, ending the history of the United States as a country of free immigration. For the first time the U.S. federal government barred the entry of a group of people on racial grounds. The law also prohibited state or federal courts from granting citizenship to Chinese, making them "alien ineligible to citizenship."

Political cartoon from the 1860s captioned “The great fear of the period—that Uncle Sam may be swallowed by foreigners: The problem solved.” The illustration, which depicts Uncle Sam, an Irish man, a Chinese man, and a railroad, alludes to the influx of immigrants used for cheap labor to build the transcontinental railroad. (Library of Congress)

The exclusion law did not apply to Chinese laborers in the United States at the time; those who arrived within 90 days after the law was enacted were not affected either. It required Chinese leaving the country to obtain a certificate from government officials for reentry in the future. Under the 1880 treaty obligations, Chinese teachers, students, merchants, tourists, and their servants, as well as diplomats were exempted. The law was amended several times, adding more restrictions and closing loopholes. An 1884 amendment required certificates for Chinese who left the country to reenter. An 1888 amendment voided all previously issued certificates and prevented Chinese immigrants who had left the United States to reenter. An 1892 amendment extended the exclusion for another 10 years and required all alien Chinese to carry certificates of residence. The amendment of 1902 extended exclusion for yet another 10 years. In 1904, a final amendment made Chinese exclusion permanent. All Chinese exclusion acts were repealed in 1943.

The exclusion laws blocked entries of Chinese immigrants effectively. They also made it extremely

difficult for male immigrants already in the United States to form families. Under the exclusion laws, Chinese population in the United States had a negative growth from 107,488 in 1890 to 77,504 in 1940.

Chinese Exclusion, Repeal of (1943)

On December 17, 1943, President Franklin D. Roosevelt signed into law the act repealing Chinese exclusion, thus bringing the 61-year practice of Chinese exclusion to an end. The repeal campaign was led by the Citizens' Committee to Repeal Chinese Exclusion (CCRCE). Active members of the committee, often described as “friends of China,” included Donald Dunham, a former member of the American consulate in Hong Kong; Pearl Buck, a Nobel laureate in literature and the author of *The Good Earth*; Buck's husband, Richard J. Walsh, editor of *Asia and the Americans*; and president of the John Day Company. Following the advice from the CCRCE, the Chinese American community kept a low profile in the campaign. The CCRCE limited membership on the committee to non-Asians to convince Congress that the demand to end exclusion came from white Americans rather than the Chinese.

The repeal was a by-product of World War II and the wartime alliance of the United States and China. During the war Congress was under pressure to end Chinese exclusion partly because Japanese propaganda was seeking ways to undermine the

U.S.-China alliance. Through broadcast programs, for example, Tokyo cited U.S. immigration policies against the Chinese to its targeted audience in China. It reminded the Chinese people that in the United States Chinese immigrants had to live in segregated Chinatowns, that even Chinese merchants were subject to detention, and that Chinese were denied the right to naturalization, a right that was accorded to the lowliest immigrants from Europe. The suggestion that discriminatory policies might cause the Chinese and other Asians to join Japan's "Asia for Asiatics" campaign alarmed American lawmakers. Meanwhile, criticism of the exclusion also came from Britain, an ally of the United States. The CCRCE seized the momentum to argue that the repeal was a military necessity to win the war.

Testifying before the House committee, representatives of the Chinese American community, Dr. Li Min Hin from Hawaii and electronics engineer Paul Yee, emphasized the significant contributions the Chinese had made to the United States and their ability to assimilate to the American culture. A few Chinese American intellectuals also spoke at public gatherings, but they were careful not to give an impression that they were advocating an open-door immigration policy.

There was, however, strong opposition against the repeal. One main concern was the impact of the repeal on American labor. Among the organizations that continued to support exclusion were The American Federation of Labor, the American Legion, and the Veterans of Foreign Wars. Urging Congress to pass the Magnuson Bill, President Roosevelt stated that ending exclusion would "correct a historical mistake and silence the distorted Japanese propaganda." Referring to the Chinese quota limit of 105 per year, the president assured the American public that "there can be no reasonable apprehension that any such member of immigrants will cause unemployment or provide competition in the search of jobs." The bill was passed by both the House and Senate and was later signed into law by the president. In theory the new law opened the door to Chinese immigration. However, although the 1924 Immigration Act classified immigrants for quota purposes by place of birth, the repeal act provided that

Chinese from any part of the world were included in the quota.

Regardless of the small quota, the significance of the repeal act could not be overlooked. The repeal ended Chinese exclusion officially, changing the status of Chinese from inadmissible to admissible. This change entitled the Chinese the benefits of general immigration laws. A good example of such benefits could be found in the War Brides Act of 1945. The repeal also made Chinese immigrants eligible for citizenship, which is very important in the postwar transformation of the Chinese American community.

Chinese Fisheries in California

Chinese fishermen came to California just after the state joined the nation in the 1850s. These men were among the first nonnative fishermen to capitalize on the natural resources found along the Pacific coast. During the next few decades, Chinese fishing camps and villages were established from the Oregon border to Baja California, on offshore islands, and along the Sacramento River Delta. For over one hundred years, the California fisheries provided employment for thousands of Chinese fishermen. These pioneers helped to establish the commercial fishing industry in California and introduced important and valuable delicacies to nineteenth-century tables such as shrimp and abalone.

Shrimp camps dominated the San Francisco Bay Area; Monterey specialized in abalone and squid;

whereas San Diego was primarily concerned with abalone. The marine resources from these areas were dried and shipped to China, Chinese communities in the United States, and sold fresh locally.

A vast number of the Chinese fishermen who settled in California displayed great skill in their ability to obtain and process marine products. For example, although the fishermen living in the Monterey Bay region were known for harvesting abalone and capturing squid, they also had the knowledge to catch and process rockfish, cod, halibut, flounder, red fish and blue fish, yellow tail, mackerel, sardines, and a variety of shellfish.

The skills of these men were developed in regions of China where fishing was a livelihood. Census data from 1880 provides evidence that fishermen who worked the fisheries at Point San Pedro on San Pablo Bay in Marin County hailed from areas of the Guangdong Province where shrimp fishing was an occupation.

Chinese fishermen in California maintained traditional fishing methods, and their adherence to these practices is best displayed by their use of traditional watercraft such as Chinese junks. In China these vessels have traditionally been used for many purposes such as fishing, transportation of cargo, and ferrying. In California, Chinese shipwrights built traditional watercraft at several locations including San Diego, Santa Barbara, San Mateo, San Pablo, Point San Pedro, San Bruno, and Hunters Point.

There are several characteristics that positively identify nineteenth-century Chinese watercraft such as a sharp bow and a rounded stern. The large unbalanced rudder was retractable and displayed perforated, diamond-shaped holes and served as a keel in the lowered position. The distinctive sails featured battens secured near the mast. Most California junks were made from redwood, and seem to have been left unpainted; they were simply treated with t'ung oil.

Fisheries in San Francisco

The shrimp fisheries located in the San Francisco Bay region provided jobs for hundreds of Chinese fishermen from the 1870s to 1930. Point San Pedro was one of the largest Chinese shrimp fishing villages.

Today, a part of this settlement still exists and is known as China Camp State Park located in Marin County, California. The fishing village spanned 10 to 15 acres and consisted of 32 houses, a boat building, and shipping facilities. The 1880 Census recorded 347 fishermen along with cooks, boardinghouse keepers, servants, gardeners, a junk dealer, a barber, and a school teacher who worked to support fishing activities and the fishermen. The total population for Point San Pedro for that year was 469 residents.

Shrimp was caught with bag nets staked to the bay floor. This equipment represented a major investment and the choice of fishing ground was very important. An experienced fisherman who understood the currents would dictate the exact location where the net stakes would be placed. Chinese fishers recognized ownership of fishing territories, yet they were not legally sanctioned.

Fisheries in Monterey

The earliest Chinese fishing village in the Monterey Bay region was established at Point Lobos, where a building, known as the Whalers Cabin, was built in the early 1850s. This structure provides physical evidence of Chinese fishing activities in the Monterey Bay region and is believed to be the oldest remaining wooden frame residence of Chinese origin in California.

There was competition in the Monterey Bay fishery between ethnic groups. Portuguese whalers established a settlement in Monterey in 1855 and additional fishermen from Portugal arrived in the area in 1860. Italian fishermen arrived in Monterey County from San Francisco in 1873. Yet, more than half of the fishermen in the area were Chinese. These men, using methods learned from their respective homeland, frequently came into conflict. In 1880, Chinese fishermen sued Portuguese fishers for cutting their fishing nets; however, the Portuguese men prevailed in the lawsuit.

Point Alones, located in Pacific Grove, one-and-a-half-miles northwest of Monterey, was established in the 1850s. This village was among the most prosperous of the Chinese fishing settlements in California. It was a self-contained community that provided its residents with traditional goods for sale at the general

store, an employment agency, a cemetery, an outdoor shrine, and an association hall. The community was a cultural center where Chinese residents from nearby towns would gather and share in traditional customs from the homeland. Many Chinese fishermen raised families at Point Alones and together they worked in the fishing industry where squid was their primary marine product. This village thrived for 50 years and burned down in May 1906.

Fisheries of San Diego

Chinese fishermen dominated the fishing industry in San Diego from the early 1850s until the 1890s. Two Chinese fishing colonies were established on Point Loma, and another fishing village was located at the waterfront adjacent to the Stingaree district and Chinatown. Chinese merchants and contactors in San Diego's Chinese community worked as marketing agents and handled export operations. In some cases, Chinese merchants owned vessels used in the fishing industry.

By the time Chinese fishermen arrived in San Diego, the abalone population had exploded. Sea otters are native to California, and their fur was highly desired, yet because of over hunting, the animal was driven to near extinction. An element of their diet is abalone, consequently, abalone flourished and multiplied once their natural predators were removed.

Abalone was the perfect resource for Chinese fishermen to pursue. Dried abalone was considered a delicacy in China, and Chinese fishermen in San Diego harvested the mollusk with very little competition. Abalone was pried from the rocks and the meat was dried and exported, whereas the shells were shipped to China to be used for cabinet inlays and jewelry, and to France and Germany to be used for buttons and curios.

Expanding their activities, Chinese fishermen worked the waters and shores of the Channel Islands and Baja California. They maintained San Diego as their base of operations for drying their catch, shipping, and fresh market sales. Abalone was abundant in Baja California and Chinese fishermen would sail their junks up to 400 miles from San Diego in pursuit of their prey. A newspaper account from 1871

described two junks arriving at the San Diego port from lower California with eight tons of abalone meat (*San Diego Daily Union* October 14, 1871).

Decline of the Chinese Fisheries

During the 1860s, Chinese fishermen began to be attacked from several fronts, culminating in the decline of the Chinese fishing industry in California. Restriction upon Chinese fishing began with investigation and regulation. The first restriction placed upon Chinese fishermen occurred in 1860, when a license fee of \$4.00 was levied upon fishermen by the state. The license fee was repealed in 1864. During the 1870s the United State Fish Commission began to investigate the Chinese fishing industry. Although the federal government recognized that the regulation of the fisheries should be left up to the states, the Fish Commission's mandate was to gather information and study coastal fisheries in the United States. In 1879 and 1880, David Starr Jordon surveyed the Pacific Coast fisheries in conjunction with the Tenth Census. The conclusion of the survey was that the quantity of fish was being "constantly and rapidly diminished by Chinamen with their fine-meshed nets" (*San Diego Daily Union* January 14, 1880).

Most members of the United States Commission of Fish and Fisheries and the State Board of Fish Commissioners were political appointees and were not scientists. They did not have the expertise to understand biological processes that affected the fisheries such as climatic changes, pollution, and a shift in predator/prey populations. Moreover, the diversity of the marine life harvested by Chinese fishers reduced the danger that fish populations would be decreased.

Hostility toward the Chinese population in the United States reached a fever pitch and in 1882 Congress passed a bill restricting immigration of Chinese laborers for 10 years. Additional laws that extended exclusion and limited Chinese employment opportunities were passed in 1892 with the Geary Act. This legislation specifically defined "persons engaged in taking, drying, or otherwise preserving shell or other fish for home consumption or exportation," as laborers. In effect, Chinese fishermen were redefined as laborers, an excluded class, and subject

to deportation. Laws and regulations placed upon Chinese fishermen were harsh and based on the racism of the time.

Chinese Garment Workers in San Francisco

At the turn of the twentieth century, jobs for Chinese immigrants in San Francisco were limited. Both the racist and exclusionary practices of the era and the need to speak English kept many Chinese immigrants from finding work outside of the home or obtaining jobs for fair and decent pay. The California Gold Rush of 1849 and the need for labor to build the transcontinental railroad in the subsequent decades provided Chinese men with employment during their initial years in the United States. After gold was depleted and the railroad completed, Chinese men living on the West Coast of the United States and especially within northern California had few options for paid employment. Some labored in the agricultural industries, those with financial resources and often formal education became merchants and shopkeepers, whereas others with some experience with domestic work began running laundries or moved to employment in the garment industry. By the early 1900s,

many Chinese immigrant men were not satisfied with the working conditions inside the city's sewing factories and left their jobs. Chinese immigrant women then replaced their male counterparts and for years after comprised the vast majority of San Francisco's garment industry workers.

Though the working conditions in San Francisco's sewing factories were particularly harsh, jobs within the garment industry were one of the only possibilities of employment for immigrant Chinese women. Racism, sexism, and the inability to speak English made it almost impossible for immigrant Chinese women to find any kind of paid work. Hiring women over men was also extremely beneficial to the manufacturers who ran the factories. Because the women often desperately needed a means of supplementing their families' income, the manufacturers were provided with a large, cheap, and exploitable workforce. In the early 1900s women factory workers were preferable to men as they accepted lower wages. Women were also barred from membership in Chinese guilds, organizations that worked to regulate workers' hours, and women did not have the means to form their own labor unions.

The disparate treatment of immigrants, Chinese, and women during the early years of the twentieth century meant that female Chinese workers in San Francisco occupied the very bottom of both society and the garment industry. Because women workers could not speak English and were without access to further education and job training, they had little hope of finding alternate employment when the factory environment became oppressive. Early immigrant Chinese women workers also lacked the social and political awareness to understand their potential for coming together and advocating for better working conditions and pay increases.

The first wave of immigrant Chinese women factory workers suffered brutal conditions in San Francisco's early sweatshops. Their dependence on the meager income that they earned from sewing and repetitive piecework kept them in the factories. However, the second generation of Chinese women who entered the garment industry, though subjected to exploitative working conditions, relied on their surrounding community for support as they made

attempts to fight for increased wages and employee benefits.

The second generation of Chinese garment workers included both immigrant and Chinese American women. Those who had lived longer in the United States had a better understanding of American culture and the English language. Thus, they had an easier time accessing social services available from organizations such as the YWCA and became more active participants in their local communities. Eventually, as their public lives expanded, Chinese American women began to join labor unions and work as a collective to make changes within the garment industry.

In the 1930s, many Chinese American women factory workers became members of The Chinese Ladies' Garment Workers Union. One of their early endeavors was to fight for better working conditions and employee benefits from their employer, the National Dollar Store. Though the women did not end up completely victorious, by coming together and being persistent with their demands, they were able to effect real change. The National Dollar Store ended up conceding to some of the union's demands. Here, the Chinese women won a wage increase, payment for overtime work, and a paid day off on Labor Day.

The first two generations of Chinese and Chinese American women workers had to struggle and sacrifice to achieve improved and fairer working conditions. However, during the early and mid-twentieth century, when "outsourcing" to other areas of the nation or overseas was difficult and expensive, large-scale corporations such as the National Dollar Store needed to keep their factories local and thus workers had the ability to eventually force change. Many of San Francisco's early garment factories were vertically integrated operations where the products originated and were completed within one location. Thus, though factory employers regularly abused their power and attempted to exploit their uneducated or desperate workers, they could not go so far as to jeopardize losing an entire workforce.

However, even with some factories making changes based on union demands, non-English speaking Chinese workers in the 1980s and 1990s and even into the twenty-first century were still at the mercy of exploitative employers and an unhealthy and dangerous work environment. In "The Only Thing

I Could Do Was Sew," interviewee Li Qin Zhou recalls her many years working in different sweatshops in San Francisco's Chinatown during the late 1980s and 1990s. Zhou took these jobs because of their close proximity to her home and because her lack of English ability meant there were no other jobs open to her. In smaller factories, some employers paid Zhou less than the city's minimum wage; others would only raise her pay, even after years of service, if San Francisco's minimum wage rates increased. In larger factories that employed hundreds of workers, bosses and supervisors exploited their employees by paying them for fewer hours than they worked, and making them undergo humiliating procedures such as lining up to use the restroom and limiting the amount of times they could access the restroom during the workday. Zhou was fully aware that she and her fellow coworkers were being mistreated, but she refrained from complaining to keep her job. Eventually, in 2001, the factory closed down when it could not keep up with other factories that were outsourcing to China.

The concluding few decades of the twentieth century and the first few years of the twenty-first century saw the clothing industry and garment factories begin to almost completely disappear from San Francisco. Newer Chinese immigrants were still moving to the city looking for jobs, but the garment industry's structure had drastically changed leaving almost no production jobs behind. The local industry that had provided jobs when nothing else existed for many Chinese immigrants was becoming a global industry that relied on fewer workers and resources in the city.

Although trade alliances such as NAFTA definitely made outsourcing more cost-effective for clothing manufacturers, the high cost of keeping the garment industry located in San Francisco also led to the decline of local jobs. As San Francisco prospered, rents and legal minimum wages also increased. Manufacturers did not need to move their entire operations outside of the United States to significantly cut down on operational expenses; they merely had to move their factories to the East Bay or the Peninsula. With San Francisco rents and the cost of employing workers higher than almost anywhere else in the nation, a simple 7 to 15 mile move could save manufacturers on both the cost of rent and on employee wages.

Today San Francisco's garment industry is just a tiny part of the city's economy. A few companies still inhabit warehouse space in the Outer Mission and South of Market areas of the city. Today's factories often prosper because of consumer consciousness and the desire to support local and San Francisco made products. The ethnic and racial make-up of the workforce has also changed as it is no longer solely or primarily Chinese but made up of immigrant workers from Mexico and Central American countries. However, workers today who have access to further job training, who are paid a fair wage, who celebrate Labor Day and other paid holidays are benefiting from the early generations of Chinese American women workers who unionized and fought against unfair labor practices. All garment industry workers in San Francisco have also contributed greatly to the city's social history and economic prosperity. With such huge sacrifices and contributions made by Chinese immigrant and Chinese American workers, the city of San Francisco should work to keep the remaining garment factories local, make job training and English language education available, hold employers accountable for exploitation and abuse that continue in factories, and support and promote locally made sweatshop-free apparel. Lastly, Chinese and Chinese American women should be recognized and thanked for their legacy of social and labor activism that set the stage for later generations of immigrant and racial minority women to organize for better working conditions and more equitable treatment.

Chinese Hand Laundry Alliance of New York (CHLA)

The Chinese Hand Laundry Alliance of New York (CHLA; Niuyue Huaqiao Yiguan Lianhehui) was founded in 1933 by a group of Chinese laundrymen in response to a crisis that threatened the survival of their business, which was already weakened and vulnerable in the Great Depression. The City Council of Aldermen proposed in March an ordinance to require U.S. citizenship for operating public laundries and to charge a license fee of \$25 per year of all public laundries plus a security bond of \$1,000. Several hundred Chinese laundrymen, disappointed with the leadership of traditional organizations and convinced that only their own collective action could save their business, founded the CHLA and sent their representatives to fight against the proposed ordinance, which was in the end largely modified (the license fee was reduced to \$10 and the security bond to \$100 and Chinese were exempt of the citizenship requirement). With this victory, the CHLA emerged as a new type of organization initiating and engaging in an array of political and social activities with increasing influence in New York's Chinese community.

As a grassroots organization, the CHLA represented the interests of the laundrymen. In the 1930s and 1940s, the Chinese laundrymen, like other Chinese Americans, were subject to political, social, and economic discriminations and vulnerable to many legal problems because of the Chinese Exclusion Acts and laws (1882–1943). Traditional family-based or native place associations and their umbrella organization in New York City, the Chinese Consolidated Benevolence Association (CCBA), had provided limited help in the past but proved inefficient in face of serious crises such as the proposed ordinance. The CHLA tried to protect the basic rights and interests of its membership by rallying support in the community and the larger society by appealing to the fundamental democratic principles as articulated in the Declaration of Independence and the Constitution, and it hired lawyers to fight against discriminatory laws and regulations and to offer legal assistances to the members. From the very beginning the CHLA adopted

a democratic electoral procedure that met the demands and was shaped by the experiences of the Chinese laundrymen. All officials of the Executive and Supervisory Committees were elected by and from the members. As a rule, any important issue would be decided at the membership meeting. The members developed strong identification with the CHLA, which became known in the Chinese community as a large occupational organization led by an effective and responsible leadership capable of protecting and defending the interests of its members. The CHLA membership, at its peak, was estimated between 3,000 and 4,000.

As an occupational organization, the CHLA offered some mutual help and recreational programs to serve its members. It circulated information about improving sanitation conditions in hand laundries and advised its members to have enough sleep, not to overwork, and always take care of their health. It organized weekend or holiday outings, such as a hike and picnic on Beer Mountain or a cruise on the Hudson River. Death benefits were offered: If a member had fulfilled his membership duties and paid his dues and fees, when he died the CHLA would collect a quarter from each member to pay for his memorial service and burial and to give his family a small sum of money. These programs and benefits were significant to the laundrymen, because most of them were single males living in America without a normal family life. The CHLA also jointly sponsored many social and recreational programs with the Chinese Patriotic Youth Club (Niuyue Huaqiao Qingnian Jiuguo Tuan), which was founded by the core members of the CHLA in 1938 to meet the need and demand of the younger generation in the Chinese community. The CHLA and the Youth Club offered classes in Mandarin, music, photography, and a chorus. The Club even organized a drama group, providing opportunities for amateurs to perform on stage. Such activities and programs, initiated and run by the young Chinese Americans who were inspired by democratic and liberal ideals, proved to be attractive to many and helped to forge a new group and community identity among these young Chinese Americans, most of whom were born in China with some born in America.

The majority of the CHLA members were young, male immigrants from the Pearl River delta in

Guangdong province, with some Chinese education at elementary or middle school level—they could read Chinese newspapers and books and write letters and short essays in Chinese. Growing up in the early twentieth-century China, these Chinese were influenced by anti-imperialist and antitraditional ideas of the May Fourth New Culture movement, by the Chinese national salvation movement, and inspired by democratic and liberal ideals. Although they had little choice but to become laundrymen to make a living after they immigrated to America because of their limited English skills, lack of capital, and the limitations imposed on them by the Chinese Exclusion Acts and discrimination, and lived in isolation from the larger society, they desired to break that isolation, to live with basic human dignity, and to improve their living conditions and social status in America. The formation and development of the CHLA provided a hope for them to achieve such goals through collective actions.

Struggling to survive in America during the Depression, the CHLA members—virtually all of them had family and relatives back in China—were deeply concerned with China's national security being threatened by Japan's occupation of Manchuria since 1931 and its continuous aggression in China, as well as with their kin's safety. They believed that their status in America would get worse if China were conquered by Japan, and they felt they must do what they could to help China resist Japan's invasion. Soon after its founding, the CHLA actively participated in the anti-Japanese movement in the Chinese community and put forward as its guiding principle the slogan "To Save China, To Save Ourselves" (*Jiuguo Ziju*). This phrase both identified the basic problems that confronted Chinese Americans and epitomized the CHLA's major activities throughout the late 1930s and the 1940s, and it linked Chinese Americans' struggle for individual and community survival in American society to China's struggle for national survival against expansionist Japan. Believing that Americans' negative views of China's weakness partially contributed to their contemptuous attitude to and discrimination against Chinese Americans, the CHLA members wanted to prove their dignity and improve their image by actively supporting China's anti-Japanese war. In addition to donating their

hard-earned money to China, the CHLA members launched a “people’s diplomacy” aimed at winning American sympathy and enlisting their moral and financial support for China’s war of resistance against Japan. They placed thousands of relief-fund boxes in Chinese hand laundries all over New York City, and in 1938 they used the donations collected from such boxes to purchase four ambulances to donate to the Chinese troops fighting the Japanese invaders. The CHLA members participated in many meetings, rallies, and parades to promote American sympathy and support for China. By pursuing people’s diplomacy, the CHLA greatly extended its contacts with the American people and civic organizations such as the League for Peace and Democracy, the American Bureau for Medical Aid to China, and the American Friends of the Chinese People. These contacts helped CHLA members better understand the American people and society better and to a certain extent facilitated the laundrymen’s integration into American society.

Never wavering in their support of China’s resistance against Japan, the CHLA members, along with many Chinese Americans, were nonetheless often disappointed with and became increasingly critical of the incompetence and corruption of the ruling party in China—Guomindang (GMD; or Kuomintang, KMT; The Nationalist Party) and its leader Chiang Kai-shek. Their criticism of Chiang’s regime intensified as their anxieties about their relatives’ fate grew after Japan occupied Guangdong in 1938, especially after the 1943 catastrophic famine in Taishan during which many overseas Chinese relatives died. In the following years the CHLA members called for reform and building a new government based on democratic principles. They were also angry at and alienated by the GMD government news censorship in China and its attempts to control overseas Chinese communities. The CHLA and its allies in the Chinese community often clashed with the GMD agents and supporters over many issues. In 1940, the CHLA founded its own newspaper *The China Daily News* (*CDN*; *Meizhou Huaqiao Ribao*) with the purpose of reporting news independently and providing a forum for ordinary Chinese Americans to express opinions on issues that concerned them. The *CDN* soon won popular support

and became an influential newspaper circulating in the Chinese communities in the eastern United States. When challenging and criticizing the GMD regime, the CHLA and its allies began to become sympathetic with the Chinese Communist Party (CCP), and gradually came to believe that the CCP, as a rival of the GMD, with its appeal to nationalism, the United Front, and its efforts to organize the peasants to fight the Japanese, and to carry out the land reform in the countryside, seemed to offer an alternative to the GMD. During the Chinese Civil War (1946–1949), the CHLA and *CDN* became unequivocal critics of the GMD and supporters of the CCP. In October 1949, the CHLA celebrated the founding of the People’s Republic of China, expecting the new CCP government would provide political and legal protection to Chinese Americans, put pressure on the U.S. government to abolish discriminatory immigration laws, extend economic and technical aid to Chinese Americans, and improve the living conditions of their relatives at home. From this point on, however, the CHLA got caught in the complexities of international politics during the Cold War years. The U.S. authorities began to see the CHLA as a “Communist infiltrated” organization and placed it under investigation and surveillance. After the outbreak of the Korean War, J. Edgar Hoover, director of the FBI, directed his New York agents to conduct a “comprehensive, thorough investigation” of the CHLA “at once” and to open “individual cases for investigation on officers or members” of the CHLA, the Chinese Youth Club, and *CDN* who “might be considered as potentially dangerous to the internal security.” By November 1950 the CHLA was regarded as the “largest single Chinese Communist group in New York,” and the FBI intensified its investigation of the laundrymen’s alliance, the Chinese Youth Club, and the *CDN*. As the tension between China and the United States increased, and as the pro-GMD forces began to prevail in the Chinese community by taking advantage of the American anti-CCP policy, the CHLA became isolated in the Chinese community and its membership shrank dramatically. In the following years the remaining CHLA members were under strict FBI surveillance. Many were pursued and interrogated by FBI agents and, as a result, lived in

fear. Only the most loyal members remained in support of the CHLA, and they had endured many years of hardship.

Some CHLA leaders, members, and supporters went back to China. A few were deported by U.S. authorities; a number of the CHLA members returned to China voluntarily to take part in building a new China or to avoid potential problems in the United States after the outbreak of the Korean War. Two former CHLA leaders found positions in the central government of the PRC. Tang Mingzhao (Thomas Tang), former CHLA English Secretary and manager of the *CDN*, secretly returned to China and became a deputy director of the Liaison Department of the Committee for Resisting the U.S.A. and Aiding Korea in October 1950; in the 1970s he was a member of China's mission to the United Nations and served as undersecretary-general of the UN from 1972 to 1979. Lin Tang, who once served on the CHLA Executive Committee, returned to China in 1949 and became a member of the Overseas Chinese Affairs Commission of the central government. Several CHLA leaders and active members went back to Taishan, Guangdong, their hometown, and served in the local government. Chen Houfu returned to China in 1951 and became a deputy magistrate in Taishan County's government. Tan Wei and Tan Guangpan, both of whom had served on the CHLA Executive Committee in the 1940s, became members of the Taishan Returned Overseas Chinese Association after they went back to China in the early 1950s.

In late 1940, when actively engaged in politics, the CHLA led a struggle against the Chinese power laundries to protect the hand laundrymen's economic interests. Since the 1920s the Chinese hand laundrymen in New York City had not done the washing in their shops, although these shops were still being called "hand laundries." They received the laundry from the customers, sorted it, and sent it to the wet-wash factory (called "power laundries" in the Chinese community) to be washed. The next day the wet-wash factory delivered the clean laundry to the hand laundry shops, where the laundrymen would iron and fold the clothes to be picked up by the customers. By the 1940s most of the Chinese hand laundry shops in New York City had equipped themselves with shirt-press machines to

replace hand ironing. (The Chinese hand laundrymen in many other cities, however, still did the wash in their own shops and continued to iron by hand as late as the 1940s.) In 1946, when the Chinese power laundries tried to impose a 33 percent price increase for wet-wash and to require the hand laundry shops to contract their work with certain Chinese power laundries, which seemed to threaten the survival of many hand laundry shops and deprive them of "freedom of wash"; the CHLA rallied its members and supporters to found their own Wah Kiu Wet-Wash Factory. Many laundrymen enthusiastically supported this collective effort because they wanted to keep their freedom and dignity as self-reliant laborers. After many painful experiences in dealing with sabotages and learning managing skills, the Wah Kiu Wet-Wash Factory stabilized by the early 1950s and over the years provided a vital economic means to sustain the CHLA and support its members.

In the 1950s and 1960s, the CHLA continued to participate in and support progressive campaigns and the Civil Rights Movement, and it always advocated the normalization of diplomatic relations between the United States and the People's Republic of China. As the Sino-American relations improved after President Nixon's visit to China in 1972, the FBI surveillance of the CHLA discontinued, and the CHLA members were able to travel to China and restore their connections with their relatives. However, the CHLA is no longer as strong and influential in the Chinese community as it was in the 1930s and 1940s, as its members aged and passed away and the young generation moved to other occupations and professions.

Chinese Herbal Medicine

The Chinese often refer to themselves as descendants of Emperor Yan and Emperor Huang. Yan was actually Shen Nong, the legendary emperor who tasted

all herbs and created herb pharmacology. Huang authored a classical internal medicine text called *Huang di nei jing* (*The Inner Canon of Huangdi* or *Yellow Emperor's Inner Canon*). Through centuries of empirical experiments, and historically influenced by Indian, Arabic, Persian, and Tibetan medical traditions, Chinese medicine developed into a systematic body of medical knowledge with complex theories and such specializations as pharmacology, pulsology, acupuncture, and moxibustion. Diagnostic methods included visual observation, inquiries into case histories, assessing auditory symptoms, and taking the pulse. Chinese herbal medicine is a comprehensive and integrated medical system with complicated theories and rich and long empirical experience. Medicine was also an important component of Chinese national culture as classical Chinese scholarship included medical textbooks that many scholars and government officials were familiar with. In fact, when some scholars failed the civil service examinations, they pursued medicine for their profession. As a popular Chinese saying goes, "If one can not be a fine minister, one should be a good doctor." Meanwhile, herbs and other medical ingredients came from different geographic locations and ecological environments. Many famous traditional Chinese doctors established their reputation by being familiar with the local herbal and other medical ingredients and treating local patients. Chinese medicine kept enriching itself from regional cultures in China. The medical profession was also a free occupation market where all kinds of doctors, healers, therapists, or practitioners coexisted.

In the pioneer days of the mid-nineteenth century, Chinese stores supplied their immigrant patrons with not only food and clothing but also herbal medicine and other health care items. Among the 88 San Francisco Chinese businesses listed in the business directory in 1856, 15 were pharmacies and 5 were herbal doctors. This number of herbal businesses was secondary only to that of grocery stores numbered at 38. Professional herbalists were also among the earliest Chinese immigrants to arrive in the 1840s and 1850s. Fiddletown in Amador County, California has preserved to this day the old Chew Kee Herb Shop established by pioneer immigrant Fung Jong Yee in 1851. This business remained in operation for 53 years.

During the Gold Rush, about five to ten thousand Chinese miners lived in Fiddletown, the second largest Chinese settlement in America at that time.

The existence of numerous herb shops or general stores that sold herbs indicates that many Chinese immigrants possessed some basic medical knowledge. Many of them knew what herbs or herbal formulations they might need for certain minor diseases or injuries. If they needed to consult a physician for a more serious symptom, they would see one; otherwise, they just purchased the herbs they thought they needed. In his observation of a rural village in Guangdong Province in the early 1920s, American missionary doctor Daniel Kulp noted that gathering medicinal herbs was an occupation based upon the needs of the home. "People regularly scour the nooks and crannies of the hills and mountains in search of the wild plants reputed to possess curative properties." He observed that even though there was a doctor in the village, "most curative effort is exercised by the housewives themselves. Whenever the opportunity offers, the women go out into the fields and on the hills to collect medicinal herbs with which they manufacture salves and medicines."

Like other Chinese retail services, an herb shop in the early days was a transplanted business that retained the style of operation in China. It sold formulated medicines and various herbs as well as hired a physician to diagnose symptoms through feeling pulses and prescribing herbal remedies. As in China, some stores hung a dried calabash over the counter to signify the availability of medical service. Patients could easily communicate with the physicians about their symptoms and purchase medicinal herbs or other curative items for minor diseases and injuries. Herbal tea or other healing methods were familiar treatments that have been used by the Chinese for several thousand years. In the Gold Rush days, Chinese immigrants realized that life in America was rough, mobile, and sometimes dangerous. Western medical care was not only inadequate but also less effective than herbal medicine in treating certain symptoms. As medical care was an important need among Chinese immigrants, herb stores existed not only in San Francisco's Chinatown but also in many Chinese communities in remote mining areas. According to Liu Pei Chi, every

Chinese community had at least one or sometimes three to four herb stores, each of which had a physician to diagnose the clients' ailments and to provide therapy. As Chinese immigrants called themselves "Tang people," they referred to the physicians as "Tang doctors" and those seeing non-Chinese patients as "Tang Fan" doctors. In Sacramento, according to the *City Daily Union* of January 11, 1873, there were six drug stores and seven herbal physicians.

Herbal medicine is a unique profession in the Chinese American experience. After racist social movements forced most of the Chinese into menial and service occupations that white people were unwilling to pursue, the Chinese typically became laundrymen or cooks. Ironing or cooking became trademarks of Chinese ethnicity though these skills developed in the United States. Herbal medicine, however, was a true ethnic skill as it was a practice brought from China. As the herbal medical practice successfully survived the hostile racial environment, it became one of the rare instances in which the Chinese made their living with a true ethnic skill for a prolonged period of time in the United States. Chinese herbalists, especially the most established ones, gradually served more Caucasian than Chinese patients. Famous herbalists in California like Li Po Tai, Tan Fu-yuan, or Tom Leung were often fully booked for appointments. Many of their patients were middle- and upper-class European Americans. Some journal article at that time claimed that famous Chinese herbalists had more patrons than most of the Western physicians in California. Chinese herbalists advertised their service in mainstream newspapers, hired white interpreters and receptionists, and set up offices outside of Chinatown. They successfully broke into mainstream American medical market with an ethnic skill.

Chinese herbal medicine was not recognized by law in California, and the judicial records of the state showed that its practitioners had often been arrested and fined. The pioneer herbalist, Li Po Tai, was subjected to serious persecution during the early years of his practice. Fong Wan of Oakland, who was known as the "King of the Herbalists" in the San Francisco area with several thousand patrons from 1915 to mid-1930, said that a great campaign was conducted

against the Chinese herbalists from 1929 to 1932 and people from all walks of life were involved. For example, the postmaster sent herbal doctors fraudulent orders to entrap them and examined their mail searching for information that might incriminate them. Fong Wan was repeatedly sued by envious Western doctors and had to appear in both local and federal courts. A federal court indicted Fong Wan on 16 counts on July 29, 1931. Pharmacologists, postmasters, professors, chemists, and physicians were all brought to court to testify against him. But Fong Wan was eventually found not guilty. During his career, he won several dozens of court cases. In 1925, when an antiherb bill was introduced into the State Assembly, Fong Wan went to Sacramento and presented the arguments and facts that were instrumental in getting the bill withdrawn. Herbalist C. K. Ah-Fong of Idaho obtained his license as a physician/surgeon on February 21, 1901, after a series of appeals in the Idaho State Supreme Court. But he was probably the only herbalist in the United States who ever won such a victory. The Chinese herb business shrank rapidly in the late 1940s and early 1950s because the federal government banned Chinese imports following the establishment of the People's Republic of China in 1949. The Japanese invasion of China before and during World War II had disrupted the herbalists' businesses to a great extent. After Congress passed the Trading with the Enemy Economy Act in December 1950, thereby suspending the trade between the United States and China, many Chinese herbalists were forced to discontinue their businesses.

Chinese Immigrant Cemeteries

Chinese cemeteries and grave markers are silent monuments memorializing Chinese contributions to the growth of the western United States. Most Chinese immigrants were from southern China, and brought with them many traditional beliefs and rituals. These led to a singular transformation of the Western landscape, in that Chinese cemeteries are often located on the slope of a small hill, surrounded by higher and wider hills that seem to envelop the main site.

By their location on a sloping, encompassing hillside, Chinese cemeteries in the West follow a pattern common to cemeteries in southern China. This is a distinctive feature of the Chinese concept of geomancy, or *fengshui*, translated as "wind" and "water," a belief system in which balancing the components of spirituality and geography ensures good fortune. Whether or not actual *fengshui* applications can be demonstrated, very specific traditional concepts appear to be at work.

In central Idaho, on the remote Salmon River, the "River of No Return," the burial site of Charlie Bemis is one such example. Although he was Euro-American, his Chinese wife, Polly Bemis, undoubtedly selected his gravesite. She chose a slight rise in front of an enveloping hillside facing a creek flowing into a river, all significant *fengshui* characteristics. This suggests

that even common people were familiar with the basic principles of *fengshui*.

Where a distinctly separate Chinese cemetery exists, such as the one in Pierce, Idaho, it is possible to isolate certain common features; chief among these are empty graves. According to Chinese custom, Chinese immigrants, nearly all of whom planned to return to China after making their fortune in the West, made provision for the possibility of their death in a foreign land by arranging in advance for their remains to be returned to China. Accordingly, they paid a "death insurance" fee to cover the costs of exhuming their bodies, cleaning the bones, and shipping them to China for reburial in the home village. Exhumation pits are clearly visible in many Chinese cemeteries in the West.

Women often appear to have been excluded from the practice of removal. The emphasis on patrilineal descent and the lack of respect accorded women were contributing factors. This may mean that some Chinese cemeteries, considered empty through removal, are actually still holding female burials.

Graves of men and women interred permanently in Western cemeteries were marked in a variety of ways. Wooden markers tended to rot, so stones, concrete, and bricks were preferred. A gravestone in the Lewiston, Idaho, cemetery bears the name Jim Yeeott in English, as the Caucasian community knew him; the stone's Chinese characters give his actual surname, Ng.

In the inland Northwest, a "burner" is an unusual feature of many, but not all, Chinese cemeteries and Chinese sections of Euro-American cemeteries. This tall brick or masonry structure serves as a place for the ritualized burning of paper and cardboard facsimiles of money, clothing, jewelry, and other household objects. Burning passes them to the spirit realm for use by the deceased in the afterlife.

Chinese Immigrant Workers in Multiethnic Chicago

Existing stereotypes against Chinese immigrants often depict them either as mysterious enclave dwellers who have little contact with mainstream U.S. society, or as the assimilated "model minority" who reside in affluent American suburbs. Consequently, the daily life struggles of working-class Chinese immigrants who live in multiracial urban neighborhoods remain largely unknown to the general public. To unravel the complexity of contemporary Chinese immigrant experience, one needs to situate it within the larger context of the multiracial transformation of the urban United States. The Chicago story is important because of the city's history of racial segregation between black and white and its increasing popularity as a new destination for post-1965 immigrants. The term "Chinese immigrant workers" is used here to refer to Chinese immigrants with limited English language skills who are mainly working at low-skill, blue-collar service jobs at the extreme margins of the U.S. economy. This group deserves special attention because of their doubly marginalized status—as perpetual foreigners in the eyes of mainstream American society and as ignorant, childlike figures supposedly in need of constant guidance and discipline from their middle-class coethnics. Based on ethnographic research between 2003 and 2005, this piece examines how Chinese immigrant workers develop their knowledge about race through daily interactions with African Americans and Latino immigrants in multiracial Chicago.

The Chinese immigration to Chicago can be roughly divided into three analytical periods: the early sojourner period (1870–1943); the emergence and consolidation of a Chinese American community (1943–1965); and new immigration from Taiwan, mainland China, and Hong Kong (1965–present). Early Chinese immigrants came to Chicago to escape racial discrimination in California. The first Chinese community in

Chicago was established in the 1880s, located south of the downtown area on Clark and Van Buren streets. In the early 1900s, due to the sudden raise of rents by landlords, about half of the Chinese population was forced to move south to Cermak and Wentworth, which soon became the hub of Chinatown until today. Sociologist Paul Siu's monograph *The Chinese Laundryman: A Study of Social Isolation* remains one of the earliest ethnographic studies on Chinese immigrants in Chicago. Siu described the Chinese laundrymen he studied in the 1930s as sojourners who came to the Gold Mountain to make a fortune with the ultimate purpose of returning to China. Siu's research on interracial relations between Chinese laundrymen, white working-class women, and African American women demystifies the image of Chinatown as a racially homogeneous enclave that was totally cut off from the outside world.

Unlike earlier Chinese immigrants to the United States who were mainly from rural areas of Canton, post-1965 immigrants come from a variety of places of origin and social backgrounds. Although Canton continues to be a major source of Chinese immigration, new immigrants also hail from other parts of mainland China, Hong Kong, Taiwan, Southeast Asia, and South America. Many of them are from middle-class or lower-middle-class urban settings, and some even hold college degrees. Differing from their immigrant ancestors who were largely sojourners dreaming of returning to China with a big fortune, these new immigrants usually come with their families and with the determination to make the United States their permanent home. However, because the educational and social capital they brought from China cannot be readily converted to economic capital in the United States, a significant number of new immigrants have to initially settle in ethnic neighborhoods like Chinatown and to rely on the ethnic Chinese labor market for employment. Because affordable rentals in Chinatown are hard to find, most new immigrants end up in Bridgeport, a historically white working-class neighborhood southwest of Chinatown, where real estate prices are 20 to 30 percent lower.

Contrary to the Euro-American stereotype of Chinatown as a racially homogeneous urban enclave, Chicago's Chinatown throughout its history has been

a multiracial neighborhood. To the east and southeast, there are African Americans in Near South Side, Douglas and Grand Boulevard. To the west, there are Pilsen and Little Village, the two largest Mexican American communities in Chicago. The “core” of Chinatown, between Cermak and 24th Streets, used to be an Italian neighborhood. The expansion of Chinese populations to Bridgeport started in the 1980s, when several Chinese American developers started building townhouses heavily marketed toward Chinese immigrants. Although the arrival of Chinese immigrants revitalized Bridgeport’s real estate market, tensions between Chinese Americans and more established residents, mainly self-identified whites, also increased. Cases of interracial harassment and property damage are often reported with Chinese immigrants being the victims. Confronted with the changing economic and racial landscapes in a postindustrial metropolis, many new immigrants who settled in Chinatown and Bridgeport found themselves facing the double burden of limited social mobility in an ethnic economy and the daily necessity of navigating multiple color lines.

Bridgeport was, until recently, a white working-class neighborhood known for its history of resistance against housing desegregation and substantial anti-black racial violence. In 1997, a 13-year-old African American youth Lenard Clark was beaten into a coma by two white youths when biking in a park near Bridgeport. The two offenders later bragged to their friends that they had kept Bridgeport white. The expansion of Chinese population to Bridgeport was largely shaped by the multiracial power relations in the neighborhood. Specifically, Chinese Americans, most of whom are working-class immigrants from Hong Kong and Canton, were allowed to move in as a buffer group to prevent the integration of African Americans and to check the growing political power of Latinos. Because of Bridgeport’s history of white racial violence against blacks and its unique connection with Chicago machine politics (five of Chicago’s mayors hailed from Bridgeport), issues of race and racism have generally been considered taboo subjects in public conversations. Nevertheless, this research finds that Chinese immigrant workers are subjected to various and contradictory experiences

of racialization in Bridgeport: they are often racialized together with Latinos as “foreigners” who are taking over the nation; as people of color side by side with African Americans; and/or as the model minority in opposition to both Latinos and African Americans.

In today’s Bridgeport, the coexistence of old racist networks, ideologies, practices, and their rearticulation in new forms (such as multiculturalism and diversity) has posed great constraints on Chinese immigrant workers’ efforts to name racism in its particular form. However, instead of being merely victims of the U.S. racial structure, Chinese immigrant workers have developed an alternative knowledge system in navigating multiracial Chicago. To deal with interracial harassment on the street, many new immigrants have accumulated intimate knowledge of physical boundaries in a multiracial city environment and sophisticated strategies for survival. Besides the learning of street-wise knowledge, Chinese immigrant workers are also highly aware that English is the language of power in their encounters with mainstream U.S. society. Because of the many ways new immigrants are racialized as “foreign” and “non-English speaking,” they feel intimidated speaking English in public even though they have a certain command of the language. As a matter of fact, many Chinese immigrant workers adopt different demeanors in different social settings: although pretending to be ignorant and non-English speaking in face of white harassment, they can also be earnest learners who vigorously practice their English skills in an ESL class.

Within the Cantonese Chinese immigrant community, white privilege is recognized by the distinction between *lo fann gong* (white American job) and *tongyan gong* (Chinese job). For many new immigrants the term *lo fann gong* is rather vaguely defined as a job paid by white Americans—meaning white Americans being the boss, rather than a job held by white Americans. For example, the most desirable *lo fann gong* among Chinese immigrant workers is a job in one of those big hotels in downtown Chicago. Compared with the gloomy future of working in a Chinese restaurant, *lo fann gong* promises a more dignified lifestyle like other average Americans: stable employment with benefits, annual pay raise, and more leisure time

with the family. *Lo fann gong* is also held in higher prestige than *tongyan gong* (Chinese job) because it symbolizes one's entry into the "system,"—that is, the mainstream American labor market. Chinese immigrant workers' aspiration for *lo fann gong* reveals their keen perception of racial hierarchies in the U.S. labor market.

Because of the proximity of Chinatown to the Black Belt, African Americans have been playing a key role in Chinese immigrants' racial learning. Prior to their emigration many Chinese immigrants are already aware that blackness is a stigmatized racial identity in the United States. Once they arrive in Chicago, most immigrants' socialization in the ethnic Chinese community is geared toward viewing African Americans as dangerous. The sheer necessity to survive in a new urban environment and the internalization of existing racial stereotypes against blacks has kept many new Chinese immigrants socially distant from African Americans. First-generation Chinese Americans' negative attitudes toward African Americans can be attributed to multiple factors: language barrier, individual experiences of interracial conflicts, exposure to mainstream media's racist portrayal of African Americans, structural discriminations faced by both groups in American society, and mediating influence from ethnic organizations and informal personal networks. However, as Chinese immigrants stay longer in the United States, some of their knowledge of blacks also gets more nuanced. As they develop friendships with African Americans at the personal level, they begin to distinguish "good blacks" from "bad blacks." For those who encounter black immigrants in their work places, they begin to make distinctions between "black Americans" and "black immigrants."

Although Chinese immigrant workers define African Americans primarily by their skin color, they have a different view of Mexicans. In today's Bridgeport, Chinese and Mexicans are the two largest minority groups and they usually share common residential spaces in the neighborhood. Because the majority of both groups are from working-class background and are both racialized as foreigners to the U.S. nation-state, the two occupy similar structural positions in the U.S. economic hierarchy. Many Chinese immigrants find themselves working side by side with Mexican

immigrants in low-skill, blue-collar service occupations. Friendships developed at workplaces often become a primary source of building information networks between the two groups, which sometimes transcend language and racial barriers. For example, the favorite shopping place for many Chinese immigrants in Bridgeport is a Mexican grocery store, where free Chinese language newspapers are provided and Chinese fruits and vegetables are sold at a lower price than at ethnic Chinese stores.

It is important to note that the Chinese identification with Mexicans is often triangulated by their differentiation from African Americans. Compared to stereotypes of African Americans as lazy, welfare seeking, and prone to violence, Mexicans are generally praised for their hardworking ethics as a group. Most Chinese immigrant workers are aware of the racialization of Mexicans as "illegal" immigrants. However, because illegal immigration is also a problem within the Chinese community, most immigrant workers do not feel the stigmatization working side by side with Mexicans. The noncitizen status of both groups actually strengthens the bond between them as brave immigrants who overcome many obstacles to achieve their American Dream. Conversely, the U.S. citizenship of African Americans becomes a liability, a counter evidence for their ability to achieve success in their own country. Chinese immigrant workers' unwillingness to identify with African Americans betrays their lack of knowledge about structural discrimination faced by black Americans. It also reveals the limitation of the black and white binary in accounting for the Chinese experience. By claiming their shared identity with Mexicans as immigrants, Chinese workers are framing their identity formation within a transnational context and thus emphasizing their contingent relationship with the U.S. nation-state.

Chinese in the U.S. Civil War

The first study of Chinese in the U.S. Civil War, published in 1996, identified only 10 who served, and although researchers combing through muster rolls have since added dozens of names, and will undoubtedly find more, the number of Chinese will always be minuscule in the face of the three million who fought. As their profiles in this volume indicate, however, the range of their participation was broad and the challenges they faced as soldiers and veterans unique.

The challenges for researchers must also be noted: "Chinese sounding" names often turn out to be nationals of other countries; many of the Chinese who served had completely Western names; microfiche are frequently illegible; Census data is flawed. In this brief overview, individuals of mixed race are included in the count of Chinese, and their names and service data are drawn from the 1996 study and Terry Foenander's "Asians in the Civil War"; the 1860 Census data for Chinese is from Him Mark Lai's statistical breakdown by state.

At the start of the fighting in 1861, scarcely 200 Chinese resided east of the Mississippi where the war was primarily waged. So, discounting the five who enlisted in California, the current total of 58 Chinese servicemen means the level of combatants in proportion to the population was substantial—and these figures do not take into account the percentage of the Chinese population that was male and of age for military service.

Because the smallest number of Chinese resided in the South, it stands to reason far fewer fought for the Confederacy than the Union. Even fewer seemed to have been committed to the Confederate cause. Certainly the Bunker cousins in the Virginia cavalry, coming from slaveholding families, were. But Cao Zishi, underage and in the nebulous position of student, apprentice, and servant, could not have chosen freely when accompanying his master into the cavalry in Tennessee.

Some Chinese had no interest in fighting for either the Confederacy or the Union. John Fouenty, conscripted in Savannah, Georgia, ran away to

Union-held St. Augustine but did not join the Union cause. Having been captured from his native Hong Kong for the notorious “coolie” trade, he had survived a four-year labor contract in Cuba and been homeward bound when forced to disembark on the American continent and then to don Confederate gray; once within Union lines, Fouenty resumed his broken journey home to China.

A strong case can be made that another runaway, Thomas Sylvanus, was devoted to the Union because he reenlisted twice after a battle-related disability discharge. Hong Neok Woo, in the Pennsylvania militia, is on record as supporting the North because he opposed slavery. Edward Day Cohota, like many peers in the general population, enlisted simply because he did not want to be left behind by friends when they went soldiering.

The range of choices and motivations for service among the Chinese reflects those of other native and foreign-born males. Desertions likewise occurred, but the reasons prompting the handful by Chinese have yet to be uncovered. The small cluster of desertions from the Second Louisiana Infantry points to a problem within the regiment. Possibly James Johnson, who had been a sailor before joining the 18th New York Cavalry, realized in the few months between his enlistment in New York and desertion in New Orleans that he preferred the sea.

American cargo vessels had long included Chinese on crews, and most of the Chinese veterans identified to date served in the Union navy, which was open to all races, and where they held similar positions: cabin boys, stewards, cooks, and landsmen. Because the navy did not maintain personnel files for enlisted men until 1885, constructing profiles of Chinese who served at sea and verifying their claims is virtually impossible. According to newspaper reports, some were involved in combat: John Akomb, steward on a gunboat, was twice wounded, once seriously in the chest; the heel of John Earl—a cabin boy on Admiral Farragut’s flagship, the *Hartford*—was smashed by solid shot in Mobile Bay; and William Hang, serving on the same vessel as a landsman, handed out powder during the battle.

Unlike the navy, the Union army initially excluded “colored” volunteers; then African Americans were

allowed to fight in segregated “colored” regiments officered by whites; and it is here that the unique position of Chinese in America’s racial landscape is most evident. There were only three categories in the 1860 Census—white, black, or mulatto—and how a Chinese was identified seemed to depend on the enumerator, economics, and geography. In North Carolina, the slaveholding Bunker family was—from the two Chinese fathers and two white mothers to their mixed race children—considered white. Also marked white was Antonio Dardelle, a servant in Connecticut. But in Maryland, a census enumerator expressed his confusion over the appropriate designation for servant Thomas Sylvanus by making something akin to an exclamation mark.

Similarly stumped was a Confederate general over a captured Union soldier, John Tomney, which may account for the Confederate cavalry and infantry’s acceptance of Chinese and mixed-race men to fight alongside whites. At least two Chinese served in the Union’s Colored Troops, whether from personal preference or after being rejected by white regiments cannot be determined. But Yale graduate Yung Wing *was* rejected when he offered his services in Washington, D.C., in 1864, perhaps because he expected to be commissioned as an officer rather than serving as a private.

Period magazines were rife with negative images of Chinese, and the widely used school text *Peter Parley’s Universal History* proclaimed Chinese as rat-and-dog-eating liars addicted to cheating. Chinese displayed in tours sponsored by missionaries or P.T. Barnum projected more positive yet no less stereotypic images. Given the scarcity of Chinese in the East, though, most people did not personally encounter any except in New York City’s lower wards where an estimated concentration of about 70 worked as peddlers, operated boarding houses and small businesses.

That Chinese won acceptance, even admiration and respect in white regiments, with three earning promotion to corporal, can be attributed to the nature of a soldier’s small, tight-knit community where men depended on each other for survival, not just on battlefields, but on long, hard marches, when felled by sickness, or as prisoners of war. Veterans reluctant to surrender this camaraderie sought to preserve it

through regimental reunions and formation of a fraternal organization, the Grand Army of the Republic, and Chinese actively participated in both. Invariably, the anomaly of their service was commented upon, sometimes by the Chinese veteran himself for whom it seemed a point of pride.

Among the veterans, only one has been identified as native born: James Earl, the California-born son of a Mexican mother and Chinese father, who ran away to sea as a boy, attended school in Salem, Massachusetts, and served in the navy 1863–1870. But foreign-born Chinese veterans, having fought for the United States of America, sought to become its naturalized citizens. Congress had promised any honorably discharged foreign-born veteran citizenship upon petition. The 1790 Naturalization Law restricted naturalization to whites, however, and the Fourteenth Amendment, by which African Americans gained citizenship, did not apply to Chinese; then Congress passed the Exclusion Act in 1882 explicitly forbidding their naturalization. Yet these laws were applied so inconsistently that Hong Neok Woo was naturalized in Lancaster, Pennsylvania before the war, Thomas Sylvanus shortly after, Antonio Dardelle despite Exclusion, but Edward Day Cohota denied, and William Hang, a Navy veteran, thoroughly ensnared in the contradictions.

Granted citizenship in New York on October 6, 1892, Hang voted until August 17, 1904, when he was arrested when exercising his franchise. Producing his naturalization papers, Hang was then subjected to a tirade by Joel M. Marx, assistant United States attorney, who accused the judge issuing the papers of inexcusable ignorance. Hang fought the ruling to no avail: On October 21, 1908, New York's Supreme Court vacated and set aside his citizenship.

Thus Chinese veterans, however acculturated in language, religion, dress, and cultural practices, were relegated to permanent outsider status whereas European veterans found their service and citizenship accelerated their complete assimilation. For European veterans, then, their ethnicity could be “just one aspect of their character, not the burning core of their very being” (*Melting Pot Soldiers*). Chinese veterans, their ethnicity their sole definition by law, enjoyed no such luxury. And, after passage of the 1892 Geary Act,

which extended exclusion and required all Chinese to carry identification proving their legal entry, Joseph Pierce changed his identity to Japanese; his children and those of Antonio Dardelle passed as white.

So powerful is the legacy of exclusion that despite its repeal in 1943, Chinese in America continue to be marginalized in the twenty-first century: Rep. Mike Honda, seeking passage of a resolution honoring Asian American and Pacific Islander soldiers who fought in the U.S. Civil War, found himself in an uphill battle; staying the course for five long years, he finally succeeded on July 30, 2008.

Chinese Language Schools in the United States

Chinese language schools have been an integral part of the organizational structure of the Chinese diaspora

worldwide, often referred to as “the third pillar” with the other two pillars being ethnic organizations and the ethnic language media. In the United States, Chinese language schools date back to the mid-nineteenth century. Just like other ethnic language schools in the immigrant German, Scandinavian, Jewish, and Japanese communities in their early years of development, Chinese language schools in much of the pre–World War II era aimed to preserve language and cultural heritage in the second and succeeding generations. Today, they have evolved to a much broader range of functions beyond language and culture. Reanalyzing the data from prior studies and from my own field observations and interviews, I address two questions in this essay: Under what historical conditions have Chinese language schools evolved and developed? What effects do Chinese language schools have on the second and later generations?

As well documented in the history of Chinese immigration to the United States, Chinese immigrants initially came to this country to work to support their families left behind in China. In their search of a sojourner’s dream—to make money and then return home with “gold and glory”—they helped develop the American West, building the most difficult part of the transcontinental railroad west of the Rockies, but ended up being targets of racism. Poor economic conditions in the late 1870s exacerbated anti-Chinese agitation, leading to the passage of the Chinese Exclusion Act in 1882, which lasted until 1943. Consequently, immigrant Chinese built Chinatowns and reorganized their sojourning lives within these socially isolated enclaves. Because of restricted immigration, there were few women and children in old Chinatowns. Since the early 1930s, however, the number of children had become increasingly visible among the aging bachelors. Like other racial minority children, the children of Chinese immigrants were not permitted to attend public schools with white children and, as they grew up, few were able to find jobs in the mainstream economy commensurate with their levels of education.

It was against this historical backdrop that Chinese language schools came into existence. The first Chinese School appeared in San Francisco’s Chinatown in 1884 for the purpose of providing for a basic education for immigrant young men and the children

of immigrants to keep their culture, custom, heritage, and language alive in the United States, in preparation of Chinese young people eventually returning to China with their families. Early Chinese language schools in San Francisco’s Chinatown, for example, were mostly private, financed primarily by tuition (\$4 to \$5 a month) and donations from churches, temples, family associations, and Chinese businesses. Each school was governed by a board consisting of mostly elite members from ethnic organizations and businesses in Chinatown. Schools typically had one or two part-time teachers, instruction was in Cantonese, and classes were held daily for three to four hours in the evenings and Saturday mornings, usually in the basement of a teacher’s home or in a room inside a family association building. Prior to World War II, there were about a dozen Chinese language schools in San Francisco’s Chinatown serving nearly 2,000 K-12 children, four in Los Angeles’s Chinatown, and at least one in New York, San Diego, Chicago, Minneapolis, Washington D.C., and New Orleans.

There were also quasi-public Chinese language schools financed directly by the Chinese government. The first of such schools, called *Da Qing Shu Yuan*, was established at the turn of the twentieth century in San Francisco’s Chinatown. Starting with two classes held daily from 3 p.m. to 9 p.m. during the week and 9 a.m. to 9 p.m. on Saturdays, *Da Qing Shu Yuan* had an initial enrollment of about 60 students under the supervision of two teachers. Tuition was only 50 cents a month and the curriculum was formal and centered on Chinese classics—*The Great Learning*, *The Doctrine of the Mean*, *The Analects of Confucius*, and *Mencius*—which were essential texts used to prepare students for the primary civil service exams in China. Quasi public Chinese language schools were later established in other major Chinatowns under the management of the Chinese Consolidated Benevolent Association (CCBA), the quasi-government of Chinatown. In recent years, these quasi public Chinese language schools have evolved into multifunctional cultural centers in Chinatowns with significant financial support from both governments in China and Taiwan.

Chinatown’s children attended segregated public schools during regular school hours on weekdays and

spent many more hours after school, on weekends, and during summer vacations learning Chinese in ethnic language schools. Immigrant parents believed that proficiency in the Chinese language was practical for their children because their children's future options were limited to either returning to China or finding jobs in Chinatowns. Parents also believed that a strong Chinese identity and ethnic pride instilled in the children through Chinese cultural and moral teachings were necessary to help the children cope with racism and discrimination. Like other ethnic organizations in Chinatown, earlier Chinese language schools had very little contact with mainstream institutions, and education in ethnic language schools was supplementary but *not* complementary to public schooling.

The repeal of the Chinese Exclusion Act in 1943 marked a new era for Chinese Americans. For the first time in history, immigrant Chinese and their offspring were legally allowed and encouraged to participate in American society. Shortly afterward, the founding of the People's Republic of China in 1949 and subsequent political and economic sanctions of the West against China further shattered the sojourners' dreams of returning. These broader social and political changes in the United States and abroad had a powerful impact on the immigrant Chinese community, shifting its orientation from sojourning to putting down roots and reinforcing its commitment to socioeconomic integration. Between World War II and the 1960s, Chinese language schools experienced a period of decline because of the pressure of assimilation. The children, especially adolescents, started to question the necessity of Chinese schooling and the practical value of Chinese language proficiency. Public schools were behind the children and indirectly encouraged them to break away from the ethnic language schools under the rationale that such ethnic education would place too much burden on their young minds and serve to confuse and ultimately impede their social and intellectual developments. Other factors that caused Chinese language schools to decline included the aging of the teachers, who were mostly non-English speaking and slow to adjust to changes, the rigidity of the curriculum and teaching methods, residential dispersion, and the opening of various educational and vocational opportunities outside Chinatown. Thus,

going to Chinese school became a burden on the child and a source of parent-child conflict. Yet, the children continued to attend Chinese language schools because their parents made them, but most dropped out by the sixth grade.

Contemporary Chinese immigration since the 1960s has led to even more dramatic changes in the immigrant Chinese community. Between 1960 and 2010, more than 2 million immigrants were admitted as permanent residents from China, Hong Kong, and Taiwan. These new arrivals are no longer only the poor, uneducated peasants from traditional sending villages in Guangdong. Instead, they have come from major cities all over China as well as from the global Chinese diaspora. Many are cosmopolitan urbanites, college-educated professionals, skilled workers, and independent entrepreneurs. Upon arrival in the United States, many new immigrants have managed to bypass Chinatowns to settle directly in more affluent outer areas or suburbs in traditional gateway cities as well as in new multiethnic, immigrant-dominant suburbs, or ethnoburbs.

The past four decades have witnessed a revival and rapid growth of Chinese schools in both Chinatowns and Chinese ethnoburbs, along with the development of a range of ethnic institutions oriented toward children's education. The National Council of Associations of Chinese Language Schools (NCACLS) in 1994 counted a total of 643 registered Chinese language schools in the United States (189 in California) with 5,536 teachers serving 82,675 K-12 students. New Chinese language schools in ethnoburbs were first started by educated Taiwanese immigrants in the 1970s. More suburban Chinese schools have been developed later by international students and well-educated professional immigrants from mainland China, especially since the 1990s. For example, the majority of suburban Chinese schools affiliated with the Southern California United Chinese School Association were initially established by Taiwanese immigrants in the mid- or late 1970s. The Hua Xia Chinese School was established as a Saturday school in a northern New Jersey suburb in the early 1990s by immigrant Chinese from the mainland and has now expanded into 14 branch campuses in the suburbs along the northeastern seaboard from Connecticut to

Pennsylvania, serving more than 5,000 students and shifting its admission to “everyone, regardless of his or her gender, race, color of skin, religion, nationality and blood ties.” Similarly, the Hope Chinese School started as a small weekend Saturday school in a Washington D.C. suburb for professional Chinese immigrant families from mainland China in the early 1990s and has now grown into five campuses in suburban towns in Maryland and Virginia, enrolling more than 2,000 students. Parallel to the revival and rapid growth of Chinese language schools is the rise of a whole range of child- and youth-oriented private institutions including after-school tutoring (also called *buxiban* in Mandarin), college preparation, arts and sports, as well as daycare and preschools.

Traditional Chinese language schools have been under pressure to change. For example, the New York Chinese School run by the CCBA is perhaps the largest child- and youth-oriented organization in inner-city Chinatowns. The school annually (not including summers) enrolls about 4,000 children, from preschool to 12th grade, in their 137 Chinese language classes and over 10 specialty classes (e.g., band, choir, piano, cello, violin, T'ai chi, ikebana, dancing, and Chinese painting). The Chinese language classes run from 3:00 p.m. to 6:30 p.m. daily after regular school hours. Students usually spend one hour on regular school homework and two hours on Chinese language or other selected specialties. The school also has English classes for immigrant youths and adult immigrant workers.

Present-day Chinese language schools, both in and out of Chinatown, are distinctive compared to those prior to World War II. First, they do not aim solely at language instruction; in fact, language teaching no longer takes priority, and Chinese classics have been almost completely taken out of the curriculum. The ultimate goal is to assist immigrant families in ensuring that their children excel in American public schools, get into prestigious colleges and universities, and eventually attain well-paying, high-status professions. Second, Chinese schools today are more flexible and diverse. In terms of forms, they range from regular weekday (3 p.m. to 6 p.m. daily after school), weekends (Saturday or Sunday half-day), summer (day schools and overseas camps), and spring or Christmas

breaks (day camps) sessions. In terms of curriculum, they offer language instruction along with a wide variety of academic enrichment and cultural programs as well as programs geared toward college admissions. Third, although most schools are funded by tuitions and fees, they are governed by a board consisting of parents, teachers, ethnic business owners, and community leaders, and rely heavily on parental voluntarism. Parents act as teacher aides, chauffeurs for pick-up or drop-off services, fundraising workers, and even janitors. Many Chinese schools have Parent Volunteer Associations (PVA) modeled after the Parent-Teacher Associations (PTA) in public schools. Parental involvement is direct and intense in Chinese schools, but similar involvement is minimal in public schools because of language and cultural barriers.

The effects of Chinese schools extend far beyond ethnic language instruction and after-school education for immigrant children. The spillover effects on children are quite significant. First, Chinese language schools and other relevant ethnic institutions offer an alternative social space where children can express and share their feelings of growing up in immigrant Chinese families. Second, Chinese schools provide unique opportunities for immigrant children to form a different set of peer group networks, giving them more leverage in negotiating parent-child relations at home. Third, Chinese schools function to nurture ethnic identity and pride that may be rejected by the children because of the pressure for assimilation, helping alleviate bicultural conflicts that run rampant in many immigrant families.

The spillover effects on parents are also evident. Chinese schools provide an important physical site where formerly unrelated immigrants (and parents) come to socialize and rebuild social ties. Chinese schools also serve as an intermediate ground between the immigrant home and American school, helping immigrant parents, especially those who do not speak English well, learn about the American educational system, and make the best of the system in serving their children without getting personally involved in formal schools and their PTAs. Furthermore, Chinese schools foster a sense of civic duty among immigrants who are criticized for their lack of civic participation. Parents not only volunteer their time and energy to

help out in Chinese schools but also take the initiative in organizing and participating in cultural and political events in the larger community.

Chinese Lion Dance in the United States

Chinese lion dance is an increasingly popular cultural practice that has continued to evolve in countries where Chinese diaspora have settled, including the United States. Lion dances can generally be categorized under Northern or Southern traditions, but both have come to symbolize power, majesty, and good fortune. The dance is performed at events such as weddings, grand openings, and Chinese New Year.

Northern Lion Dance

One of the origin tales of the Northern lion dance tells of the subjugation of Mongolian tribes by the Northern Wei Dynasty (386–534), and the Chinese emperor subsequently calling upon his new subjects to pay tribute through song and dance. The dance featured lion-like creatures made of wood and animal skins that were performed by Mongolian warriors. The emperor enjoyed the performance so much that he allowed the performers to return to their homeland and this lion dance subsequently spread in popularity across northern China.

Northern lions resemble Pekingese dogs and typically have gold-painted heads and shaggy yellow or orange fur with costumes that cover most of each performer's body. The use of red colors on the head, such

as a bow, is used to represent a male, and green for a female. The dances are regularly performed with one or two lions, but there are also performances with adult lions and several smaller child lions. There are usually two performers in the adult lion, and one in the child lion. With adult lion performances, there is usually a "warrior" character who leads the lions in their movements with a ball-sphere and does acrobatic choreography.

Similar to Southern lions, the Northern lions dance following the rhythms of cymbals, drums, and gongs. However, the Northern lions are more playful than the Southern lion and tend to focus on displays of kindness and agility. These displays often take place on apparatuses like three-tier platforms and balls. Northern lion dances are not performed as often in the United States, which can be partly attributed to the much larger numbers of southern Chinese immigrants to the Americas.

Southern Lion Dance

One of the origin tales of the Southern lion dance is that a village would be attacked by a beast called nian, which would consume much of their crops every harvest season. To combat this threat, the villagers created costumes and masks fashioned to resemble lions, but with fierce and grotesque faces and bodies larger than normal lions. Accompanied with loud sounds, the villagers would "play" the lions that scared away the nian. Over time, the lion dance was performed not only to scare away the nian, but also demons and other bad spirits, thus bringing good luck and prosperity.

Compared to Northern lions, Southern lions feature longer tails and larger heads with a variety of colors and patterns. The heads are usually made of paper-mache, bamboo and rattan, with the lion's sponsoring organization painted on the back of the head. Tails and pants are constructed with a mix of satin, nylon, and sequins, along with variations of natural and synthetic fur that also appear on the head. Common colors include gold, red, orange, black, and green.

The Southern lion is one of the most inclusive artifacts of Chinese cultures. The heads and dances draw direct references to Buddhism, Daoism (including the bagua or eight trigrams), the Yijing (I Ching), also

known as the Book of Changes (including Feng Shui), Beijing Opera, and the Chinese classic historical fiction, *Romance of the Three Kingdoms*. For example, most Southern lion designs emulate the heroes of *Three Kingdoms*: Liu Bei and his Five Tiger Generals (i.e., Guan Yu, Zhang Fei). Based on personalities derived from the novel, the lions symbolize themes like seniority, mourning, prosperity, and youth. The dance is often accompanied by a “Buddha” character with a fan who ushers the lions along.

Southern Chinese kung fu schools have long adapted the lion dance to practice footwork, develop stamina, and earn recognition and income for the school. During the Qing (Manchu) Dynasty when European nations and the United States colonized China, kung fu was largely banned for fear of rebellion. Indeed, many kung fu practitioners were revolutionaries, including those from southern Shaolin traditions like Cai Li Fo (Choy Lee Fut) and Hong Quan (Hung Kuen) with roots in the Guangdong (Canton) and Fujian (Fukien) provinces. Along with traveling performance shows on riverboats, lion dance allowed these kung fu schools to secretly practice their arts, raise funds, and communicate with one another through red envelopes, choreography, and other dance rituals. This history has been popularized worldwide through the Hong Kong cinema.

When southern Chinese began migrating to the United States en masse in the mid-1800s, they brought lion dance with them. Thus, Southern lion dance is often performed in areas with large Chinese communities like California, Hawaii, New York, and Texas. Over the past four decades, these communities have grown to include ethnic Chinese (i.e., Chaozhou or Chiu Chow, Kejia or Hakka) from Southeast Asian countries like Vietnam who have brought their own adaptations of the dance.

Other than kung fu schools, many family/village associations, cultural groups, and temples in the United States have lion troupes that perform at celebrations for their organization and local community. Sometimes these troupes are taught by kung fu masters from those organizations, and other times they are instructed by non-kung fu practitioners. Over the past two decades, there has also been a proliferation of troupes across colleges where there is a significant

Chinese or Southeast Asian presence. These troupes are often taught by students or alumni, and they perform for collegiate or activist-oriented events like culture nights, Asian Pacific American Heritage Month festivals, and political actions.

Given these variations in structure and pedagogy, there is great variation in the Southern Chinese lion dances performed in the United States. Historical differences between the Heshan and Foshan lions, such as drumming patterns and footwork, are often now blended together. One particularly heavy influence on lion dancing in the United States has been the hybrid styles (Northern, Heshan, and Foshan) of lion head design and choreography in Singapore and Malaysia. Utilizing shorter tails, lighter construction materials, and flashier colors and designs, this hybrid lion dance has been popularized by the annual Genting World Lion Dance Championship in Malaysia where teams perform highly stylized set routines on top of poles and wires. This high-flying style has a reduced emphasis on kung fu practices and has been likened to the more ballet-like modern Chinese wushu, as opposed to the more martial styles of traditional kung fu and lion dance.

Chinese Mining in America

Before the California gold rush, Chinese immigration to the United States was almost negligible, but soon, the Chinese came in numbers. During their first decade in the West, most Chinese worked in gold mining, about 75 percent of them by the early 1860s. Gold

Chinese miners stand next to a sluice box, Aubine Ravine, California, ca. 1852. (Fotosearch/Getty Images)

occurs in the form of placer or lode deposits. Lode deposits consist of gold still contained in the rock in which it formed. Most placer deposits consist of alluvial deposits that contain gold that has been freed from the rock by weathering and erosion. The majority of Chinese who worked as miners did so in placer mines. As yields declined, almost every placer region of note received its complement of Chinese, and they became, in fact, a ubiquitous feature of the mining West. By the 1870s they had spread to almost every major placer area. In the 1870s the Chinese represented over 25 percent of all miners, and in some individual states they accounted for one-half to almost two-thirds of all miners. As late as 1900, a few Chinese still patiently extracted gold from the gravels along some Western rivers using a pan, rocker, or sluice.

Not all Chinese mining operations consisted of small-scale placer operations, using the most elementary methods. As early as 1852 the Chinese engaged in river mining along the Yuba River. River mining,

which often represented large-scale, expensive undertakings, involved the use of dams, ditches, and flumes to divert streams partially or completely from their natural beds to enable the working of the streambed, usually using sluices. By the close of 1863, the Chinese controlled most of the river claims in California and continued to do so through the 1880s and 1890s. Moreover, many of the white companies still engaged in this form of mining employed Chinese to work their claims. The Chinese also engaged in river mining in British Columbia as early as the 1860s and 1870s, in Colorado and Oregon in the late 1870s, and in Washington in the 1880s.

In addition to river mining, the Chinese played an important role in another form of large-scale mining—hydraulicking. Hydraulicking or hydraulic mining utilized a jet of water issuing under high pressure from a nozzle to excavate and wash the gravel through sluices (wooden troughs) that caught the gold and disposed of the tailings. The Chinese involvement in

hydraulic took many forms. The tremendous supplies of water demanded by hydraulic mining required the construction of an elaborate system of reservoirs, flumes, canals, and ditches. Hydraulicking produced huge amounts of tailings, sometimes disposed of into adjacent canyons or valleys through the construction of bedrock tunnels. Great numbers of Chinese often worked in the construction of such projects. White mining companies sometimes employed Chinese laborers to carry out the basic unskilled labor of their hydraulic mines. Moreover, the Chinese operated hydraulic mines themselves, sometimes quite large ones utilizing the most up-to-date equipment and methods, and producing tens of thousands of dollars worth of gold annually. The Chinese, in fact, operated the largest, most important hydraulic mines in some mining localities.

For a number of reasons, the Chinese never became a major force in lode mining, either as mine operators or as laborers in Euro-American lode mines. Lode mining involved the use of tunnels, shafts, and other excavations to extract ore-bearing rock. The ore was then subjected to various milling processes to extract the gold, silver, and other metals. Because the majority of Chinese were sojourners, they typically focused on deposits exploitable with simple methods that afforded quick returns and short-time profits. Lode mining required more technological and geological knowledge, more skilled labor, and greater capital investment than traditional forms of placer mining. Furthermore, the harassment and outrages perpetuated on the Chinese made the permanency required of lode mining a luxury that they often could not afford. Finally, as lode miners, the Chinese represented a real economic threat to Cornish, Irish, Italian, and miners of other nationalities. Within a few years of their founding, the hardrock miners' unions were infected with the anti-Chinese fever that had affected the Far West for nearly two decades. When Chinese sought jobs in and around the deep mines as miners or laborers, they were usually turned away by bigoted superintendents who felt they could not do the work, or by bigoted miners who refused to work with them. Thus, they were generally denied the opportunity to work their way up from unskilled surface workers,

to cartmen, to muckers, and finally to skilled miners. Euro-American miners were determined to deny the Chinese a place in hardrock mining. Although they generally managed to exclude the Chinese from lode mining on a large scale, the Chinese did engage in this form of mining for gold and silver, first in California in the mid-1850s and in the 1870s in Nevada, Oregon, Idaho, and Colorado. Although Chinese involvement in lode mining usually took the form of laborers in Euro-American mines or mills, they sometimes worked their own mines or for Chinese lode-mining companies. Although the Chinese participated in lode mining of gold and silver only sporadically and to a limited degree, another form of hardrock mining, coal mining, did employ significant numbers of Chinese in parts of the Far West. The Chinese were employed in the coal mines of Vancouver Island, British Columbia as early as the 1860s. In the nineteenth century, Chinese worked in coal mines at Almy and Rock Springs, Wyoming (1870s through 1890s) near Shasta and Carbondale, California and Tenino, Washington (1870s), near Como, Colorado (late 1870s and early 1880s), and near Park City and Pleasant Valley, Utah and Black Diamond, Coal Creek, and Wilkinson, Washington (1870s and 1880s), and probably elsewhere in the western United States.

In one form of lode or hardrock mining, the mining of quicksilver (mercury), the Chinese played a significant role and in some instances dominated the industry. In fact, the *Independent Calistogan's* (May 18, 1881) editor characterized the Chinese as almost indispensable in a quicksilver mine. During the nineteenth century the mining of quicksilver was restricted to a relatively few locales. The most important were in the Coast ranges of California, and Chinese worked in the mines here from the 1870s through the 1890s.

In parts of the West, the Chinese played a significant role in borax mining, and they probably first began working them sometime in the 1860s. In 1867, most of the 70-some miners at Borax Lake, near Clear Lake, Lake County, California consisted of Chinese workers. Subsequently, Chinese mined borax near Coso and Clear Lake, California; Columbus, Nevada; and in Death Valley, California. Besides the involvement in mining

gold, silver, quicksilver, coal, and borax, the Chinese occasionally participated in the mining of antimony, copper, sulfur, and lead.

The Chinese undeniably made substantial contributions toward the economic development of the Far West. “Despite the dual handicap of having to overcome a formidable language barrier and being frequently subject to intense prejudice, these immigrants soon put their stamp on almost every sector of the region’s emerging economy” (Pastron 1989, 50). In many parts of the region, this economy initially depended largely on mining and activities that supported it. Between 1850 and 1856, Chinese paid American shipping companies \$2,329,580 for passage to California and \$22,555 in hospital taxes to the state of California. For steamboat transportation into the interior, the Chinese expended a million dollars a year. Their rent for housing and storage averaged over \$230,000 a year. The amount of gold produced by the Chinese will never be known and the meager statistics available preclude even an educated guess. During the period from 1848 to 1883, however, California produced \$1.2 billion or two-thirds of the entire U.S. gold production. Because the Chinese accounted for a large percentage of the mining population of the state during that period, they undoubtedly accounted for a considerable part of that production. Most of their gold passed into the hands of Chinese merchants and a good part of it went on to China. Contrary to the prevailing opinion of the day, however, the Chinese did not send all of their gold to China, and they played an important role in the economic development of many areas.

The Chinese provided an inexpensive source of dependable labor and built hundreds of miles of ditches and flumes, not only for their own operations, but for white mining companies as well. They often handled the hardest and most dangerous work in the hydraulic, quicksilver, and borax mines. They made significant purchases of mining equipment, mining claims, and water. In the mid-1850s, for example, the Chinese expended \$2,400,000 for mining claims, implements, and water in California. This amount, when added to their purchases of clothing, boots, shoes, food, and so on, averaged \$10,080,000 annually. In 1862, Chinese miners bought \$2,190,000 worth of water and \$1,370,000 worth of claims.

The Chinese excelled in saving gold, especially fine gold, under difficult conditions. Most often they complemented rather than competed with white miners. Competition between white and Chinese miners was generally in terms of hired labor and was probably more implied than real. Many times the movement of independent Chinese miners into a mining district was encouraged. As the rich, surface placers declined and the original miners moved on, the Chinese almost without fail replaced them. The Chinese, thus, continued gold production in areas where it would have otherwise ceased. The money that the Chinese paid for claims helped finance the discovery and development of other claims including lode deposits and other industries and businesses. Yu (1991, 278) concluded that the Chinese miners served, in a large degree, to bridge the gap between early placer mining and the large-scale, base metal mining in Idaho. They played a similar role in other parts of the West.

The Chinese paid their share of taxes—miner’s taxes, property taxes, poll taxes, and other assessments. In California, the Foreign Miner’s Tax, \$4.00 a month in 1853, levied largely on the Chinese, was the largest single source of state revenue. The (Coloma) *Argus*’s editor in 1855 pointed out that the mining taxes paid by the Chinese not only lessened the taxation of the county’s other inhabitants, but added materially to the state’s revenue and benefited trade and commerce in general. Almost all this revenue was derived from “ground so poor as to offer little or no attraction to miners of other nations.” By 1870, the Chinese had paid \$5,000,000 or 85 percent of the total Foreign Miners Tax collected in California. The Chinese paid similar taxes for the privilege to mine in other parts of the West.

In terms of population distribution, the Chinese brought about a new concentration of miners in areas abandoned by whites. In effect, the Chinese slowed population loss by maintaining settlement in areas that otherwise would have had few, if any, people. As a result, their mining and other economic activities, such as pack trains, vegetable gardens, and merchandise stores, helped sustain the vitality and/or existence of some mining towns for decades. Despite period claims to the contrary, their purchasing power often helped Euro-American merchants thrive. The editor of the

Northern Californian (February 2, 1856) at Oroville wrote, "For two years past, a very large portion of the gold taken from the mines has been the product of Chinese labor, and the traders in mining localities can attest that a very small portion of this has ever been carried out of the country." Indeed, he claimed, "Chinese labor has literally kept alive the trade of most of the mining towns during the past year."

The supply needs of the Chinese meant business for many white packing and freighting companies throughout the mining West. In 1876, for example, G. W. Samples, a freighter in Idaho's Boise Basin brought 220,000 pounds of "China goods" into the basin. The Chinese also operated their own pack trains that carried supplies for both Chinese and non-Chinese stores and residents and played an important part in the supply network of many mining communities. Especially after most white miners left, Chinese pack trains provided the remaining population with the food and other supplies that they needed.

Often merely dismissed as "sojourners" and marginal participants in the history of the Far West, in reality the Chinese proved instrumental in the development of many parts of the region and helped sustain the economy of many mining districts after the flush production period. Undoubtedly the tens of thousands of Chinese miners who lived, labored, and died in the Far West between 1848 and 1900 influenced the region's economic development.

Chinese New Year Parade

The Chinese New Year celebration has grown significantly since Chinese immigration to the United States in the mid-nineteenth century. Shifting from a small private festivity to a big public activity, this event provides us a pivotal window on the development of the Chinese American community and its relation with the dominant society and the ancestral country.

When Chinese immigrants migrated to the United States, they brought the Chinese New Year with them. This old war tradition served as a linkage for Chinese immigrants to connect with their home country. It also created an opportunity for them to forge a sense of community among themselves in the new, and often hostile, host society. The celebration was quite modest in the beginning. Chinese stores were closed for the festivity. Chinese immigrants cleaned their dwellings and decorated them with banners and lanterns. They also paid debts and shot firecrackers to scare away evil spirits, often producing tensions with the dominant society because of the noise. Wearing their new or best clothes, "bachelors" visited each other or went to the homes of those who had families in this country to enjoy feasts. The Chinese also paid tribute to the well-decorated Chinese temples so as to get blessings in the incoming year. At night, scores of them gathered and gambled. For those who were in San Francisco or New York City, some of them spent the holiday at Chinese theatres.

Ethnic organizations hosted holiday celebrations for their members. As early as 1851, Chinese immigrants formed institutions such as family (surname) and district (*huiguan*) associations and tongs (fraternal organizations) for social welfare and protecting members' rights. Among them, the Chinese Consolidated Benevolent Association (CCBA) was the largest. Community groups hosted elaborate holiday dinners for their members: the banquets in some big organizations continued for several nights. The holiday also attracted the Chinese from the outskirts who flocked back to the ethnic enclave for the celebration.

When Chinese immigrants grew more populous in one area, they moved their private celebrations to the streets. Lion and dragon dances, in which performers wearing a lion or dragon costume mimic the animal's movements, pranced through Chinatown streets, followed by Chinese musicians playing cymbals and gongs, to drive away evil spirits. The procession stopped before many houses and stores to gather heads of lettuce, usually containing red envelopes wrapped with money. The money gathered was donated to Chinese charities or schools.

In those days, the ethnic community rarely organized a large parade for the holiday. Usually each big institution had its own processions. For example, On Leong Tong and Hip Sing Tong, the two largest tongs, held separate dragon or lion dances in New York City Chinatown. Because of the rivalry between the two, each procession went through different parts of the ethnic enclave. At night, each hosted a banquet for its members. Some large organizations had more than one parade. The On Leong Tong staged one on New Year's Eve and another one the next day, with a route starting from its clubhouse at 5 Mott Street and ending at its headquarters at 41 Mott Street. Through demonstrating their ability to stage large-scale celebrations, influential groups such as the On Leong Tong used the occasion to showcase their power in the community.

The celebration also reveals the transnational connection and demographic changes of the Chinese American community. When the Republic of China overthrew the Qing government in 1911, it eliminated many old traditions including the Chinese New Year. Ethnic leaders urged Chinese immigrants to follow the new practice and eliminate the holiday celebration. Consequently, fewer people observed the holiday. Nevertheless, many immigrants continued to retain the tradition. The Los Angeles Chinatown even welcomed the holiday with a dragon dance. Another force that threatened the festivity was the acculturation of the ethnic community. The second generation came of age in the 1920s. Few honored the holiday as religiously as their parents did.

Although the younger Chinese generation shied away from the traditional practice, the dominant society was attracted to the exotic ritual. In fact, non-

Chinese had been quite intrigued about the Chinese New Year celebration because Chinese immigrants transplanted it to this country. White visitors frequented Chinatowns or Chinese settlements during the festival period either as visitors or spectators. Major newspapers such as the *New York Times*, *Los Angeles Times*, and *San Francisco Chronicle* covered the celebrations frequently, if not annually. The reportage often discloses relations between the ethnic community and the larger society. It treated ethnic enclaves as an exotic place and emphasized the foreignness of the tradition.

The curiosity of the general public over the ethnic celebration enabled it to become a means for community organizations to generate funds. Because discrimination prevented Chinese Americans from receiving public assistance, they often relied on ethnic institutions to weather through recession. To raise money during economic downturns in the 1920s and 1930s, community groups staged large-scale Chinese New Year parades to attract spectators. For example, in 1927 St. Mary's Chinese School in San Francisco organized the "Feast of Lanterns" to raise money for the school. The Lantern festival took place two weeks after the Chinese New Year and marked the end of the holiday celebration. The program showcased a beauty contest, a cabaret, stage performances, and a parade. The parade was much larger than it had been in previous years, including not only community groups but also mainstream organizations for the first time. Veterans, military and ethnic school bands and drill corps, Catholic and community marching teams, and community organization cars and floats crowded the parade route. The procession went beyond the ethnic enclave: it started on a downtown street before entering Chinatown. The event effectively drew numerous spectators.

The success of the event possibly inspired the business community to follow suit. San Francisco's Chinese Chamber of Commerce, a merchant's organization to protect and promote business interests, designed similar activities to lure visitors to Chinatown. In 1931 it organized a Chinese New Year festival, featuring lion dances, concerts, and dramas. To persuade the general public that Chinatown was a normalized family place, the event showcased Chinese

American women. Several of them dressed up as “Chinese maids” and served biscuits and tea to guests. The 1936 celebration in New York City Chinatown attracted crowds from nearby Bowery residents, school children, and spectators from uptown, including 100 students and faculty from Teachers College, Columbia University. The presence of school children and middle-class spectators indicates the successful transformation of Chinatown from a red-light district to a tourist thoroughfare. Since the last three decades of the nineteenth century, Chinatowns across the United States lured the patronage of working-class white males to brothels, opium dens, and gambling joints, often enticing disorderly kinds to the area. To develop the tourist industry and attract middle-class patrons, Chinatown merchants and restaurant owners waged a crusade against the vice industry and transformed the ethnic enclave into a safe place for family outings. To draw tourists into the area, they capitalized on cultural celebrations such as the Chinese New Year.

Not only did the business community profit from the holiday, Chinese Americans also used it to generate funds for the war efforts in China. Although they halted the Chinese New Year celebration to save money for the Sino-Japanese war relief, they soon realized that a public celebration could generate even larger funds. In the 1939 celebration in New York City Chinatown, an ambulance replaced the traditional dragon dance to enhance people’s awareness about the war. The dragon dance was brought back the following year to lure mainstream spectators. Members of the Chinese Women’s Association carried a huge Chinese flag, subsequently becoming a receptacle for coins and paper money, as many of viewers threw money to it. This became a common practice in other Chinese New Year parades. Led by both American and Chinese flags, the public event underscores Chinese Americans’ dual identities. During the 1940 Chinese New Year, San Francisco Chinatown held a “Bowl of Rice Party,” including fashion shows, Chinese concerts, acrobatics, Chinese operas, and Chinese art exhibitions. Its success motivated the organizer to stage it again in the subsequent year. Once the United States entered the war, Chinese American veterans were featured in the processions to demonstrate their contributions to the U.S. war effort. These

wartime celebrations were much larger than before, in hopes of attracting mainstream spectators to harvest greater funds for the war relief. Because the war in China encouraged unity within the ethnic community, the CCBA usually was the main organizer for the parades, in contrast to separate celebrations staged by different groups in the previous years.

The end of World War II also was reflected in the ethnic celebration. Although no large public activities were scheduled in major Chinese enclaves, lions and dragons joyfully pranced through Chinatown streets. Residents decorated their inhabitants with lanterns and festooned both American and Chinese flags. Shoppers swarmed into Chinatowns for holiday goods and for *bai nian* (visiting friends and relatives). Chinese Americans not only were overjoyed by the end of the war, but also were pleased by the transformation of their racialized status: during the war, the image of the Chinese was changed from “yellow peril” to American allies. This image projected to Chinese Americans as the general public often conflated them with Chinese. To boost relations with China, Congress repealed the Chinese Exclusion Act in 1943 and allocated a 105 quota for Chinese immigration. The policy, however, deviated from the national origins system, as a Chinese who was born in the Great Britain would charge the quota. The Exclusion Act had banned Chinese immigration, except for the few exempt classes, since 1882. The repeal allowed Chinese immigrants to naturalize and become citizens. During the war, Chinese Americans, for the first time, were recruited into the defense industry and other mainstream jobs. Chinese American veterans also benefited from GI bills to gain college degrees and move to the suburbs. More important, they took advantage of the 1945 War Brides Act and the 1946 Chinese Alien Wives of American Citizens Act to bring in their Chinese alien wives. Accordingly, holiday audiences noticed more women and girls in the festive Chinatown streets.

Although Chinese Americans were still in a celebratory mood, they soon found that they again had to use public celebrations to demonstrate their loyalty. When Communists took over China in 1949 and the entry of the People’s Republic of China (PRC) into the Korean War in 1950 motivated the American

public to change their perception of Chinese Americans—from a good Chinese to an enemy within, many of them were terrified by the possibility of being sent to concentration camps as Japanese Americans were during World War II. Their fright became intensified when Congress passed Title II of the McCarran Internal Security Act (Emergency Detention Act) in 1950 that enabled the government to arrest and detain any suspects who engaged in subversive activities. Chinese New Year celebrations became a platform for Chinese Americans to accentuate their patriotism. In 1951 the CCBA in San Francisco organized 600 school children and several hundred adults to march with placards that declared, “Down with Communism” and “Preserve Your Heritage of Freedom.” The procession then ended with a meeting hosted by the Anti-Communist League, where they again pledged their anti-Communist stance and patriotism to the United States.

The ethnic community was threatened not only by the rising anti-Communist hysteria but also was endangered by economic distress. After the entry of the PRC into the Korean War, the United States started an embargo against it, thereby forcing the closure of Chinese grocery markets, dry goods shops, and pharmacies. Many curio and souvenir stores similarly had difficulty acquiring Chinese gift and toy articles, further worsening Chinatown’s economy.

To attract tourists, the business community in San Francisco again resorted to the Chinese New Year celebration. In 1953 Henry Kwock Wong initiated the idea of the modern Chinese New Year Festival to revive business and transform the negative perception of Chinese Americans among the public. The celebration featured Chinese veterans, the Anti-Communist League, the CCBA, Chinese school marching bands, the Miss Chinatown festival queen, and a dragon dance. The San Francisco mayor and mainstream military bands also appeared in the procession. The presence of Chinese American Korean War veterans reveals an intention to showcase Chinese American patriotism. In fact, ethnic leaders couched the celebration in Cold War rhetoric and emphasized the importance of Chinese New Year observance to American democracy. They claimed that its celebration could demonstrate U.S. freedom and superiority. The

celebration effectively lured hundreds of thousands of spectators into Chinatown. Chinese in other cities staged similar events. In these festivals, non-Chinese usually outnumbered Chinese.

The postwar celebrations accentuated Chinese American exoticism to attract mainstream spectators. Chinese American children in the marching bands donned traditional outfits. The Miss Chinatown beauty queens wore cheongsams (Chinese long gowns) to stress their sexuality. Although Chinese Americans at this time had adopted Western-style clothing, Chinese American women and children were encouraged to wear traditional Chinese attire during the festival periods to increase their attraction. No wonder one observer in New York Chinatown described the celebratory scene as more of a costume party than of a traditional festival.

Ethnic leaders also used the cultural celebration to gain support from mainstream politicians. Mayors were invited to join parades and crown beauty queens. Postwar liberalism encouraged New York City Mayor Robert Wagner to use the celebration to pledge his effort to eliminate racial discrimination for Chinese Americans. Because the festivity could successfully attract tourists, mayors also wanted to capitalize on it to galvanize the tourist industry. For example, San Francisco mayors encouraged the expansion of the ethnic festival so it could achieve a nationwide appeal.

Over the last half of the twentieth century, the Chinese New Year celebration grew into an important event in major Chinese American settlements. For instance, the festival in San Francisco Chinatown expanded from one week to three weeks. Through television broadcast, the parade even reached a nationwide audience. Its significance was no longer confined to ethnic businesses, but was vital to the San Francisco tourist industry and its multicultural image. The rise of multiculturalism since the last two decades of the twentieth century further encouraged the spread of public Chinese New Year celebrations to areas even with few Chinese American settlements. Now, the ethnic holiday was part of the American multicultural mosaic and the Chinese New Year parade could be seen in major Chinese American communities across the country.

Chinese Railroad Workers

Chinese immigrants made a major contribution to the construction of the western half of the transcontinental railroad in the 1860s. As part of the U.S. pledge to Manifest Destiny, plans to link the east and west coasts with transcontinental routes started in the 1850s. In 1862, Congress passed the Pacific Railroad Act and called for two private companies to build the transcontinental line. The Union Pacific Railroad Company was to build westward starting from the Missouri River in Nebraska. The Central Pacific Railroad Company, owned by the California big four: Collis Huntington, Leland Stanford, Mark Hopkins, and Charles Crocker, would build eastward from Sacramento, California. The act would provide each company 64,000 acres of land and up to \$48,000 for every mile of track it built. The Pacific Railway Act of 1864 and its later amendments provided more incentives to the companies, offering subsidies based on the miles of tracks laid and the difficulty of the job. Bidding for government funding and land grants, the two railroad companies entered a historical race between 1867 and 1869.

The Central Pacific quickly had to deal with two major issues of the race. First, unlike the Union Pacific that could hire cheap Irish immigrant labor, California had the nation's highest wage rate. Second, unlike the Union Pacific that could lay track across open plains, the rugged high Sierras in California posed a serious

challenge. Instead of going over or around several ranges of high mountains, the company's engineers decided to traverse through them. Progress was slow at the beginning: only 50 miles of track was laid in the first two years. By 1864, only 600 workers were on the company's payroll.

Although the Chinese had participated in the building of the California Central Railroad that linked Sacramento to Marysville and the San Jose Railway, many doubted that their small body frames could handle the physically demanding tasks. But the executive of the Central Pacific, Charles Crocker, quipped about such skepticism by pointing out that he Chinese had built the Great Wall. In 1865, 3,000 Chinese workers were hired. By the summer of 1868, about two-thirds of the workers were Chinese. It was estimated that as many as 10,000 Chinese worked for the railroad company, many were former gold miners.

Chinese workers not only provided the bulk of the demanding physical labor required to lay tracks, but they also performed many highly skilled tasks. In a message to the Board of the Central Pacific Railroad Company, Chief Engineer Montague described the Chinese as industrious and skillful in performing their duties. He commended Chinese workers' expertise in drilling, blasting, and other types of rock work. E. B. Crocker, brother of Charles Crocker and director of the Central Pacific Railroad Company, stated that without the Chinese, it would be impossible for his company to continue the work: "I can assure you the Chinese are moving the earth and rock rapidly. They prove nearly equal to white men in the amount of labor they perform, and are far more reliable."

Working through ranges of high mountains with dynamite explosions was very hazardous. In Cape Horn near Colfax, California, in 1865, for example, the Chinese were assigned to carve a ledge on the rim of a gigantic granite bulk with their picks, drills, shovels, wheelbarrows, and blasting powder. They used hundreds of barrels of black powder, bringing down massive chunks of rocks into the American River. One after another the Chinese were lowered with ropes tied around their bodies from the top of the summit. From the cliff side they would chisel holes in the rock, stuff them with black powder, and ignited the explosives before being pulled up by their fellow workers.

Those who did not climb up fast enough to escape the blasts became casualties of the explosions. Chinese workers completed the work before the winter, allowing track to be laid the following spring. They worked through freezing harsh weather, drilling tunnels through solid granite in the snow-covered High Sierras, and they laid tracks in hot summers across the plateaus of Nevada and Utah. In the harsh winter of 1867, many Chinese workers were buried by heavy snowfalls; their bodies were not exposed until the following spring.

Regardless of their invaluable contributions, the Chinese were never treated equally as their white compatriots. They were compensated for only \$28 (\$31 later) a month without boarding, which was considerably lower than what skilled white workers were paid. In 1867, about 2,000 Chinese working in the High Sierras went on strike. The workers demanded a monthly wage of \$40, the same wage paid to the white workers. They demanded a 10-hour working day (8 hours a day if working inside the tunnels). And they demanded the freedom to quit their jobs. The railroad company was devastated but refused to meet the demand of the strikers. It cut off the workers' food supply. Forced into starvation, the workers returned to work after a week.

On May 10, 1869, when the two parts of the transcontinental railroads were about to meet at Promontory, Utah, a crew of eight Chinese workers and a few Irish workers were selected to place the final section of rail track in front of a band and a cheering crowd of observers. Speakers of the ceremony acknowledged the dedication and hard work of the Chinese workers. According to the May 15, 1869 issue of the *San Francisco Newsletter*, the eight Chinese workers who laid the final section of the rail track were brought over to dine at J. H. Strobridge's boarding car. "When they entered," the report states, "all the guests and officers present cheered them as the chosen representatives of the race which have greatly helped to build the road . . . a tribute they well deserved and which evidently gave them much pleasure."

Chinese workers also contributed to the construction of the western sections of the Southern Pacific and Northern Pacific and several branch lines. Railroad construction facilitated the expansion of Chinese

settlement in towns of different regions in California, Washington, Oregon, British Columbia, Utah, and Texas. A monument was placed at Cape Horn of Colfax, California, to honor the Chinese workers who built the transcontinental railroad.

Chinese Restaurants in the United States

Restaurant business was one of the earliest economical enterprises pursued by Chinese immigrants in North America. The Canton (Guangzhou) Restaurant with a 300-seat capacity in San Francisco was the first Chinese restaurant in the United States and was founded as early as 1849. During the Gold Rush era, large quantities of Chinese food products such as dried oysters, shrimps, cuttlefish, mushrooms, dried green vegetables and bean curd, bamboo shoots, sausages, sweetmeats, duck liver, and kidneys, or water chestnut flour arrived in California. There were at least seven Chinese restaurants in San Francisco by 1851 whereas dozens of Chinese food joints in various mining areas served both Chinese and American customers. However, the number of Chinese restaurants in the late nineteenth century was actually modest. San Francisco had 11 in 1878 and 28 in 1881. The number dropped to 14 in 1882, probably because of the impact of the passage of Chinese exclusion law in that year. The 1882 Directory of Principal Chinese Business Firms in San Francisco listed 175 laundries, 77 general merchandise stores, 62 grocery stores, 22 drug stores, 16 butchers, and only 14 Chinese restaurants.

Chinese restaurants began to thrive only after chop suey houses became popular in New York City in the 1900s. The first Chinese who opened a chop suey

house outside of Chinatown was a Chinese man named “Charley Boston” (his Chinese name was Lee Quong June or Li Quen Chong), a thoroughly Americanized wealthy merchant, and a leader of the famous On Leong Tong in New York’s Chinatown. He did so well that soon many other Chinese followed him. When Liang Qichao, a leading Chinese intellectual, visited the United States in 1903, he noted with surprise that there were over 400 chop suey houses in New York City. Chinese restaurant business enjoyed a golden era from 1900 to the 1920s. During that period, chop suey houses were not only a New York phenomenon but spread into Boston, Long Island, New Jersey, and Connecticut. In 1900, Chicago had only one Chinese restaurant. By 1905, Chicago had 40 Chinese restaurants. Only five were in Chinatown. By 1915, it had 118, and only six or seven were in Chinatown. On the West Coast, the number of Chinese restaurants was also growing and there were not only Chinese but also Japanese and Koreans chop suey proprietors. In 1905, San Francisco had only 46 Chinese restaurants. Twenty years later, the number grew to 78, which was still far behind that of New York. In 1900, there were but two or three Chinese restaurants in Los Angeles, frequented almost exclusively by Chinese. There were at least 15 Chinese restaurants by 1910. Several of these Chinese restaurants were outside Chinatown and a few were in downtown Los Angeles. In the 1920s, one of the largest Chinese restaurants in the Los Angeles area was Crown Chop Suey Parlor in Pasadena, owned by a Japanese immigrant, Mr. Kawagoye. However, New York had more Chinese restaurants than any other cities.

When catering white and tourist clients became the focus of the restaurant business, Chinese began to run cocktail bars, café shops, and night clubs in and outside of Chinatowns in New York, Chicago, Los Angeles, and San Francisco in the 1920s and 1930s. Live music and dancing rather than food became the major attraction in those restaurants. In the beginning, such bars purely attracted white clients. Then Chinese customers gradually frequented them as well. Some of them did not serve Chinese food. The most famous Chinese night club was the Forbidden City started by Charlie Low in December 1938 on Sutter Street outside in Chinatown of San Francisco. Food at the

Forbidden City was Western and cheap, but the restaurant began to offer nude dancing by Asian girls.

When the Chinese restaurant business established a niche in the American food market, it began to provide important hiring opportunities for the Chinese. The 1920 Census indicates that of the 45,614 Chinese employed in the United States, 26,488 of them worked in restaurants and laundries. In the 1930s, 6 percent of the Chinese adult males in California and 20 to 25 percent of Chinese adult males in East Coast cities worked in the restaurant business. According to a 1938 report by the Oriental Division of the U.S. Employment Service in San Francisco, 90 percent of Chinese youth were service workers, mainly in the culinary trades. In 1941, 5,000 young Chinese in San Francisco had no future worthy of their education but seemed destined to wash dishes, carry trays, cut meat, and dry fish in Chinatown when the defense industry was in great need of professional employees. In Chinese American experience, food was not only an ethnic label but attached to their racial status. Restaurant jobs were American-made and self-employed occupations for Chinese Americans.

Following the 1965 immigration reform, Chinatowns in San Francisco, Los Angeles, and New York experienced a heavy influx of new immigrants. When Chinatown was not big enough for the new immigrants, they began to move into suburban cities like Monterey Park in Southern California or Flushing, Queens in New York. Following the immigration boom, the number of Chinese restaurants was growing rapidly. In the late 1960s, the number of Chinese restaurants in the continental United States grew to more than 10,000 and there was actually a shortage of qualified Chinese chefs in the early 1970s. Before 1965, there was only one Chinese restaurant in Monterey Park. By 1987, the city had over 60 Chinese restaurants representing 75 percent of the dining business in the city. Harbor Village and Ocean Star, located on Atlantic Boulevard, became two of the largest city revenue generators in Monterey Park. Ocean Star, owned by Robert Y. Lee, had 800 seats and was one of the largest Chinese restaurants in San Gabriel Valley. Recipes, ingredients, and cookery in the post-1965 Chinese restaurant businesses in America follow closely their counterparts in Asia. A pattern in the Chinese

restaurant business in the San Gabriel Valley is that each city with concentrated Chinese residents has a few famous Chinese restaurants as a major attraction. Monterey Park has the Ocean Star and Harbor Village. Arcadia has the celebrated Din Tai Fung dumpling house. San Gabriel has the high-end restaurant Mission 261. Rowland Heights has the Sea Harbor Seafood Restaurant and Sam Woo See Food Restaurant. Famous Chinese restaurants follow wherever the immigrants have congregated. The emergence of numerous Chinese restaurants has changed the social landscape of Southern California and made Chinese America a visible ethnic community. From a bunch of chop suey eateries in the 1960s, the Chinese restaurant business here has evolved into a food capital of Chinese cuisine. As authentic Chinese food has replaced Americanized Chinese dishes, the booming restaurant business becomes a concrete example to of how a transnational lifestyle is deeply embedded in Chinese American communities. Different regional Chinese cuisines and restaurant types and operations also illustrate the diverse social origins and the diaspora background of the new immigrants. In the Chinese restaurant world, we see how the San Gabriel Valley in Southern California has become a real global village. By 2004, as a home to over 240,000 Chinese residents, the San Gabriel Valley had more than 2,000 Chinese restaurants. In comparison, Los Angeles Chinatown, according to a *Los Angeles Times* article, has about 80 restaurants for 15,000 residents.

Today there are more than 40,000 Chinese restaurants across the nation—a number larger than the total number of McDonald's, Wendy's, and Burger King's in the United States combined. According to a 2000 report by the National Restaurant Association in the United States, Italian, Mexican, and Chinese cuisines have already joined the mainstream. Those three cuisines have become so engrained in American culture that they are no longer foreign to the American palate. More than nine out of ten consumers are familiar with and have tried these foods, and about half report eating them frequently. Hunan, Mandarin, and Szechwan variations of Chinese cuisines, like some European cuisines, are known to between 70 and 80 percent of Chinese restaurant consumers.

Panda Express is the largest Chinese fast-food restaurant chain and the fastest growing Asian restaurant company in America. Established in 1983 by Andrew and Peggy Cherng, an immigrant couple from Taiwan and Hong Kong, Panda Express has become the most visible and popular Chinese fast-food chain in the United States. Targeting mainstream American customers, Panda Express stores usually locate in shopping malls, airports, theme parks, sport stadiums, street plazas, university campuses, and hospital cafeterias, or even military camps. By 2009, Panda Express had over 1,200 chain stores throughout 37 U.S. states with \$1 billion in annual revenues. The largest sit-down Chinese restaurant business was P.F. Chang's China Bistro established by Paul Fleming, a white American restaurateur. In 1993, he opened his first P.F. Chang's in Scottsdale, Arizona and invited Philip Chiang as his partner. When the restaurant was named P.F. Chang's China Bistro, "P.F." stood for Paul Fleming, and "Chang" stood for Chiang though Philip purposely spelled his "Chiang" as "Chang" as a more contemporary and standardized Romanization of the Chinese name. In 1998, when P.F. Chang's had 10 stores, it filed an IPO at \$12 a share, which jumped to \$32.75 in March 2000. By then, the chain had developed 39 stores with 13 in development. The chain developed 13 to 15 new restaurants annually. By 2008, P.F. Chang's had run 189 full-service Bistro restaurants and 159 fast food Pei Wei restaurants across the country. Though owned by a mainstream American food company, the restaurant imported some ingredients, herbs, and spices directly from China and its menu featured some regional-flavored Chinese dishes.

P.F. Chang's phenomenon poses a serious question to Chinese Americans—who owns culture. Although mainstream American customers tend to stay away from small, family-owned Chinese restaurants, more and more of them learned to accept genuine Chinese food at P. F. Chang's, which has the financial resources to provide a trendy, comfortable dining environment, attract middle-class professionals and families as its clients, and carve out a high-end Chinese cuisine niche in the competitive American restaurant market. The success of P.F. Chang's reveals the complexity of cultural and economical negotiations

between Asian and Western culture, between the struggling, family-owned small Asian American business and giant, publicly traded corporate America.

Chinese Students in the United States since 1960

Since 1960, the United States has played host to hundreds of thousands of students from mainland China, Hong Kong, and Taiwan. According to the Institute of International Education, in 2011 all three regions were among the top 20 regions in sending the most

international students to the United States, with mainland China at number 1, Taiwan at number 5, and Hong Kong at number 16. Although most students from Hong Kong came to obtain undergraduate degrees and most students from mainland China and Taiwan came for graduate education, the number of mainland Chinese undergraduates is increasing. Overall, the number of mainland Chinese students in the United States is steadily increasing, although the number of students from Taiwan and Hong Kong has been decreasing since the 1990s.

Although the three regions have different histories and different reasons for sending so many students to the United States and other Western nations, they share several factors in common. In all three regions, a limiting local opportunity structure and a need to acquire skills for an industrializing (and later globalizing) economy are among the reasons so many Chinese have pursued educational opportunities abroad. Many also look to study abroad as a way to open the door to permanent residency, an escape route in case of political instability or uncertainty.

Furthermore, Chinese families who send their children to study abroad are in pursuit of the additional social, cultural, and educational capital they perceive an overseas degree will bring. In Hong Kong, for example, there is a widespread perception that local education is inadequate for the global economy, that overseas degrees have much more cachet, and that employers prefer to hire those with foreign credentials.

The United States has been the primary destination for students from greater China, though many do go to other English-speaking countries. The United States is perceived as a leader in the global economy as well as in the global educational marketplace. The networks of Chinese students and other Chinese residents are also particularly well developed in the United States, allowing for an easier transition.

Although most students from greater China came for undergraduate or graduate degrees, some students came for high school or even middle or elementary school. Wealthy parents leave these "parachute kids" in the United States, where they have their own caretakers (either relatives or hired servants) and their own houses and automobiles. The reasons for parachuting are the same as the reasons why older students

come to the United States, though parents of parachute kids often believe that getting educated in the United States at an earlier age gives their children distinct advantages in getting into college in the United States. In the late 1980s and early 1990s, most of the parachute kids were from Taiwan, with smaller numbers from Hong Kong and Chinese communities in Southeast Asia. After 1995, an increasing number came from mainland China. Most parachute kids live in the Chinese “ethnoburbs” near cities with large Chinese population, where they have easy access to local and transnational networks of people of the same ethnicity and convenient access to a major Pacific Rim transportation hub.

Taiwan

The Chinese Civil War effectively ended in 1949, with the Communists taking over the mainland and the Nationalists (Kuomintang or KMT) retreating to Taiwan. Nationalist refugees from coastal cities of the mainland flooded into Taiwan, mostly settling in Taipei, where they became the capital’s elite class. These elite *waishengren* (literally, people from other provinces) benefitted the most from the KMT’s martial regime, including its U.S.-backed economic and educational reforms. Their children, educated in postwar Taiwan, formed the largest part of the flow of Chinese undergraduate and graduate students to the United States in the 1960s and 1970s. Reflecting the inequality of Taiwanese society after 1949, few *benshengren* (literally, people from this province) had the cultural or economic capital to leave Taiwan for further study in this period.

Students from Taiwan’s elite classes studied abroad for a number of reasons. Aside from the general recognition of a U.S. degree and the relative high development of U.S. education, especially in technical fields, the local opportunity structure in Taiwan made it difficult to get a spot in the university as high-school education became more widespread and competition more severe. There were a limited number of university classes for a rapidly expanding population, and college admissions were assigned by performance on an extremely rigorous comprehensive examination. As a result, few high school graduates could move on

to university in Taiwan, and those who could afford it preferred to send their children for degrees abroad. Furthermore, until recently, Taiwanese universities lacked the capacity to provide education beyond the undergraduate level, so students looking for advanced training were forced to seek it abroad.

Another reason for the high number of students from Taiwan, particularly during the 1960s and 1980s, was the uncertain political future of the island. Taiwan residents feared an invasion from mainland China, so many sought residence abroad as a sort of “insurance policy.” When mainland China replaced Taiwan in the United Nations in 1972 and relations between the United States and mainland China normalized in 1978, Taiwan’s brain drain to the West accelerated. Most Taiwanese students in the United States during this period settled in the United States after graduation. Only in recent decades has the trend reversed; with government incentives, a slowing U.S. economy, and rapid expansion in greater China, many Taiwanese students either chose to return to Taiwan permanently or live transnationally.

Hong Kong

After being occupied by the Japanese during World War II, Hong Kong returned to British control in 1945. The colonial government expanded the city’s education system, making secondary education accessible to nearly all of Hong Kong students by the 1980s. At the same time, the city’s limited number of places in its few universities pushed many students to study abroad, particularly in the United States, Canada, and Australia. As in Taiwan, the rigorous examination system that determined university places kept many students out of higher education, and going abroad was an alternative way to acquire a university degree.

Hong Kongers’s fears about the city’s future under mainland Chinese rule accelerated as the date of the 1997 handover of sovereignty approached, and especially after the Tiananmen Incident in 1989. Many who could afford it left the city in pursuit of permanent residency in Canada, the United States, and Australia. Students left in droves: In the late 1980s, nearly twice as many Hong Kong students were studying in universities abroad as were enrolled in universities in the city.

In addition, many students were leaving at younger ages. Though not all families could afford to move abroad as a unit, some would send minor children alone to get educated overseas.

Mainland China

Mainland China's education system expanded much later and at a much slower pace. The Cultural Revolution (1966–1976) resulted in numerous economic and educational setbacks. Upon the initiation of economic reform in 1978, higher education began to expand, but universities were underfunded and technical training was underdeveloped. A number of students began to apply for graduate study abroad, particularly in the United States. Although most were funded by the national government or by their work unit, some received funding from governmental and nongovernmental sources abroad.

Most mainland students from this period stayed abroad once they completed their studies. Salaries abroad were higher and opportunities for advancement were greater; had they returned to China, many would have had to return to their original work units. After the Tiananmen Incident on June 4, 1989, in which a student uprising was brutally repressed, Chinese students abroad feared for their safety if they returned. The United States and other Western governments allowed these students to stay. The United States government granted nearly 60,000 "June Fourth green cards" to Chinese citizens on student or exchange visas, allowing them to stay permanently and apply for citizenship.

In the early 1990s, with the Chinese government's new emphasis on economic development, students studying overseas were valued; their knowledge and expertise, in fact, made them crucial for advancing state interests. The Communist Party granted them the right to enter and exit the country freely and the opportunity to move to other work units. The state also began to invest in material incentives for these potential returnees, such as the 100 Talents Program. These programs not only served as marks of honor but also narrowed the gap between Chinese and foreign salaries.

As economic development progressed, the middle class and elites began to accumulate wealth. At the

same time, domestic educational opportunities expanded and the pressures that Hong Kong and Taiwan started to experience decades earlier began to appear on the mainland. The fierce competition for limited places in relatively low-quality universities led those with means to send their children to study overseas, both at the undergraduate level and below. As a result, the number of students from mainland China has increased exponentially. Except for one year in which it was displaced by Japan and three in which India took the lead, China has been the leading place of origin of foreign students in the United States from 1988 to 2011.

Future Developments

The composition of students from greater China in the United States has changed dramatically since the 1960s and 1970s. Mainland Chinese, who were not able to come in the period between the Chinese Civil War and the end of the Cultural Revolution, have now become the most numerous international students in the country, whereas once-dominant Taiwanese have been declining in number for decades. The number of Hong Kong students has stayed between 7,000 and 9,000 since the handover in 1997, perhaps reflecting continued ambivalence about the opportunities that the city offers and the territory's future under mainland rule.

Although in previous decades most Chinese students chose to stay in the United States, global economic shifts have made them more willing to move home or live transnationally. As the U.S. economy slows down and China's continues to grow, we may expect that more mainland students will return home, and that Taiwan and Hong Kong students may also move to work in the mainland after graduation. On the mainland, returnees are known as *haigui*, literally "sea turtles," but also a play on words meaning "to return from overseas."

Additionally, governments are becoming proactive in reversing the "brain drain" to the West. Developments such as Taiwan's Hsinchu Science and Industrial Park and financial incentives such as the mainland's Changjiang Scholars program are meant to encourage holders of advanced foreign degrees to innovate at home rather than abroad.

Finally, the difficulty in gaining work permits and permanent residency in the United States has pushed many international students (including those from greater China) to move home or onward to third countries after they graduate and their student visas expire. In recent years, many different proponents of immigration reform have suggested that the United States attempt to reverse the “reverse brain drain” through start-up visas and other means of allowing U.S.-trained students to stay.

Implications

The arrival of such large numbers of students from greater China, many of whom stay in the United States, has had a dramatic effect on the nature of immigration to this country and on how Chinese and other Asian immigrants are perceived. Although Chinese students who stay form an important stream of immigrants, they are not the only Chinese immigrants to this country. On the aggregate, immigrants from greater China are among the most highly educated and affluent immigrant groups in the United States. They are often portrayed as the “model minority,” the minority group with indicators of success that surpass even those of native-born whites. However, such a characterization hides the tremendous diversity of ethnic Chinese immigrants in the United States. Many are low-skilled workers with little education, particularly those who came as refugees from Southeast Asia and those who came from the mainland without authorization. Though Chinese immigrants of high socioeconomic status (including students who stay) have generally settled in the suburbs, many working-class and poor Chinese still live in innercity Chinatowns.

Chinese War Brides

Chinese War Brides were women who gained entry to the United States between 1945 and 1950 mainly under the War Brides Act. The War Brides Act was enacted on December 28, 1945, granting entry to “admissible” alien spouses and children of American World War II veterans. Because Chinese exclusion laws were repealed in 1943, Chinese war veterans became the first qualified Asian group to send for their families. In a five-year period between 1945 and 1950, thousands of Chinese women immigrated to the United States, leading to a profound change in the Chinese American community. The war brides are most crucial in transforming the Chinese America from an immigrant community of bachelors to an ethnic community of families.

Although exclusion ended, the impact of the repeal act itself on Chinese immigration was limited because the law allocated only 105 immigrant slots for Chinese each year. The War Brides Act, the Chinese Alien Wives of American Citizens Act, and the Alien Fiancées and Fiancés Act, however, allowed eligible applicants to gain entry outside the quota. These new laws helped push the unbalanced sex ratio of the Chinese American community toward normalcy. The War Brides Act alone enabled 5,132 adult Chinese women to enter within three years. The Chinese Wives of

American Citizens Act admitted an additional 2,317 adult women between July 1947 and June 1950. With thousands of families settling down in the United States, the chapter in the history of the Chinese American community as a predominantly male society came to a close.

Unique Features of Chinese “War Brides”

Unlike war brides from other regions, the vast majority of Chinese war brides were not married during and after the war; they were longtime wives of Chinese Americans in transnational Chinese American families during the exclusion era. Research based on immigration files reveals that only a very small number of Chinese American veterans were married during or went to China to find wives after the war. By the time they came to the United States, about 87 percent of the war brides had been married for at least five years, and 77 percent of them had been married for over 10 years. Chinese war brides were also considerably older than those from other parts of the world. The British war brides, for example, were between 23 and 25 when they came to the United States. In contrast, the average age of the postwar Chinese immigrant women was 32.8, and some of them were at their 40s. Without the war, however, these wives of Chinese immigrants would probably not have had the chance to be reunited with their husbands for many more years. Aimed at facilitating the immigration of European women who married American G.I.s, the War Brides Act incidentally facilitated family unification for Chinese Americans.

The Legacy of Exclusion

During the war, between 75,000 and 100,000 American soldiers married abroad, and the majority of these marriages took place in Europe. About 50,000 American soldiers married British women and wanted to bring them home when the war ended. The Immigration and Naturalization Service (INS) and European governments also pressured the U.S. government to make it easier for the brides to join their husbands. The result is the War Brides Act, one of the least restrictive immigration legislation in recent U.S.

history. A group of INS officials also went to England and France to expedite the admission process, and some women from European countries and Australia traveled to America by “bride ships.”

Although American naval forces fought many battles on the islands of the Pacific and a few thousand soldiers were sent to the East Asian mainland, the possibility of an influx of Asian women taking advantage of the War Brides Act was not a concern at first. Relatively few Americans stayed in Asia for more than a year, and marriages between American military personnel and Asian women were less common compared to those between Americans and Europeans. The War Brides Bill (HR 4857) passed both Houses of Congress without a struggle, partly because no one anticipated that this new piece of legislation would be used by Chinese to reunite their families. A few months after the new law went into effect, however, the INS regional inspectors suddenly found themselves confronted by hundreds of middle-aged Chinese women who possessed the required documents to come as war brides.

As it was during the Chinese exclusion, the INS routinely checked the identity of each Chinese immigrant applicant at the ports of entry. Because marriage certificates and birth certificates were not issued in rural China, the INS had established a system of investigation and interrogation to determine applicants’ qualifications and developed certain strategies against document fraud. Each war bride had to convince the inspector in charge that her case was genuine. Should any suspicion arise, the applicant would be detained.

The legacy of the exclusion era, however, had made it difficult for some Chinese women to face interrogation. Although they were indeed wives of American G.I.s and therefore had every right to enter the United States, their husbands might have used fictive ties when they first came over or had given false testimony to help other fellow villagers. The war brides thus had to involve themselves in their husbands’ schemes. They had to furnish immigration authorities with the exact information that was recorded in their husbands’ files. Failure to adhere to the recorded details would not only jeopardize a woman’s own case, but also cause trouble for the many

others who had helped her husband in the past. Whether she could gain entry in such cases would depend on how well she could conceal part of her own past.

Many Chinese women were detained at the immigration stations as soon as they landed on American soil. They were not allowed to see anyone from the outside, and they were fully aware of the consequences if they were caught lying. Not knowing what they were going to be questioned about or what their husbands might have said created much anxiety and frustration. Liang Bixia, a 32-year-old war bride, hanged herself at the immigration station. Another woman, 41-year-old Huang Lai, was released from detention after a failed suicidal attempt.

The immigration authorities' suspicions of document fraud were not completely groundless. Many war brides had been victims of the Chinese exclusion. Although family reunification had finally become a reality, they took their chances to pave the way for other community members. Some war brides claimed additional dependents. As recorded, 589 Chinese children were admitted under the War Brides Act, but the number of children still in China claimed by the war brides was much larger. The fact that many war brides claimed a large number of children and that more than 80 percent of these children were male suggest that not all claims were genuine.

Nevertheless, previous involvement with the immigration networks prepared some war brides to deal with the U.S. immigration officials. Most of them were calm when interrogated and prepared with ready answers for questions. These women seemed to understand that their right to enter was guaranteed by law because their husbands were indeed war veterans. The INS, on the other hand, was no longer given a free hand to detain and deport Chinese applicants as it had done during the exclusion, because of the strong support for Chinese American war veterans from the American public.

The difficulties the INS faced in dealing with war brides are readily apparent from two failed deportation proceedings. The INS's most effective weapon was interrogation, and the inspectors could try to intimidate Chinese applicants by pressing them to admit fraudulent schemes. In one case, however, a war bride was

detained with a young boy because she could not describe her own wedding during the initial interrogation and admitted that she was assuming the identity of her alleged husband's deceased wife. But the woman regained her composure the day after. She denied what she had said earlier and calmly described her wedding. Meanwhile, her alleged husband had told the investigators that the woman was not his wife, and confessed that he had been promised \$1,000 for bringing in the boy, all arranged by the woman's father, a laundryman in New York. This would be a clear-cut case for deportation, especially because the woman's alleged husband turned against her, and her own earlier testimony matched the man's confession. The increasing political strength of the Chinese American community, however, forced the INS to prove her guilt incontrovertibly, which was extremely difficult because the agency did not have the capacity to conduct investigations in China. Cooperation of the applicants was therefore crucial for successful deportation proceedings. But the woman insisted that she was the wife of her sponsor and that her alleged husband was mentally ill. Because the INS could not prove the woman guilty beyond reasonable doubt, she and her alleged son were both admitted 14 months later.

A second case involves a 34-year-old war bride. The woman said that she had been married for 15 years with a 14-year-old son attending school in China. Immigration records indicate that her husband originally entered the United States in 1926 as the son of a citizen. He visited China in 1930, got married, and returned a year later with his father and an alleged sister. But that sister was later deported. Checking pictures of the deported "sister," immigration officials discovered the deported "sister" and the war bride were the same person. Deportation proceedings were filed against the woman. If she was indeed found involved in this fraud, she would face a felony charge and not be admitted. The woman, however, would not give in. Although her alleged husband argued that she was not that deported sister, she insisted that the photo on file was not hers, and that this was her first trip to the United States. Although two medical experts confirmed that the two women were most likely the same person, they also pointed out that photos alone were not sufficient proof of this. What remained to be true was that

her husband's military service record during the war, which entitled him for naturalization. Probably because of her previous experience, the woman was quite prepared for an extended interrogation. She made the same statements every time she was questioned, and she appeared completely ignorant about the deportation case of her husband's alleged sister. After a year-long investigation, the INS finally relented and admitted the woman.

Between September 14, 1946 and April 15, 1948, the INS detained 3,838 Chinese immigrant applicants, most of them women. The government believed that at least 75 of the detainees were involved in fraud, but proof of fraud was no longer sufficient for the INS to deport an applicant. Most of those who did not do well at the interrogation eventually gained admission. Only a very small fraction of them were deported.

Deporting war brides was also difficult because of the effective campaign of the Chinese community to subject INS under public scrutiny received overwhelming support from the general public. In June 1948, the California branch of the American Veterans Association passed a resolution condemning the poor treatment of Chinese war brides. It accused the INS of violating both the U.S. Constitution and the Bill of Rights and urged the government to treat all immigration applicants equally regardless of race, color, or religion.

Meanwhile, the detained war brides also worked together with the community to put pressure on the INS. On September 21, 1948, the day after Liang Bixia committed suicide, all 104 of the Chinese women detained in San Francisco staged a hunger strike to protest their treatment. That these middle-aged Chinese country women who had never lived in the United States would take group action against an agency of the United States government was inconceivable to the INS. Officials in San Francisco, already embarrassed by the death of Liang, refused to admit that the Chinese war brides were capable of organizing a hunger strike. They told reporters that the women did not eat because that was the way Chinese mourned the deceased. But the women smuggled out at least two letters asking for support from their community, and the Chinese War Veterans Association in New York

sent telegrams to all Chinese newspapers and community organizations calling for a united protest against the detention of the Chinese war brides. The telegram accused the INS of violating the rights of American war veterans and demanded that the war brides be released immediately. During a meeting with representatives of the INS, members of the Chinese Hand Laundry Alliance argued that immigration applicants should not be detained for more than three days. They asserted that more detention constituted an act of racial discrimination because only Chinese immigrants were being singled out. Under pressure from Chinese Americans, politicians, and the general public, the INS investigated Liang's case. It criticized the conduct of the San Francisco district office and promised future progress. By the end of 1948, thousands of war brides were united with their husbands. These women played a critical role in the postwar transformation of the Chinese American community.

Chinese World (Sai Gai Yat Po)

Chinese World (Sai Gai Yat Po) was a major Chinese American newspaper published in San Francisco from 1891 to 1969. It was an organ of the Protecting Emperor Society (*Baohuanghui*, succeeded by the Chinese Constitutionalist Party). The paper became a Chinese-English bilingual daily in 1949.

The *Chinese World* traced its origin to *Mon Hing*, a Chinese weekly published in San Francisco since 1891. In 1899, when Chinese intellectual and reformer

Kang Youwei (1858–1927) established the Protecting Emperor Society (*Baohuanghui*, or the Chinese Empire Reform Association) in North America, *Mon Hing* was taken over by his followers and became a daily in 1901. The paper adopted an English name, *Chinese World*, in 1898 and its Chinese name was changed to *Sai Gai Yat Po* in 1908.

From its inception to the mid-twentieth century, the *Chinese World* exhibited a strong and persistent interest in the political affairs of China. Its editorial policy followed closely the *Baohuanghui*'s political platform. In the first decade of the twentieth century, it supported a gradualist reform of the Manchu government as opposed to the radical revolutions proposed by Dr. Sun Yat-sen (1866–1925), who was also mobilizing the Chinese community in America for support. When the *Baohuanghui* changed its name to the Chinese Constitutionalist Party in 1906, the paper became an avowed exponent of constitutionalism in China.

After the 1911 Revolution ended the Manchu rule, the *Chinese World* continued to represent the conservative Chinatown elite who wished to preserve the traditional Chinese culture. Although it had accepted republicanism and embraced the legitimacy of the Republic of China, it remained a firm opponent of Sun Yat-sen and his revolutionary party. From 1928 to 1935, one of Kang's followers, Wu Xianzi, served as its editorial writer. Writing under the pen name *meng die* (dreaming of butterflies), Wu authored many forceful editorials against the Nationalist government led by Chiang Kai-shek. However, after Wu left America in 1936, the paper's influence declined significantly. During the Sino-Japanese War, the *Chinese World* supported a united war effort against Japanese aggression and abstained from attacking the Nationalist government.

In 1944, Hawaiian merchant Chun Quon (C. Q. Yee Hop, 1867–1954) took over the *Chinese World* and made Lee Dai-ming its publisher and chief editor. Lee revived the paper's political platform and built up a steady readership through his sharp criticism of both the Guomindang and the Chinese Communist Party. In the early 1950s, because of Lee's refusal to endorse Chiang Kai-shek's leadership, the *Chinese World* was intimidated by the Guomindang supporters in San

Francisco for a while. However, the incident helped it to win a reputation for being a truly free and democratic press. As a result, the *Chinese World* became the first Chinese American newspaper to be accepted as a member of the Associated Press. Under Lee's management, the *Chinese World* was also recognized, though not entirely accurately, as the largest Chinese language daily in the United States.

During Lee Dai-ming's tenure, major publishing innovations were introduced to the *Chinese World*. In December 1949, the paper added an English section for the purpose of promoting communication between the Chinese community and the American mainstream society. For nearly two decades, it remained America's only Chinese-English bilingual daily. On November 25, 1957, the *Chinese World* launched an East Coast edition in New York. Everyday printing mats were sent from San Francisco to New York by air. However, because of unreliable flight schedules and insufficient personnel in New York, the experiment failed. The Atlantic Coast edition was discontinued on January 17, 1959.

The failure of the New York edition took a heavy toll on the paper's finances. After the death of Lee in 1961, the paper was supervised by Cho Kwei Fong (Cao Guifang), former principal of the Confucian School in San Francisco. Famous Confucian intellectual Carsun Chang (1886–1969) also contributed many editorials and articles. However, the paper was on an overall decline and ceased publication in 1969.

Chinese-Vietnamese Americans

Chinese in Vietnam

The Chinese from Vietnam, also known as the *Hoa* people of Vietnam or Chinese-Vietnamese, are individuals of Chinese ancestry from Vietnam. The history of the ethnic Chinese in Vietnam can be traced back to 111 B.C., when China's Han Dynasty conquered the kingdom of Nan-Yueh (Nam-Viet) and became a Chinese province. In A.D. 939, the Vietnamese pushed out the Chinese occupation and created an independent nation. From this period to the sixteenth century—with the exception of two decades in the 1400s—the Vietnamese were able to fend off Chinese rule. The ethnic Chinese population in Vietnam, which consisted of five major dialect groups including the Cantonese, Teochiu, Hakka, Hokkien, and Hainan, does not become significant until the seventeenth century. During this time period, a wave of Chinese entered Vietnam to flee the Qing Dynasty in China.

The more contemporary population growth of the ethnic Chinese in Vietnam is directly linked to the French occupation beginning in 1858. During their colonial rule, the French actively recruited Chinese contract laborers into Vietnam. Consequently, the Chinese entered Vietnam in large waves. The majority of Chinese settled in South Vietnam, particularly in the densely Chinese-populated region known as the Cholon district. Within this region, many of the Chinese participated in commerce, manufacturing, and trade. Those who settled in the northern region engaged in agricultural work. For the most part, the ethnic Chinese played the role of the petit bourgeois and contributed significantly to Vietnamese economy.

In the 1950s, circumstances began changing for the Chinese after Vietnam gained independence from the French. In their efforts to nationalize the population, the Diem regime of South Vietnam sought to institutionally integrate their growing ethnic Chinese population by employing tactics such as declaring all

children of Chinese and Vietnamese unions, as well as all Chinese born in Vietnam, automatic Vietnamese citizens. Moreover, every person engaged in economic activities was required to register for citizenship. Those who did not register for Vietnamese citizenship received major restrictions on education, travel, and economic activities. These actions resulted in shifting the Chinese's economic dominance in commercial trade to an overrepresentation in the industrial and service sector.

The ethnic Chinese encountered another period of drastic change in the mid-1970s, shortly after the end of the Vietnam War (The Second Indochina War). The Communist-controlled Vietnamese government had just defeated South Vietnam and the United States. The newly established government of the Socialist Republic of Vietnam confiscated many businesses and implemented new economic policies such as nationalizing trade, setting exchange currency rates, and forcing many into "new economic zones." The new socialist reforms created problems for all engaged in capitalist activities in Vietnam. By default, this included many Chinese who still dominated various trade sectors of the Vietnamese economy. Furthermore, Vietnam's unstable relationship with China further exacerbated the ethnic Chinese's tenuous position in Vietnam. China and Vietnam were embroiled in economic, political, and land disputes. In December 1978, the Soviet-backed Vietnam engaged in a border conflict with the Khmer Rouge and, suspicious of China's ultimate intentions in Southeast Asia, invaded Cambodia and overthrew the China-backed Khmer Rouge regime. In response, China invaded Vietnam in February 1979, leading to the month-long Sino-Vietnamese War (The Third Indochina War). By the end of the 1970s, the culmination of the Vietnamese government's policy changes and numerous border conflicts led many ethnic Chinese to flee Vietnam fearing social, political, or economic persecution.

Chinese-Vietnamese in the United States

Of the many Chinese who fled Vietnam, many ended up in the United States. Prior to 1975, there were only 4,300 Chinese-Vietnamese living in the United States.

By 1981, the Chinese-Vietnamese population had increased to over 85,000. Today, the total Chinese-Vietnamese American population is a little over 200,000 people. The immigration of the Chinese-Vietnamese, along with the Vietnamese, into the United States is separated into three major waves.

The first wave began in 1975 and lasted until 1978. This wave consisted of mostly intact family units and educated Vietnamese who were employed by either the government of South Vietnam or the United States. This group fled Vietnam during the surrender of Saigon to the north. In the wake of the Vietnam War, the United States quickly responded to the outpouring of refugees from Vietnam, Cambodia, and Laos by establishing the Indochina Migration and Refugee Assistance Act of 1975 to provide emergency admittance and funding for the resettlement of Southeast Asian refugees into the United States. In 1977, Congress extended this Act to allow refugees who had physically resided in the United States for at least two years, and who were initially given parole status, to adjust their status to permanent resident. The Chinese-Vietnamese population came in a smaller proportion during the first period. Only 9 percent of the current total foreign-born Chinese-Vietnamese population living in the United States entered during the first wave. Although the fall of Saigon in 1975 ignited the migration of the largest wave of Vietnamese refugees into the United States, the mass exodus of the Chinese-Vietnamese refugees did not begin until the second wave in late 1978.

The second wave fled Vietnam between the period of late 1978 to 1982. Compared to the first wave, the second wave was more ethnically and professionally diverse, and many did not speak English. The Chinese who fled during this time included those who fled north by foot into China, whereas others (along with the ethnic Vietnamese) bribed Vietnamese officials for exit permits and chartered small fishing boats from pirates to navigate through the South China Sea. Those who survived this clandestine journey ended up in refugee processing camps in the first asylum countries of Thailand, Singapore, Malaysia, Indonesia, the Philippines, and Hong Kong. In these countries, the ethnic Chinese awaited word of sponsorship from families,

individual sponsors, and volunteer organizations overseas.

This mass movement of refugees, internationally known as the “boat people” movement, sparked an international refugee crisis. The crisis led to an assembly of lawmakers at the 1979 Geneva Conference. The discussion at the Geneva Conference resulted in three resolutions dealing with the refugee crisis:

(1) Vietnam would halt illegal departures by sea and implement the Orderly Departure Program (ODP); (2) first asylum countries would cease turning refugees away and instead, provide them with temporary shelter; and (3) second asylum countries would accept more refugees. The purpose of the Orderly Departure Program, established under the auspices of the United Nations High Commissioner for Refugees (UNHCR), was to provide a safer route out of Vietnam. Following the conference, the number of boat departures declined but did not halt. In 1980, in response to the growing refugee movement out of Vietnam, the United States government passed the Refugee Act of 1980. This act established the first systematic and most comprehensive process for dealing with refugee admissions into the United States.

Both the politics and policies of Vietnam, and the host country of the United States, directly impacted the increase of the Chinese-Vietnamese population into the United States during the second wave period (1979–1982). Specifically, 16.1 percent of the total foreign-born Chinese-Vietnamese population living in the United States today entered during the year 1979. A substantial 41 percent of all foreign-born Chinese-Vietnamese population living in the United States today entered during the second wave. By the end of this wave in 1982, over half of the foreign-born Chinese-Vietnamese population had already entered the United States. This demographic trend differed from their coethnics, the ethnic Vietnamese, who did not reach their current 50 percent population mark in the United States until 1989. Thus, a majority of the Vietnamese refugees/immigrants entered at a later date than the Chinese-Vietnamese.

Finally, the third wave, which spanned from 1982 to the present, consists of predominantly Vietnamese refugees and immigrants. Although the previous two

waves were comprised of political refugees, this final wave is composed of people with various statuses, including Amerasians, marriage migrants, former re-education camp detainees and their families, and others who left under the Orderly Departure Program. Since their peak during the second wave, the number of Chinese-Vietnamese entering the United States has decreased every year since.

Chinese-Vietnamese Americans: Resettlement Patterns and Socioeconomic Indicators

Upon entering the United States, the Chinese-Vietnamese (and Vietnamese) refugees were originally sent to four different processing centers throughout the nation (Camp Pendleton, California; Fort Indiantown Gap, Pennsylvania; Fort Chaffee, Arkansas; and Eglin Air Force Base, Florida) and scattered throughout the 50 states via 813 different zip codes. However, many have since relocated through secondary migration to specific regions of California. According to the 2000 Census, the top five states of residency for Chinese-Vietnamese Americans are California, Texas, New York, Washington, and Massachusetts. The majority of Chinese Vietnamese (58 percent) reside in California. Within California, four metropolitan regions—Los Angeles, San Francisco-East Bay, San Jose, and Orange County—are home to 88.5 percent of the state's Chinese-Vietnamese population. Seventy-nine percent of all Chinese-Vietnamese residing in California are located in Los Angeles and San Francisco-East Bay. Not surprisingly, both regions also house two of the oldest and largest Chinatowns in the United States. San Francisco's Chinatown is the oldest in the nation and was established in the mid-nineteenth century, whereas Los Angeles's old Chinatown was founded in the latter part of the nineteenth century.

A large majority (88 percent) of the Chinese-Vietnamese population is foreign born. This number represents a complete inverse of the national portrait where 88.9 percent of the U.S. population is native born. However, a large majority (76 percent) of the Chinese-Vietnamese are U.S. citizens, including 64 percent who became naturalized citizens.

The Chinese-Vietnamese are a relatively young population with a medium age of 41, but are slightly older than the national average of 35.3. A little over one-third of their total population consists of the children of refugees and immigrants, also known as the 1.5 and second generation. The 1.5 generation, or those who entered the United States before the age of 13, are currently entering young adulthood with a median age of 24. The second generation are in their early adolescent years with the median age of 10. The population is equally distributed by gender.

The educational portrait of the Chinese-Vietnamese Americans reveals the population as less educated when compared to the national average; for instance, 43.1 percent of the Chinese-Vietnamese population does not possess a high school degree as compared to the national figure of 19.6 percent. The national Asian American percentage is identical to the U.S. national figure. When comparing the percentage of the highly educated, or those with a bachelor's or an advanced degree, the Chinese-Vietnamese's 18 percent is lower than the U.S. national figure of 24.4 percent. The Chinese-Vietnamese are behind the national Asian American figure of 44.1 percent.

In the employment sector, the Chinese-Vietnamese Americans are most likely found in service-related occupations. Only 19.8 percent of the Chinese-Vietnamese population is found in the professional and management occupations. This percentage is much lower than the national average of 33.6 percent and drastically lower than the national Asian American average of 44.6 percent.

Finally, the Chinese-Vietnamese's medium total household income at \$57,160 is much higher than the national medium total household income of \$41,994. However, it is important to note that the Chinese-Vietnamese average household size is 4.44, which is much larger than the U.S. national average household size of 2.59. Their medium total annual family income is more comparable to the U.S. national average, with the Chinese Vietnamese at \$52,550 and the national average at \$50,046. However, the medium income is much lower than the Asian American national average of \$59,324.

First-Generation Economic Adaptation and Second-Generation Identity Formation

Since arriving to the United States, the first-generation Chinese-Vietnamese Americans have been able to establish an economic foothold in their respective ethnic enclaves. Scholars have noted that the Chinese-Vietnamese were able to enter ethnic economies in the United States through their unique position as refugees who have local and international ties to the overseas Chinese community. This advantage, along with their entrepreneurial backgrounds, has led Chinese-Vietnamese Americans to owning businesses in the Little Saigons and Chinatowns throughout the United States. In fact, in the late 1970s, Chinese-Vietnamese American Frank Jao was one of the principal real estate developers who conceived of Orange County, California's Little Saigon. Today, this community is the oldest and largest Vietnamese American ethnic enclave in the United States.

The socioeconomic adaptation patterns of the 1.5- and second-generation Chinese-Vietnamese Americans are positive. A series of studies have concluded that overall, members of this group, along with their Vietnamese coethnics, are achieving educational excellence.

One of the most prevalent issues for the 1.5- and second-generation Chinese-Vietnamese growing up in the United States is that of ethnic self-identification. As descendants of both the Chinese and Vietnamese diasporic narratives, their multiple ethnic historical backgrounds avail them of numerous ethnic self-identifications, which include—although are not limited to—Chinese, Chinese-Vietnamese, Vietnamese, and Sino-Vietnamese American. In many instances, their multiple ethnic backgrounds only serve to complicate, and at times confuse, their sense of ethnic identification growing up.

There are numerous factors influencing how the Chinese-Vietnamese Americans ethnically self-identify. For example, living near an ethnic enclave influences *the choice* of the 1.5- and second-generation's ethnic self-identification. Thus, the Chinese-Vietnamese 1.5- and second-generation who grew up near the ethnic enclave of Los Angeles's Chinatown were more likely to identify as

Chinese or Chinese American. There is also an association between a county's dominant ethnic population and ethnic language knowledge. According to the 2000 Census, on a national level, 64.6 percent of all Chinese-Vietnamese Americans speak Chinese at home, as opposed to the 26.3 percent who prefer to speak Vietnamese at home. However, different patterns are exhibited when comparing the Los Angeles County and Orange County regions. In Orange County, the Chinese-Vietnamese are more likely to speak Vietnamese at home. Conversely, the Chinese-Vietnamese's Los Angeles County residents tend to speak more Chinese as compared to their Orange County counterparts. These data suggest a regional influence factor as Orange County is home to the previously mentioned large Vietnamese ethnic enclave of Little Saigon. Los Angeles County, on the other hand, is home to numerous large Chinese ethnic enclaves, including old and new Chinatowns located in downtown Los Angeles and several large Chinatowns located in the Los Angeles suburbs of Monterey Park and Alhambra.

Finally, as the 1.5- and second-generation are coming of age and are transitioning into early adulthood, other factors continue to influence their identity selection. In college, some may learn, for the first time, about their family's participation in the larger Vietnamese refugee history or how they are a part of the larger Chinese diaspora movement. In a number of instances, this knowledge has led some to alter or append their prior ethnic self-identity choice. As these individuals continue to transition into adulthood, it will be interesting to see whether identity will change in the future, and how the generations to follow will self-identify.

Ching, Fong (1864–1897)

Fong Ching (pinyin: Feng Zhengchu; a.k.a. Fung Ching, Feng Jing, Fung Wing, Fung Jing Doy, Feng

Jing Toy) was a Chinese merchant and suspected organized crime ringleader in San Francisco during the late nineteenth century. Fong became infamous for his involvement in the so-called "tong wars" of this period.

Fong was born in Nanhai, China in 1864, and immigrated to the United States as a child in the 1870s. Fong subsequently learned English at the school of the Methodist Mission and gained employment as an errand-boy in a shoe factory in San Francisco. Fong went on to work as a broker, assisting in the landing of goods and individuals. With the capital earned from this position, he founded his own shoe company in due course, which he called the "F.C. Peters & Company." Fong adopted this name for his business to appeal to non-Chinese customers, and was also known to use a white bookkeeper and white salesmen to sell his goods outside of the Chinese community. In the English language press, Fong was given the nickname "Little Pete" for this reason.

Fong first came to the public eye when he came to trial for attempting to bribe policemen in regard to his bodyguard, Lee Chuck. As a successful businessman and interpreter for the Sam Yup Company—one of the Chinese Six Companies—Fong was a prominent member of the Chinese community. Accordingly, he employed a bodyguard for protection. On October 28, 1886, an assassin named Yen Yuen attempted to attack Lee Chuck, who fended off his attacker and killed the man in the process. Lee Chuck was immediately arrested by San Francisco police; in an effort to free him, Fong supposedly attempted to bribe several policemen associated with the case. Fong was put on trial for attempted bribery and his bodyguard was put on trial for murder. This trial revealed the impressive degree of understanding that Fong had of San Franciscan politics and law; not only did Fong retain lawyers as well known and respected as Hall McAllister, but the trial revealed his connections to San Franciscan politics, such as his association with Democratic political boss Christopher Buckley. Despite the best efforts of his lawyers, in 1887, Fong was convicted of bribery and sent to Folsom prison for five years.

It was this trial that revealed his alleged involvement with the "fighting tongs," organizations among the Chinese community that were sometimes associated

with illegal interests and violence. Fong avowed membership in the Bo Sin Seer tong, the same tong to which Yen Yuen belonged; the police, on the other hand, insisted that Fong was leader of the Gin See Seer tong, a rival organization. Although the extent to which he was involved with these tongs remained unconfirmed, Fong appeared to be continually involved in conflicts seated within the Chinese community.

After finishing his sentence, Fong would become notorious for other economic ventures. The most infamous of these schemes was his fixing of horse races at the Bay District track in 1896, for which he supposedly earned a sum of between \$25,000 and \$100,000. Aside from his legitimate operations in light manufacturing, Fong was often suspected of involvement in a wide variety of illegal enterprises, such as the importation of Chinese women to work as prostitutes, and the maintenance of gambling and opium dens in Chinatown. Fong pursued many of these activities with the assistance of his family members in China as well as in the United States. On the other hand, Fong also continuously engaged with non-Chinese individuals, as shown by his friendship with Buckley and Six Companies lawyer Thomas D. Riordan, his bribery of horse jockeys, and his use of white bodyguards.

Fong was also heavily involved in cultural activities both inside and outside of Chinatown. Not only was he an owner of a Chinese theater and avid theater fan, but Fong was also connected to the Chinese exhibition at the California Midwinter Centennial Exposition of 1894.

On the morning of January 23, 1897, Fong was shot and killed by two men in a barbershop close to his residence and shoe factory. Having sent his white bodyguard C. H. Hunter away, Fong was left relatively vulnerable. After his death, two men were immediately apprehended in a nearby boardinghouse, but there was little evidence to link them to the murder. Other arrests followed, but no promising suspects were ultimately to be found. Newspaper reports speculated that Fong's murder came at the behest of various criminal "high-binder" or tong societies, or possibly as a result of the ambitions of rival businessmen. Most reports emphasized conflict between the Sam Yups and Sze Yups, conjecturing that Fong's murder was related to ongoing Sam Yup-Sze Yup enmity. His death also resulted in mutual

recrimination between the Chinese Consul-General and the police department, as the consul questioned the efficacy of police operations in Chinatown. Nonetheless, the aftermath of Fong's murder had an immediate effect on San Francisco's Chinatown; because of Fong's prominence, this had ramifications in both the United States and China. The numbers of policemen were increased in Chinatown to rein in any potential violence, particularly between individuals of the Sam Yup and Sze Yup associations. In China, at the behest of Li Yung Yen, the Chinese Consul General, Fong's death resulted in the arrest of the relatives of prominent officers of the Sze Yup association.

At his death, Fong's property was estimated to be between \$150,000 and \$500,000, with approximately \$100,000 invested in China, supposedly in fish ponds. Despite the fact that Fong spent most of his years in the United States, his life and economic pursuits were decidedly transnational. As importer, broker, and interpreter, Fong's life offers a prime example of the ways in which diasporic Chinese maintained social and economic links with China and also negotiated with the legal, social, and economic milieu of late nineteenth-century San Francisco.

Cho, Margaret (1968–)

Margaret Cho, born December 5, 1968, is a pioneering Korean American artist. A comedian, actress, writer, and social activist, the multifaceted Cho was born and raised in San Francisco, California to parents who emigrated from South Korea in 1964; she has a younger brother. She grew up on Haight Street, which Cho described as inhabited during her childhood by old hippies, ex-drug addicts, "burnouts" from the 60s, drag queens, and Chinese immigrants. Her parents owned and operated Paperback Traffic, a bookstore in the heart of Polk Street, a gay neighborhood, and she

developed close friendships with the gay men who worked in her parents' store.

Cho's birth name, Moron, was a source of bullying and early childhood trauma. At 15, she was expelled from Lowell High School after failing nearly all her classes. Her father wrote joke books in Korean, and she, too, felt the urge to make people laugh. Cho auditioned to enter San Francisco School of the Arts (renamed Ruth Asawa San Francisco School of the Arts in 2010), and participated in the high school's improvisational comedy group *Batwing Lubricant*; her first performance in a comedy club was with the group. In her senior year, she dropped out of school and traveled to Europe. Eventually she returned home and began pursuing a stand-up career, appearing in small comedy clubs and on college campuses across the country. Early in her stand-up career, she won a contest to open for comedian Jerry Seinfeld. Soon Cho became a regular guest on the late-night *Arsenio Hall Show*, and achieved national prominence

Comedian Margaret Cho at the VH1 Rock Honors The Who in Westwood, California, July 12, 2008. (Aaron Settipane/Dreamstime.com)

appearing on a prime time Bob Hope special. One of her popular routines was “Mommy,” a character based on her own mother that she summoned by tilting back her head, squinting her eyes, and rolling her l’s. In 1992 she won a small role on *The Golden Palace*, a spin-off of the sitcom *The Golden Girls*. In 1994, she won the American Comedy Award for Best Female Comedian.

Cho achieved unprecedented success for an Asian American when American Broadcasting Company (ABC) created a sitcom based on her stand-up act: *All-American Girl* (1994), the first show to center on an Asian American family. The 19-episode series, a watered-down, barely recognizable version of her raunchy, outspoken comedy routines, ran one year and starred Cho as Margaret Kim, a rebellious, second-generation Korean American in San Francisco with two brothers and traditional immigrant parents and grandmother. The mediocre show, not scripted by Cho, debuted with strong ratings, but quickly became a lightning rod for criticism and lost its audience. Viewers attacked Cho and the show’s racial and sexual stereotypes, such as the lead character’s older brother Stuart (played by B. D. Wong) who was portrayed as a meek, effeminate medical student, and cultural gaffes, such as an episode that showed her wearing a Chinese-style jacket. Because of the poor ratings, the show shifted its focus on the family and created a new pilot, recasting Cho as living with three young men in an apartment. Finally the show was cancelled in 1995. Years later Cho skewered the experience of being on the show, criticizing the television agents who silenced her and pressured her to drop 30 pounds, leading to her hospitalization for kidney failure. Cho suffered a deep depression after the show’s cancellation. She developed an addiction to drugs and alcohol, and got booed off the stage during a show at a university in Monroe, Louisiana. Cho eventually overcame her addictions and developed empowering, new material that focused on her terrible experiences working on the show, especially the pressures because of her weight and ethnicity. The new work was featured in a one-woman show called *I’m the One I Want* that toured nationally; the show was later made into a movie self-produced and self-distributed by Cho and also a book.

Cho has developed a career as a writer; she has published two books and maintains a weblog (<http://margarecho.com>), in which she writes on varied topics such as Asian adoptees and global poverty. Her work has a strong political, feminist perspective and has focused explicitly on charged topics, such as sex, drug addiction, Asian American stereotypes, and racism. Opposed to the 2003 U.S.-Iraq War, Cho became the target of hate mail and death threats after responding to comparisons of President George Bush and the German Nazi dictator Adolf Hitler, by saying, "Bush is not Hitler. He would be if he applied himself." She wrote about the experience in *I Have Chosen to Fight*, a collection of writings about global politics, human rights, and other current issues. Cho, who has written about her bisexuality, has been a longtime activist for LGBT rights. In 2007, she emceed the True Colors Tour, a 15-city, multiartist, rock concert for gay rights. She received awards for her activism from the American Civil Liberties Union, the Asian American Legal Defense and Education Fund, the Gay & Lesbian Alliance against Defamation, and the National Organization of Women.

Cho has experimented in many fields, including film acting and directing, screenwriting, fashion designing, performing burlesque, and singing. In 2002 she cofounded a short-lived clothing line called *High Class Cho*. In 2004 she began belly dancing and designed a line of belly-dancing accessories. Her first, self-written film *Bam Bam and Celeste* premiered at the Toronto International Film Festival in 2005. In 2007 she launched "The Sensuous Women," a burlesque-style variety show, and released a single "I Cho Am a Woman" in September 2008.

Cho appears regularly on television. In August 2008 she was featured in *The Cho Show*, a VH1 reality show that aired one season. The following year she had a supporting role in *Drop Dead Diva*. In 2010, she was a contestant on *Dancing with the Stars*. She married artist Al Ridenour in 2003. Cho lives in Los Angeles.

Choi, Susan (1969–)

Susan Choi is a novelist. She was born in 1969 in South Bend, Indiana, and grew up in Houston, Texas. She received her BA in literature from Yale University in 1990. After working a number of odd jobs for two years after graduation, Choi enrolled in the Creative Writing program at Cornell University where she received her MFA three years later. Choi worked as a fact checker at the *New Yorker* before turning to writing full time in 1998 after publishing her first novel *The Foreign Student*.

The Foreign Student was inspired by Choi's father's experiences as a Korean immigrant in the United States. The novel garnered high praise, received the Asian-American Literary Award for Fiction, and was a finalist for the Discover Great New Writers Award at Barnes & Noble. Choi's second novel, *American Woman*, based on the Patricia Hearst kidnapping story, was a finalist for the Pulitzer Prize in 2004. Choi's third novel, *A Person of Interest*, whose plot resembles both the Unabomber case and the Wen Ho Lee saga, was a finalist for the PEN/Faulkner award in 2009.

Although both *American Woman* and *A Person of Interest* are based on notorious crime cases whose perpetrators have gained celebrity status, Choi does not make Patricia Hearst and Theodore Kaczynski protagonists of her novels. Instead, she gives the limelight to marginalized characters. In an interview with NPR in 2008, Choi says that she is interested in stories that

“seem to have another story hidden in them, that’s not being told in the media.”

Choi coedited a collection of short stories entitled *Wonderful Town: New York Stories from The New Yorker* with David Remnick. Her nonfiction has appeared in *Vogue*, *Allure*, and *O* magazine, *Tin House*, *The New York Times*, and in anthologies such as *Money Changes Everything* and *Brooklyn Was Mine*.

Choi has received fellowships from the National Endowments for the Arts and the Guggenheim Foundation. She lives in Brooklyn, New York, with her husband Pete Wells and their two sons.

Chouinard, Bobby (1972–)

Born in the Philippines in 1972, Bobby Chouinard pitched five seasons of Major League Baseball (MLB) from 1996 through 2001. Chouinard was drafted out of high school in Forest Grove, Oregon by the Baltimore Orioles. After several years in the minors, Chouinard made his MLB debut as a starting pitcher for the Oakland Athletics in 1996. He subsequently became a relief pitcher, toiling for teams such as the Milwaukee Brewers, Arizona Diamondbacks, and Colorado Rockies. In 2005, he pitched his last professional season for Yucatan of the Mexican League.

Chow, Amy (1978–)

Amy Yuen-Yee Chow is best known as a retired American women’s artistic gymnast. Amy Chow’s parents, Nelson and Susan Chow, immigrated from Shanghai and Hong Kong, respectively. Chow, born in San Jose, California, was the first Asian American woman to win an Olympic Medal in gymnastics. At the 1996 Summer Games in Atlanta, Chow was a member of the “Magnificent Seven,” the first U.S. women’s gymnastics team to win an Olympic gold medal, and also won an individual silver medal on the uneven bars. Chow returned from retirement to gain a place on the 2000 U.S. Olympic team, which was awarded the team bronze medal. Chow has been inducted into the U.S. Gymnastics Hall of Fame (1998) and the U.S. Olympic Hall of Fame (2008) for her contributions to the 1996 women’s Olympic team, and has been recognized as an individual by the U.S. Gymnastics Hall of Fame (2005) and the San Jose Sports Hall of Fame (2004).

Amy Chow began training in gymnastics in 1981, at the age of three. Her mother initially wanted her to learn ballet, but local schools were not open to children that young. She eventually enrolled Amy in gymnastics at age five at the West Valley Gymnastic School in Campbell, California, run by Mark Young and Diane Amos. Chow was nicknamed “the Trickster” for her grace in performing difficult moves in all events. She was the first American woman to successfully complete a double-twisting Yurchenko vault and a tucked double-double dismount on the uneven bars at an international competition, and has two staldler skill variations named after her.

Chow was part of the first U.S. women’s gymnastics team to win an Olympic team gold medal in the 1996 Olympic Games in Atlanta, Georgia. At the Olympic Trials, Chow recovered after falling and hitting her eye on the balance beam to complete a difficult routine to finish fourth overall and make the U.S. team. At the Summer Games in Atlanta, Chow competed on the uneven bars and the vault finals in the team competition. She also qualified for the individual uneven bars finals, and tied for a silver medal in the event with Bi Wen Jing of China.

After the 1996 Games, Chow toured in exhibitions as a professional gymnast and began premedical studies at Stanford. Two years into her biology degree, she took a leave of absence and resumed training to qualify for the 2000 Olympics—but continued to conduct medical research at the university. Chow finished in second place in the all-around competition at the Olympic Trials. At the 2000 Olympic Games in Sydney, Australia, the U.S. women finished in fourth place in the team competition. However, the Chinese team had their third place finish revoked after one athlete was found to be under the minimum age of 16. The 2000 U.S. women's team was finally awarded the bronze medal in 2010.

Today, Chow is married and practices pediatric medicine with a sports medicine focus. Chow also trains in tower diving and had potential to qualify for the 2012 Olympic diving trials before she was injured in practice. She has also competed in the pole vault, with a personal best of 13' 5" and is an accomplished pianist.

Chu, Judy (1953–)

Judy Chu, a politician and educator, is a Democratic U.S. House Representative from California's 32nd District. Chu is of Chinese American descent and

became the first Chinese American woman to be elected into Congress in 2009.

Judy May Chu was born on July 7, 1953, in Los Angeles, California to parents who were first- and second-generation immigrants. Chu grew up in southern Los Angeles and in junior high school she moved with her family to the San Francisco Bay Area.

Chu graduated from University of California, Los Angeles (UCLA) in 1974 with a Bachelor of Arts in mathematics. Later, Chu would also earn a PhD in clinical psychology from the California School of Professional Psychology in 1979. After earning her degree in clinical psychology, Chu taught psychology at East Los Angeles Community College and Los Angeles City College. When studying in UCLA, Chu met her future husband Mike Eng, who was working on his law degree at that time. Eng is an attorney of immigration law and has been a representative in the California State Assembly since 2007. They were married in 1978 and settled in Monterey Park, California.

Chu's public service career began when she was elected to the board of the Garvey School District in Rosemead, California in 1985. In 1988, Chu left the Garvey school board after her election to the City Council of Monterey Park. Between 1988 and 2001, Chu would serve as mayor of Monterey Park for three terms. During Chu's tenure at the Monterey Park City Council, Chu would run twice for the California State Assembly, albeit unsuccessfully.

In 2001, Chu ran in a special election and was successful in her bid as representative for the California State Assembly. She represented the 49th Assembly District, which includes areas in the western San Gabriel Valley (Alhambra, El Monte, Monterey Park, Rosemead, San Gabriel, San Marino, and South El Monte). Between 2001 and 2006, she would be reelected twice (the first reelection was in 2002, when she was elected to a full term in the State Assembly). During her tenure in the State Assembly, Chu would be known for her important tax amnesty bill that helped to bring approximately \$4 billion in revenue for the state of California without raising taxes. She also sat as the chair of the Appropriations Committee and supported legislation that provided positive change to the environment, K-12 education, civil rights (especially rights of the immigrant community),

and the protection of women. According to Chu's voting records as assemblywoman, she has received high ratings from liberal organizations (e.g., Planned Parenthood Affiliates of California, NARAL Pro-Choice California, and The League of Conservation Voters).

After serving two terms in the California State Assembly, Chu was elected to the California State Board of Equalization, a state agency elected by the public to be in charge of collecting various California State taxes as well providing effective and fair tax policies. She served between 2006 and 2009.

In 2009, a Congressional seat in the 32nd District opened up after Hilda Solis was appointed and assumed office as Labor Secretary in the Obama Administration. During the initial special election, Chu garnered far more votes than fellow Democrat California State Senator Gil Cedillo and was the overall front-runner. However, because of the crowded nature of the election, she could not obtain a majority win (50+1 percent of the votes) to avoid the second round runoff. On July 14, 2009, Chu went into a runoff with Republican candidate Betty Tom Chu and Libertarian candidate Christopher M. Ag. Chu won with nearly 62 percent of the votes and became the first Chinese American woman to be elected into Congress. Chu assumed office on July 16, 2009 to join ranks with few other Asian American politicians in the 111th Congress.

In the ethnically diversified San Gabriel Valley area, Chu had built political support from her Asian American base (consisting of about 13 percent of the population in the 32nd District), and expanded to include Latino voters, organized labor, and women voters. She has served the communities of western San Gabriel Valley since her early days on the school board. Chu won reelection for a full term in 2010.

Chu, Steven (1948–)

Steven Chu, a Chinese American scientist, is a leading physicist in the world, sharing the 1997 Nobel Prize in Physics, the 12th U.S. secretary of energy, a passionate advocate for international actions to address the problem of climate change, and a leader in promoting U.S.-China scientific exchange and collaboration on this and other issues.

Steven Chu was born on February 28, 1948, in St. Louis to father Ju Chin Chu, a chemical engineering professor at Washington University, and mother Ching Chen Li, who had studied economics. As immigrants from a war-torn China with strong academic lineages, Steven's parents instilled in him and his two brothers a deep appreciation for the value of education. Growing up in Garden City, New York, where the family moved in 1950, Chu did not set, as did his older brother, the record in academic performance at their high school, but he did excel in those classes, such as geometry and physics, that interested him. Especially memorable to him was the construction of a pendulum to measure gravity.

Chu enrolled at the University of Rochester in 1966 where he was inspired by Richard Feynman's *The Feynman Lectures in Physics* and graduated four years later with a double major in mathematics and

Steven Chu, Nobel Prize winner in physics (1997) and U.S. secretary of energy (2009–2013). (Department of Energy)

physics, followed by a summer conducting research on astrophysics at the National Radio Astronomy Observatory in Virginia. In the fall of 1970 Chu, looking up to C. N. Yang and T. D. Lee, among others, as his models, went to the University of California, Berkeley, to pursue graduate studies in theoretical physics. He changed his mind after spending some time doing experimentation in the laboratory of Eugene Cummins, one of his professors. His first major experiment, conducted with Cummins and others, involved the building of laser devices to test a major theory in particle physics that was connected with Lee and Yang's Nobel Prize-winning discovery nearly two decades earlier. He received his PhD in 1976, stayed on as a postdoc for another two years, was offered an assistant professorship in physics at Berkeley but was allowed to take a leave of absence to become a visiting researcher at the famed Bell Labs at Murray Hill, New Jersey in the fall of 1978.

The excitement of doing cutting edge research within the stimulating and supportive environment at

Bell Labs proved irresistible and Chu never returned to his Berkeley post. At Bell, Chu conducted a difficult experiment with colleague Allen Mills to produce and measure, using laser beams, the energy levels of positronium, which is the most basic atom and that consists of only an electron and a positron (anti-electron). In 1983, Chu became head of the Quantum Electronics Research Department at the Bell Labs' branch at Holmdel, NJ, and soon began to work on trapping atoms with lasers with collaborators after learning of its possibility from a colleague.

Atom trapping was a field fraught with both experimental and theoretical obstacles, but Chu and his group introduced innovations, such as counterpropagating beams of laser light, "optical molasses," and magneto-optic trapping, that eventually enabled them to be among the first in the world to successfully cool sodium atoms to barely above absolute zero degree and then trap them with lasers and magnetic fields in the mid-1980s. This achievement made Chu a winner of the 1997 Nobel Prize in Physics, which he shared with Claude Cohen-Tannoudji and William D. Phillips "for the development of methods to cool and trap atoms with laser light." The development opened vast new areas of scientific research and technological applications, including the construction of atomic clocks much more accurate than existing ones.

Indeed, the atomic clock was what Chu worked on when he moved from Bell Labs to Stanford in 1987, when he felt "the urge to spawn scientific progeny." At Stanford he also worked with his graduate students and postdocs to improve laser cooling and trapping and to use the technique to solve problems in biology and polymer science. For example, he and collaborator Steve Kron developed a method (a kind of "optical tweezers") to hold and observe a single molecule of DNA. He soon became a well-known advocate for "Bio-X," interdisciplinary biomedical research drawing ideas and methods from a variety of fields such as physics, chemistry, and engineering. He also served as chair of Stanford's Physics Department from 1990 to 1993 and again from 1999 to 2001.

In 2004, Chu moved back to UC Berkeley to become a professor of physics and cellular and molecular biology as well as director of the Lawrence Berkeley National Laboratory that the university runs

for the U.S. Department of Energy. His most notable achievement at the Berkeley Lab was to reorient its considerable interdisciplinary resources toward finding solutions to two of the most critical problems facing the world today: global warming and renewable energy. He was instrumental in the establishment of two new institutions in these fields in the San Francisco Bay Area: the Joint BioEnergy Institute (JBEI), with \$135 million in funding from the U.S. Department of Energy, and the Energy Biosciences Institute (EBI), funded by a \$500 million grant from British Petroleum. Chu's concerns over climate and energy also led him to speak out internationally, including in China, for taking actions to address these problems.

Because of both his scientific stature and his advocacy on global warming and renewable energy, Steven Chu was nominated by Barack Obama as his secretary of energy in late 2008. The appointment, which was confirmed by the U.S. Senate in early 2009, was met with widespread approval from the American scientific community. In announcing Chu's appointment, Obama called it a sign that the new administration would respect science and take seriously the threat of global climate change. In his new position he has worked to implement Obama's ambitious plans to invest in alternative and renewable energy, to create millions of new, clean-energy jobs, and to curb global warming. He has also traveled to China to encourage the Chinese government and the Chinese scientific community to work with the United States to find solutions to the problem of global climate change. In this regard, his identity as a Chinese American scientist and his long-standing collaboration with Chinese scientists—he was elected both a member of the Academia Sinica in Taiwan and a foreign member of the Chinese Academy of Sciences in Beijing—have proved to be an asset.

Chu resigned as secretary of energy in 2013 and returned to Stanford University.

Chung, Connie (1946–)

Connie Chung is a Chinese American journalist and news anchor. She became the first Asian and the second woman to anchor a major American network news show. Over her career, Chung took positions at CBS, ABC, CNN, and NBC, and conducted numerous exclusive interviews. She has won several awards, including a Peabody and three Emmys.

Chung was born in Washington, D.C., on August 20, 1946, with the given name Constance Yu Hwa Chung. Her father, William Ling Chung, was a prominent diplomat in the Nationalist government in China. Because of the Japanese invasion, the Chung family had fled to Washington D.C. in 1944. Five of the family's eventual ten children died in China. Chung was the only one born in the United States.

Chung's initial career dreams were far from journalism. Growing up in a Maryland suburb, she fantasized of being a ballerina. As a college student at the University of Maryland, her major through her junior year was biology. However, a junior summer internship with a congressman changed everything. Chung was able to see reporters in action for the first time, and became interested in writing. She returned to college and changed her major to journalism. She was subsequently hired by WTTG-TV in Washington. Reflecting on her career choice in a 2011 interview, Chung said, "For a small, diminutive-sized Chinese person who grew up in a very loud family and never spoke up in my life, it was very dramatic."

At WTTG, she was promoted from copy editor to news writer, assignment editor, and then finally reporter.

After two years there, Chung was hired by the CBS News Washington Bureau as a news correspondent. There, she reported on George McGovern's unsuccessful presidential campaign, President Richard Nixon's trips to the Soviet Union and the Middle East, the Watergate hearings, and the vice presidency of Nelson Rockefeller. During the Watergate scandal, Chung received an exclusive interview with President Nixon.

During her early journalism career, Chung was not sure if racism played a role when people gave her a difficult time. She notes she was "young, inexperienced, female, and Chinese," any of which could have caused harsh criticism. Nevertheless, she always faced claims of bias and other journalistic criticism with humor. Chung does, however, attribute her CBS position in part to her gender and race. She suggests CBS chose to compensate for years of discriminating against minorities and women by hiring four women, one being Chung.

In 1976, Chung became a news anchor at KCBS in Los Angeles. At KCBS she won numerous awards, including Best Television Reporting from the Los Angeles Press Club in 1977, local Emmy awards in 1978 and 1980, and a George Foster Peabody Award. Chung then moved to the national stage in 1983, as she accepted an anchor position on NBC News at Sunrise in New York City. In addition, Chung also regularly contributed to the NBC evening news, coanchored the Saturday evening news, and produced numerous prime-time documentaries. In 1984 Chung married fellow television host and longtime friend Maury Povich. The two eventually adopted a son.

During this period she produced perhaps her most personal piece—a five part series on her personal reconnection to relatives in China. Although her parents and four older sisters fled China in 1945, the rest of her family stayed behind. The series was a deeply personal one; Chung was the first of her family to return to China. She interviewed her own relatives and visited her grandparents' graves. Her series provided a new personal perspective into China's hardship caused by war and cultural revolution.

Chung attributes her own drive and ambition indirectly to her cultural heritage. Five of her siblings, including her brothers, had died in China before the family had left with the four remaining daughters.

Without boys, the family legacy could not continue as women traditionally join the family of their husband. Chung remarked she was thus motivated to compensate for this by somehow making the "Chung" name significant.

In 1989, Chung returned to CBS as a coanchor on its Saturday and Sunday evening news programs. Four years later, Chung became coanchor with Dan Rather on the *CBS Evening News*, thus becoming the second woman and first Asian American ever to coanchor a major network news evening program. During this time she also hosted her own newsmagazine, *Eye to Eye with Connie Chung*. Her program presented a combination of serious news and entertainment stories but created controversy when she interviewed Kathleen Gingrich, the mother of then Speaker of the House Newt Gingrich. Chung asked what her son thought of then First Lady Hillary Clinton, a question that caused Kathleen to hesitate. Chung then said she could whisper, and that her answer would be between them. Many viewers, journalists, and Congressman Gingrich himself felt that Chung had entrapped and manipulated the elderly Kathleen Gingrich into responding.

In addition to concerns over her interview style, Chung's coanchor Rather was rumored to be upset with sharing the anchor seat. For these reasons, CBS informed her that it was demoting her from her coanchor weekday evening position to the position of weekend anchor. Chung declined the offer and chose to be let out of her contract. Chung then moved to ABC News, where she hosted *20/20*, a Friday night newsmagazine. There she was the first journalist to interview Congressman Gary Condit after the 2001 disappearance of intern Chandra Levy. In 2002, she moved to CNN to host her own show, *Connie Chung Tonight*. The show was harshly criticized by CNN founder Ted Turner and canceled after one year.

Chung then hosted an MSNBC news show with her husband entitled *Weekends with Maury and Connie*. The show performed poorly in the ratings and was shortly canceled. Chung then began a teaching fellowship at Harvard Kennedy teaching fellowship.

A trailblazer in every sense of the word, Chung's career brought the first Asian American and female face to national news prominence. But Chung herself prefers the label Asian over Asian American.

She considers herself as “American as anybody” but suggests the Asian American label as implying half and half. Both of her parents are Chinese, so she considers herself “just Chinese.”

Chung, Eugene Yon (1969–)

Eugene Chung is a former professional football player and the first Asian American to be selected in the first round of the National Football League (NFL) draft. Prior to Chung, only a few other persons of Asian descent had ever played professional football in the United States. Born in Prince George’s County, Maryland, Chung attended Virginia Tech and was one of the nation’s top college offensive linemen when drafted in 1992.

Chung grew up in northern Virginia, the third of four boys. His father, Choon Chung, had emigrated from Korea to the United States in 1956, only a few years after the end of the Korean War. Chung’s father subsequently studied at City College of New York, Columbia University, and Yale Law School. It was in the United States that Chung’s parents met. His mother, also a native of Korea, was a pianist. She passed away in 1980, when Chung was 11.

As a teenager Chung played varsity football at Oakton High School in Vienna, Virginia. Though not

heavily recruited by college football programs, he went on to play at Virginia Tech, where he made the starting lineup as a redshirt freshman. The following year Chung started every game, and was voted the team’s most outstanding offensive lineman. He earned that distinction again in 1990, his third season, when he allowed only one quarterback sack. In his senior year, the now 6-foot 5-inch, 290-pound Chung was named All-Big East Conference (First Team) and a Football Writers’ Association All-American. He would become Virginia Tech’s first offensive player to be chosen as a first-round NFL pick.

Chung was drafted by the New England Patriots in 1992 as the 13th selection overall. Despite a difficult start to his rookie season—the sudden loss of his father, contract difficulties, and a hip injury—he started 30 out of 32 games in his first two years with the Patriots. Chung played for a total of five seasons in the NFL: three with New England (1992–1994), one with the Jacksonville Jaguars (1995), and one with the Indianapolis Colts (1997). In 2008, Chung was inducted into the Virginia Tech Sports Hall of Fame. He has stayed involved with football, and is currently on the coaching support staff for the Philadelphia Eagles.

Churches and Ethnic Identity

The tensions between Asian ethnic identity and the dominant culture have existed in the Asian ethnic church since the late nineteenth century when growing numbers of immigrants and converts necessitated the start of Asian-language churches. Other than a few on

the West Coast, the majority of Asian American churches existed in Hawaii at the turn of the century. Although the number of Asian-language churches grew in the early twentieth century, they faced increasing hostility during the interwar years when the Americanization crusade that began on the mainland to assimilate European immigrants spread to Hawaii where Chinese-, Japanese- and Korean-language churches and worship services were started in nearly every plantation.

For Chinese, Japanese, and Korean American Christians in Hawaii, a great deal of effort went into starting ethnic church that would become the benchmark of their immigrant experience. Although the church's primary function was religious in nature, the church was also the educational, social, and political epicenter of their community where English and ethnic language classes were taught, business networks and relationships were nurtured, community activism and mutual aid societies were organized, works of charity undertaken, and political action groups mobilized. But ethnic culture in the churches had its dissenting voices from the outside as well as within Asian communities that called for greater acculturation to American culture. The proponents of acculturation in Asian communities argued that ethnic churches stunted the process of assimilation and unnecessarily delayed the immigrants' adjustment to mainstream society, but ethnic church leaders contended that ethnic churches facilitated Americanization because of its assistance programs that taught them English and survival skills in a new country. Without the ethnic church that eased the harsh realities of rootlessness and alienation experienced by all foreigners who entered the United States, they argued, immigrants faced a greater sense of disengagement and demoralization.

During the interwar years, the children of Asian immigrants in Hawaii experienced the "100 percent Americanism" campaign that questioned the patriotism of their parents and Asian ethnic churches. Korean, Chinese, and Japanese language schools that sprouted across the plantations were closed under nativist pressure. For Japanese American Christians in particular, the painful experience as "enemy aliens" interned in camps during World War II made them acutely aware of the ways in which race and ethnicity

can question their loyalty and patriotism. After World War II, the forces of religious Americanization prevailed, but in the process the Americanization of ethnic churches has meant a distinct loss of the sense of creative initiative from a particular cultural context. For example, when many Japanese American churches ceased to exist as a separate organization and joined their mainline denominations, the cultural bonds that promoted local autonomy, culture-specific programs, and expressions of Japanese heritage dissipated. Responding to the pressure to Americanize, the First Korean Methodist Church in Honolulu, the first Korean American Protestant Church in the United States, dropped its ethnic name in 1965 and adopted the name Christ Methodist Church.

Interestingly, around the same time, President Lyndon B. Johnson signed the 1965 Immigration and Nationality Act that led to the unprecedented increase in Asian immigrants. Not long after the immigration law was enacted, the number of new Asian immigrants surpassed the population of Asian Americans before 1965. Subsequently, the number of Asian-language churches proliferated in a post-Civil Rights era when ethnic churches felt greater ease than in generations past to exercise their faith in an ethnic context. Asian immigrant churches of nearly every Asian nationality have thrived across America. In addition to the diversity of Asian ethnicities, the denominations within Protestantism have made for the cacophony of Asian ethnic churches, a collection that includes, as a small sampling, Calvary Hmong Alliance Church in Spartanburg, South Carolina, Indonesian Pentecostal Revival Fellowship in Pomona, California, Japanese American United Church in New York City; Vietnamese Evangelical Church of North Hollywood; and the First Burmese Baptist Church of San Francisco.

The prevalence of Asian ethnic churches of many denominations indicates not only the coalescence of ethnicity and faith but, more important, the enduring phenomenon of practicing faith within the language and context of an ethnic culture. In addition, the vast majority of Asian ethnic churches, like the Church of the Transfiguration in New York's Chinatown, the largest Chinese Roman Catholic congregation in the United States, hold services in multiple languages. Bridges Community Church in Fremont, California,

holds Sunday services in six languages: English, Mandarin, Cantonese, Filipino, Deaf, and Romanian. Korean immigrant have the largest number of churches among all Asian ethnic groups with 4,000—1,300 are in Southern California. Although most Asian immigrant churches remain small and medium in size, over thirty churches have more than a thousand members, a few reaching six thousand and above.

According to the 2008 Pew Forum Survey, 45 percent of Asian Americans are Christians with 27 percent identified as Protestant and 17 percent Catholic. With a significant portion of the Asian American population affiliated with Christianity, many second-generation Asian Americans cultivated their Christian faith in an Asian ethnic church. For example, former New York Knicks point guard Jeremy Lin grew up in Northern California where he and his family attended Chinese Church in Christ where services in both English and Mandarin are offered. The former secretary of commerce and later transportation, Norman Mineta, who as a boy was incarcerated in internment camps during World War II, attended Japanese Methodist Church in San Jose, California with his family and remained active in his ethnic church.

Among the more compelling traits of second-generation Asian American Christians is their religious participation during college. Scholars have shown the increasingly important role ethnicity has played in the identity formation of Asian American adolescents and college students. Among top-tier colleges, Asian American college students dominate Christian campus organizations. UC Berkeley has as many as 64 Asian American Christian organizations. Overall, 80 percent of evangelical Christian groups at UC Berkeley and UCLA are made up of Asian Americans. Among UCLA's many Asian American Christian groups, more than 10 are Korean American. At Yale University's Campus Crusade for Christ, an evangelical group for undergraduates, about 90 percent are Asian American. At Stanford, the InterVarsity Christian Fellowship (IVCF) has become almost entirely Asian American. IVCF, one of the largest parachurch organizations serving college campuses, created a separate ethnic ministry for Asian Americans because of their high number. Included among the 30-plus Asian

American chapters in IVCF is the Harvard-Radcliffe Asian American Christian; Jeremy Lin later credited his Harvard Christian Fellowship for deepening his faith journey.

Despite the compelling evidence of the importance of ethnicity to the faith formation of Asian Americans, some second-generation Asian American church leaders reject ethnicity in the life of their churches: they model themselves to the dominant, white Evangelicalism, a movement that has historically been reluctant to address or rectify racial issues. These Asian American churches maintain an ambivalent existence as an ethnic church that is resistant to assimilation yet vocally opposed to ethnicity. By their rejection of ethnic culture, they accelerate the process of assimilation and move the Asian American Christian community toward what a scholar called a "culturally *nonethnic*" church community, despite the desires of many to preserve aspects of their heritage.

Clay, Bryan (1980–)

Bryan Ezra Tsumoru Clay overcame a dysfunctional childhood and athletic obscurity to become one of the greatest decathletes in Olympic history. Born in Austin, Texas, on January 3, 1980, to a Japanese American mother and an African American father, Clay and his family moved to Oahu when he was five. But Clay's parents divorced, and his mother, Michele, remarried when he was still in elementary school. Clay reacted negatively by getting into fights, neglecting his studies, stealing liquor from stores, experimenting with drugs, and even flirting with suicidal thoughts. It was not until he joined the Kailua Track Club, coached by Duncan Macdonald, a former Olympian who was once the American 5,000-meter record holder, that his life started to turn around. Clay found solace on the track

and, with Macdonald pushing him, he began to see his potential for athletic success. At James B. Castle High School, Clay was known for his versatility. He would often compete in six events each meet and, during his senior year, he won four gold medals and broke three records in the state track and field championships.

In his sophomore year at Castle, Clay attended a clinic on Maui and met Chris Huffins, the bronze medalist in the decathlon at the 2000 Olympics. Huffins persuaded him to consider the grueling event and introduced him to Kevin Reid, head coach at Azusa Pacific University. Clay went on to attend the university, a small Christian school that competed in the National Association of Intercollegiate Athletics (NAIA). There, he met his future wife, Sarah; and became a 23-time NAIA All-American, winning

U.S. athlete Bryan Clay competes in the men's decathlon 110 meters hurdles race in Goetzis, Austria, May 28, 2006. (AP Photo/Kerstin Joensson)

championships in the decathlon, pentathlon, and long jump. Around the same time, he also achieved a sense of peace in his personal life. He devoted himself to Christianity and, with the support of his stepfather, Clay began to reconnect with his biological father, Greg. In 2003, Clay graduated with a degree in social work and committed himself to the 2004 Athens Olympics under the tutelage of Reid, who still coaches him today. At the Olympic trials, he upset the defending world champion in the decathlon, Tom Pappas, as his entire family cheered from the stands.

Despite his stunning victory over Pappas, many experts believed that Clay, who stands just 5-feet-11 inches tall and weighs 174 pounds, was not even the best decathlete on the American squad at Athens. Still, he finished first in the 100-meter dash and the long jump, and second in the javelin and discus throws en route to a career-best score of 8,820 points—the second highest total ever by an American and fourth-best in Olympic history. Were it not for a record-setting performance by the Czech Republic’s Roman Sebrle, who finished with 8,893 points, Clay would have earned a gold medal instead of a silver. The two decathletes, who would go on to become close friends, squared off again at the 2005 World Championships in Helsinki. However, this time it was Clay who finished in first place, 211 points ahead of Sebrle.

In 2006, Clay captured the silver medal in the heptathlon at the World Indoor Track Championships in Moscow. But he left the arena disappointed by the fact that he led by 28 points headed into the final race, only to lose by five points. Clay’s momentum continued to slow in 2007, as injuries kept him out of the national and world championships. But 2008 proved to be a momentous year, starting with a gold-medal victory in the heptathlon at the 2008 World Indoor Championships in Valencia, Spain. Five months later, he put on a stunning athletic performance at the Beijing Olympics. Under the bright lights of the 91,000-seat stadium known as the Birds Nest, he endured two 11-hour days of competition and torrents of rain to win the decathlon in convincing fashion. Clay led the event from beginning to end, and even set a decathlon Olympic record in the discus with a throw of 176 feet and 5 inches. In addition, he finished first in the 100-meter dash and the long jump; second in the shot put and 110-meter

hurdles; and third in the pole vault and javelin throw. Clay, the shortest Olympic decathlon winner in history, earned a final score of 8,791 points, and his 240-point margin of victory over Andrei Krauchanka of Belarus was the largest since 1972. When the final race was over, Sebrle, the sixth-place finisher who once believed that Clay was too small to seriously compete in the event, approached his friend and raised his arm triumphantly in the air.

By winning the gold—and with it the unofficial title of “world’s best athlete”—Clay vaunted himself into exceptional company. His victory was the fifth overall for the United States in the event, and the first since Dan O’Brien starred in the 1996 Atlanta Olympics. Moreover, Clay’s two Olympics medals in the decathlon represent a feat that only a handful of his predecessors have achieved. *Track & Field News* subsequently named him the U.S. Athlete of the Year in 2008, and USA Track & Field (USATF) awarded him the Jesse Owens Award as the sport’s top athlete. Rather than rest on his laurels, Clay continued to compete at a high level. A hamstring injury derailed his hopes for a world title in 2009, but he bounced back with a strong 2010 campaign, winning the heptathlon at the World Indoor Championships as well as the decathlon in the combined events challenge known as the Hypo-Meeting. Though another hamstring injury prevented him from competing in the 2011 World Championships, Clay is healthy once again and training six days a week for an unprecedented third Olympic medal in the decathlon.

In addition to his track accomplishments, Clay has found time to give back to others. The Glendora, California, resident founded the Bryan Clay Foundation in 2005 to help children reach their personal potential and initiated a Walk for Wellness campaign to address national budget cuts in physical education and healthy living. For his efforts, he was named the 2011 Visa Humanitarian of the Year by USATF. When he is not working with his foundation or training, Clay enjoys spending time with his wife and three children. In 2012, he published an autobiography titled *Redemption: A Rebellious Spirit, a Praying Mother, and the Unlikely Path to Olympic Gold*.

Cohota, Edward Day (d. 1935)

Edward Day Cohota fought in the Union’s volunteer army during the Civil War and then served for 30 years in the regular army. Nevertheless, he was denied naturalization. Protesting, “I, if anyone, have earned the right to be pronounced a citizen of the United States,” he personally carried his fight to Congress (Pension Records).

Born near Shanghai, China, Cohota was taken to Gloucester, Massachusetts as a boy by Sargent S. Day, captain of the *Cohota*, who was retiring from the sea. Cohota and Day’s children referred to each other as brother and sister all their lives, and Cohota named two of his own for them. He was said to attend school, and he expressed himself well in letters as an adult. At his enlistment in the Twenty-Third Massachusetts Voluntary Infantry on February 12, 1864, however, Cohota made an X in place of a signature, and he gave his occupation as a seaman. Furthermore, Sargent Day signed a *Consent in Case of Minor* form, yet gave Cohota’s age as 18, and Cohota’s daughter Lucy wrote “15” in green ink above the “18” beside his name in the family’s copy of the regimental history.

As a soldier, Cohota proved both lucky and generous. He emerged from the dense fog and fierce fighting of Drury’s Bluff with seven bullet holes through his uniform but his skin unmarked. And at Cold Harbor,

where 7,000 Union soldiers fell in a single hour, his sole injury came from a minie ball that grazed his scalp, parting his hair permanently. In the same battle, Cohota saved the life of a severely wounded comrade, carrying him to the shelter of a rock shaded by trees, then returning after the fight was over and carrying him to an ambulance station in the rear.

At the war’s end, Cohota joined the regular army’s Fifteenth Infantry, Company H, and he continued to reenlist until 1894. Two years earlier, he’d been banished in disgrace from Fort Sheridan and sent to Fort Niobrara for selling liquor and keeping a gambling house. Cohota was open about his gambling, telling a reporter for the *Chicago Tribune* he’d won \$1,400 placing wagers on the successful Republican candidate for president in 1890. Moreover, he intended to claim the citizenship he’d earned as a Civil War veteran after he returned to civilian life, “and when I feel like voting I would like to see Dennis Kearney try to deny me my right.”

Settling in Lincoln, Nebraska, Cohota voted in six elections before he was challenged and a judge ruled that exclusion barred him from citizenship. His attempts to have the case reconsidered failed despite the sympathy of Nebraska’s assistant attorney general. So he sought the help of Nebraska’s senator, who agreed to intercede on his behalf. When nothing happened, Cohota traveled to Washington and appealed directly to his representative in the House, who brought the matter to the chairman of the immigration committee. “The representative looked through the laws in a sympathetic endeavor to find some statute that would permit the Chinaman to claim citizenship and give him the right of franchise, but could find none” (*Washington Post*).

Even after these denials, Cohota apparently harbored no bitterness toward America. As an old man living in the Battle Mountain Sanitarium for Veterans in Hot Springs, South Dakota, he would frequently go outside at flag-down and stand uncovered and at attention to demonstrate his reverence and respect.

Cohota died on November 18, 1935. A Master Mason, his last rites were performed at his burial in Valentine by the Minnechadusa Lodge No. 192 two days later.

College Students

Today, Asian American college students are in a different place. With academic success has come a sense of increased social acceptance and assimilation as well as socioeconomic mobility. Unlike previous generations, Asian American college students have greater access and increased opportunity. And yet they still face a number of limitations. Even though college is a space imagined to be full of freedom and opportunity, many Asian American students continue to negotiate expectations from family and society with their own aspirations. Even in a supposed post-racial moment, Asian American students cannot escape racialization. As a result, Asian American college students wrestle with dilemmas and tensions that are a result of conflicting meanings of higher education and fluctuating levels of significance of Asian American racial identity.

Educational Attainment

Currently, Asian Americans are the fastest-growing racial minority group in U.S. higher education. Between 1995 and 2005, Asian American enrollment increased by 37 percent with more than 1 million in college. By 2006, 61 percent of Asian Americans between the ages of 18 and 24 were enrolled in college. This compared with 44 percent of white, 32 percent of African

Americans, and 25 percent of Hispanics and American Indians. Asian Americans also have the largest percentage of adults with a bachelor’s degree or more education. In 2008, 53 percent of Asian Americans ages 25 and older had a bachelor’s degree or higher level of education. This compares with 33 percent for non-Hispanic whites, 20 percent for blacks, and 13 percent for Hispanics.

Because of statistics such as these, universal academic success for Asian Americans is widely assumed. The diversity within the Asian American racial category and wide variations among students’ experiences, however, are often overlooked. For instance, when data is disaggregated, Asian American educational achievement is actually bimodal in nature with both high rates of college completion and low rates of high school retention. Significant differences also exist among achievement rates for different Asian ethnic groups. In 2006, 69 percent of Asian Indians ages 25 and older had a bachelor’s degree or higher education. By contrast, 26 percent of Vietnamese Americans 25 and older had a bachelor’s degree or more education.

There are also significant differences among the types and locations of institutions of higher education that Asian Americans attend. For example, in the University of California (UC) system, Asian Americans are the largest, single racial group, comprising the highest percentage among racial groups on the majority of 9 undergraduate campuses. In the fall of 2006, Asian Americans comprised approximately 46 percent of the incoming freshmen class at UC Berkeley, 43 percent at UC Davis, 43 percent at UCLA, and 56 percent at UC Irvine. Other elite, private universities also had significant Asian American freshmen enrollment: Stanford, 24 percent; Harvard, 18 percent; and MIT, 27 percent. Although a number of Asian Americans do attend elite colleges and universities, they also have high levels of enrollment at two-year institutions. In fact, more than 40 percent of Asian American students in U.S. higher education attend community colleges. Asian American enrollment in two-year community colleges is increasing at a faster rate (73 percent) than their enrollment in four-year private (53 percent) and public (42 percent) institutions. Asian American college enrollment is also concentrated in particular geographic locations. In 2000,

two-thirds of Asian Americans enrolled in college attended schools in only eight states.

Issues and Challenges

Behind the veil of Asian American educational success are a number of other stories. High levels of Asian American enrollment on certain campuses, relative to the overall Asian American population, have caused Asian American students to be frequently viewed as “over” represented. This “over” representation, in turn, has led to instances of institutional discrimination. During the 1980s, controversy emerged regarding Asian admissions at top universities, including UC Berkeley, Brown, Stanford, Princeton, and Harvard. When Asian American enrollment noticeably decreased on these campuses, questions were raised about changes to admissions policies. Investigations at several of these campuses produced mixed findings ranging from the unfair implementation of racial quotas to admissions’ criteria adjustments that happened to result in lowered acceptance rates of Asian American students. Incidents such as these compel Asian American leaders to remain vigilant regarding institutional decisions that have the potential to negatively impact Asian Americans’ access to higher education.

Incidents such as these also highlight the peculiar position that Asian Americans have in higher education. Although they are viewed as “over” represented, higher education has been and continues to be primarily defined by black and white experiences. Thus, Asian Americans remain peripheral. They are the “wild card” in the racial politics of higher education, used (or not) in arguments for and against issues such as diversity, affirmative action, and educational achievement. And because Asian American college students are assumed to be doing well on their own, they are also invisible. Their voices, issues, and needs are often overlooked by university administrators, faculty, and staff as well as education researchers.

The invisibility of Asian American college students also obscures the dilemmas and tensions with which they wrestle on an individual level. Although they bring a myriad of expectations—expectations of college life, what they will do, and who they will

become—Asian American college students must negotiate personal aspirations with expectations from community and family, particularly parents. This is often the case with students’ choices of academic majors and career paths. A number of Asian American students tend to choose majors which lead to jobs that are understood to be stable and lucrative. It is more common for the children of recent immigrants to choose these paths; these choices often stem from feelings of obligation for what their parents have sacrificed on their behalf. Some Asian American students only receive support from parents, including financial assistance, if they pursue a career path that the parents deem acceptable. Other students find ways to compromise by choosing majors and career paths that are less desirable for their parents, though still acceptable, yet more in line with the students’ abilities or interests. In fact, many Asian American students must renegotiate their expectations and aspirations when they meet the realities of college life. They find that classes in certain fields are more difficult than they originally anticipated, or discover interests and passions in completely different fields. These processes of negotiating expectations further underscore the complexities and varieties of Asian American college students’ experiences.

On-Campus Clubs, Organizations, and Resources

When Asian American students enter college, they gain new freedoms and opportunities. For many of them it is their first experience living apart from family. Quite often, students enter college without established social circles and are able to choose with whom they will and will not associate. Colleges and universities are different from a number of other social institutions in that there is significant emphasis on diversity, particularly racial diversity. Many campuses have student populations that are far more the diverse than the neighborhoods from which students come. However, racially diverse student populations do not necessarily result in interracial interactions. In fact, there is a tendency for students in multiracial settings to prefer and develop close associations with same-race peers. Same-race living arrangements, campus clubs and organizations, fraternities and sororities,

peer groups, and even dating patterns are often the norm on campuses with multiracial student populations. And it is not uncommon for a majority of on-campus clubs and organizations to be race- or ethnic-specific. At the same time, debates continue to exist over whether participation in same-race organizations, clubs, and peer groups is counterproductive to diversity efforts or whether it is still a necessity for students' well-being.

Even though Asian American college students may explore their individual freedoms and engage in self-discovery, they are often pulled toward a variety of group identities. Although some Asian American students prefer to engage in diversity and socialize with students from a variety of racial backgrounds, others prefer to socialize with other Asians. However, as students attempt to assimilate or engage in racial diversity, they frequently find that there is a limit to their integration and difference is maintained along the lines of race.

Reasons for separation along racial lines are still widely debated. These tendencies have been attributed to the particular stage of racial identity development that Asian American students are in during their college years. Another possible reason for the tendency of Asian American students to primarily socialize with other Asian Americans is the need to validate their perspective as racial beings and create spaces for resisting stereotypes. And a third reason for the appeal of same-race peer groups is students' assumptions that shared race automatically means similar cultures, backgrounds, experiences, and perspectives. Students tend to search for spaces that are comfortable and safe. Many Asian American students find these safe spaces among other Asian Americans because shared race is often assumed to mean shared bonds.

The need for "safe spaces"—spaces in which Asian American students feel as though they belong—has also led to the creation of formal spaces on campus to help support these students. Asian and Asian American resource centers are a common form of institutionalized space for Asian Americans. Resource centers offer Asian American students a physical space in which to organize and socialize. At several colleges and universities, there are also Asian American-themed residence halls. This housing option is

available to any student, no matter their race, but tends to attract Asian and Asian American students as well as students who are interested in Asian American cultures and issues.

Although some efforts have been made to support Asian American college students, one important area that remains insufficiently addressed is that of mental health services for Asian Americans on campus. Because Asian American students are often perceived as doing well, little attention is given to their emotional and mental well-being. This is problematic because they must deal with a number of issues, such as significant pressures from family or racial discrimination, on their own.

Offering much needed support to students are Asian American Studies programs and departments. The field of Asian American Studies and a number of institutionalized departments and programs are one result of a larger moment, led by college students and faculty, to make education relevant to students of color and to address and meet the needs of their communities. Asian American Studies programs and departments continue to be a key space for Asian American college students to learn about and examine Asian American experiences and issues. It is also a space in which Asian American identities are affirmed and explored. Currently, there are over 50 U.S. colleges and universities that have Asian American Studies departments and programs, the majority of which were created as a result of student protests that spanned the last four decades. The struggle for institutional support and resources is ongoing, though the viability of Asian American Studies programs and departments is largely based on their ability to remain relevant to the issues and needs of shifting Asian American demographics.

Racial Identity Formation

College is an important space for the formation of Asian American students' racial identities. Asian American students enter higher education with a range of views about themselves, other people, and the world they live in. They come to college with racial identities and perspectives on race that have been shaped by their families, peer groups, and communities. Still,

many Asian American students find that their racial identity becomes increasingly salient during college and must negotiate how and with whom to identify.

In this transitional moment, higher education serves multiple purposes for Asian Americans. On the one hand, college is a space in and through which Asian Americans can re/make themselves. This works particularly well because meanings of higher education lend themselves to such purposes. College is already viewed as a key space for students to explore various opportunities and discover who they want to be and what they want to do. It is a site of strategic navigation as students make sense of what is possible. On the other hand, higher education remains a persistent socializing tool through which the racial status quo, including ideas of Asian Americans as a racial “other,” is perpetuated. Even with the institutional changes over the years that have often come as a result of struggles (including increased emphasis on diversity, addition of ethnic studies, and other provisions for racial minorities), students of color continue to be racialized. Behind the discourse of freedom, opportunity, and possibility, Asian American students cannot escape racialization. The dominant perception of Asian Americans as a “model minority” is emphasized and perpetuated in this context. And their status of racial “other” remains.

Throughout college, Asian American students experience a disconnect between simultaneous freedoms and limitations. At times, their racial identity seems to be irrelevant. They can engage in diversity, and being Asian American seems to have little bearing on their lives. In these instances, Asian American racial identity is understood to be more of a personal choice and a cultural activity than a social reality. There are times, however, when their racial identities are inescapable. Asian American students can very quickly be relegated to the status of racial other. The contradictions of the discourse of diversity and their everyday experiences, of race not mattering but still very much mattering, must be managed by these students.

As a result of the multiple functions of higher education, Asian Americans emerge from college with a variety of views on and understandings of Asian American racial identity and its importance. Much of their college (and pre-college) experiences suggest that race does not or should not matter. Multicultural or

homogeneous perspectives perpetuated through K-12 schooling, diversity rationales in higher education, and current discourse surrounding higher education (i.e., freedom, possibility, moving beyond race) all indicate that Asian American students have the ability and opportunity to reposition themselves. And yet these students are still racialized, some more intensely than others. Asian American college students continue to be positioned (or repositioned) in ways that bring about uncertainties and dilemmas regarding the importance and meaning of their racial identities. Many of these students emerge from college viewing their racial identity as a choice, a cultural choice at that, even if their everyday experiences and interactions tell a different story. As such, Asian American college students’ experiences and the dilemmas with which they must wrestle offer insight into what is possible for their lives—who they will become and what they will do—as well as a window into the flexibility and trajectory of Asian American racial identity.

Comfort Women

On December 14, 2011, CNN captured elderly Korean women (also referred to as *halmoni*) protesting with fists raised and, among them, younger Koreans standing in solidarity in front of the Japanese Embassy in South Korea. These women protested at their "1,000th rally for justice" and are not just any elderly Korean women; they are "comfort women." In 1992, surviving comfort women in Korea organized and began protesting every Wednesday in front of the Japanese Embassy, requesting that the Japanese government formally apologize for the war crimes that were committed against them. They continue to protest and to date only 63 Korean women of a total of the 1,000 women around the world are alive to testify about the war crimes against them that occurred in the first-half of the twentieth century. Who are these women, what story is it that they invoke and tell, and why do they matter to an Asian American community?

Comfort women have many names. In Japan they are referred to as *Jūgun ianfu*, which translates to comfort women. In Korean, *Chōngshindae* translates to "Women's Volunteer Labor Corps" illustrating the coercive elements of their recruitment—recruited *Chōngshindae* assumed they would work in Japanese factories. They are also referred to as *Halmoni* (grandmother) as a form of respect. And, similarly in the Philippines, they are referred to as *Lolas* (grandmothers). In English, including the Japanese translation of Comfort women, they are referred to as "sex slaves" because of the mass mobilization that began in South Korea and Japan to raise awareness surrounding the exploitation of the comfort women system. It is estimated that anywhere from 20,000 to 400,000 women and girls from Korea, Taiwan, the

Philippines, Indonesia, Okinawa, East Timor, and Guam were recruited as comfort women into wartime sexual slavery by the Japanese military. The Japanese government listed the women as military materials and a majority of the comfort women died in a life of sexual slavery, suggesting that there are no concrete numbers. It is estimated that a mere 25 percent to 35 percent of the total comfort women survived at the end of World War II.

In the late eighteenth and early nineteenth centuries, recruitment of Japanese prostituted women, *Karayuki*, was a practice of the Japanese government. Japanese recruitment of comfort women that were not only Japanese, but women and girls from occupied territories, began during the Sino- and Russo-Japanese Wars (1894–1895, 1904–1905). But it was not until the Nanjing Massacre of December 1937 that the comfort women system became a full-scale operation. In Shanxi, China, testimonies indicate that women and girls were both randomly raped as well as systematically prostituted in Japanese "comfort stations" or brothels. It is estimated that Korean women and girls made up 80 to 90 percent of those recruited to be comfort women and they were primarily from Kyongsang and Cholla Provinces, although not exclusively from these regions. Stereotypes of Korean values surrounding chastity and Confucianism led the Japanese government to believe that Korean women were ideal for the Japanese militarized prostitution because they were less likely to have venereal diseases. During World War II and the Japanese occupation in the Asia-Pacific, the Japanese government did not recruit Japanese prostituted women for military use in large numbers because of the fears of spreading venereal diseases. Starting in 1938, Taiwanese women and girls were recruited; however, soon after the outbreak of war in the Asia-Pacific (1941) with Japan's invasion of the Philippines, Singapore and Indonesia, Filipina *Lolas*, Dutch, and Indonesian women and girls would find themselves in systemic militarized prostitution as comfort women.

The experience for comfort women was one of exploitation. By 1941, Japanese government legislation was enacted requiring that the age of the women and girls recruited be between the ages of 14 years to 45 years old, also conveying that virgins were

preferred. Comfort women were primarily 18 years old or younger, with the youngest documented at eight years old. Women and girls were deceived into sexual slavery when they were told they would work in factories. Some were kidnapped, sold off by their families, and others were runaways escaping abuse in the home that made them vulnerable to recruitment. Regardless of how they arrived at the Japanese Comfort Stations, testimonials suggest that comfort women experienced institutionalized rape, physical and psychological abuse, torture, and in many cases death. The experience for comfort women at these stations was diverse; they varied from complete isolation to less isolation, but violence was a normalcy for all. Many of the women and children died as comfort women servicing countless numbers of men; on average, they were expected to serve for two years. For those that survived they live with the physical markers of scars and disfigurement from rape and other forms of physical torture, venereal disease including gonorrhea and syphilis, the inability to give birth, as well as posttraumatic stress disorder and other mental disorders from rape and head traumas that they accrued as military comfort women.

The development of the comfort women movement as a transnational human rights initiative began in the 1980s and has largely occurred through the work of survivors who testified about their experiences. The Korean Council for the Women Drafted for Military Sexual Slavery in Japan (KCWDMSS) facilitated two important events: a public testimonial by Kim Hak-sun on August 1991 that was soon followed by the first class action suit against Japan by a Korean comfort woman survivor in December 1991. In January 1992, Japanese historian Yoshiaki Yoshimi found direct evidence of Japan's military role in managing the comfort stations in spite of Japan's continued silence surrounding wartime atrocities. Yoshimi described the comfort women's experience as a violation of human rights, sexual violence against women, racial discrimination, and discrimination against the impoverished. His work, built on the testimonies by former comfort women, fueled the ongoing global movement seeking redress for their abuse. In 1993, 18 Filipina former comfort women filed lawsuits against Japan. The public protests, testimonials by survivors, and lawsuits exposed to the United States and the world Japan's

war atrocities of sexual violence in spite of Japan's denial and its erasure from Japanese textbooks. This increasing visibility also led other survivors to come forward with such governmental and organizational support as the Taipei Women's Rescue Foundation (Taiwan, 1992); the Asia Center for Human Rights (Philippines, 1990s); the Task Force on Filipino Comfort Women (Philippines, 1992); the Washington Coalition for Comfort Women Issues (U.S., 1992); the establishment of a home for survivors in Korea, called The House of Sharing (1992); Lila-Pilipina (Philippines 1994); the Foundation for Japanese Honorary Debts (Netherlands 1994); the Violence Against Women in War Network (Japan 1998); the Shanghai Comfort Women Research Centre (China 1999); and Forum Komunikasi Untuk Perempuan Timor Loro-sa'e, or the East Timor Women's Communication Forum (East Timor 2000).

In response to the cry for redress and international organizing, a private group in Tokyo organized the Asian Women's Fund (1995) to make cash payments to surviving wartime sex slaves. The fund compensated a total of only 285 women (from the Philippines, South Korea, and Taiwan) who each received 2 million yen, at the time about \$17,800. A handful of Dutch and Indonesian women were also given payment. Many victims rejected payment from the Asian Women's Fund because it had come neither directly from the government nor was it accompanied by an official apology; the Japanese government continues to deny any legal responsibility for the comfort women and to compensate them directly. As the debates surrounding redress boiled in Asia, it was clear that by 1996, the movement had made its way to the Americas.

In 1996, the comfort women movement became more prominent in the United States through an international conference at Georgetown University titled, "The 'Comfort Women' of World War II: Legacy and Lessons" (September 30 to October 2, 1996). From its beginnings in the Americas and in Asia, Asian Americans have participated in the comfort women movement because of the numerous Asian Americans that identify with the issues directly impacting comfort women: the hypersexualization of Asian women and men, histories of colonialisms, U.S. expansion being linked to other histories of

violence, racism, and sexism, and the need for redress during and after wartime crimes. The kinds of engagement have ranged from hosting testimonies by surviving women, art exhibits such as the “Quest for Justice: The Story of ‘Comfort Women’ as Told Through Their Art,” community forums, academic conferences, and websites. Asian Americans are creatively writing about the comfort women, making art, and portraying this complex history through film and other visual media. Although these popular mediums have proved important for spreading awareness, it would not be until 2007 that the comfort women issue received attention from Asian Americans through legislative activism.

Asian Americans have participated in linking comfort women to the United States through the national policy campaign in the United States entitled 121 Coalition. This campaign has created mass visibility and participation by Asian Americans that started with a small listserv of friends. On January 31, 2007, U.S. Congressman Michael Honda (D-San Jose) introduced House Resolution 121 that was shepherded by House Foreign Affairs Committee Chairman, Tom Lantos. Titled, “Relative to the War Crimes Committed by the Japanese Military during World War II,” the Resolution urges the government of Japan to bring closure to the issue by formally issuing a clear and unambiguous apology for the atrocious war crimes committed by the Japanese military during World War II and immediately paying reparations to the victims of those crimes. Michael Honda’s role in the HR 121 initiative illuminates the complexity in Asian American solidarities: Honda, a third-generation Japanese American, experienced Japanese internment for 14 months. HR 121 initiative is a national U.S. campaign galvanized by Asian Americans Annabel Park and Eric Byler. An initiative that started with small numbers, they created YouTube videos to help mobilize the international movement via the Internet. Park best describes the ongoing tensions with the comfort women issue as being like the game of tug-of-war. On one side of the rope are those who struggle for justice and reconciliation for comfort women and on the other side are those who wish to forget. As the organizers made progress through community educational forums and visiting

campuses across the United States, the movement took a quick turn on March 1, 2007, when Prime Minister Shinzo Abe publicly stated that there was “no evidence” of the comfort women and, therefore, nothing to apologize for. Abe’s statement was accompanied by the placement of an ad in the *Washington Post* by 45 Japanese lawmakers and a number of intellectuals stating the House Resolution 121 distorted the truth. Major news media, including the *New York Times*, criticized Abe’s comments, which in turn solidified international support for the comfort women. The non-binding resolution was passed on July 30, 2007. The U.S. passage of House Resolution 121 led to similar adoptions in the European Parliament, Canada, and the Netherlands.

Sixty-plus years after the violence was committed the comfort women have yet to hear an official apology from the Japanese government. In 2011, Japanese Prime Minister Yoshihiko Noda’s statements continue to mirror the same denial of his predecessors, stating that the issue is “legally resolved” where a bilateral treaty between Japan and South Korea signed in 1965 rendered the issue settled. In spite of the adversity to acknowledge the crimes against them, the Korean comfort women stood together at their 1,000th protest to fight against the forgetting of the war crime atrocities they experienced. Many young people stood with them in this protest. Such imagery of solidarity illustrates that even though the comfort women will die with the passage of time, their testimonial narratives will continue to live on in the next generation of people seeking justice. And, Asian Americans are making the connections of how the comfort women experience is not just an issue of the past. Although Japanese occupation of Korea ended with the close of World War II, modern version of comfort women stations continue to persevere in U.S. military camptowns both in South Korea and around the world. Women and girls continue to be exploited through prostitution, including those who are coerced and trafficked, in the shadows of military bases.

Committee of 100 (C-100)

The Committee of 100 (C-100) is an influential and one-of-a-kind Asian American organization that takes pride in the bicultural background of its small but effective troop of elite members, who have employed their personal connections and resources to help collectively inform and improve U.S.-China relations and address important issues concerning the Chinese American community. Headquartered in New York City and with a regional office in Hong Kong, this nonprofit, nonpartisan, and highly selective organization has played a key and indispensable role in the formulation of a mutually constructive U.S.-China policy since its founding. It has also contributed over the years to the promotion of public education, leadership development, and social justice for the advancement of Chinese and other Asian Americans.

The origin of C-100 can be traced back to the Tiananmen Square bloodshed in June 1989 when a need to coordinate Chinese American responses to the American media and public officials about events in China became evident. World-renowned architect I. M. Pei, cellist Yo-Yo Ma, corporate investor Henry Tang, General Motors executive Shirley Young, physics professor Chien-Siung Wu, and investment bank Oscar Tang, along with 37 other concerned Chinese Americans with distinguished backgrounds, were

founding members. The group held its first conference to establish bylaws and articles of incorporation in New York in 1990. Its twofold mission is to help foster stronger ties between the United States and the Greater China and to facilitate the full participation of Chinese Americans in all aspects of American life. Despite the namesake, the organization currently has about 150 members; all are U.S. citizens of Chinese descent who have achieved positions of leadership in a broad range of professions including fine arts, business, academia, public service, and the sciences. In 2010, five of the six cofounders named above are still actively serving on the governing board.

C-100 was founded at an auspicious time when the world was on edge with the actions and decisions made by the Chinese government. Because its members were in close contact with key figures on all sides of the China-Taiwan-U.S. relations, the organization was able to deliver what normal diplomatic channels could not. Individual members would meet with Chinese officials privately to raise issues and the organization sent its first official delegation to China and met with top leaders in Beijing and Taipei on the same trip in 1994. The purpose of this and other delegations was to help broaden perspectives and improve relations between the United States and Greater China by fostering mutual understanding of the politics, policies, and peoples in both nations.

As Americans familiar with both cultures, members often play the role of a “cultural ambassador” to encourage the exchange of ideas and perspectives with decision-makers on both sides of the Pacific Ocean. In 1993, the organization commissioned its first of a series of public opinion surveys gauging American attitudes toward China. In both 1996 and 1998, C-100 presented position papers on China policy to the Clinton Administration advocating the principle of “seeking common ground, while respecting differences” that stressed diplomacy over confrontation, frequent exchanges to enhance mutual understanding, and a focus on areas of common concerns rather than disagreements. On the eve of the Hong Kong transition from the British to the Chinese rule in 1997, C-100 released a binational public opinion survey and orchestrated a national outreach campaign to temper the highly negative U.S. media coverage of the transition.

In both 2001 and 2009, the organization commissioned national opinion polls of American attitudes toward Chinese and Asian Americans and shared the results with Chinese and American leaders. Beginning in 2006, the organization also established endowment funds and issued its first grant of C-100 Leadership Scholarships to outstanding students and scholars at several universities in China.

On the domestic front, C-100 works to promote the full participation of Chinese and Asian Americans in all areas of American life, especially in the political process. In 1992, it joined the first-time effort with other Asian American organizations to invite the three presidential candidates to address issues of Asian American underrepresentation in political appointments and the need for equal protection of their civil rights. In 1995, the organization secured a rare on-air apology from a major U.S. television network over accusations that all Chinese in America could be spies. It also worked with other Asian American organizations to ensure equal justice for Air Force Captain Jim Wang, who had been the only officer charged in a friendly fire incident in Iraq. During the reelection campaign of President Clinton in 1996, when a handful of immigrant Chinese Americans were charged of political contribution improprieties, C-100 took a strong stance in the campaign finance controversy protesting the use of innuendo by 12 major media and network news organizations and congressional committees to implicate all Chinese and Asian American donors. In 1999 when Taiwan-born nuclear scientist Dr. Wen Ho Lee was fired from his position at the Los Alamos National Laboratory, the organization spearheaded a campaign with 15 other Asian American organizations to collectively raise national awareness of the denial of due process to Dr. Lee.

To help counter the generally negative images of the Chinese in American history and society, C-100 members helped secure funding for a three-part PBS series “Becoming American: The Chinese Experience” that aired in spring 2003. It also established the C-100 Cultural Institute in 2000 (which became the U.S.-China Cultural Institute in 2006) to promote cross-cultural understanding through arts and education exchanges. Meanwhile, it also partnered with the Asia Society to increase the knowledge of China and

Asia in the curriculum of K-12 education and to highlight Chinese American philanthropy in several major publications. C-100 members also discussed with leaders in government, education, and the business community on issues such as education, employment, the glass ceiling, and ethnic profiling.

Through these multipronged and persistent efforts, and with its unique membership network and resources, the Committee of 100 has built an informal bridge between the United States and Greater China and become a voice in shaping U.S.-China policy. It has also provided a forum and means for addressing civil rights issues facing Chinese and Asian Americans.

Conger, Hank (1988–)

Widely considered a solid catching prospect for the American League's Los Angeles Angels, Hank Conger is a son of Korean immigrants. Born in Federal Way, Washington in 1988, Conger's real name is

Hyun Choi, but he became known as Hank in honor of his favorite ballplayer—the great Hank Aaron. Conger's family eventually moved to Southern California, where he not only starred at Huntington Beach High School but gained the attention of Major League scouts. In 2006, the Angels drafted him in the first round.

Since then there has been little mysterious about minor league pitching for Conger. From the Rookie League to Triple A organizations, Conger has put together a solid .294 batting average since 2006. In 2010, he appeared in 13 games for the Angels. However, Major League pitching has proved more baffling for Conger who has only a .172 batting average. Still, at 22, Conger has plenty of time to show his major league worth at baseball's most challenging position.

Dandekar, Swati (1951–)

Swati Dandekar is a member of the Iowa Utilities Board and former Iowa state legislator. She became the first Asian American person elected to the Iowa state legislature in 2002 and served in the House of Representatives until 2008. Dandekar then served in the Iowa State Senate from 2009 until her appointment to her current position on the Iowa Utilities Board.

Dandekar was born in Nagpur, India on March 6, 1951. She earned a bachelor's degree in Biology and Chemistry from Nagpur University in 1971, and a postgraduate diploma in Dietetics from Bombay University in 1972. In 1973, Dandekar and her husband, Arvind, immigrated to the United States and settled in Cedar Rapids, Marion, Iowa. She became a naturalized citizen in 1996.

A mother to two sons, Ajai and Govind, Dandekar began her community involvement through her involvement in their education. After serving as president of the Parent Teachers Organization, friends convinced her to run for office on the Linn-Mar School Board, where she served as a member from 1996 to 2002. In 2002, Dandekar won election to the Iowa House of Representatives by campaigning on the issues of education, quality health care, renewable energy, and economic growth. She was reelected in 2004 and 2006.

In 2008, Dandekar ran for the Iowa State Senate seat representing the 18th District. As a state senator, she served as chair of the Commerce Committee, vice chair of the Economic Development Budget Subcommittee, and was a member of the Economic Growth/Rebuild Iowa, Transportation, and Ways and Means committees. In 2011, Dandekar was elected president of the National Foundation of Women Legislators.

On September 19, 2011, Republican Governor Terry Brandstad appointed Dandekar to the Iowa Utilities Board (IUB) and cited her science training and experience with the utility industry and the energy needs of Iowa as factors in her appointment. Dandekar's term on the IUB runs through April 30, 2015. Her resignation from the State Senate following appointment to the IUB threatened the Democratic Party's slight lead (26–24) in the Iowa State Senate. Democrat Liz Mathis won in a November 2011 special election to fill the seat vacated by Dandekar to maintain Democratic control of the Senate.

Dandekar currently serves as a member of the National Association of Regulatory Utility Commissioners (NARUC), the NARUC Committee on Telecommunications, and the Committee on International Relations, the IUB representative to the Advisory Council of the Iowa Energy Center in Ames, and a voting member of the North American Numbering Council (NANC). She is also part of the advisory board of the National Science Foundation's Experimental Program to Stimulate Competitive Research (EPSCoR).

Swati Dandekar has won many awards from her work, including recognition from community groups and news organizations. She has been named "Person

of the Year” by *India Abroad* (2002), the Asian Alliance of Iowa (2003), and *AsianWeek* (2008).

Dardelle, Antonio (d. 1933)

Antonio Dardelle’s name and features suggest he was of mixed race, but he always identified as Chinese and gave Canton as his place of birth. Dardelle (also Dardell or Dordelle) served in the American Civil War. Despite the strictures of exclusion, he secured naturalized citizenship and became politically active.

Brought to Connecticut as a boy of seven by Captain and Mrs. David White, Dardelle had limited schooling and was working as a servant in the couple’s New Haven household in 1860. At his enlistment on August 23, 1862, he was apprentice to a tinsmith in Clinton. The Twenty-Seventh Connecticut Voluntary Infantry, Company A, a nine-month regiment formed by the New Haven Grays, fought in three major battles, and Dardelle claimed he was severely injured in his right shoulder at Marye’s Heights during the Battle of Fredericksburg. But according to his military records, he spent almost his entire service sick in various hospitals. More soldiers were felled by sickness than in battle and Dardelle’s comrades apparently did

not consider him a malingerer because he was welcome at his regiment’s annual reunions. He was also an active, lifelong member of the New Haven Grays and frequently attended meetings of the Grand Army of the Republic, Post #17, officially joining on July 16, 1892.

Although Dardelle served his apprenticeship in Clinton, he established himself as a tinner and plumber in New Haven; over the decades, he expanded his business to dealing with stoves and ranges, jobbing for manufacturers, and contracting. His earnings supported a family of six as well as a summer home in Madison, so he clearly did not need the veteran’s pension of \$12 a month, but he applied for it in 1907. Initially denied, he was then paid the amount due a much younger man because he could not prove his year of birth, which he gave as 1844. Going by this date, Dardelle stopped working at the age of 81.

He petitioned for—and was granted—citizenship as a discharged veteran on October 22, 1880. Subsequently an ardent worker for the Republican Party in the ward where he made his home, Dardelle also joined the Young Men’s Republican Club, a popular organization for Republicans who were not so much young as forceful and vigorous. Perhaps because of his political activity, he enjoyed the friendships of many prominent men, including two state governors.

As an apprentice in Clinton, Dardelle became a candidate for Freemasonry, and within a year of his acceptance in the Jephtha Lodge No. 95 in 1864, he was appointed Tyler, a position akin to a guard or sergeant. He became affiliated with the Wooster Lodge No. 79 in 1882.

When Dardelle died of pneumonia on January 18, 1933, the New Haven Grays sent a delegation to his funeral. His will, written the year before, stipulated that his Lodge, *not* his family, should take charge of the service and provide the chaplain and pallbearers. Furthermore, outside of \$1,000 to the Madison West Cemetery Association for perpetual care, his money was to be placed in trust for his three daughters so that none would become destitute. Upon the death of his last surviving daughter, the trust would terminate and the balance would be paid over to the Trustees of the Lodge—which, by 1971, came to nearly \$250,000.

Dawson, Toby (1978–)

Toby Dawson is an Olympic freestyle skier who won the bronze medal in mogul skiing in the 2006 Turin Winter Olympics. He is the first Asian American medalist in the Olympic sport of skiing. Dawson, from South Korea, was adopted by a couple in the United States and publicity around the Olympics brought attention to his adoption story. After the 2006 Olympics, Dawson was reunited with his birth father and became a household name in South Korea. He was a member of South Korea’s Winter Olympics Bid Committee in 2014 and 2018 and has become actively involved in the 2018 Pyeongchang Winter Olympics as a member of Winter Olympics Organizing Committee.

Dawson was born on November 30, 1978, in Pusan, South Korea, as Kim Bong-seok. At the age of three, he went missing during a trip to the market with his biological mother. His biological father claims to have searched for him by scouring orphanages for days to no avail. He ended up in an orphanage in circumstances that remain unclear and was adopted in 1981 by a ski instructor couple from Vail, Colorado, who renamed him Toby Dawson.

He began skiing at the age of four and landed a spot on the U.S. Ski Team at the age of 19. He was nicknamed “Awesome Dawson” for his fearless approach to technically difficult moves. He won a bronze medal in freestyle mogul skiing on February 15, 2006. After winning the medal, Dawson announced that he was retiring from skiing to pursue a professional career in golf.

During the 2006 Winter Olympics, NBC Sports featured a biographical vignette on Dawson featuring his quest to locate his birth parents. After he won the bronze medal and his story as a Korean adoptee was relayed in the South Korean media, over 100 people came forward claiming that he was their son. The Korean government agreed to help Dawson find his birth parents using DNA testing if he would agree to help the Korean Olympic Committee in its bid for the Winter Olympics. It was determined that one claimant, Kim Jaesu, was his biological father. He met his father and biological brother for the first time in a live television reunion a year after the Olympics on Wednesday, February 28, 2007. True to the genre, the reunion was a highly emotional and tearful event. Because his biological father blamed his biological mother for losing him and they had since divorced, she was not part of the reunion.

His story brought to light corruption with adoption processes in South Korea, and he pledged to start a foundation to prevent similar cases. His narrative is also part of the history of engagement by Korean adoptees with South Korea. Dawson has played the role of public relations ambassador for the Korea National Tourism Organization and took part in the 2014 and 2018 Pyeongchang Olympic Winter Games Bid Committee with the latter bid resulting in success. In November 2011, he agreed to become the freestyle moguls coach of Korea’s National Ski Team and to be part of the 2018 Pyeongchang Olympics Organizing Committee.

Dear Wing Jung v. United States of America (1962)

Dear Wing Jung (also known as Dear Kai Gay) arrived in San Francisco in December 1933, at the age of 10. He entered the United States as a paper son of Dear Bing Quong (also known as Dear Nay Lim), an alleged native-born United States citizen. Dear Wing Jung's biological father, Dear Nay Ting, had never set foot on American soil. But, Dear Wing Jung was able to claim derivative United States citizenship through his paper father, Dear Bing Quong. On December 6, 1933, Dear Wing Jung applied and shortly thereafter received his Certificate of Identity. This certificate served as proof that Dear Wing Jung was an American citizen.

The paper children phenomenon grew in the first half of the twentieth century in response to the Chinese Exclusion Act of 1882. The passage of this Act and subsequent amendments prohibited Chinese laborers from immigrating to the United States. The paper children system enabled Chinese merchants and native born Chinese Americans to bypass legal restrictions and bring young people from China to the United States as their own children. Each time a Chinese merchant or native-born Chinese American returned to the United States from China, he would report the number of children he fathered in China. The U.S. government compared these self reports against claims made by children trying to gain entry; the government hoped this comparison would reveal fraudulent relationships.

Each time the birth of a child was reported, an immigration slot was created. The majority of these births were reported as males, which meant that the majority of paper children were paper sons. When a father purchased a slot for his son, his son became the paper son of the man who sold the slot. If the paper father was a U.S. citizen, the paper son became United

States citizens by derivation of his paper father's citizenship. To create additional slots, many men reported more children than in actual existence.

The paper children method of immigration did not guarantee access to the United States. In fact, upon arriving in the port of San Francisco, Chinese newcomers faced lengthy interrogation about their family relations. To beat the interrogation, the paper children had to study and memorize coaching papers containing detailed information about their paper father and his family relations.

An unintentional consequence of the paper children system is that biological children of Chinese merchants and Chinese American citizens were also subjected to interrogations. If the biological children of Chinese merchants or U.S. citizens got the interrogation questions incorrect, they would also be detained or deported.

The paper family system rapidly grew following the 1906 San Francisco earthquake and subsequent fire. The fire engulfed the San Francisco Hall of Records and destroyed all of its contents. The Chinese seized this opportunity by claiming that they were born in the United States, thus making themselves eligible to bring family to the United States. To combat the document fraud the U.S. government implemented interrogations at the port of departure, in Hong Kong, starting in 1950. Thus, paper sons or paper daughters had to successfully pass interrogation twice.

Although the U.S. government learned about the intricate and vast expanse of the paper family system, it could not investigate every lead. So, they implemented the Chinese Confession Program. The program was first implemented in San Francisco in 1956, and by February 1957 had spread across the country. It encouraged paper sons and paper daughters to confess that they used false papers to gain legal entry into the United States. In return for their confessions, government officials sometimes promised to adjust their status in accordance with the Immigration Act of 1952. For the majority of paper children who confessed, they obtained adjusted legal status. However, some cases were more complicated as the guidelines of the Chinese Confession Program were ambiguous.

Many Chinese immigrants were coerced into confessing; others had family members who revealed their

paper identity. In Dear Wing Jung's case, his alleged aunt, Geraldine Chinn, testified that she had lied as a witness prior to Dear Wing Jung's admission into the United States and that her brother, Dear Bing Quong, asked her to lie. She disclosed that the real name of the paper son, using Dear Kai Gay's name, was Dear Wing Jung, and his true father's name was Dear Nay Ting. Geraldine Chinn's testimony was verified by Rosaline Fong and Dear Kai Ming's (daughter and son of Dear Bing Quong, respectively) testimonies.

In the 1950s, the U.S. government was on heightened alert to deport anyone affiliated with leftist organizations such as the Min Qing, a Chinese American Democratic Youth Club in San Francisco. Dear Wing Jung was a member of the Min Qing. His paper son status in conjunction with his leftist political affiliation singled him out for prosecution.

Dear Wing Jung's lawyer, Lloyd E. McMurray, was well aware of the government's actions. So, when the San Francisco Grand Jury indicted Dear Wing Jung on March 30, 1961, on three counts of fraud and conspiracy, his lawyer motioned to dismiss the indictment. McMurray argued that the only reason Dear Wing Jung was prosecuted was because of his affiliation with a leftist organization. By singling him out, it was discriminatory and a violation of Dear Wing Jung's freedom of speech and assembly under the First Amendment as well as a violation of his due process rights under the Fourteenth Amendment to the United States Constitution. McMurray asserted that the Chinese Confession Program was in reality a pretext to punish those who were members of leftist organizations. The motion was denied.

Thereafter, Dear Wing Jung pled not guilty to all three counts. Counts one and three were violations of Title 18 U.S.C. Section 1001. This code section punishes anyone who "... knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements ...". Dear Wing Jung was accused of providing false information about his name, parents, nationality, and privilege to enter and remain in the United States by posing as Dear Kai Gay. Count two charged him with violating Title 18 U.S.C. Section 371, which prohibits conspiracy against the U.S. government. Dear Wing Jung was accused of conspiring with his paper father, alleged aunt,

and others to defraud the U.S. government in the administration of immigration and naturalization laws.

Count three focused on the false information Dear Wing Jung provided, under oath, at the naturalization proceedings of Emmy Dear (also known as Chow Shoy Mun), his wife, on January 10, 1956.

In response to these charges, McMurray not only filed a motion to dismiss the case prior to trial, he also tried to dismiss the case during the trial without a jury. When the case was brought before United States District Court Judge Albert C. Wollenberg, McMurray motioned to dismiss on all three counts. Judge Wollenberg agreed to dismiss counts one and two as barred by the statute of limitations (the time for bringing an action had expired). Despite the arguments provided by McMurray, the court did not dismiss the third count. According to the court, the third count was easier to prove than the first count. McMurray also issued a *subpoena duces tecum* ordering the district director of the Immigration and Naturalization Services to appear and submit a list of organizations, regulations, instructions, directions, or other documents describing the procedure for placing or removing an organization for such lists. McMurray believed that the list would prove that Dear Wing Jung was discriminatively targeted because of his political affiliations. The court quashed the *subpoena duces tecum* because it believed any evidence used to prove that Dear Wing Jung was denied due process of law would be irrelevant. McMurray also faced setbacks when the court refused to review evidence that proved his client was specifically targeted for prosecution.

On October 24, 1961, Dear Wing Jung was found guilty. Following his conviction, McMurray tried one more time to argue that count three should have been dismissed. The court dismissed his motion in arrest of judgment (to suspend enforcement of a judgment). On December 15, 1961, Dear Wing Jung was sentenced to prison, but the court suspended the sentence for six months on condition that Dear Wing Jung leave the United States. Dear Wing Jung filed an appeal to the United States Court of Appeals, Ninth Circuit.

On appeal, Dear Wing Jung made many arguments, but the Ninth Circuit agreed with the Attorney General on every argument except for one. The Ninth Circuit found the sentence too harsh. Because the

government argued that Dear Wing Jung was not a United States citizen, his departure from the United States would leave him with no means of returning. Judge Magruder of the Ninth Circuit wrote, the sentence is “. . . equivalent to a ‘banishment’ from this country and from his wife and children, who will presumably remain here. This is either a ‘cruel and unusual’ punishment or a denial of due process of law. Be it one or the other, the condition is unconstitutional.” On December 27, 1962, the case was remanded back to the District Court for resentencing. On April 15, 1963, the District Court sentenced Dear Wing Jung to five years probation and a fine of \$500.

For paper sons awaiting trial, the case of Dear Wing Jung was a victory. If he was able to remain in the United States, so could they.

DeSoto, Hisaye Yamamoto (1921–2011)

Hisaye Yamamoto DeSoto was a master short story writer who submitted her first story for publication at the age of 14 and by age 27 had been published in a major literary magazine. Having had the self-described “addictive” experience of seeing her words in print at a young age, Yamamoto became a prolific writer with stories and essays in Japanese American and Japanese Canadian newspapers such as the *Rafu Shimpo* and *Hokubei Mainichi*, and literary magazines such as *Partisan Review*, *Arizona Quarterly*, and *Harper’s Bazaar*. Several of her short stories appeared on Martha Foley’s lists of Distinctive Short Stories for 1949, 1951, and 1960, and her story “Yoneko’s Earthquake” appears in *Best American Short Stories: 1952*. Her short stories—“Seventeen Syllables,” “The Legend of Miss Sasagawara,” and “Yoneko’s Earthquake”—have been widely anthologized and her work appears in *Speaking for Ourselves* (1969),

Aiiieeeee!: An Anthology of Asian American Writers (1975), *Charlie Chan Is Dead: An Anthology of Contemporary Asian-American Fiction* (1993), and the *Heath Anthology of American Literature*. Hisaye Yamamoto received a Before Columbus Foundation’s lifetime achievement award in 1986. Known for the precision of her prose and the understated emotion in her stories, Yamamoto’s work is a favorite among literary scholars and commonly taught in the college classroom. In 1991, an hour-long movie, *Hot Summer Winds*, was presented by Public Broadcasting’s American Playhouse; the movie was based on “Yoneko’s Earthquake” and “Seventeen Syllables.”

A second-generation Japanese American, Hisaye Yamamoto was born to Kanzo and Sae Tamaura Yamamoto, immigrants from Kuramoto, Japan, in Redondo Beach, California where the couple in the author’s words “eked out a living on the land” raising small profitable crops like strawberries. She had an older and a younger brother. Hisaye Yamamoto was raised speaking Japanese until she entered kindergarten. At the age of 14, she received her first rejection notice but she also began publishing in the *Japan California Daily News* (Kashu Mainichi). She was an avid reader and received her Associate of Arts degree in European Languages and Latin from Compton Junior College.

As was the case with over 110,000 Japanese and Japanese Americans during World War II, Hisaye Yamamoto and her family were forced from their home and placed into a War Relocation Authority internment camp in Poston, Arizona for the majority of the war. During her time in Poston, Yamamoto continued her writing, working as a reporter and publishing stories in the *Poston Chronicle*. She also became friends with playwright and short story writer Wakako Yamauchi. She was able to leave camp briefly to travel to Massachusetts to work as a cook, but then returned when her brother was killed when serving in Italy.

Following the family’s release from Poston, Hisaye Yamamoto returned to Los Angeles where, from 1945 to 1948, she worked as a reporter for the *Los Angeles Tribune*, an African American newspaper. Her experience inspired an autobiographical short story, “A Fire in Fontana.” In 1948, “The High Heeled Shoes, a Memoir,” a story about sexual harassment, was accepted for the *Partisan Review*, and she

published “Seventeen Syllables,” a story based on her mother’s experience, in 1949. Her artistic merit was recognized in 1950 with a John Whitney Hay Foundation Opportunity Fellowship, which allowed her to write full time and care for her son, Paul, who she adopted in 1949. Although Hisaye Yamamoto was offered an opportunity in 1953 to study at Stanford with Yvor Winters, who admired her work, Yamamoto instead moved to Staten Island to a Catholic community work farm founded by Dorothy Day and she wrote for the *Catholic Worker* from 1953 to 1955. In 1955, she married Antony DeSoto, an Italian American, and after the couple moved to Los Angeles she gave birth to four children: Kibo, Elizabeth, Anthony, and Claude. The couple’s courtship and relationship serve as the inspiration for her “Epithalamium” published in 1960. Very modest when asked about her writing, Yamamoto has noted that when asked she usually describes her occupation as a housewife.

A compilation of Hisaye Yamamoto’s work, *Seventeen Syllables: 5 Stories of Japanese American Life* was first published in Japan in 1985, and 15 of her stories, *Seventeen Syllables and Other Stories*, were published in the United States in 1988. Both collections were named after her trademark short story, “Seventeen Syllables,” which, in Yamamoto’s lyrical and economical prose, tells the story of a young girl who watches her mother’s struggle for artistic expression with an unsupportive and oppressive husband who only values the mother’s manual labor. Another popular short story, “Yoneko’s Earthquake,” also features a young girl who observes her mother’s troubled relationship with her father as she reaches adolescence. And a young female also narrates, “The Legend of Miss Sasagawara,” a story about a community’s reception of a new internee, a former dancer, and the dancer’s reaction to her incarceration.

Hisaye Yamamoto DeSoto died in Los Angeles on January 30, 2011, at the age of 89.

Dinh, Linh (1963–)

Linh Dinh is a Vietnamese American poet, fiction writer, essayist, editor, translator, painter, curator, and photographer. He was born in Saigon in 1963 and came to the United States in 1975. Dinh started his early career as a painter after attending the University of the Arts in Philadelphia, but soon began to write and read his poems at literary venues. In 1991, he cofounded *The Drunken Boat*, a bimonthly art and literary journal, and received the Pew Fellowship in the Arts in 1993. He returned to live in Saigon in 1999, but moved back to the United States in 2001. He stayed in Certaldo, Italy, as a guest of the International Parliament of Writers from 2002 to 2004. In 2005, he moved to Norwich, England, as the David T. Wong Fellow at the University of East Anglia. He returned to Philadelphia as the 2006–2007 Fellow in Poetics & Poetic Practice at the University of Pennsylvania, and has since joined its faculty. He has been awarded a resident fellowship at the Doreen B. Townsend Center for the Humanities at University of California, Berkeley for 2012–2013.

Dinh’s works include two short story collections, *Fake House* (2000) and *Blood and Soap* (2004), as well as the novel *Love Like Hate* (2010), and he has published five books of poems: *Drunkard Boxing* (1998), *American Tatts* (2005), *Borderless Bodies* (2006), *All Around What Empties Out* (2007), *Jam Alerts* (2007), and *Some Kind of Cheese Orgy* (2009). Individual poems have also appeared in literary journals such as *The American Poetry Review*, *The Threepenny Review*, and *Manoa*. He is also the editor of the anthology, *Night, Again: Contemporary Fiction from Vietnam* (1996) and *Three Vietnamese Poets* (2001), and the translator of Phan Nhien Hao’s *Night, Fish and Charlie Parker* (2006). *Blood and Soap* was chosen by the *Village Voice* as one of the Best Books

of 2004, and his poems have appeared in Scribner's *Best American Poetry* series for 2000, 2004, and 2007, as well in many anthologies including *Watermark: Vietnamese Poetry and Prose* (1998), *Bold Words: A Century of Asian American Writing* (2001), *Great American Prose Poems from Poe to the Present* (2003), *Charlie Chan Is Dead 2: At Home in the World* (2004), *Black Dog, Black Night: Contemporary Vietnamese Poetry* (2008).

Often shockingly absurdist while being devastatingly realistic, his writing contains images that prompt visceral responses that have the forceful ability to defamiliarize. Yet his stories are not all confined to solipsistic alienation, as Susan Schultz (2005) has convincingly asserted: "As I read Linh Dinh I see manifestations of disgust in his poetry as paradoxical expressions of suffering: violence, poverty, degradation, and an odd empathy for those caught up in it. When the reader encounters an image that disgusts her, disgust becomes more than a child-like reaction to feces or vomit or blood, more an odd expression of empathy with one who suffers."

Playfulness, improvisation, and experimentation are central to Dinh's literary and nonliterary works. Dinh's 1994 exhibit "Toys and Incense," which he produced as a guest curator at the Levy Gallery at Moore College of Art and Design, was a reference and response to Arthur Rimbaud's playfulness in his question, "pourquoi pas déjà les joujoux et l'encens?" ("Why not toys and incense already?") The disruptiveness and playfulness of this exhibit lies at the heart of his writing, which is defined, as Marianne Villanueva (2008) observes, by "break[ing] accepted norms in an overt attempt to play with form." Dinh has discussed his writing process itself as "line by line," in the sense that he starts with a concept, an image, or a phrase that are imagined or encountered in real life and "improvise[s] from one line to the next, with one sequence of images or ideas suggesting subsequent ones."

Dinh's writing moves geographically and linguistically with ease between the spaces of Vietnam, the United States, and beyond. Dinh has named Louis-Ferdinand Céline, Franz Kafka, and Jorge Luis Borges as his literary influences. Dinh's short stories in *Fake House* seem to reflect Céline's dark sense of humor,

the grittiness of observations, and the willingness to engage with people. At the same time, some of the Kafka-esque stories, especially in *Blood and Soap*, also reflect a mind which resonates with the work of Borges, a writer who was known to have lived strictly through the world of books. Poets who influenced Dinh include César Vallejo, Henri Michaux, Wallace Stevens, John Ashberry, and Michael Palmer, besides Arthur Rimbaud. What is altogether original about Dinh's writing, however, is his global purview itself that can accommodate the wide range of trans-Atlantic artists he has embraced but always retain some critical distance from them.

Dinh's critical essays on the deteriorating current social and political landscape have been published in major newspapers like *The New York Times* and *The Guardian*, as well as in webzines including *CounterPunch*, *Common Dreams*, *Dissident Voice*, and *OpEd-News*, and it has also appeared in a recent essay collection, *Hopeless: Barack Obama and the Politics of Illusion* (2012). Dinh's current and ongoing project also displays a heightened awareness of severe realities symptomatic of the economic condition in the United States. The project, started in March 2009, has mostly found expression in his frequently updated photo blog, *State of the Union*, which includes over 3,100 photos and 50 essays. With aspirations akin to the WPA photographer Dorothea Lange, Dinh turns his gaze toward the underemployed, the dispossessed, and other marginal presences found in numerous tent cities of the homeless and other gritty cityscapes, resulting in photographs taken in over 20 cities, which include Detroit, Buffalo, Cleveland, New Orleans, and Atlanta: peddlers, protesters, public preachers, and prostitutes, casinos, and abandoned factories. Parts of this project were exhibited at the University of Pennsylvania's Brodsky Gallery in 2011 and are scheduled to be compiled by Kaya Press. The body of social commentary reflects a consistently remarkable quality of Dinh's integrity as an artist: the ability to draw his audience into an experience of his unflinching gaze at the often disturbing and brutal conditions of life, which just *is*.

Dīpāvalī

Dīpāvalī, also known as *Deepavali*, and most commonly shortened to *Diwali*, is a Vaishnava celebration and spiritual ceremony to commemorate several

important occurrences in Védik devotional practice. Dīpāvalī means “row of lights” in Sanskrit. Typically identified with Hinduism, Sikhism, Jainism, and some sects of Buddhism, Dīpāvalī takes “place according to the lunar calendar during the Kṛṣṇa Pāksha (lunar dark fortnight) in Kartik/Ahvin (month of October/November). Each group who observes Dīpāvalī varies the practices according to their group’s region and religious traditions and is observed in almost every region of India where it is an official national holiday. It is also an official holiday in Sri Lanka, Nepal, Myanmar, Mauritius, Guyana, Trinidad & Tobago, Suriname, Malaysia, Singapore, and Fiji.

Most commonly identified with Hindu and Indian culture, Dīpāvalī is a significant occasion as both a secular holiday and religious observation of key elements of Védik spiritual practice. Hinduism is the third largest religion on Earth with approximately 950 million to 1 billion humans identified as Hindu worldwide. In the United States, the Hindu population estimates range from almost 600,000 in 2008 according to the U.S. Census Bureau, and present numbers approaching 1 million. This is not to be conflated with the number of Asian Indians, which records at approximately 3 million in the 2010 U.S. Census Bureau data. Having both secular and religious significance, Dīpāvalī could be observed as cultural celebration and/or spiritual practice for 1 to 3 million Americans of Indian and Asian ancestry.

The origins of Dīpāvalī are narrated in numerous sacred texts including the Védas, Mahābhārata, the Bhagavad Gīta, the Rāmāyana and the Purāṇas. Prior to these written accounts, spiritual injunctions, historic accounts and stories of Sri Viṣṇu, Sri Nārāyana, and his many incarnations were transmitted by oral tradition, hence an attempt to specify an exact date of origin is at best an educated guess because the knowledge has been passed from teacher to student within a given sampradāya or lineage. The primary stories that shape the practice and festivities of Dīpāvalī are: the exile and return of the king Sri Rāmacandra to Ayodhya, the vanquishing and deliverance of King Mahābālī to Pātāla by Vamanadeva (the fifth Avatara of Sri Viṣṇu), the vanquishing and deliverance of Narakasura by Sri Kṛṣṇa and the birth/emergence of the divine mother Sri Lakṣmī from the Ocean of Milk during

Samudra manthan and her attendant incarnations of Maha Kālī and Sarasvatī and the emergence of Sri Dhanvantari, physician to the deities and father of Ayurveda. The activities during Dīpāvalī are meant to focus on the worship and commemoration of significant events and pastimes of Sri Viṣṇu, Sri Lakṣmī and related deities, and Avatars to give thanks for the autumnal harvest in the Northern Hemisphere, to begin the New Year and to commemorate key events that shape sanatana dharma.

The period of observance can vary from five to nine days depending on a group's customary practice and includes days leading up to the day of Dīpāvalī and several days into the New Year. In the present era five days is most common and typically identified as: the first day is *Dhanteras*, *Dhantrayodashi* or *Dhanvantari Triodasi* and a lighted *diya* and prasādam is offered to Sri Yamaraja; the second day is *Naraka Chaturdasi* or *Choti Diwal* and *diyas* are lit, pūja is done and prasādam is offered to Sri Kṛṣṇa and Maha Kālī; the third day is *Sri Lakṣmī Pūja*, the main Dīpāvalī day on Amavasya commemorates the return of Sri Rāmacandra and *diyas* are lit, pūja is done and prasādam is offered to Sri Lakṣmī, Sarasvatī, and Sri Rāmacandra; the fourth day is *Bāli Pratipāda*, *Govardhan Pūja*, or *Gudi Padwa* and *diyas* are lit, pūja is done, and prasādam is offered to Sri Viṣṇu; this is the first day of the new year known as Rama Rajya commemorating the worship of Mount Govardhan by Sri Kṛṣṇa; and the fifth day is *Bhai-Dūj* commemorating Sri Yamaraja's visit to his sister Yamunaji and brotherly/sisterly love. The lights of Dīpāvalī are traditionally *diya* or *diya*, earthen clay lamps filled with ghee or mustard oil and burned by a cotton wick; however, today many use candles.

Divakaruni, Chitra Banerjee (1956–)

Chitra Banerjee Divakaruni is a South Asian American author, poet, and professor. She was born July 1956 in Calcutta, India. She attended the Loreto House Convent School and Presidency College in Calcutta. She then earned her BA in English from the University of Calcutta in 1976, an MA from Wright State University in Ohio in 1977, and enrolled at the University of California, Berkeley in 1978, where she earned her PhD in 1985 in Renaissance literature. She lived in the Bay Area, and taught creative writing at Foothill College, Diablo Valley College, and the University of Houston. In 1991, she founded MAITRI, a help line for South Asian women who are the victims of abuse. She also serves on the advisory board for DAYA, a similar organization in Houston, Texas. Currently, she teaches in the University of Houston's Creative Writing Program and lives with her husband, Murthy, and their two sons, Anand and Abhay.

Divakaruni's work has been published in a multitude of national magazines, and has been translated into over 20 languages. Her first published works were poetry collections, including *Dark Like the River* (1987), *The Reason for Nasturtiums* (1995), and *Black Candle* (1991). Her first collection of short stories, *Arranged Marriage* (1995), was the recipient of the American Book Award, the PEN Oakland Josephine Miles Prize for Fiction, and the Bay Area Book Reviewers Award for Fiction. In 1997, she published another poetry collection, *Leaving Yuba City*, which won an Allen Ginsberg Prize and a Pushcart Prize. Her first novel, *The Mistress of Spices* (1997), was shortlisted for the Orange Prize, and it was adapted for a film of the same name, premiering in 2005, directed by Gurinder Chadha, starring Bollywood actress Aishwarya Rai and Dylan McDermott. Her second novel, *Sister of My Heart*, was published in 1999, and its sequel, *The Vine of Desire*, was published in 2002. Her second collection of short stories, *The*

Unknown Errors of Our Lives, was published in 2001. Her latest novels are *Queen of Dreams* (2004), *The Palace of Illusions* (2008), and *One Amazing Thing* (2010). *The Palace of Illusions* is a renarration of the Hindu Vedic epic tale, “The Mahabharata,” and written from the perspective of a female protagonist. Divakaruni also has published a trilogy of short stories for children, titled *The Brotherhood of the Conch*. She is an avid social media user, and her blog can be found at <http://www.chitradivakaruni.com>. She can be followed on Twitter @chitradivakarun.

Divakaruni’s narratives reflect her continuing concern for the situation of South Asian immigrants in the United States, particularly those women from the Indian subcontinent. Her writing carries with it a lyrical quality of poetry and the vibrancy of oral traditions. She writes across genres, incorporating magical realism, fantasy, historical fiction, and realism into her work.

Much of her work is concerned with intersectionalities of power as an integral issue in South Asian American communities. She is careful to point out different kinds of people who exist within that particular community, writing about characters of different socioeconomic classes and cultural backgrounds. Her writing disrupts the myth of the “model minority” within South Asian diasporic communities. Her protagonists include battered women, the working class, and the middle class, and the tales are suffused with the diversity and difficulties of being South Asian and living and working in the United States. Issues regarding gender, race, class, ethnicity, caste, sexuality, and religion are present across her oeuvre. Over the last 30 years, Divakaruni’s narratives situate themselves with current sociopolitical events, including such crises as the AIDS epidemic, as reflected in *The Mistress of Spices*, and coalition across communities with the Chican@ and African American population, reflected in *One Amazing Thing*, and global events, where *Queen of Dreams* addresses such events as 9/11 and its aftermath.

Divakaruni is careful not to pathologize the communities that she writes about. Her works are complex because they offer multifaceted ways of seeing the world, of knowing, and of being, going beyond binaries, of “East” versus “West,” of hegemonic narrative

structure. For example, *Sister of My Heart* is the story of two cousins who grew up as though they were siblings in Calcutta. Aesthetically different, mired in family secrets, the two grow into adulthood with different circumstances resulting in their separation, with the stunning Sudha remaining in the provinces of South Asia and the plain Anju bound for the United States. It is told in chapters, with each sister alternately serving as the narrative voice, in a fairy tale structure shaped by rhymes and plots within plots. The story centers on the story of Sudha, who is forced to get an abortion by her husband’s family because she is carrying a female fetus, bringing into focus a battle fought for centuries over gender-biased abortions and class privileges.

Queen of Dreams is the tale of Rakhi, a divorced second-generation South Asian American living in San Francisco, dealing with the aftermath of a divorce, raising young children, and caring for her father, when reading and translating the journals of her mother, who was clairvoyant. Much has been made of the book’s attention to 9/11 and its aftermath on South Asian Americans, the violence, confusions, and anxieties resulting from that attack. *One Amazing Thing* flows across multiple perspectives and narrators, centering around nine people who are trapped in the passport office in the basement of the Indian Consulate in San Francisco who are yoked together by fate when an earthquake hits. Starting from the first-person perspective of Uma, an Indian graduate student awaiting a visa to visit her aged parents in “shining India,” the text flows across perspectives, as those people trapped engage in community building through storytelling.

Divakaruni has stated that she takes on a particular responsibility, and that writing affords her opportunities “to be able to straddle two distinct cultures and depict both with the relatively object hand of the outsider; to destroy stereotypes and promote understanding between different sectors of the multicultural society in which we live; to paint the complex life of the immigrant with its unique joys and sorrows, so distinct from those of people who have never left their native land” (Rustomji-Kearns, p. 47).

Draft Resistance in Internment Camps

During internment, Japanese American leaders—most notably those within the Japanese American Citizens League (JACL)—advocated for the reinstatement of the draft for the Nisei and a segregated combat unit that would allow Japanese Americans to prove their loyalty to the United States in battle. By the spring of 1943, Nisei were reclassified as "1-A," or immediately available for service. The government, impressed by the Nisei volunteers and having received fewer volunteers from within the camps than anticipated, reinstated the draft for Japanese Americans on January 20, 1944 and sparked resistance within the camps.

This reclassification came after almost five thousand Japanese Americans who had been members of the United States Army prior to the Japanese attack on Pearl Harbor had been discharged or removed from active duty. It also reversed the January 5, 1942 Selective Service System decision to classify American citizens with Japanese ancestry as "IV-C," or ineligible for enlistment as enemy aliens. Between January 1944 and mid-1945, when the War Relocation Authority (WRA) camps closed, over 300 Nisei from nine out of the 10 camps refused induction or to report for their preinduction physical exams. The most organized resistance came from the Heart Mountain Fair Play Committee. Though the Poston camp in Arizona did not have the same level of organization, one-third of

draft resisters had been held there. Individual reasons for draft resistance varied widely and overlapped between those who were principled resisters of conscience, to those who were tired of being held in camp, or some other combination of motivations.

In Heart Mountain, Kiyoshi Okamoto led draft resistance efforts. By the fall of 1943, Okamoto had become disillusioned with events at Heart Mountain, including brutality and discrimination by the white American staff members, lack of free speech, poor living and working conditions, and a sense of injustice about the wartime treatment of Japanese Americans as a whole. He proclaimed himself the "Fair Play Committee of One," and opposed the military draft of Nisei on the grounds that being held in camps violated their constitutional rights as citizens. Later on, as Paul Nakadate, Frank Seishi Emi, Isamu Sam Horino, Minoru Tamesa, Tsutomu Ben Wakaye, and Guntaro Kubota joined with Okamoto, they became known as the Fair Play Committee (FPC). By February 1944, the FPC held meetings and issued newsletters. It restricted membership to American citizens as they were the only ones eligible for the draft.

Between March 25, 1944, and the beginning of May, 63 men had been arrested for their refusal to report for their preinduction physicals until their citizenship rights had been clarified and restored. Their case, *U.S. v. Shigeru Fujii, et al.*, was the largest mass trial in Wyoming history. On June 12, 1944, District Court Judge T. Blake Kennedy ruled that Congress and the president had legally discriminated against the defendants based on their Japanese ancestry as a matter of wartime necessity, and that their reclassification as 1-A had established their full citizenship rights as Americans. Therefore, he found their draft resistance to be illegal, and sentenced them to three years in federal prison. Their convictions were upheld on appeal on March 12, 1945.

On July 21, 1944, a grand jury indicted the seven members of the FPC executive council and James Omura, editor of the Denver newspaper the *Rocky Shimpō*, for conspiracy to counsel, aid, and abet the violation of the Selective Service Act. Omura had not met the members of the FPC prior to his arrest as he had relocated to Denver before Japanese Americans were removed from the West Coast, and therefore

was not interned. In the trial, *U.S. v. Okamoto et al.*, only Omura was found not guilty, and the others were found guilty and sentenced to two- to four-year-prison terms. By August 1944, 22 more resisters of conscience from Heart Mountain were tried and sentenced to two years in prison. In 1946, the convictions of the leaders of the FPC were overturned on appeal, and on December 24, 1947, President Truman issued a pardon for all Nisei resisters of conscience.

Meanwhile, in Poston, over 100 Nisei were arrested for draft resistance despite the lack of formal organizing efforts. George Fujii, writing under the name of the “Voice of Nisei,” posted two handbills calling for Nisei citizenship rights to be restored and for an end to discrimination against Japanese Americans more broadly, but did not overtly call for draft resistance. A third handbill, also attributed to “Voice of Nisei,” but which George Fujii did not claim as his own work, later recommended that Nisei avoid the draft until their citizenship rights had been restored.

Successive waves of draft resisters from Poston were arrested and tried in federal court. In March of 1944, 10 draft resisters pled guilty and federal Judge David Ling sentenced them to three years in La Tuna Federal Prison in Texas. On May 27, 1944, five more resisters were arrested, but unlike the previous group, many of them were released on bail and awaited trial in camp. In early June, George Fujii was arrested, charged, and tried for alleged sedition. Despite dire predictions that fundraising for Fujii’s defense should assume the need for an appeal, he was acquitted with a directed verdict because there was no evidence that Fujii had written the circular that had urged draft resistance. By October, over 100 Nisei had either refused to be inducted or refused to appear for their preinduction physical. Their resistance was likely spurred by the presence of other resisters in the camp and Fujii’s acquittal.

Meanwhile, in July 1944, 26 internees from the Tule Lake Segregation Center for those deemed particularly “disloyal” were tried for draft evasion in *U.S. v. Kuwabara*. Louis E. Goodman, U.S. District Judge for Northern California dismissed the criminal charges against the resisters from Tule Lake on the basis that the prosecution of those incarcerated on the basis of ancestry for draft evasion was shocking to the conscience and a violation of due process.

In mid-March 1945, grand jury indictments were handed down for the Poston draft resisters. They were tried in three cases—those of Hideichi Takeguma, Kingo Tajii, and Yasuto Fujioka—that typified the specific circumstances under which each defendant had resisted the draft, such as whether or not he had requested expatriation, and whether or not the government had ordered his exclusion and segregation before or after he had been ordered to report for induction (*U.S. v. Takeguma et al.*). Judge Ling found the defendants guilty and sentenced them to one year in prison. The Ninth Circuit Court of Appeals affirmed the verdicts against the three named defendants. Judge Ling ruled on the matters of the other resisters who had stipulated their cases to the Takeguma, Tajii, and Fujioka appeals on October 7, 1946, by which time Poston had been closed for almost a year. He ruled that the government had treated the Nisei defendants inconsistently by suspecting them of sabotage and then conscripting them to military service, where they could arguably do more damage. He found them guilty but sentenced them to a fine of one penny each. At the same time, he ordered a stay of execution for the prison sentences of Tajii, Takeguma, and Fujioka, during which time they could apply for executive clemency. They were pardoned with the other draft resisters by Truman in 1947.

Military service and draft resistance continues to be a controversial topic within the Japanese American community. At their 2000 national convention, members of the JAACL passed a resolution to recognize and apologize to resisters of conscience, but some members stormed out of the room in anger. Likewise, when Lieutenant Ehren K. Watada refused to deploy to Iraq in June of 2006, Japanese Americans and other observers renewed old debates over loyalty, military service, and Japanese American identity.

Draves, Victoria “Vicki” Taylor Manalo (1924–2010)

Victoria “Vicki” Taylor Manalo Draves is well noted as the only swimmer or diver to gold medal in two individual events at the 1948 London Olympiad, but there is much more to her story. She had to overcome racial prejudice as the first Asian American and first Filipino American to accomplish this feat. During the London Olympics, Vicki Manalo Draves won both the 3-meter springboard and 10-meter highboard diving gold medals. In those games, she and Dr. Sammy Lee, the men’s platform winner and a Korean American, became the first divers of Asian descent to win Olympic gold medals.

Victoria Taylor Manalo was born December 31, 1924, in San Francisco, the daughter of Teofilo Manalo, an immigrant Filipino musician father and an English mother, Gertrude Taylor. They met and married in San Francisco in a time that society looked down on mixed race marriages. Vicki grew up there

as one of three sisters, including the eldest, Frances, and Vicki’s nonidentical twin, Consuelo. There was also a brother, Sonny, who died before she and Consuelo were born.

“I always loved anything to do with acrobatics. I wanted to be a ballet dancer. We were just a very poor family, and there was no opportunity to extend on those desires,” Draves said in the oral history, published by The Amateur Athletic Foundation of Los Angeles. “I was really kind of afraid of the water,” she said. Neither of her parents swam. Vicki couldn’t afford to take swimming lessons until she was 10 years old and took summer swimming lessons from the Red Cross, paying five cents admission to a pool in San Francisco’s Mission District.

When Vicki was 16, she and her sisters rode the trolley to Fleishacker Pool (a large saltwater pool) to swim and admire the divers. When she was 17, one of the boy divers encouraged her to join the Fairmont Hotel Swimming and Diving Club in San Francisco.

Olympic high diver Vicki Manalo Draves, 1948. (Ed Clark/Time Life Pictures/Getty Images)

As she told the *San Francisco Chronicle* in 2005, the club’s coach, Phil Patterson, told her she was a natural diver but that because of her Filipino name she could not join the club. Instead, she said, he “formed a ‘special’ club just for me—the Patterson School of Swimming and Diving. . . . I think he was a prejudiced man,” she added. “It wasn’t special for me. It was his way of separating me from the others.” He also told her that she could not compete unless she changed her name to Taylor, her mother’s maiden name. She and her mother reluctantly agreed. “I don’t know how my dad felt,” Draves said in an oral history in 1991, “because he never said anything.”

When the war broke out in 1941, Patterson went into military service and the Fairmont Hotel swimming pool closed down, forcing Vicki to stop swimming for a year. She graduated from Commerce High School in 1942 and took a civil service job in the Army Port Surgeon’s office to add to the family’s meager income. Later, after Vicki learned about a swimming program at the Crystal Plunge with Charlie Sava as the coach, she talked to Charlie about coaching her and he agreed and assigned Jimmy Hughes as her coach.

Hughes coached Vicki to her first national AAU diving competition at the Indiana national meet in 1943 when she was 19. She placed third behind Helen Rose and Zoe Ann Olsen on the 3-meter board.

The next national AAU diving competition was held in 1944 at the Athens Athletic Club in Oakland where Zoe Ann Olsen trained with her coach, Lyle Draves. “That is where I first saw Lyle,” Vicki recalls. Because her coach, Jimmy Hughes, could not advance her to the next level, she asked Lyle Draves, an electrical engineer by trade, to be her coach and he agreed. Under Lyle’s guidance, Vicki learned platform diving to add to her springboard diving repertoire. With a third diver, Gloria Wooden, Lyle coached the athletes to the 1945 Indoor Nationals in Chicago, and they placed 1, 2, 3 in the 3-meter springboard.

Vicki was now ready to compete in a diving competition that was to be held at the Fairmont Hotel Swimming and Diving Club where she used to practice her diving years before when she was “Vicki Taylor.” But as Vicki Manalo, she was barred from entering the competition.

In disgust at the Fairmont’s racism, Lyle Draves left the San Francisco Bay Area for Los Angeles leaving Vicki again without a coach. He was working for a Navy contractor, the Alameda Air Base, at the time and was transferred back to the Los Alamitos Air Base.

After asking if Lyle would continue coaching her, there followed some commuting to Los Angeles, a second and a third place at the Outdoor Nationals, and then, on the death of her father, Vicki retired from diving and returned to San Francisco and her old job as a secretary in the Army Port Surgeon’s office.

When the war ended, Vicki finally moved to Southern California for good, got a job at Canada Dry and on July 12, 1946 she and Lyle Draves were married. Perhaps as a premonition of their sharing future Olympic Gold as the first Asian Americans, she was given away at their wedding by her diving friend, Sammy Lee. With Lyle by her side Vicki returned to diving and her winning ways began immediately with the National Tower Diving Championship (10-meter platform) in 1946, 1947, and 1948. In 1948, she won her first springboard national title. As part of the Los Angeles Athletic Club, she made the Olympic team but did not place first at the Olympic Trials, held in Detroit in neither the springboard nor the platform.

However, in her first Olympic competition in London, Vicki made her mark on the 3-meter springboard and platform. *Life* magazine named Draves and decathlon gold medal winner Bob Mathias the top two U.S. athletes at the 1948 Games. After her Olympic victory, Vicki visited the Philippines for the first time and brought Lyle with her. She gave platform diving exhibitions at the Rizal Stadium and in other Philippine venues. She then turned professional and appeared in water shows like Larry Crosby’s “Rhapsody in Swimtime” at Soldier Field in Chicago and in the swimmer Buster Crabbe’s “Aqua Parade,” which toured internationally.

After starting a family in the early 1950s, Vicki and Lyle operated a swimming and diving training program at Indian Springs in Montrose, California and later moved the program to Encino, California. She later worked as a secretary. Together they raised four sons, David, Jeffrey, Dale, and Kim. In 1969,

she was inducted into the International Swimming Hall of Fame in Fort Lauderdale, Florida. During the 2002 Filipino American National Historical Society (FANHS) Conference held at Loyola Marymount University, in Los Angeles, Vicki addressed an adoring audience in the hundreds and was presented their award at their GALA banquet. In October 2006, San Francisco built a two-acre play park in her old neighborhood, South of Market Street (SOMA), and named it in her honor. Her former Franklin Grammar School once stood on the very spot.

Vicki Draves died on April 11, 2010, of complications of pancreatic cancer at Desert Regional Medical Center in Palm Springs. Besides her husband, she was survived by her four sons, six grandchildren, one great-grandchild and her twin sister, Consuelo Sessions. Perhaps her parents always believed she was destined for success. In many languages, “Victoria” means victory. In Tagalog, the major language in the Philippines, the word “Manalo” means win.

Du, Miranda (1969–)

Miranda Du is currently a United States District Judge for the United States District Court for the District of Nevada. Formerly, she was a partner at McDonald Carano Wilson LLP, a law firm in Reno, Nevada specializing in employment law.

On August 2, 2011, President Barack Obama nominated Attorney Du to the United States District Court bench for the District of Nevada. Nevada Democratic Senator Harry Reid, who currently serves as Senate Majority Leader, originally presented Du’s name to President Obama for consideration. Her candidacy was supported by a bipartisan coalition of Nevada public officials, a trend notably paralleled in October 2011, when Republican Senator Dean Heller joined Senator Reid in introducing Du at the Senate Judiciary Committee hearing. The Senate Judiciary Committee voted 10-8 in support of Du’s appointment to the bench on November 3, 2011. Opposing votes were cast by Republican committee members who expressed concern over what they deemed to be Attorney Du’s inexperience. A 2007 sanction by the federal court in Nevada also gave some committee members pause. Despite these concerns, Du’s nomination was confirmed on March 28, 2013.

Du was born in Cá Mau, Vietnam. At the age of 8, she fled the country with her parents, two siblings, aunts, uncles, and cousins. Fleeing by boat, the family was part of a massive boat exodus that sought temporary asylum in Malaysia. Du and her family spent almost a year in a refugee camp before a U.S. family volunteered to sponsor their resettlement in Winfield, Alabama. Du’s father, a former soldier in the U.S.-supported South Vietnamese Army, worked on a dairy farm in Alabama to support the family. They soon relocated to Oakland, California, where Du attended junior high school and high school. In high school, Du participated in the summer Upward Bound program at the University of California, Berkeley, where she would return after college to study law. Du graduated from the University of California, Davis in 1991 with honors in History and Economics. In 1994, she received her JD from UC Berkeley’s Boalt Hall School of Law. Shortly after law school, Du relocated to Reno, Nevada to join McDonald Carano Wilson LLP, where in 2002, Attorney Du became a partner in the firm.

Among her achievements, Du was named a Mountain States Rising Star, Super Lawyer in 2009. In 2008, she was included in the “Top 20 under 40” Young Professionals in the Reno-Tahoe Area, and in 2007, the

Nevada Women's Fund nominated her as a Woman of Achievement.

Duong, Wendy N. (1959–)

Wendy N. Duong (also known as Wendy Nicole Duong, Duong Nhu Nguyen, and Uyen Nicole Duong) was the first Vietnamese American to hold judicial office in the United States. She served the state of Texas under the title of Associate Municipal Judge for the city of Houston and as Magistrate of the State of Texas. She was appointed to the bench by the American Bar Association in 1992 and served a three-year term until resigning her seat to become senior legal advisor to Mobil Asia-Pacific. Professor Duong joined the faculty of University of Denver, Sturm College of Law with 18 years of experience in corporate law.

Born in Hoi An, Vietnam in 1959 and raised in Saigon, Wendy Duong left her home country of Vietnam with her family at the age of 16 on April 26, 1975, four days before the fall of Saigon. Escaping by U.S. cargo plane, Duong's family perhaps benefited from the social and professional standing of her parents—her father was a professor of Linguistics at the University of Saigon and her mother taught Vietnamese literature in Hoi An—allowing them participation in the organized evacuation of Saigon. At the time of her departure, Duong had just won a national Vietnamese literary award. She would later return to her literary and artistic talent to publish fiction and produce art in the United States.

Duong attended Southern Illinois University as an undergraduate, graduating summa cum laude with a BS in Communications and Journalism. Newspapers in Houston declined to hire her, however, and a broadcasting career was even more difficult to break into. She entered law school in 1980, choosing the University of Houston to be able to work full time and care for her ailing mother. After receiving her JD in 1984, Duong joined the public education sector of Houston in the area of risk management for five years. At the age of 24, she became director of the Risk Management Office, the first Asian American woman to serve in an executive position in the Houston Independent School District (HISD). Prior to her commission as judge in 1992, Duong worked for the Securities and Exchange Commission Office of General Counsel as a special trial attorney. From 1998 to 1999, she headed a team of lawyers examining Y2K liability levels for a Texas-based multinational energy company. Duong ultimately received her LLC from Harvard University.

In addition to teaching at Sturm College of Law, Duong writes essays on law and culture, publishes fiction, and paints. In 1998, her story, "The Young Woman who Practiced Singing," won the Stuart Miller Writing Award of District of Columbia Bar Association. Her short story, "The Ghost of Ha Tay," was a finalist for the Columbine Award at the 2001 Moon-dance Film Festival. Major publications include *Daughters of the River Huong: A Vietnamese Royal Concubine and Her Descendants* (2005) and *Postcards from Nam* (2009), both of which Duong says are part of a three-book series. The third book in the series is not yet published. Professor Duong was recently selected to participate as a U.S. Scholar in the Fulbright Core Program for 2011–2012.

80/20

80/20, also referred to as the 80/20 Initiative, is a Pan-Asian-American non-partisan political organization. The main purpose of 80/20 is to organize an Asian American voting bloc that will help leverage and galvanize support from politicians for agendas concerning Asian Americans. Notable founding members of 80/20 include S. B. Woo (lieutenant governor of Delaware, 1984–1989) and Chang-Lin Tien (chancellor of University of California, Berkeley, 1990–1997).

Events such as the fundraising controversy of 1996, in which investigations by the United States Department of Justice had uncovered that the Democratic National Committee (DNC) had received illegal contributions from various Asian American individuals and sources; or the circumstances in which charges were brought against Dr. Wen Ho Lee, a 60-year-old Taiwanese scientist held in jail for nine months without bail after federal indictment on the mishandling of nuclear secrets, drew criticism from many in the Asian American community that Asian American individuals were targets of investigations because of their ethnicity. The creation of 80/20 was motivated by such events in hopes of bringing more political activism as well as political clout into the Asian American community.

The name 80/20 refers to the proportion of votes needed for the Asian American community to become an important voting bloc during national elections.

Often, Asian American votes are split 50–50 between the Republican and Democratic candidates. The goal of the 80/20 initiative is to form a cohesive voting bloc in 80 percent of the Asian American voters in support of one particular candidate. The idea is that by forming a voting bloc, the Asian American community can be recognized as an ethnic group whose support that politicians should have to gain.

The 2000 presidential election was the first time in which 80/20 endorsed a nominee. In this case, Democratic candidate Al Gore had pledged to help Asian Americans win equal opportunity as well as high-level federal appointments whereas Republican candidate George W. Bush had not. Although Gore eventually lost the presidential election, according to 80/20, the organization had still helped garner 66 percent of Asian American votes nationwide and 70 percent in California. In other words, according to 80/20's calculation, Gore had the support of more than 50 percent of Asian Americans.

During the 2004 presidential election, 80/20 started the practice of sending formal questionnaires that were meant as promises or commitments to the Asian American community to all presidential candidates. In the 2004 presidential election, 80/20 endorsed the Democratic candidate John Kerry, who had pledged commitment via the questionnaires instead of Republican candidate George W. Bush. Even though Kerry lost the election, 80/20 still claimed that it helped Kerry garner 68 percent of Asian American votes nationwide according to the *New York Times*, and about 64 percent according to the *L.A. Times*.

In the 2006 congressional races, 80/20 endorsed all Democratic congressional candidates with the exception of three Republican candidates, who

had consistently pledged to help the Asian American community, out of frustration with the Bush Administration on issues of equal opportunity in workplaces (80/20 Initiative 2009b). The result of the 2006 congressional elections was that Democrats became the majority in both the House and Senate.

During the 2008 presidential election season, 80/20 started out endorsing Hillary Clinton in the California Democratic primaries. However, as Democratic nominee Barack Obama eventually won the Democratic nomination and pledged support to the Asian American community, 80/20 chose to endorse him instead of Republican candidate John McCain. According to 80/20, 62 percent of Asian Americans voted for Barack Obama whereas 35 percent voted for John McCain. Barack Obama was elected to office and became the 44th president of the United States of America.

Today, 80/20 remains active as an Asian American political action committee that boasts over 700,000 on its membership mailing list and the ability to reach at least 50 percent of Asian Americans nationwide. Although some were skeptical of the role that 80/20 played in the Asian American support of one particular candidate, the organization has gradually received more mainstream media coverage in its effort to form a cohesive Asian American voting bloc. Especially during the 2008 presidential election season, 80/20 received coverage from CNN, *Time* magazine, the *Washington Post*, the *Wall Street Journal*, the *Huffington Post*, and various other media sources.

Espineli, Geno (1982–)

Filipino American Geno Espineli is a professional baseball pitcher, who seems to have the misfortune of thus far competing for a major league spot on the pitching rich San Francisco Giants. Born in Texas, Espineli was drafted out of Texas Christian University in 2004 by the Giants. Since then the left-hander has generally toiled as both a starter and reliever in the Minor Leagues. In 2008, Espineli did pitch 15 games as a reliever for the Giants, winning two games and putting together a mediocre 5.06 Earned Run Average. Interestingly, and incorrectly, Espineli has often been hailed as the first “full-blooded” Filipino to play Major League Baseball.

Ethnic Communities in Hawaii

Ethnic communities in Hawaii are composed of Chinese, Japanese, Korean, and Filipino communities, most of whom are descendants of the laborers brought to Hawaii to work the sugar plantations. Many stayed after their contracts were fulfilled to establish these communities. Ethnic communities are significant because they made Hawaii a most racially and ethnically diverse society and it remains so to this day.

After Captain Cook’s landing in Kaua’i, European trading and whaling ships used Honolulu and Lahaina as a ports-of-call to and from China and Japan. The Kingdom of Hawaii proved to be a perfect place to grow sugarcane as well. The first sugar plantation was established on Kaua’i in 1835 on land leased from the Hawaiian monarch. Indigenous Hawaiian laborers were employed under a wage-based system, but the indigenous Hawaiian population had been declining rapidly since 1778 with the introduction of new diseases. Indigenous Hawaiians were also migrating to the West Coast of the U.S. mainland. To fill the plantation owners’ need for cheap, permanent laborers, the owners looked west to Asia and began to order and import Asian laborers as straightforwardly as they ordered their supplies.

The Chinese referred to Hawaii as *Tan Heung Shan* (Fragrant Sandalwood Hills) because of the sandalwood that Hawaiians were trading with the Chinese. The earliest record of a Chinese person in Hawaii is 1794. Some of the Chinese came to Hawaii as sailors. Some of the Chinese came as laborers. Most of the Chinese came as contract-laborers to work the sugar plantations. Many of the Chinese that came as contract-laborers were seen as *wah kui* or sojourners because they planned to return to China. Most of the laborers were single men. In 1852 the first of many Chinese contract-laborers arrived in Hawaii. They were immediately quarantined for signs of smallpox. When the quarantine was satisfied, the contract-

laborers were transferred to Honolulu where they were viewed and selected by the various plantations. After being chosen, the contract-laborers would sign a three-year contract. The plantation owners thought that the Chinese contract-laborers would compete with the indigenous Hawaiians and increase production. The sugar plantations were expanding and in constant need of laborers. The owners continued to import Chinese contract-laborers, even sending recruiters to China to send more laborers to Hawaii. To ensure racial competition, the owners developed a policy to pit one racial and ethnic group against another. The Hawaiian monarchy became concerned with the rising Chinese population and in 1883 restricted Chinese immigration to 600 contract-laborers every three months. By 1886, all unskilled Chinese contract-laborers were prohibited.

The concern of the rising number of Chinese became increasingly vocal, the plantations were discovering that the Chinese contract-laborers moved away from the plantations once their contracts were fulfilled, and the Chinese contract-laborers with their increasing numbers began to agitate for better work conditions. The plantation owners turned to Japan. Japanese sailors, who had been shipwrecked in Hawaii, were not an unusual sight. A couple of them became citizens of the Kingdom of Hawaii. The Hawaiian monarchy signed a treaty with Japan and the Japanese embassy spent time in Honolulu on their return trip from Washington, D.C. In 1868, the first of many Japanese contract-laborers arrived in the Kingdom of Hawaii to work. Many of them came as families. Single men would marry Japanese women and bring them to Hawaii. This group encountered cultural misunderstandings and a dozen returned to Japan after fulfilling their three-year contracts, although the majority stayed to make the Kingdom of Hawaii their new home. It would be decades before more Japanese contract-laborers came to work the sugar plantations. The Japanese government resumed sending Japanese citizens to the Kingdom of Hawaii in 1886. The plantation owners began to import Japanese contract-laborers in earnest to counterbalance the large numbers of Chinese. Within four years, the plantation owners would return to Chinese contract-laborers because of the overabundance of Japanese.

The overthrow of the Hawaiian monarchy was conducted by plantation owners in conjunction with other businessmen, missionary descendants, and the U.S. Marines. The Kingdom of Hawaii became the Republic of Hawaii and the importation of Chinese and Japanese contract-laborers expanded because of better economic conditions for the sugar industry. Annexation by the United States in 1900 effectively ended Chinese importation as well as the contract-labor system. Thousands of Japanese laborers continued to arrive until the 1907 Gentlemen's Agreement when fewer Japanese immigrated. Around the same time, Koreans began to arrive as plantation laborers. In 1905, Japan's invasion of Korea ends Korean migration to the Republic of Hawaii. The immigration act of 1924 ended Japanese immigration and the plantation owners needed another source of labor.

After the United States annexed the Philippines after the Spanish-American war in 1898, the plantation owners had their new source of labor. This new source of labor would also compete with the Japanese and Chinese laborers to increase production. In 1907 a few Filipino families were brought to work on the sugar plantations. Other families migrated independently. In 1910 Filipino immigration increased. After a major Japanese plantation laborers strike in 1919, Filipinos became the plantation owners' primary source of labor. Filipinos became the plantations' only source of labor when the Japanese and Korean laborers were excluded because of the immigration act of 1924. When the depression occurred, Filipino immigration was halted until 1946 when laborers were in short supply. Over time, Filipinos became the majority among the plantation laborers.

Once on the plantations, the different ethnic groups were kept segregated to encourage interethnic competition. Eventually, the plantation owners integrated the different groups into a community. The most effective plantation strikes would occur when all ethnic groups banded together. A creole language, pidgin, developed on the plantations as a way for each group to communicate in the cane fields and in the mills. Pidgin is a combination of Hawaiian, Chinese, Japanese, and Portuguese words that helped make the plantation community. Despite creating a common language, each ethnic group worked hard to maintain their

distinct cultures and traditions. Most of these traditions revolved around food and holidays. Chinese New Year, Japanese bon festival and Mikado's birthday, and Filipino's Rizal Day were some of the holidays celebrated on the sugar plantations. Past-time activities carried over from the old country flourished on the plantations. Card games, taxi dances, gambling, and cockfighting were some of those carried over activities. Over time, these activities were replaced with baseball and music to "Americanize" these different ethnicities. Religion was important. Chinese laborers, many of them were having converted to Christianity in Hawaii, had their own churches built on the plantations. Korean laborers, having converted to Christianity in Korea, also had their own churches built on the plantations. The Japanese laborers often built little gardens around their living quarters, establishing Little Japans on the plantations. As the laborers established families and their children attended English-speaking public schools, these laborers wanted their children to learn and maintain their parent culture. These ethnic communities established their own language schools, ensuring that their children would learn their cultural language. The Japanese language schools were the most numerous, followed by the Chinese language schools and Korean language schools. These schools would continue long after the families left the plantations, until Pearl Harbor.

As early as 1859, Chinese and Japanese laborers moved to urban areas, California, and Honolulu once their contracts had been fulfilled. Another mass migration of laborers left the plantations when the Organic Act made the Republic of Hawaii a U.S. territory and the three-year contracts were null and void. The laborers that stayed on the plantations agitated in a series of strikes, monoethnic and multiethnic. In 1919, in response to a major strike on O'ahu, plantation owners evicted several thousand strikers and their families from plantation housing. Many of them migrated to Honolulu. At that time, there was a major influenza outbreak in Honolulu and many of the strikers and their families died. Eventually, many of the striking laborers' demands were met by the plantation owners because they needed the laborers. At the same time, the plantation owners had to make the work conditions better because they needed to entice the

laborers to stay on the plantation without the legal power of the three-year contracts.

Chinese laborers after having fulfilled their contracts would move off of the plantations and into other parts of the islands. Many of them were single men. They begin to make Hawaii their home by intermarrying with indigenous Hawaiian women. Then many of these men established small businesses for themselves or rented or leased land from indigenous Hawaiians. They established Chinese restaurants. There was no small town store that was not run by a Chinese man who had married an indigenous Hawaiian woman. Several of these men became an integral part of their Hawaiian communities. They not only provided needed goods, but sometimes served as the middleman between the indigenous Hawaiian farmers and the city markets. The Chinese would barter lumber, metal pots, and clothing for the labor of indigenous Hawaiians. They also served as the main source of transportation for goods from the ports to the rural areas of Hawaii that were otherwise inaccessible. One Chinese man, Ah Lum, would operate a mule train to and from the port of Ke'anae to Hāna. He also owned a poi factory, where poi was made from the taro plants that indigenous Hawaiian farmers would grow. In Hāna and other rural parts of Hawaii, Chinese farmers would grow rice on leased land that was not being used to grow taro. They would also have small garden plots at home or graze cattle, mules, and horses. Other former contract-laborers moved to Chinatown in Honolulu. In 1895, another epidemic was making its way through Honolulu. To control the epidemic, a controlled burning of parts of the city was practiced. When the burning raged out of control, Chinatown was burnt to the ground.

The Japanese laborers after having fulfilled their contracts would move off the plantations. Many of the Japanese laborers came with families to Hawaii or were able to establish families in Hawaii. Some returned to Japan. Other families moved to California and other parts of the mainland. Once President Roosevelt declared that no Japanese would be allowed to enter the mainland, thousands of Japanese families began to make Hawaii their home. Several educational campaigns were started to encourage the continued Americanization of the original Japanese laborers and

the maintenance of Americanism among the second generation.

Korean laborers had always retained their sense of nationalism for Korea. Many intended on returning to Korea once their contracts were completed, but many of them stayed. Once Japan colonized Korea, the Korean laborers began to see themselves as refugees and their duty was to continue their Korean culture and traditions for the sake of their country. These laborers began to see Hawaii as their home away from home where they could maintain their culture until Korea was free again. Eventually, they began to see Hawaii as their permanent home. By 1946, the Chinese, Japanese, Korean, and Filipino laborers and their descendants were a majority of the population in Hawaii.

These ethnic communities contributed to World War II by answering the call for soldiers and other sources of manpower. The Japanese and Japanese American community in particular enlisted in greater numbers than any other ethnic or racial group in Hawaii. They served in the 100th Infantry Battalion, the 442nd, and as translators. The Japanese community, especially after the bombing of Pearl Harbor, went out of their way to prove their Americanness. Because so many Japanese and Japanese Americans were an integral part of the community in Hawaii, a couple thousand were detained and very few were placed in concentration camps on the mainland.

Presently, these ethnic communities continue to raise families, some who stay, and others who move to the mainland. Chinatown has been reestablished with various businesses and a museum. Although there is no official Japantown, there is a part of Honolulu that has Japanese businesses and is predominantly Japanese. There is no official Koreatown, but there is a part of Honolulu that has Korean businesses and is predominantly Korean. Although many of the ancestors of these modern ethnic communities came as laborers, their descendants are a part of the upper echelon of Hawaiian society; both of Hawaii's Senators are Japanese American.

Ethnoburb

Ethnoburbs (a.k.a. multiethnic suburbs) represent the creation of a new ethnic landscape and a new model of the contemporary urban ethnic community. Ethnoburbs have emerged under the influence of international geopolitical and global economic restructuring; changing national immigration and trade policies; and local demographic, economic, and political contexts; and increasing transnational networks and connections. Ethnoburbs are suburban ethnic residential and business concentrations, which usually locate in large metropolitan areas. They are often multiracial, multiethnic, multicultural, multilingual, and multiracial in which one or more ethnic minority groups have a significant concentration but not necessarily comprise a majority of the total population. They are the spatial expression of a distinctive set of ethnic relations, characterized by a distinct spatial form and internal socioeconomic structure, and involves interethnic group and intraethnic class differences and tensions. An ethnoburb is likely to be created through some deliberate efforts of that group and has played out within changing demographic, socioeconomic, and political contexts in recent decades. Ethnoburbs function as a community replicating some features of a traditional ethnic enclave and other features of a suburb lacking a distinct minority identity. Thus, ethnoburbs

form an alternative type of ethnic settlement in contemporary urban areas and coexist along with, but differ from, traditional ethnic ghettos and enclaves by forming multiple clusters of urban and suburban ethnic settlements in contemporary societies. Both the traditional ethnic enclaves and the multiethnic suburbs have become new immigrant gateways.

The term “ethnoburb” first appeared in a study on the spatial transformation of the Chinese community in the Los Angeles area from downtown Chinatown to the suburban San Gabriel Valley in the second half of the twentieth century. These two communities exhibited distinctly different patterns of demographic and socioeconomic characteristics, as well as residential and business landscapes. The former is a typical American downtown Chinatown, congested and touristy; the latter, however, is the largest suburban Chinese concentration in the nation since the late twentieth century. At the time when the work began in early 1990s, Monterey Park (where the San Gabriel Valley Chinese community started) was referred to as the nation’s first “suburban Chinatown” by both academia and popular media, a designation implying that Monterey Park was the same sort of place as downtown Chinatown, only located in the suburbs. The residents of these two communities differ in their demographic and socioeconomic profiles. The economic restructuring and globalization on the one hand and Los Angeles’s regional circumstances on the other hand further connect empirical findings to broader socioeconomic and geopolitical contexts. The study concludes that the ethnic concentration in the San Gabriel Valley does not represent a suburban Chinatown, but is, instead, a new form of ethnic settlement. Other studies also discover that the processes driving ethnoburb formation are not unique to the Chinese in LA, but affect other ethnic minority and immigrant groups in other localities and even other countries.

The study of ethnoburbs is informed by both classic research on immigrant communities and new theoretical underpinnings. Varying spatial location, degrees of concentration, and forms of ethnic communities are good indicators of changing racial relations and socioeconomic environments. Historically, ethnic minority groups (immigrants included) were forced to live in contained communities because of

discrimination. Urban housing dynamics were underpinned by racial discrimination that caused various degrees of diverse forms of spatial segregation in both inner cities and suburbs. Their residential areas often take the form of ghettos and ethnic enclaves and are located in run-down neighborhoods, mostly inner cities. Numerous classic studies have been done on such immigrant neighborhoods and leave a rich legacy, describing immigrants' adaptation, assimilation, and integration to the destination countries. In the meantime, white middle-class families—composed of a working dad, a stay-at-home mom, and their children dominate the traditional suburbs in metropolitan areas, especially those in North America. If racial and ethnic minorities, Asians included, did achieve their dream of social and economic upward mobility by suburbanizing, they are expected to be, and likely are, spatially dispersed (known as “spatial assimilation”) and socioeconomically assimilated into the mainstream society. As a result, within an ethnic group those who live in inner-city enclaves are usually poor, less educated, spatially concentrated, and more likely to be low-skill workers in an ethnic job market; whereas residents of the suburbs are well off, professionally trained, and live in racially or ethnically mixed residential areas—as portrayed by the two traditional spatial models of ethnic settlements of “invasion and succession” and “downtown versus uptown.”

Such images, however, belie reality in recent decades as many suburban areas have transformed to multi-racial, multicultural, and even multinational ones. Changing political and socioeconomic situations have resulted in a range of ethnic spatial settlement patterns, from total dispersion or in new forms of ethnic concentration. Both processes can transform ethnic communities as well as society at large. Many new immigrants with higher educational attainment, professional occupations, and financial resources settle directly into the suburbs without ever having experienced life in the inner city. Today, demographic characteristics, social and economic structures, and residential and commercial landscapes are undergoing drastic changes in the suburban areas of many large metropolitan areas across the globe. The combination of changing geopolitical and global economic contexts and shifting immigration policies make it possible for

ethnoburbs to take root and grow. The influx of immigrants and the new economic networks created by their arrival stimulate the formation and determined the particular location of an ethnoburb within a metropolitan area. Following the major immigration policy changes of the second half of the twentieth century, unprecedented numbers of Asians with a variety of socioeconomic backgrounds immigrate to the recipient countries that have recruited them via the various mechanisms. The traditional small scale, congested inner-city ethnic enclaves can no longer house all the new immigrants. Many of them, including those who are wealthy and middle-class, not only do not consider the often crowded and run-down neighborhoods in inner cities their ideal places to live, they also have the financial resources to avoid living in those neighborhoods. They can afford the newer houses, nicer neighborhoods, and better schools that suburbs often offer. Because of the changing domestic social policies in the recipient countries, these new immigrants in most cases also have the freedom to choose where they preferred to live within a metropolitan area.

As a new type of ethnic concentration area, ethnoburbs occupy a unique position in the contemporary socioeconomic and political context and engage in all manner of social and economic relationships. Ethnoburbs are fully functional communities with their own internal socioeconomic structures that nevertheless integrated to national and transnational networks of information exchange, business connections, financial flows, and social activities. Ethnoburbs offer more space and diversified, economic activities to ethnic populations, compared to traditional enclaves. Ethnic economy in ethnoburbs not only incorporate the traditional ethnic businesses, but also involve globalization of capital, goods, and information, increasing mobility of both highly skilled, professional and managerial personnel, as well as low-skilled laborers. Forced segregation is not behind the formation of ethnoburbs as the case of ghettos, but clustered voluntarily among immigrants and minorities to maximize their personal and social networks and transnational business connections. Ethnoburbs also provide new immigrants with a community of similar language and culture. The ethnic economy inside ethnoburbs provides jobs and lures more immigrants to live and work. Increasing numbers of

immigrants—who are entrepreneurs, laborers, and customers of ethnic businesses—strengthen the ethnic socioeconomic structure in ethnoburbs. Yet, they may also increase potential tensions and conflicts between different classes within the ethnic group itself.

Given this mixed environment and daily contacts with people of different backgrounds, ethnic minority people in ethnoburbs are both inward and outward looking through their socioeconomic and political pursuits. Inside ethnoburb, people of different racial and ethnic backgrounds are connected not only with economic activities, social and cultural affairs, they are interacting with each other as neighbors. Immigrants and minorities are more likely to mobilize and involve in political activities, evident in the election of third-term Congresswoman Dr. Judy Chu, representing the West San Gabriel Valley and the current chairwoman of the Congressional Asian Pacific American Caucus, and the newly elected Grace Meng representing the multiethnic Queens of New York 6th Congressional District. Given the heterogeneity of ethnoburban residents with class differences, there are internal fragmentations along class line as well. Cultivating an ethnic consciousness leads to growth and prosperity, but may also undermine cross-racial coalition formation.

Since its inception, the ethnoburb concept phenomenon has been examined for its applicability and utility among different racial and ethnic groups and in different countries by both academia and media. Among urban areas studied are Sydney, Australia; Toronto and Vancouver in Canada; Auckland, New Zealand; London in the United Kingdom; and Atlanta, New York, Orange County, Portland, San Francisco Bay Area, and Washington, D.C. in the United States.

In summary, traditional ethnic settlements such as ghettos and enclaves are marginalized communities in mainstream society. Such traditional models of isolated communities can no longer fully capture the changing dynamics and connections in contemporary immigrant and minority settlements. Ethnoburbs have become reality in major American and other metropolitan areas. They provide opportunities for ethnic minority people to resist complete assimilation into the non-Hispanic white cultural and social “norms” of the mainstream societies. More important, the ethnoburb model challenges the dominant view that

assimilation is inevitable and the ideal solution for immigrants and other racial/ethnic minorities. By maintaining their multifaceted identities and establishing distinctive communities when keeping transnational connections, ethnoburban populations can nonetheless integrate into the mainstream society through economic activities, political involvement, and community life. In doing so, these ethnic minority groups are transforming American and other receiving societies.

Eu, March Fong (1922–)

March Fong Eu is a third-generation Asian American politician representing the Democratic Party. She was born March 29, 1922, in California and is famous as the first Asian American woman to be elected to the California State Assembly. Eu was one of the few women Californian state legislators of her time.

Eu, a third-generation Asian American, grew up in the small town of Oakdale, California. She received a BA in dentistry from the University of California at Berkeley in 1943, and later an MA from Mills College, and finally a PhD in education from Stanford University in 1954.

Eu has extensive experience as an educator. She taught in the Oakland Public School system, the

Alameda and Santa Clara County school system, at Mills College, and also served three terms with the Alameda County Board of education. She was also the president of the Alameda County Board of Education during part of her tenure there.

In 1966, Eu was elected to the California State Assembly, representing Oakland and parts of the Castro Valley. She served for four terms in the state assembly, from 1967 to 1974. Specifically, during her time in the state assembly, Eu championed consumer rights, worked tirelessly on environmental issues, and was an advocate for women's issues. After serving in the state assembly, Eu ran and won the position of secretary of state and served as the chief elections officer of the state of California.

Eu's election was groundbreaking at that time for two reasons. First, she was elected into office with a record-setting 3 million votes, and second, she also became California's first woman secretary of state. Her many accomplishments as secretary of state include instituting voter registration by mail, the availability of candidate statements in the state ballot pamphlet, the possibility of mail-ballot for all registered voters, and other initiatives. Eu's efforts have streamlined voting procedures in California and helped eliminate instances of election fraud. Eu was the 25th secretary of state of California, serving from 1975 to 1994.

In 1994, Eu accepted former President Bill Clinton's appointment as Ambassador of United States to the Federated States of Micronesia. She served as ambassador for two years until 1996. Eu returned to California afterward to continue her efforts in promoting California commercial interests, especially with the increase of exports of California products. She sponsored the creation of the California State World Trade Commission and served as its first chair.

In 2002, Eu had intended to run again for the office of secretary of state of California; however, she lost the Democratic nomination during the primaries. In 2003, she also filed a statement of intention to run in the gubernatorial race after the recall of former Governor Gray Davis; however, she later withdrew her intention. March Fong Eu has been a trailblazer in her own way, making history for Asian Americans and women alike in public service.

Evangelicals and Korean American Community Formation

Nearly 30 percent of the 49 million or so South Koreans are Christian. In the United States, however, 70 to 80 percent of over a million Koreans are Christian and are affiliated with an ethnic church. The majority of Koreans regularly attend the 4,000 or so Korean churches every Sunday in the United States. The Protestant faith and church have been central to the formation of the Korean American community since the very beginning of Koreans' settlement in the United States.

The Ethnic Church and Early Community Formation

The story of Korean immigration in America begins with the arrival of 102 Koreans in Honolulu, Hawaii on January 13, 1903. Between 1903 and 1905, more than 7,226 Koreans arrived in Hawaii to work on its sugar plantations. Within the first few months of settlement, the Korean laborers formed the Hawaii Methodist Church in 1903 and the Hawaii Korean Anglican Church in 1905. By 1904, there were seven Korean Christian chapels in Hawaii. From the start, these early churches became important clearinghouses of social

Church Elder David Ting holds his son Tobin, 2, as the congregation stands at the beginning of Sunday service at Grace Chapel in Lexington, Massachusetts, February 11, 2007. Grace Chapel is one of many megachurches altering the segregated landscape of Sunday worship, with African American, Haitian, Caucasian, Chinese, and Korean congregants singing along with a guitar-playing pastor. (AP Photo/Michael Dwyer)

services and information as the umbrella organization for the Korean American community. Beyond religious services, churches provided a forum for Korean Americans to discuss a wide range of issues including their economic concerns, status as an ethnic racial minority, and their desire to see Korea free from Japanese colonial oppression. The church became a place of comfort and meaning in a new land.

Unable to fully engage themselves as U.S. citizens and troubled over the Japanese colonization of Korea, Korean Americans actively involved themselves in homeland politics and advocated Korea's independence from Japan. In this process, Korean Christian churches became important sites for Korean immigrants' political activism and nationalism. The

separation of church and state found in mainstream America was not evident in the early Korean church. Homeland politics commonly intermingled with religion.

In addition to being the locus of political activity, Korean churches operated as the main community centers that addressed the various survival needs of their congregants. Located close to where the Korean immigrants resided, the churches provided multiple services and programs to ease Korean immigrants' settlement in the new country like job placement, counseling, legal aid, language classes, interpretation and translation, among others. Moreover, the churches served as a home away from home where fellow Korean exiles could find emotional and social support. At the ethnic

church, immigrants could speak their native language, exchange stories from back home, seek the advice and assistance of fellow co-ethnic church members, and support each other through the difficulties of working at the sugar plantations. The Korean church thus functioned as the educational, cultural, political, and social service center for Koreans. With pastors serving as spiritual counselors as well as community leaders, churches also became the representative of the Korean community to the rest of U.S. society.

The Ethnic Church and Community Formation Today

From 1970 to 1980, the Korean population in the United States increased by 412 percent, and Korea has consistently been on the list of the top ten immigrant-sending countries since the 1980s (USINS 1997). The Korean American population increased from 69,150 in 1970 to 1,076,872 in the year 2000. Koreans are currently the fifth-largest Asian group behind the Chinese, Filipino, Vietnamese, and South Asians. According to the 2000 U.S. Census, Koreans made up 0.39 percent of the U.S. population and 10.8 percent of the non-Hispanic Asian and Pacific-Islander population.

Surveys conducted in the 1980s show that almost three-quarters of the Korean immigrant population in America identified themselves as Christians and attended mostly Protestant churches. In some cities, the numbers are higher. A 1997–1998 survey conducted by Pyong Gap Min reported that 79 percent of Korean immigrants in Queens, New York identified themselves as Christians and 83 percent of them reported that they attend an (ethnic) church once a week or more. With nearly all Korean Christians taking part in a Korean congregation, the church participation rate for Korean Christians is much higher than that of other Christian groups in the United States. With the largest segment of the Korean Christian population being Presbyterians, the Racial and Ethnic Panel of Presbyterians' study based on national surveys show that 28 percent of white, 34 percent of African American, and 49 percent of Latino Presbyterians attend the congregation's Sunday worship every week compared to 78 percent of Korean Presbyterians.

Korean Presbyterians donate more money to the church, spend more time in the church, and take part in church activities more than their non-Korean counterparts in the study. Although Korean immigrants tend not to stay in one church for long, they will likely take part in an ethnic church for most of their lives and do so extensively. The Korean churches in the United States also have more than one service throughout the week and provide various opportunities for its members to take part in the church. Where there is a settlement of Koreans, there will be a Korean church nearby, where they will be actively engaged.

Reasons Behind the Importance of Faith and Church in Community Formation

Selective Migration. Part of the reason why Korean immigrants are drawn to the Christian faith and church in the United States is because they were Christians before their arrival. Although over a quarter of the population in South Korea can be counted as Christian, approximately half of the Koreans leaving in the post-1965 immigration wave were estimated to be Christian. This is not surprising considering that Christianity in Korea is strong among the urban middle-class, the group that is most likely to take part in contemporary immigration to the United States. Christians are also more likely to migrate than Buddhists or other Koreans with no religion.

The significance of faith and church for the Korean American community is also because of the abundance of Korean immigrant pastors in the United States. There are pastors that come directly to the United States to work at Korean immigrant churches. There are also Koreans that come to the United States as students in seminaries that stay on in the country as religious workers upon graduation. At Fuller Theological Seminary located in Southern California, Koreans make up about a quarter of the student body. Asians, mostly Koreans, also account for a quarter of the students at Talbot School of Theology. The significant cadre of Korean Christian religious professionals fuels the growth of Korean churches. If they can't lead an existent church, they can start a new church and expand the Korean American Christian community.

Reviving the Spirit. Immigrants, dislocated and faced with the difficult task of adjusting to a myriad of new changes in a foreign land, can find psychic relief and meaning through faith and church. Korean immigrants can turn to a conservative evangelical faith because it provides them an absolute belief system and a clear moral standard in an otherwise volatile existence as not only immigrants but as a racial minority in a new land. They may be strangers, misunderstood and marginalized in the broader society, but within the church community they can be accepted, understood, and uplifted. They can revive their spirit through their faith and church, which contributes to the significance of the church for the Korean American community.

The importance of the Protestant church in Korean Americans' community formation can also be attributed to the syncretism between traditional Korean culture and Protestant Christianity. The centrality of moral, social, and family values in Confucianism complements the moral codes and teachings of conservative Protestant Christianity. The Christian churches' stance against moral depravity and the importance of honoring and obeying one's parents, and the promotion of male-domination are in many ways congruent to patriarchal Confucianism. The Protestant church provides an amenable and reliable vehicle for the maintenance of traditional familial and communal order in the United States.

Social Capital. Immigrants need information and practical assistance as they settle and adjust in a new country. The Protestant Korean churches in the United States certainly fill this need. Korean Christian churches help its members find homes, purchase cars, and find the proper schools for their children. In addition to hospital visits to greet new babies or to comfort the sick, ethnic churches also provide translating services, aid in applying for citizenship, and dealing with the courts. In addition to spiritual counsel, one can get practical advice on where to find the best Korean food and how to pay for a traffic ticket. And, if they need financial capital to start a business or send their children to college, they can join credit associations through their church contacts. Many of the Korean language schools and preschools are connected to Korean churches. There are also faith-based community

organizations like the Korean Churches for Community Development that work with Korean churches to obtain resources and provide variety of social services and programs for the Korean American community.

Besides more practical assistance, Korean churches provide numerous fellowship opportunities for its members. There are picnics, retreats, sports events, holiday celebrations, and more that members can take part in and find community and belonging. Churches and their small fellowship groups can function as an extended family. Those who are single can also find their future partners within the church. Parents can be more assured that their children will marry another Korean if they take them to a Korean church. Koreans who are not part of a Korean church miss out on multiple social opportunities.

Ethnic entrepreneurs whose businesses cater to the coethnic community find the ethnic church to be a particularly valuable place for conducting business and gaining a reliable clientele base. Some Korean entrepreneurs even hold multiple memberships in several Korean churches to expand their networks for business purposes. Those who receive services from these business entrepreneurs can also benefit; they can be assured that they will be treated fairly by the businesses because news of dishonesty or improper business practices can spread quickly within a tight ethnic religious community. Those seeking employment can also get news of potential employment from businesspeople within the ethnic church.

The multiple social services and family-like community support that ethnic churches provide are particularly important given the lack of formal social service agencies for Korean immigrants. Because their meetings tend to be less intense and frequent, nonreligious ethnic organizations are also less effective than churches in fostering social interaction and networks with coethnics. The proactive outreach strategies of the Korean Protestant churches, relative to other alternative religious and/or ethnic organizations, further contributes to the significance of the ethnic church for the Korean American community. Buddhist monks are not at local Korean grocery stores and other Korean businesses or the major airports looking for converts like the Korean Evangelical Protestants.

Status Revival. Besides the more visible social functions of the Korean church, there are more latent functions that the church provides, which contribute to its significance in the formation of the Korean American community. The ethnic church helps Koreans regain the social status that they lost in the process of immigrating and adapting to a new land. Because of language limitations, cultural unfamiliarity, and other disadvantages, many contemporary Korean immigrants cannot maintain the professional, administrative, and managerial positions that they once had in Korea. In this situation, the ethnic church helps alleviate immigrants' status depreciation and devaluation by giving them recognition and opportunities to take on leadership positions within the church. Besides positions as elders and deacons, there are various committees like the committee for education, fellowship, finance, and publication that members can lead. Members can be the directors of the choir, children's Bible schools, or language school. Multiple positions exist to satisfy members' need for social status and recognition. Although the broader U.S. public may not recognize and/or respect middle-class Korean immigrants' past social status and achievement as college graduates or professionals in Korea, fellow coethnics will.

Constructing Identity and Culture. As an extended family, the Korean church provides the social arena for Korean immigrants to regularly gather, speak Korean, eat Korean food, celebrate Korean holidays, exchange news from Korea, and practice traditional Korean culture and norms. The Korean church offers the plausibility structure, the stable social relationships, that help preserve and reconstruct not only Koreans' religious identity, but also their ethnic identity in the United States. With familiar faces, smells, and sounds surrounding them, Korean immigrants can share as well as pass on parts of their culture to the next generation. Korean churches organize various social activities that help build ethnic networks; they have Korean language programs, daycare, and other children's programs that facilitate the transmission of Korean culture to the later generations. After the main Sunday worship service, Korean churches serve Korean food, full lunches and refreshments, with time for fellowship. At these and other gatherings, Korean immigrants can celebrate birthdays for

the children and the elderly members in the traditional Korean fashion with Korean food. Korean churches celebrate Korean holidays like Chuseok, the Korean equivalent to Thanksgiving, where Korean food can be consumed wearing traditional Korean clothes. Outside of the family, Korean churches are a major, if not the major, source of coethnic cultural interaction and community building.

Summary

Since the first group of Korean migrants settled in Hawaii, faith and church have been central for the Korean American community. Evangelical faith and church provide significant meaning systems and provide Korean Americans the plausibility structures to forge their own spiritual and ethnic space in the new country by also offering them multiple practical services and aid. The tremendous significance that the church has for the community, however, means that Koreans who are disengaged from the ethnic church are also disconnected from many of the resources within the Korean American community.

Evangelicals on the College Campus

At many of the large and elite college campuses across the United States, the terms evangelical Christian and Asian American have become almost synonymous. A quarter of the evangelical college students at New York City colleges and universities are Asian American. Christian campus groups on Ivy League campuses like the Harvard Radcliffe Christian Fellowship at Harvard and Campus Crusade for Christ (CCC) at Yale have become majority Asian American. A joint meeting of the major campus ministries on campuses like the University of California at Berkeley and the University of California at Los Angeles (UCLA) will be over 90 percent Asian. Since the early 1990s, many evangelical campus groups have experienced an “Asianization” within their ministries. On most college campuses, you have a far better chance of finding a Chinese Christian fellowship than a Chinese Buddhist club.

Responding to this growth, some in the evangelical community have dubbed Asian American evangelicals as “God’s new whiz kids” who not only excel in school, but are exemplars of evangelical piety and devotion. Asian Americans are stereotyped not only as the “model minority,” but the moral minority, which other evangelicals would do well to emulate. Although Asian Americans are being touted as the model moral minority, Asian American evangelical leaders note that being involved in campus ministries has become a “cool” thing to do for Asian American college students. There are multiple factors that contribute to the growing presence of Asian American evangelicals on college campuses.

Reasons Behind the Growth

Asian Americans account for roughly 4 percent of the U.S. population. But they makeup more than

15 percent of the student enrollment at Ivy League colleges like Yale, Harvard, and Columbia, and more than 20 percent of the student enrollment at Stanford, Massachusetts Institute of Technology, and California Institute of Technology. The numbers are even higher in some of the public universities in California. Over 40 percent of the student enrollment at UC Berkeley, UCLA, and UC Irvine are Asian Americans. But numbers do not tell the whole story. The religious background of Asian American students, namely Korean Americans and Chinese Americans who predominate in campus ministries, is also important.

Most of the students in campus ministries have former religious ties. The largest group of Asian American campus evangelicals, Korean Americans, is a mostly churching population. Seventy to 80 percent of over a million Koreans in the United States identify themselves as Christians and regularly attend the 4,000 or so Korean churches every Sunday. Indeed, it is difficult to find a Korean immigrant who is not part of a Korean church. Many of the children of Korean immigrants that matriculate into colleges and universities thus come from church backgrounds, which can lead them to take part in campus ministries once they are in college. Chinese Americans, who also makeup a sizable population of Asian American evangelicals, are not as likely to be churching. Nevertheless, it is estimated that a third of Chinese Americans are Christian—far more than the estimated 1 to 5 percent of the Christian population in Chinese societies—and Christian churches are the most predominant religious institutions among Chinese Americans.

Coming from church backgrounds can contribute to students’ participation in campus ministries. In some cases, students are connected to a particular campus ministry even before their matriculation to college through the networks that are available in their church community. Church background, however, is not enough. Campus ministries themselves have to be appealing. Recognizing this, campus ministries work hard to recruit new members. Particularly during the first few weeks of schools, they will set up their tables out in the popular walkways on college campuses with free food, refreshments, and games to attract new members. In addition to Bible studies and worship gatherings, campus ministries offer multiple

opportunities for social gatherings. They have free barbecues, pizza parties, special banquets, study sessions, trips to amusement parks, sports events, bonfires at the beach, and retreats into the mountains. In campus ministries, students can meet lifelong friends and even find one's future spouse.

Newly arrived students on campus have a lot to gain by joining these communities. During midterm and final exam weeks, the older members in the campus ministry will cook and prepare special care packages for the new members. Someone in the campus ministries will remember their birthdays, help them run errands, and assist them if their car breaks down. They can also turn to fellow peers in the campus ministry for advice on everything from relationships to how to pass a biochemistry exam. What is more, all of these social benefits are offered free of charge. Unlike other campus organizations like sororities and fraternities, anyone who is willing to join is welcome and can obtain the benefits of joining the organization.

In his in-depth field research at an InterVarsity Christian Fellowship (IVCF) chapter at McMaster University in Ontario, Paul A. Bramadat also finds that campus ministries function as an alternative institution that enables students to work through a sense of otherness as Christians on a secular campus. IVCF offers a unique evangelical counterpart to every secular student social function and organizes meetings and events that help students to address the cognitive and social dissonance that they face as Evangelical Christians in secular academia. For ethnic minorities, however, campus ministries solve more than their spiritual estrangement. They can also shield them from marginalization as ethnic and racial minorities.

In ethnically or racially homogeneous campus ministries where most Asian Americans are clustered, Asian Americans can take their ethnicity for granted, and not worry about race or racism. In his study of Chinese American and Korean American evangelicals, Anthony Alumkal finds that Asian Americans retreat into evangelical campus fellowships as an act of self-preservation in a racially hostile setting. Examining the reorganization of Chinese and Japanese American congregations around a new panethnic Asian American identity, Russell Jeung also adds that contemporary evangelicalism gives Asian Americans

a chance to escape the undesirable aspects of their racial status by adopting an alternative identity, by making Christianity the locus of their identity. Asian Americans can turn to many of the ethnically or racially homogeneous evangelical fellowships to escape a society where race continues to matter.

Asian American pastors and staff leaders also point out that Asian American campus ministries provide Asian American students opportunities for leadership, which they would not otherwise have in other white-dominated campus ministries. They do not have to compete with other ethnic groups, namely whites, for power within the campus ministry structure. Asian Americans are also said to have different leadership styles. They are more submissive and hierarchical and less likely to challenge authority figures and consequently are less likely to get noticed for leadership within a larger group setting. Accordingly, Asian Americans will have a better chance of moving up the ladders of power and exercising their leadership within a racially and culturally more homogeneous ministry.

Moreover, Asian Americans are creating their own generational, ethnic, and religious community through campus ministries. Studies on churched second-generation Korean Americans as well as Chinese Americans note that the second-generation are not happy in their parents' church. Many find the immigrant church to be patriarchal, hierarchical, divisive, dry, rigid, first generation focused, and disconnected to their cultural and spiritual needs. Coming from these backgrounds, campus ministries, which are commonly run by the second- and later-generation Asian Americans themselves, provide Asian Americans a chance to worship in their own way. They can sing the most contemporary worship songs, construct programs that suit their own tastes, and listen to messages that speak to their generational and cultural experiences as Asian Americans, many of whom grew up in immigrant-parent homes. Along these lines, the leaders of campus ministries deliberately try to reach out to Asian American students with the belief that they are a distinct group with unique needs and cultural backgrounds.

Asian Americans, even those who are third- or fourth-generation, are believed to be bound by common cultural traditions, beliefs, and values that

become the basis of a distinct panethnic group identity. Characteristically, Asian Americans, particularly those of East Asian descent, are described as more self-controlled, disciplined, fatalistic, obedient to authority, humble, and collective relative to the European American population. They are viewed as more shame- and guilt-ridden and bound by “liminality”—being in-between two worlds. These perceived differences motivate campus pastors to create campus ministries especially catered to Asian Americans. The fact that mainline seminaries educate seminarians about the specific theological concerns, perspectives, and social issues of Asian Americans and offer programs and courses tailored toward them further supports the formation of Asian American campus ministries. There is even a sense that religious institutions should play a role in reconnecting Asian Americans with their ethnic and familial heritages.

Religious leaders and scholars also suspect that Asian Americans are drawn to evangelicalism because their familial cultural background and overall group character mesh well with conservative evangelical faith. Evangelicalism’s emphasis on hard work, discipline, self-control, and obedience complement Asian Americans’ familial and cultural upbringing. Turning to evangelical campus ministries can help Asian Americans to stay on the model minority path of socioeconomic mobility. It can encourage them to work hard and live disciplined, self-controlled, and obedient lives that honor one’s parents. At the same time, evangelical campus ministries can offer psychological spiritual relief for many of the Asian American students who grow up with excessive parental pressures to succeed. Ethnic campus ministries can help Asian American students to sort out their ethnic identity issues in ways that other organizations like ethnic studies programs cannot. Ethnic studies courses teach students about their history, culture, and racial oppression, but do not practically help second-generation Asian American students to work through their identity issues as a people straddling multiple generations and cultures.

Impacting the Campus

Asian American evangelical campus ministries tend not to be politically active. They focus on fellowship

gatherings and may have a few community service activities and mission trips to nearby countries, but they do not actively engage themselves in politics in or outside of the college campus. Although they may not be politically active, Asian American evangelicals are enlivening and diversifying the campus Christian community and innovating new ways of worship.

Across the United States, Asian American groups are pioneering a revival of a cappella singing. On West Coast college campuses, Korean American evangelicals are known for their cutting-edge praise music. Although Asian American evangelicals’ praise is largely similar to other evangelicals, it is often more cutting edge. They use the latest praise music coming out of the United Kingdom as well as the United States—before the other campus ministries do the same. They tend to use more modern musical instruments like electric pianos, bass, and guitar than some of the other traditionally white-dominant campus ministries.

The presence of Asian American students has also made the campus evangelical community more diverse. Taking part in campus ministries is no longer just a predominantly white phenomenon. Looking at the list of campus organizations or walking through the rows of campus organizations trying to attract students on the popular walkways of college campuses tells us that the campus Christian community has diversified. Moreover, the emergence of Asian American evangelicals has pushed the campus Christian community leaders to create more ethnic and multiethnic ministries and think seriously about issues like racial reconciliation. There is more talk of worshipping with the entire body of Christ and moving beyond the racial boundaries that divide the rest of society. A few Asian American evangelical leaders are even forming multiethnic ministries that draw a more ethnically diverse student body.

Despite genuine intentions and attempts to pursue more integrated fellowships, separate ethnic or race-based ministries remain the most popular. Asian American evangelicals have a visible presence and are known for their religious fervor and innovative worship, but their campus ministries run separately from the more established white Evangelical campus

ministries. This isn't just the Asian Americans' or other ethnic minorities' doing. It is because white students want their own ethnic fellowship too. The campus evangelical community has diversified, but it is not integrated.

When Asian American students increasingly start filling the seats in their campus ministry, white students leave. They tend to leave in search of their own racially homogeneous campus ministry where they can remain the majority, where they don't have to confront or deal with diversity. This is what happened at several IVCF chapters. When some IVCF chapters started to proactively promote racial reconciliation and give ethnic minority students more leadership positions, white students left. They left for campus ministries or similar alternative organizations where they don't have to reconcile cultural differences and compromise their majority group status.

Recognizing that neither white nor the growing numbers of minority students, namely Asian Americans, want to pursue a truly integrated multiethnic community, campus ministries have created multiple parallel ethnic campus ministries. Larger established campus evangelical organizations like Campus Crusade for Christ and Intervarsity Christian Fellowship both have separate ethnic ministries for Hispanics, blacks, and Asian Americans. For example, on the University of Texas at Austin campus, CCC and IVCF have their own separate Asian American ministries. On some college campuses on the West and East Coasts, CCC and IVCF even have ethnic ministries specifically for Korean Americans (e.g., Korea-CCC and Korea-IVCF). Thus, although there is still talk of racial reconciliation and racial unity, integrated multi-racial campus ministries remain scarce. This is largely because of the leaderships' recognition that far fewer people would take part in the campus ministries if ethnic and racial integration is pushed. In a setting where students can choose from a variety of racially diverse campus ministries, most, including Asian American evangelicals, will choose separate ethnic ministries. In this way, the growing numbers of Asian American college evangelicals have contributed to the development of separate ethnic ministries on many of the

private elite and large college campuses across the United States.

Evora, Amanda (1984–)

Amanda Evora is a Filipino American pair skater. She was born on November 17, 1984, in New York. When she was six, she discovered her sister's skates in the garage that fit her. This discovery started her skating career. Evora teamed with Mike Adler until June 2002 and with Mark Ladwig since then. Evora and Ladwig received their training in Florida. They won the gold medal at the 2004 Golden Spin of Zagreb. In 2010, they finished second at the U.S. Championships and ninth at the World Championships. They represented the United States at the 2010 Winter Olympic Games in Vancouver, Canada and placed tenth in pairs skating.

Ex Parte Mitsuye Endo (1944)

In the case of *In re Mitsuye Endo* 323 U.S. 283 (1944), announced in December 1944, the United States Supreme Court ruled that the federal government could not confine concededly loyal citizens of Japanese ancestry. This case was fundamental in reshaping the wartime trajectory of Japanese Americans, as it led to the opening of the camps and the mass return of inmates to the West Coast before the end of the war.

The fact that the *Endo* case was brought at all, let alone appealed before the Supreme Court, was in some sense a matter of chance given its importance. Mitsuye Endo, a stenographer at the Department of Motor Vehicles in Sacramento, was one of a small group of Nisei state employees who were dismissed from their positions in early 1942. Following her removal to the Tanforan Assembly Center, Endo was contacted by ACLU lawyer James Purcell, who sought to challenge the arbitrary dismissal of the Nisei state employees. Although Endo either never met her lawyer or did so only on one occasion, she agreed to serve as a test case. Purcell's original intent was not to challenge confinement as such but for Endo to regain the civil service job from which she had been arbitrarily dismissed. Purcell determined, however, that the most rapid legal means to achieve this goal was by the circuitous route of challenging her confinement via a *habeas corpus* petition. Thus, Purcell charged the federal government with unlawful detention that deprived Mitsuye Endo of her right to return to her job.

In bringing his petition, Purcell was supported not only by the ACLU, but by the Japanese American Citizens League, which had earned the enmity of many Nisei by declining to oppose mass wartime removal. Unlike the other challenges to Executive Order 9066, Endo's case did not involve a challenge to the initial removal, but rather a larger question of liberty from arbitrary confinement.

In July 1942, Endo's *habeas corpus* petition was argued before Judge Michael Roche. Although a *habeas corpus* petition is supposed to be an expedited proceeding, Judge Roche deliberately stalled his decision for over one year following the hearing, during which time Endo remained arbitrarily confined, first at Tanforan and then at the Tule Lake camp. (Some time later, Endo was once more removed to the Topaz camp in Utah. In theory, this removed her from the jurisdiction of the California court, but Judge Roche neither acted to freeze her location nor withdrew from the case.) Finally, in July 1943, after the Supreme Court decisions in the *Hirabayashi* and *Yasui* cases were issued, Roche issued an order summarily dismissing Endo's petition, but did not offer any explanation or grounds for his action.

Purcell appealed Endo's case to the U.S. Court of Appeals for the 9th Circuit. Government lawyers recognized that they had little chance of prevailing on appeal, especially because Mitsuye Endo had filled out a leave clearance questionnaire and had been adjudged "loyal." Government officials nevertheless feared the consequences of opening the camps. Thus, the War Relocation Authority's (WRA's) chief attorney, WRA Solicitor Philip Glick, traveled to see Endo and tried to persuade her not to continue, offering her an immediate "leave permit" to resettle outside the West Coast if she would abandon the case. Endo refused and remained in confinement as her appeal was perfected.

In March 1944, as the 9th Circuit prepared to hear Endo's appeal, the Supreme Court agreed to hear the *Korematsu* case. James Purcell and the ACLU lawyers defending the *Korematsu* case hoped that the two would be argued together, as the arguments presented in defense of Mitsuye Endo might influence the Justices to rule in favor of Fred Korematsu as well. In turn, the fact that both cases were forthcoming might push the government to take rapid action to lift West Coast exclusion so as to avoid being put in the position of acting illegally. Ninth Circuit Appellate Judge William Denman, who hoped for a rapid resolution to the *Endo* case, certified questions for the Supreme Court in April 1944, so that it could be brought before the court before its summer recess. Although the court did decide in the end to hear the cases together, it reached an opposite conclusion as to time—instead of

hastening action in *Endo*, already prolonged immoderately for a *habeas corpus* case, the justices decided to put off arguments on both cases until its fall 1944 term. The court justified the delay by reference to the needs of the lawyers involved in the cases. However, it was surely not coincidental that it saved the court from being forced to rule on the cases during the fall 1944 electoral season.

In October 1944, the *Endo* and *Korematsu* cases were both argued before the U.S. Supreme Court. On December 18, 1944—also the same day as it announced its ruling in the *Korematsu* case—the Supreme Court unanimously ordered the executive branch to release Mitsuye Endo from confinement. In contrast to the sharp exchanges between the justices in *Korematsu*, Justice William O. Douglas’s opinion in *Endo* was brief and almost offhanded. In the interests of maintaining unity among the fractious justices, Douglas evaded all constitutional questions regarding the arbitrary race-based imprisonment of American citizens and the essential question of the government’s power to issue military orders against citizens. Instead, he merely found that nothing either in Executive Order 9066 or in the congressional legislation enforcing it granted the WRA or any agency the power to detain a concededly loyal citizen such as Endo. So cautious were Justice Douglas and the court that the opinion did not even explicitly state whether Endo might return to her home and job on the West Coast.

In essence then, Douglas took the demonstrably absurd position that the WRA had acted as a rogue agency in pursuing mass confinement without approval. Justice Owen Roberts rejected Douglas’s logic in a concurrence, stating that the president had confirmed the action in his messages to Congress, and Congress had approved incarceration by funding the agency. Justice Frank Murphy added his own concurrence, explicitly connecting the confinement in *Endo* with the mass removal that the court had just upheld in *Korematsu*.

The *Endo* decision capped a long struggle within government circles over whether to permit Japanese Americans to return to the West Coast. The court’s unanimous ruling provided political cover not only for the executive branch to open the camps, but for the war department to lift exclusion. Beginning in

early 1944, the war department had quietly allowed various categories of Japanese Americans, such as the wives and children of Nisei soldiers, to return to the West Coast, but had retained its overall policy and enjoined silence on the returnees. The *Endo* case provided constitutional sanction for the former inmates to return home, and the war department lifted exclusion as of January 2, 1945. Within 12 to 18 months after the *Endo* decision, the majority of the mainland Japanese population had resettled in the former excluded zone.

Paradoxically, despite its vital impact on the lives of confined Japanese Americans, the *Endo* case was little cited in subsequent rulings by the court and remains comparatively little known. In contrast, the *Korematsu* decision, which had little or no actual influence in the shaping of government policy toward Japanese Americans, has achieved classic status in the history of American constitutional law. In a further irony, even after her long-sought victory, Mitsuye Endo (later Mitsuye Tsutsumi) did not return to the West Coast and the job she had left. Instead, she settled permanently in Chicago, where she took a job as an assistant to the city’s Human Rights Commission. She died in May 2006.

In the decades after her case was decided, Endo shied away from public scrutiny, and did not actively participate in the protests and commemorations of the Japanese American redress movement (although she did produce a short oral history for John Tateishi’s 1983 anthology *And Justice for All*). Because of the fact that Endo won her initial case—and perhaps also in view of her retiring nature—she was not associated with the *coram nobis* petitions through which her fellow wartime Supreme Court plaintiffs challenged their convictions during the 1980s, and in the process she achieved renewed celebrity. (She likewise fit awkwardly, both on gender and ideological grounds, into popular celebration of the “resisters” who had stood up against official oppression.) Her obscurity is unfortunate, as Endo’s actions, in their quiet way, were at least as heroic as those of the others. First, she was prepared to challenge her arbitrary dismissal from a California civil service job—itsself an unusual achievement for a Nisei woman in the prewar days when discrimination was the rule. In addition to her

desire to hang on to such a prized position for herself, she was surely inspired to defend her rights on behalf of the larger group. Furthermore, her refusal to accept a “leave permit” and moot her case, and her willingness to remain in confinement for some 18 months to ensure that her case was heard, demonstrated Endo’s courageous dedication to principle.

F

Filipina War Brides

Although American media has often dedicated greater attention to Japanese and, to a lesser extent, Korean and Vietnamese women who have married American servicemen, Filipina war brides have a long presence in Asian American immigration history owing to the nation's complex colonial and neo-colonial relationship with the Philippines. According to historian Emily Porcincula Lawsin (1996), "a war bride is defined as a foreign national who married a man who served in the U.S. armed forces as a result of U.S. mobilization for war, or as a result of subsequent military occupation. For Filipina war brides, this included those who married servicemen who had enlisted in the armed forces either in the United States or in the Philippines, where the Philippine Scouts, the Philippine Army and Philippine Guerillas (during the Japanese occupation) were all placed under U.S. armed forces command." Because of this colonial context, most Filipina war brides married Filipino and Filipino American men, challenging the conventional European American male/Asian female military relationships.

The United States' imperial entanglement with the Philippines, that began with the Philippine-American War (1899–1902) and lasted well beyond Philippine Independence (1946), crafted structural and ideological factors facilitating the marriage and migration of Filipina war brides. The presence of the armed forces established sprawling urban economies around military bases that led to the interaction between American servicemen and Filipinas of a variety of backgrounds. Moreover, the Philippine colonial education system has historically inculcated in Filipinos a view of the superiority of American culture. Lastly, since English

was the medium of instruction in the education system, Filipinas and non-Filipino servicemen from the United States shared a language that eased communication barriers.

After the Philippines became a U.S. colonial possession, the migration of Filipina war brides was minimal, in part because of immigration channels that favored the migration of male laborers and later, immigration restriction under the Tydings-McDuffie Act (1934). Nevertheless, as early as 1902, Rufina Clemente and her American husband Sgt. Francis Jenkins settled in Seattle marking the arrival of Filipina war brides.

By World War II, the U.S. military presence in the Philippines intensified. Moreover, Filipino Americans joined the First and Second Filipino Infantry Regiment and the Philippine Civil Affairs Unit whereas Filipinos served in the Philippine Scouts, Philippine Army, and the guerilla resistance, which were subsumed under the U.S. military (and therefore enabled Philippine-born veterans to apply for naturalization). Filipinas came into contact with servicemen around military bases and after usually brief courtships many married. A common fear among war brides was that their marriages would last *hanggang pier lamang* or only up to the pier; that is to say, their husbands would in effect abandon them. This fear was not completely unfounded because of lengthy immigration bureaucracy and the Tydings-McDuffie Act. However, because of amendments to the 1945 War Brides Act, servicemen were able to bring their new wives to the United States without having them count against the nation's immigrant quota.

During the Cold War and particularly America's involvement in Southeast Asia, militarism in the

Philippines increased rapidly and the migration of war brides followed suit. Although some 1,000 war brides migrated to the United States per year in the late 1950s, that number rose to a staggering 4,000 by the 1970s. By the 1980s the U.S. military became the largest employer in the Philippines after the Philippine government. Many brides met their future husbands on or around military bases as civilian staff, through USO functions, or in the surrounding businesses. Because the Philippines was appointed a “rest and recreation” center for soldiers serving throughout the region, many relationships also developed through the service and entertainment economies of restaurants, bars, and clubs surrounding military cities such as Olongapo. Because of the stigmatization of the stereotypical “bar girl” and the long history of sexual exploitation of Asian women by U.S. military members, many war brides are careful to distinguish themselves and their relationships from those sexualized spaces.

After migrating to the United States war brides faced a variety of adaptation issues. Many were faced with the disappointment that their new homes did not match the idealized imagery of America they gleaned from U.S. popular culture. War brides, reflective of the diversity of Filipino immigration, worked in a variety of occupations ranging from cannery labor to service work to the nursing profession. Like other immigrants, war brides reported homesickness, but theirs was certainly amplified given the transitory nature of military life and settlement in areas with few other Filipinos. Nevertheless, war brides created networks among themselves. In Seattle, a handful of women established the Seattle War Brides Association in 1949. This organization helped cultivate a stronger Filipino American community in the city to welcome new war brides, offer a variety of social events, provide mutual assistance, establish youth programming, and work toward the construction of a community center.

The migration of Filipina war brides has several implications for the course of Asian American history. This wave of migrants created new generations of Filipino Americans that disrupt the conventional periodization of the pre-World War II farm and plantation laborers and the post-1965 migration of professionals.

Moreover, the marriage of Filipinas to Filipino Americans, European American and, to a lesser extent, African Americans led to different consequences for the contours of Filipino American communities. Coethnic marriages led to the development of a pre-1965 second generation and, in Chicago, for example, lessened prejudice against the Filipino American community that had included several Filipino male/European American female couples. Meanwhile, interracial marriages led to the rise of a newer mixed-race Filipino American population.

Although the United States’ military installations in the Philippines, most notably the U.S. Naval Base at Subic Bay and Clark Air Base, closed in the early 1990s, America’s military presence in the region is still very evident through trainings in the wake of September 11, 2001 and counterinsurgency activities against Muslim separatists in the southern Philippines. Moreover, since the 1960s the growth of the Filipino American community has largely been because of liberalization of immigration laws that facilitated the migration of professionals and individuals through family reunification. However, Filipina war brides have left a lasting impact on the development of diverse Filipino American community.

Filipino Agricultural Workers

Filipino agricultural workers, popularly known as the *manongs* (a Filipino colloquialism for an elder brother or uncle), have left an indelible mark on Asian American history through their labor activism and the social world they crafted beyond the fields. From the 1920s until the 1970s both fiery union leaders and rank-and-file Filipino workers addressed the egregious inequalities that existed in America’s West Coast agricultural empires.

The manong story begins with dual expansions of American empire and capitalism in the nineteenth century. Following the Philippine-American War (1899–1902) and the occupation of the Philippines, a colonial education system valorized the United States in the eyes of Filipinos, setting the stage for future large-scale emigration. Meanwhile, the U.S. West Coast witnessed the meteoric rise of agribusiness following land monopolization and the development of railroads during the Gilded Age. The success of these “factories in the field,” as investigative journalist Carey McWilliams called them in 1939, was predicated upon the exploitation of cheap labor. Following the legal exclusion of other Asian immigrants and the fear that future laws might curtail Mexican migration, West Coast growers aggressively seized on the ambiguous status of Filipinos as “nationals” (neither alien nor citizen) and recruited a new labor force from the Philippines.

The manongs were primarily young, unmarried men, with little formal education from the rural areas of the Luzon region of the Philippines. They were tantalized by the growers’ recruitment promises of making quick fortunes in the United States and driven by overcrowding and a tenant economy that afforded little paths to financial security in their home provinces. Migration quickly accelerated: although there were only five Filipinos in California in 1910, by 1939 there were over 35,000. By 1930 the Pacific Northwest also had a population of over 5,000 Filipinos. Sixty percent were concentrated in manual labor both on farms and

in canneries. Generally, Filipinas did not migrate during this wave because of patriarchal norms that restricted the mobility of single women, immigration channels that favored men, and the difficulties of sustaining a family on agricultural workers’ wages. By 1930 less than 10 percent of the total Filipino population in the United States was female.

The harsh and unprofitable life of farm work undermined many of the sojourning plans of the manongs. Labor contractors managed crews ranging in size from 5 to 50 laborers. By the 1930s workers earned between \$0.20 and \$0.35 per hour whereas upward of \$60 per month went toward lodging and meals. Agricultural workers moved across the West Coast based on harvest seasons. Manongs in the Pacific Northwest and Montana cultivated, picked, cut, cleaned, and packaged apples, hops, potatoes, and lettuce; in California they worked with carrots, lettuce, strawberries, celery, asparagus, and grapes. Asparagus was particularly lucrative (and notoriously difficult to harvest) and by 1925 Filipinos comprised 80 percent of the workforce. Whereas previous generations of farm workers were able to transition to owning land, Filipinos faced restrictive land laws in California that prevented Asian immigrants from purchasing land.

Manongs faced both deep racism and demanding conditions in the fields. Racist assumptions abounded among growers who believed Filipinos were suited to “stoop labor” because of their youth and relatively shorter stature. The local press lambasted them as “semi-barbarian,” “shiftless,” “diseased,” and, despite their labors, “worthless.” The West Coast’s extreme climates also contributed to dangerous conditions from the stinging cold of Washington to the oppressive heat of California. Manongs suffered heat stroke and exhaustion, which was a common hazard for asparagus workers. Few growers provided bathroom facilities or safe drinking water and workers had no security net for dealing with injuries or disease. As agrochemical techniques advanced, many growers used toxic pesticides with little regard for the health and safety of the farm workers who were housed in shacks, tents, abandoned boxcars, or dilapidated bunkhouses. In most cases workers lived in unsanitary spaces, rife with insects, and lacking privacy. During the Great Depression the California State Relief Administration found a

gang of Filipino laborers living in an abandoned schoolhouse in the Imperial Valley; after some five months of work they had earned only \$50 each. The few, but determined, Filipinas (or *manangs*) joined their husbands in the fields or cooked for work crews, while managing their family finances and raising children.

Because of dangerous workplaces, shoddy living conditions, and meager wages, the manongs formed labor organizations and strikes across the West Coast. Grassroots action was particularly urgent because, as their status as “nationals,” the manongs did not have a home government to advocate on their behalf. However, because they were “nationals,” growers were unable to deport recalcitrant Filipinos as they regularly did to Mexican farm workers. Given organized labor’s historically antagonistic relationship toward Asians, Filipinos mobilized on their own. In 1933, when the American Federation of Labor (AFL) refused to charter a Filipino lettuce workers union, the manongs established the Filipino Labor Union (FLU) and staged a strike in Salinas, California. The FLU, with a membership of over 2,000, established a tentative partnership with the white-dominated Vegetable Packers Union, but during the negotiations, the latter betrayed the manongs, which resulted in a minor five-cent wage increase. In 1937, the FLU called another strike in Salinas that ended with the arson and destruction of the manongs’ camp, the arrest of a union leader, and the forced removal of some 700 Filipinos from the region. By 1939, the Filipino Agricultural Laborer’s Association of Stockton engaged in a strike; the following year, the AFL eventually chartered the Federated Agricultural Laborers Association, which negotiated on behalf of Filipino laborers in the Central Valley.

In the world beyond the fields, Filipinos endured crude and violent racism yet still carved out communities. Racist attitudes toward Filipinos colluded with economic competition during the Great Depression producing a series of race riots. Filipinos in Washington were targeted in Yakima Valley (1927) and Wenatchee Valley (1928). White mobs raided and beat Filipinos at a labor camp in Tulare County, California in 1929. Despite the presence of racist violence as well as the transitory nature of agricultural work, the manongs built a variety of spaces and

support networks. In ethnic enclaves across the West Coast migration corridors, they gathered in hotels, restaurants, pool halls, and stores to relax and share a network of jobs, working conditions, housing, and news of friends and loved ones. Often manongs owned or managed these businesses and supplemented that income by cooking and selling Filipino food to the farm workers on the move. The manongs also established province-based organizations and fraternal clubs including *Caballeros de Dimas Alang*, *Legionarios de Trabajo*, and the Filipino Federation of America. Prizefighting was also a popular recreational activity. Manongs also created fictive kinship networks, showering care upon the few children in the Filipino community.

The manongs frequented other spaces associated with vice. They attended gambling dens, which provided both recreation and a limited pathway for financial mobility. Because they were a bachelor society, the manongs patronized taxi dance halls where they could escape the rancor of the world around them in the arms of Mexican American or, more generally, white women. Treated as an automaton by growers and constructed as a “brown horde” by U.S. society, the manongs donned their finest zoot suits and redefined themselves through style and performance on the dance floor.

These interracial interactions, which often led to romantic or sexual relationships, incensed white men who claimed ownership over white women’s bodies. In the early 1930s Judge Sylvain Lazarus ordered police to arrest any Filipino seen with a white woman. The El Cerrito police chief, meanwhile, instructed officers to arrest white woman seen with a Filipino. Throughout the West Coast, unscrupulous politicians fanned the flames of anti-Filipino hatred to bolster their electoral campaigns. The intersection of anxieties over race mixing and economic competition came into stark relief during the 1930 Watsonville Riots when, just days after the local chamber of commerce pushed for Filipino exclusion, hundreds of white vigilantes stormed a dance hall, beat dozens of patrons, and went on a five-day destructive rampage against Filipinos in town that resulted in the death of one 22-year-old manong. The violence led to similar riots in Stockton, San Francisco Salinas, and San Jose. Three years later,

California amended its antimiscegenation laws to prevent “Malays” from outmarriage, blocking interracial Filipino unions.

Despite these obstacles, manongs persevered during and after World War II. In the 1950s, Larry Itliong, a veteran of Filipino labor organizing in Alaska and Washington, established the Filipino Farm Labor Union (FFLU), which merged with the National Farm Labor Union (of which Philip Vera Cruz was affiliated) to form the Agricultural Workers Organizing Committee (AWOC) in 1959, a branch of the American Federation of Labor-Congress of Industrial Organizations. The AWOC led a strike among grape workers in California’s Coachella Valley that resulted in a wage increase. Emboldened by this minor success, on September 8, 1965, the AWOC instigated the Delano Grape Strike that brought national attention to farm worker struggles. In the following days, the National Farm Workers Association, under the leadership of Cesar Chavez, joined the strike and the two unions merged to become the United Farm Workers Organizing Committee (now the UFW). Manong Philip Vera Cruz became a vice-president of the new union and advocated for the Filipinos.

The Delano grape strikers struggled over many of the same issues that catalyzed the strikes of the 1930s: poor wages, atrocious working conditions, and substandard housing. The strikers also addressed the pay differentials between the Filipino/Mexican workers and contract *Braceros* from Mexico and the use of undocumented immigrants to break strikes. After garnering significant public support, particularly over the dangerous use of pesticides in the fields, Chavez’s hunger strike, and a grueling 350-mile march from Delano to Sacramento, the UFW successfully signed equitable contracts with the major grape growers in 1970.

After the Delano Grape Strike, the manongs found themselves in often-tense debates over the direction of the UFW. Although Vera Cruz never publicly displayed any dissatisfaction with union leadership, he expressed growing concern about the marginalization of Filipinos in the UFW. Oftentimes meetings would be held only in Spanish and the Mexican and Filipino officers disagreed over union leadership. For Vera Cruz and the other more left-leaning manongs,

Chavez’s visit to the Philippines at the invitation of the dictator Ferdinand Marcos was the final straw. Although they never abandoned their crusade for all farm workers, both Vera Cruz and Itliong resigned from the UFW by the late 1970s (manong Peter Velasco, however, remained a UFW officer until his retirement in 1988).

Although they generally worked well into their 60s, by the 1980s, most of the manongs retired. Their population dwindled because of the restriction on Filipino immigration by the 1934 Tydings-McDuffie Act and antimiscegenation laws. Even after immigration laws eased in 1965, the new wave of Filipino migrants tended to be professionals, those with connections to the U.S. Navy, or members of families already in the United States.

The retired manongs found refuge in small residential hotels, most notably the International Hotel in San Francisco, which offered cheap rent and a surrounding network of Filipino businesses. Despite a concerted effort throughout the 1960s and 1970s by tenants, community allies, members of the radical *Katipunan ng mga Demokratikong Pilipino* (KDP; Union of Democratic Filipinos), and students, the International Hotel closed in 1979 after a long struggle with both the city and the building’s owners.

The manong spirit nevertheless remains alive in Agbayani Village, a Delano retirement home opened in 1974 on land owned by the National Farm Worker Service Center. Named for manong Paulo Agbayani who died from a heart attack on the Delano grape strike picket line, volunteers from the KDP, Third World Women’s Alliance, the Japanese American Community Services, and other groups built the complex. Despite tensions between Vera Cruz and the UFW leadership over rent, Agbayani Village has memorialized the manongs and serves as a pilgrimage site and symbol of pride for the Filipino American community. Although the last of the original manongs died in 1997, they leave a rich legacy of resistance and social justice.

Filipino American Baseball

A useful tool of U.S. colonization, baseball found fervent and skilled practitioners in the Philippines of the early twentieth century. As Filipinos/as migrated to Hawaii and the U.S. mainland, they formed community teams. Subsequently, they and their U.S.-born offspring crossed racial and ethnic borders to play with and against non-Filipinos. Indeed, a handful of Americans of Filipino ancestry have played and excelled at baseball at the game's highest, professional levels.

The United States' uninvited occupation of the Philippines after the Spanish-American War led to a protracted, bloody guerilla war. Taking a cue from British colonizers who used sports such as cricket and football to pacify at least the more privileged members of indigenous populations, the United States hoped that the introduction of sports such as baseball would help "civilize" the locals, who reportedly were much too excited about cockfighting. Thus, U.S. military and non-military personnel stationed in the Philippines reported back to the mainland the exhilarating news that the Filipino population played and watched the game with growing skill and knowledge.

In 1913, a team of Filipinos journeyed to Hawaii and the U.S. mainland. Initially, their trek was publicized as proof that American assimilation efforts in the Philippines were going well. However, the team did not fare well when it came to wins and losses. Moreover, its tour went largely ignored by the mainland press.

In the years before the Philippines gained commonwealth status within the U.S. empire by way of the controversial Tydings-McDuffie Act (1934), Filipino baseball teams and leagues somewhat thrived. In the 1920s, the *Sporting News*, the most powerful voice of American baseball, happily reported that one Filipino baseball fan would give up independence if it meant Filipinos would lose baseball.

In Hawaii and on the U.S. mainland, Filipino immigrants formed community teams. Indeed, soon

after substantial numbers of Filipinos made their way to Hawaii in the 1910s, they put together teams that took on teams representing other Hawaiian ethnic groups. After World War II, an Oahu Filipino League existed. On the U.S. mainland, Filipinos in Chicago organized a team in the early 1920s. Later in the decade San Franciscans assembled a squad called the Filipino All-Stars. Watsonville's Filipino Athletic Club had a team in 1933 that played a contingent of Japanese Americans from nearby Santa Cruz. In the 1940s, the San Francisco-based Mango Athletic Club organized a baseball team.

Induced partly by baseball, athletes of Filipino ancestry have traversed racial and ethnic frontiers. Before turning professional after World War II, Bobby Balcena played high school and semiprofessional ball in Southern California. Possessing Filipino-Portuguese ancestry, Hawaiian Jack Ladro played for Fresno State and a U.S. military team in Hawaii in the 1950s. Ladro, too, eventually turned professional. Better known as a basketball standout, Raymond Townsend, a son of a Filipino mother, starred for UCLA's baseball team in the 1970s. And, in the 1990s, Laura Gouthro, a fine softball player in college, joined the barnstorming women's baseball team, the Colorado Silver Bullets.

Hawaiian Crispin Mancao merits special attention. A southpaw pitcher, Mancao hurled for an assortment of elite Hawaiian teams in his long career as a semiprofessional on the islands. From the 1930s through the 1960s, Mancao's clever artistry on the mound confounded Hawaiian, as well as visiting mainland, hitters such as Billy Martin and his New York Yankee teammates in the mid-1950s. Mancao even pitched a bit for the Hawaiian Islanders of the Pacific Coast League in the early 1960s.

Since the mid-twentieth century, a small but growing contingent of ballplayers of Filipino ancestry has made it to the big leagues. The first was Bobby Balcena. Raised in Los Angeles, Balcena signed a Minor League contract with the American League's St. Louis Browns after leaving military service in World War II. For the next several years, he played Minor League baseball, gaining a reputation as a fine outfielder, swift base runner, and a hitter, with

surprising power given his relatively small stature. Meanwhile, the St. Louis Browns invited Balcena to the team's spring training camp in the early 1950s, as did the franchise that moved from St. Louis to Baltimore, the Orioles. But in both cases, he was shipped back to the minors. However, after a successful stint with the Seattle Rainiers of the Pacific Coast League in 1956, Balcena was called up by the Cincinnati Reds for a "cup of coffee" visit in the big leagues. Subsequently, Balcena returned to the minors where he remained until his retirement in the early 1960s.

In the late-twentieth and early twenty-first centuries additional ballplayers of Filipino ancestry were getting more than a "cup of coffee" in Major League Baseball (MLB). Possessing Filipino and Samoan ancestry, Hawaiian Benny Agbayani made many key hits for the New York Mets as they fought their way into the World Series in 2000. Chris Aguila played four years as an outfielder primarily for the Florida Marlins. Another outfielder, Hawaiian Shane Victorino has proved vital to the efforts of the Philadelphia Phillies in becoming a National League powerhouse in recent years. Shortstop Jason Bartlett has made many sparkling plays and key hits for the Tampa Bay Rays of the American League as they battled the New York Yankees and Boston Red Sox for division supremacy from 2008 through 2010. Possessing Filipino ancestry on his mother's side, Tim Lincecum reigned as the MLB's best pitcher from 2008 through 2010. Frequently called "The Freak," because of his ability to throw an overpowering fastball although standing under six feet tall and weighing well less than 200 pounds, Lincecum crucially aided the San Francisco Giants 2010 World Series victory.

Through baseball Filipino Americans have nurtured a sense of community in Hawaii and on the U.S. mainland. Like Crispin Mancao, they have been able to cross racial and ethnic frontiers while crossing foul lines. And a few players such as Shane Victorino, Jason Bartlett, and Tim Lincecum have gained fame and fortune in the MLB.

Filipino American Communities (Contemporary)

Contemporary Filipino American Communities are spread out across the United States from Honolulu to New York and Alaska to New Orleans. With the various waves of Filipino immigration, they have evolved from the early days of the 1930s and 1940s as urban ethnic enclaves to “ethnoburbs.” The shift from cities to suburbs occurred over the years as many families were able to gain stable employment and move from being urban renters to suburban homeowners. As businesses followed the population, the urban ethnic enclaves declined. Historical Little Manila in Stockton is typical urban ethnic enclaves that served the early manongs: their businesses were usually barbershops, restaurants, hotels, and pool halls. These enclaves often served as a home base for the migratory workers who followed the crops with the changing seasons.

The first wave of ethnoburbs for Filipinos started to form following the immigration wave after World War II with the arrival of war brides brought to the United States by Filipino servicemen. Cities in California like National City, Carson, Alameda, and Vallejo grew because of their proximity to navy bases and military housing. Particular neighborhoods became known as concentrations for Filipino families and attracted ethnic businesses such as grocery stores,

video outlets, beauty salons, restaurants, and bakeries. With growing number of children and a new generation, families sought suburban areas that had good schools and still had ethnic businesses to serve them.

With the passage of the Immigration Act of 1965, more professional and skilled Filipino immigrant arrived, and they found themselves in other parts of the county besides the West Coast. Today, New York, Queens, Chicago, Philadelphia, and even Kansas City have visible and active Filipino communities, many with identified Filipino community centers. In some cases these centers have existed from the days of the earlier immigrants or have been remodeled or rebuilt as new structures, including San Francisco International Hotel that has been converted to Manilatown Heritage Foundation.

Social Service organizations have emerged as well to serve their respective communities. In Los Angeles Historic Filipinotown, Search to Involve Pilipino Americans (SIPA) has existed for over 40 years providing immigration services, small business assistance, youth counseling, and housing development as well as many other services. In Oakland, California, Filipino Advocates for Justice’s services “continue to be centered around the needs of the most vulnerable in our community through our programs and advocacy. We assist newcomers in their transition to life here in the United States. We are also a resource for positive youth development, and act to protect the rights of low wage workers.” Operation Samahan in San Diego, California, in existence from the 1970s, provides medical, dental, and social services in two locations: National City and Mira Mesa.

Cultural and history institutions, especially the Filipino American National Historical Society (FANHS), have been committed to collect, preserve, and educate not only Filipinos but also the broader American public about the Filipino American experience. Stockton has been identified as a site for the first Filipino American Museum. The Filipino American Library in Los Angeles was originally established in 1985 as the Philippine American Reading Room and Library (PARRAL). Arts and cultural groups such as Los Angeles’s Kayamanan Ng Lahi Philippine Folk Arts & FilAm ARTS, San Diego’s PASACAT & Samahan Philippine Dance Companies, and Bindlestiff Studio in

San Francisco have worked to produce new and traditional art forms as well. Filipino Youth Activities (FYA) of Seattle started in 1959 was the first to produce a cultural marching drill team that still performs today.

Community empowerment and political representation are ongoing goals for the Filipino American community. Although they have the numbers as the second-largest Asian/Pacific group in the United States, they traditionally and still today have been underrepresented in political offices. Although many Filipino Americans have served on legislative staffs, few have gone on to win political office. Filipino Americans have had most success in city government in ethnoburbs where they can leverage their residential concentration. Ben Cayetano, the former governor of Hawaii, is one of the most visible Filipino American politicians, but much more needs to be done to increase the number of Filipinos in state- and federal-level elected office. Filipino leaders have been collaborating with others to build coalitions and support candidates who share their goals and aspirations. Filipinos have always been known for their hospitality and Bayanihan spirit (working together), and these values will serve them well in the future.

Filipino American Communities (Historical)

The long-standing presence of the Filipino community in the United States is a testament to the long and uneven power relations between the United States and its former imperial possessions as well as to the changing nature of U.S. labor migration policies in

the twentieth and twenty-first centuries. As the second-largest immigrant group in the United States as of 2010, Filipino American influences can be increasingly seen in mainstream American popular culture, politics, and society; their actual level of social capital, like those of other communities of color, remains disproportionately lower than that of the white American majority. Depicted as savages and “Little Brown Brothers” by the popular press and American politicians such as Theodore Roosevelt and William McKinley during the 1899 Philippine-American War, and displayed in their “native villages” as examples of backward peoples at the 1904 St. Louis World’s Fair, Filipino Americans have since then worked to fight such perceptions, either through emulating conservative values and assimilating into mainstream U.S. society or through more liberal and radical political organizing for human rights of Filipino American, Filipino immigrants, and Filipinos in the homeland and diaspora.

The first reported account of Filipino peoples’ arrival in the United States was in 1763, though the veracity of this claim has been contested, with some claiming their arrival as early as the 1500s. The “Manilamen” were forced laborers brought from the Philippines by their Spanish colonizers to Mexico as part of the Manila-Acapulco galleon circuit. These Manilamen jumped ship and swam to the shores of what was then the Louisiana territory, settling in the bayous with Native American and Creole women. In the 1800s, permanent Filipino communities in Louisiana such as St. Malo in Saint Bernard Parish, and Manila Village in the Barataria Bay of the Mississippi Delta region were settled; community members were active in the shrimping industry, and introduced dried shrimp into the Cajun diet, where it remains a staple today. Tragically, many important archives of the Manilamen communities were lost in the devastation of Hurricane Katrina in 2005; the lives of the fifth-generation Filipino American Burtanog sisters, however, were captured in Rachel Tajima-Peña’s 1997 film *My America . . . or Honk If You Love Buddha*.

Although the Manilamen were the first Filipinos to permanently settle in the United States, the vast majority of Filipino Americans today trace their histories to later waves of Filipino migration beginning in the early

twentieth century. Between the period of the 1899 Philippine-American War—which made the Philippines an American colonial possession after the United States annexed the nation from Spain—until the passage of the 1934 Tydings-McDuffie Act that released the Philippines from official U.S. control, large numbers of Filipino men were recruited to work and study in the United States. This second wave of immigrants were primarily of two classes—the *pensionados* were higher class, educated Filipino elites who were sent to colleges throughout the States to learn American modes of governance, agriculture, and philosophy so as to return to the Philippines and serve as a managerial class, whereas the *manongs* were of varying class backgrounds and geographical points of origin and arrived in the United States to serve as devalued manual laborers.

The manong generation, as they came to be known, and a term that was based on an Ilokano honorific for a male elder, formed the backbone of the first permanent Filipino communities on the West Coast and in Hawaii. As the Philippines was a U.S. colonial possession, Filipinos were given the status of “U.S. National,” a designation that made them neither citizen nor alien, but that allowed them to travel freely between the two nations without passports, unlike other Asian groups who were barred from U.S. immigration with the 1924 Johnson-Reed Act. Filipinos, moreover, were desired by American businessmen, for they were seen as a cheap labor force that could be reliable and tractable and could be used to further devalue the labor of African Americans who were, during this time period, migrating to Northern and West Coast cities for industrialized jobs. As such, the majority of manongs were recruited to work in the agricultural fields of California and on Hawaiian plantations; in the salmon canneries of Washington state and Alaska; and as cleaners, waiters, bus boys, and in other kinds of service jobs in major cities such as Los Angeles and New York City. Carlos Bulosan’s semi-autobiographical novel *America Is in the Heart* documents the plight of the manongs working the seasonal agriculture circuit in California and the kinds of abuses they faced at the hands of their employers and white laborers who, during the Great Depression, grew increasingly angry at Filipinos for taking what they

considered their rightful employment. Bulosan’s seminal Filipino American novel not only documented their oppression, but also their resistance as members of the Committee for the Protection of Filipino Rights (CPFR) and labor unions.

Because of antimiscegenation laws preventing Filipinos from marrying white women and the restrictive housing covenants and de facto residential segregation that limited their options for lodging, many of these bachelor manongs formed alternative kinship communities where they lived during and between their periods of transience from job site to job site. These communities offered some respite and protection from the banal and spectacular violence experienced by the manongs on a daily basis, from lynchings of individual Filipino men to large-scale race riots like the 1929 Watsonville Riots, during which a mob of 400 white vigilantes terrorized Filipinos for four days, leaving one Filipino, Fermin Tobera, dead. One such bachelor community was the Kearny Street neighborhood, also known as Manilatown, an area adjacent to Chinatown that later became incorporated into downtown San Francisco. Serving as a way station for the Filipino farmworkers looking for employment in central California cities such as Delano and in areas northward of Oregon, Kearny Street was a bustling neighborhood of Filipino-run restaurants, barbershops, pool halls, and other illicit entertainments. A permanent community of Filipino manongs settled in residential hotels lining Kearny Street—the last standing hotel, the International Hotel (I-Hotel), was closed in 1977, and the battle to save the building and the entire Manilatown community itself became a key site of struggle of the nascent Asian American Movement (AAM) of the 1970s and 1980s.

After Filipinos lost their U.S. National status with the granting of Philippine independence in 1946, the influx of Filipino migrant laborers to the United States ground to a halt, as the new immigration quotas were limited to 50 per year. During the period between 1945 and 1965, however, many Filipinos came to the United States through joining the U.S. armed forces, primarily as cooks and stewards in the U.S. navy. The *veteranos* who served in World War II were able to bring their Filipina wives through the War Brides Act of 1945 and settled in large navy port areas

including Virginia Beach, Virginia, and the California cities of San Diego and Alameda. Promised the coveted status of U.S. citizen as well as generous compensation upon completion of their service, these veteranos were sorely disappointed when, because of the 1946 Rescission Act, they were stripped of veteran status and denied their benefits including healthcare, disability pensions, and burial expenses. For over 60 years, aging and elderly Filipino veteranos living in both the United States and the Philippines have been organizing for their deserved equity and benefits and spearheaded a mass mobilization campaign for Filipino veterans' rights. Veterano advocacy groups, along with Hawaiian Senator Daniel K. Inouye, successfully lobbied for the passing of the Filipino Veterans Equity Act, a provision included in President Obama's 2009 economic stimulus plan. Under this provision, veteranos were finally awarded a small lump sum of \$15,000 for Filipinos who are U.S. citizens or \$9,000 for those who are not; accepting these token amounts, however, prevent veteranos from ever receiving full veteran benefits or status should they ever win their campaign. Today, service in the U.S. armed forces and employment in military-related fields remains a popular profession for young Filipino Americans, many of whom have been recruited directly out of low-performing urban high schools to fight in the ongoing U.S. War on Terror being waged in Iraq, Afghanistan, Pakistan, and the Philippines.

The third wave of Filipino migration to the United States occurred after the passage of the Immigration and Nationality Act of 1965, which removed all racial barriers to immigration. Under the Act's seven provisions, Filipino immigrants most directly benefited from preferential immigration for professionals and skilled laborers, as well as the family reunification clause, which allowed for the petitioning of many children and extended family members from the Philippines. This wave of Filipino migration transformed the overall class character of the Filipino American population in the United States, as highly educated medical professionals and managerial workers, many of whom were female and from the cities, came to the United States in droves, rather than the primarily male, working-class Filipinos of provincial backgrounds. Since the 1970s, according to Espiritu

(2007), "the Philippine government has actively promoted the export of its nurses in exchange for their remittance dollars, which are critically needed to alleviate the nation's mounting external debt and trade deficits"; many doctors trained in the Philippines have had to become nurses in the United States to maintain their employment and residency while being able to support families in both nations.

Since the late 1980s, the migration pattern of Filipino people to the United States has once again changed significantly. With the successful People Power Revolution of 1986, which ousted the U.S.-backed dictator Ferdinand Marcos from his 21-year rule, and the closing of the last remaining U.S. military bases in the Philippines in 1989, more Filipinos than ever have been searching for employment opportunities and better living standards in the United States and other nations of the global North. Although professional preference, military service, and family reunification still account for large numbers of Filipino immigration, American individuals and agencies have recruited a growing number of Filipina women into the care labor field. In 2010, approximately 140,000 Filipinos in the United States worked as home health aids, nannies, and in other forms of domestic work and have sent back over US\$16 billion in remittances to the Philippines; this highly feminized, devalued form of labor migration can be unofficially considered the fifth wave of Filipino immigration to the United States.

Today, Filipinos remaining in historical Filipino American enclaves such as the Little Manilas of Los Angeles and Stockton, California, are slowly being pushed out, many in large part because of massive federal urban redevelopment schemes that have named these areas as "blighted" to raze them for high-profit corporate development. Many other established Filipino Americans, however, have relocated to more affluent, suburban areas surrounding major cities, such as in the Inland Empire of Southern California and the central New Jersey suburbs in the larger New York Metro Area. According to the 2010 U.S. Census, there are over 3.4 million documented Filipino Americans nationwide; they comprise one of the fastest-growing groups among all immigrants to the United States. As of 2010, they are the largest Asian group in five metro

areas (San Diego, Riverside, Las Vegas, Sacramento, and Phoenix) and in eleven states. Although there are more prominent Filipinos and Filipino Americans in the mass media than ever before—such as the professional middleweight boxer Manny Pacquiao, *American Idol* finalist Jessica Sanchez, prize-winning author Jessica Hagedorn, and chef to the President Cristeta Comerford—Filipino American communities are still in need of vital services, financial and social capital. The particular issues and concerns of LGBTQ, ethnic and indigenous, and Moro/Muslim Filipino Americans, too, are often overlooked by larger Filipino American community organizations. As the Filipino American population in the United States grows, it is imperative that the concerns of all—from aging veterans to homeless queer youth—are served.

Filipino American Community Organizations

Community organizations are vital to the protection and enrichment of the lives and interests of many racial and ethnic groups in the United States. They provide spaces for bringing people together through networks of support, cooperation, and care. For Filipino Americans, this has been true historically and in much more important ways in the present, for they also tend to lessen the physical and social distances between Filipinos who are in the Philippines and those who are in other countries such as the United States. These voluntary and nonprofit organizations are multiple and diverse. As collectives, they struggle for group recognition, they enable the gratifying outcomes of friendship, and they become avenues for pursuing common interests, values, and visions. And because of their tendency to replicate and adopt organizing practices from their homeland, Filipino American community organizations usually become critical sites for making meaning, negotiating practices, and representing identities connected with being Filipino Americans among themselves and with the larger society. Their practices reveal local instances of resistance to mainstream forms of organizing that, on the one hand, defy or impede full inclusion into mainstream society, but on the other, enable alternative forms of community building and organizing.

Organizations are created to take advantage of opportunities to connect people or to address barriers that exclude people from other organizations.

Filipino Americans tend to establish organizations in response to historical experiences of exclusion, displacement, or loneliness caused by migration, and as a way to build collaboration in the face of their minority status in many social, economic, and professional areas. It has been said in jest and with some truthfulness that whenever two Filipinos meet for the first time, they would likely form a club. This is a testament to the high significance and value of community organizing for Filipino Americans. Organizations may easily be created among friends, acquaintances, and real or fictive kin, but they can also quickly disappear or become inactive because kinship structures of hierarchy, legitimation, and rules of succession in many Filipino communities are not strictly enforced.

Fred Cordova, the foremost pioneer of Filipino American social history, recounts that the first U.S. mainland-based Filipino social club was established in New Orleans in 1870. Called the *Sociedad de Beneficencia de los Hispano Filipinas de Nueva Orleans*, this benevolent society inspired the growth of many Filipino organizations, including the founding of many fraternal and professional organizations, lodges, and masonic associations. The most famous of these were the Filipino American Association of Philadelphia (organized in 1912 and known as the oldest ongoing Filipino organization in the United States), the *Caballeros de Dimas Alang* (established in 1920 in San Francisco), the *Legionarios del Trabajo* (established in 1920 in San Francisco), and the *Gran Oriente Filipino* (established in 1925 in Los Angeles by Hilario Moncado). These organizations were important in providing security, camaraderie, and support for mostly bachelor workers and professionals during the violent anti-Filipino movements in Hawaii and in the Pacific Coast states from the 1910s to the 1930s. These organizations worked hand in hand with labor union struggles against workers' exploitation, racial discrimination, and antisecessionism. Local Filipino American community organizations usually acted as surrogate families for those who came alone into many parts of the United States. They also provided legal assistance to those who could not afford representation,

and they opened up spaces for social activities and athletic events that included dancing and singing, cultural programs, games, boxing matches, beauty pageants, raffles, and other types of community gathering. In some instances, these organizations also made possible financial support through credit cooperatives or rotating credit systems (the Tagalog term is *paluwagan*) and business and personal loans.

Early organizations were formed through, based in, or attached to local community centers. They usually served as combined associations of smaller clubs in the area or region, or hubs for loosely demarcated Little Manilas (also known as Manilatowns or Filipinotowns) in places like Los Angeles, New York, and Honolulu. A good sample of these centers included the Filipino Community of Seattle formed in 1926 (later served as the umbrella organization for several collectives in the area), the Filipino Community of Stockton and Vicinity (formed in 1930 as a response to the Watsonville riots), the Filipino Federation Club in Detroit (established in 1934), the Filipino Community Center in Brooklyn (established in 1934), the Filipino Community of Salinas (established in 1936), the Filipino Community of Yakima Valley (established in 1937), the Filipino Federated Organizations (established in 1935 in Hawaii), and the Council of Filipino Community Associations in Hawaii (established in 1959). Many of these organizations functioned as information producers and disseminators for their members and published their own community newspapers. They were also instrumental in preserving traditions despite assimilation, creating and sustaining practices of unity and camaraderie, developing fondly held values among the youth, and bridging separate communities together especially during moments of national crises such as World War II and the Korean and Vietnam wars, in which many Filipino Americans actively participated. With the formal independence of the Philippines from the United States and the passage of the Luce-Celler Bill of 1946, communities expanded and deepened with the immigration of war brides and opportunities for naturalized citizenship.

The entry of more Filipinos into the United States as a result of the Immigration and Nationality Act of 1965 radically altered the number, character, and demographic profile of Filipino American communities,

posing challenges to multigenerational cohesion and cross-labor unity. New immigration policies favored the admission of college-educated professionals as opposed to the recruitment of primarily agricultural workers during the earlier part of the twentieth century, and they made easier the reunification of families separated by migration and mobility, compared to the preference for single able-bodied male laborers and military personnel imposed by recruiters prior to the 1960s and 1970s. Filipino populations in the United States changed as the influx of new immigrants from the Philippines increased significantly: they were older, more economically better off, more female, more family based, professional, with higher educational attainment. They were also dispersed mostly in urban and suburban residences, and were more socially mobile. Compared to earlier Filipinos who were classified as aliens ineligible for citizenship and who bore the brunt of open violence and exclusion because of racism, these newly immigrated Filipinos enjoyed a more stable legal status that made them easily eligible for naturalization, able to sponsor their parents and other relatives into the United States once they became U.S. citizens, and experience a less openly violent racial climate in the aftermath of the Civil Rights Movement. The availability of modern transportation and communication technologies has also assisted in easing the displacement families and separation of loved ones caused by intense migration. As a result, Filipinos after the 1960s and into the 2000s have become more financially secure, socially stable, and able to travel and interact with others in physical and virtual terms.

The variety of Filipino American community organizations these days is remarkable, and many of them attempt to connect diverse populations together whenever possible in Filipino communities that are currently predominantly immigrant and transnational. Filipinos as individuals and in groups from different generations are active in state and local politics that advocate for the interests of their constituencies, workers of all kinds, veterans of World War II and the Vietnam and Korean wars, women and children who are trafficked, immigrant rights, economic well being, and victims of domestic abuse. Active participants in many Filipino community centers help in nurturing

the elderly, keeping traditional cultures alive, bridging ties with newer generations, and keeping allies together through networks of support. Business-focused organizations have members who are engaged with commercial interactions that benefit and sustain Filipino communities here and abroad. There are also educational community organizations that promote bilingual education, teacher training in Filipino history and culture, and the positive enrichment of the youth.

A most important national and international site of community is the Filipino American National Historical Society, an organization with many local chapters that has inspired countless Filipinos everywhere to preserve and value their heritage as Filipinos and as Americans. This society hosts national and regional conferences and community events, supports and promotes the publication of historical studies, and serves as repositories of archival materials. There are groups of artists and cultural workers in the hundreds who use culture as a site of empowerment and engagement with different forms of representation and recognition. There are also grassroots organizations that ally with similar groups in their homeland and elsewhere to organize and coordinate efforts against political, military, and corporate disenfranchisement and environmental destruction, including activities that provide relief to those victimized by calamities, social ills, and other emergency situations wherever Filipinos are affected. And there are countless native, immigrant, professional, civic, regional, state, provincial, county, city, alumni, political party, business, religious, sports, queer, student, and youth associations which perform the similar work of collective advocacy, support, and nourishment for multigenerational Filipino Americans as many others have done before them. An organization of vital impact is the National Federation of Filipino American Associations. Established in 1997, this federation coordinates 12 regional offices and thousands of organizations to advocate for the common interests and political empowerment of Filipino Americans.

With increasing globalization and transnationalism, Filipino lives in the United States are now much more complex as increasing numbers of Filipinos do away with permanent settlement and instead opt for greater connections with their relatives and friends

around the world if they can afford it. In these cases, community organizing has grown and taken on multiple roles. In the advent and increased popularity of social online networks, the reach and depth of activities that community organizations can undertake are not limited anymore by physical geographical space. Communities of every nature, interest, and composition, and even those that attract members from different races and other groups, set aside conventional definitions of community organizing that are limited to face-to-face contact and restricted by traditional boundaries of space and time. Many Filipino-based and Filipino interest online “communities,” including business organizations and government entities, have quickly taken advantage of these more flexible network opportunities, either developing an online version of their organization or functioning strictly as virtual communities.

Filipino Americans as members of collectives are able to use their First World privilege to create and sustain solidarities with each other and with other groups. They also identify as or ally with Asian Americans, Pacific Islanders, Chicanos and Chicanas, Latinas and Latinos, African Americans, and Native Americans because they are linked together by blood and by the commonalities of their struggles, desires, passions, and commitments to social justice. Given all of these histories and contemporary realities, their stories as U.S. Filipinos have become so much more than the typical stories of immigrant assimilation and integration. Their community organizations reflect the complexities of these stories and help sustain the intricate ways in which their experiences of struggle, resistance, pleasure, and resiliency in the United States and elsewhere continue to be celebrated, supported, and transformed.

Filipino American Domestic Workers

Balibayan, Overseas Contract Worker (OCW), Overseas Filipino Worker (OFW)—these are all names for the thousands of Filipinos working abroad to support not only their families at home, but the nation itself. With globalization and the growing demand for flexible, cheap labor in the First World, Filipinos have become one of the most in-demand labor forces, especially in the field of domestic work.

The demand for Filipino domestic workers can be traced to the 1970s presidency of the U.S.-backed Ferdinand Marcos. Under Marcos, the Philippines was one of the first nations in the world to adopt the structural adjustment policies advanced by the International Monetary Fund (IMF) and World Bank; structural adjustment required was the transformation of the Philippine economy into one that was export-oriented and foreign-capital-dependent as the prerequisite for receiving development loans from the World Bank. As the Philippines struggled to pay the growing interest on these loans, Ferdinand Marcos signed Presidential Decree 442 in 1974, a labor export policy that created the Philippine Overseas Employment Administration (POEA), a state agency charged with deploying Filipino workers overseas. Although Marcos’s labor export policy was supposed to be a temporary solution to the state’s economic and political crises at the time, labor export has become a more permanent feature of the Philippine economy.

Every subsequent president of the nation has not only continued, but strengthened, labor export as the linchpin of Philippine economic policy; according to the 2008 report by the POEA, an estimated 8,233,172

Filipino migrants are employed overseas—nearly 10 percent of the total Philippine population. The taxed remittances sent back by migrants, along with the exorbitant passport, training, and processing fees paid to recruitment agencies, contribute nearly 10 percent to the Philippines’s GDP, as well as support the many family members left behind without employment in the Philippines. The remittances sent by Filipino domestic workers in the U.S. topped US\$16 billion in 2010; this is but a small fraction of the total remittances sent back from other nations, especially those in the top receiving countries of Saudi Arabia, the United Arab Emirates, Hong Kong, and Japan.

As Filipina feminist scholar Neferti Tadiar argues, the slogan that OFWs are the “*bagong bayani*,” or the new heroes of the nation, is promoted by the Philippine state to justify the mass exportation and exploitation of women workers as the solution for its sovereign debt crisis and other economic woes. These numbers, however, capture only *documented* overseas workers—many more have migrated clandestinely in search for employment opportunities. In 2010, the number of documented Filipino domestic workers newly deployed worldwide increased by 11 percent from the previous year to 154,435. Currently, it is estimated that over 140,000 Filipinos work as caregivers in the United States—in New York and New Jersey alone, approximately 30,000 to 40,000 Filipinos are housekeepers, cooks, nannies, and home aides and comprise from 15 to 20 percent of the total domestic worker population.

Ninety percent of domestic workers from the Philippines are women, as follows the worldwide trend of care labor being feminized: women’s worth is valued by their ability to perform household duties and other forms of “care labor.” Filipina American sociologist Rhacel Parreñas has called this process part of the “international transfer of caretaking,” in which Third World women are desired as domestic workers by affluent women in industrialized, First World nations who have entered the public workforce to perform these basic household tasks. Parreñas goes on to say that that Filipina women’s entrance into the field of domestic labor emerges out of their structural location as “racialized women, low-wage workers, highly educated women from the Philippines, and members of

the secondary tier of the transnational workforce in global restructuring” (2001). As such, it is the Philippine state’s discourse portraying Filipina women as ideal domestic workers, rather than any “natural” or inborn ability they may have, that helps explain the entry of so many Filipina women into domestic work.

Filipina women may be portrayed as the Philippines’s “new national heroes,” but it is their labor and not their lives that is valued. Throughout the world, even in the United States, Filipina and other domestic workers are subject to sexual, physical, emotional, and verbal abuse by their employers; have had their passports and work papers hidden or destroyed; are trafficked into other forms of sexualized labor, such as prostitution; are forced to work 24-hour shifts without reprieve; and have been denied basic health care and minimum wages. High-profile cases of murdered, abused, and wrongfully imprisoned Filipina domestic workers, such as the 1995 execution of Flor Contemplacion in Singapore, have neither resulted in large-scale Philippine state reform of its labor export policy nor has it extended its protections for OFWs. In the United States, the 1938 Fair Labor Standards Act exempts domestic workers (and farm workers) from protections, leaving them at the mercy of their employers.

Because of the individualized nature of their work and the often strict limitations placed on their mobility and time, domestic workers have faced difficulty in collectively organizing to protect themselves. But Filipina domestic workers have been persistent, forming organizations such as DAMAYAN Migrant Workers Association, based in New York since 2002. Filipinas were central players in establishing the National Domestic Workers Alliance (NDWA) in 2007, a coalition of women from many racial, national, and ethnic backgrounds. Domestic worker advocates in New York State have won a victory at the state level for passing a Domestic Workers Bill of Rights that extends the labor protections of the Fair Labor Standards Act to nannies, house cleaners, and other domestic workers. In California, the similar AB889 was approved by the Senate Committee in August 2011, but has been stalled since then. Advocates know that such bills are but the first step for Filipina domestic workers’ rights—and that it is real structural change in

the Philippines that will help alleviate the burdens that OFWs and their families face.

Filipino American National Historical Society (FANHS)

Founded in 1982, the Filipino American National Historical Society (FANHS) is a nonprofit organization that aims "to preserve, document, and present Filipino American history and to support scholarly research and artistic works which reflect that rich past" (2012). FANHS is currently one of the leading Filipino American scholarly organizations with over 27 chapters in the United States. It continues to play a vital role in creating and contributing to Filipino American historiography.

FANHS was founded on November 26, 1982 by Dorothy Laigo Cordova and Fred Cordova in Seattle, Washington. During the 1970s, Dorothy Cordova served as the director of the National Endowment for the Humanities (NEH)–sponsored Asian American

Demonstration Project, which conducted and collected a myriad of studies related to the social problems Asian Americans faced at the time, including numerous oral histories. After the project had ended in the early 1980s, the Cordovas organized the research they collected into FANHS. The organization was then later chartered in the state of Washington on January 7, 1985.

In 1987, FANHS established the National Pinoy Archives, the largest archival collection of Filipino American materials and artifacts in the United States. It includes materials on more than 9,000 individuals and approximately 1,500 organizations throughout the United States. The archives and the national offices are headquartered at former classrooms at Lake Washington Girls Middle School at 810 18th Avenue, Seattle, Washington. Local chapters also collect and archive their respective Filipino American histories. The Los Angeles FANHS chapter, for example, houses its collected archive at the Filipino American Library of Los Angeles.

Also in 1987, FANHS hosted its first national conference at Seattle University. The biennial conference attracts hundreds of academic scholars, community organizers, writers, filmmakers, students, and seniors eager to learn and share stories of Filipino American history through its many panels, workshops, and activities. The 2014 FANHS Conference will be held in San Diego, California.

Including their biennial conference, FANHS activities include photo exhibits, oral history, lectures, symposiums, and educational forums. Both the organization and its individual members have also published many works including *Filipinos: Forgotten Asian Americans* by Fred Cordova, *Filipinos in Puget Sound* by Dorothy Cordova and *Filipinos in Stockton* by Dawn Mabalon and Rico Reyes as part of the Arcadia Publishing Series, as well as numerous regional publications and journals. In 1994, FANHS produced the award winning documentary, *Filipino Americans: Discovering Their Past for the Future*.

In 1988, FANHS officially declared October as Filipino American History Month as a commemoration to the first historically documented Filipino presence in the United States when Filipino sailors aboard the Manila-Acapulco galleon trade landed in Morro Bay on October 18, 1587. The California Central

Coast chapter of FANHS dedicated a plaque in 1995 at the Morro Bay Rock in honor of this occasion.

Filipino American Newspapers

Within many Filipino American commercial establishments all over the United States, a wide selection of community newspapers is usually on display and often free for the taking. Such newspapers occupy significant places not only in the sites where Filipino Americans meet, but also in the contexts where the dynamic formations of Filipino American identities are imagined, imaged, and transacted.

Community newspapers are one of many kind of tools that help link individuals together. They are also one among many forms of media, like radio, television, film, and online communication systems, that operate as dissemination and interaction networks within and between communities. But beyond simply providing information, education, and entertainment to their readers, community newspapers are also storehouses of history and sources of conversations regarding specific and local group identities. For many Filipino Americans, these print channels are very significant because they create and provide a sense of community, especially because of their minority status and racism. They operate as alternative spaces to mainstream sources of publication that usually ignore or misrepresent them. They are, therefore, sites of a historically specific and localized hub of community formation and expression in which both writers and readers can be viewed as active agents engaged in the remembering, reconstruction, and representation of their own collective identities.

Unlike traditional newspapers, only a few of these community publications are regularly published over a

long period of time. Many of them last for only a few months. Or, they die out and then reappear once publishers regain control over their resources to publish. This situation happens because of the political economy of publishing in which these community papers operate. Community newspapers require less capital outlay and lower production costs than large mainstream papers. They market to a more targeted readership and, therefore, have comparatively smaller ethnic audiences to speak to and depend on. But because of these reasons, they are generally more susceptible to pressures from investors, readers, advertisers, competitors, and suppliers of their printing needs. Additionally, more and more new media technologies (primarily, those that are on-line) are becoming attractive to and convenient for readers.

Filipino Americans have been prolific in community journalism since their early years of migration and immigration into the United States. The Filipino American Research Project reports the existence of newspapers specifically for this group as early as 1906. Early city-based newspapers include *The Filipino Forum* (Seattle 1928), the *Philippine Advocate* or *Philippine-American Tribune* (Seattle 1935), the *Philippine-American Observer* (Los Angeles 1938), the *Philippine-American Mirror* (Stockton 1941), the *Bataan News* (1943), and the *Philippine American Times* (1950). A substantial collection of past issues of some of these early Filipino newspapers is maintained at the University of Washington library in Seattle and at the archives of the Filipino American National Historical Society (headquartered in Seattle). Jean Vengua's website, "The Commonwealth Café," also provides valuable reference information on the many examples of Filipino American journalism during the early part of the twentieth century. More contemporary and ongoing newspapers include the *Philippine News* (first published as *The Manila Chronicle*, San Francisco 1961), the *Filipino Reporter* (New York 1972), *The Filipino Express* (Jersey City 1986), the *Asian Journal*, *The Filipino-American Community Newspaper* (San Diego 1987), *The Filipino-American Bulletin* (Seattle 1991), and *The Hawaii-Filipino Chronicle* (Waipahu 1993). Many of these newspapers have weekly editions, multicity distribution, local and international bureaus, a radio-TV extension, an online edition, or are completely online.

These days, ethnic presses are comparatively small-scale, are run with a minimal number of reporters and commentators, and, especially with Filipino American papers, are usually free of charge. Advertising revenues shoulder their costs of production and distribution. Such a demand to read a newspaper “of one’s own” by members of an ethnic group is a phenomenon that has existed at least since modern immigration. In 1922, sociologist Robert E. Park conducted a survey of American immigrant presses to highlight their significant roles in easing the transition of new arrivals into permanent settlements in the United States by preserving languages, traditions, and values of their home countries. To some degree, Filipino American newspapers share this common ground with immigrant journalism of the past and present. But unlike many of them, Filipino papers are mostly in English (with some exceptions, or occasionally mixed with Philippine languages such as Tagalog and Ilocano), owing to their American-style, English-based education. However, Filipino American community papers are not solely oriented toward Americanization. Even though they are geared toward immigrant Filipinos as primary readers, these newspapers swing between facilitating assimilation into U.S. society (for example, by encouraging its readers to naturalize, vote, or purchase a house) and retaining homeland-based traditional values, including the maintenance of connections with the Philippines. As such, Filipino American newspapers are quite transnational in nature, scope, and interest.

To a large extent, these newspapers promote dignity, belonging, and mutual support for their readers. They help Filipinos settle into their new homes in the United States while also reminding them of their original country’s values and traditions. In these ways, community newspapers connect Filipinos with each other and with their homeland.

Filipino American Youth Cultures

Filipino American youth cultures can refer to a matrix of expressive forms, from very specific and focused activities to generalized and diffuse scenes.

Youth cultures are attempts at community building as much as they are the ongoing and contested negotiations of minority and diasporic groups with a dominant culture, recognizing that the term “dominant culture” is not monolithic or homogenized. Researchers have made use of two overlapping approaches to the study of Filipino American youth cultures that involve (1) tracing expressive forms of culture that are experienced by historical cohorts, and (2) tracking the development of various genres, categories, or disciplines.

Because Filipino American youth cultures emerge largely from the experiences of an ethnic minority in the United States or from the experiences of Philippine diasporic subjects, chronological and historical accountings are inevitable. The emphasis here is on how events and processes such as labor immigration, family reunification, and the need for political asylum can shape the life chances and choices of large cohorts of people at various time periods. The familiar demarcations of such experiences would involve but are not limited to: the settlement of a Filipino community in southern Louisiana in the mid-nineteenth century, the importation of Philippine labor to the territory of Hawaii in 1906 and to the continental United States in the 1920s, the reclassification of Filipinos as alien with the passage of the 1934 Tydings-McDuffie Philippine Independence Act, the creation of dual chains of migration with the passage of the 1965 Immigration and Nationality Act, and the imposition of Martial Law in the Philippines in 1972.

As a subset of the larger ensemble of practices that could fall under the term, “Asian American popular

culture,” Filipino American youth cultures can also be tracked in terms of specific forms. The examples of Filipino American youths’ engagement in the performing arts are broad, including, and not limited to, theater, music, dance, comedy, and Pilipino Cultural Nights. Early examples from the first two decades of the twentieth century would include the student musicians working the Circuit Chautauqua such as Manila Filipino Orchestral Quartette, the Ne Pomoceno Filipino Quartet, the Filipino Collegians, and the Filipino Varsity Four (Library of Congress). The number of examples of theater troupes, bands, dance companies, and theater collectives has yet to be fully documented. For example, by focusing on young musicians as cultural producers, a short and varied list could include talents as diverse as Pearl Harbour (and her band, the Explosions), the Rocky Fellers, Death Angel, June and Jean Millington (founders of Fannie), Dakila, Pinay, and Joe Bataan, although Bataan’s *success was not the result of Filipino American audiences but rather of Latino audiences tuning in, buying his music, or attending his concerts.*

Further research on the youth activities of Filipino Americans in dance and theater is in dire need of documentation and analysis. For example, folkloric-oriented troupes such as San Diego’s PASACAT Philippine Performing Arts Academy, San Francisco’s Likha Pilipino Folk Ensemble, Seattle’s Filipino Youth Activities, and Boston’s Iskwelahang Pilipino Rondalla Ensemble have offered to young people extensive opportunities for training, leadership development, and creative expression through classes, workshops, and the formation of youth or junior level ensembles. Likewise, troupes, companies, and houses such as Alleluia Panis’ Kulintang Arts, Pearl Ubungen’s Dancers and Musicians, Teatro ng Tanan, Bindlestiff Studio, Qbd, Pintig, and Ma-Yi, for example, have received occasional analysis by literary and performing arts studies scholars. Although the leadership of the aforementioned groups tends almost always to be professionals in their chosen disciplines, the players, crew, and audiences are often drawn from youthful ranks.

In the late 1990s and early 2000s, Hip Hop performers of Philippine heritage (who did *not* attempt to conceal their cultural backgrounds) enjoyed high

levels of commercial acclaim, recognition from various media outlets, and exposure to national and international audiences. For example, Grandmixer DXT (Derek Showard, popularized by his work on Herbie Hancock’s 1983 “Rockit”) bestowed the title of “Grandmixer” onto DJ Qbert (Richard Quitevis) as seen on Doug Pray’s 2001 documentary, *Scratch*. As indicated by music and entertainment industry recognition, Chad Hugo (one half of The Neptunes production team) has emerged as one of Hip Hop’s most successful players since 1992, having garnered, as of this writing, 11 Grammy nominations and 3 wins, as well as 6 nominations and 2 wins for Billboard Music Awards in production and songwriting. After a 2008 win on the U.S. television program, *America’s Best Dance Crew*, the San Diego-based Jabbawoockeez, a number of whom are of Filipino heritage, has toured extensively, made numerous television appearances, and has taken on major corporate endorsements. And with the release of his singles, “The Apl Song” (2003) and “Bebot” (2005), Apl.de.ap (Allan Pineda Lindo of the Black Eyed Peas) has reinforced the popularity of Hip Hop among young Filipino American audiences. The video for the latter track was criticized by activists and scholars for not providing what they claimed to be an “honest attempt to offer more full-spectrum representations” of women, although depicting instead Filipinas as either hypersexualized or asexual (“Open Letter on Bebot,” 2006).

This moment of popular and occasionally critical acclaim around *individual* artists and the charged responses it continues to generate should underscore the work of a much larger scene of hundreds of less well known but respected young performers throughout the United States, especially those working in *collectives* or troupes, or in the case of performer/community activists such as Kuttin’ Kandi, Lani Luv, or Rocky Rivera, women who work in a male-dominated field. Emphasizing Hip Hop as a consciousness-raising tool and activity, performers such as the Geologic of Blue Scholars, Kiwi, Bambu, Kuttin’ Kandi, Rivera, Deep Foundation, Power Struggle, and others often play to focused audiences within Filipino American community settings, as allies in cross-cultural urban-set organizing campaigns, and in transnational work that bears witness to political

and social struggles in the Philippines, the Middle East, and throughout the Filipino diaspora.

In addition to producers of Filipino American youth culture, researchers can also turn their attention to the wider cultural field in which such forms are circulated and consumed. For example, Robyn Rodriguez and Vernadette Gonzalez highlight a scene long associated with teens and young adults—car clubs—and the manifold ways that its marketing, sexualized imagery, and mastery over that most fetishized of American objects may be analyzed against a soundscape of contemporary Hip Hop. We can pair this work with cultural anthropologist Bangele Alsaybar's ethnography of what he terms a "Party Culture," circa 1980s and 1990s. These aforementioned works pay attention to the more diffuse concept of a subculture, echoing Hebdige's 1979 study of youth cultures in England in the late 1970s.

Examples of *verbal arts* among Filipino American youth would include literary societies, reading groups, poetry slams, spoken word competitions, and showcases. Slam competitions and spoken word events update and refresh the inherited Philippine literary form of the Balagtasan while expressing it through the dynamic percussive range of Hip Hop culture. San Francisco's Eighth Wonder, Los Angeles's the Balagtasan Collective, Seattle's Isangmahal Arts Kollektive, and Chicago's I Was Born with Two Tongues serve as key examples of young artists extending Philippine oral traditions into contemporary Hip Hop scenes that foreground political engagement, community responsibility, and social justice. An indispensable recorded document is the 1998 album, *Inflip-tation—A Youngblood R.Evolution*, produced by Aleks Figueroa, features more than a dozen U.S.-based writers and performers.

Those in the field of *visual arts* have produced a range of interdisciplinary public arts projects—including happenings, symposia, festivals, and exhibits—as either individuals, in formal or ad hoc groups like the Mail Order Brides/M.O.B. and the DIWA Arts collective Committed to projects affecting youth, many artists collaborate with nonprofit community based organizations such as Precita Eyes Mural Arts (San Francisco), the Social and Public Art Resource Center (Los Angeles), and the Northside Community

Center (San Jose). Extending one's attention into a wider horizon, young artists work in every aspect of visual media, from the fine arts to commercial/corporate application: for example, comic book illustration, animation, and graphic design.

An important aspect of Filipino American youth culture concerns the participation in *sporting events*. With more than 20 years of operation, the Southern California college/university-based Friendship Games has grown into a multistate tournament involving games and other forms of entertainment. Basketball leagues continue to dominate contemporary Filipino American sport, with tournaments turning up expectedly in states with sizable populations such as California, Hawaii, and Washington State, but also in the Midwest, the mid-Atlantic region such as Washington, D.C., Maryland, Virginia, and in Jacksonville, Florida. These largely nonprofessional sporting events had a long lasting impact. Joel Franks's work highlights participation by Asian American and Filipino American athletes in boxing, tennis, baseball, and basketball with personalities, clubs, and leagues that have been active well before 1965. Linda Maram's scholarship on Filipino boxers who were active in the first half of the twentieth century covers more than biographical detail and looks to a wider historical horizon of a "sporting life" shared by a community. Corky Pasquil and Agrafino Edralin's 1994 documentary on the subject is still one of the few visual records of the *Great Pinoy Boxing Era*. Another underdeveloped area of scholarly research into this area concerns the importation and popularization of martial arts forms such as Kali and Eskrima. One of the better known practitioners in the United States of such forms, Dan Inosanto, himself a student of Bruce Lee, has trained dozens of students in his specific style. Orvy Jundis's *Pilipino Martial Arts* is a good place to start, but detailed research across various schools and styles is also needed to grasp the sociological, historical, and other cultural aspects of Philippine culture that are imparted in the training.

Regarding rituals and community-based events, Filipino American youth have participated, redefined, and often contested organized social events such as beauty pageants and taxi dances. Essays by historians Dawn Mabalon and Arleen De Vera investigate how

young Filipinas both embodied male aspirations for a “stabilized” U.S.-based community while also resisted narrowly written gender codes. In an extension and significant revision of Paul Cressey’s 1932 investigation into the taxi dance phenomena, scholars such as Burns, Parreñas, and Maram have acutely diagnosed power differentials between working-class Filipino males, white males, and white females. Emily Ignacio’s work on exchanges and community formations on the web affords a new line of research into global networks that are often coded, programmed, and maintained by youth throughout the Filipino diaspora.

At least three sets of institutions that have fostered and guided Filipino American youth cultures deserve future research. First, consider the inestimable influence of college and university student organizations, many struggling to straddle the so-called “social-political” divide. Whether constituted for *merely* social purposes or for expressly political ones, student organizations since the beginning of the twentieth century have been a nexus for activities, organizational development, interest identification, leadership training, student mentoring, participatory research, and creative experimentation in the arts. Second, in addition to campus settings, more attention should be paid to how labor unions specifically, and the work environment more generally, have fostered participation in youth cultures, whether through sporting events, dances, theatrical productions, or film festivals. Monrayo’s poignant memoir of life as a young Filipina in Honolulu attests to the complex social life structured in and around labor camps. And third, community-based organizations such as Filipinos for Affirmative Action (now known as Filipino Advocates for Justice; Oakland), Filipino Youth Activities (Seattle), the Search to Involve Pilipino Americans (Los Angeles), and the Festival of Philippine Arts and Culture (Los Angeles), have often served as incubators for student-led programming in the form of concerts, exhibits, publications, conferences, and participatory research projects.

Caveats

An accounting of cultural forms, especially one constructed tightly around the notion of Filipino American

youth cultures, will ultimately prove frustrating for the following reason: Such work, at a certain level, remains merely descriptive of a limited number of personalities, performers or scenes. *Youth cultures* can and do often refer to a subset of *popular cultural forms*. Hall (1981) goes to the heart of what is problematic regarding the term: “Virtually *anything* which ‘the people’ have ever done can fall into the list. Pigeon-fancying and stamp-collecting, flying ducks on the wall and garden gnomes. The problem is how to distinguish this infinite list, in any but a descriptive way, from what popular culture is *not*.” An understandable response would be that examples of Filipino American youth cultures are relatively few amidst the vast sea of U.S. popular cultural forms, and that no list of activity undertaken by Filipino American youth could ever be large enough. Furthermore, to recognize or encourage more expressive forms will, of necessity, be politically, if not at least culturally, important for an underserved and/or underappreciated minority group. Yet such a response does not move beyond the fine-tuning of an ever-growing list. Moreover, the idea of merely accounting for more examples of Filipino American youth cultures does nothing to critically analyze why, where, and how certain things and activities become popular whereas others do not. Hall again: “Popular forms become enhanced in cultural value, go up the cultural escalator—and find themselves on the other side.” It’s crucial not to focus solely on the “contents of each category,” but rather on the “forces and relations which sustain the distinction” between what is and is not popular. What are those structuring principles that account for the deployment (and withholding) of certain kinds of cultural forms on stage or in a particular setting, or the articulation (or silencing) of certain choreographed movements, or themes in a play, in one’s lyrics?

Another caveat concerns terminology: my use of the term “Filipino American” referred to persons of Philippine heritage in the United States and Hawaii. The term “Filipino American” would not gain currency until the mass-based organizing efforts of the 1960s and 1970s ushered in a new era where nonwhite groups were experimenting with new ways of naming themselves. Although the use of “Pilipino” and “Pilipino American” appears often in journalistic,

academic, literary, musical, and theatrical works, there is no clear uniformity.

Filipino Americans

Introduction

Historically and in political terms, "Filipino American" is a relatively recent idea, dating to the onset of Philippine independence in 1946. Prior to then, Filipinos were politically bound to the United States and known as various things, formally and informally, such as fellow laborers, insurrectionists, "little brown brothers," abortive citizens, colonized subjects, and "nationals," to name a few. The year 1946 seemed to bring to an end some of the conceptual crises that dogged the colonial administration and its legal apparatus since at least the Insular Cases in the wake of the 1898 Spanish-American War. Such conceptual crises emerged and reemerged with every effort to figure out the place of the Philippines and Filipinos in U.S. national and imperial governance and culture. Though the Philippines stands out somewhat conspicuously as the most remembered of the forgotten U.S. formal colonial holdings, it was not alone in that de facto status that is still extant in such locations as Puerto Rico and Guam and American Samoa and Guantanamo. One place where the Philippines departs from these other locations is that it has gone on to become a formally independent postcolonial nation-state. These historical conditions have provided the social, political, economic, and cultural contexts, methods, and stakes for Filipino Americans to emerge as a meaningful category invoked when working for, or sometimes against, change.

Across the historical transition from colony to nation-state, Filipinos have migrated to the United States. The United States had itself, of course, migrated to the archipelago, thereby initiating a new pull toward a new center of an emergent imperial master. Such a pull is a motif of a great many empires, whether Roman, British, French, or American, to name a few prominent Western examples. The economic and

legal conditions of these migrations are, as always, crucial considerations. The forms of labor have ranged from the trainings of sojourning bureaucrats in-progress at the outset of the twentieth century to low-wage migrant laborers in the 1920s and 1930s as well as stewards on U.S. navy ships, which would open outward to the wide proliferation of labor niches that have come to be associated with the Filipino diaspora, such as seafarers, domestic laborers, nurses, physicians, and caregivers. Each of these forms of work have occasioned types of labor organizing, most notably perhaps in the farm-working sector in the territory of Hawaii and the Pacific Coast of the United States, but also more recently in nursing.

Historical Sketch

A historical outline of U.S.-Philippine relations customarily begins with the military defeat of the Spanish at the hands of Admiral Dewey in Manila Bay on May 1, 1898. From this moment of violent incorporation to the United States, the general contours of U.S.-Philippine history meanders through the settling of debates over U.S. imperialism on the side of empire, followed by a fairly massive push for so-called “benevolent assimilation” in the roughly two decades that followed, leading to the devising and implementation of “complete independence” that included the accelerating “Filipinization” of the administrative positions in Philippine governance with the eventual adopting of the Tydings-McDuffie Act of 1934 that put the Philippines on a 12-year timetable for eventual independence. The occupation of the archipelago by Japan beginning in late 1941 would potentially interrupt that process, though ultimately 1946 did prove to be the year of political, if not “complete” independence.

There is evidence of earlier, Spanish-era migrations of galleon “Manilamen,” ship-jumping individuals who would now be considered Filipinos, in the Gulf Coast. Understandably their impact on the larger population of Filipino American communities in the contemporary moment is more of a symbolic nature than a material one.

During the period when the archipelago was a formal part of the United States as a territory of the

empire, Filipinos had a legal status that allowed for some circumvention of immigration restrictions that impacted Asians, most notably through the Chinese Exclusion Act of 1882 followed 42 years later by the more expansive Asian Exclusion Act of 1924. Clearly, as persons who were not technically crossing international borders when going from a U.S. territory to either another U.S. territory at that time (e.g., Hawaii or Guam or Oklahoma or New Mexico or Arizona) or one of the admitted states, Filipinos of this era, as Rick Baldoz has described, had a different relationship to these laws as indeed they had a different relationship to the imperial “mother country.” Other race-based laws of the era did play a role in the ability of Filipino migrants to form communities, particularly the antimiscegenation laws of various U.S. states that, among other things, did not permit the legal marriage of men of color with Caucasian women. Given the ratio of Filipino men to Filipino women at this time, with men vastly outnumbering women, bachelor societies emerged, with sporadic interracial unions and offspring. Such a family unit is thoughtfully treated in Bienvenido Santos’s canonical short story “Scent of Apples,” about a Santos-like figure who is invited to the home of Celestino Fabia, a Filipino American apple farmer who lives outside Kalamazoo, Michigan in the early 1940s with his Caucasian wife and mestizo son.

These pre-World War II era Filipino Americans, some like Celestino Fabia but many others unmarried and childless, came to eventually be called manongs or old-timers. Over time they earned this name as rising generations of Filipino Americans in the post-World War II era came to belatedly find them in their midst, nearly lost to history. These later generations of first- and second-generation immigrants from the Philippines did not necessarily have a conventional kinship relationship to these older men and some women, but there was something of a productively imagined link between the older generations who did not establish conventional kinship units and the rising generation that would effectively play a key role in what would come to be the Asian American movement.

With the major immigration reforms after 1965, a new generation came into its own, establishing ethnic

enclaves in such cities as Los Angeles (Eagle Rock) and San Francisco (Daly City) and Seattle and later “ethnoburbs” in such regions as the San Gabriel Valley and San Diego County/National City. Filipino America would come to seemingly follow in the footsteps of many immigrant groups before them. That is, they seemed to become another population working through the oft-told processes of adjustment, acculturation, and assimilation of the immigrant narrative. And this explanation can be compelling. Yet such a veneer has contributed to the obfuscation and invisibility of the colonial past of the Philippines and the ongoing importance of that history to the neoliberal globalization of today. Those conditions of globalization, with a practical infrastructure for the mobility of persons and money, manifest a global labor market where Filipinos are an exportable commodity for the Philippine economy, attractive to employers in such industries as shipping and domestic labor because they are viewed by these economic conditions as being low cost, highly educated, and “flexible,” meaning that they are both readily deployed and readily let go when the job appears to be finished. Whether in the 1920s for the production of sugar in the territory of Hawaii or in today’s export processing zones or middle-class nuclear family homes, Filipinos have inherited and reproduced cultural, economic, and educational conditions that were developed under formal colonial conditions and have adapted to postindependence neocolonial ones. The result is a diaspora that includes the diverse formations of Filipino Americans today and in the past, from the community of gay Filipino diasporic men in New York to the generations of Filipino Americans who have established, and at times left behind, communities in Los Angeles, San Francisco, Seattle.

The Ironically Unparalleled Example of Carlos Bulosan

Arguably the most canonical text of Asian American literature is Carlos Bulosan’s *America Is in the Heart: A Personal History* (1946), especially for appreciating approaches to social, cultural, political, and economic change. Bulosan’s story is both extraordinary and paradigmatic. To generations of Asian

Americans, his story has become exemplary and inspiring, as well as productively ambiguous and potentially misunderstood. The recovery of Bulosan’s text by and for the Asian American movement in the 1970s demonstrates the important interplay between new social movements searching for lost histories and the stories with whom those movements find strategic connection.

Though he wrote in various genres, ranging from poetry to short stories to novels, Bulosan is best known to U.S. readers for the aforementioned “personal history” that draws upon the conventions of the autobiography and the Bildungsroman to make legible a range of experiences that were largely invisible to most perspectives to the political right of reformist liberals. *America Is in The Heart* is therefore an activist text that chronicles the formation of what, in Antonio Gramsci’s terms, would be called an “organic intellectual.” That is to say, the book is the story of conscientization, of the arrival at critical social theory rooted in personal experience with social, economic, and cultural inequalities.

The book is divided into four sections, narrated in the first person, that chronologically trace the life of Allos. The first section recounts childhood in the rural Philippines under a U.S. colonialism that is omnipresent yet references only obliquely. The increasing dispossession of the peasantry, of which the narrator’s family is a part, is a thread that runs through this section, culminating in the departure of the narrator from the Philippines eventually to the Pacific Coast of the United States, after a brief stopover in Hawaii. The next two sections follow Allos as he looks for work along the Pacific Coast and struggles with myriad hardships not uncommon for poor migrant workers of color, such as exploitation by management and the resistance among the exploited to recognize their exploitation. His growing sense of despair leads him to make the observation that “it is a crime to be a Filipino in America,” and he seriously entertains the idea that he may need to turn to criminalized behavior to survive. The relentlessness of the inequalities of the social, economic, and political system occasions the despair that can precede an effective epiphany. And that epiphany takes the form of the very title of the book, when his brother Macario, articulates the idealism of Americanism in a spirit that may vaguely capture the era’s notion that communism is twentieth-century

Americanism. Throughout all of these experiences, Allos battles health problems including an extended stay in a tuberculosis sanatorium where he reads voraciously as he convalesces. The final, fourth section of the book leads to, among other things, Allos's emergence as a published writer and organizer. And the book ends at the outbreak of World War II for the United States including the occupation of the Philippines by Japan, a situation that prompts the frail Bulosan to try to enlist in the military. The final image of the book is Bulosan, aboard a bus on his way to some form of low-wage seasonal work.

Given its complexity, its subject matter, and its uniqueness, it is no wonder then that Bulosan's personal history would go on to play a key role in the Asian American movement. It provided hard evidence of conditions that shaped communities and perceptions—including self-perceptions—of Asian Pacific Americans, and it does so in ways that militate against the still dominant image of contemporary Asian Americans as the miracle synthetic white people so insidiously prominent in the postwar and post-Civil Rights era. Yet the lack of a more socialist transformation out of the hardships of the 1930s, arguably due to the cooptations of the left in the name of a global war on fascism, would not come to pass. And Allos, like other characters of realist and naturalist literature, remained an incipient socialist waiting for a revolution that did not happen. The transformation that did occur went as far as canonizing *America Is in the Heart* as inspiringly Asian American, even if other aspirations were left disappointed.

That said, the important work of farmworker activists such as Philip Vera Cruz and Larry Itliong have demonstrated kinds of necessary and hard-won measures that have been realized through historic struggles that have served as models for future forms of organizing.

Pre- and Post-Bulosan Filipino Americans

Although Bulosan's story stands out today for its detail, uniqueness, and sense of transformative purpose, his story was clearly linked to earlier generations of Filipinos who came to the United States. Perhaps the most notable early wave was that of the pensionados, a largely elite—or about to become

elite—strata of Philippine society who came to the United States to study at prestigious institutions of higher learning. They were seen as the American version of the *ilustrados* of the Spanish era who went to Spain for advanced training. The earliest of these migrants to the United States would do so under the auspices of government support, though they would be followed in much greater numbers by Filipinos without such support, inspired by the possibility of social and economic mobility that the earlier waves evidenced by their conspicuous placements in the colonial administration. By the time the likes of Allos would make the journey to the United States, the dimly seen vision of educational attainment and white collar rewards had become particularly unrealizable in the face of the Great Depression and its globally felt miseries.

The struggles of Allos and his comrades would then come to be the undeniably pervasive fate for Filipinos in the United States: low-wage seasonal labor, readily exploitable, and therefore useful to capitalist production. A 1930s silent film titled *A Filipino in America*, by a Filipino USC graduate student named Doroteo Ines, recounts the transition from hopeful pensionado to exploited service worker. Like Bulosan's book, the film provides a rare period glimpse into the lives of Filipino Americans of that time. The film remains somewhat obscure to this day, perhaps in part because of the potentially controversial resolution of this pre-World War II film. Rather than tell a peasant's story, the film is about a well-educated Filipino in America who suffers occupational downgrading, as well as the myriad social slights that gendered racialization both makes and is made by. Yet rather than converge with Allos at a site of revolutionary struggle, the film ends with the central character eventually boarding a ship to allow him to repatriate to the Philippines for the explicit task of nation-building. Ines's protagonist achieved a degree in engineering from USC, a skill set that would understandably be useful to development and industrialization.

Yet repatriation, especially in the era of the problematic Repatriation Provisions of the Tydings-McDuffie Act, was seen then as an abdication of a broad-based struggle to change America in Filipino interests rather than as a means to realized change through postcolonial nation-building in the semiperiphery. Also, decades later, for an Asian American

movement that may have had—and may still have—concerns about being perceived as the “perpetual foreigner,” the prospect of leaving the United States after failing to build a life and community in America may come across as fulfilling the desires of the xenophobes and nativists who never wanted the foreigners in the first place. And the extent to which there would have been an economic landing place for the likes of Ines’s protagonist may have been dubious under the conditions of colonialism at that point in pensionado history.

Yet Ines’s protagonist can also be understood as prescient, for better or for worse, about the projects in development that remain to this day. In that era, the specter of left, right, and centrist models of development were less pronounced and contentious as they would be thought of as elements of the Cold War. Now, Ines’s protagonist might be seen as a hero of certain forms of development that attempt to participate in, and even make possible, the new economies of globalization. Today, organizations such as Gawad Kalinga and other NGOs tap into, and indeed generate, diverse networks of resources for economic development projects in the Philippines that integrate Filipino Americans and the Filipino diaspora.

But, unlike Ines’s protagonist, the fact remained that the mass of Filipino Americans of that era were not being trained as engineers at expensive private schools. They were more likely one of the occupations listed in Cerenio’s poem cited above. Until the late 1960s, they were a population almost entirely composed of men without nuclear families. And these bachelor communities were without the burdens and/or gratifications of transnational family structures that have come to be more common with significant segments of the Filipino/a diaspora today, but by no means all of the diaspora today. Today, actively transnational families draw on an often highly gendered sense of familial obligation to ensure that capital flows back to the sending country will not be thwarted by the establishment of new families, as Parreñas and R. Rodriguez have analyzed. The folks “back home” then receive the putatively surplus wages from OFWs, electronically transmitted from across the globe by Western Union, PNB Rapid Remit, and other financial instruments that make a business out of the Filipino diaspora’s fulfillment of these kinship obligations,

which in turn are figured as valorized forms of national service that have come to define the *bagong bayani* (new heroes) of the Philippines.

Amid, as well as somewhat prior to, these transformations, there has been a significant sector of the Filipino diaspora that can be characterized as a brain drain, a highly educated population that follows the labor market out of the Philippines to, say, practice medicine in the rural United States. They are, in a sense, seen as the precise opposite of Ines’s protagonists: they remove their homegrown educational capital from the Philippines rather than repatriate the educational capital they acquired abroad. And given the middle-class feasibility of these professionals, the establishment of conventional nuclear family structures in the United States or other developed location they have relocated to, can potentially mean a less strong tie to the homeland that overseas contract workers (OCWs) would have and a subsequent less robust flow of money back to the Philippines.

One of the efforts by the Philippine government, as well as a more generalized cultural climate, has been the notion of balikbayans, or homecoming diasporic Filipinos who repatriate some of their wealth even if they do not themselves repatriate. This informal practice achieved something of a more focused government program in the repressive regime of President Ferdinand Marcos. But this sort of activity was not new and has not gone away in the post-Marcos era. If anything, it has become only more pervasive and crucial to the Philippine economy, creating stronger real and imagined ties between Filipinos all over the world but especially perhaps for contemporary Filipino Americans who have indeed established nuclear families where Filipinos from other times and in other locations have been structurally prevented from doing so. The Philippine state, as R. Rodriguez discusses, has come to engage in diverse and at times direct forms of facilitating labor export.

The Manongs of the International Hotel and the Movements They Inspired

The defeated broad-based struggle to prevent the demolition of the International Hotel in downtown San Francisco in the late 1970s serves as a last gasp of the literally dying generation of the earlier waves of

Filipino Americans, the manongs. For decades they worked in low-wage occupations, living paycheck-to-paycheck, and then later Social Security check to Social Security check. Lacking the benefits as well as the liabilities of raising children who might one day support them, they had no private safety net in the event of economic crisis. And just such a crisis emerged when postwar, postindustrial, inner-city redevelopment, sometimes called gentrification, eliminated the last remaining form of low-cost housing that was available to them: The International Hotel.

After lives of toil and some adventure and romance (as they vividly recounted in Curtis Choy's 1983 documentary *The Fall of the I-Hotel*), these elderly Filipino Americans were on the verge of homelessness. They had been more or less forgotten, for better or for worse, until their plight became a celebrated cause for a diverse range of movements militating against forms of capitalist development that would consider the eviction of poor old men left to their own devices to be a legitimate business practice. These men can be seen as sharing a fate of the poor the world over who are seen as collateral damage to the struggle to realize neoliberal globalization. These men can be seen as helping galvanize a movement that would even make Richard Hongisto, sheriff of San Francisco County, serve jail time for refusing to carry out the eviction order. Hongisto would later, through professions of self-disgust, oversee that eviction. The sanctioned eviction of these men was seen as a triumph of a particular path to prosperity, and that triumph did not sit well with new social movements that carried on resonant struggles. And so the state's lack of protection—and, as many saw things, the state's de facto persecution—of the manongs remains a conspicuous example of the punishments doled out to those who, for various complex reasons, have not established private forms of insulation from crisis.

One such lingering struggle that also bridges older Filipino American generations with new ones is the coalition that has formed around Filipino American veterans of World War II who have not, as they and their advocates compellingly contend, received their due benefits. As with the “old timers” from the International Hotel movement, these veterans are the focal point for a broad-based movement united by a

common desire to address failings in both the implementation of state power as well as the legitimacy of forms of state power itself. And as with the I-Hotel struggle, activism ranging from engagement with the legal and legislative apparatuses to direct action demonstrations have been used in response to an emergent crisis that demands organizing on behalf of a population that has come to be especially vulnerable to economic devastation.

Contemporary migratory populations out of the Philippines have more recently emerged as what might seem to be a new formation under globalization. In various ways these are indeed new developments, particularly in terms of scale and the infrastructures that the labor and conditions of these workers support. The so-called flexibility of the workers, that is, their capacity to be mobilized and demobilized with minimal negative impact on the processes and expenses of late capitalist production, has highlighted the legacies of Philippine development as a factory of such flexibility.

New Communities and Their Reproduction

According to the U.S. Census, there were 3.4 million Filipino Americans in 2010, including individuals of multi-racial background. The majority of Filipinos in the United States, nearly 69 percent, were born outside the United States. Nearly half of the Filipino American population, almost 1.5 million, reside in California. They are highly concentrated in southern California, in Los Angeles County and the greater L.A. region, San Diego County (especially National City). Large Filipino populations are also found in the greater San Francisco Bay Area Hawaii, the NY/NJ region, and Illinois and the Chicago metropolitan area. Other locations with large Filipino Americans include Florida, Texas, and Nevada (especially in Clark County, which includes Las Vegas). Over 55 percent of the total Filipino American population is female.

The era of the 1980s and after witnessed the further development of Filipino American communities, including the strengthening and proliferation of private forms of insulation from crisis, that is, the further establishment of nuclear families as well as extended,

transnational family networks. At the same time, the public forms of working for transformative social justice were being eroded through such events as the dismantling of affirmative action and the assaults on welfare under both Republican and Democratic administrations at all levels of government. Whether through faith-based efforts or through secular community-based organization or through professional guilds/unions or through progressive organizations focused on gender and sexuality or through less formal means, nongovernmental organizing has played and continues to play a key role in the making and remaking of Filipino America. As historian Cathy Ceniza Choy has written about, a growing population of Filipina Americans in nursing was engaged in efforts to have their interests adequately represented through nurse's unions or otherwise form their own organizations to protect their rights as Filipino American nurses. And organizations important to Filipino American rights, such as the Pilipino Workers Center, in Los Angeles emerged to advocate for and serve Filipino Americans. Indeed, a broad proliferation of Filipino American organizations has cropped up to fulfill social, economic, political, and cultural desires that make the case for ongoing needs and desires to act as a group rather than as individuals or even single families. That said, the emphasis on private family values, including the ascendant place of individual educational attainment, remains as strong as in the general U.S. population, if not stronger. And a growing awareness of emergent forms of labor exploitation through human trafficking has inspired new movements to advocate for the vulnerable and to recognize and prosecute perpetrators.

These movements have not been without creative artists to inspire and provoke. The acclaimed writings of such authors as Jessica Hagedorn, R. Z. Linmark, Han Ong, Peter Bacho, Brian Roley, Al Robles, and others have, with complexity and lucidity, shaped the terms by which Filipino America is understood across diverse forms of creative expression. Visual artists such as Manuel Ocampo, Paul Pfeiffer, Marlon Fuentes, Papo de Asis, and Reanne Estrada have changed the way the Filipino difference and historicity are understood. The arts have emerged as a fertile and central site of activism and transformation, altering both what is known about Filipino Americans and

how that knowledge has been produced. And so the work of such organization as FilAmARTS in Southern California or Kulintang Arts in Northern California continue to be important institutions attentive to cultural politics and cultural production, to name just two such institutions.

In the sphere of knowledge production specifically then, the educational apparatus has been the focus of intense attention. The school, and especially higher education, has long been a near-sacred site for presumptively virtuous pursuits above almost any other competing interest. This idea pervades Bulosan's book and Ines's film, and is so customarily associated with Asian Americans as to need little further comment. What may be worth further comment is the tradition of educational activism that Filipino Americans have, along with, but sometimes apart from, other Asian Americans, been a part of in the past four decades or more. Certainly the struggles to establish, protect, and

Filipino family in Santa Barbara, California. The father wears a t-shirt exclaiming, "It's great to be a Filipino." (Joseph Sohm/Visions of America/Corbis)

extend the fields of Ethnic Studies are notable and visible. And the efforts to incorporate progressive, decolonizing Philippine Studies and Critical Filipino Studies into traditional disciplines are important to recognize as well. But also important have been efforts to transform Area Studies, such as Southeast Asian Studies and even Pacific Islander Studies, to be more accountable and relevant to Filipinos, and vice versa. One of the more celebrated and conspicuous educational developments of the past quarter century has been the Filipino Cultural Night or PCN on many college campuses and even some high schools, especially where a critical mass of Filipino Americans exist. PCNs are annual, often massive productions, run almost entirely by students to showcase the wealth of talent and of traditions they seek to avail themselves of.

Conclusion

As the older imperial networks have presumably given way to newer forms of geopolitical structuring of a post-colonial world order, Filipino America has emerged as an illuminating example of what it means to make, or not to make, that transition. Narratives of immigrant assimilation in the United States alongside postindependence narratives of nation-building through globalization contend with an archive of alternative knowledge that scholar Neferti Tadiar has productively termed “Philippine historical experience.” Reckoning with this complicated and complicating set of materials both critiques and provides alternatives to the once-compelling answers to current and historic problems. “Filipino Americans” can then be seen as a term to capture a particularly situated constituency that is at once the agent and beneficiary of movements for social, economic, and political change, change that becomes compellingly necessary in the face of ongoing and innovative forms of oppression and exploitation, from formal to informal empire, and in a range of locations including but not limited to the United States.

Filipino Americans in World War II

The Philippines became a colony of the United States at the turn of the twentieth century, and a commonwealth of the United States in 1934. By the time the United States entered World War II in 1941, there were over 100,000 Filipinos in the United States. The majority of these Filipinos were men, often referred to as *manongs* or older brothers, who had come to the United States as “nationals” and worked as seasonal workers in the fields of California, Oregon, and Washington, as well as the canneries in Alaska. They were also recruited as plantation workers in Hawaii. Filipinos in the United States in the early time period earned less than their white counterparts, were subject to antimiscegenation laws, and experienced a lot of racial discrimination, which had erupted into riots in cities such as Exeter and Watsonville in California throughout the 1920s and 1930s.

Because of the 1934 Philippine Independence Act, also known as the Tydings-McDuffie Act in the United States, the status of Filipinos in the United States had switched from “nationals” to “aliens.” The Act enabled the Philippines to create its own institutions and government and to gain its independence after 10 years, but the United States still had control over its foreign affairs and national defense. At the start of World War II, President Franklin D. Roosevelt merged the Philippine Army into the U.S. military and formed the United States Armed Forces in the Far East (USAFFE). Unlike their fellow Filipinos in the Philippines, the Filipinos in the United States were exempt from military at first. They thus initiated a campaign for an all-Filipino military unit in December 1941, and less than a month later, President

Roosevelt revised the Selective Service Act to permit Filipinos to join the U.S. Army and also authorized the formation of the 1st Filipino Battalion.

The 1st Filipino Battalion was formed on March 4, 1942, and activated on April 1, 1942, at Camp San Luis Obispo, California, under the supervision of the California National Guard. It was later elevated as the 1st Filipino Infantry Regiment on July 13, 1942, at the California Rodeo Grounds in Salinas, California, from which Japanese Americans were evacuated and transported to remote concentration camps. The battalion was made up of volunteers of Filipinos from the United States and also by Philippine Army officers and soldiers, as well as wounded soldiers from the Philippine Army and Philippine Scouts, who had first escaped to Australia from the Philippines on the USS *Mactan* in December 1941 and sent to the United States for additional medical treatment. The Filipino volunteers from the United States were primarily immigrant farm and cannery workers but also included a few Filipinos who had obtained a college education and the limited white-collar positions available to them.

The number of the 1st Filipino Infantry Regiment quickly grew as Filipino volunteers came from all over the United States and soon the 2nd Filipino Infantry Regiment was established in November 22, 1942, at Fort Ord, California. In January 1943, the 1st Regiment was relocated to Camp Beale whereas the 2nd Regiment was sent to Camp Cooke. More Filipino volunteers from the Hawaiian National Guard were to join the two regiments as a third regiment, but the Hawaiian Sugar Plantation Association contended that low-wage Filipino laborers on the plantations were essential for U.S. victory and thus prohibited Filipinos from Hawaii to join the U.S. military. These men were not able to enlist in the Army until 1943 when the 1st Filipino Infantry Regiment needed reinforcement to increase its size.

Some Filipino volunteers from California and Hawaii were sent to Australia and were integrated into the 1st Reconnaissance Battalion, operating out of New Guinea in preparation for General Douglas MacArthur's planned return to the Philippines after his initial retreat during March 1942 after the fall of Bataan. Lieutenant Colonel Robert H. Offley, the

assigned commander of the 1st Regiment, gave West Point graduate Lieutenant Colonel Leon Punsalang command of the battalion in New Guinea, thus becoming the first Asian American to command white troops in combat in the history of the U.S. Army.

After comprehensive combat training from January 1943 through the spring of 1944 at Camp Roberts and Hunter Liggett Military Reservation, the 1st and 2nd Regiments were sent to the Philippines. The 1st Regiment went into combat with the Japanese on Samar and established operations in Northern Leyte and other islands in Visayas starting in February 1945. The regiment was reporting a daily average of 40 Japanese deaths and 32 captures; although the 2nd Regiment never fought in combat as a unit, they were instead sent to Manila to assist the Philippine Civil Assistance Units (PCAUS).

When the war ended in August 1945, the 1st and 2nd Regiments ended its operations. The 1st Reconnaissance Battalion was deactivated. The PCAUS were also disbanded and their operations turned over to the Philippine government. The men were permitted leaves from the Alamo Scouts, the 5217th Reconnaissance Battalion, and various other units, and were released back to the 1st Regiment. When the men reported back to the Regiment in Ormoc, Leyte, they brought along with them their wives and fiancées, Filipino women from the Philippines, whom they were able to marry under the War Brides Act of 1945 and the Alien Fiancées and Fiances Act of 1946. Colonel William Hamby, Colonel Offley's successor as the 1st Infantry Regiment Commander, established a "tent city" for the newly married couples.

The War Brides Act also allowed spouses and children of U.S. military personnel to enter the United States. Before the Act was expired, many manongs from the United States returned to the Philippines to marry in their homeland. The manongs were then able to bring their families to the United States and establish a new generation of Filipino American community. Similarly, many of the younger soldiers were able to become more knowledgeable with languages and customs with which they were not familiar previously. The 1st Regiment returned to the United States on April 8, 1946, aboard the USS *General Calan* and was settled at Camp Stoneman; it was deactivated

two days later. The regiment soldiers who did not qualify to return to the United States, were ineligible, or wanted to remain in the Philippines were transferred to the 2nd Filipino Infantry Battalion in Quezon City. This battalion was deactivated on March 31, 1946, and the men were assigned to the 86th Infantry Division of the Philippines.

When the 1946 Rescission Act, signed by President Harry S. Truman, revoked the benefits promised to World War II Filipino veterans during their enlistment. However, this was not the case for the Filipino American veterans who were living in the United States at the time of their enlistment. These Filipino American veterans received full veterans benefits because their honorable discharge was from the U.S. Army. These veterans were given the option to naturalize through the Filipino Naturalization Act, which endowed U.S. citizenship to those who had arrived in the United States before March 24, 1943. As many as 1,000 soldiers were sworn in at Camp Beale on February 20, 1943. Some Filipino immigrants, however, declined the option to naturalize for various reasons, such as never having felt welcomed in the United States and also having enlisted only to liberate the Philippines, the homeland.

Filipino Cuisine in the United States

Filipino food is one of the least understood cuisines in the United States, with its diversity reflecting the different geographic regions of the Philippines. How a certain Filipino dish is prepared can vary depending on the particular region from which the chefs are from in the Philippines.

Filipino cuisine includes a mix of native fruits and fishes, with *calamansi* limes and vinegar to flavor stews and soups. Many of the dishes have Indonesian and Malaysian influences (sweetened sticky rice desserts like *biko* and *suman*), while other dishes are legacies of trade with China (*lumpia*, which are fried spring rolls, and *pancit*, which is similar to chow mein), Spain (*longganisa*, which is similar to chorizo), and Mexico (*sinigang* made with Mexican tamarind and chilies). Filipino cuisine also evolved to include hot dogs in ispageti (spaghetti made with banana ketchup) and Spam—because of the military history of America in the Philippines.

The best place to find Filipino food is in the home. For breakfast, Filipino Americans may cook a

traditional breakfast consisting of fried fish, such as *daing na bangus* (vinegar marinated milkfish), *sinangag* (garlic fried rice), and *longganisa* (short chicken or pork sausages). Other popular breakfast dishes include *tocino* (pork belly bacon) or *tapsilog*, which is the combined name of three breakfast dishes—*tapa* (cured type of beef), *sinangag*, and *itlog* (fried egg). Most Filipino meals have more than one dish to bring out a subtle flavor called *linamnam*, which implies a thrill due to the overall flavors of the meal (Malakunas 2012).

At parties, one can find typical Filipino dishes that can often be ordered from a *turo-turo* restaurant (take-out from a buffet-style set-up) or can be made at home. These dishes are often fried, braised, sautéed, or grilled. On special occasions, *lechon* (a whole suckling roasted pig) is often served. *Pancit* is often served at birthday parties because the long noodles symbolize long life for the celebrant. Finger foods at parties often include *lumpia*, *chicharron* (different parts of the pig that have been salted, dried, and then fried), and *ukoy* (fried shrimp cakes with bean sprouts). Stews that may be served include *mechado* (beef or pork in tomato sauce with potatoes), *kare-kare* (peanut-based stew of braised ox tails with vegetables) served with *bagoong* (fermented shrimp paste), and *dinuguan* (pig blood and meat cooked with vinegar and chiles).

For a simple dinner at home, one may cook *adobo*—the Philippines’ unofficial national dish. It is typically made with pork or chicken that is stewed or braised in a sauce consisting of vinegar, garlic, bay leaves, peppercorns, and soy sauce. Another popular dinner entrée is *bistek* (sliced beef marinated in soy sauce and calamansi and then fried with onions). Soups such as *sinigang* (sour tamarind soup with pork, beef, chicken, or seafood), *nilagang baka* (made with beef shanks and vegetables), or *tinola* (large chicken pieces and chayote slices cooked in a ginger-flavored broth) may appear on the table as well.

Many Filipino bakeries in the United States offer sweet and savory pastries, breads, and desserts that reflect multicultural influences. For example, *empanada* (a moon-shaped pastry filled with meat and spices) was introduced during the Spanish colonization of the Philippines. Similarly, *siopao* (the Filipino version of the Chinese *bao*) and *hopia* (bean-filled pastry introduced by Fujianese immigrants) are sold as well.

Spanish influence is also evident in *pandesal*, *monay*, *ensaymada*, *pan de coco*, and *mammon* breads that are sold at Filipino bakeries. Typical Filipino desserts also include *puto*, *bibingka*, and *kutsinta*, which are variations of rice cakes. *Leche flan*—another Spanish influence—is also available to order. *Turon* is made with native *plantain* (bananas) rolled up in eggroll wrapper and deep fried. *Ginataan* (coconut milk pudding made with root vegetables and tapioca pearls) is another familiar dessert. The most popular Filipino dessert is *halo-halo*, which means “mix-mix,” a parfait of various native preserved fruits served with shaved ice and evaporated milk.

For a time, traditional Filipino dishes were not easily accessible to mainstream America. A colonial mentality, lack of central identity, and a preference for cooking at home are possible reasons for the historic lack of presence of Filipino cuisine in the United States. Yet, the culture of Filipino cuisine is greatly evolving in the United States. This is primarily because of the tendency of Filipinos to “pakikisama,” or get along with others and assimilate with the collective. Although Filipino immigrants brought their traditional foods with them, they also enjoyed the cuisines of other ethnicities. This has influenced the way they now present traditional Filipino dishes. Recently, Filipino cuisine has steadily become part of mainstream America, which popularizes food trucks, fusion cuisine and more healthily prepared foods. In addition, the popularity of certain exotic Filipino dishes like *sisig* (grilled pig’s cheek skin seasoned with calamansi and chili peppers) is a growing trend. Thus, the story of Filipino cuisine in the United States is not done yet.

Filipino Farm Labor Union (FFLU)

Although there are few details left in the historical record about the Filipino Farm Labor Union (FFLU) it nevertheless played a critical role in the modern history of labor in the United States. Established in 1956 under the leadership of longtime labor activist Larry Dulay Itliong (1913–1977), the Filipino Farm Labor Union was one of the founding member organizations of the Agricultural Workers Organizing Committee (AWOC), an organization that later went on to be a part of the United Farm Workers (UFW).

The FFLU grew out of a historic tradition of Filipino immigrant labor across the West Coast of the United States that began in the early twentieth century. Powerful agribusiness interests from California to Alaska required a cheap pool of labor to till the soil of vast agricultural empires that produced a variety of seasonal fruits and vegetables. Given the United States' colonial relationship with the Philippines, a result of the Philippine-American War (1899–1902), and agricultural growers' need for cheap labor, many young Filipinos set their sights on the West Coast in hopes of finding employment.

Seasonal agricultural proved to be labor-intensive work in harsh working conditions given California's disparate weather. In communities across the West Coast, Filipinos, like other ethnic farm workers, faced interpersonal racism, discrimination, and at times mob violence, as evidenced in the Watsonville Race Riot of 1930. On the job they faced harsh resistance

to unionization by local growers who were supported by law enforcement. Nevertheless, Filipino farm workers slowly organized in piecemeal fashion.

Throughout the 1930s and 1940s Filipinos formed a variety of small labor organizations and mounted small strikes reflecting growing labor militancy and providing a base for the eventual founding of the FFLU. In 1933 when the American Federation of Labor (AFL), which had a notoriously xenophobic and especially anti-Asian platform for many years, refused to organize Filipino lettuce pickers in California's Salinas Valley, Filipino workers took it upon themselves to establish the Filipino Labor Union and stage a one-day strike. Despite the strike's failure, the Filipino Labor Union grew to some 2,000 members and eventually joined the AFL-affiliated Vegetable Packers Association (however, after violence against Filipinos in a subsequent strike, this coalition split). Later in 1940, the AFL chartered the Federated Agricultural Laborers Association, a union that negotiated with growers on behalf of Filipino celery, garlic, asparagus, and Brussels sprout workers, among others.

Within this legacy of small, but enduring, labor activism, Larry Dulay Itliong established the FFLU in 1956. Itliong was a veteran organizer who left the Philippines in 1929 and worked in Alaska's cannery industry and later the lettuce fields of Washington State. Before coming to California he worked with the United Cannery, Agricultural, Packing, and Allied Workers of America Workers Union, the International Longshore and Warehouse Union, and served as vice-president of the Seattle cannery workers local. In California, he coordinated a strike among asparagus workers and then established the FFLU. Reflective of the slowly changing attitudes toward immigrant workers of color, this organization was affiliated with the American Federation of Labor-Congress of Industrial Organizations (AFL-CIO).

Just three years later in 1959, the disparate organizing activities of Filipino farm workers began to coalesce. The FFLU joined with other labor groups such as the National Farm Labor Union (which included future United Farm Worker leader Philip Vera Cruz) to form the Agricultural Workers Organizing Committee (AWOC), which was comprised primarily of Filipinos. Although a branch of the AFL-CIO, the

AWOC was not a formal union, but, as its title suggests, a committee for organizing workers. In this capacity, it strove for better working conditions, higher wages, and official union recognition. Under Itliong's leadership, Filipino grape workers successfully staged a strike in the Coachella Valley, which led to a salary raise of \$1.40 from \$1.25 per hour. Although the strike did not result in a formal contract between workers and growers, this action set the stage for the Delano Grape Strike.

On September 8, 1965 the AWOC initiated the historic Delano Grape Strike, one of the most well-known strikes of modern U.S. history that blended labor and civil rights agendas. Soon after the AWOC called the strike the primarily Mexican American National Farm Workers Association under Cesar E. Chavez joined and later merged to become the United Farm Workers Organizing Committee (UFWOC; now known as the United Farm Workers). Among the other issues the UFWOC engaged through the strike were the use of dangerous and toxic pesticides on fruits and vegetables, the differential wages between Mexican and Filipino farm workers and *Braceros* (i.e., contract laborers from Mexico brought to the United States through a federal program designed to alleviate agricultural labor shortages during World War II), deplorable living conditions, the use of undocumented workers as strikebreakers and the general dignity of working-class people. In addition to the strike by workers themselves, the movement gained momentum through a highly publicized consumer secondary boycott of grocery stores that sold nonunionized California grapes that, due to the use of pesticides, also posed general public health risks. A dramatic 350-mile march by the united Filipino and Mexican farm workers from Delano to California's state capitol, Sacramento, also brought the plight of agricultural labor to a national audience. After several long years, in 1970 the UFW finally signed contracts with major grape growers. Because of antimiscegenation laws the Filipino farm workers remained largely a bachelor society and by the end of the 1970s most had retired; however, the UFW now affiliated with the Change To Win Federation, continues to push for social and economic justice for farm workers today.

Although the FFLU as an independent organization had a very short history, its place in a larger story of labor activism remains significant. Although the Filipino presence in the farm worker movement has been largely erased in mainstream accounts, as an early constituent of what eventually became one of the most important strikes in U.S. labor history the FFLU contributed to a long legacy of immigrant Filipino mobilization against inequalities faced by all working people.

Filipino Federation of America (FFA)

The Filipino Federation of America (FFA) is a mutual aid society established on December 27, 1925, by Hilario Camino Moncado. Although still in existence today, the zenith of FFA political activity was under Moncado's charismatic leadership. A conservative organization that sought a leadership role in the mid-twentieth century immigrant Filipino community, the FFA's early political activities were refracted through a pronounced moral code and ethnic nationalism. Over the years, the Federation gave rise to a unique, transnational Filipino folk religion.

Founded in Los Angeles as a Christian, fraternal organization, the FFA vied for members alongside other well-known mutual aid organizations such as the Caballeros de Dimas Alang and the Legionarios de Trabajo. In addition to Moncado, other early members were young urban male Filipino immigrants who performed a variety of jobs to pay for their education. Ostensibly a fraternal organization, women also participated in FFA activities. The organization's popularity quickly grew and chapters were established in other centers of Filipino immigrant life in California and Hawaii. The Federation emphasized the centrality of God, an ethic of brotherhood and the importance of mutual assistance. Medical aid, English language classes, sharing information about employment and current events in the Philippines, and companionship for migratory Filipinos were among the services the FFA provided.

The FFA was a decidedly Christian organization; its documents were often peppered with invocations of Biblical scripture. Significantly, the religious overtones of the FFA were evident in the ways in which Moncado came to embody the "Equifrilibrium" (EFB) or master who guided both spiritual and political salvation, following in the footsteps of both Jesus Christ and the Philippine national hero, Dr. Jose Rizal. The juxtaposition of Christ, Rizal, and Moncado became a powerful "trinity" that guided the FFA. Although grounded in Catholicism, the FFA's religious dimensions were complex. Moncado emphasized the next coming of Jesus Christ, borrowing from American evangelicalism; yet, the FFA also displayed a Catholic folk mysticism grounded in *Doce-Doce* ("twelve-twelve") or the centrality of the number 12 in the membership structure of the organization, which would total the "mystical" number of 1728. Upon initiation into the Federation, members were required to fast and provided with *instuksyon* (instructions) on specific prayers designed to ensure moral rectitude and prevent harm. The spiritual and mystical development of the FFA was largely the work of Lorenzo de los Reyes, while "Mama" Luisa Cortez was one of a handful of women who took on a visible role in "spiritual training" for members.

Politically, FFA leaders framed the organization as a broker between the United States and the Philippines

and sought to build harmonious relationships between Filipino immigrants and Americans. Nevertheless, the FFA fervently advocated Philippine independence from the United States and attracted membership by appealing to that struggle. Their strategies for achieving independence, however, were often at odds with other Filipino organizations. Rather than disrupting existing social relations through strikes or other mobilization, the FFA emphasized that morality, temperance and sobriety were the best paths toward challenging damaging stereotypes of Filipinos and thus securing empowerment.

To accomplish these goals, the FFA set forth a series of moral codes to which their members had to abide. Challenging the detrimental stereotypes of the vice-ridden Filipino male, leaders exhorted members to abstain from drinking, gambling, and smoking. To forestall conflict between Filipinos and whites, FFA members were prohibited from attending taxi-dance halls and dating European American women. The organization emphasized "clean" living through recreational activities such as bowling and golf, which also signified the FFA's concern with introducing American culture to Filipinos. Documents indicate FFA members even removed meat from their diets reflecting other health movements in America beginning in the Progressive Era.

Crafting a clean, positive image of the Filipino community was one component of a larger political project. Moncado and his fellow leaders avoided any explicit discussion of colonialism and rather sought to translate and imbricate American values and ideologies into a burgeoning Filipino American identity politics. Moncado stressed "loyalty" to the U.S. Constitution as the cornerstone of democracy. FFA members proudly participated in American Independence Day celebrations and leaders often equated Dr. Jose Rizal with President George Washington as paragons of political leadership. Just a year after its founding, the FFA sponsored a Rizal Day celebration at USC's Bovard Auditorium, a significant event given that many immigrants still had Rizal's martyrdom in their memories. Moreover, the FFA promoted the use of the English language, as opposed to Tagalog, in its extensive print culture that included books, pamphlets, and a 52-page monthly newsmagazine entitled *The*

Filipino Nation that tied diasporic Filipinos across the United States together through local news and progress toward Philippine independence.

This political outlook that ironically deployed some markers of Americanization to achieve Filipino nationalist goals was often at odds with other Filipino organizations. The greatest schism occurred in the arena of labor relations and reflected the FFA's "clean" image as a strategy toward gaining political legitimacy. In Hawaii, the FFA was highly critical of the growing militancy of Filipino plantation workers who had initiated several strikes even before the Federation came into existence. In California, under the banner of forging better relationships with European Americans, the FFA created alliances with white agribusiness interests who attempted to block the unionization of the vast number of Filipino migratory laborers. The FFA refused to support a farm worker strike in the Salinas Valley in the 1930s and collaborated with immigrant Japanese growers in an attempt to thwart a strike initiated by the Filipino Agricultural Laborers' Association.

The FFA movement began to falter after the 1934 Tydings-McDuffie Act effectively ended Filipino migration to the United States. However, the folk religious practices of the FFA's "spiritual division" took on a new life of their own as Moncado and Reyes' disciples attempted to establish "Moncado Colonies" in the Philippines. Although Moncado died in 1956, the "religion" he helped found continued to spark interest throughout the 1970s in Hawaii and the Philippines. The FFA remains active in Stockton, California, today focusing on social and historical events.

Filipino Language Movement (FiLM)

The Filipino Language Movement (FiLM) describes the collaborative efforts that lead to the legitimization of Filipino language classes in public K–12 schools in California in response to the passage of the federal No Child Left Behind (NCLB) Act in 2002. Although valuable endeavors have been made since 1975 in teaching Filipino ("Filipino" is used throughout this article in reference to Filipino designated as the national language in the Philippines to be inclusive of other Philippine languages in addition to Tagalog) throughout California, the term "Filipino Language Movement" was used by the advocates of California Assembly Bill 420 (AB 420) entitled "Teachers: alternative language assessments: Filipino language." The bill was developed to address the endangerment of Filipino language classes in the state of California brought about by the passage of NCLB. FiLM served as the driving force behind the grassroots movement that helped pass AB 420, also known as the Filipino Language Bill on September 29, 2005. As a community-based sociopolitical movement, FiLM encompassed the efforts of several different Filipino education advocacy groups such as Filipino American Educators of San Diego County and Council for Teaching Filipino Language and Culture. Along with support drawn from many community organizations, FiLM's successful efforts in aiding the passage of AB 420 helped legitimize the status of the Filipino language throughout California.

Background of FiLM and AB 420

Although an existence of successful rallying efforts led to the establishment of Filipino language

classes in various school systems throughout California, the Filipino Language Movement, as an organized advocacy effort beginning in 2004, was born as a proactive response to the No Child Left Behind Act. The passage of this federal policy, which was signed into law in 2002, threatened the continuation of Filipino language classes. It required teachers to be deemed as “highly qualified” or proficient in the subject taught; however, this need could only be met by either the successful completion of a teaching credential program specifically for Filipino or by passing a subject examination in that subject area. Neither of which was offered during that time.

Recognizing this need, the Filipino advocacy organizations and individuals of FiLM gathered to organize their efforts to not only prevent the potential erasure of Filipino language classes but also to create a pathway for those who want to teach Filipino in the future. Until the passage of AB 420, Filipino was the only language among the nine prevalent languages in California with no formalized subject examination for teachers to verify their language proficiency. The absence of this heightened the risk of losing the highly enrolled Filipino language classes. However, meeting this requirement of NCLB was impossible without a formal accreditation from the California Commission on Teacher Credentialing (CTC).

Community Organizing Efforts Behind AB 420

To resolve this, FiLM acknowledged the need for legislative support. The group successfully appealed to former Assemblymember Shirley Horton, who represented the 78th District in San Diego County during that time, to champion this issue to the state. Recognizing the importance of heritage languages and multiculturalism in school systems (FILAMEDA), she authored AB 420, which would “require the CTC to adopt alternative assessments to ensure the credentialing of Filipino teachers by the NCLB deadline” (AB 420 bill).

The advocates behind FiLM were students, parents, community leaders, and supporting organizations. The Filipino American Educators of San Diego County (FILAMEDA) was the organization spearheading the lobbying efforts. Understanding the need

for a unified voice, this policy-driving organization was led by its former president Eleonor Castillo who became FiLM’s principal spokesperson accompanied by the strong support from experienced Filipino language teachers from the Council for Teaching Filipino Language and Culture (CTFLC). Students from various organizations within the Filipino Collegiate Collaborative also assisted in raising awareness about this issue. Supporting organizations and individuals contributed to the Filipino language movement by submitting petition signatures, sending letters to Congress, and providing testimonials from students and parents about the benefits of language classes. FiLM’s online petition collected over 3,600 signatures and numerous letters were mailed to key decisionmakers during various parts of the campaign. At the time of the lobbying efforts, Filipino had been taught in California as a world language for the past 30 years, student demand for Filipino Language classes has increased 35 percent over the last four school years.

Throughout the process of AB 420, this bill had bipartisan support since its introduction on February 15, 2005. Aside from Assembly member Horton, who was the principal author of AB 420, the official bill indicates that its coauthors were Assembly members Chu, Coto, DeVore, Huff, Jerome Horton, Jones, Plescia, and Vargas and Senators Chesbro, Ducheny, Maldonado, and Torlakson. The official supporters of AB 420 were: California Language Teachers Association; California Teachers Association; California Women Empowerment Network; Council for Teaching of Filipino Language and Culture; Council of Philippine American Organizations of San Diego County, Inc.; Councilmember Garcetti, Los Angeles City; Filipino American Educators Association, Inc.; Filipino American Educators Association of San Diego County; Filipino American Social Services of Solano County, Inc.; Solano County Board of Education; The Foreign Language Council of San Diego; University of California, San Diego, Associated Students; and Vallejo City Unified School District.

After FiLM’s successful lobbying through the Senate and Assembly, Governor Schwarzenegger signed the bill into law on September 29, 2005. Thus, the collaborative efforts of FiLM and its supporters successfully petitioned the state Commission on

Teacher Credentialing to establish a California Subject Examination for Teachers (CSET) on Filipino.

The next step was to ensure that funding was secured for full implementation of AB 420. FiLM along with Assembly member Horton continued their efforts in stressing the importance of the development of this test. As a result of their successful campaign and follow-up, the inaugural Filipino CSET was administered on November 4, 2006, which was two years ahead of the deadline. On the first examination, all teachers who took the test passed.

Current Status

Since then, the CSET Filipino has been offered twice a year to teachers planning on preserving the Filipino language through teaching. CTFLC has designed CSET: Filipino review classes to offer support for the exam. Since 2007, Alliant International University, located in San Diego, is currently the only university in California offering a teaching credential program specifically for Filipino. Although other universities have teacher-credentialing programs for other world languages, Filipino has yet to be included in the public university system.

According to the American Community Survey (2007), almost half (668,073) of all Filipino language speakers in the United States (1,480,429) reside in California. The top metropolitan areas of Filipino language speakers were Los Angeles (17.5 percent), San Francisco (11 percent), New York (9.1 percent) and San Diego (5.8 percent). Filipino language classes exist in K-12 schools throughout San Diego County (14), Los Angeles County (2), Alameda County (2), Solano County (2), and San Francisco County (4). The schools that offer Filipino as a world language have high concentration of Filipinos; however, the classes also enroll students of various heritage backgrounds. Because of the advocacy efforts of the Filipino Language Movement, Filipino classes were not eradicated by federal law requirements and, instead, provided a pathway for teachers to be officially authorized to teach Filipino throughout schools in California. Teachers, students, and community members desiring to continue the Filipino Language Movement may

consider developing Filipino language classes through continued advocacy of Filipino language classes.

Filipino Pensionados

Pensionados is the term given to Filipinos who were chosen to participate in a government-sponsored program to send students to the United States for high school and college education. This program was institutionalized during the U.S. colonization and Philippine Commonwealth periods, commencing in 1903, formally ending in 1914, and then revived from 1918 until 1943. Under a recommendation by a Taft Commission report in 1901 to undertake the training of local teachers, the Philippine Commission officially passed this program as Act No. 854 in 1903, picking by means of an examination its first 104 participants from a variety of provinces and school districts and including selected members of the elite. Supervised by William A. Sutherland, then the Spanish-language secretary to the first governor general of the Philippines William Howard Taft, the expanded *pensionado*

program was aimed at providing the scholars with direct exposure to Western civilization and training in various fields such as agriculture, education, mechanical and industrial arts, and civil administration. After their schooling and during their eventual return to the Philippines, these students were required to take the civil service examination and accept an appointment in local government offices if offered. Indeed, in the Philippines, they became involved in academic, political, industrial, business, and professional leadership positions, and they assisted in leading the advocacy for Philippine independence and the administration of the commonwealth government and beyond.

The first *pensionados* were all men between the ages of 16 and 25. They attended agricultural and technical schools such as the Agricultural College (now the Iowa State University) and Cincinnati Technical School (now the University of Cincinnati), teaching schools such as the State Normal School in New York (now the State University of New York at Oswego) and the Northern Illinois State Normal School (now the Northern Illinois University in De Kalb), and research universities such as Cornell University, Purdue University, University of Chicago, and Yale University. They were not housed in school dormitories or boarding houses but instead lived with American families. These *pensionados* were also sent to the Louisiana Purchase Exposition (otherwise known as the St. Louis World's Fair) in 1904 to serve as guides, waiters, and assistants and to be exposed to American ways of life. Five women were among the 39 *pensionados* who were selected into the program in 1904. In 1905, three women were part of the 34 *pensionados*. Between 1903 and 1914, 218 students were sponsored. By the time the program finally ended in 1943, almost 500 scholars would have benefitted from this program, many of them having been sent to the United States for graduate and professional degree programs, or just to take seminars and college courses or attend postgraduate programs.

Among those in the list of prominent *pensionados* were Francisco Benitez (who became the dean of the College of Education at the University of the Philippines), Antonio De Las Alas (who became a house representative, senator, secretary of the interior, secretary of finance, and director of the Bureau of

Public Works), and Camilo Osias (who became the first Superintendent of Schools, then a senator and, later, the secretary of education).

Filipino Piecemeal Sugar Strike (1924–1925)

On April 1, 1924, Filipino sugar plantation workers in Hawaii initiated a strike that scholar John Reineke would dub “The Piecemeal Filipino Sugar Strike of 1924–1925.” His 1976 manuscript of the same title describes the disjointed—or piecemeal—nature of the strike, as well as the sugar industry’s and government’s systematic oppression of workers.

The strike was the final step in a series of actions undertaken by the High Wage Movement (HWM), led by Filipino sugar and dock worker turned lawyer and activist Pablo Manlapit, as well as George Wright, a local white AFL leader. As wholesale sugar prices fell from a record high of 12.33¢ per pound in 1920 to 4.63¢ per in 1922, wages also took a hit. Concentrated at the bottom rung of the sugar plantation labor ladder in unskilled positions, Filipino workers suffered disproportionately. In the fall of 1922, representatives of workers held a series of meetings, culminating in the HWM’s petition with a list of requests that garnered over 6,000 signatures. These requests included a raise in the minimum wage, workday hour reduction,

time and half for overtime and double time for Sunday work and holidays, equal pay for men and women in the same jobs, increases in wages to skilled and semi-skilled employees, and recognition of collective bargaining and the rights of employees to organize.

The petition was sent to the Hawaiian Sugar Planters' Association (HSPA) in April 1923, and again in November and December. The HSPA, sticking to its long-standing policy of neither recognizing nor negotiating with organized labor, ignored the petition every time. The HWM also sent its list of requests to individual plantation companies, and was again disregarded. In January 1924, the HWM issued a manifesto stating that a strike would follow in the event of the authorities' refusal of workers' demands. In March of that year, the group's executive committee drafted its "Strike Proclamation," calling for the action to begin on April 1.

The strike began on the island of Oahu and picked up haltingly elsewhere in Hawaii in the months following April. The action ultimately involved 34 of the islands' 49 plantations and three-fifths of the Filipino workforce. On September 9, 1924, violence erupted in Hanapepe on the island of Kauai as police fired on a mass of strikers, killing 16 and wounding others (four policemen were killed as well). The incident became known as the Hanapepe Massacre. Over 160 strikers were jailed and 76 were indicted for rioting, with 57 others pleading guilty to assault and battery charges. Indicative of the collusion between the sugar industry and local authorities, a county attorney was assisted by two special deputy attorney generals hired and paid for by the HSPA in the ensuing legal proceedings. The 72 men tried were provided a single counsel and convicted. HWM organizer Pablo Manlapit was charged with suborning perjury, convicted, and imprisoned until 1927.

The HSPA made no concessions to the Filipino strikers, just as it had ignored previous strikes spearheaded by Japanese workers in 1909 and 1920. If there were changes or developments on the HSPA's end in the aftermath of strikes, these were most often framed as initiatives extending from the paternal benevolence of the industry rather than concessions to labor union demands. In 1925, the HSPA—less interested in recognizing workers' needs than preventing protest and

unionization efforts—commissioned an outside firm to research conditions on plantations. The firm recommended that improvements be made on all fronts: from wages, hiring, promotions, and working hours, to housing, medical care, sanitation, education, and recreation. Although plantations moved forward with some changes in response, these would not be sufficient.

The failure of the 1924 Filipino sugar strike, along with failed Japanese-led strikes in years prior, underscores the particular legal, racial, and economic milieu of pre-war Hawaii. This was a time during which corporations colluded with local governments and law enforcement to oppress an immigrant workforce already stratified by racialized plantation hierarchies. In 1900, the Organic Act made way for labor organization by obviating the 1850 Masters and Servants Act that permitted indentured labor. That same year saw 18 strikes. By 1900, however, Hawaii sugar plantation owners had already coalesced to form the HSPA, controlled by the Big Five agencies. These agencies were owned by five families of missionary background who were variously allied through business partnerships, family ties, stock ownership, and other relations. Led by such a block, the HSPA operated as a monolithically antiunion entity. Starting with Japanese workers' Great Strike of 1909, the HSPA established its policy of neither recognizing nor negotiating with labor unions, especially in response to strikes. Repeatedly, the plantations of the HSPA united to bear out the cost of strikes, hired strikebreakers, evicted thousands of strikers and their families, and engaged in espionage to obtain information about labor movement activities and to disseminate misinformation.

Standing against such a force, Filipinos in the lead-up to the 1924 strike were at multiple disadvantages. They were relative newcomers to Hawaii compared to the Portuguese and Japanese. The sugar industry had turned to the Philippines, then a U.S. colony, for migrant labor after the Gentleman's Agreement of 1907–1908 halted migration of Japanese laborers. By 1919, there were over 10,000 Filipinos in Hawaii, and they made up 22.9 percent of the sugar workforce, with Japanese comprising 54.7 percent. The vast majority of Filipinos were poor young men without families whose turnover rate at plantations

was 83 percent in 1923. This translated to a lack of community networks and resources among Filipinos. As a result, the Filipino HWM that carried out the 1924 strike lacked key infrastructure and funding. The movement's prospects were grim, especially in light of the HSPA's power and the territorial government's recent passage of multiple anti-labor laws. This context—fused with a racial discourse that constructed Filipinos as essentially violent, volatile, and in need of imperialist discipline— informed the strike's ultimate failure.

Filipino Repatriation Act (1935)

Just one year after the passage of the Tydings-McDuffie Act, which set the 10-year timeline for recognition of Philippine independence, the United States Congress approved the Filipino Repatriation Act of 1935. The act established a “voluntary” repatriation program that allocated \$100,000 to the Immigration and Naturalization Service to organize the return of Filipino immigrants back to the islands. The act and program were extended three times, lasting from April 1936 to July 1941 with the total cost of the program reaching \$250,000. Despite concerted efforts by INS officials, however, only 2,064 Filipinos total were repatriated. The Tydings-McDuffie Act and the Filipino Repatriation Act, taken together, illuminate how the end of formal U.S. control of the Philippines was motivated in significant part by nativist desire to exclude and expel Filipino immigrants to protect American society and economy from the perceived racialized and sexualized threat posed by its former colonial wards.

At the end of the nineteenth century, acquisition of the Philippines had been viewed as necessary to U.S. economic growth, but as the Great Depression deepened, concerns grew sharply over the cost of governing the Philippines as well as over the labor competition posed by Filipino immigrants. Because Filipinos were classified as U.S. nationals, they were exempt from immigration quotas. By the 1930s, over 45,000 mostly young male Filipinos had immigrated to the mainland U.S., filling the agricultural labor vacuum left by the exclusion of Chinese, Japanese, and Asian Indian immigration. Unlike previous waves of Asians, however, Filipinos had already been exposed to American history and culture prior to their arrival because of U.S. occupation and the establishment of a public education system in English in the islands. Such an exposure made Filipino immigrants more apt to claim belonging in U.S. society, resisting labor disenfranchisement and conditions of de facto segregation. For example, Filipinos organized the 1934 Salinas lettuce strike and the 1939 Stockton asparagus strike as well and defied antimiscegenation laws by consorting with lower-class white and Mexican women at taxi dance halls. Such labor militancy and interracial fraternization sparked anti-Filipino riots in the West, such as the 1929 Watsonville Riot that lasted five days. West Coast white labor organizations began campaigning for Filipino exclusion; however, their national status made such exclusion legally untenable. Independence and ultimately repatriation were seen as the solutions to Filipino economic and sexual competition.

Once Congress passed the Tydings-McDuffie Act in 1934, it revoked the national status of Filipinos and rendered them aliens ineligible for citizenship. Though Filipino immigration was limited to 50 a year, anti-immigrant forces began to advocate for repatriation. Such a move was unnecessary, however, as Filipino immigration had already begun to slow because of reports of nativist hostility and widespread unemployment. By 1932, the Philippine Bureau of Labor had already reported immigration numbers dropping to 1,306 as compared to 11,360 in 1929. Moreover, Filipinos were already returning to the islands on their own volition for various reasons such as the completion of the terms of their labor contracts. Even Filipino leaders themselves were already

contemplating their own repatriation programs to avoid forced deportation and to alleviate indigence. In 1933, the Filipino resident commissioner in Washington, D.C. supported a congressional resolution to subsidize the return of Filipino immigrants. The resolution failed to pass because it did not make clear whether or not repatriated Filipinos retained the right of return. In 1935, Richard Welch definitively denied that right in his proposal that ultimately became the Filipino Repatriation Act of 1935.

Initially, Welch and INS officials anticipated as many as 10,000 Filipinos would take advantage of the Act. The first repatriates, however, were wards of the state who were incarcerated, ill, or mentally unstable. The majority of Filipinos refused to participate in the program, whether in protest of the racist motivations behind repatriation or simply because of pride. Edward Cahill, the San Francisco District Commissioner of the INS, attempted to combat negative perceptions by even arranging for participants in the program to attend local colleges for days and receive a certificate in agricultural training before being sent back. At the end of the first year, barely 150 had been repatriated. Most of those who did actually choose repatriation seem to have been materially better off than most Filipino immigrants of the time. They had already accumulated a certain amount of possessions, capital, and work experience that could be utilized once home. Along with the problem of low participation, INS officials were also challenged by the question of mixed-race families. Technically, the government could only fund the passage of Filipinos, and the Philippine government disapproved of the white wives of Filipinos as potential disruptive presences in society and burdens to the state. Officials, however, could not stop white wives from purchasing their own tickets to accompany their husbands. Of the journey itself, many Filipinos complained of appalling treatment by INS officials, such as restriction of free movement and inedible food. Once in the Philippines, it is not quite clear how repatriates fared. Some seem to have faced challenges assimilating back into society, such as reportedly developing affectations of superiority and aggressiveness because of their extended time in the United States. Others, however, used their skills gained abroad to become local entrepreneurs.

The ultimate failure of the repatriation program can be read as indicative of the level of political resistance in the Filipino community that had originally sparked the program itself. Filipinos, refusing to be marginalized in U.S. society, formed labor unions and interracial coalitions that were read as economic and sexual threats to U.S. society. Independence and repatriation were meant to solve the Filipino problem. The sheer number of Filipinos who refused to participate speaks to the community's resistance not only to repatriation specifically but to racist hegemonic forces generally.

Filipino Transnationalism

Although “transnationalism” has increasingly become synonymous with traversing national boundaries, the term seems to encompass more than this commonsense notion of migration, denoting the varieties of travel, communication, exchange, and consciousness that new technologies have made possible in the late twentieth and twenty-first centuries. Indeed, transnationalism seems to build upon earlier forms of migration by going beyond a one-way or unidirectional movement. First, it tends to be *circular* in nature, marking out a “third” or “in-between” space, economic or cultural, across national borders, which nation-states have precisely failed to capture. Second, transnationalism tends to subvert the conventional notion of migration from

the Third World to the First World, or from an underdeveloped periphery to a developed core. Rather, it involves just as often movements in the opposite direction. Third, transnationalism tends to be diasporic in nature, seeming to involve a multivectoral dispersion away from a homeland. Hence, it often involves a cultural response to exile, a sense of displacement from a home that expatriates nonetheless continue to remember and engage. From these perspectives, Filipino transnationalism might thus be seen as the dynamic relationship between a sense of “Filipino” national or ethnic identity and the circulation across borders of Filipino bodies that tends to subvert such a unity.

During the late twentieth and twenty-first centuries, Filipino transnationalism has come to be synonymous with the phenomenon of overseas contract workers and their movements back and forth from their areas of work to their Philippine homeland. Joining “permanent or settler immigrants” to traditional destinations like the United States, Canada, and Australia, an almost identical number of Filipinos work overseas with temporary contracts. After Mexico, the Philippines has become the world’s second largest exporter of labor. The majority of them during the 1990s were destined for the Middle East, one-fourth to East Asia (esp. Japan, Hong Kong, and Singapore), and 6 percent to Western Europe and North America. Women, in particular, have made up the vast majority of the Filipino labor outflow. Observers have remarked at the especially large remittances they send to the Philippines. In 2004, for instance, the 7.4 million temporary and permanent (as well as legal and illegal) Filipino overseas migrants remitted nearly \$8 billion, making up 10 percent of the Philippines’ gross domestic product. This phenomenon has been made possible by the combination of Philippine government recruitment, deployment, and protection of workers abroad and by businesses related to migration, including recruiters, travel agents, insurance services, and investment services.

Although an engine of circular migration has been established with overseas foreign labor, such a movement, over time, has resulted in the inevitable settlement of Filipinos and Filipinas in certain regions of the world. They in turn have been making frequent journeys to their Philippine “home,” even though de

facto they have become members of the countries where they work. Still, there is a disparity in the levels of assimilation of Filipinos around the world, as with other migrants, as the receiving country’s laws and its public culture of immigration influence their integration into the overseas nation’s culture, economy, and social life. Filipinos in Spain, the United States, and Canada, for instance, can more easily integrate into the dominant society as a result of immigration laws favorable to foreign labor, professional work, family reunification, residency, or citizenship. Their counterparts in Japan, the Gulf States, or Germany, have, however, faced stringent residency and citizenship laws. In very real terms, they remain a people in limbo, a truly deterritorialized, if not pariah population.

Given the greater participation of women in the Filipino migrant stream, one might speak of a *feminization* of Filipino migration in the late twentieth and twenty-first centuries. The varying demands of the global labor market account in part for their prominence in the transnational migration stream, the other part being Filipinas’ English-language skills, high level of literacy, professional training, and their willingness to make tremendous sacrifices personally for the sake of their families as well as to expand individual opportunity. Globally, there has long been a shortage of qualified nurses to staff expanding health care industries. As a result of its history of nurses’ training and nurse export established during the U.S. colonial period, the Philippines has long been an exporter of nurses. Filipina nurses and, one should add, a growing number of male nurses, have been in demand all over the world, although ironically, there are nursing shortages in the Philippines itself. Besides nurses, Filipino women and a smaller number of Filipino men, many of them from poor or low-income backgrounds, have been responding to developed nations’ needs for domestic labor, home care, and elderly care to make up for the increasing labor force participation of women in developed countries as well as the faster rates of aging and negative population growth rates.

Some of the most sensational abuses of their labor have occurred in these arenas, especially in the Middle East and East Asia where Filipino nurses often face verbal abuse, oppressive conditions of labor, and not a small measure of racism and sexism, working for

male or female heads of households. Filipinas congregating in large numbers, if not multitudes, in parks on Sundays to share stories of home, to eat together, or to commiserate about their bosses has become a common sight in places such as Hong Kong's Central Station or in Madrid's parks. Their sensational sacrifices, the billions of dollars they remit to support the Philippines, and their concrete impact on families, local communities, and national life in the Philippines has led the Philippine state to recognize their contributions. The government, for instance, grants duty-free and tax-free privileges for overseas workers. Likewise, since the 1990s, Filipina laborers have come to be labeled as "national heroes." Although a welcome development for the workers, such cultural capital depends on their ability to send back money and goods from overseas. This, however, makes them subject to the economic fluctuations in metropolitan economies, many of which have faltered in the late twentieth and twenty-first centuries. Ironically, they have also increasingly become subject to much "shabby treatment" and bureaucratic red tape at Philippine airports by government officials who regard them as "nobodies."

Notwithstanding these complex developments, the contemporary Filipino experiences of deterritorialization, exile, and circular migration are not novel or exceptional to the digital age. In fact, these processes may be seen as an expansion or generalization of social experiences already at work in the modern Filipino history. Contemporary Filipino transnationalism is but the latest manifestation of an ongoing historical engagement with colonialism and neocolonialism, which has always been fought in transnational terrain. In this light, I discuss the reform struggle against Spain in the late nineteenth century, the independence campaign under U.S. colonial rule, and the political struggle against the Marcos dictatorship of the 1970s and 1980s.

The forces that set in motion the first transnational movement among Filipinos were long in emerging as a result of the decentralized, highly localized character of Philippine societies and the poor means of transportation and communication at the time of the Spanish conquest. Not until the mid- to late-nineteenth century, when new forms of transportation and communication

were superseding archaic ones, did a sense of national consciousness begin to emerge. By the 1810s, the galleon trade between Manila and the Viceroyalty of New Spain, which had linked the Philippines to Spain (via Acapulco) was terminated, a casualty of the independence movements that gripped Spain's Latin American colonies, including Mexico, which was to become independent in 1821. Only the Philippines and Guam in the Pacific and Cuba and Puerto Rico in the Caribbean-Atlantic would remain in the Spanish orbit. Spanish colonial administration of its new empire was restructured into a new bureaucratic arm, the *Ministerio de Ultramar*, or overseas ministry, in the 1860s. Meanwhile, the opening of the Suez Canal in Egypt in the 1860s made possible an abbreviated steamship voyage from Spain to its Far Eastern colony, which was becoming more and more valuable to the empire as a result of the expansion of the new cash crop, tobacco. Yet, not only did improved transportation facilitate commerce and colonial administration between Spain and its colonies, it also made possible traffic in the opposite direction, from the colonies to the metropole and back in the guise of children of *mestizo* elites from all over the Philippines, hitherto unknown to each other, seeking advanced education in Western Europe. Out of these overseas encounters with Western modernity and the common experiences of discrimination, political agitation, and social encounter in the metropole, a sense of Filipino identity and national belonging would emerge. The Filipino reform struggle in Spain, known as the Propaganda Movement, was followed by a revolutionary independence struggle whose geographic centers came to include British Hong Kong, Qing China, the empire of Japan, Australia, and the United States. Independence was attained in June 1898 with help from the United States, but no sooner was it proclaimed than the United States itself turned colonizer and unleashed a war of pacification that suppressed independence agitation to American rule.

Under United States colonial rule from 1899 to 1946, a second transnational movement, the Philippine independence movement, would arise, a movement for political separation from the United States that eventually produced independence legislation in the Tydings-McDuffie Act of 1934. During the early stages of

American rule, Filipino elite nationalists were divided among each other on the question of the future status of the Filipino nation under U.S. sovereignty. A political party favoring U.S. statehood for the Philippines, the Partido Federal, was the first one to be recognized by U.S. colonial administrators. However, Filipino sentiment for independence remained strong and Filipino political leaders exploited this constant undercurrent among the masses in the electoral contests made possible by U.S. rule under the slogan of “immediate, absolute, and unconditional independence.” Under such a platform, the Partido Federal was defeated, the Nacionalista Party was founded, and elite leaders Sergio Osmeña and Manuel Quezon soon led “Philippine independence missions,” legislative delegations sent to lobby for Philippine independence in the U.S. Congress. In the United States, the work of the resident commissioners and other Philippine colonial officials, such as labor investigators and labor commissioners supplemented the work of the missions. Yet, the legislative work of the missions and commissioners notwithstanding, it should be noted that the elite did not have a monopoly on proindependence sentiment. Indeed, the unofficial mission of labor leaders such as poet and labor leader Benigno Ramos, who spoke in several cities among Filipino laborers in the United States, as well as the sentiments of transnational figures such as Hilario Camino Moncado, a mystical figure and head of a semireligious confraternity, contributed to keeping sentiments of independence alive and strong among the Filipino masses across the Pacific.

A third and final development crucial to the history of Filipino transnationalism is that of the anti-Marcos movement, a movement from the late 1960s to the mid-1980s opposing President Ferdinand Marcos and the First Lady, Imelda Romualdez Marcos, who ruled the country from 1965 to 1986. Although seen as a single campaign, the anti-Marcos struggle involved several phases—the first was opposition to his support for the U.S. war on Vietnam and his creeping authoritarianism to 1969; the second was resistance to martial law, which he declared in September 1972, and exposure of human rights abuses and crony capitalism; and the last was the attempt to recover billions of dollars of pilfered national funds, to seek reparations for

political prisoners, and to prosecute human rights violations after his overthrow in February 1986 and exile to Hawaii. At the height of Marcos’s rule, the Philippine state’s power extended to overseas Filipino communities. It blacklisted dissenters, used intelligence services and local gangs to intimidate critics, and seduced immigrants with discounted travel fare and VIP treatment in the Philippines, if not by outright bribery. A heterogeneous group of social actors involving young Filipino American men and women of the civil rights and anti-Vietnam War movements as well as recent Filipino immigrants and political exiles emerged in the United States to oppose these moves. The movement also included various non-Filipino individuals—white, black, Latino, Asian, and American Indian—who were inspired by the Philippine struggle.

Given such an agenda and diversity of actors, it is not surprising that the anti-Marcos movement took on an intensely transnational character. Numerous political opponents and critics of Marcos traveled extensively throughout the United States, often at the behest of opposition groups well established in the country. A special impetus to the anti-Marcos movement was the presence of respected high-profile oppositionists like Senators Raul Manglapus and Jose Diokno, and later, the coming of Benigno “Ninoy” Aquino and his family and residence in New England. But the movement was not just one way. Anti-Marcos oppositionists traveled to the Philippines on fact-finding commissions to investigate human rights violations, refugee resettlement policies stemming from the Philippine state’s war against Muslim Filipinos, the spread of prostitution and disease in often untouchable U.S. bases, and for many other reasons. Opposition leaders in the United States, frustrated with Marcos, supported more “extreme” measures, including terrorism, as well as financial and moral support for the outlawed Communist Party of the Philippines and its military wing, the New People’s Army.

The prospects for Filipino transnationalism remain positive in the near future, despite various warning signs. Indeed, Filipinos on both sides of the Pacific continue to take advantage of opportunities to work abroad and live at home, despite the potential costs of such arrangements in terms of discrimination, strains

on family life, and personal health. Filipinos in the United States, in particular, continue to return as *balikbayans*, providing the image of success for Filipinos all over the world. “1.5 generation Filipinos” (those born in the Philippines and raised in the United States) and second-generation Filipino Americans (those born in the United States) have increasingly become exposed to the Philippines. Study-abroad and language-training programs, advanced research fellowships, nongovernmental organizations, and many other groups have provided ways to engage the birthplace of their forebears. Some have also moved to the Philippines for better opportunities, whether to study in Philippine universities (medical schools, for instance, which are highly impacted in the United States), to pursue careers in the movies, television, sports, stand-up comedy, and other performative venues, or to tap into the booming business in outsourced telephone support operations. Still, recent developments have blunted the expansion of transnational activities, including the subsequent travel restrictions placed by the State Department on the Philippines in the wake of 9/11 and the spread of the war on terror in Mindanao, which has placed study abroad programs on hold. Moreover, the declining value of the dollar as well as the worldwide economic downturn have made overseas labor migration less palatable as developed countries have made drastic cuts in production, laid off more workers, or simply gone out of business. Still, Filipinos across the Pacific are likely to take advantage of the openings made possible by globalization and transnationalism so long as poverty, unemployment, lack of opportunities, and racial and gender discrimination continue to circumscribe their lives.

Filipino Women and Global Migration, History of

Filipina or Filipino women’s global migrations are most often associated with the various waves of women who, since World War II, emigrated from the Philippines, and moved through global circuits while crossing multiple national borders. At the same time, transpacific migration during the first few decades of the twentieth century is typically associated with large numbers of Filipino men leaving the Philippines and entering the United States as agricultural workers, laborers in the service sector, and as government-sponsored exchange students, otherwise known as *pensionados*. Indeed, the number of Filipino men far exceeded the number of Filipino women entering the United States. Gender norms first established during the Spanish colonial period dictated strict supervision of unmarried women and therefore deterred many Filipinas from emigrating the Philippines. Moreover, Filipino women, unlike their male counterparts, were not actively recruited for employment or educational opportunities abroad. Such factors led to the significantly lower numbers of Filipina global migrants during the early twentieth century. Despite these impediments, Filipinas did indeed leave Philippine borders traveling through global circuits for a variety of reasons and encountered different migrant experiences.

These developments in Filipina global migrations, both in terms of motivations and barriers, occurred within the context of a long-standing colonial heritage. Thus, although Filipinas migrated in transnational circuits for a multitude of reasons, it is important to recognize the role that United States imperialism and colonial projects in the Philippines played in creating Filipina transnational mobility. To understand the foundations of such colonial legacies and its connection to Filipina global migrations, we must look to a longer history of Filipina transnational movements, particularly during the U.S. colonial period of the early twentieth century. Examining the history of Filipina global migrations pre-World War II, brings to light the diversity among Filipinas moving across transnational circuits, the multiple motivations to migrate and the impediments against migrations, and situates these developments within the context of U.S. imperialism

Filipina Migration and Labor

The Hawaiian Sugar Planters' Association (HSPA) actively recruited Filipino laborers who, as colonial wards of the United States, could bypass race-based and national origin immigration restriction laws and thus could fill the desire for cheap labor for plantation owners. As a result, the first migrations of Filipinos in large numbers were to Hawaii. Furthermore, because of poverty and farm tenancy in the Ilocos and Visayan rural provinces of the Philippines, working-class Filipino men and women viewed the United States as a place of economic opportunity that would help alleviate their poverty. Between the years 1909 and 1934, a total of 103,544 Filipinos migrated to Hawaii and of that number, 8,952 were Filipinas. The HSPA recruited Filipinas and allowed married men to bring their families as part of a strategy to quell rising rebellion and strikes in Hawaii. From Hawaii, a significant amount of Filipinos and Filipinas migrated to the mainland seeking new economic opportunities, particularly in the service and agricultural sectors.

Filipina immigrants met with a clash of traditional ideas concerning Filipina womanhood with the everyday harsh realities of living and working in the United States. Filipinas needed to negotiate their status and

roles in a society where Filipino men outnumbered them seven to one in a society where they faced racism, sexism, and exploitive labor conditions. The demand to survive in harsh economic conditions urged Filipinas to enter the labor market in the agriculture and service industries, which also brought them into conflict with long-standing gender ideologies that upheld the woman's place was only in the home. The association with women and the domestic space, however, remained strong, and Filipinas worked both outside of the home in their places of employment but in the home as well.

The gender imbalance between Filipino women and men bestowed upon the women a sense of power in terms of their ability to not adhere to older traditional views of courtship and marriage. For example, in her diaries, Angeles Monrayo revealed how her mother, Valeriana Monrayo, challenged normative views on marriage by leaving her husband and taking a lover. The ability to pick and choose who they wanted be intimate with, live with, or marry gave a sense of empowerment to the Filipinas in agricultural communities. These changes, however, did not completely transform patriarchal hierarchies. For example, the gender imbalance also created an environment of potential violence toward Filipinas. Because of the low numbers of Filipino women in the mostly male labor camps in Hawaii, *coyboy coyboy*, the infrequent, but still very serious and dangerous practice in which a woman was kidnapped and raped by unmarried men, occurred.

Despite the fact that the number of Filipinas immigrating to the United States as laborers during the early twentieth century was relatively low in comparison to Filipino men, their experiences provide further insight into their specific concerns, negotiations, and realities that they faced as Filipino women.

Pensionadas

Through the Pensionado Act of 1903, the United States colonial government established a government-sponsored student exchange program, providing scholarships to Filipinos who sought to study at American universities. Colonial officials regarded education as a means to "Americanize" Filipinos. The student

exchange program sought to send Filipino students to American institutions with the intention that these students would bring newly acquired skills, knowledge, and exposure to American modern culture back to the Philippines and thus help create the ideal colonized subject. One way that the American colonial government masked their intents was to present the inclusion of Filipino women in the *pensionado* program as a measure to bring progress and gender equality to the Philippines. Despite the rhetoric of equality and opportunity, such programs targeted Filipinas from the middle and elite classes. In doing so, the *pensionado* program revealed what type of Filipina would be considered acceptable in the United States and at American educational institutions.

The rhetoric of modernity and progress through education came into conflict with the prevalent gender norms first established during the Spanish colonial period in the Philippines that discouraged Filipinas from the middle and upper classes from leaving the “protection” of the home and family. Taking advantage of the fissures created by such conflicts, some Filipinas left the Philippines to attend American universities. For example, five Filipinas received scholarships in 1904 and three Filipinas in 1905. Other Filipinas received privately funded scholarships during and even after the tenure of Pensionado Act.

In 1919, Encarnacion Alzona participated in the *Pensionado* program. As a *pensionada*, she earned a master’s degree from Radcliffe College and a doctorate from Columbia University by 1923. Alzona was the first Filipina to obtain a doctoral degree and became the first Filipina historian. In 1932, she returned to the United States to participate in the Barbour Scholarship Program at the University of Michigan at Ann Arbor. The program sought out “Oriental women of noteworthy achievement in scholarship and service in the Orient.” Alzona, like the majority of Filipina exchange students, hoped that earning a degree from an American university would ensure her success in the Philippines. As a member of an elite Spanish mestizo family, Alzona, like other *pensionadas* of her class, did not need wages earned abroad to support herself and her family. Rather, migrating to the United States provided her the cultural capital to secure a prestigious professorial position at the University of the

Philippines. Thus, most Filipina *pensionadas* did not settle in the United States but returned to the Philippines.

Perhaps in response to the gender barriers that kept the number of Filipina exchange students low in comparison to Filipino men, Alzona extended her influence to help other Filipinas gain passage to and study in the United States. Alzona viewed education as a way for Filipinas to gain equal standing with Filipino men, although she was critical of U.S. colonialism in the Philippines. For example, Alzona strongly encouraged Fé del Mundo, who would later establish the first children’s hospital in the Philippines, to continue her study of medicine in the United States. Alzona wrote letters of support to Philippine President Manuel Quezon, recommending del Mundo as a bright and talented medical student. Her backing aided del Mundo in receiving a scholarship to attend any university in the United States. Del Mundo traveled to Boston, where she obtained a medical degree at Harvard Medical School. Upon finishing medical school, del Mundo continued her residence at the University of Chicago. When she wanted to extend her leave in the United States to continue her work in pediatrics, she again turned to Alzona to support her request to President Quezon. While living in Boston, del Mundo asked Alzona to also help her sister, Corazon, come to the United States to pursue medicine.

Although both the Philippines and the United States offered very limited opportunities for trans-Pacific crossings for Filipinas, Alzona used her prominent status to create a network that would allow Filipino women to sojourn to the United States. Furthermore, their correspondence revealed that as transnational Filipina students, who moved back and forth between the borders, they needed to navigate within mechanizations of both the United States and the Philippines. As women, they faced the difficulty of being considered intellectually inferior to men in both Filipino and American societies. As Filipino women, they battled against their position as colonial wards and notions of their inferiority to white Americans. Lacking the numbers to build a critical mass or community of Filipinas in the United States, *pensionadas* often faced feelings of isolation and loneliness. Unlike other immigrants who entered the United States in

“waves,” these women often relied on letter-writing to build and maintain transnational relationships with family, friends, and colleagues.

Isabel “Dimples” Cooper: Migrating to Fulfill Personal Desires and Gain

Filipinas also traveled through global circuits to fulfill their own personal gain and desires. For example, during the 1920s and ’30s, Isabel “Dimples” Rosario Cooper, a famous vaudeville performer and Philippine cinema actress who is mostly remembered as performing the first on-screen kiss in a Philippine film, migrated between multiple destinations to pursue her acting career. U.S. imperial expansion of markets and the importation of Hollywood films not only influenced the establishment of a Philippine cinema system but also introduced the lure of Hollywood to Filipino spectators. With Hollywood as the golden standard of cinema throughout the globe, Filipino actresses and actors viewed Hollywood as a place where fantasies of fame, celebrity, and success could be realized. Cooper’s own dreams of advancing her career and fantasies of Hollywood urged her to seek work opportunities in Los Angeles in the late 1920s and again in the late 1930s. Cooper, unlike other Filipino men and women who sought employment abroad, was not motivated by a sense of filial duty or the need to help economically support family in the Philippines. However, Cooper, like other Filipino actors and actresses, found that her identity as a Filipina coupled with racism in the United States severely limited her ability to land roles in Hollywood films.

In 1930, Cooper again left the Philippines but this time to continue her relationship with General Douglas MacArthur in Washington D.C. Whatever her hopes she had set for their relationship, the power differences between the two because of their race, gender, class, age, and citizenship would create difficult challenges for Cooper while living in Washington. As a white, male, powerful military and political figure, MacArthur had the capability of using his status to control Cooper. MacArthur demonstrated his power over Cooper by determining the conditions of their relationship and Cooper’s lifestyle while in Washington D.C. For example, upon their arrival, he placed her in a secret

apartment close to his office. The location made it convenient for him to see her when his schedule permitted, though this convenience was not extended to Cooper. MacArthur restricted her to the apartment to keep their relationship hidden from the public eye.

Perhaps the most blatant example of MacArthur’s sense of power over Cooper was his attempt to deport her to the Philippines. In 1934, the same year that saw the passage of the Tydings-McDuffie Act, an act that reclassified all Filipinos, including those in the United States, from colonial wards to aliens, MacArthur abruptly ended his relationship with Cooper and attempted to deport her to the Philippines. MacArthur’s attempts to send Cooper back to the Philippines revealed that he considered her, much like her Filipino contemporaries in the United States, as expendable. Measures that sought to revoke Filipinos’ status as U.S. nationals and attempts to send them back to the Philippines rendered them as undesirable immigrants.

Despite Cooper’s precarious legal position as a Filipina in the United States, she was determined to remain. Making claims to U.S. citizenship through her American father, Cooper was able to legally avoid the alien status established by the Tydings-McDuffie Act. Cooper, like many other Filipinos and Filipinas, needed to go through great lengths and navigate a legal system designed to render them as undesirable aliens to remain in the United States. Cooper eventually settled in Los Angeles where, just as she had the previous decade, Cooper continued to struggle against the racism of Hollywood in her pursuit of an acting career. Not much is known about Cooper between the 1940s and the time of her death in 1960. Some biographies written on MacArthur suggest that she spent the latter years of her life trying to sell the story of her relationship with MacArthur. Cooper eventually overdosed on barbiturates and died in 1960.

Legacies of Colonialism on Filipina Immigration Post-World War II

During the postwar years, gendered migration included the influx of Filipino women into the United States as a result of the War Brides Act of 1945 and the Veterans’ Alien Fiancées Act of 1946. In the 1950s, Filipina nurses educated in English-language

schools established in the Philippines traveled to the United States under the State Department's Exchange Visitor Program. Filipina nurses were then recruited to work in American hospitals as a result of nursing shortages. Instituting nursing education and hiring systems provided the means for the United States to tap into cheap labor to address the nursing shortages, particularly in inner-city hospitals. American-established nursing education and employment programs were examples of U.S. expansion into the Pacific under the guise of American benevolence. Such postwar education and fellowship programs were modeled after the previously established *pensionado* programs. By 1960, there were 67,435 Filipinas who comprised 37.1 percent of the Filipino American population. Later, the 1965 Immigration Act notably reversed previous immigration restrictions and quotas based on national origins and race. This act legally opened U.S. borders to "desirable" immigrants based on family reunification or occupational characteristics.

Such changes to immigration laws made it possible for large numbers of Filipinas to enter the United States. These legal changes, in addition to the financial difficulties because of a weak economic infrastructure in the Philippines that resulted from colonial economic exploitation, an oversupply of educated Filipinos, and political strategies implemented by the Marcos regime resulted in the mass exportation of Filipina laborers beginning in the early 1970s. In 1972, after declaring martial law, then-president Ferdinand Marcos established a neoliberal outward-oriented strategy of development to earn foreign capital, and thus the overseas Filipina/o worker or OFW was created. Marcos regarded and promoted Filipino men and women as national heroes to develop the Philippine economy that manifested, more often than not, in exploitive labor practices. By the 1990s, Filipino women made up the majority of overseas Filipino workers. The high demand for Filipinas care workers, including nurses, domestic workers, and entertainers has caused the proliferation of Filipina labor migrations to over 160 countries. The high numbers of Filipinas migrating for employment as care workers reifies the notion that women innately are nurturing caretakers and at the same time feminizes these types of jobs. Furthermore, the continued belief that the Philippines is a source

for bodies and cheap labor for the rest of the world is a product of the legacy of U.S. colonialism.

These developments in Filipina global migrations occurred within the context of a long-lasting colonial heritage. Thus, although Filipinas migrated in transnational circuits for a multitude of reasons, it is important to recognize the role that United States imperialism and colonial projects in the Philippines played in creating Filipina transnational mobility. To understand the foundations of such colonial legacies and its connection to Filipina global migrations, we must look to a longer history of Filipina transnational movements, particularly during the U.S. colonial period of the early twentieth century.

Filipino World War II Veterans

The recruitment of Filipinos to fight in the Pacific theater for the United States during World War II must be understood within the context of colonization of the Philippines by three imperial powers: Spain, the United States, and Japan. Spain colonized the Philippines beginning in the sixteenth century and ruled the country for over 300 years; the United States colonized the Philippines as its "commonwealth" at

Filipino American veterans stand in front of a chained statue of General Douglas MacArthur in MacArthur Park, Los Angeles, California, June 27, 1997. The veterans were demonstrating in support of full benefits for Filipino American World War II veterans. (AP Photo/Seanna O'Sullivan)

the turn of the twentieth century to maintain a favorable location from which to trade with China; and the Japanese invaded in the 1940s as part of its imperialistic agenda in Asia.

Before the arrival of the Japanese, the United States had instituted the Philippine Independence Act (also known as the Tydings-McDuffie Act) in 1934 to aid the transition of the Philippines as an independent nation by 1946. Under this Act, the Philippines was able to establish its own constitution and government, but the United States still had influence over its foreign affairs and national defense, and were thus able to integrate the Philippine Army into the U.S. military at the start of World War II. The merger of the Philippine Army with the U.S. armed forces stationed in the Philippines resulted in the formation of the United States Armed Forces in the Far East (USAFFE).

The USAFFE was not the only capacity in which the Filipino veterans served. The other three primary

categories are as follows: (1) veterans of the Philippine Scouts, established in 1901 by the United States immediately after its colonization of the islands; (2) veterans of the anti-Japanese guerrilla units in the Philippines recognized by the United States; and (3) veterans of the New Philippine Scouts, recruited by the U.S. Army after October 1944 before the end of War. There is also a small number of Filipino veterans directly recruited into the U.S. Armed Forces. As Filipino veteran scholars note, the case of these Filipino veterans is contentious because of their induction into the U.S. military as "U.S. nationals" because the Philippines was still in its transitional phase into becoming recognized as an independent nation and was thus still considered a commonwealth during the war.

Satoshi Nakano distinguishes between the Filipino World War II veterans who enlisted in the Philippines and those who enlisted in the United States. He identifies the Filipino veterans who were first-generation

immigrants living in the United States and volunteered to become members of the Filipino Infantry Regiment there as “Filipino-Americans,” whether or not they naturalized as U.S. citizens after the war. He reserves the term “Filipino veterans” to those who were born in the Philippines and were living there upon enlistment into military service. It is these Filipino veterans who would experience discrimination after the war with the 1946 Rescission Act, signed by President Harry S. Truman, which revoked the recognition of the Filipino veterans’ services as active. Of the foreign U.S. military veterans in 66 countries who helped secure U.S. victory during World War II, only the Filipino veterans were denied immigration privileges, as well as recognition and benefits.

The campaign to support lawsuits seeking naturalization began in the mid-1960s, nearly 20 years after the immigration privilege was first denied to Filipino veterans. The 1965 Immigration Act, which abolished the national origins quota system and established a preference system for family members and skilled workers, facilitated the entry of many Filipinos. Filipinos were compatible with the legislation’s provisions because they had studied in U.S.-based educational institutions and work in the fields that were in high demand in the United States such as healthcare institutions and the physical sciences. When the Filipino veterans who arrived in the United States, mostly through family sponsorship, applied to acquire citizenship they were denied on the basis that their applications were 20 years late. This began the battle over naturalization in the courts were met with a mix of wins and losses for the Filipino veterans. The 1988 case *INS vs. Pangilinan*, a loss for the Filipino veterans, ultimately demonstrated that the issue must be placed in the hands of the U.S. Congress, and not with the U.S. courts.

The response of the U.S. Congress was the passage of the 1990 Immigration Act. The Filipino veterans naturalization bill was incorporated into the Act, with the help of Congress members such as Senator Daniel Inouye (D-Hawaii), Congressman Tom Campbell (R-California), and Congressman Benjamin Gilman (R-New York). The Act provided Filipino veterans the means to acquire American citizenship and facilitated their mass migration, most of

whom were already in their 70s at the time of their arrival to the United States. Congressman Campbell had imagined that many of the elderly veterans would choose to remain in the Philippines to be with their families, but by 1998, 28,000 Filipino veterans have become U.S. citizens. The U.S. Congress made some amendments to the provision in hopes of limiting the number of veterans that venture to the United States in their old age: the Congress made it possible for veterans to naturalize in the Philippines and also extended the deadline to February 2001, which resulted in 10,000 veterans’ applications for naturalization in the Philippines. Some of these veterans still moved to the United States to receive Supplemental Security Income (SSI) payments.

The Act, however, did not provide any benefits for these veterans from the U.S. Department of Veterans Affairs (DVA). For those in the United States, the veterans were limited to receiving SSI payments, rendering these elderly veterans poor and unable to petition for their family members to join them in the United States. The SSI payments of \$505 per month in 1998 to these veterans were in contrast to the payments along with benefits received by those recognized as American veterans: \$772 per month as well as old age pensions and free medical care at veterans hospitals throughout the United States and in other places in the world with significant U.S. military presence. Additionally, American veterans receive assistance with burial plots in a national veterans cemetery and funeral flags from the government. The Filipino veterans were not entitled to any of these benefits even though they were naturalized as American veterans after 1990.

After some Filipino veterans in the United States discovered that they did not have access to medical care from the DVA, they began to organize around the issue of benefits. They staged public demonstrations, such as that held on July 12, 1997, when the veterans and their allies, including Congressman Bob Filner (D-California), chained themselves to the fences in front of the White House Garden. The veterans rallied the Filipino American community to support their cause, which brought about the formation of advocacy organizations for the veterans and their families, such as the American Coalition for Filipino Veterans

(ACFV), National Alliance for Filipino Veterans Equity (NAFVE), and Justice for Filipino American Veterans (JFAV). The efforts of experienced Filipino American activists helped the veterans place even greater pressure among congressional leaders to attend to the benefits issue.

The Filipino Veterans Equity Movement sought to acquire equal benefits for the veterans regardless of nationality, whether one had U.S. citizenship or Philippine citizenship. The movement leaders believe that veterans, naturalized as U.S. citizens or not, should receive American veterans benefits. However, because the number of veterans is waning, they and their advocates were ready to make compromises, even though lump sum settlements were not the initial preferences. After more than 10 years of struggle over the benefits issue, President Barack Obama signed the American Recovery and Reinvestment Act on February 18, 2009, and it contained a provision called the “Filipino Veterans Equity Compensation Act.” The provision allotted one-time, lump sum payments in the amounts of \$15,000 for the veterans with U.S. citizenship and \$9,000 for those with Philippine citizenship. This legislation was made possible by the efforts of the various Filipino veterans advocacy groups and with the support of Filner, Inouye, Representative Xavier Becerra (D-California), Senator Daniel Akaka (D-Hawaii), and other members of the Congressional Asian Pacific American Caucus.

The estimated number of Filipino veteran survivors after the war is between 200,000 and 250,000. Today, after over 60 years since the 1946 Rescission Act, fewer than 18,000 live to experience full recognition from the United States as veterans and to receive some of the compensation for their service. Many veterans, now in their 80s and 90s, still struggle to claim their benefits because of the delays in Army’s National Personnel Records documentation verification processes. Some veterans living in the United States are still hoping to petition for their families to join them. The Military Families Act, sponsored by Filner and is still in progress at this time, contains a provision for the Filipino Veterans Family Reunification to exempt from immigration visa quotas the sons and daughters of Filipino World War II veterans naturalized in the 1990 Immigration Act.

Filipinos in Hawaii

Like the majority of Filipino migrant laborers who came to the West Coast of the United States during the early 1900s, many Filipinos also left their homes and families in the Philippines to come to Hawaii. In a search for cheap “unskilled” labor to bolster a booming sugar economy, Albert F. Judd arrived in the Philippines in 1906 to recruit plantation workers. A Honolulu lawyer and business agent for the Hawaiian Sugar Planters’ Association (HSPA), Judd successfully recruited 15 Filipino laborers who set foot in Hawaii to become the first of a long line of imported Filipino sugarcane and pineapple laborers now popularly referred to as *sakadas*.

Filipinos were the last of several immigrant groups brought to Hawaii as expendable labor. The pressure to increase recruitment numbers intensified after the 1907–1908 Gentlemen’s Agreement halted migration of Japanese laborers, who at the time made up 75 percent of Hawaii’s plantation workforce. At the same time, as efforts by Japanese laborers to organize and strike for equitable wages and working conditions began to gain serious traction, plantation owners

Filipino workers on a plantation in Hawaii take a break from spraying crops, ca. 1940. (Eliot Elisofon/Time Life Pictures/Getty Images)

looked to the Philippines as an alternative source of labor.

Many factors made the Philippines a desirable place for labor recruitment. For one, since the Philippines became a U.S. colony following the Spanish American War in 1898 and the Philippine-American War from 1899 to 1902, Filipinos were considered U.S. “nationals.” Occupying this position enabled Filipinos to enter the United States in unlimited numbers although remaining restricted from privileges that come with full citizenship, such as the right to vote, own land, or buy real estate. Furthermore, as a nation with a large population of agrarian people already

facing economic hardship, to plantation owners the Philippines represented a docile and plentiful solution to any worries about labor stability.

The year 1909 marked the beginning of HSPA’s more organized recruitment efforts in the Philippines, where they focused on recruiting physically strong, uneducated, poor single men from Visayas and Ilocos, two rural regions in the Philippines. Through the capitalistic, profit-driven logic of plantation owners, able-bodied, illiterate, and “unskilled” Filipinos were the perfect workers, willing to conform to the exploitative working conditions and unjust management practices already in place. During formal outreach presentations,

recruiters in the Philippines painted Hawaii as an exotic and beautiful “land of glorya” in their presentation full of opportunities to earn income and make a decent living. Eager to improve the lives of themselves and their families, Filipinos signed three-year labor contracts. Recruitment efforts continued until the 1930s when Filipinos became the largest migrant labor group, representing roughly 70 percent of the entire sugar and pineapple workforce.

The gender imbalance among Filipino/a men and women also shaped social relations during this period. In 1920, there were roughly seven Filipino men for every one Filipina women. Angeles Monrayo—one of the few Filipina women in Hawaii—wrote in her diaries about being pursued by older men and being offered marriage at 14 years old. She even earned up to \$9 a day during weekend get-togethers, where Filipino men would pay up to \$.10 a dance. Her experiences show how the everyday lives of *sakadas* were both racialized and gendered, offering an important lens to the male-centered perspectives common to this time period.

Sugar plantation workers represented a variety of nationalities: Hawaiian, Filipino, Puerto Rican, Chinese, Japanese, Portuguese, and Korean; however, from 1910 onward, the majority of workers were Portuguese, Japanese, and Filipino. To maintain control and foreclose any possibilities for interethnic solidarity, plantation owners employed a “divide-and-conquer” strategy to manage workers. A racial hierarchy in terms of status and power existed in descending order among Portuguese, Japanese, and Filipino workers. Top-tier management positions were entirely occupied by *haole* (white) workers, whereas Portuguese and Japanese workers could be found in supervisory, skilled, and semiskilled jobs. Filipinos were almost entirely relegated to the bottom of the hierarchy into “unskilled” jobs requiring the most labor-intensive and backbreaking work. This consisted of planting, cane cutting, hoeing, fertilizing, hauling, and fluming for 10 to 12 hours a day, 26 days a month, with very little to no opportunity for advancement.

Plantation owners also used a multitiered wage system to pit workers against each other. For example, Japanese cane cutters were paid \$0.99 a day, whereas Filipino cane cutters were paid only \$0.69 a day. Plantation managers used this system to carefully regulate

Filipino and Japanese workers, fostering interethnic rivalry and division although still ensuring that nothing interfered with their ability to fulfill their everyday work duties. The lack of a common language between Filipinos further reinforced these divisions.

Racial and economic inequities profoundly shaped the living conditions of all laborers, as higher-ranking positions came with access to better quality housing and recreational facilities. Housing was racially and economically stratified, with most plantations forcing workers to live in separate camps. On at least one plantation, for example, the housing pattern resembled a “pyramid,” with the big, luxurious home of the *haole* manager at the top of the hill; nice homes of the Portuguese, Spanish, and Japanese *lunas* (plantation foremen) below; then the wooden houses of the Japanese camp; and at the bottom, the most run-down houses of the Filipino camp. The sewage system was also part of this pyramid organization, with the ditches servicing the toilets starting from the top of the manager’s home moving downward all the way to the bottom of the Filipino’s living confines. In other words, the literal flow of human sewage reflected how a white racial hierarchy permeated the workers’ most intimate spaces.

Nonetheless, many Filipinos refused to succumb to their dismal working and living conditions, realizing that working together can bring about change. In 1919, Pablo Manlapit organized the Filipino Labor Union (FLU) to mobilize Filipino sugar plantation workers, discourage any further Filipino immigration to Hawaii, and inform the Philippines of Hawaii’s inequitable working conditions. Manlapit played a key role in organizing Filipino workers alongside Japanese labor managers and workers of the Federation of Japanese Labor (FJL) to form the Higher Wage Movement. In December 1920, the FLU and the FJL submitted their demands to the HSPA. Though they submitted their demands separately, they had many in common, such as higher minimum daily wages, better quality recreational and medical services, equal pay between men and women, eight-hour (as opposed to 10- or 12-hour) work days, and overtime pay. The HSPA refused to honor the demands, resulting in roughly 8,300 Filipino and Japanese workers organizing a five to six month strike. As 77 percent of the state’s workforce, the multiethnic strike represented a serious threat to

HSPA. Despite the strikers' eventual defeat in 1920, these actions sent a clear statement to the HSPA, repudiating initial stereotypes of Filipinos as simple-minded and subservient.

Dissent from *sakadas* continued in 1924 when Manlapit called for another strike resulting in 20 violent and fatal encounters between strikers and police officers. Remembered now as the Hanapepe Massacre, on September 9, 16 Filipino plantation workers were shot dead and 4 sheriffs died from stab wounds. Just six days after the massacre, Manlapit was found guilty in a conspiracy trial that sent him to Maui Prison for a sentence of one to two years.

The year 1946 marked the last wave of *sakadas* to enter Hawaii. Unlike their earlier predecessors from 1906 to 1934, this group included families with high school and sometimes even college level-education. The story of Filipinos in Hawaii is one of survival, resistance, and the power of personal and collective will, despite oppressive and seemingly insurmountable circumstances.
