Preface

We are honored and humbled to serve as the editors of *Asian Americans: An Encyclopedia of Social, Cultural, Economic, and Political History*. This three-volume encyclopedia is a collaborative effort of more than two hundred scholars from various fields and disciplines. The project is committed to making research results and records about Asian Americans readily available in one reference source, where the interested reader can locate the facts, events, trends, or policies concerning Asian Americans, Asian American history, and Asian American studies. Conscious efforts were made on a number of fronts to reflect some of the important developments in Asian American studies and to cover underrepresented groups. Most of the entries build upon existing literature, whereas new research was conducted to cover understudied areas and topics. We gave special attention to issues concerning race, class, and gender relations, as well as transpacific and transnational dimensions of Asian Americans.

Given the diversity and complexity of the ethnic group and the rapid pace of growth of Asian Americans in a fast-changing world, we recognize that the completion of such an undertaking is only one step to our ever-expanding knowledge of the Asian American experience. The field of Asian American studies is relatively young. We trust this book will create a foundation for the expansion of academic inquiries. By making these records more readily accessible, we hope to reach out to a wider audience and inspire more future research.

Beginning in 2000, the U.S. Census Bureau has identified Native Hawaiians and Pacific Islanders as an independent race category separate from Asian Americans. Native Hawaiians and Pacific Islanders have unique histories and experiences of their own, and their affiliations with the United States are quite different from those of Asian Americans. To lump Native Hawaiians and Pacific Islanders together with Asian Americans is to marginalize these groups of people. Nevertheless, because they had been grouped together with Asian Americans by government agencies and academic institutions, readers are more likely to look for information about them from Asian American reference books. For this reason we have made an effort to include some entries on Native Hawaiians and Pacific Islanders in this project.

This comprehensive reference project contains approximately 600 entries. Cross-referencing is provided in some entries by the use of *see also* lines. An archive of primary sources in Volume 3 is an important addition to the project, which will enable the student to advance beyond narrative summary of historical research. A detailed chronology in Volume 1 offers a quick glance of historical facts and events. We considered several options of organizing the project but eventually settled on the A–Z

arrangement for easy look-up. In addition to the alphabetical list of entries in the front matter, the index serves as a useful tool for name/subject searching.

Transliteration of Names

The transliteration of personal names in this book is sometimes inconsistent for a number of reasons. In most Asian societies, the family name precedes an individual's given name. Asians living in the United States often invert their family and given names following American and European practice, but some have chosen not to do so. For example, Rhee is the family name of Syngman Rhee, a prominent Korean American community leader and the first president of the Republic of Korea, and Yao is the family name for Yao Ming—the former Houston Rockets NBA star from China who never inverted his family and given name. Different transliteration systems and regional dialects also prevent consistency in translation and conversion. Chinese from Taiwan or pre-1949 China transliterate names according to the Wade-Giles system, whereas those from the People's Republic of China use the pinyin transliteration system, one that has been adopted by most academic institutions and educational programs in the United States and throughout the world.

Acknowledgments

It would not be possible to consolidate such a wealth of scholarship, information, and source materials into one reference book without the contributions of over 200 scholars. To build a diverse and inclusive list of entries, we reached out to accomplished scholars and graduate students in both humanities and social sciences, and we also solicited entries from a large number of writers and independent scholars in law, journalism, political activism, and other fields. Our editorial process is one of community building, through which we enjoyed the luxury of having a productive conversation with a large community of scholars. We sincerely hope this project will help expand such a conversation among scholars and students.

We want to thank everyone who has generously shared their scholarly expertise in their entries as well as their ideas and acts of encouragement. Several colleagues and scholars deserve special acknowledgment for their concrete suggestions in the planning stage of the project, and for their efforts in helping to recruit contributors. Sucheng Chan, who insisted that encyclopedia entries should be comprehensive, definitive, and reliable, not only contributed her own original essays, but also helped secure entries from a number of prominent scholars. Suggestions from Diane Fujino, Pei-te Lien, Ruthanne Lum McCunn, and Zuoyue Wang added invaluable guidance to several subject areas. We also want to thank the University of California, Santa Barbara, and the Dean's Office of the Bellarmine College of Liberal Arts at the Loyola Marymount University for providing a welcoming environment for research and writing. Contributions from our colleagues as well as excellent administrative support from Elizabeth Faulkner, Elizabeth Guerrero, and Arlene Phillips from these two universities are very much appreciated. We also want to thank Katie Do, Fang He, Yanjun Liu, Myung Jin Lee, Andrew Turner, and Tian Wu for their assistance.

Finally, we would like to thank the editors at ABC-Clio, especially James Sherman, Kim Kennedy-White, and John Wagner. PreMediaGlobal, especially project manager Magendrarvarman Nithyanandam, provided superb service in copy-editing, typesetting, proofreading, and indexing of the book. We would also like to thank Ellen Rasmussen for photographic research.

Introduction: Asian Americans in the Twenty-First Century

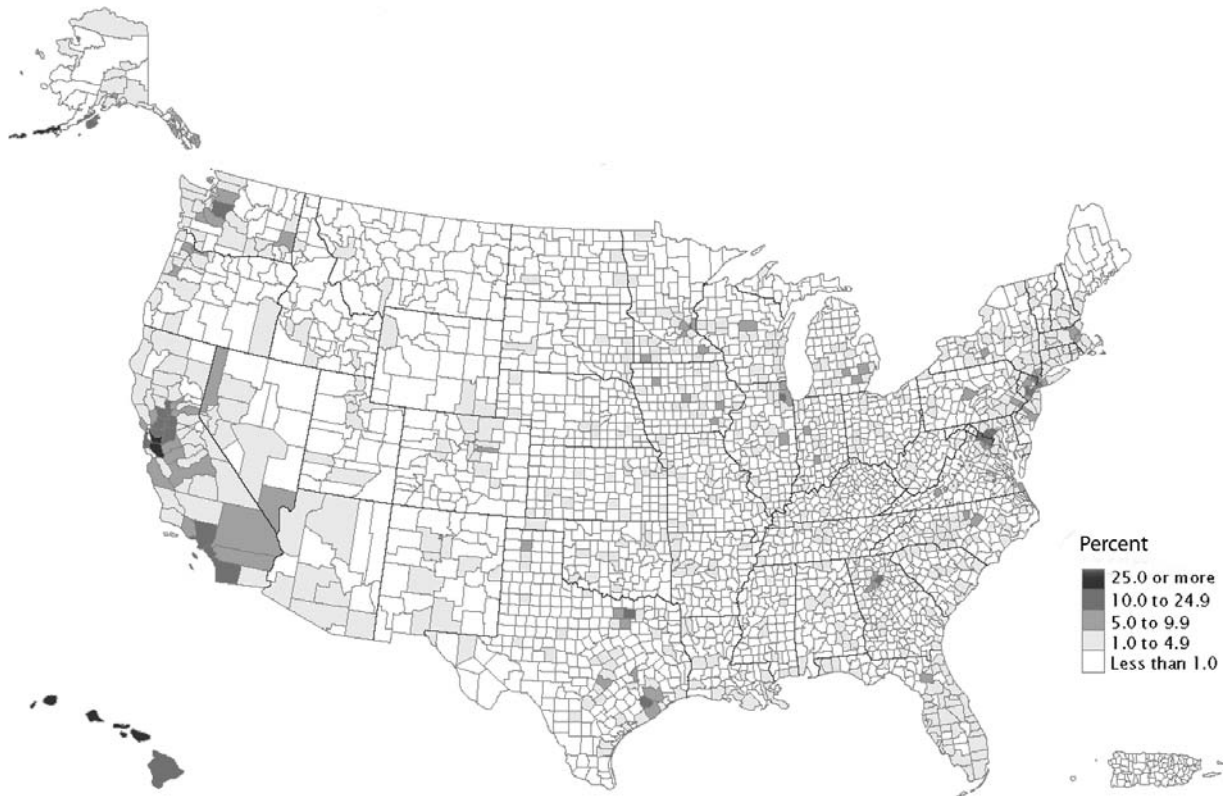

Beginning from the California Gold Rush, Asians have settled in the United States for more than 160 years. The two major groups that arrived first in the late nineteenth century originated from China and Japan. They were joined by immigrants from Korea, the Philippines, and India in the early decades of the twentieth century. Until the late 1960s, however, the Asian population in the United States was small. Between 1951 and 1960, immigrants from Asia accounted for only 6 percent of the total immigrants to the United States. The rate of Asian immigrants began to increase substantially beginning in the 1970s after the Immigration Act of 1965 ended the national origin quota system. Post-1965 Asian immigrants came in large numbers, and they came from many more Asian nations and regions. Most significant changes occurred in the late 1970s and 1980s, when large waves of Southeast Asian immigrants arrived as refugees after the Vietnam War.

Today's Asian America is built by immigrants and their descendants who originated from countries in South Asia, East Asia, and Southeast Asia. In the 1960s, a new generation of Asian Americans, inspired by the Civil Rights Movement, began to organize across ethnic lines in search of a unified front in their struggle for racial equality and social justice. Increasing visibility of Asian Americans as one of the more prominent minority groups in recent decades has had significant impact in political, economic, and social realms; it has also affected race and ethnic relations in the United States in profound and complicated ways.

Population and Distribution

Asian America has become the fastest-growing racial group in the United States, increasing from 3.8 million in 1980 to 6.9 million in 1990, to 10.2 million in 2000, and to 17.3 million in 2010 (including 2.6 million mixed-race individuals). It comprised 5.6 percent of the total U.S. population of 308.7 million. Between 2000 and 2010, the total U.S. population grew by 9.7 percent, from 281.4 million to 308.7 million, whereas the Asian American population increased more than four times faster, with a growth rate of 46 percent. It is worth noting that about 2.6 million people reported to be Asian in combination with other races, which represents 15 percent of the Asian American population. Mixed race Asian Americans is the fastest growing subgroup of the Asian American population.

A high percentage (46 percent) of the Asian American population resided in the West in 2010, constituting 11 percent of the region's total population. Meanwhile,

Asians as a percentage of county population: 2010.

22 percent of the population lived in the South (3 percent of the region's population), 20 percent in the Northeast (6 percent of the region's population), and 13 percent in the Midwest (3 percent of the region's total population). The percentage of the total Asian American population residing in the West had declined recently, however, from 49 percent to 46 percent within a decade. Meanwhile, the proportion of Asian population in the South increased from 19 percent to 22 percent.

Nearly three-fourths of the entire Asian American population resided in ten states in 2010, led by California, home to 5,556,592 Asian Americans. The other states with large populations of Asian Americans were New York, 1,579,494; Texas, 1,110,666; New Jersey, 725,356; Hawaii, 780,968; Illinois, 668,694; Washington, 604,251; Florida, 573,083; Virginia, 522,199; and Pennsylvania, 402,587. All these states have experienced substantial growth of their Asian American population in the past decade. Texas, Florida, and Virginia each enjoyed a growth rate of between 71 to 72 percent, and this pattern continues to show the increasing dispersal of Asian Americans out of their traditional population centers on the West Coast and in Hawaii. Following these states in Asian population growth are Pennsylvania (62 percent), Washington State (53 percent), and New Jersey (52 percent). In comparison, the growth rate is relatively low in Hawaii (11 percent), although the Asian population represents over 50 percent of the entire population. Asians represented 62 percent of Honolulu's population and 51 percent of the population in Kauai. In terms of actual population numbers,

California had the largest gain of Asian American population over the decade, from 4.2 million in 2000 to 5.6 million in 2010. Within California, Asian population constituted more than 25 percent of the total population in four counties, all within the San Francisco-San Jose metropolitan area. Metropolitan areas with the largest population of Asian Americans were Los Angeles (1,884,669), New York (1,878,261), San Francisco Bay Area (1,577,790), Chicago (532,801), Washington, D.C. (517,458) and Honolulu (477,503).

Chinese American, the oldest Asian ethnic group in the United States, was the largest group of Asian America in 2010 (3.8 million). The next two largest groups were Filipinos (3.4 million) and Asian Indians (3.2 million). Given the high rate of immigration in the past decade, these three groups constituted 60 percent of the entire Asian American population. At the same time, since its implementation in 1990, the Diversity Immigrant Visa Program that allows citizens of countries with low rates of immigration to secure permanent residency in the United States have added to the diversity of Asian Americans. In addition to this program, economic and political changes in Asia ranging from rapid development to civil wars have resulted in new immigrant groups from Bhutan to East Timor.

Immigrants constitute a significant majority of adult Asian Americans. According to an analysis of the 2010 census by the Pew Research Center, 59 percent of Asian Americans and 74 percent of its adult population were foreign-born, compared with 13 percent of the total U.S. population. However, there were significant demographic variations within different subgroups. For instance, 75 percent of Korean Americans were foreign born, but only 38 percent of the Japanese American population were immigrants. Among the foreign-born Asian Americans, 54 percent were women. The female-to-male ratio was greater than two-to-one among Japanese immigrants, but males outnumbered females among immigrants from India.

Chinese, next to Spanish, is the most widely spoken non-English language in the United States. In 2010, an estimated 2.8 million people aged five and older spoke Chinese at home. Other Asian languages spoken by a large number of Asian Americans at home are Tagalog, Vietnamese, and Korean. Over half of the foreign-born Asian American population (53 percent) self-reported that they could speak English well, higher than other foreign-born groups in the United States (45 percent).

Socioeconomic Status: Improvement and Gaps

Before World War II, most Asian Americans worked at unskilled and low-paying jobs, often in racially segregated ethnic communities or as migratory agriculture laborers. After World War II, especially since the Civil Rights Movement, Asian Americans have gained access to the mainstream job market; their socioeconomic status has also shown significant improvement. Such improvements have been reported in the Census in every decade since 1970, reinforcing a “model minority” image for Asian Americans.

Asian Americans, however, are not a monolithic population. In the 2010 Census, the estimated median household income for Asian Americans was \$66,286—higher than it was for the overall U.S. population (\$50,831), the non-Hispanic white population (\$56,178), the Hispanic population (\$38,818), and the black population (\$33,137). However, there were wide gaps among different Asian groups. Asian

Indians had a median household income of \$90,711, for example, but the Bangladeshi median household income was only \$48,471.¹ Median household wealth (net worth) for Asian Americans was \$83,500 in 2010, higher than the median household wealth for the overall U.S. population (\$68,529), and higher than it was for Hispanics (\$7,800) and blacks (\$5,730) by large margins. But median household wealth for Asian Americans was significantly lower than it was for non-Hispanic whites (\$112,000). These data on income and wealth should take into account the fact that higher percentages of Asian Americans are urban dwellers concentrated in California, Hawaii, and New York, regions known for their high costs of living. In addition, it is crucial to understand that immigration is a highly selective process. For instance, whereas the median household income of Asian Indians was much higher than that of Hispanics in 2010, the per capita Gross Domestic Product (GDP) of Mexico was over six times that of India (\$10,146 and \$1,514, respectively, in 2011).

Poverty and health insurance rates provide different angles to assess socioeconomic status of Asian Americans. In 2010, about 12.2 percent of Asian Americans were reported by the Census Bureau as living in poverty. In comparison, poverty rates for non-Hispanic whites, Hispanics, and blacks were 9.9 percent, 26.5 percent, and 27.4 percent, respectively. Although poverty rates for Filipino, Japanese, and Indian Americans were relatively low (6, 8, and 8 percent, respectively), 26 percent of Hmong Americans were living below the poverty line. It is worth noting that although 16.5 percent of Asian Americans did not have health insurance in 2009, that rate increased to 18.4 percent in 2010. Nearly a quarter of both Pakistani and Bangladeshi Americans (23 percent) and more than a fifth of Korean (22 percent) and Cambodian (21 percent) Americans were uninsured, whereas the percentage of people without health insurance among non-Hispanic whites, Hispanics, and blacks were 13.5 percent, 30.7 percent, and 20.8 percent, respectively.

Employment patterns for Asian Americans are also complex. Although 48 percent of Asian Americans aged 16 and older were employed in management and professional occupations in 2010, about 17 percent of them worked in service occupations, 22 percent in sales and office occupations, and 10 percent in production, transportation, and moving and shipping occupations. In comparison, only 40 percent of employed Americans held management and professional jobs. Occupational distribution among different Asian groups, however, was diverse. Although two-thirds of Asian Indians held jobs in management and professional occupations, only about a third of Vietnamese Americans did so. Hmong and Cambodian Americans were relatively underrepresented in management and professional positions (20 to 21 percent). Whether Asian Americans with comparable educational levels and professional qualifications are earning the same pay or achieving equal professional advancement opportunities remains to be a serious question. Business ownership rate among Asian Americans continued to grow. In 2007, 1.5 million businesses were owned by Asian Americans, reflecting a 40.4 percent increase from 2002. It must be noted that a large proportion was small businesses, as 44.7 Asian American-owned businesses were in repair and maintenance, personal and laundry services, professional and technical services, and retail trade.

One Asian American group that has usually been overlooked is undocumented immigrants. Undocumented Hispanic immigrants have received most public and

media attention, and they account for approximately three-quarters of the total undocumented population in the United States. The U.S. government officially estimates that about 10–11 percent of the U.S. undocumented immigrants are from Asia, constituting approximately 13–15 percent of the Asian immigrant population. Whether undocumented Asian immigrants have been undercounted remains an open question. If so, their population would have a significant impact on socioeconomic status of the overall Asian American population.

Educational Attainment: Achievement and Gaps

Recognizing both growth and diversity of Asian Americans are especially important in reading statistics of Asian Americans in education. A most remarkable characteristic of the Asian American population is its high level of educational attainment. About 49 percent of Asian Americans aged 25 and older had at least a bachelor's degree in 2010, which was much higher than that of the total U.S. population (28 percent). However, levels of educational attainment for different Asian American groups were uneven. About 70 percent Asian Indian Americans, for example, had at least a bachelor's degree, but only 14 percent of both Cambodian and Laotian Americans held a similar degree.²

The analysis by the Pew Research Center also showed high educational attainment among the new Asian immigrants: 61 percent of the immigrants between the ages of 25 and 64 have at least a bachelor's degree, almost twice as high as non-Asian immigrants. About 81 percent of new immigrants from India held a college degree, but only 17 percent of immigrants from Vietnam had attended college. Further behind immigrants from Vietnam are new immigrants from Cambodia and Laos who have much lower college education attainment.

A higher percentage of Asian Americans 25 and older had graduate or professional degrees than the total U.S. population (20 percent to 10 percent). The Pew Research Center revealed that Asian American students and students from Asia accounted for 25 percent of doctorate degrees granted at U.S. universities in 2010, with considerable numbers in engineering, science, mathematics, computer science, physical science, and life science. Asian or Asian American students also received 20 percent of PhDs granted by U.S. universities in social sciences. These high levels of educational attainment helped Asian Americans find professional jobs. U.S.-trained Asian students from China and India have also been the main beneficiaries of H-1B visa program, which revitalized in 1990, this visa program also provided temporary employment opportunities for foreign-trained Asians in “specialty occupations,” especially in engineering, sciences, and business-related professions. With employer sponsorship, a significant percentage of H-1B visa holders have successfully adjusted into immigrant status. Foreign students from India and China, as well as skilled workers, were the two top-ranked groups to benefit from the program, and they received three-fourths of all H-1B visas granted to Asia in 2011. Indians alone accounted for 56 percent of all the H-1B visas granted by the United States in 2011, whereas those from China received an additional 8 percent. Although considerable numbers of students from Korea, Philippines, Japan, and Taiwan also benefited from this temporary visa program, very few students from other Asian nations were able to do so.

Conclusion

Improved socioeconomic status and increased visibilities of Asian Americans in U.S. politics, educational institutions, and other areas of American life have impacted the development of American society in significant ways. In many parts of the United States, Asian Americans have changed the social landscape of cities and neighborhoods, integrating their customs, values, languages, foods, and institutions. The increasing presence of Asian Americans has enriched the American society, but it has also challenged and strained the nation. Unfortunately, accompanying the drastic demographic changes were also incidents of racial conflict and hate crime, as well as a resurfacing anti-immigrant sentiment. Increasing political participation of Asian Americans has shown impressive results, as more and more of their representatives have been either elected or appointed to political, government, and judiciary posts at local, state, and national levels. In turn, Asian Americans have been able to more effectively pursue political and policy issues that concern them the most: social justice, immigration, health care, public support for education, U.S. foreign relations, and international trade. Their devotion to education and their high enrollment in colleges and universities have had a great impact in educational reform, and many colleges and universities across the United States have established and expanded course offerings in Asian American studies, in Asian history, culture, and languages, and developed educational exchange programs with more and more Asian nations.

At the beginning of the twenty-first century, the Census Bureau projected that the Asian American population will grow to 37.6 million by the year 2050, comprising 9.3 of the total U.S. population. The rapid growth of Asian American population of the late twentieth century was the result of large waves of new immigrants from Asia, which became possible after the Immigration Act of 1965 and a host of legislations that addressed the immigration and refugee issues. There is no doubt that new immigrants will continue to come from Asia in significant numbers in the next few decades. In addition to immigration policies of the United States and changing U.S. diplomatic relations with Asian nations, globalization and the development of global economy will play an increasingly important role in determining sources of Asian immigration and directions of Asian migration. Scholars have already noticed that economic development and high living standard in Japan have made emigration less attractive in the past few decades. Korean immigration peaked in the 1970s and 1980s, but it declined in the late 1990s. Although the number of Chinese immigrants continued to grow, the rate of growth has slowed in the past decade. Developments in other parts of the world may also affect Asian migration, as more and more individuals are also paying attention to different opportunities in Europe, Australia, South and Central Americas, Africa, as well as in their neighboring Asian countries. From an Asian diaspora perspective, it would not be difficult to find that Asian emigration has become increasingly multidirectional, in which the United States is one destination (the most attractive one) among many others. Moreover, an increasingly large number of Asian Americans have resettled to Japan, Korea, China, and other Asian nations and many more are moving between Asia and the United States. All these developments will play important roles in shaping Asian immigration and the contours of twenty-first-century Asian America.

Xiaojian Zhao and Edward J. W. Park

Notes

1. Comparison between median household income of Asian Americans is based on tables released by Census Bureau in September 2010, see United States Census Bureau Newsroom, “Income, Poverty, and Health Insurance Coverage in the United States: 2011” (September 12, 2012); comparison between median household income between Asian Indian Americans and Bangladeshi Americans is based on a report from an earlier release from the Bureau, see United States Census Bureau News Release, “2010 Census Shows Asians are Fastest-Growing Race Group” (March 21, 2012).

2. The Pew Research Center’s analysis of Asian Americans, based on the 2010 U.S. Census, selects only six Asian American groups. Many smaller and less well-to-do groups are left out. See, Pew Research Center, *The Rise of Asian Americans*, July 12, 2012.

P

Page Law (1875)

The Page Law—enacted on March 3, 1875—restricted the entry of contract labor and prostitutes from China, Japan, or “any Oriental country” into the United States. The law predominantly targeted Chinese women as Congressman Horace F. Page, who authored the bill, attempted to use this measure to stop cheap Chinese laborers and Chinese prostitutes from coming to the United States. The assumption that all Chinese women were suspected of being prostitutes discouraged many from immigrating to the United States.

Under Section 1 of the law, the United States Counsel General located at the port of departure must determine if the immigration is free and voluntary before letting her to board the ship with a clearance certificate. The immigrant must not have entered into a contract for any services that are considered “lewd and immoral.” If any person in the United States forced a person from China, Japan, or any “Oriental country” to the United States for a “term of service,” then that person will be punished by a fine not exceeding \$2,000 and imprisonment not exceeding one year (Section 2). The Act emphasized that prostitution is forbidden, and such agreements are declared void. Furthermore, any person who contracted to bring these women into the United States for prostitution purposes shall be guilty of a felony. If convicted, the government will impose a fine not exceeding \$5,000 and imprisonment not to exceed 5 years (Section 3). Section 4 provided that anyone involved in the “coolly-trade” (indentured servitude) shall be guilty of a felony. Finally, Section 5 prohibited felons and

prostitutes from immigrating to the United States. Additionally, each ship that entered the United States would be subject to inspection.

Prostitution became a problem in the United States following the large number of Chinese men who came, by themselves, to the United States. Men who were married did not bring their wives to the United States, as it was a hostile environment for women. Those who were single had plans to go back to China to start a family. An inherent consequence of the bachelor’s society was the growing number of prostitutes in locales with a prominent number of Chinese men; therefore, the demand for prostitutes was high. So, young women were recruited from China to the United States, not knowing that they signed up to become prostitutes. After arriving in the United States, these women faced exploitation, torture, and the possibility of becoming a slave. Prostitutes were of various races and ethnicity; however, the Chinese prostitutes predominated because of the growing Chinese bachelor’s society in the United States. In response, the Page Law required Chinese women boarding ships in Hong Kong to document that they were of good moral character and were not coming to the United States to engage in prostitution.

The Page Law was the first attempt at restricting Chinese immigration before 1882. It restricted Chinese contract laborers and was very successful in its efforts to prevent female immigration from China. Between the 1870 to 1880 Census, the Chinese female population dropped from 6.4 percent to 4.6 percent.

Paik, Nam June (1932–2006)

Nam June Paik is widely recognized as the world's pioneering video artist. Known for his avant-garde vision for contemporary art, Paik's signature works incorporated multiple television screens with sculpture, music, and performance art. What began as a fascination for television as a medium of artistic expression in the 1960s spawned into the subject of exhibitions, installations, and institutions worldwide that continue Paik's legacy beyond his passing in 2006.

Born on June 20, 1932, in Seoul, Korea, Paik was the fifth son of a textile manufacturer and grew up studying piano and composition from an early age. In 1950, Paik's family fled from the Korean War, first to Hong Kong, then to Japan. Six years later, Paik graduated from the University of Tokyo with a degree in aesthetics. During his time at the university Paik studied art and music and completed a thesis on the compositions of Arnold Schönberg, an Austrian composer and painter whom he discovered as a high school student in Korea.

Despite cultivating an initial interest in the music and arts in Asia, Paik spent his formative years constructing a creative identity in Europe and the United States. Paik moved to Germany in 1956 to pursue graduate studies at the Universities of Munich and Cologne, and the Conservatory of Music in Freiburg. Here he became deeply involved with the "Fluxus" movement—an international network of artists, composers, and designers challenging established notions of what constituted art. During this time, Paik

experimented with performance art incorporating random happenings and objects including altered pianos and other musical instruments. He would later go on to include altered television sets after experimenting with the medium in the 1960s. In 1958 Paik met John Cage, an American, avant-garde composer, at a music conference and was powerfully inspired by his radical attitude toward art.

Paik began working with video art in the 1960s as he became impassioned by television's effect on mass culture and subsequently the notion of television as a mechanism for forging a world culture. Paik initially experimented with ways to manipulate video images on the screen by tampering with television signals and developing devices allowing him to explore different electronic techniques. Driven by his theoretical perspective redefining television as a medium for two-way communication, Paik continued exploring video art involving public participation in both processes of production and consumption. In 1964, Paik moved to New York City, where he struck up an artistic relationship with classical cellist Charlotte Moorman and began focusing on combining video with performance and sculptural art.

An experimental art scene embedded in the culturally diverse context of New York further cultivated Paik's creative identity. Here he made his "discovery" of the Sony Portapak (the first mass-produced, portable video tape recorder) giving Paik free range to shoot footage. Paik would develop his craft to use video recorders and synthesizers to layer, deconstruct, and reconstruct moving images. Video footage was then edited to include random fluctuations of sound, imagery, and movement at varying speeds, which often created a dreamlike sense of time and space. Paik's television sculptures would often use multiple television sets screening these moving images to construct anything from a cello to gargantuan installations towering at 60 feet.

Since the 1960s, Paik has staged numerous one-man exhibitions—the first being staged at the Galerie Parnass in Wuppertal, Germany. His installations and sculptural work has been the subject of exhibitions at renowned institutions across the United States including the Whitney Museum of American Art in New York, Museum of Contemporary Art in Chicago and

the San Francisco Museum of Modern Art. In addition, Paik has received a variety of awards for his contributions to the art world. These awards include grants and recognition from the Rockefeller Foundation, Guggenheim Museum, American Film Institute, and the state of New York. Paik has also been recognized internationally, with exhibitions and awards in numerous countries such as Korea, Japan, Switzerland, and France—to name a few.

Beyond producing his own art, Paik inspired new generations of artists by taking on a professorship from 1979 to 1996 at the Kunstakademi Düsseldorf, an arts academy in Germany. His stints at studios including WNET's TV Lab in New York introduced alternative content for media consumption. Paik will be remembered for his visionary artwork that encompasses an eclectic realm of philosophical and theoretical explorations, cultural observations, and scientific experiments. His unique perspective emanating from a life of migration and artistic expression gave way to a rich portfolio of art examining creative production in post-industrial, consumerist, and information-based society.

Pak, Gary (1952–)

Gary Pak is lauded as one of the most important Asian-Hawaiian writers of the twentieth century. He is the author of *The Watcher of Waipuna and Other Stories* (1992), *A Ricepaper Airplane* (1998), *Children of a Fireland* (2004), and *Language of the Geckos and Other Stories* (2005). He has written many creative

and critical essays, and coedited *Yobo: Korean American Writing in Hawaii* (2003). His short stories have appeared in numerous magazines, anthologies, and literary journals. Pak has also written and produced two plays, *Only the Wind's Home* (1991) and *Beyond the Falls* (2001). He also served as the producer, editor, and writer for the Olelo Community television series, *Plantation Children: 2nd-generation Koreans in Hawaii*.

After completing his BA in social psychology from Boston University, Pak went on to receive his MA and PhD in English from the University of Hawaii at Manoa, where he specialized in Native historiography of nineteenth-century Hawaiian literature. He has taught at Kapi'olani Community College, and is currently a professor of English and creative writing at the University of Hawaii at Manoa.

Pak was born in 1952 in Honolulu, Hawaii, as a third-generation Korean American to Francis Chin Chan Pak and Etta Chung Hee Pak, second-generation Korean Americans. He was raised in Kane'ohe, Oahu, where he still resides with his family. Like most of the children in his neighborhood, Pak did not distinguish the ethnic divisions between himself and other children; the working-class neighborhood in which he grew up, though multiethnic, had an integrated community. This strong sense of community and inter-ethnic interaction can be found in many of his works. Pak is one of the few Asian American writers who frequently write in multiple ethnic voices and perspectives.

Though he had always written poetry and stories as a hobby, it was not until the birth of his first son in 1980 that Pak began to write seriously. He believed that the stories of his family and community in Hawaii were important and needed to be told—and most of all, he wanted to share these stories with his son and others as a way of enriching cultural experience. Like many Hawaiian writers, Pak writes in local pidgin, which was his first language. His writing often shifts points of view as well as time and place, to demonstrate the collectivity of community and voice. Pak, who believes that all art and writing is inherently political, frequently integrates contemporary Hawaiian issues such as land rights into his writing.

After receiving his MA in creative writing in 1990, Pak began to work on a collection of short stories.

The Watcher of Waipuna and Other Stories was published in 1992 by Bamboo Ridge Press and won the 1993 National Book Award for Literature from the Association for Asian American Studies. The book, which features eight varied stories emphasizing the connections between land, community, and childhood, deals largely with the struggles arising from colonization and imperialism, as well as the way in which these difficulties define both Native and local Hawaiian relationships to the land and each other. Notably, within the book the Hawaiian and pidgin words are neither glossed nor italicized, a decision Pak made to demonstrate how pidgin and Hawaiian words are an inextricable part of the local Hawaiian culture and language.

Pak's first novel, *A Ricepaper Airplane*, was published in 1998. The novel is about a Korean immigrant plantation worker who, on his deathbed, tells his nephew the story of his life as a dreamer, revolutionary, and Hawaiian trade union activist. The symbol of the ricepaper airplane after which the book is named is a fantastic dream the uncle once had about building an airplane out of ricepaper that would return him to Korea. The novel was adapted for stage and was performed at Kuma Kahua Theatre in Hawaii in 2002. It also won the 1999 Ka Palapala Po'okela Award of Merit in Excellence in Writing Literature.

Pak's second novel, *Children of a Fireland*, was published in 2004. As in his first book, Pak continues to write in local pidgin, employing a stream-of-consciousness narrative technique. Although the novel continues Pak's investment in writing about community connections and relations, it takes a dramatic step toward the fantastic by incorporating supernatural elements, allowing the novel to function as a ghost story as well as a portrait of Hawaiian culture and society. It received honorable mention from the Association for Asian American Studies' 2004 Book Award in Prose and Poetry.

Language of the Geckos and Other Stories, published in 2005, is a collection of nine short stories that explore the cross-cultural exchanges and conflicts that occur between the local Asian American ethnic and Native Hawaiian communities of Hawaii, as well as the pasts that haunt them. The narrative voice shifts from character to character as they grapple with the difficulties created by their racial and economic

locations, complicating the common vision of Hawaii as a racial paradise.

Pak is currently working on a forthcoming creative nonfiction book, *Chon-go Ma-bi/High Sky and Horse Fattening: Essays on Contemporary Korean Culture*. Aside from his professional career as a writer and academic, Pak is also heavily involved in local community struggles. Pak's long relationship with community organizing and activism began in the 1970s, when he protested against the Vietnam War and Boston's 1974 school busing crisis. He also was involved in the urban development of agricultural lands and protested against the eviction of low-income residents of Honolulu's Chinatown. He continues to be an outspoken activist for Native Hawaiian land rights and the decolonization of Hawaii.

Pak is winner of the Fulbright Award and spent 2002 in Korea as a Fulbright visiting lecturer at Korea University. His current research interests include creative writing, literatures of Hawaii and the Pacific, Asian American literature, Korean American literature, ethnic American literature, modern Korean literature in translation, and jazz.

Pakistani Americans

Pakistani Americans are immigrants and their descendants originated from Pakistan. Located in South Asia, the present-day Pakistan is home to several ancient cultures. Early sizable immigration of Pakistani to the United States could be traced to the first two decades of the twentieth century, when the India subcontinent was a British colony. In 1947, India gained independence from the British Empire and the subcontinent was divided into two countries, India and Pakistan. From 1947 to 1971, Pakistan constituted both West Pakistan and East Pakistan, with Islam as the dominant religion of the nation. In 1971, East Pakistan proclaimed independence from Pakistan and formed the People's Republic of Bangladesh.

These historical developments defined and redefined Pakistani immigration to the United States. Before 1947, Pakistani immigration to the United States was part of India diaspora; between 1947 and 1971, it meant immigration of people from both West Pakistan and East Pakistan; after 1971, Pakistani immigration involved only those from the present-day Pakistan.

Early History: India Immigration to the United States

Among the early arrivals from South Asia were groups of Sikhs and smaller groups of Hindus and Muslims. The Sikhs were inhabitants of Punjab of British India, which includes the present-day Punjab province in Pakistan and Punjab state of India. Some of the early immigrants started to come to North America in the late nineteenth century and settled in Canada. When Canada issued restrictive measures to limit the number of entries from India in the first decade of the twentieth century, the number of immigrants to the United States increased significantly. Early immigrants from British India traveled from their homeland through Hong Kong, where they had built a Sikh temple to serve as a stopover for migrants on their way to the United States. These early arrivals settled in California, Oregon, and Washington in small groups and scattered locations. Large numbers of Sikhs, Muslims, and Hindus settled in Imperial and Coachella valleys in

Southern California. They worked as farm laborers and leased land. Some later bought land and orchards, growing cotton, rice, vegetables, and fruits. They also contributed to railroad construction in California and worked in gold mines. Some Indian Americans also served in World War I. The 1917 Immigration Act, however, barred new immigrants from India. Between 1899 and 1924, only 7,700 individuals from British India came to the United States, and some of them had returned to their homeland. During the period of Indian exclusion (1917–1946), it was extremely difficult for immigrants from South Asia to bring their families to the United States. Some Indian immigrants eventually established families in the United States through interracial marriages; many with Mexican immigrant women.

Because the India subcontinent was under British colonial rule until 1947, early immigrants from South Asia shared a common Indian national conciseness and identity. Many early immigrants were actively involved in the Indian independent movement regardless of their regional, linguistic, and religious distinctions. They built ethnic organizations based on religious, social, and political affiliations. The struggle for an independent India and against discrimination helped build a united front. Many early Indian immigrants had mixed feelings about the struggles between religious and regional groups after India independence that eventually led to the partition of Pakistan from India, and later the split of Pakistan and Bangladesh. Early immigrants from the present-day Pakistan considered themselves as Indian immigrants in general; few were related to the current Pakistani American community.

Pakistani Immigration to the United States

Islam is the national religion of Pakistan. In 1947, the population of Pakistan was 98 percent Muslims. Therefore, most of the immigrants from Pakistan were Muslims. The establishment of Pakistani statehood took place only a year after the passage of the Luce-Celler Bill, which repealed Indian exclusion laws and made Indian immigrants eligible for naturalization. The new law established an annual quota of 100 immigrants from India. After Pakistan became an independent nation, it received the same quota. Between

1947 and 1965, most Pakistani immigrants came to study in the universities. In 1965, there were about 2,500 Pakistanis residing in the United States. The number of Pakistani immigrants increased significantly after the enactment of 1965 Immigration Act. A few thousand immigrants arrived each year in the late 1960s. The new immigrants tended to be urban and educated; among them were students seeking advanced degrees and training in America as well as professionals and skilled workers from cities like Karachi and Lahore.

The Pakistani American community expanded at a fast pace after 1980. About 100,000 Pakistanis were in the United States by 1990, and the population has more than doubled each decade thereafter. Because the immigrant community was relatively small to begin with, prospect immigrants from Pakistan benefited from the diversity immigration visa program legislated in the Immigration and Nationality Act of 1990. New York, California, and Texas were the main attractions to the newcomers. The 2000 Census counted 209,273 Pakistani living in the United States. The number was 409,163 in 2010. Because of the significant expansion of the ethnic community, Pakistan was no longer included in the diversity immigration program by 2002.

Pakistani American Population

The New York-New Jersey metropolitan area, which consists of New York City, Long Island and nearby areas in New Jersey, Connecticut, Pennsylvania, has been the choice for most new Pakistani immigrants, including those with no marketable skills and undocumented immigrants. About 25 percent of the Pakistani American population lived in New York-New Jersey metropolitan area in 2010. In New York City, Pakistani Americans are the fifth-largest Asian American group. Metropolitan areas of Houston, Chicago, Washington D.C., Los Angeles, Dallas, Philadelphia, and San Francisco also have sizable population of Pakistani. Pakistani Americans are quite visible in the state of California, especially in Southern California regions such as Los Angeles, Orange County, Riverside, San Bernardino, Ventura, and San Diego. In Northern California, a large number of Pakistani

American engineers and other professionals and skilled workers work in Silicon Valley and San Francisco Bay Area. In the state of Texas, Austin, Dallas, and Houston also attracted a large number of well-educated Pakistani professionals, especially in fields such as medicine, information technology, engineering, and business.

A relatively young ethnic community, about 65 percent of the Pakistani American population was foreign-born in 2010, of which 57 percent gained citizenship. The median age of the ethnic group was 29 years old. Many of those who arrived after 1965 were initially on student visa before gaining permanent resident or citizen status. A considerable number of Pakistanis also gained entry as professionals or skilled workers. Immigrants who gained entries under the diversity visa program came from more diverse socioeconomic backgrounds. Once established, these early arrivals were able to sponsor their family members and relatives through family unification provisions of the 1965 Immigration Act.

About 86 percent of the Pakistani American population aged five years and older in 2010 spoke a language other than English at home. Although most of the bilingual population was fluent in English, a considerable proportion of them had only limited English proficiency (28%) or identified as a linguistically isolated household (12%) in 2010.

The range of educational attainment of the Pakistani population was broad in 2010, so was their socioeconomic status. Overall the population had a very high level of education, which had a great impact on the level of social mobility. About 87 percent of the Pakistani American population had at least a high school diploma, higher than that of the total Asian American population and total U.S. population (86 percent and 85 percent, respectively). And about 55 percent of the Pakistani Americans had at least a bachelor's degree, much higher than that of the Asian American population and the U.S. total population (49 percent and 28 percent, respectively). Those who came to attend graduate schools in the United States are among the most highly educated members of the community. In addition, many Pakistani-trained medical doctors and dentists are now practicing in the United States. The Association of Physicians of Pakistani Descent of North America (APPNA), an

organization to facilitate graduates from medical school in Pakistan to join residency programs in the United States has been active for more than 30 years, with 3,000 registered members in 2012. Pakistan is the fourth-highest source of foreign-trained medical doctors and dentists practicing in the United States. Pakistani Americans are also well represented in engineering, information technology, accounting and other professions. More than half of Pakistani Americans were homeowners (55%) by 2010 and many of them lived in affluent suburbs.

On the opposite end of the spectrum, however, is a large number of new immigrants who have little education, marketable skills, and personal savings. Immigrants gained entry through the diversity immigration visa program, as well as those came through family unification provision of the 1965 Immigration Act are from a broad range of socioeconomic background. This explains the relatively low per capita income for Pakistani Americans (\$24,663) in comparison to the income for the general Asian American population (\$28,342) and total U.S. population (\$27,100). Many new immigrants worked at low-paying unskilled jobs in large cities with no job security or health insurance. Self-employment rate is also high within the ethnic group, and taxi driving is a common occupation for Pakistani immigrants. In New York City, for example, 38 percent of the taxi drivers were South Asians in 2000 and Pakistani taxi drivers were more numerous than those from India or Bangladesh. Poverty rate for the ethnic group remained to be higher (15%) than that of the Asian American population in 2010, and about 8 percent of Pakistani Americans were unemployed compared to 6 percent of the Asian American population. Moreover, the rate of Pakistani Americans who did not have health insurance (23%) was the highest among Asian American groups, tied with Bangladeshi Americans.

Community

Early Pakistani immigrants (1947–1970s) played most important roles in the formation of Pakistani American community. They were the first to become eligible to sponsor family members, which formed the bases for community activities. Community became

increasingly important in the 1980s with the presence of large groups of professionals as well as new immigrants with limited resources. Community organizations provided network services for members to exchange ideas and information, and they assisted new immigrants to find work and established various mutual support systems. The APPDA, an organization to facilitate Pakistani trained medical doctors to practice in the United States, was formed as early as 1982. The Organization of Pakistani Entrepreneurs of North America (OPEN) started in 1998 in Boston to promote entrepreneurship and professional growth; it later opened chapters in Silicon Valley, New York, Chicago, Houston, Washington, D.C., and Atlanta. Pakistani small business owners provided jobs for the newcomers, and many self-employed individuals, such as taxi drivers, introduced their own trade to their fellow immigrants.

Religion is one of the most important aspects of South Asian American communities. Muslims constitute a dominant majority of Pakistani Americans, and mosques often serve as centers of the ethnic community. The majority of Pakistanis belong to the Sunni sect of Islam, and the next important sect is that of the Shi'ite. Unlike it is in South Asia, however, Pakistani American mosques are generally inclusive; it is relatively common for the immigrants to worship at mosques in the area of their residence alongside members of different sects. Major Islamic holidays are also celebrated in integrated mosques.

The importance of religion also led to the participation of Pakistani Americans in larger religious communities. Many Pakistani American students, for example, are members of the Muslim Students Association of America. Hindus, Christians, and Zoroastrians from Pakistan are relatively few, and their religious activities are not bounded by the Pakistani nation-state. Pakistani adherers of Sikhism, Buddhism, Taoism, and Jainism also join religious communities beyond the Pakistani borders.

Pakistani Americans have maintained a strong bond with their ancestral land. When big earthquakes struck Pakistan, the community raised large amounts of money to assist the victims in need. Although there have been tensions among ethnic groups in Pakistan, there is little ethnic division in the Pakistani American

community. A common interest in developments in Pakistan enabled members of the community to unite regardless of their diverse backgrounds.

Pakistani Americans share a common ground fighting against discrimination in the United States. The terrorist attack of September 11, 2001, shocked the world as well as the Pakistani American community. The media treatment of the event from a religious standpoint, however, has created an unprecedented fear, and Muslim groups have experienced the most emotional and psychological stress. After the incident, there was an overwhelming fear about detention and deportation among Pakistani Americans. A number of Pakistani Americans have been mistaken targets for hate crimes.

Compared to some other Asian American groups, Pakistani America is relatively small. But the community has grown at an amazing pace in the past three decades. And because of the increased number of citizens in the community, the Pakistani American population will probably grow at a faster pace in the next two decades, even without the assistance of the diversity immigration visa program. Expanded ethnic business networks will continue to help newcomers adjust to their life in America.

Pan-Asian American Coalitions

Coming Together: The Emergence of Pan-Asianism

Asians in the United States have always been active in civic engagement—from striking for higher wages and

better working conditions to challenging laws that denied them civil rights to supporting political movements to liberate their homelands. However, it was not until the late 1960s, with the advent of the Asian American movement, that a pan-Asian consciousness and constituency were first formed. The development of a pan-Asian consciousness and constituency reflected broader societal developments and demographic changes as well as the group's political agenda. Before World War II, pan-Asian unity was not feasible because the predominantly foreign-born Asian population did not share a common language. During the postwar years, owing to immigration restrictions and the growing dominance of the second and even third generations, U.S.-born Asians outnumbered immigrants. By 1960, approximately two-thirds of the Asian populations in California had been born in the United States. With English as the common language, persons from different Asian backgrounds were able to communicate with one another and in so doing to create a common identity associated with the United States. Also, the breakdown of economic and residential barriers during the postwar period provided the first opportunity for an unprecedented number of Asian Americans to come into intimate, sustained contact with the larger society—and with one another.

Although broader social struggles and internal demographic changes provided the impetus for the Asian American movement, it was the Asian Americans' politics—explicitly radical, confrontational, and pan-Asian—that shaped the movement's content. Through pan-Asian organizations, publications, and Asian American studies programs, Asian American activists forged a pan-Asian consciousness by highlighting their shared resistance to Western imperialism and to U.S. racism. By the mid-1970s, "Asian American" had become a familiar term. Although first coined by college activists, the pan-Asian concept began to be used extensively by professional and community spokespersons to lobby for the welfare, health, and business interests of Americans of Asian descent. Pan-Asian media such as *Amerasia Journal* and *Asian Week* newspaper have also been established. Moreover, some single ethnic organizations such as the Japanese American Citizens League and the Organization of Chinese Americans began to take up issues that affect all Asians. Commenting on

the “literally scores of pan-Asian organizations” in the mid-1970s, William Liu asserted that “the idea of pan-Asian cooperation [was] viable and ripe for development” (Liu 1976, 6).

The advent of state-sponsored affirmative action programs provided another material reason for Asian American subgroups to consolidate their efforts. Because the welfare state bureaucracy often treats all Asian Americans as a single administrative unit in distributing economic and political resources, it imposes a pan-Asian structure on persons and communities dependent on government support. As dealings with government bureaucracies increased, political and civic participation along a pan-Asian line became necessary, not only because numbers confer power but also because the pan-Asian category is the institutionally relevant category in the political and legal system. Although administratively treated as a homogeneous group, Asian Americans found it necessary—and even advantageous—to respond as a group.

Although political benefits certainly promote pan-Asian organization, it is anti-Asian violence that has consistently drawn the largest pan-Asian support. For many Asian Americans, anti-Asian violence concerns the entire group, cross-cutting class, cultural, and generational divisions. The 1982 killing of Vincent Chin, a Chinese American who was beaten to death by two white men who allegedly mistook him for Japanese, united Asian Americans across generational, ethnic, class, and political lines. For some Asian Americans, the Chin case marked their first participation in a pan-Asian effort. Their belief that all Asian Americans are potential victims propelled them to join together in self-defense and to monitor, report, and protest anti-Asian violence. In particular, Asian Americans pushed for the collection and reporting of statistics on anti-Asian crimes at the local, state, and federal levels. This pan-Asian activism has forced government officials, the media, and the public to be more attentive and responsive to anti-Asian crimes.

Changing Demographic and Economic Characteristics

The post-1965 immigration surge has transformed Asian America—and thus the feasibility of pan-Asian

civic engagement—in dramatic ways. The share of immigration in the United States from Asia as a proportion of total admission grew from 5 percent in the 1950s to 11 percent in the 1960s and to 33 percent in the 1970s, and it has remained at 35 percent since 1980. In sheer numbers, the Asian American population grew from 1.4 million in 1970 to 7.3 million in 1990, to 10.2 million in 2000, and to 14.7 million in 2010. By 2030, it is projected that the API population will be nearly 25 million and will comprise just over 7 percent of the total population. According to Zhou and Gatewood, immigration accounted for more than two-thirds of the spectacular population growth. The population growth for the new national origin groups (Indians, Koreans, Vietnamese, Cambodians, Laotians, and the Hmong) can be attributed almost entirely to immigration. The dramatic growth in the absolute numbers of Asian Americans has been accompanied by increasing ethnic, generational, and socioeconomic diversity within Asian America. As Michael Omi succinctly states, “The irony is that the term [‘Asian American’] came into vogue at precisely the historical moment when new Asian groups were entering the U.S. who would render the term problematic” (Omi 1993, 205).

By most accounts, the expanding diversity of Asian Americans has brought into question the very definition of Asian America—and along with it, the feasibility and appropriateness of pan-Asian identities and practices. In a major public policy report on the state of Asian America, editor Paul Ong suggests that the pan-Asian identity is “fragile,” citing as evidence the group’s ethnic and economic diversity as well as the growing population of bi- and multiracial Asian Americans who want to acknowledge their combined racial heritage. Similarly, in the introduction to their multidisciplinary reader on contemporary Asian America, editors Min Zhou and James Gatewood caution that “differences in class background among the immigrant generation and divergent modes of incorporation of that generation can deter the formation of panethnicity.” Comparing the experiences of affluent Chinese immigrants and Cambodian refugees, Aihwa Ong concludes that the category “Asian American” “must confront the contradictions and instabilities within the imposed solidarity, brought about by the

group's internal class, ethnic, and racial stratifications" (Ong 1976, 751). In Asian American studies, some scholars have critically pointed to the field's privileging of East Asians over South and Southeast Asians—a clear indictment of the suppression of diverse histories, epistemologies, and voices within the pan-Asian framework.

Organizing as Asian Americans

During the post-1965 period, the Asian American community's growing numbers, high growth rate, and local concentration promise to enhance the political influence of their pan-Asian civic engagement. On the other hand, the expanding diversity of Asian America presents multiple challenges to building a meaningful pan-Asian political coalition. A review of the research on Asian American civic engagement suggests that pan-Asian organizing is a *secondary but politically critical phenomenon* that is constantly shaped and reshaped by social, cultural, legal, and political forces in the environment. It is also important to note that ethnic-specific identities and panethnic identities are not mutually exclusive; both exist simultaneously and both serve as a resource for the development of Asian American political participation and empowerment.

Asian Americans, regardless of how they define themselves ethnically, organize panethnically when they determine that pan-Asian alliance is important for the protection and advancement of their civic and political agenda. In her analysis of 55 national pan-Asian organizations from 1970 to 1998, Dina Okamoto found that the number of pan-Asian organizations has increased since 1970 and throughout the 1980s, with the peak occurring in 1980. A smaller number of national pan-Asian organizations formed in the 1990s, which may be due to the increasing diversity of the Asian populations or to the increasing size and influence of the existing organizations. More than one-quarter of the pan-Asian organizations established between 1970 and 1998 were political organizations that shared the common goals of promoting civil, economic, and political rights for Asian Americans as well as for Asians in their respective countries of origin. In a recent study of 2004 registered Asian American organizations, Chi-kan Richard Hung found that pan-

Asian organizations are in the minority (14 percent), but that they tend to have more assets and revenue than ethnic-specific ones. Echoing Okamoto's findings, Hung reports that social service and public interest organizations are more likely to be pan-Asian than religious and cultural ones. Moreover, even though pan-Asian organizations are not growing as quickly as ethnic-specific ones, their steady growth, especially in the arena of political advocacy, is noteworthy. Lai reports that Asian American community-based organizations are among the "fastest growing public service sectors in California during the last three decades" (Lai 2007–2008, 7). In 1998, over 250 pan-Asian organizations existed in Los Angeles and Orange counties. In 2007, there were over 150 organizations that focused on political advocacy alone. Overall, these findings suggest that Asian Americans form pan-Asian organizations to respond to external political and funding opportunities and to fight unequal opportunities and discriminatory treatment.

Other studies confirm that racial discrimination galvanizes pan-Asian mobilization: as Asian Americans find themselves without opportunities and fair treatment, they establish supportive alliances from which to strategize about collective issues. As an example, Leland Saito reports that Japanese and Chinese Americans came together in Monterey Park, California, to protest xenophobic attempts to remove Asian languages on business signs. Linda Vo's study of the Asian Business Association in San Diego provides another example: Asian Americans joined the association because of shared professional interests and shared experiences of economic exclusion and employment discrimination. Along the same line, Okamoto found that underlying structural conditions, such as occupational segregation and spatial concentration, heighten panethnic consciousness, leading Asian Americans to found pan-Asian institutions.

Asian American activists have also organized to combat anti-Asian violence, which is defined not as random attacks against Asians but as a product of structural oppression and everyday encounters. The activities of the Asian Americans United, a panethnic community-based organization in Philadelphia, provide an example. When large numbers of Southeast Asian immigrants began experiencing problems in

Philadelphia with racist violence, educational inequality, and poor housing, a small group of educated East and South Asian American activist responded. Modeling themselves after the militant Yellow Seeds organization in the 1970s, group members insisted on anti-imperialist politics, a critique of racism as institutional and structural, and a focus on activist organizing and politics. They organized a successful rent strike and were part of a victorious legal campaign to institute bilingual education in the local schools. Most important, they sought to build relationships with working-class Southeast Asian communities by creating a youth leadership-training program organized around a pan-Asian identity and radical politics. This example suggests that class need not be a source of cleavage among Asian Americans, and that the concerns of working-class Asian Americans *can* unite people at the grassroots level with class-conscious members of the intellectual and professional strata. The pervasiveness of racism also catalyzes pan-Asian organizing among Asian American college students. Colleges constitute an important site for the emergence of pan-Asianism because they are among the public institutions that lump all Asians into a single group and also because young Asian Americans—whose ethnic and racial identities are shaped largely in dialogue with and in opposition to U.S. racist ideologies and practices—are much more receptive to Asian American panethnicity than their immigrant parents.

Asian Americans have also been active in the policymaking arena. As an immigrant-majority population, Asian Americans have united to contest anti-immigration policies in the late twentieth century. During the 1996 presidential election, the issue of immigration was at the center of attention for Asian Americans. In the congressional fight over the Illegal Immigration Reform and Immigrant Responsibility Act, Asian American (and Latino) groups led the proimmigrant family coalition, which formed to preserve yearly allocations of family-unification visas. They also lobbied to protect and enhance the rights of foreign workers. Regarding welfare reform, Asian Americans' responses splintered along ethnic and class lines. Many affluent Asian Americans regarded the harsh 1995 Welfare Reform Act, which bars disadvantaged immigrants from many government assistance

programs, as a "refugee" or "elderly" immigrant issue that did not concern them. However, many Asian Americans became interested in the 1995 Act once they realized that it included language that would have made legal immigrants ineligible for student loans and grants. In other words, it was the proposed cut to educational benefits rather than to welfare benefits that galvanized Asian Americans into action because many did not view educational assistance as welfare. The welfare reform case thus encapsulates both the possibilities and limits of pan-Asian advocacy efforts: on the one hand, Asian Americans will organize panethnically to protect their interests; on the other hand, what they perceive to be *their* interests can and do exclude the needs of the most marginalized Asian American groups.

Conclusion

The emergence of the pan-Asian entity in the late 1960s may be one of the most significant political developments in Asian American civic engagement. The existing evidence suggests that Asian American panethnic organizing is closely linked to civic engagement: whenever there is a need to combine their resources, Asian Americans act as a cohesive unit, presenting a united front against the dominant society. This united front does not mean that Asian Americans dismiss internal differences and divisions, but only that they look beyond them. The post-1965 immigration has fueled population growth and led to greater visibility for Asian Americans, but their changing demographics has also complicated pan-Asian organizing. In particular, Asian immigration to the United States is bifurcated along class lines: many Asian immigrants are uneducated, unskilled, and poor, whereas others are highly educated, skilled, and affluent. Moreover, Asian immigrants do not share a common history, sensibility, or political outlook with U.S.-born Asians. Such internal diversities have made it more difficult for Asian Americans to speak with a unified political voice. Thus Asian American panethnicity has been an efficacious but contested category, encompassing not only cultural differences but also social, political, and economic inequalities.

Parachute Kids

Parachute kids are defined as minors who are sent to live and study in the United States without their parents. They can be as young as eight years of age, but the majority are between the ages of 13 and 17 years old. They often live alone or with a relative, family friend, or unrelated paid caregiver. This phenomenon first emerged in the 1980s. Most parachute kids come from Taiwan, followed by South Korea, Hong Kong, and China, with smaller numbers of parachute kids from other countries such as Indonesia,

Malaysia, and the Philippines. Other terms have been used to describe these children. For example, in Taiwan, these minors are referred to as “little overseas students” or in Mandarin as “Hsiao Liu Hsue Sheng.” The term “air-dropped children” was coined because of the lack of involvement by parents with children attending school abroad. Other terms used by the media include “parental dumping,” or “child dumping,” and in academic literature, they are commonly described as “unaccompanied minors.”

Among the young overseas students coming from Asian countries, those from Taiwan were the most noticeable and gained much media attention both in Taiwan and in the United States. From 1983 to 1993, it was estimated that more than 24,000 elementary school children and over 13,000 secondary (seventh to twelfth grades) school students left Taiwan to attend school in the United States. The majority of these students remained in the United States until the completion of their undergraduate and graduate studies. It has been estimated that the number of unaccompanied minors have increased significantly since 1991 given the intensified political unrest in Taiwan and Hong Kong, and the 1990 revision of the Immigration Act of 1965 that increased the number of immigrants and the number of professional immigrants in particular. As for students from South Korea, a former employee of the Korean Ministry of Education estimated in 1997 that 7,000 unaccompanied minors were enrolled in elementary and secondary schools in Southern California alone.

Many unaccompanied minors arrived in the United States as foreign students on F-1 visas, and approximately one-third came with their entrepreneurial parents on B-2 visitors visas, which were later adjusted to F-1 status. Taiwanese unaccompanied minors are usually between the ages of 6 and 18. The majority of them come from upper-middle class, or upper-class socioeconomic families.

Motivations

Most research on the parents’ motivation for sending unaccompanied children to the United States found that the primary reason is for improved academic opportunities. This is consistent with traditional Asian beliefs in emphasizing education as the key for social

mobility, success, and distinction. In many Asian countries, a college education is a much desired but unlikely goal for most high school graduates because of the rigorous unified national entrance exams at both the high school and the college level. For example, in the early 1990s, there was approximately a 10 percent college admissions ratio in Hong Kong, and only 8 percent of the 18-year-old young adults enrolled in college in Taiwan, compared to 30 percent in Japan and 50 percent in the United States. In South Korea, children often spend 15 hours each day studying away from home to compete for university entrance. Other factors that motivated families to send their children to a new country may include the political uncertainty in Asian countries such as Taiwan, Hong Kong, and South Korea. Parents in Taiwan and South Korea may want their male children to avoid the compulsory military services and for their female children to take care of their younger brother in the United States. For some families, sending their children abroad may serve as a “status symbol” that was indicative of upper socioeconomic class standing. Lastly, some families may have had plans to immigrate but parents needed to stay in the country of origin for family or business reasons and decided to send the children alone to the United States first to adjust to the language and culture before the parents can join them.

Despite the many factors that motivated parents to send their children abroad, parents of the unaccompanied minors decided to stay in their countries of origin and not immigrate to the United States with their children for a variety of reasons. They may have strong business or professional ties in their countries that provide the financial stability that makes it possible for their children to be in the United States. They may need to stay and care for other family members. These parents often hope that their children would return to their countries of origin after being educated in the United States and gaining advantages in the global market for being able to speak English fluently compared to those who were educated in their countries of origin.

Living in the United States

The living situations of these unaccompanied minors range from having their own house to sharing living

spaces with other young adults, including (1) minors living by themselves or with siblings in a house or apartment, (2) minors living with legal guardians who are their relatives or parents' friends, (3) minors living with paid legal guardians/caregivers/landlords, or (4) minors living with other students in boarding schools or privately run boarding homes. These living situations give the unaccompanied minors greater freedom than if they had lived with their parents, and they are often less fearful of trying out typically discouraged behaviors such as smoking or drinking. They also have access to more spending money than the other adolescents. At the same time, these unaccompanied minors are often responsible for not only taking care of their own needs but also the needs of their younger sibling(s) as well. They have to learn how to navigate through different systems, such as schools, government agencies, and the bureaucracy of these systems without adult guidance. In the media and by some in the mainstream society, the unaccompanied minors are often perceived as maladjusted foreigners who attend public schools at the expense of American taxpayers with "bad" or "neglectful" parents. This perception intensified with the critically acclaimed crime-drama *Better Luck Tomorrow* (2003)—Hollywood feature film that included parachute kids as central characters.

A related immigration trend is the "astronaut family," where one parent (usually the mother) immigrates with the children to the host country and the other parent (usually the father) stays in the country of origin living and working to pursue economic advantages. The South Koreans call these families *kirogi*, or wild geese, the birds that mate for life and travel great distances to bring back food for their young. The absent parent who returns to the home country is termed the astronaut, which is a derivative of the Chinese word *taikongren*, meaning "a person who spends time in space." There is very little data on the number of astronaut families in the United States. It was estimated that 100,000 astronaut immigrants arrived in Canada between 1989 and 1993, and the occurrence of such families is common enough for the term to be generally used in the Chinese community and to be noted in mainstream American media. There are many shared motivations for the parents of an astronaut

family to decide to have one parent stay in the country of origin while the rest of the family live in the United States. In addition to the reasons described earlier for parents of parachute kids, the booming economy in East Asian countries made many first-generation immigrants feel that the United States no longer offers as many economic opportunities as in their home countries. Furthermore, for most of the middle class or upper-middle class new immigrants, the employment and financial opportunities in the United States are usually less lucrative than in one's home country. Especially for those who are established professionals (e.g., physicians, attorneys, architects) in their home countries, the process of becoming recognized or obtaining licensure is difficult, in addition to language barriers. Therefore, to sustain lifestyle and financial stability, astronaut families have the main income earner stay behind and continue generating a good income as the rest of the family settles in the new country.

Family units as a whole are often impacted by the separation in distance and different cultures. Communications between parachute kids and their parents became less frequent over time. Parents may feel guilty and worried for being apart from their children. For astronaut families, the physical separation between the parents also impacts the marital relationship and relationships with children.

The common feelings of loneliness, sadness, anger, alienation, and homesickness can become precursors for the development of serious psychological and behavioral problems in parachute kids, such as depression, anxiety, gambling, or substance abuse. The adjustment process inherent in the immigration experience can be a risk factor in and of itself. Research has found that those parachute kids who tend to adjust well are those who make use of available adult supervision and guidance, seek out a network of peers who are similar in background and values, and maintain a connection to their own ethnic identity and community.

Park, Richard (1976–)

In 1994, the Pittsburgh Penguins selected six-foot, 190-pound Richard Park in the second round (fiftieth overall) of the National Hockey League (NHL) Entry

Draft. Park played in only one regular season game and three playoff games in his debut season, but the following year he played in 56 games and achieved 10 points totaled. For the next five seasons, Park bounced around the minors, playing for NHL affiliates in Cleveland, Cincinnati, Philadelphia, and Utah, as well as for the NHL Anaheim Mighty Ducks and Philadelphia Flyers.

In 2001, Park joined the Minnesota Wild. In his three seasons there, he achieved career highs in games played (81), goals scored (14), assists earned (15), and points totaled (25). During the Wild's Cinderella run in the 2003 Stanley Cup Playoffs, Park scored the winning goal in overtime in game six of the Western Conference Quarterfinals.

During the 2004–2005 NHL lockout, Park played for Team USA in the 2004 World Championship, helping them capture the bronze. He then signed short-term contracts in Sweden and Switzerland with the Malmö Redhawks and the SCL Tigers, respectively. Park returned to the United States to play one season for the Vancouver Canucks and then two seasons with the New York Islanders. Park was named the recipient of the Bob Nystrom Award, presented annually to the Islander "who best exemplifies leadership, hustle and dedication." He also served as the Islanders' alternate captain in the 2008–2009 season. After returning to Switzerland to play for Genève-Servette HC for one season, Park returned to the team that drafted him, the Penguins, for the 2011–2012 season.

Throughout his career, Park has gained renown for his hustle and leadership. He is also considered one of the league's top penalty killers, a role that often requires him to skate when his team is short-handed (down one skater because of a penalty). He scored four short-handed goals during the 2007–2008 regular season, finishing among the league leaders in this category. After Park retires, he plans to raise awareness of hockey in Korea, which will host the 2018 Olympic Winter Games.

Park, Tongsun (1935–)

Tongsun Park is a South Korean businessman and lobbyist. He was implicated in the 1970s Koreagate scandal and the 2000s U.N. Oil-for-Food Program scandal. His highly publicized involvement in these two political scandals raised lingering suspicions among Americans about the practices of Asian ethnic lobbies and lobbyists.

Park was born on March 16, 1935, in Sunch'ŏn, Korea (now a part of North Korea). Shortly before the Korean War, he fled the North with his family to Seoul. After high school, he moved to the United States and eventually enrolled at Georgetown University's School of Foreign Service. After graduating in 1962, he returned to South Korea to oversee one of his family's companies, *Miryung Sansa* (an oil tanker firm).

Throughout the 1960s, Park returned to the United States frequently and established ties to various political figures in Washington, D.C. In 1966, he opened the George Town Club, where he hosted social events attended by politicians and officials. His elaborate dinner parties earned him a reputation as the "Asian Great Gatsby." During this time, he developed a particularly close relationship with Congressman Richard Hanna (D-CA), with whom he arranged large sales of California rice to the South Korean government.

Through Hanna, he established relationships with other members of Congress, particularly ones representing rice-growing districts.

Impressed with Park's growing influence in Washington, the South Korean government enlisted him to lobby on their behalf during the mid-1960s. By the start of 1970s, he had become a central component of South Korea's lobbying efforts. Using funds from the South Korean government, he gave various congressmen cash and gifts as well as made campaign contributions in exchange for favorable representation in Congress.

In the fall of 1976, Park became a central figure in the Koreagate scandal. The nature of his activities was uncovered during a congressional investigation of the Korean Central Intelligence Agency's activities in the United States. When allegations of illegal lobbying became widely known, a major political scandal ensued, which the press dubbed "Koreagate." Fearing prosecution, Park fled the country shortly after the scandal broke. A U.S. District Court, nevertheless, indicted him on over 30 criminal charges, including bribery, illegal campaign contributions, and racketeering. After being granted immunity by the U.S. government, he returned to testify about his lobbying activities in the spring of 1978. Although denying he was a South Korean agent, he admitted to giving nearly a million dollars to various congressmen and to conspiring with Congressman Otto Passman (D-LA) to buy influence in Congress. His testimony resulted in the conviction of two members of Congress (Hanna and Passman) and the reprimands of three others. In 1979, after the scandal subsided, the U.S. government dropped all legal charges against Park.

In 2005, Park was implicated in the U.N. Oil-for-Food Program scandal. According to investigators, he illegally lobbied on the behalf of the Iraqi government for the approval of the Oil-For-Food Program, which was designed to bypass U.N. economic sanctions against Iraq. He was convicted of conspiracy charges by the U.S. government in the summer of 2006 and was sentenced to five years in prison, \$15,000 in fine, and was forced to forfeit \$1.2 million in ill-gotten profit. Since his release from prison in 2008, Park returned to Korea and has remained active in various business ventures, including serving as chairman for

the Parkington Group, an international consulting business he established in 1976.

Park Yong-man (1881–1928)

Park Yong-man, born July 2, 1881, was a reformist and activist for Korean independence during Japan's annexation of Korea, and one of the early Korean immigrants to the United States. Park is known for mobilizing militantly and internationally, founding organizations advocating independence in Nebraska, Hawaii, and Colorado in the United States. He also traveled around Asia, at one point as an intelligence agent and spy, and aided the establishment of a nationalist army in Siberia.

Park was born into a family that practiced military traditions in Cheorwon, Gangwon province. After Park's parents passed away at an early age, his uncle Park Hee Byung assumed the role of father. Park Hee Byung moved from Cheorwon to Seoul to Japan with Park Yong-man, and it was in Japan that he was exposed to notions of reformation and national independence. Park returned to Korea in 1897 and proceeded to immerse himself in a network of reformists and participated in the reformist movement. Park's activities drew the attention of the Korean government, and Park was imprisoned when he met Syngman Rhee—a fellow reformist and the future first president

of the Republic of Korea. Although the relationship between the two became antagonistic over the years because of divergent political beliefs, when imprisoned together the two shared a fruitful relationship. Park contributed to Rhee's book *The Spirit of Independence* that became one of the most important tracts in Korean independence movement.

After being released from prison in 1903, Park migrated to the United States in 1904 to continue his education. He initially settled in Nebraska and studied at the Hastings Institute in Nebraska. Upon graduating, he moved to Denver, Colorado where he helped mobilize a network of nationalists with his uncle. Park returned to Nebraska to continue his studies in political and military science at the University of Nebraska in the aftermath of his uncle's assassination in 1907.

Coming from a family of military tradition and through continued studies in military science, Park became deeply involved in organizing Koreans in America through the establishment of military schools. He first established a military school in Kearney, Nebraska and later on created the Korean Military Corps (Daechosun Kookmin Kundan) in Hawaii. The Korean Military Corps was supported by the U.S. Hawaii Army Headquarters and trained approximately 300 men before ending its tenure in 1917. This was rooted in his own political point of view that the use of military force was necessary in the anticolonial struggle and in achieving national independence. In practice, this meant offering programs training young Korean Americans through military drills, teaching them military tactics as well as educating them in history, science, and language skills.

In 1919, Park translated the March First Declaration from Korean to English for publication in Hawaii. In May of the same year, he took on the role of intelligence agent for the American Expeditionary Forces in Siberia. Americans were allied with the Japanese military force in Siberia at the time, and consequently Park allegedly and inadvertently was assigned the task of spying on Koreans, which was paradoxical to his own nationalist agenda. However it was during this time that Park also covertly contributed to founding a nationalist army.

Park's job at the American Expeditionary Forces ended with the withdrawal of U.S. forces in Siberia

the following year. Subsequently, Park traveled to Shanghai where he became involved with the activities of the Korean Provisional Government—a government in exile. While in Shanghai, Park furthered his militant efforts by pooling funds to a leftist, militant group called Yiyuldan; he was also part of negotiations for a clandestine defense pact between the Soviets and the Provisional Government. His commitment to military confrontation with the Japanese was what drove a fork in his relationship with Syngman Rhee, who committed to a more diplomatic approach to the anticolonial struggle. In addition, despite his commitment to national independence, Park was also known to have continued working with those who supported the Japanese annexation of Korea.

Park continued his efforts in mobilizing militantly in Manchuria. In 1924, he returned to Korea with a group of military and business leaders from the Japanese puppet government of China and was eventually accused by the Korean Provisional Government of being a Japanese spy and collaborating with the enemy. Park was assassinated on October 17, 1928, in Beijing, China at the request of General Ji Chung Chun—head of military affairs in the Provisional Government. Consequently Park’s legacy remains a contradiction of reformist activity striving toward national independence through military confrontation with the Japanese and simultaneously being accused of engaging in activities advocating the efforts of Japanese oppression.

Parque, Jim Vo (1976–)

Jim Vo Parque is a former Major League Baseball (MLB) pitcher who possesses Vietnamese ancestry on his mother’s side. Born in Norwalk, California in 1976, Parque starred at UCLA before being drafted in the first round by the American League Chicago White Sox in 1997. He quickly moved up the Minor League ladder and started his first game for the White Sox in 1998. Until arm injuries plagued him, Parque had carved out a promising career as a left-handed starter. In 2000, he had a record of 13 wins and 6 losses. However, by 2002, he was on his way out of Major League Baseball. Parque subsequently confessed to using steroids when struggling with a damaged left arm.

Pei, I. M. (1917–)

Jeoh Ming (I. M.) Pei is a renowned Chinese American architect, founder and partner at Pei Cobb Freed & Partners, and leader in the Chinese American community. Pei is best known for his work on large-scale institutional and high-profile projects, such as the Grand Louvre in Paris, the East Building of the National Gallery of Art in Washington, the John Fitzgerald Kennedy Library in Boston, and the Bank of China Tower in Hong Kong. Pei’s signature style defies easy categorization and blends a modernist penchant for sleek geometric lines, glass, concrete and steel with a dedication to local context, history, and indigenous materials. In addition to his architectural accomplishments, Pei founded the Committee of

Chinese American architect I. M. Pei. (AP Photo)

100 in 1990, following the Tiananmen Square protests and massacre in 1989, with the goal of providing a voice for Chinese Americans in the United States, speeding their integration into all facets of American life, and to seek positive relations between the people of the United States and China.

Pei was born on April 26, 1917, to Tsuyee and Lien Kwun Pei in Canton, China, where Tsuyee worked at the Bank of China. Pei grew up in Shanghai and Suzhou (Jiangsu province) and left China for the United States to attend college in 1935. Though he had planned to return to China after completing his schooling, war and China's political turmoil made his move a permanent one.

Likewise, Pei's educational path was bumpy and almost discouraged him from his early goal of becoming an architect. Pei enrolled in the University of Pennsylvania to study architecture, but he quickly found that the campus climate and emphasis of the program on the mastery of the classical Parisian design

style as transplanted from the Ecole de Beaux-Arts were not a good fit. After only a few weeks at Penn, Pei transferred to the Massachusetts Institute of Technology (MIT) and began studying engineering. Dean William Emerson noticed his potential in sketches that he had made for his engineering courses and persuaded him to return to architecture. Pei received his Bachelors of Architecture at MIT in 1940.

Though Pei had intended to return home to China after graduation, the Japanese bombing of Shanghai and subsequent occupation of the city prevented his return. Instead, Pei took a position as a draftsman at Stone & Webster, an engineering firm in Boston. In June 20, 1942, Pei and Eileen Loo were married. In 1942, Pei attended the Harvard Graduate School of Design's architecture program, led by Bauhaus refugees Walter Gropius and Marcel Breuer. In contrast to MIT's emphasis on the Beaux-Arts style, Gropius and Breuer espoused a modernist style and philosophy that a change of the architectural environment toward streamlined, utopian geometry made possible with use of modern materials would lead to social change. Pei embraced the influences of his mentor Gropius, and other modern designers such as Le Corbusier, Mies van der Rohe, and Frank Lloyd Wright, but regarded some of social implications of the modernist vision with some skepticism.

Shortly after enrollment, Pei left Harvard to volunteer for the National Defense Research Committee in Princeton, a liaison between physicists conducting weapons research and the White House. Pei drew upon his expertise as an architect and understanding of how buildings were held together to understand how to destroy them and was called upon to devise plans on how to most effectively bomb Japanese cities.

Once the war ended, Pei returned to Harvard to earn a master of architecture degree in 1946. Following graduation, Pei began teaching at Harvard. In 1955, both Pei and Eileen became naturalized U.S. citizens.

In 1948, after heavy recruitment by New York real estate developer William Zeckendorf, Pei joined real estate development corporation Webb & Knapp as its director of architecture. Pei's early projects included a renovation of Webb & Knapp's offices and, in 1950, his first building—a corporate building for Gulf Oil

in Atlanta used local Georgia marble to keep costs down. At Webb & Knapp, Pei oversaw large-scale architectural and urban renewal and redevelopment projects that were met with varying levels of success. After several projects in Denver, Washington, D.C., and Montreal, Pei gained a reputation among Zeckendorf's vice presidents for designing very costly buildings. Providing oversight for many simultaneous projects, Pei was less free to develop his own design style and relied on his staff to work in-depth on individual projects. Though providing connections and experience with development and the business side, his association with Zeckendorf stigmatized Pei as a developer's architect, and critics considered his projects at Kips Bay Plaza in Manhattan and University Plaza at New York University to be bland modernist towers that ruptured the landscape of their immediate surroundings.

In 1955, Pei took steps toward separation from Webb & Knapp by establishing I. M. Pei & Associates. By 1960, I. M. Pei & Associates officially broke from Webb & Knapp. They would go on to become I. M. Pei and Partners, to recognize the contributions of Henry Cobb, Araldo Cossutta, and administrative talents of Eason Leonard in 1966, though the partners would not be officially recognized in name until the firm became Pei Cobb Freed & Partners in 1989. The firm's break from Webb & Knapp allowed Pei to more fully develop his own style by having a more direct role in individual projects.

Pei's design for the National Center for Atmospheric Research (NCAR) in Boulder, Colorado, was emblematic of his sensitivity towards integrating the natural elements of a site with the built environment and incorporation of indigenous building materials and styles. Located on a 6,200-foot high mesa in the Rocky Mountain foothills, together with client Dr. Walter Orr Roberts, Pei created a meandering approach that drew upon the natural drama of the site, and a sculptural rectilinear grouping of structures that nestled into the hillside that were inspired by Anasazi Indian adobe buildings.

After the NCAR project, Pei won two important commissions that would considerably raise his national profile and garner him both acclaim and criticism: the John Fitzgerald Kennedy Library and the

East Building of the National Gallery of Art in Washington, D.C. The first project was wrought with controversy, including organized opposition to an influx of tourists to the proposed site in Cambridge, Massachusetts, in general, and to Pei's design in particular. After modifications to the design and the passage of several years, the Kennedy Library Committee settled on a site at Columbia Point, with views of downtown Boston and the harbor. The Kennedy Library featured a dramatic space-frame atrium, framed by intersecting and processional geometric forms. Though met with only a muted critical response when it opened in 1979, the bond that Pei forged with Jacqueline Kennedy during the project granted him access to important connections and international attention. Indeed, throughout his career, Pei's friendliness, confidence, elegant demeanor, powers of persuasion, and intuitive ability to negotiate power dynamics and befriend clients were important professional assets that complemented his technical and design skills.

In 1978, the East Building of the National Gallery of Art in Washington, D.C., another of Pei's major long-term projects, opened. With the East Building, a collaboration with sponsor Paul Mellon and assistant director of the National Gallery, J. Carter Brown, Pei intended to showcase large-scale modern art as well as smaller works and to accommodate large crowds. Pei embraced the trapezoidal shape of the site on the Mall by bisecting the site into two triangular buildings, one for the gallery and another for a study center, and repeated the triangular motif throughout. Irregularly shaped panes of glass in triangular scaffolding added light and movement to the main space, which is adorned with a large abstract sculpture by Alexander Calder.

The building received mixed reviews. Some praised it as an appropriate showcase for contemporary art at a grand scale, and others deemed it too targeted toward the popular consumption of art and lacking in depth. There were still others who criticized the East Building for not being innovative enough and lacking a clear vision, an evaluation that mirrors critiques of Pei's overall body of work. Indeed, Pei's oeuvre shows a conservative refinement and melding of existing styles rather than that of a trailblazer or stylistic purist.

Changing international relations between the United States and China also began to impact Pei's

professional and personal trajectories. In 1974, Pei was able to return to China for the first time as part of a professional delegation with the American Institute of Architects. In 1978, he was invited to China to serve as an advisor on issues of development and city planning, during which, despite his image as a modernist, Pei wanted to preserve China's cultural and architectural heritage. He returned to China again later in the year, and declined an invitation to design several large modern hotels, including a tower near the Forbidden City. Pei expressed his opinion against any project to mar the skyline near the Forbidden City, and his opinions were well taken by the Chinese government. Pei eventually agreed to develop a luxury hotel at Fragrant Hill in northwestern section of Beijing. The Fragrant Hill Hotel was to be a low rise with 325 rooms that mediated on themes that Pei had presented in his master's thesis and with which he would continue to grapple when building the Suzhou Museum in 2006: how to establish a new vernacular in architecture that incorporated historical precedent and style with the demands of contemporary circumstances. Though temples and palaces were no longer relevant economically or ideologically, neither did Pei find the socialist style of Russian architecture desirable. His understated design for the Fragrant Hills Hotel drew upon the style of traditional Chinese family homes, the framed views in the style of the Shizilin Garden in Suzhou, and incorporated rock formations and existing trees as counterpoints to the built landscape. The design, completed in 1982, surprised many in China, who had anticipated something more elaborate, sleek, and modern from Pei. He found the project a challenge and working with the local Chinese construction crew highlighted that after years of living in the United States, he might not be as thoroughly Chinese as he had once thought.

His next project, a 72-story tower for the Bank of China in Hong Kong brought Pei back to the bank branch that had been founded by his father, who was later stripped of his job when banks were nationalized in the Communist revolution. For the skyscraper, Pei developed a diamond-shaped scaffolding that allowed the tower to be structurally sound and taller than its competitor, Norman Foster's Hongkong Bank. In early 1990, Pei began meeting with other prominent Chinese

Americans, including General Motors vice president Shirley Young, investment banker Oscar Tang, and physicist T. D. Lee. Together, they decided to collectively form a group called the Committee of 100, comprised of elite Chinese Americans from various professions. The group's goals would include promoting the dignity and rights of Chinese Americans and Chinese in general, serving as cultural intermediaries, and advising the U.S. government on policy matters relating to China. Government officials such as the Chinese and American ambassadors supported the Committee of 100, but Asian American grassroots activists criticized it as elitist and lacking expertise in substantive issues. The Committee of 100 also works to promote Chinese American interests and support Chinese American candidates from both major political parties.

Pei also celebrated the completion of an office building for the Creative Artists Agency in Hollywood, the Morton H. Meyerson Symphony Center in Dallas, a science building at the Choate Rosemary School in Wallingford, Connecticut, and the project for which he is perhaps best known—the Grande Louvre in Paris. Pei was tasked with incorporating the Richelieu wing into the museum and reorganizing the rooms for gallery and storage space. To clearly demarcate an entrance, Pei devised a translucent pyramid, a shape that had appeared in some of his earlier designs. He intended the pyramid to both visually dissolve into the courtyard space and integrate with the geometric lines of the surrounding buildings. The appropriateness of the pyramid became a source of debate within France, and nationalists questioned the ability of an American with Chinese ancestry to restore a symbol of French national culture and Western art and civilization. Eventually, Pei's work on the Grand Louvre was met with widespread acclaim.

In 1989, Pei stepped down from his role as an active partner in his firm. This allowed him to take on projects of special interest, such as a bell tower and the Miho Museum of Art in Shiga, Japan, for the religious group Shinji Shumeikai, the Four Seasons Hotel in midtown Manhattan, the Rock and Roll Hall of Fame in Cleveland, the Schauhaus wing of the German Historical Museum in Berlin, and the Musée d'Art Moderne Grand-Duc Jean in Luxembourg.

Over his career, Pei has been awarded several honorary doctorates and has won almost every major professional accolade possible. When he was named the 1983 Pritzker Architecture Prize Laureate, he used the prize money to set up a scholarship fund for Chinese students to study architecture in the United States and return to China to practice, thus allowing others to fulfill the goal that he had hoped to achieve as a young man.

People v. Hall (1854)

In August 1853, George W. Hall, a white man, was indicted for the murder of Ling Sing, a Chinese miner, in Nevada County, California. During Hall's trial, three Chinese witnesses and one white witness testified on behalf of the prosecution. In October 1853, the jury found Hall guilty of murder and sentenced him to death by hanging. Hall appealed the verdict to the California Supreme Court. Hall argued that Chinese witnesses should be prohibited from testifying in court under Section 14 of the California Criminal Proceedings Act. Hall raised this issue for the first time on appeal, which would normally be barred from review. However, the court entertained this issue and wrote an opinion—racist by modern standards—that echoed the sentiments that many white miners held toward the Chinese in the 1850s.

The animosity toward the Chinese miners corresponded to the influx of Chinese in California mines following the Gold Rush of 1848. The Chinese population in California in 1850 was 660; 10 years later, that number had risen dramatically to 34,933. Feeling

threatened by the competition, white miners subjected their Chinese counterparts to physical abuse, excluded them from some mining districts, drove them off of good claims, and asked them to pay higher prices for worked-out claims. They even tried to exclude the Chinese through discriminatory laws, such as the Foreign Miners' Tax of 1852.

The Foreign Miners' Tax of 1852, in practice, was targeted at the Chinese miners; the tax collectors collected these taxes almost entirely from the Chinese. Some of the tax collectors abused their power by collecting taxes from the Chinese on multiple occasions. Other tax collectors murdered Chinese miners. For the Chinese miners who witnessed these incidents of abuse, the admissibility of their testimonies rested upon the outcome of the California Supreme Court's decision in *People v. Hall*. This decision would either combat the aforementioned violence or escalate it.

The California Supreme Court in *People v. Hall* began its review with an examination of Section 14 of the California Criminal Proceedings Act. The Act stated that "No Black, or Mulatto person or Indian, shall be allowed to give evidence in favor of, or against a white man." The Supreme Court, for the first time, had to review whether this Act would be applicable to the Chinese. Following its analysis, the California Supreme Court held that the Chinese were "Indians" and therefore could not testify in court against a white man. This holding meant that Hall's conviction had to be overturned.

Chief Justice Hugh C. Murray, writing for the majority, provided three reasons for overturning the jury verdict. First, the court examined the legislative intent of the words, "Black, Indian, and white" as used in section 394 of the California Civil Act and Section 14 of the California Criminal Proceedings Act. Section 394 used the term "Negro" and Section 14 used the term "Black." The court interpreted the term "Black" to be more broad and comprehensive. Therefore, "Black" is a generic word, which signifies that "white" and "Indian" are generic term as used in section 14 of the California Criminal Proceedings Act.

Before the court addressed whether "Indian" was a generic term, the court examined what the term "Indian" means. The court believed the legislative intent was to include "those portions of Asia which

include India proper, the Eastern Archipelago, and the countries washed by the Chinese waters, as far as then know, were denominated the Indies. . . .” This explanation, coupled with the court’s discussion on Columbus’s voyage to the New World, means the term “Indian” refers to “American Indians and the Mongolian, or Asiatic,” because they “were regarded as the same type of the human species.”

Second, the court resorted to ethnology and early geography to further support its explanation of what it believed was the legislative intent behind the term “Indian.” The court referenced the movement of the early Asian tribes into the Americas and the similar physical features between the peoples of Asia and the Native Americans. The court acknowledged that “the name of Indian, from the time of Columbus to the present day, has been used to designate, not alone the North American Indian, but the whole of the Mongolian race, and that the name, though first applied probably through mistake, was afterwards continued as appropriate on account of the supposed common origin.” The court believed this was the, “common opinion in the early history of American legislation . . . and . . . all legislation upon the subject must have borne relation to that opinion.” As a result, the term “Indian” is generic and comprises the Chinese race. Such an interpretation would exclude the Chinese from testifying in court against a white man.

The court emphasized that the only person who could testify against a white person was a white person. In the words of the court, “the Legislature . . . adopted the most comprehensive terms to embrace every known class or shade of color, as the apparent design was to protect the White person from the influence of all testimony other than that of persons of the same caste. The use of these terms must, by every sound rule of construction, exclude everyone one who is not of white blood.”

Finally, the court relied upon public policy to verify their construction of the term “Indian.” If the court admitted non-whites to testify, it would “admit them to all the equal rights of citizenship, and we might soon see them at the polls, in the jury box, upon the bench, and in our legislative halls . . . it is an actual and present danger.” As the court stated, it could not imagine extending equal rights to non-whites. Justice

Alexander Wells dissented; however, no dissenting opinion was written.

This decision sanctioned white men to commit acts of violence against the Chinese; it made the Chinese more susceptible to abuse and riots. In response to the *Hall* decision, the Chinese hired lobbyists to advocate on their behalf in Sacramento. But change was slow. The impact of the *Hall* decision lasted for 18 years, from 1854 to 1872. In 1872, in an effort to conform state law to the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution, statutes and case law could no longer prohibit the admission of evidence in court provided by the Chinese or any race. No California statute or case law ever directly overruled the decision in *People v. Hall*.

Phan, Aimee (1977–)

Author Aimee Phan was born in the city of Orange, California, the first of two children. Her parents were part of the small population of students and professionals who came to the United States from Vietnam before 1975; her mother and father subsequently became a social worker and medical interpreter, respectively. Phan’s mother, having returned to Vietnam for a visit immediately before April 1975, was asked to accompany an orphanage upon her departure, and was therefore one of the social workers on a flight of Operation Babylift. Phan discovered this in the end stages of writing her first book.

Phan attended public schools in Orange and later in Irvine, although these were still largely white communities. At UCLA for her undergraduate studies, she started as a pre-med student, but took courses in literature and writing concurrently, knowing that the latter were her true interests. For a time Phan considered pursuing a career in journalism, as a supposedly more practical or financially stable alternative to

creative writing and began writing for the *Daily Bruin* campus newspaper. She interned at the *New York Times* Dallas bureau and at *USA Today* after her sophomore and junior years of college, respectively. Phan graduated with an English major and an Asian American studies minor in 2000.

Accepted to the Iowa Writers' Workshop, where she won a Maytag Fellowship, Phan received her MFA in 2002. She has taught creative writing in at the University of Nevada in Las Vegas (2003–2005), in the English department at Washington State University (2005–2007), and is currently assistant professor in the graduate writing program and chair of Writing and Literature at California College of the Arts (2007–present).

Phan's first book, *We Should Never Meet* (Picador 2005), a collection of lightly intersecting, fictional stories set in both South Vietnam and Orange County, centers on the lives of Vietnamese orphans during the war and then decades later. It shifts perspective between those of four adoptees in the 1990s, and of those who *may have* given birth to or tended to them as babies at various orphanages—although resisting the reader's urge to make those connections definitive. Informed by a strong feminist as well as ethnic studies analysis, the book creates a structure of expectation and disappointment, echoing the emotional guesswork of adoptees looking for their histories. The narratives remain circumspectly unresolved: What is lost is not recovered, whether histories or relationships; connections broken are not remade. But Phan's Vietnamese Americans move forward, with whatever new possibilities are afforded by forgiveness.

A carefully constructed and highly teachable book, *We Should Never Meet*, won the 2004 Association of Asian American Studies Book Award, was named a Notable Book by the Kiriyama Prize in fiction, and was a finalist for the 2005 Asian American Literary Awards.

The *San Francisco Chronicle* reviews the book as follows:

The characters in each story are connected by their shared experiences in the Vietnam War: a mother who has to give up her mixed-race child for adoption; a U.S. doctor who comes over to volunteer at an orphanage; an adoptee who's in cultural limbo;

a Vietnamese social worker who risks her future to keep her family together; a woman struggling to forge a new identity for herself in the United States as she tries not to forget her past. The characters in one story have cameos in another, Phan weaves them together seamlessly.

To her credit, Phan does not try to water down the complicated issues involved, does she try to invoke a false sympathy for or demonize any of her characters. There are no clear-cut solutions or happy endings in the portraits she creates, which is a testament to her vision and skill as a writer. It would have been easier to take sides, to simplify feelings and strive for clear answers, but she sets herself the more difficult task of being real. The author doesn't let anyone get away clean; everyone has scars here.

Publishers Weekly lauded *We Should Never Meet* as “a wrenching, poignant collection,” whereas the *Los Angeles Times* praised the stories for their “acuity and sensitivity, and a wisdom that is remarkable for such a young writer.” In *Ends of Empire*, Jodi Kim calls the book a “significant and much-needed analytic in the discussions of transnational adoption,” for its resistance of “the sentimentalist tropes saturating dominant representations of both refugees and transnational adoptees,” and for declining the presumed teleologies of American immigration (218–219).

Phan's second book, a novel titled *The Re-education of Cherry Truong*, follows a Vietnamese refugee's extended family over several generations as they scatter and resettle in France and the United States. The title character is a woman on the brink of medical school, who takes a trip to Vietnam to retrieve her banished brother. It is due out in March 2012 from St. Martin's Press.

Phan has also continued to freelance in journalism. Her journalistic work includes topics of general interest, but she specializes in the Vietnamese diaspora and Asian American issues. Her nonfiction essays, editorials, and reporting have appeared in the *New York Times*, *USA Today*, and the *Ngu'òì Viêt 2*.

Pierce, Joseph (1842–1916)

Brought from Canton, China to Kensington, Connecticut, as a boy by Captain Amos Peck III, Joseph Pierce was said to have been sold by either his father or brother, dubbed Joe by the ship’s crew, and given the surname of President Franklin Pierce. Farming at the outbreak of the Civil War, Pierce mustered into Company F, Fourteenth Connecticut Volunteer Infantry on August 23, 1862. In the numerous regimental histories published after the war, he is the only Chinese soldier whose photograph was included.

The Fourteenth Connecticut’s first battle, Antietam, cost the regiment dearly in dead, wounded, and missing, and according to Pierce, he hurt his back when he fell over a fence. He distinguished himself in Gettysburg, where he was among the first to go out on the skirmish line on July 2, 1863, and volunteered for the critical

attack against the Bliss farm on July 3, the day of Pickett’s charge. Halfway between the opposing armies, the masonry of the farmhouse and barn created a miniature fortress that both armies coveted and that Confederate sharpshooters controlled the morning of July 3, allowing them to fire at Union positions on Cemetery Ridge. Under savage fire, the Fourteenth Connecticut brought the Bliss farm back under Union control, contributing to the Confederate defeat later in the afternoon.

Promoted to corporal on November 1, 1863, Pierce was assigned to recruiting service the following month and sent back to conscript camp in New Haven from February 9 through September 1864, when he returned to his company, mustering out with them at Baileys Crossroads, Virginia, on May 31, 1865. According to *New York Times*, the regiment’s chaplain told a reporter years later, “‘Our Joe,’ as we all called him, was rarely off duty—a brave, capable, and faithful soldier.”

Instead of returning to farming, Pierce settled in Meriden where he worked as an engraver in its famous silverware industry. Like many Civil War veterans, however, Pierce found his service injury continued to trouble him, especially after he turned 40, and as of October 25, 1890, he began collecting an invalid pension of \$10 a month under the act of June 27, 1890. His requests for an increase were repeatedly denied, and because he was supporting a wife and three children, he could not stop working despite muscular rheumatism, heart disease, and general debility.

Over the years, Pierce changed his identity. During the war, he fought with his hair combed in a queue, and through the 1880 U.S. Census, he identified himself as Chinese. But after Congress passed the Geary Act of May 5, 1892, requiring Chinese to carry a certificate of residence, he gave Japan as his country of origin. Franklin, the only one of his children to marry, passed as white and claimed both his parents were born in Connecticut. On Pierce’s death certificate, his place of nativity is “unknown.”

Pierce was buried in the Walnut Grove Cemetery after a private funeral without military honors, and his grave remained unmarked until Co. G, Fourteenth Regiment Connecticut Volunteer Infantry, Inc., led by Irving D. Moy, arranged for a Grand Army of the Republic marker, which they dedicated on August 5, 2006.

Pilipino Cultural Night (PCN)

The “Pilipino Cultural Night” (or PCN) is a performance staged by thousands of students on college and university campuses throughout the United States and Canada. Elements of the PCN as a performance genre emerged in the late 1970s, and the shows were fully realized by the early 1980s, coinciding with the growing numbers of college and university students in the United States of Philippine heritage, many clustered on West Coast campuses and organized through student ethnic heritage organizations. PCNs share many of the performative elements found in other nation-based performances, for example, Mexican ballet *folklorico* or the national dance theater presentations of Jamaica, Ethiopia, or the Netherlands. However, the PCN is more analogous to ethnic minority group expressive forms of culture and public ritual that take place within larger multicultural settings.

Naming the Genre

Custom and repeated use has anchored the preference for the term *Pilipino* in the “Pilipino Cultural Night,” even though there have been several instances where show organizers have offered alternatives, such as “Filipino Culture Night” or “Filipino Fiesta.” Using

the term *Pilipino* conveys the show organizers’ commitment to what is purportedly a kind of “rhetorical anti-assimilationist strategy,” that is, a way to embrace, claim, or simply announce one’s Philippine cultural authenticity. The genre’s name is reliably tied to the use of “Pilipino,” which has not translated into developing a consensus outside of the show for how individuals or groups continue to self-identify as “Filipino,” “Philippine,” or “Filipino American.”

Structure

Many PCNs involve the presentation of two elements: the performance of Philippine folkloric forms through music, costume, and dance; and a theatrical narrative, or “skit” that is interspersed between the folkloric dances. First, PCNs offer dynamic reinterpretations of the Philippine national repertoire that was created in the early 1930s by Manila-based educators at the University of the Philippines and at Philippine Women’s University. As Gilmore notes, U.S.-based student performers rely heavily on the presentational style of dance theater performances by the Bayanihan Philippine National Dance Company. “The Bayanihan,” as the troupe is known colloquially, attained international praise for their performance at Expo ’58 and during their 1959 tour that featured a critically acclaimed appearance at New York City’s Winter Garden Theatre. Gonzalves points out that the Bayanihan’s stylized dance theater presentations drew on the research conducted in the late 1920s and early 1930s by physical educator Francisca Reyes Aquino, whose work was sponsored by Jorge G. Bocobo, president of the University of the Philippines from 1934 to 1939. These Manila-based educators codified a national performance repertoire in anticipation of the Philippines’ sovereignty.

Second, the “skit,” the other primary feature of the PCN, is a theatrical narration in which U.S.-based Filipinos are the chief protagonists. Although hundreds of performances have taken place since the inception of the PCN as a performance genre, PCN theatrical narratives have relied on durable conventions, devices, and narrative arcs in which U.S.-based Filipino youth travel to the Philippines, come in contact with Philippine historical characters, or perform rituals, or other

actions that are emblematically Philippine in nature, at least from the perspective of the overseas Filipino performer or audience member. Several shows have featured protagonists in a so-called identity crisis—they have very little knowledge of their Filipino heritage, a situation that produces consternation and humor among their on-stage friends and family. In a familiar quest motif, the characters meet guides—elders, spirits, or parent figures—who transport them from suburban settings in the United States to a pastoral, idyllic, and timeless Philippines. During their journey, the characters encounter sounds and visions that are dramatized in the form of folk-dances, and they marvel at their new knowledge of aspects of Filipino culture. Although many of the shows feature a clumsy coupling between the Philippine dance theater pieces and the theatrical narration, many of the folkloric elements—the bird dances, courtship waltzes, and warrior chants, for example—help to confirm for the protagonists what they think they should know about the Philippines and “Filipino culture.” The folkloric elements also allow the show organizers and participants to arrest the forward march of modern or contemporary time by throwing the protagonists not simply into an historic past, but rather a mythic one, that is, a time that only appears to be “released” from time itself. By the end of the show, the characters have reached an epiphanic state of cultural awareness and pride as they “return” to the United States.

Themes

The PCN offers several thematic possibilities for both performers and audiences. PCNs demonstrate how performances continue to be a rich site for investigating the inculcation of cultural knowledge, the invention of tradition, and the body as a repository for collective memories. The PCN articulates a deep sense of cultural pride about most things Philippine, precisely at a time in the lives of young Filipino Americans when they are working toward the attainment of a higher U.S. socioeconomic status by virtue of their college and university education. Also, the PCN nostalgically imagines not only a return to a *place* (usually, a bucolic version of Philippine life), but also to a *time*, that is, a mode of temporal apprehension that is

perhaps outside the normative pacing of both U.S. and Philippine nationalisms.

Criticisms and Parody

Gaerlan noted that PCN performances featuring the popular *Singkil* dance theater suite—which has become emblematic of the southern Philippines and, hence, Muslim Filipino cultures as a whole—can be uncritical of the presentation of Philippine dance narratives; for example, performers may embrace an anticolonial symbolic politics although remaining silent on the choreographed representations of enslaved persons. Gilmore stated that Filipino American performers will often uncritically rely on the presentations of a single dance company—whose musical directors, choreographers, and costumers have attested to the highly stylized nature of their presentations—in an effort to authenticate their own U.S.-based choreography. Gonzalves revealed the fiction of the creation of dance theater and folk dance repertoire that coincided with the anticipation of formal Philippine sovereignty, thereby revealing that such performance repertoires are in fact twentieth-century inventions. Also, this research documented how U.S.-based comedians and other performers have generated their own parodies of the PCN, emphasizing static and ossified portrayals of both Philippine and U.S.-based cultures.

Plantation Workers in Hawaii

Asian plantation workers had a major role in the economic success of Hawaii's plantations. The need for relatively low-wage field labor on the sugar and pineapple plantations in the islands drew Asian workers from various nations to the Hawaiian Islands. Many workers intended to stay only through the duration of their contract, to send the majority of their earnings back home, and to eventually return to their native lands. However, many laborers ended up making Hawaii their permanent home. Though they worked the land and helped build the islands' economy for generations, today local Asians in Hawaii are often viewed as "settlers," despite having been in the islands for almost two centuries. Owing in large part to the national and ethnic diversity of the plantation laborers, Hawaii has a large multiracial population. Hawaii is the only state in the United States aside from California that does not have a numerical racial majority. Since the mass importation of plantation labor of the late 1880s, no racial majority has existed in the islands. Hawaii is also the only state where interracial couples and racially mixed individuals are the norm rather than an exception.

In the middle of the nineteenth century, Hawaii's plantation owners were desperate for a continuous and cheap labor supply and began to recruit contract workers from overseas. Low-wage laborers were needed on the islands because the Native Hawaiian population refused to work for the oppressive European and American businessmen who were running the large-scale plantations in the islands.

In 1852, without an adequate local labor force, plantation owners first looked to workers from China. Chinese laborers mainly consisted of men who made the journey to the islands without their families and sent their pay back home. Many expected to return to China after the expiration of their initial five-year labor contracts. By 1874, some Chinese had worked the duration of their contracts and left the plantations to return home. However, many stayed in Hawaii and moved to Honolulu to work for businessmen or perform domestic work. By the last decades of the nineteenth century, Chinese made up almost 25 percent of the islands' population. In 1900, after the United States annexed Hawaii, the importing of Chinese labor to the islands was barred under the Chinese Exclusion Act. The Act prohibited members of the laboring class from freely migrating between the United States and China. As a territory of the United States, Hawaii had to follow U.S. laws and regulations and thus lose a major source of potential labor.

During the decade prior to annexation, plantation owners had also begun to recruit an additional workforce from Japan. Japanese contract workers arrived in the islands in large numbers and joined Chinese on the plantations. Though many Chinese could freely leave the plantations after their contracts were up, it was in the plantation owners' best interest to retain many of them. Having a multiethnic workforce helped the owners have more control over their workers as neither group would have a large enough number to force change. However, the large number of Japanese workers who continued to arrive in the islands and who made early attempts at pushing for workers' rights made the plantation owners fearful of potential uprisings. Thus, in 1902, the plantation owners turned to Korea as a new source of labor. At this time, smaller numbers of workers were also contracted from Italy, Portugal, the Southern United States, Puerto Rico, and Okinawa. However, their numbers never reached the level of those of the Asian ethnic workers and many of them rebelled against plantation hierarchies and racism right from the start.

With Chinese, Japanese, and Koreans working in significant numbers on the plantations in the early years of the twentieth century, plantation owners felt fairly secure that their laborers conspiring against them

would be unlikely. Because of the relations between their home countries, Japanese and Chinese and Japanese and Koreans were not likely to get along in the islands. Not having a common language or culture and being housed by race in different areas of the plantation also kept the groups of workers separate, making it much easier for the plantation owners to use divide and control methods. The various Asian ethnic laborers viewed each other as enemies because of their histories of war and colonization back home and because in the islands they were paid and treated differently based on their ethnicity. Additionally, the events occurring within the home nations directly impacted the Asian labor source and thus the population in the islands. For instance, in 1905 Korean labor to the islands was stopped as Japan banned Korean migration to Hawaii after signing the protectorate treaty.

The continual and urgent need to keep a steady labor source in the first decade of the twentieth century had plantation owners looking to the Philippines. Because the Philippines were a colony of the United States, Filipinos were American nationals and could migrate freely to and from Hawaii. In 1906, Filipino men began making their way to Hawaii as the next group in the search for a constant labor supply for the plantations. New Filipino workers were paid even less than their Chinese and Japanese peers and were segregated from the Asian workers by being made to live in the least desirable areas on the plantations. As newcomers and because of the plantation owners' racism, Filipino workers sometimes had Japanese as their direct bosses because of the longer duration of the Japanese on the islands and their higher-class status within the plantation system.

As each new group of laborers established themselves on the plantations and in the islands, another group faced limitations and/or a complete ban on their continued immigration. In 1907, Japanese migration to the islands was restricted under the regulations of the Gentleman's Agreement between the United States and Japan. However, even without new Japanese laborers taking up residence on the plantations, Japanese numbers were significant as many of the early contract workers came to the islands with families, or men had participated in the picture bride system of arranged marriage and had brought wives to the

islands. After approximately 20 years in the islands, the population was large enough for the Japanese as a collective to advocate for higher wages.

In addition to contributing to building, strengthening, and expanding Hawaii's economy, the Asian and Pacific Islander workforce was also involved in early advocacy for workers' rights. Because of their numbers and their years on the plantations, Japanese workers were the organizers of the first major labor uprising on the plantations. In 1909, 7,000 plantation workers on the island of Oahu launched a four-month strike for increased wages and an end to disparate pay based on ethnicity. Striking was especially difficult for plantation workers as the plantation was not only their place of work but place of their residence. The Japanese laborers sacrificed greatly to implement better working conditions. However, the response of the plantation owners was to bring over even more Filipino workers to replace Japanese strikers and keep the plantation economy running.

Two major subsequent labor strikes in 1920 and in 1924 also involved the Japanese workers but were ethnically inclusive as Filipino laborers were integral participants. In 1920, Japanese and Filipino plantation workers collectively protested for a pay increase. The strike lasted six months, but the workers' sacrifices were not in vain as they came away with a small wage increase. The outcome of the 1920 strike was also significant in that it brought an end to the decades-long process of pay differentials according to ethnicity. In addition, Japanese and Filipinos now saw that uniting despite national and ethnic differences worked to force their employers to make changes. Ronald Takaki said that the most significant gain from the 1920 labor strike was to go beyond "blood unionism" as the workers chose class-based solidarity over individual national and ethnic commonalities.

Solidarity based on socioeconomic similarities between different Asian ethnic groups also contributed to the "local" identity that many long-time Asian residents of the islands have adopted. The term "local" for ethnic Asian islanders denotes a history in the islands and/or on the plantations, a respect for and contribution to the land, a connection to Hawaiian culture, and often those who identify as local are of Asian, part-Asian, and/or mixed race descent. Many have

spent the majority of their lives in Hawaii or are part of families who have lived in the islands for generations. Today, unlike within the continental United States, “Asian American” as a racial grouping and form of racial and political identification does not really exist or make sense in Hawaii. Instead there are local Asians whose pride and connection to their homeland remains a basis for their personal and collective ethnic, social, and political identification with Hawaii.

Local solidarity also came out of the events of the early 1930s that further bonded non-white members of the working class together. The infamous, controversial, and tragic Massie case that unfolded in the islands (where men of Asian and Hawaiian descent were tried on the basis of one white woman’s claim of rape that lacked evidence, a Hawaiian man, Joseph Kahahawai was killed in response, and his wealthy white killers went free) started to loosen the tight grip of power held by the affluent white ruling class. Having Asians of different ethnic groups, Hawaiians, racially mixed individuals, other members of the laboring-classes deemed both undeserving of justice and a collective threat by upper class whites inspired the coming together of those groups of people. The outcome of court cases that allowed for the killing of a poor Hawaiian man to go unpunished, motivated working class whites, Japanese, Chinese, Filipino, and Hawaiians to come together to make social and community change for those who suffered at the hands of corrupt and oppressive white authority.

Presently, the population of the Hawaiian Islands remains racially and ethnically diverse with many of its residents being of mixed race ancestry. Though the plantations are no longer the primary contributors to the islands’ economy, their legacy is reflected in the current island ethnic and socioeconomic demographics. Today, as has been the case for several decades, whites (both local and from the U.S. continent), Japanese and Chinese comprise the highest numbers of ethnic groups in Hawaii, and members of those groups are regularly at the top of the financial and socioeconomic ladder. As was the case during the plantation era, Filipinos in the islands today occupy much lower rungs on the financial and socioeconomic ladder. Whereas local Japanese and Chinese, as well as Taiwanese and Japanese transnationals own and control much of the islands’ businesses, real estate, and tourism. Immigrant Filipinos and other newer

Asian immigrants, including Vietnamese and Pacific Islanders work in low-level positions in the local tourist industry. They, along with many Native Hawaiians, are some of the most disenfranchised of the islands’ residents.

Currently, the term “settler colonialist” is used by Hawaii scholars to distinguish between Native Hawaiians and all others residing in the islands. The term also somewhat controversially is applied to local Asians, even those with plantation roots, who are viewed as colonialists when compared to Native Hawaiians. Scholar and writer, Candace Fujikane states that to understand settler colonialism as applied to local Asians we must take into account how their living practices in the islands stand in the way or harm Native Hawaiians’ access to justice. Basically, when Asians engage in financial, social, and political behavior that furthers the Hawaiian economy and society in their favor or they fail to support the efforts of indigenous Hawaiians to reclaim their land, they are behaving as colonialists rather than those with a deep investment in the land and its people.

Polamalu, Troy (1981–)

Troy Aumua Polamalu is a strong safety for the Pittsburgh Steelers and one of the most feared defensive

Pittsburgh Steelers safety Troy Polamalu. (AP Photo/Gene J. Puskar)

players in the National Football League (NFL). Born on April 19, 1981, in Garden Grove, California, Polamalu is of Samoan descent. He grew up in Winston, Oregon, and attended Douglas High School. He was an All-State football player as well as a standout on the baseball and basketball teams. Polamalu went on to the University of Southern California (USC), where he was a three-year starter and a two-time All-American.

During the 2003 NFL draft, the Steelers thought so highly of Polamalu that they did two things they had never done in the first round of any previous draft: make a trade to improve their position and select a pure safety. Convinced that the Trojan great would have an instant impact on their lackluster pass defense, Pittsburgh surrendered their picks in the first, third and

sixth rounds to move up eleven spots and take Polamalu with the sixteenth overall selection.

The move turned out to be a huge success. The 5-foot-10-inch Polamalu, who is known for his long, flowing locks, is used in a variety of defensive packages and is one of the most versatile players in the league. In just his third season, he tied the NFL record for most sacks in a game by a safety with three against the Houston Texans. A few months later, he helped the Steelers defeat the Seattle Seahawks for their fifth Super Bowl. The franchise was so satisfied with Polamalu that they made him the highest-paid safety in the league before the 2007 campaign. He showed his worth in the fourth quarter of the 2008 conference title game, intercepting a pass and returning it 40 yards for a touchdown against the Baltimore Ravens. Pittsburgh went on to beat the Arizona Cardinals 27–23 in the Super Bowl, as Polamalu took home his second championship ring and the Steelers became the first organization to win six Vince Lombardi Trophies.

In 2009, Polamalu appeared with Cardinals wide receiver Larry Fitzgerald on the cover of the popular video game *Madden NFL 10*. Although a knee injury hindered his season, Polamalu responded with a phenomenal effort in 2010. He tied a career high with seven interceptions and played in his third Super Bowl. Pittsburgh lost to the Green Bay Packers 31–25, but Polamalu was voted the Defensive Player of the Year by the Associated Press. The award added to an impressive list of accolades that includes four First-Team All-Pro selections and a spot on the NFL 2000s All-Decade Team.

Despite his hard-hitting reputation, Polamalu is known for his gentle personality off the field. He is a devout Greek Orthodox Christian and has made religious pilgrimages to Greece and Turkey. During the 2011 NFL lockout, Polamalu went back to USC and completed the graduation requirements for a degree in history. Along with his wife, Theodora, he founded The Troy and Theodora Polamalu Foundation, which is dedicated to providing aid to American Samoa and the Pittsburgh Children's Hospital. The couple also created the Henry Panos Fund, named after Theodora's grandfather, who served in World War II, to help injured combat veterans.

Political Participation

See Gender, Race, and Class in Political Participation; Political Representation

Political Representation

Asian American political representation is almost always discussed in the context of a paradox: Why is a racial group with such a high socioeconomic status underrepresented in the political arena? This entry explores why and to what extent Asian Americans do not have representation that matches their population level in the U.S. Congress and in the legislature of states in which large numbers of Asian Americans live, such as California.

In political science representation is conceived in two ways: descriptive representation and substantive representation. In the context of this entry, descriptive representation means individuals who are openly identified as Asian are elected or appointed to important political offices. Substantive representation means that the political *interests* of Asian Americans are achieved in politics, regardless of the race of leadership.

The following examination is mostly confined to descriptive representation. This is not because substantive representation is not important; indeed, given that Asian Americans are descriptively underrepresented, how they achieve their policy goals is an important question to ask. Rather, substantive representation is not analyzed here because it is difficult to study. With

so diverse ethnic groups within Asian Americans themselves, it is nearly impossible to define what "Asian American interests" are. Moreover, with certain exceptions, what legislative bills or executive actions match the preferences of Asian Americans (and not of minorities as a whole) is difficult to identify. Within American political science, this a qualitative difference between Asian American politics and the politics of other major racial minority groups where interests and political preferences are seen as more readily identifiable.

In terms of descriptive representation, Asian American underrepresentation in the political arena is often ascribed to their culture, in particular influence from their parents. Anecdotes abound that Asian Americans were told by their parents to become engineers, doctors, lawyers, and other professionals so that they could lead a steady and risk-free life. But this "cultural thesis" does not explain Asian American underrepresentation, because there are indeed many Asian Americans who have run for offices (some of them lost, so they may not just remain in our memory).

The factors leading to underrepresentation must therefore be looked for in other places. First is history. Because of the anti-Asian immigration laws and court rulings from the 1880s through the 1930s, Asian Americans were not allowed to immigrate in large numbers or become naturalized citizens. This slowed Asian American political participation, both in voting and running for offices, compared to other racial and ethnic groups. Moreover, "forever foreigner" images that were created during this period function against Asian American candidates even today, making them look as if they are not "American."

Second is the ethnic and socioeconomic diversity within Asian Americans. These factors make it difficult to create pan-Asian coalitions. What do Japanese American white collar workers and Southeast Asian refugees have in common? Moreover, do they live next to each other? Not only are Asian Americans ethnically divided but even among their own ethnic groups they tend to live dispersed in separate suburbs instead of concentrated in urban centers. Therefore, Asian Americans are often outnumbered by other racial groups, which make it difficult for them to create majority Asian districts.

Third is the low voter registration rate of Asian Americans compared to whites. There are three steps for immigrants to voting—naturalization, registration, and voting itself. If they pass the second step—that is, once registered to vote, Asian Americans are as likely to vote as whites. Despite voter registration initiatives by various nonprofit organizations (such as APIA Vote), however, the level of registration for Asian Americans is low because of many factors such as language barriers and the lack of familiarity of the U.S. political system (some countries in Asia, for instance, provide automatic registration for their nationals).

With these obstacles, to what extent do Asian Americans achieve descriptive political representation? Although this relatively easy compared to the study of substantive representation, this task is not straightforward because it is sometimes difficult to identify who “Asian American” politicians are. In some cases, politicians are not willing to “come out” to tell to the public that they have Asian heritage (especially when it is not obvious from their surnames). For instance, Filipino ancestry of Robert “Bobby” Scott (D-VA), a liberal member of the House, and John Ensign (R-NV), a former conservative member of the Senate, are not known even by most scholars who study Asian American politics. In other cases, it is difficult to determine where to draw the “Asian” line without reproducing arbitrary lines drawn by U.S. government in the past to defend white privilege. While Iranian Americans and Armenian Americans are considered “white” and Afghanistan Americans and Asian Indians “Asian,” this tells us more about illogic of U.S. Supreme Court Cases on naturalized citizenship than about any “real” or essential differences in political interests. However, the data for this study uses the 2010 Census and therefore relies on government definition of Asian.

The first place to look at the level of descriptive representation of Asian Americans is the United States Congress. Table 1 lists all Asian American members (excluding nonvoting members such as those from American Samoa) who have served in the U.S. Congress at the time of this writing (summer 2012).

Table 1 shows several important facts. First, there are currently eight members in the House and two in

the Senate who are at least part Asian. Although these numbers may not look small, they fade compared to the proportion of Asian American population in the country. Although Asian Americans comprise 4.8 percent of the country (in one race only; in the case of two or more races, 5.6%), they are represented by only 1.8 percent in the House and 2 percent in the Senate. Because the two Senators are both from Hawaii, no Asians on the continent are directly represented in the Senate.

Second, despite this underrepresentation, the number of Asian American members has been growing. In 2000, there were only four House members. Typically politicians’ careers start with local education boards or city councils, then move on to state legislatures, and when opportunities arise, running for the U.S. House or Senate. Mike Honda is a good example of this pattern. He started his political career as a member of the San Jose Unified School Board in 1981. He then won an election to be on the Santa Clara County Board of Supervisors in 1990. After that, as Tables 1 and 2 indicate, he proceeded to the California State legislature and then the U.S. House. Honda’s example exemplifies how important it is to have Asian American local politicians for future “candidate pools” for higher offices.

Judy Chu, another Californian, has a similar case, but hers is accompanied with more hardship. Chu was elected to the Monterey Park city council in 1988 and served as mayor three times. She ran for the state assembly seat unsuccessfully twice in 1994 and 1998, defeated both times by a Latina in a district (49th) in which Latinos outnumbered Asian Americans. It was in a special election in 2001 that Chu was elected to take this seat.

Third, there are ethnic variations among Asian Americans who served in Congress. The first Asian in Congress is not a Japanese American Democrat from Hawaii, as people may often think; that honor goes to Dalip Singh Saund, an immigrant from India (he was the only Sikh member who ever served in Congress up until today). It is true that Japanese Americans dominate the list of the members, but Chinese Americans have been elected not only from Hawaii but also from the mainland (David Wu and Judy Chu). Korean (Jay Kim), South Asian

^kDeceased on April 15, 1990.

^lSworn in on May 16, 1990 to a seat vacated by a deceased member (Spark Matsunaga); elected by special election on November 6, 1990.

^mResigned on May 3, 2011, due to reported financial affairs with his staffers.

Source: Aoki and Takeda (2008), used with permission. Updated by the author using Nakanishi and Lai (2007, 2011), Tong (2011) and U.S. Congress (n.d.).

(Dalip Singh Saund, Bobby Jindal, and Hansen Clarke), and Vietnamese (Anh “Joseph” Cao) have also been elected. It was widely held that the first Vietnamese House member would be Van Tran, a famous California Assembly member in Orange County, but before Tran ran for the House unsuccessfully in 2010, Cao took a Louisiana seat in a 2008 election held by a member who was removed by corruption charges. What is lacking in the list of members is a self-identified Filipino despite the fact that Filipino Americans are the third-largest Asian American ethnic group.

Table 2 details Asian Americans who have served in the California state legislature. Similar features can be seen in this table as in Table 1. First, Asian Americans are somewhat underrepresented in the legislature. Asian Americans comprise 13.0 percent of the California population (in one race alone; 14.9 percent in two or more races), but there are currently only eight Asian American House members (10 percent of the 80-member chamber) and only four Senators (10 percent of the 40-member chamber).

Second, however, the current level of underrepresentation is not so severe when compared with other states. For example, New York, where 7.3 percent of the state population is Asian American, is represented by only one Asian representative in the 150 member Assembly: Grace Meng (Democrat, 22nd district, Flushing, Queens, and daughter of Jimmy Meng, who previously held that seat). In contrast, the number of California state legislators has grown significantly in the past decade. Although California has been home to a large number of Asian Americans, there have been no Asian American state legislators during the period between 1981 and 1992, and only two members (Mike Honda and George Nakano) served in the 1997–2000 period. The trend changed, however, when three Chinese American women—Wilma Chan, Carol Liu, and Judy Chu—began to serve in 2001. They added more female Asian faces to the legislature as well, where only March Fong Eu had served as an Asian female state legislator (Eu later became secretary of the state; her adopted son, the late Matt Fong, became state treasurer).

Third, again, we can see some ethnic variations in Table 2. Although Chinese and Japanese Americans

comprise the majority of past and present Asian American state legislators, the first Asian American ever elected to the legislature was a Korean American, Alfred H. Song. However, the absence of a Korean American legislator since Song is striking, especially given the large population of Korean Americans in the state (in particular Koreatown in Los Angeles and in affluent communities in Orange County). Moreover, as in the case of the U.S. House, the absence of a Filipino legislator is worth mentioning in light of Filipino Americans’ long history in the state, relatively high socioeconomic status, and their concentrated population areas (such as in Daly City and Carson).

Political representation cannot be assessed only by its presence in legislatures. It is also measured by its level in the executive and judicial branches as well.

In the executive branch, needless to say, there has not been an Asian American president of the United States. Although there are numerous Asian American judges and lawyers, there has not been an Asian American Supreme Court Justice. With President Barack Obama’s appointment of Sonia Sotomeyer, a Latina, to the Supreme Court in 2009, some Asian Americans are waiting for an appointment of an Asian American to the highest court in the land.

At the cabinet level, several Asian Americans have been appointed and confirmed in the past three administrations. The first Asian American cabinet member is Norman Y. Mineta (Japanese American), who became the secretary of commerce in July 2000 after his predecessor, William M. Daley, resigned to take a position on Al Gore’s presidential campaign. Mineta, a Democrat, went on to serve in the George W. Bush administration as the secretary of transportation until 2006. As transportation secretary, he faced the 9/11 terrorist attacks and ordered to land all airplanes flying above or around U.S. territories within hours after the attacks. He also took a tough policy against racial profiling at airport security gates.

George W. Bush appointed the first Asian American woman, Elaine Chao (Chinese American), to the cabinet as the secretary of labor. Chao, wife of Senator Mitch McConnell (R-Kentucky), was the only cabinet member who served the entire eight-year Bush administration, after her colleague, Donald Rumsfeld, resigned toward the end of the term.

Table 2. Asian Americans Who Have Served in the California State Legislature

Table 3. Asian Americans Who Have Served as Governors of States

Year Served	Governor	Ethnicity	Party	State
1974–86	George Ariyoshi	Japanese Am.	Democrat	Hawaii
1986–94	John Waihee	Native Hawaiian	Democrat	Hawaii
1994–2002	Benjamin Cayetano	Filipino Am.	Democrat	Hawaii
1997–2005	Gary Locke	Chinese Am.	Democrat	Washington
2008–present	Bobby Jindal	Indian Am.	Republican	Louisiana
2011–present	Nikki Haley	Indian Am.	Republican	South Carolina

Source: Compiled by the author using Aoki and Takeda (2008).

President Obama appointed a record three Asian American members to his cabinet. They were Steven Chu (secretary of energy, Chinese American), Eric Shinseki (secretary of veteran affairs, Japanese American), and Gary Locke (secretary of commerce, Chinese American). Locke left his position in 2011 to become the first Chinese American ambassador to China. Interestingly, in the same year, Obama appointed Sung Kim, a naturalized immigrant, the first Korean American ambassador to the Republic of Korea (ROC). It is to be seen whether future administrations will appoint an ambassador of the ethnic origin to other Asian countries like Japan and India.

Representation in the executive branch can be seen at the state level as well. Table 3 shows Asian Americans who have served as governors of U.S. states. Because gubernatorial candidates must collect votes statewide, not surprisingly, the first three governors (George Ariyoshi, John Waihee, and Benjamin Cayetano) were all from Hawaii. Interestingly, however, the following Asian American governors were elected where the Asian American population was not so large. In the case of Gary Locke, his record as the County Executive of King's County (which includes the Seattle area) might have appealed to Asian American voters there. But in the case of Bobby Jindal and Nikki Haley, two Republican South Asians in Southern states did not make any special appeals to Asian voters. Their election indicates that Asian Americans may be able to (or may have to) win an election as an "American" without foregrounding their ethnicity.

The foregoing assessments indicate that Asian Americans are still politically underrepresented, yet their descriptive representation in terms of the numbers

of Asian American members of Congress and state legislatures is growing. Moreover, as Nikki Haley and Bobby Jindal demonstrate, what it means to be an Asian American political leader is constantly evolving.

Poon, Lim (1918–1991)

Born on March 8, 1918, into a poor family on Hainan Island, Lim Poon left home as a teenager to apprentice as a “learn-boy” on British freighters. He rose to second steward after six years and was on the S.S. *Benlomon*, which was sailing from Capetown to Paramaribo in Dutch Guiana, now Surinam, when it was sunk on November 23, 1942, by two torpedoes from a German submarine, the U-172, in position 00.30N, 38.45 W, 750 miles east of the Amazon River. All hands were lost except Poon who dogpaddled to a wooden life raft from the ship and whose endurance for 133 days would earn him the Guinness World Record for survival alone at sea, a record that has yet to be broken.

Rations of food and water on the raft lasted 40 days. To catch rain water, Poon slanted a square of canvas between the raft’s four posts and formed a sloping roof with a gutter. He created a fishing line by separating the strands of hemp rope that encircled the raft and made a hook out of a flashlight’s spring. Using barnacles from the sides of the raft as bait, he caught small fish. Prying loose a nail from the raft, he made a second, larger hook and line, and then hooked a small fish by its tail so it could still swim and attract bigger fish. With a knife made from the lid of a tin, he sliced the fish into pieces and dried them like villagers back home.

His darkest hours were when he was denied the chance of rescue—first by a passing ship that deliberately refused him, then by a storm that rose shortly after a plane sighted him and marked his position. In the storm’s aftermath, long days without rain or fish reduced Poon to drinking his own urine. Near death, he managed to catch a bird, kill it, drink its blood, eat its innards, and meat. He caught and consumed a second bird before both the fish and rain finally returned.

A Brazilian fishing family picked Poon up 10 miles off the coast of Brazil, east of Salinas, in the state of Para, and delivered him to the British consul in Belem.

Amazed at Poon’s excellent physical condition, U.S. Naval Lieutenant Samuel Harby arranged for Poon to reenact his experience in New York to help future castaways. When Poon offered to join the navy, however, he was rejected because of flat feet.

Poon was authorized by special order of the War Shipping Administration to wear the United States Merchant Marine Combat Bar with One Star for “His courage and fortitude will be an enduring inspiration to merchant seamen of all the United Nations.” King George VI invested him with the British Empire Medal. The Executive Council of the Chinese Republican Government awarded him a Certificate of Honor. Yet it was only through the persistent efforts of Lt. Commander Samuel Harby that the 81st Congress finally passed a special bill granting Poon permanent residence in the United States. President Harry Truman signed this Private Law 178 on July 27, 1949, and the final papers for Poon’s citizenship were completed in 1952. Settling in Brooklyn with a bride from Hainan Island, Poon returned to sea as a steward and retired as a chief steward in 1983. He died on January 4, 1991.

Prostitution in Late Nineteenth- and Early Twentieth-Century Asian Immigrant Communities

Prostitutes and prostitution were critically important to early Asian immigration networks and to nascent nineteenth-century Asian American communities. In the nineteenth and early-twentieth centuries, several factors resulted in relatively small numbers of Asian women migrating to the United States. Cultural beliefs about the duties and place of wives and mothers made them reluctant to leave. Also, a shrewd economic calculus showed that families maximized their

opportunities and minimized their risks by sending only men overseas. Arguably most important, restrictive and discriminatory laws told Asian women that America did not want them and made Asian men loathe to bring their wives, daughters, or sisters to a prejudiced land bent on excluding them.

Still, Asian women did immigrate to the United States before and during the exclusion era. Many came as wives of Chinese merchants. Although these women had to prove their status, sometimes by supplying x-rays of their bound feet to show they were not laborers or laborers' wives, even after the 1882 exclusion the United States allowed merchants' wives to enter. Also, following the Supreme Court's 1902 decision in *Tsoi Sim v. United States*, Chinese women used the legal logic of coverture to gain entry as wives of American citizens. This case stood until 1924 and allowed some Chinese American families to form. Japanese women also came as wives of merchants, but after the Gentleman's Agreement of 1907 they also entered as "picture brides" of Japanese laborers. Although the 1921 Ladies' Agreement ended this practice, the interlude provided a foundation for Japanese family formation in America. Also, in an attempt to ensure greater labor stability, sugar plantation operators in Hawaii encouraged Japanese, Korean, and Filipino workers to bring or form families.

Groups opposed to Asian immigration used the specter of prostitution as a key rhetorical and legal tool to block both Asian women's entry and Asian entry in general. As in mainstream moralizing discourse, exclusionist groups opposed to Asian immigration used the image of the prostitute as a synecdoche for the multiple threats and failures that meant Asians should not be allowed entry to America. Although even rabidly anti-Asian labor groups, such as the Workingmen's Party of California, recognized that prostitutes themselves were victims of exploitation, these groups still used prostitution as a symbol of the Asian slave mentality that made them unfit for the American free labor marketplace. The presence of prostitutes, coinciding with the relative absence of wives, also convinced anti-Asian groups that Asian men could neither protect nor provide for their women. Political cartoons, salacious newspaper stories and photographs, and supposedly authentic tours of Chinatowns also used

prostitutes as examples of vice, licentiousness, and disease that many thought characterized Asians and Asian American communities. Because Asian prostitutes did not limit themselves to Asian clients, xenophobic and eugenicist Americans also saw the horror of miscegenation in the threat of white men visiting Asian prostitutes. The myriad imagined threats and implied failures encapsulated in the figure of the prostitute were central to the passage of the Page Act in 1875 and to later broader exclusion of Asians.

Although anti-Asian forces, as well as the U.S. Census and other local and national government agencies, greatly exaggerated the number of Asian prostitutes, out of a combination of malice and ignorance, Asian prostitutes did work in America. In fact, prostitution was perhaps the most profitable enterprise for Asians in America. Strikingly, some of the first Chinese prostitutes in San Francisco made substantial profits for themselves. Ah Toy, who came to San Francisco from Hong Kong in 1849, became the city's first Chinese prostitute (or at least the first to be recorded). Ah Toy bought her own freedom and then began a career as a self-employed courtesan who served both Chinese and white clients. She was quite successful and within only a few years owned and operated at least two houses. Initially, self-employed prostitutes and businesswomen like Ah Toy and Ah Joan controlled Asian prostitution in San Francisco; they owned the buildings, kept the profits, took loans from local businessmen, and took clients to court if they failed to pay. The *Alta California* even recorded an 1852 case in which Ah Toy sued a Chinese gangster to avoid paying protection money. However, in 1854 *People v. Hall* effectively ended Chinese recourse to California courts by banning Chinese testimony. This legal shift may have helped change the character and control of Asian prostitution in America, but the enterprise was simply too lucrative to escape the encroachment of the growing Chinese secret societies (tongs) seeking to control Chinatown's vice economy.

It is important to note, however, most Chinese prostitutes were brought to the United States in the late nineteenth century against their free will, and those who were able to work as free agents were few. Many young Chinese girls were lured, sold, or kidnapped in

China and trafficked to the United States, where they were forced to work as prostitutes.

Although the Page Act barred the importation of prostitutes (along with contract laborers), San Francisco allowed brothels to operate openly until 1917. The nebulous legal position of Asian prostitution in America combined with its high profit margins led to elaborate transnational networks to support it. Agents in China obtained girls for the trade through false promises, purchase, or kidnapping. The Page Act (1875) subjected prospective immigrant Asian women to increased scrutiny and cut into tong profit margins because the importers often had to bribe the U.S. consul in Hong Kong to establish the women's "good character." The passage of the Chinese Exclusion Act in 1882 made importation from China prohibitively expensive, so tongs such as the Hip-Yee Tong, which dominated the trade, began kidnapping Chinese women already in America. Although prostitution continued, demographic, geographic, and social changes in California's Chinese population meant that large organized prostitution rings began to decline in the 1880s.

In addition to prostitution's rhetorical and political function for anti-Chinese organizations, and its economic role within the Chinese community, nineteenth-century prostitution also played an important social role in Asian America. Although conditions on Hawaii differed, the skewed sex ratios among both the Japanese and Chinese in America meant that communities were almost entirely male. Prostitutes, whether in urban Chinatowns or rural mining or agricultural camps, provided both sex and female companionship. Diaries left by Chinese men indicate that visiting a prostitute was an accepted form of relaxation and, for the higher class prostitutes, a cultural activity that did not necessarily involve sex. Some prostitutes eventually escaped the vice trade and were able to form families.

White nativist groups used Asian prostitutes rhetorically to foment anti-Asian sentiment. Asian American men, primarily in Chinese tongs, used prostitutes as lucrative investments that paid exponentially better returns than gold mining, farming, or laundries. Asian-American men also used prostitutes for socialization, companionship, and community and family

formation. Finally, for crusaders like Donaldina Cameron and other Mission Home women, Asian prostitutes helped establish white Victorian women's moral authority and provided these women with power in the community. Each time Cameron led San Francisco police in a raid, appeared in the courts, intervened in immigration cases, or campaigned for donations to the Mission, she asserted the right (and duty) of properly defined Victorian women to act in the public sphere. Cameron sometimes contracted out former prostitutes she rescued to local orchard owners for cheap labor, and she found marriage suitors for many of them. The moral authority she derived from her work was significant.

Asian prostitutes were used by Victorian crusaders, anti-immigration activists, criminal societies, and their own nascent communities. Much of their lives is lost to history because of the paucity of records prostitutes themselves left. It is apparent that they were not completely powerless. Victorian women used prostitutes to establish their moral authority, but these same prostitutes could also use the rescue missions for security, education, and greater social mobility. Tongs and brothel owner profited immensely by acquiring and employing prostitutes, but some prostitutes also resisted by refusing to provide services, by fleeing their captivity, and by committing suicide. Some were eventually married and had children.

R

Radical Organizations

Asian America has a long history of radical organizing, but one obscured by the long-standing dominant view of Asian Americans as apolitical subjects or partisans of mainstream electoral politics. Among the early immigrants were Leftists who fought fierce labor struggles, protested U.S. anti-immigrant policies, engaged in homeland politics, and were strong advocates of socialism or other radical alternatives to capitalism. In the late 1960s to late 1970s, during the height of the Asian American Movement (AAM), radicalism was arguably the predominant political orientation among Asian American activists. Moreover, Asian American Marxists provided significant leadership to the U.S. Left.

Early Asian American Radicalism

Before the advent of the model minority image, Asian Americans were viewed as hyperpolitical, Yellow Peril threats to the U.S. racial and social order. In *People v. Hall* (1854), the California Supreme Court ruled that Chinese could not testify against Whites in court, fearing that allowing so would encourage the Chinese to fight for naturalized citizenship and other rights. In 1917, Japanese immigrants were seen as political protesters who refused to “acquiesce[e] in the position assigned them, as, on the whole, the great mass of Negroes seem disposed to do,” but instead, “have taken a bold stance for their rights and insist that there shall be no discrimination against them.”

Although Yellow Peril fears were overblown, there existed a significant, though small, radical immigrant community. Given their working-class

conditions and early labor organizing, many Asian Americans were drawn to the militant labor struggles of the 1920s and 1930s and formed or joined Left organizations. Happy Lim and Ben Fee were creative writers, Communists, and leaders of the Chinese Workers’ Mutual Aid Association formed in San Francisco in 1937 to organize workers, to raise labor consciousness through discussion and study, and even to teach “singing classes for workers to learn songs of revolution and about the War of Resistance.” The most famous Japanese immigrant socialist was Sen Katayama, founder of labor and socialist movements in Japan and active with the Communist Party USA (CPUSA); longshoreman and Communist Karl Yoneda was also widely known. By the 1930s, a higher proportion of Japanese Americans (1 in 650) were in the CPUSA than the general U.S. population (1 in 5,000). There were nearly 200 Japanese Americans in CPUSA in the 1930s and some one thousand fellow travelers. Carlos Bulosan, in his widely read semiautobiographical novel, *America Is in the Heart*, details the agonizing struggles of 1930s–1940s Filipino laborers at a time when “No Dogs and Filipinos” signs were common. In the 1960s, the Filipino-based Agricultural Workers Organizing Committee, led by Larry Itliong, merged with Cesar Chavez’s Mexican-based group to form the famed United Farm Workers of America (UFW). Although Chavez and Mexican laborers are best known, it was the more militant Filipino laborers who in 1965 started the successful, five-year grape strike, supported by a nationwide grape boycott, as depicted in Philip Vera Cruz’s memoir.

During and after World War II, the Asian American Left all but disappeared as a result of fierce state repression and the errors of the leading Left

group, the CPUSA, which ousted its Japanese American members and failed to oppose the Japanese American evacuation. So when the AAM emerged in the late 1960s, young activists knew little, if anything, about their radical past. Still, a few Asian Americans connected the Old and New Lefts. In the Workers Party and later Socialist Workers Party (SWP) in the 1940s and 1950s, Chinese American Grace Lee Boggs worked with the famed C. L. R. James and Raya Dunayevskaya, urging the global workers' struggle against capitalism to include the black struggle against racism. Since the early 1960s, Grace Lee Boggs, with her husband James Boggs, worked in militant labor and black radical struggles in Detroit and together wrote the influential book, *Revolution and Evolution in the Twentieth Century*. A generation younger, Japanese American Richard Aoki joined the SWP in Berkeley in the early 1960s, but left in 1967 over differences on armed self-defense and Black Nationalism. Aoki emerged as the most prominent non-black in the Black Panther Party (BPP) and an early leader of the Asian American Political Alliance (AAPA) and Berkeley's Third World strike. Japanese American Kazu Iijima worked with the CPUSA's youth group in the 1930s and cofounded Asian Americans for Action (AAA) in New York City in 1969. There were also independent radicals like the prominent Japanese American activist Yuri Kochiyama who, after being radicalized by Malcolm X, immersed herself in the revolutionary Black Nationalist movement in Harlem as well as anti-imperialist Asian American and Puerto Rican struggles.

Asian American Radicalism, 1960s and Beyond

Asian American radicalism grew as the overall U.S. New Left developed but also shaped the larger movement by centering an analysis of racism and imperialism and demanding self-determination and Third World solidarity. Most Asian American Leftists applied a Marxist analysis of capitalism (as an economic system in which the means of production are privately owned and motivated by profit and capital accumulation; profits derived largely from exploiting labor, forming the basis for class struggle between the working-class and capitalist class) and a Leninist

analysis of imperialism (as the highest stage of capitalism—marked by monopolies; the export of capital, not merely goods; and the merging of banking and industrial capital into finance capital—generating the need to move into the less industrialized spheres to expand profits). In this context, the Black Power movement and Third World revolutions were the strongest influences on the development of Asian American radicalism and arguably on the overall AAM itself.

In 1968, a worldwide revolution took place, from the Vietnamese Tet offensive exposing the vulnerability of U.S. power, to the millions-strong general strike in France, to protests against the police massacre of students in Mexico City, to huge antiwar protests on U.S. campuses. The students and workers protested along multiple fault lines, but the Vietnam War was the foremost galvanizing issue, particularly for the U.S. New Left. As opposition to the war in Vietnam grew, the liberal peace movement's demand to "bring the boys home" turned to New Left critiques of U.S. imperialism. In addition, China, along with Vietnam and Cuba, became the dominant model of revolution as 1960s activists criticized the USSR's move toward "peaceful coexistence" with capitalism. For Asian Americans, the gaze toward China and Vietnam radicalized their activism and made them particularly receptive to the ideas of Marx, Lenin, Mao, Fidel, Guevara, and others.

Beginning in 1968, amid worldwide student protests, Asian American political organizations began to form a widespread and sustained collective movement. Many of the earliest groups, including AAPA in Berkeley and AAA in New York City, embraced anti-racist, anti-imperialist politics, linked domestic and international struggles, and emphasized serving the community. Within a year or two, these groups, or offshoots of them, moved further to the Left, embracing an eclectic socialism and later Marxism-Leninism. Max Elbaum contends that Marxism-Leninism became the dominant left trend in the AAM as well as within the Asian American communities, where its ideas about the need for a U.S. revolution and support for Marxist-Leninist parties in China, Vietnam, and the Philippines spread well beyond activist ranks.

The earliest revolutionary organization of the AAM, the Red Guard Party, was started by U.S.-born

street youth in San Francisco's Chinatown in February 1969. Two years earlier, Leways, Inc. had purchased a pool hall, through a raffle, as a recreational outlet for Chinatown youth and at a time when non-profit organizations were sparse, developed community youth and job programs. But frustrated with the difficulties of changing Chinatown conditions and after studying with Black Panthers and others, Leways members created the Red Guard Party. More than any other AAM group, the Red Guards emulated the BPP in its program, lumpen proletariat membership, and activities. The Red Guards' 10-point program was almost identical to that of the Black Panthers, with one major departure: The Red Guards demanded that the U.S. government view Mao as "the true leader of the Chinese people." The Red Guards also established a free lunch for seniors program, worked to save a playground from being developed into high-income housing, and brought Maoist politics into Chinatown, tightly controlled by the anti-Communist Six Companies.

In late 1969, in New York City, radical students and working-class youth, primarily from AAA and Columbia University's AAPA, collectivized their income and opened a storefront in Chinatown. Inspired by the BPP and Young Lords, I Wor Kuen (IWK) developed a 12-point program that called for housing, health care, and self-determination for Asians and all Third World peoples. Extending beyond the Panthers, IWK explicitly promoted "a socialist society" to promote human rights over capitalist labor exploitation. IWK's program was unique at the time, with the notable exception of the Young Lords, in explicitly calling for "an end to male chauvinism and sexual exploitation." IWK also established childcare programs and was known for its predominance of women's leadership. Material conditions in Chinatown motivated the IWK's "serve the people" programs. In February 1970, IWK members, dressed in berets and sunglasses and promoting a new militancy, began selling their newspaper, *Getting Together*. The first issue declared Chinatown to be "a ghetto," with 40,000 residents overcrowded in rat- and roach-infested tenements and paying high taxes on low wages. To gain "community control of our institutions and land," IWK began to provide health services, particularly

tuberculosis testing, and developed Chinatown's first clinic, complete with bilingual staff.

In 1971, IWK and Red Guard members jointly formed the first nationwide Asian American revolutionary organization, under the name IWK. Former Red Guard members later issued a document criticizing the Red Guards for having an "ultra-military line" that promoted armed struggle without first developing a community base and for their inattention to workers' organizations. These critiques reflected IWK's focus on serve-the-people programs and developing an anticapitalist analysis of social problems. From the start, IWK distinguished themselves from "do-gooders" out to save somebody else" and "bureaucratic agenc[ies] to hand out charity." Instead, like the Panthers, they sought to use their service programs to improve people's lives, to build a mass base, and to raise political contradictions about the U.S. government and capitalism. In 1972, IWK moved in two directions. Their Chinatown work showed the significance of service, but also the limitations of reformism. So through experience and study, they adopted Marxism, Leninism, and Mao Zedong thought as an ideological framework to effect revolutionary change. They also established the Chinese Progressive Association as a mass-based, grassroots organization.

In the early 1970s, similar radical developments were occurring across the nation. After the successful Third World strikes at UC Berkeley and San Francisco State College, AAPA members turned toward Asian American Studies or community activism. By early 1970, former AAPA members and others established the Asian Community Center (ACC) in San Francisco and provided free food for mothers and children, activities for youth and the elderly, and support for labor struggles and tenant rights. Their "serve the people" programs, inspired by Mao and the Black Panthers, had a dual purpose: (a) to provide direct services to "help our people and ourselves to solve our community problems"; and (b) to educate the community for self-empowerment. They opened Everybody's Bookstore to provide the hard-to-locate Asian American studies books and newspapers from China.

Seeking a clearer political ideology, some ACC members started Wei Min She (WMS), meaning "organization for the people," in January 1971.

Moving away from revolutionary nationalism, they raised a class analysis of imperialism as the root cause of oppression: “The system of imperialism is controlled by the small class of capitalists who own the majority of the world’s wealth, while everyone else must work to live.” They retained their focus on community organizing, but also promoted workers’ struggles. WMS also formed a women’s group that pushed the group to view the struggle for women’s equality as intertwined with the overall struggle for Asian liberation.

Filipino Americans saw themselves as uniquely positioned, both as “brown” people within the Yellow Power movement and as former U.S. nationals, whose homeland was dominated by U.S. neo-colonialism. U.S.-born anti-imperialist activists and radical exiles from the Communist-led Philippine revolution, many from the San Francisco-based *Kalayaan* newspaper collective, formed the *Katipunan ng mga Demokratikong Pilipino* (KDP or Union of Democratic Filipinos) in July 1973. KDP’s dual goals were to support the national democratic movement in the Philippines and to struggle for a socialist United States. They opposed Philippine President Marcos’s martial law and organized support for Filipino American workers. At times, the two goals intersected, as in the 1981 murders of two Filipino cannery workers, labor organizers, and KDP members in Seattle, targeted by Marcos supporters for their anti-Marcos activities.

Despite their strong political unity—in opposition to imperialism, capitalism, racism, and in support of socialism—the various Asian American Left organizations also had bitter clashes, reflecting the fierce ideological conflicts that occurred throughout the 1970s U.S. Left. The International Hotel struggle in San Francisco provides an example. The KDP, IWK/CPA, and WMS/ACC all had offices on Kearny Street in or near the I-Hotel, home to elderly bachelors and a number of AAM organizations. The 10-year I-Hotel struggle drew tens of thousands in a broad-based movement that helped define the AAM of the 1970s. But the three revolutionary groups had sharp differences over ideology, strategies, and tactics. KDP, working closely with the International Hotel Tenants Association (IHTA), prioritized the needs of the elderly working-class Filipino and Chinese tenants and

were the most willing to work with city officials to develop strategic compromises to halt eviction and demolition. Other Left groups accused the KDP of being “hopelessly reformist.” By contrast, WMS and its later formation as the Revolutionary Communist Party (RCP) sought to heighten consciousness about the ways capitalism prioritized corporate profits over human rights and opposed the gentrification of Manilatown to make San Francisco the “Wall Street of the West.” WMS/RCP prioritized sharpening political ideology over strategies that produced small gains for tenants. Activists criticized the WMS/RCP for using ultra-Left, provocative tactics and for being a rogue organization, refusing to work with others over ideological disagreements and disrupting city hearings. The IWK/CPA strove for reforms for tenants, while raising revolutionary ideas. They emphasized how national oppression and racism intersected with capitalist motives in shaping corporate desires to demolish the I-Hotel.

These clashes reflected sharp ideological and organizational differences among Asian American Leftists in the late 1970s and beyond. Max Elbaum writes convincingly of a New Communist Movement that began in the late 1960s and remained vital throughout the 1970s. He argues against the mainstream historiography’s view that U.S. radicalism disintegrated in the early 1970s, brought about by the shift to Black Power, at a time of overall movement decline and a shrinking U.S. political economy. Rather than disappearing, Asian American radical organizations merged into multinational formations. For many, their community experiences and political study moved them beyond nationalism, even revolutionary nationalism, toward Marx, Lenin, and Mao as a means of opposing capitalism, imperialism, and racism. Many also wanted to form a vanguard party that would replace the defunct CPUSA in providing ideological and organizational leadership to guide spontaneous rebellions. In 1974, WMS joined the Revolutionary Union (RU), the first and until then largest New Communist group, which dissolved to form the Revolutionary Communist Party (RCP). In 1978, the IWK merged with the predominantly Chicano August 29th Movement to form the League of Revolutionary Struggle (LRS). Amiri Baraka’s

Revolutionary Communist League (formerly Congress of African Peoples), East Wind (a Japanese American Left organization in Los Angeles), and others soon joined. LRS was unique among the U.S. Left in its predominance of Third World membership (some 80%) and leadership, and its majority women's leadership and membership. LRS prioritized nationality-based organizing and according to IWK/LRS member Fred Ho, "had more [Asian American] members and far greater and extensive work in the 1980s than IWK ever had in the 1970s." Working primarily through secret members—many were top leaders in labor, community, student, and cultural sectors—and through their publication, *East Wind*, LRS exerted a significant influence on Asian American student and community struggles on both coasts. The LRS was known for its mass-based work (and was criticized for having a low priority on theoretical study), was a major force in Jesse Jackson's bids for presidency, and did not strive to be the vanguard party. In late 1976, the KDP began meeting with the Third World Women's Alliance and the Northern California Alliance, to form Rectification, later Line of March, which developed a theoretical journal and promoted party building. There were others, too, particularly the Asian Study Group in New York, founded by Jerry Tung, that formed a mass group, Asian Americans for Equal Employment, and also merged into multinational Marxist-Leninist groups, Workers Viewpoint Organization and later the Communist Workers Party (CWP).

Asian Americans played a significant leadership role in the New Communist movement—all the more significant given their continuing political invisibility. Former IWK women provided the major operational leadership for LRS; two of the three Rectification network founders were from the KDP; and Jerry Tung was selected as CWP general secretary. Although most Left organizations ended by 1990 (Line of March in 1989; LRS in 1990; CWP in 1990), Asian American radicals, though with little visibility, continue to work in the RCP and other socialist formations, in mainstream justice groups, and as independents. There was a small revival of Asian American radicalism in the 1990s, in response to California's anti-immigrant legislation and nationwide bans on affirmative action, and after September 11, 2001, in response to the

perpetual "war on terrorism." Even as the demographic base shifts toward the middle-class, the growing anti-immigrant movement, ongoing racism, and hardships caused by capitalist prioritizing war and corporations over education and healthcare suggests the basis for an expanded Asian American radical movement.

Ramakrishnan, Venkatraman (1952–)

Venkatraman Ramakrishnan is an Indian-born American and British structural biologist. He was awarded the Nobel Prize jointly with Thomas A. Steitz and Ada E. Yonath in Chemistry in 2009 "for studies of structure and function of the ribosome."

Venkatraman Ramakrishnan was born in 1952 in Chidambaram in Cuddalore district of Tamil Nadu, India, when his father was away on a postdoctoral

Joint winner of the 2009 chemistry Nobel Prize
Venkatraman Ramakrishnan. (AP Photo/Alastair Grant)

fellowship at the University of Wisconsin, Madison. His mother was also a scientist who taught at Annamalai University in Chidambaram. During his parents' absence, he was brought up by his grandmother and his aunts in an extended Indian family. In 1955, his parents moved to Baroda (called Vadodara since 1976) in Gujarat, where his father was appointed to head a new department of biochemistry at the Maharaja Sayajirao University. His mother got a PhD degree in psychology from McGill University later under his father's encouragement, which was unusual at the time in India. Ramakrishnan's childhood and adolescence were filled with visiting scientists from both India and overseas. A life of science struck him as being both interesting and particularly international in its character.

In Baroda of Gujarat, Ramakrishnan was educated at Convent of Jesus and Mary. His move to Baroda was something of a culture shock for him. He was three then and could only speak Tamil. When

he moved to Baroda, however, he had to learn a new language, Gujarati. One of his childhood memories is being unable to understand the language his young peers were speaking. This feeling of being an outsider has remained with him for much of his life as his career has taken him to many different countries. He spent one year in Adelaide, Australia from 1960 to 1961 and then moved back to India with an Australian accent. After high school, he failed in the entrance test of the Indian Institutes of Technology (IIT), partly because he did not attend the coaching classes, which his parents thought were "nonsense." His entrance test for a seat in the Christian Medical College in Vellore in Tamil Nadu was unsuccessful as well because the school was founded to mainly train female doctors. Although he was offered admission to study medicine in Baroda in 1968, he chose basic science instead under a National Science Talent Scholarship. He got his bachelor's degree of science in physics from Maharaja Sayajirao University of Baroda in 1971.

In the summer of 1971, when his parents took a short sabbatical at the University of Illinois in Urbana, Ramakrishnan visited the United States for the first time. He decided to go to graduate school in the United States, but few universities would consider his application without GRE scores. Later, he was offered a fellowship by Ohio University's physics department, which he accepted after turning 19 years old. Ramakrishnan got married in 1975 to Vera Rosenberry, who studied painting at the university. After he received his PhD in physics in 1976 from Ohio University, he intended to go to graduate school again for a second PhD in medicine. Even though he did extremely well on the MCAT (a nationwide medical college entrance exam) scoring in the 99th percentile in all the subjects, he got only one interview from Yale and was not selected because he was not an American citizen or even a permanent resident at the time.

In 1976, Ramakrishnan attended the University of California, San Diego (UCSD) to study biology. In 1977, he read an article in *Scientific American* written by Don Engelman and Peter Moore on ribosomes that he found most interesting. He then decided not to get his second PhD. Instead, he went to Yale University to work on ribosomes as a postdoctoral fellow with

Peter Moore from 1978 to 1982. At Yale, Moore and his coworkers, including the biochemist Don Engelman, put Ramakrishnan to work as he learned to isolate, purify, reconstitute, and assay ribosomes from cells. These specialized methods he learned in Moore's lab proved invaluable to him.

In spite of his contributions to ribosomal structure at Yale, Ramakrishnan's initial entry into academia was without doubt hard-won. He applied to approximately 50 universities, but he could not get a faculty position at the beginning. Instead, he accepted an appointment in the Biology Division at Oak Ridge National Laboratory in Tennessee in 1982. He was disappointed at the job because the Biology Division put him at the neutron scattering facility with no research resources. He began looking for alternatives within a month after arriving in Oak Ridge. Although quite unsatisfied with the research environment in Oak Ridge, Ramakrishnan made many fast friends there and his collaboration work with several structural biologists on the nucleosome sparked his interest in chromatin that continued until 1998, when he shifted to concentrate entirely on the ribosome.

Eager for bigger challenges and enough resources to conduct independent research, Ramakrishnan came to work at Brookhaven National Laboratory in 1983, where he was eventually hired as a biophysicist with tenure in 1990. There were two crucial developments for him at Brookhaven National Laboratory. The first was his collaboration with Steve White to find a better way to purify proteins. The second was the work enabling him to master new tools and collaborate with new colleagues. He was also a visiting scientist at Medical Research Council Laboratory of Molecular Biology (MRC-LMB) in Cambridge, England, from 1991 to 1992. From 1994 to 1995, he was a senior biophysicist at Brookhaven National Laboratory.

Ramakrishnan moved to the University of Utah as a professor of biochemistry in 1995. However, his funding there was limited. In 1999, he moved to England, taking a position at the MRC-LMB in Cambridge. When in Cambridge, Ramakrishnan's laboratory published a 5.5 angstrom resolution structure of the 30S subunit in 1999. The following year, his laboratory determined the complete molecular structure

of the 30S subunit of the ribosome and its complexes with several antibiotics. His next study provided structural insights into the mechanism that ensures the fidelity of protein biosynthesis. He became a senior research fellow at Trinity College of Cambridge in 2008.

After he left India at age 19, Ramakrishnan has gone back to visit only three times. In early 2002, he was asked to present the first G. N. Ramachandran Memorial Lecture in Chennai, and he also visited the Indian Institute of Science in Bangalore. His first visit to India in interactions with the Indian scientific community allowed him to get connected with scientists there. He later held a G. N. Ramachandran visiting professorship at the Indian Institute of Science in Bangalore. The Indian National Science Academy elected him as a foreign fellow in 2008. In 2010, he received India's second highest civilian honor, the Padma Vibhushan. He has become a source of inspiration for many people in India.

Ramakrishnan is a Fellow of the Royal Society, a member of EMBO (European Molecular Biology Organization) and the U.S. National Academy of Sciences. Prior to the Nobel Prize, he had received, the Louis-Jeantet Prize for Medicine in 2007. And he was given a knighthood in the 2012 New Year Honours for services to Molecular Biology.

See Excerpt from the Civil Liberties Act (1988)

Refugee Act of 1980

The Refugee Act of 1980 (Public Law 96-212) was the first comprehensive legislation on refugee admissions and resettlement in the United States. The act, which was signed into law by President Jimmy Carter on March 17, 1980 and went into effect on April 1 of that year, was a direct response to the growing issue of boat people pushed out of Indochina during the Vietnam War. The act defined who could be considered a refugee, laid out how the country would accept and resettle them, and how they could change their status and apply for citizenship.

Before the passage of the act, refugee admissions to the United States were considered on a case-by-case basis. The U.S. response to increasing displacement of people in Southeast Asia, Cuba, and Communist Eastern Europe demonstrated that this *ad hoc* admissions process was unsustainable, and that the country needed codified procedures and definitions that could manage refugee admissions in the long term.

The United States began to accept people as “refugees” only after World War II, when the government began using the Attorney General’s discretionary parole power to accept Eastern Europeans fleeing Communism. In 1965, Congress passed an amendment to the Immigration and Nationality Act of 1952 to systemize the refugee admissions process. It allowed for a certain number of people fleeing political, religious, or ethnic persecution in an Eastern Hemisphere Communist or Middle Eastern country to gain conditional admission to the United States. Although the amendment was intended to avoid having to accept refugees on an *ad hoc* basis, its specifications received a challenge in the same year from the Cuban refugee crisis, as Cubans were not eligible for entry under the new law.

The refugee crisis created by the Vietnam War reached its peak in the late 1970s. In 1978, President Carter ordered American ships to pick up people

fleeing Vietnam by boat. The administration moved to accept more refugees, in part to encourage other countries to do the same. By 1979, tens of thousands of Indochinese refugees were allowed into the United States per month. President Carter created the post of U.S. Coordinator for Refugee Affairs, and the Department of State and the Department of Health, Education, and Welfare created their own Offices of Refugee Affairs.

The increasingly dire refugee crisis caused by United States intervention in Southeast Asia led Congress to develop comprehensive legislation regarding refugee admissions. The Refugee Act of 1980 not only defined who could be admitted and how many to admit but also set out guidelines for resettlement assistance, which the federal government began to provide on a group-specific basis starting with the Cuban Refugee Program in 1962.

The law used the definition of “refugee” provided in the United Nations Protocol on the Status of Refugee. Under the new law, refugees may be from any country and may be suffering any form of persecution based on race, religion, nationality, political opinion, or membership in a particular social group. Only those refugees who are not permanently resettled in a third country may be eligible for entry to the United States. Those who participated in the persecution of others are not eligible.

The law directed the attorney general to develop a procedure for screening refugees abroad and determining whom to admit. The spouse and children of any individual granted refugee status are automatically given refugee status. The law allowed for 50,000 refugees to be admitted between 1980 and 1982; afterward, the president may decide on the limit after consulting with Congress. The president may exceed the set limit for a given year should a humanitarian crisis require it.

The law created an Office of Refugee Resettlement in the Department of Health and Human Services and stipulated that this office provide assistance to refugees, including job training, English as a second language classes, and limited cash and medical assistance. It also specifically required that equal access and opportunity to this assistance be given to women.

Under this law, refugees could apply for permanent residency after one year of living in the United States. Most refugees are protected from deportation to their country of origin if they continue to be persecuted there. However, those who commit serious crimes and those who are determined to be national security risks may still be deported.

No significant changes to United States refugee law have been passed since the Refugee Act of 1980. According to the Department of State, more than 1.3 million refugees from East and Southeast Asia have been resettled in the United States between 1975 and 2011, mostly from Vietnam, Cambodia, and Laos. This included Vietnamese, Khmer, Lao, Hmong, Chinese, Cham, and other ethnic groups living in that region. An additional 250,000 refugees from West and South Asia have been admitted in this time frame. Current refugee priorities in the Asia include Burmese, Bhutanese, and North Koreans.

Refugee Camps and Southeast Asian Migration

In 1975, North and South Vietnam unified under a Communist regime, forcing the migration of approximately 1.5 to 2 million refugees by land and sea over a period of two decades. First asylum countries (countries in the region that offered temporary asylum and shelter in provisional campsites) included China and Thailand (the two countries that refugees could reach by foot), Indonesia, Philippines, Malaysia, Hong

Kong, Singapore, and even Australia. The pattern of migration out of the region is typically categorized into three periods. The first period includes evacuations that took place between mid-April and early-May of 1975, during the weeks before and after the historic fall of Saigon. The second period, known as the period of the Boat People, occurred between 1975 and 1986, with peak migration occurring from 1978 to 1982. The third period of migration took place from 1987 into the early 1990s. Between these periods, migration streams ebbed and flowed until the early 1990s, when several thousand refugees would be forced to repatriate (i.e., return to Vietnam) under the 1989 Comprehensive Plan of Action mandated by the office of the United Nations High Commissioner for Refugees.

Neither first-asylum countries nor the West anticipated the extent of the exodus, which continued to flow through illicit channels despite the dangers involved in seeking asylum. Fear of political retribution forced families to escape in secrecy, leaving many vulnerable to exploitative channels that would cost life savings and sometimes result in arrest. An underground economy emerged for buying and selling travel papers and information on escape routes. However, double agents and opportunists quickly took advantage of the underground economy, often compromising the planned escape or abandoning individuals and groups at assigned locations. Successful avoidance of landmines and pirates did not automatically end with asylum. Sometimes refugees faced rejection by camp officials because of camp overcrowding. Boats were pushed back into the sea; refugees on foot were forced to retrace steps over landmines. In 1979, Hong Kong had 68,748 refugees; Malaysia 53,996; Indonesia 48,651; Thailand 11,928; the Philippines 7,281; and Singapore 5,451. When Hong Kong, Malaysia, and Indonesia, the most overburdened locations, began turning away new arrivals by refusing docking privileges, desperate refugees purposefully damaged vessels to prevent a forced return to sea. Larger ships carrying from 2,000 to 3,000 refugees were forced to linger for weeks offshore before they were granted entry or were redirected to different campsites.

Refugees admitted to camps continued to face harsh conditions, with thousands lingering in crowded makeshift bungalows for periods of six months to

several years. Camp residents were forced to build unstable domiciles out of foraged or traded material. In Malaysia's Pulau Bidong camp, for example, 40,000 refugees resided in a crude 200-acre campsite that lacked proper provisions and provided no privacy. Living quarters were not secure and safety continued to be a major concern as the influx of arrivals prevented the timely establishment of infrastructure. With no plumbing available, makeshift latrines were constructed with slabs of wood built over seawater. Former refugees have reported collecting rainwater for drinking purposes. When time in the camps began to grow longer, classrooms were set up and cafes and gambling rooms were built. Residents established makeshift medical clinics to help care for the ill. Despite attempts to create community, rapes and kidnappings occurred, as did thefts, brawls, and riots. Women and children were especially vulnerable in this chaotic environment, particularly if they were unaccompanied. In the mid-1980s, academic anthropologist James Freeman and former refugee and United States trained sociologist Dinh Huu Nguyen visited the camps and found that the vulnerability of children attracted violations that included rape, theft, and bullying from guards and adult refugees alike.

In 1979, a diplomatic standstill between Vietnam and the United States over conditions of normalization precipitated a desperate measure by the UNHCR to offer refugee status and asylum to all evacuees attempting to leave Vietnam. At the UNHCR Convention on the Indochinese Refugee, Vietnam announced that it would not permit refugee repatriation unless economic and diplomatic normalization occurred, including reinstatement of Vietnam's membership in the International Monetary Fund (IMF). The United States refused these conditions, insisting on continued embargo and refusal of aid. To curb anxieties felt by first asylum countries and the subsequent refusal of asylum to new refugee arrivals, the UNHCR mandate included provisions that guaranteed the eventual resettlement of refugees in Western nations. The provision temporarily alleviated concerns held by first asylum countries over the fact that permanent integration of refugees would leave the countries vulnerable to military occupation and political annexation by a Vietnam eager to expand. First asylum countries were also less

prepared than the West to support the new population economically.

When evidence of the high death rates of clandestine boat escapees became known, the United States implemented the 1979 Orderly Departure Program (ODP) in concert with the UNHCR mandate for automatic asylum for Southeast Asian refugees. The Orderly Departure Program sought to work with the Vietnamese government to provide legal means of escape that were less perilous and more sustainable. Still, many Southeast Asians could not navigate successfully the bureaucracy of the ODP, which involved a cumbersome exchange of lists of names between the two governments. Clandestine and independent escapes by boat continued into the 1990s. The ODP in concert with UNHCR's blanket measure of guaranteed political asylum resulted in an increase in refugee migration by boat, mostly by ethnic Chinese fleeing restructuring and reeducation between 1978 and 1982. In 1979, refugee arrivals to first asylum countries numbered 202,000. By 1980, 400,000 refugees arrived to a first asylum country, with 400,000 others killed or drowned. Hong Kong alone claimed a total of 124,225 refugees between 1975 and 1984. The total number of refugees that remained in all camps in 1986 was approximately 35,000, with many having lingered in the camps for years. With resettlement quotas in Western countries still high enough to accommodate the remaining 35,000, a new influx of refugees started to arrive in 1987 to first asylum countries. Hong Kong, Indonesia, and Malaysia, became concerned that no end was in sight.

In 1988, in response to a new wave of arrivals, Hong Kong broke with the UNHCR's 1979 mandate and established its own measures to stem the flow of arrivals. Under its new policy, Hong Kong required new arrivals to undergo "Refugee Determination Procedure," a screening process that conveniently classified a majority of screened candidates as unclassified persons rather than as refugees, thus lowering their chances of resettlement in the West. The new procedure legitimated Hong Kong's suspicions that more recent refugees were economic refugees rather than political refugees, a distinction that many legal theorists and human rights advocates challenge. Procedural weaknesses also played a role in the adjudication

errors of Status Boards who were charged with determining an applicant's status. Status Boards, for example, regularly relied on narrative summaries provided by interviewers and did not meet applicants themselves. The persons labeled "unclassified" rather than "refugee" lingered in camps even after a program of "voluntary" repatriation was brokered with Vietnam in 1988. Hong Kong elected to employ forcible repatriation of unclassified individuals to encourage camp residents to voluntarily return to Vietnam.

One strategy implemented by Hong Kong was a closed camp policy that restricted the movement of Southeast Asian refugees, prohibiting camp residents from seeking minor employment, education, or participating in any activity outside of the camp boundaries. Refugees were held as prisoners indefinitely in these detention centers until voluntary or forced repatriation. The international community criticized Hong Kong's policy and argued that its detainment action was not in response to a threat caused by the refugees but rather a means of control and determent that undermined asylum and human rights protocol. The number of refugees in closed camps in Hong Kong 1987 was 9,537 (with 3,395 new arrivals that year). In 1988, Hong Kong's detainment number increased to 25,673 (with 34,112 arrivals that year). By 1989, the number of refugees detained by Hong Kong had surged to 55,728.

On December 16, 1988, a Memorandum of Understanding signed between Hanoi and UNHCR allowed repatriation of refugees on a voluntary and case-by-case basis. The first voluntary repatriations under the memorandum occurred on March 2, 1989 with 75 refugee campers. By May, a second repatriation effort increased the number to 148. In 1990, 5,452 were repatriated. In 1991, repatriation numbers grew to 7,747; in 1992, they climbed to 12,612. The UNHCR's 1989 Comprehensive Plan of Action ensured resettlement in the West for refugees arriving in Hong Kong before June 14, 1988, and before March 15, 1989 in other asylum countries within three years of the plan. Few refugees arriving after these dates were resettled in the West. Most were indeterminately detained until forcibly or voluntarily repatriated. To encourage voluntary repatriation, the UNHCR provided monetary stipends of US\$360 as reintegration incentive and assistance per person, adult and child. Additionally, \$50

spending cash and \$25 for children was distributed. Hong Kong remained the only first asylum country to establish an Orderly Repatriation Program.

Religion and Its Social Function in the Japanese American Community

Religions and religious organizations play a vital role in virtually all ethnic communities in our country. More than just places of worship, ethnic churches, temples, synagogues, and mosques provide a host of social and economic functions ranging from housing and employment services to dancing and sports. Like other ethnic community organizations in the United States, religion and religious organizations provide a safe and often familiar environment in an otherwise strange land. Moreover, as the relationships between a religion, the ethnic community, and the larger society evolve, the social functions similarly adjust as well.

For the Japanese American community, the link between social functions and religion began from the very onset of the community itself. The first religious organization, and perhaps the first Japanese American organization in general, was the Fukuinkai (Gospel Society) established by students converts in San Francisco in 1877. In addition to bible study, the group offered a bunk house and social receptions for Japanese students and travelers.

The connection between religion and social functions became firmly established once the communities of Japanese Americans grew. Large-scale Japanese immigration to Hawaii and the United States began in 1885, when many Japanese went as contract laborers to the sugarcane plantations in Hawaii. In May of that same year, the First Japanese Presbyterian Church of

San Francisco began its operation. In 1886, the first Japanese Young Men's Christian Association formed in San Francisco. These organizations were an outgrowth of the Gospel Society and American missionaries working within the immigrant community.

Transplanted Japanese religious organizations became a part of the community a decade later through the formation of the Young Men's Buddhist Association (YMBA) in 1898 also in San Francisco. The YMBA subsequently formed the North American Buddhist Mission (NABM) that same year. The NABM and its current incarnation, the Buddhist Churches of America (BCA), is an overseas branch of the Nishi Hongwanji (Western School) of Jodo Shinshu (True Pureland) school from Kyoto.

The membership for these ethnic religious groups consisted primarily of young male laborers. In keeping with this body and its circumstances, the religious organizations offered general settlement services such as employment, medical, housing assistance and language classes. In a population of predominantly single male laborers, the role of religion was also, in many ways, limited. The lives of these men revolved around hard labor over long hours and days. These individuals often had little time to devote to religious activities.

Socially, however, the churches, temples, and, most notably, the Young Men's Associations expanded their activities to appeal to what little social time this population enjoyed. By 1900, the associations had established libraries, dormitories, and community newspapers. The churches and temples also began to include music classes as well as employment offices, and a savings department as part of its operations.

Another key factor affecting the course of the Japanese American community was the anti-immigrant and anti-Japanese movement. The first decade of the twentieth century saw a rise in anti-Asian sentiment throughout the Western U.S. states. One of the most significant actions in this respect was the 1906 San Francisco Board of Education's vote to create segregated Asian schools for Japanese students.

Although the number of children would be affected was small, this decision became an international issue when the Japanese government protested on behalf of their emigrant populations. The subsequent negotiations resulted in the 1907

Gentlemen's Agreement that essentially traded unsegregated schools for the end of labor migration. The general hostility toward immigrants continued, however.

By 1913, all of the Western U.S. states had passed a series of "alien land laws," which denied specific immigrant groups the right to own land. The legal culmination of the hostility manifested itself in the federal Immigration Act of 1924, which effectively ended all significant immigration from Japan.

As the flow of immigrants represented the original source for the membership in the organization, the end of labor immigration meant the end of a steady supply of potential new members. Moreover, the efforts to marginalize and exclude the Japanese from mainstream economic life would mean that its membership was not likely to have the type of financial resources to assist the maintenance, let alone growth of the organization.

This situation, however, pushed the social role of the religious organizations within the community. In the face of a hostile general community, the Japanese American population experienced an enhanced sense of ethnic solidarity. Like other immigrant groups, the Japanese Americans developed their own ethnic enclaves in which they recreated the social services unavailable elsewhere. The churches and temples were one of those organizations to which the community turned.

Similarly, and perhaps ironically, the Gentlemen's Agreement of 1907 was one of the other key factors in expanding and consolidating the Japanese American community. Although it curtailed the immigration of Japanese as laborers, a loophole existed for wives and children of those already residing in America. The Agreement allowed for these individuals to immigrate as part of a family reunification. This allowance began the period of "shashin-kekkon" or picture brides.

The term "picture brides" refers to the practice of exchanging photos as the means by which prospective husbands and wives made their marriage choices. Once a couple agreed to marry, a proxy groom would stand in for the husband at the marriage ceremony in Japan. Upon official record of the marriage, the new bride became eligible for entry into the United States under the terms of the 1907 Gentlemen's Agreement.

Thus, from 1907 to 1924, over 20,000 Japanese women entered U.S. ports. The unification of husbands and wives transformed the Japanese American community from being a primarily bachelor society to a family community. Soon, thereafter, these families led to the emergence of an American-born generation: the Nisei.

These demographic shifts translated into both an expansion of social functions as well as a basic shift in activities. Rather than simply providing newcomer settlement and assimilation services for single workers, the organizations began to meet the needs of a family population. The first indication of this transition came with the formation of Japanese language schools in 1903. Subsequently, in addition to language classes, the churches began to provide a whole host of what can be described as cultural activities. The church offered martial arts training in the form of judo, kendo, and karate. By 1914 church athletic leagues began holding games and tournaments and all Nisei Boy Scout troops was formed in 1915.

By the 1920s individual churches and temples had expanded their networks to engage in state and national activities. Through state and national conferences, social functions expanded ostensibly as a part of religious meetings and discussions. As a part of these religious gatherings, there would always be dances and receptions.

In effect, the Nisei utilized these conferences to extend their social network in the Japanese American community. As these gatherings numbered in the thousands at their largest, they allowed the Nisei to see and to engage with their peer group. By the 1930s, social activities, in many ways, dominated these religious organizations. Although religious services occurred on Sundays, the other remaining days of the week saw the buildings being used for everything from dances and sports events to ice cream socials. The organizations also became a sponsor for community events such as camping trips and picnics as well as beauty contests and festivals.

The entry of the United States into World War II brought about what amounted to a forced dissolution of Japanese American communities on the West Coast. With the relocation of Japanese Americans, virtually all Japanese American churches and temples were

shuttered. When in the relocation centers, the various religious organizations formed interfaith councils to share and coordinate religious as well as social functions, allowing each group to continue to operate under the difficult conditions.

As church members returned to their communities in early 1945, the church and temples facilities served as resettlement centers for the people returning from the relocation centers. In the face of continuing social hostility to the Japanese American community, the churches provided temporary hostels, job placement centers, and meeting places. More important, the experience of incarceration during the war had created a generational sea change in the ethnic community. On one hand, the leadership of the community and the religious organizations passed from the Issei to the Nisei. On the other, the Nisei were left with a shared bond and identity as an ethnic group as a result of the relocation experience.

The postwar era until the late 1970s and early 1980s thus marks a second stage in which the Japanese American religious organizations reasserted its ethnic community service functions. The Japanese American community once again turned to their ethnic churches and temples for social functions of the community. They largely recreated the groups and activities originally developed before the war and also extended those functions to the third generation of Japanese Americans, the Sansei. Moreover, as anti-Japanese sentiment transformed to tolerance and even friendship and admiration, Japanese Americans began to make significant gains socioeconomically. With this change in the status of the ethnic population, the geographic spread of the Japanese American community changed as well. New ethnic churches and temples not only improved and expanded their facilities but also began to build new branches in suburban areas rather than in former urban ethnic enclaves or rural communities.

From the 1980s, Japanese American religious organizations experienced some new changes. On one hand, the membership remains overwhelmingly Japanese American. On the other hand, the issue with new demographic change is that with high levels of structural and physical assimilation among the Sansei and low levels of immigration from Japan, the ethnic enclave is gone. Thus, it seems that the traditional social roles are no longer needed by its ethnic community.

Yet the pattern thus far has been that this increasingly assimilated membership continues to look for ways to maintain their ethnic identity and have turned to the churches to provide this. The 1980s saw the initiation of Japanese cultural programs for children during summer recess. With Japanese names such as Medaka (minnow), Tampopo (dandelion), and Gakko (School), these are programs that introduce Japanese American children to elements of Japanese and Japanese American culture, history and traditions. In a parallel development, a number of churches began to sponsor Taiko (Japanese drum) groups in the 1980s as well.

This indicates that Japanese American religious organizations have experienced a persistence of ethnicity in the motivations of members. In effect, although Japanese Americans now have the ability to find social outlets in the general society, they choose to attend ethnic churches and temples and utilize them precisely because of their ethnic social roles.

Thus, 120 years into the history of Japanese American religious organizations, the specific social roles have changed, but they appear to have been largely structured within the activities originating from and addressing the needs of the community. From immigration to settlement, to segregation, to incarceration, to resettlement, to acceptance, and perhaps finally to assimilation, the experience of these churches, temples, and associations is a reflection of the experience of Japanese Americans and the Japanese American community.

In every stage of the community, religious organizations had the resources, will, and ability to address the needs of the ethnic population both religiously and socially. As the composition and the needs of the membership changed, the churches and temples were there once again to be a social resource.

Rhee, Syngman (1875–1965)

On March 6, 1875, Syngman Rhee was born into a scholarly *yangban* family of royal lineage, in the ancient capital of Kaesong, now part of North Korea. Despite his aristocratic background, he grew up with Korea's poor on the outskirts of Seoul and realized the importance of the welfare of the common people. When he was nine years old, an epidemic of smallpox left him blind until medical missionary Dr. Horace Allen cured him. Rhee's early education consisted of Chinese Confucian classics and calligraphy, supplemented by Korean traditional proverbs and poetry. At the age of 19, he enrolled at Paejae Middle School, run by American Methodist missionaries, to study the modern world and the English language. While attending Paejae, Rhee started the first daily newspaper in Korea. It was published partly in Korean and partly

Syngman Rhee, president of South Korea (1948–1960).
(Library of Congress)

in English, establishing Rhee's habit of addressing both Korean and American audiences in his political endeavors.

After the Sino-Japanese War, Japan promised Korean independence only to consolidate the eventual colonization of the country. Rhee helped found the Independence Club to organize mass protests but was arrested in 1897. After a failed escape attempt, Rhee was placed in solitary confinement for seven months and subjected daily to extreme torture, after which he was tried and sentenced to life imprisonment, barely escaping execution on the evidence that the pistol in his possession had been unused. Rhee spent his prison years constantly reading English magazines and books and writing his magnum opus, *The Spirit of Independence*, which outlined the principles of individual freedom and self-determination of nations in relation to Korean independence. This was also a time of spiritual awakening. Rhee had gradually gained an appreciation of Christianity's role in fostering Western democracy, and out of his humbling prison experience awoke his deep Christian faith, one of his most defining traits.

Upon his release in the upheaval of the Russo-Japanese War in 1904, Rhee went to Washington D.C. to work for the cause of Korean independence from abroad, hoping to invoke the language of peace and friendship in the Korean-American Treaty of 1882. He met with President Theodore Roosevelt and other influential Americans, but discovered that most were too circumspect about maintaining good relations with Japan and broadly considered Korean independence a lost cause. In the interim, Rhee, believing an advanced education would be useful for his career, entered George Washington University, fortuitously named for Rhee's lifelong hero. He was awarded his AB in 1907, after which he completed both his MA at Harvard and his PhD at Princeton within the span of three years, making him the first Korean to receive a doctorate in the United States. He later attributed his American education in history, political science, and economics as the foundation for his work toward establishing a self-governed Korea. He made long-lasting connections at Princeton, including President Woodrow Wilson. Rhee returned to Korea in 1910 that had been annexed by Japan. Feeling wary of the Japanese, who recognized him as a threat, he lived in exile until the end of Japanese rule in 1945.

In 1912, Rhee received an invitation from the Korean National Association, a nationalist expatriate organization in Hawaii. Rhee spent the next 25 years in and out of Hawaii working for the independence movement in exile and serving the Korean-Hawaiian community as school principal and church founder. Concurrently with the March 1, 1919, nationwide uprising against the Japanese occupation, exiles in Shanghai established the Korean Provisional Government. Rhee was elected in absentia as its first president, a post he held until 1939. In 1934, Rhee married Francesca Donner whom he had met on a trip to meet delegates to the League of Nations where Donner had been working as secretary to the Austrian delegation. She would prove to be an invaluable help to Rhee's work for the rest of his life.

Rhee spent the World War II years in Washington gaining recognition, with help from his old American missionary friends, and pleading for Allied promises on the basis that Korean independence was a matter of Asian stability and international security. In early

1941, he published *Japan Inside Out*, in which he warned the United States of the danger of leaving an imperialist aggressor unchecked—proved by the December 7 Pearl Harbor attacks later that year.

The Allied victory in 1945 signified Korea's liberation and the end of Rhee's self-imposed exile. The Americans were received enthusiastically as liberators, and their endorsement of Rhee, as well as his personal prestige, nationalist credentials, and force of personality, gained him a strong following. From the beginning, the United States and the Soviet Union (USSR) had asymmetrical commitments to their joint military occupation. The USSR with interests in entrenching themselves on the Korean peninsula set up highly trained and disciplined Communist cadres in North Korea. In contrast, government in South Korea under the ambivalent and ill-prepared United States was disorganized and partisan. Of the numerous political factions, Rhee, campaigning for immediate independence and unification, rose to the forefront. In May 1948, he was overwhelmingly elected Chairman of the newly formed National Assembly; in July, he was elected president, and, in August the Republic of Korea (ROK) was declared as the only lawful government in Korea, for the USSR had refused to hold elections in the North.

North-South antagonism steadily grew. On June 25, 1950, with Soviet and Chinese backing, North Korea invaded, taking the ROK army by surprise, and captured Seoul by June 28, forcing Rhee to relocate his government to Pusan. The UN Command counterattack under General Douglas MacArthur revived Rhee's hope for unification, and he pushed for a northward surge. But President Harry Truman's fears of a wide-scale international war were realized when Chinese entered the war, resulting in a two-year stalemate. Military Armistice Agreement was signed on July 27, 1953, to bring an uneasy stalemate to the war.

Rhee was reelected in 1952 by popular vote. He exercised control through the loyalty of the bureaucracy, police, and military, which were staffed by trained and talented professionals. Those staff had formerly served under the Japanese, prompting accusations of collaboration, which Rhee deflected with his own impeccable anti-Japanese credentials. The Korean

War had damaged the nation's infrastructure and industrial capacity and brought floods of refugees from North Korea, China, Manchuria, and Japan. Realizing that the key to real economic recovery lay in modernization, Rhee promoted compulsory elementary education in Korea and study abroad programs in the United States. An important part of his modernization policy was land reform to create a new class of entrepreneurial farmers and to break the feudal power of yangban landlords.

In 1955, various anti-Rhee groups merged to form the Democratic Party. His supporters, realizing that Rhee must stay in leadership to preserve the government and their personal privileges, pushed through a constitutional amendment allowing him to run for a third term even though the votes fell short of the required two-thirds majority. Rhee was reelected in 1956, but his administration was quickly becoming drained of resources in the face of strong opposition from the Assembly. In the fourth presidential election, not only did Rhee win by a landslide, but his widely unpopular running mate won as well, prompting cries of electoral fraud. Student demonstrations that began in Seoul spread into other major cities, and the military intervened but failed to stop the growing political protest. Rhee resigned on April 26, 1960 and lived in Hawaii until his death in 1965 at the age of 90.

For one so devoted to his nation, Syngman Rhee lived much of his life abroad and died far away from his country. His regime was marred by corruption and scandal and is largely considered a failure. Yet, accusations that Rhee was autocratic must be viewed in the historical context. Korea, suddenly thrust into the modern international sphere after isolation and foreign domination, was in many ways unready for democracy and lacked the necessary capital, infrastructure, and the capacity to govern. Though often misunderstood, Rhee left a tangible mark on modern South Korea. His Economic Development Council, his program to train technocrats, and the U.S. economic aid he secured laid the groundwork for South Korea's modernization.

Robles, Al (1930–2009)

Born in San Francisco on February 16, 1930, Alfred A. Robles was a Filipino American poet, teacher, and community activist who published numerous poems and collected the history of the Bay Area *manongs* (elderly first-generation Filipino migrant workers). Robles was second eldest of a large family consisting of 10 brothers and sisters. He was born and raised in San Francisco's Fillmore district and remained there virtually his whole life.

Al Robles's poetry combined explorations of space, place, and time within a framework of identity based avant-garde poetics established within communities of ethnic writers beginning in the late 1960s. Often in a single poem, Robles mixed numerous dialects—language from the streets of San Francisco, the heterogeneous voices of the manong, and Tagalog—crossed back and forth between the Philippines and the United States, and moved between the past and the present. The manong were central to his poetic aesthetic. In the introduction to *Rappin' with Ten*

Thousand Carabaos in the Dark (1996), Robles wrote: "As a poet I've followed the footprints of the manongs. I gathered up their history from Agbayani Village to Stockton, in the farms and fields that stretched north, south, east, and west. I followed them deep inside fish bellies swimming across the icy cold Pacific waters. Sat down with every single manong and watched as they weaved out dreams from fishnets beneath trees, in the Kauai rains. I cried out to them across the sugar cane fields." The manong, however, were not only vessels of the past, their stories informed the sensibilities of second- and third-generation Filipino Americans, such as Robles. In this manner, Robles's project was political in that it provided Filipino Americans with an alternative history and a path to connect with their cultural and ethnic heritage. In the poem, "Tagatac in Ifugao Mountain," he wrote: "Who's going to travel/far back in the past?/Writing empty poems/to the wind/is closer to ifugao mountain/Brings the mind closer/to its roots."

Robles was conscious of his identity as a Filipino American and Asian American poet. In fact, Robles felt poetry was a vehicle for Asian Americans to explore and create their identity against the backdrop of racial and class discrimination in the United States. Moreover, he argued that poetry should be a vehicle where Asian Americans connect with other communities of color. In his essay, "Hanging in the Carabao's Tail" (1989), Robles recalled the origins of the Asian American poetry movement in the early seventies: "As Asian American poets, it was essential to dwell on our identities, to feel the need to find who we are. This was not just mere talk. This has been the stepping stone of Asian American poetry. Yet, however, no matter how brown, black, yellow or red we are—whether we like it or not, we should live as one tribal family, not dividing the communities of poets running amok."

Robles's poetic practice crossed over into his work as a teacher, community activist, and historian. It is difficult to delineate the parameters of each role because they each informed and influenced the other. Beginning in the early 1970s, Robles began going to the Kearny Street Workshop, which at this time was located within the original I-Hotel. The Kearny Street Workshop was established in 1972 to promote the

creative endeavors of Asian Americans during a time of radical change within the United States. Robles remained a fixture at the Workshop throughout his life, offering mentorship and guidance to generations of young poets. The I-Hotel is also where Robles often interacted with the manong and collected their stories. When the I-Hotel became the target of San Francisco's urban renewal project, Robles was at the forefront of the movement to save the building that was the home for numerous low-income Filipinos. Even though the movement to stop the destruction of the I-Hotel was ultimately unsuccessful, Robles continued to work to find new housing for the elderly. As a teacher and mentor, Robles was known for taking emerging activists and artists to Agbayani Village in Delano and the Japanese internment camps at Tule Lake. He felt it was important for poets to bring themselves into history.

In 1996, the UCLA Asian American Studies Center published *Rappin' with Ten Thousand Carabaos in the Dark*, which remains the only volume of his collected poetry. In 2008, filmmaker, Curtis Choy, released a 47-minute documentary about Robles entitled, *Manilatown Is in the Heart: Time Travel with Al Robles*. The film follows Robles through various areas of San Francisco and provides a wonderful record of his multilayered and vibrant life. He died on May 2, 2009.

Romulo, Carlos P. (1899–1985)

Born on January 14, 1899, in Camiling, Tarlac, Philippines, Carlos Peña Romulo was a Filipino politician, diplomat, writer, and intellectual. He lived parts

of his life in both the Philippines and the United States. Romulo's life can be seen as comprising three main periods: the Quezon era, the era of exile, and the postwar years. Each of these periods highlights specific themes in his overall thought.

Romulo studied at Manila High School and the University of the Philippines. He came from an economically privileged social class and spoke multiple languages and dialects. Under the influence of his American high school instructors, he became an ardent admirer of the English language and American culture. Simultaneously, he developed a deep veneration for then Philippine Senate President Manuel Quezon, under whom Romulo would later serve in various roles and guises.

Although Romulo came into contact with Americans in the Philippines, his experience of racial difference became more nuanced after he traveled to the United States as a *pensionado* (government scholarship student) and enrolled in graduate school at Columbia University, where he studied foreign trade service and comparative literature. When studying at Columbia, he discovered racism aimed at not only African Americans but also Filipinos. Despite the difficult circumstances, Romulo chose not to exclude himself from interacting with whites. Rather, Romulo continued to interact with both whites and African Americans and used his influence to bridge the gap between the two groups. Some scholars have argued that Romulo's strategy for dealing with racism at Columbia University served as a model for how he would deal with the colonial question later in life at the level of the transnational.

After graduating from Columbia University, Romulo returned to the Philippines in 1922 and began working under Quezon as his private secretary and the assistant editor of the *Philippines Herald*. Although their relationship was at times tumultuous, Romulo remained close to Quezon throughout the 1930s and into the 1940s. It was during this period that Romulo began to develop his ideas on how the Philippines might forge its own strand of a postcolonial modernity. Rather than reject the social, political, and economic policies imposed upon the nation by their colonial oppressors, Romulo argued for an acceptance of Western European liberal ideology. He felt the clearest

path toward decolonization was to prove to the United States that the Philippines was a nation that shared its same values and mores. It was also during this time that Romulo began to develop his relationship with U.S. General Douglas MacArthur. Because of his ambivalent stance toward U.S. colonialism and his privileged position with the U.S. military, Romulo had a somewhat fraught relationship with more staunchly anticolonial Filipino and Filipino American intellectuals.

The 1940s was an incredibly rewarding time for Romulo. During this period he won the Pulitzer Prize for correspondence and published four important autobiographical books, *I Saw the Fall of the Philippines* (1942), *Mother America* (1943), *My Brother Americans* (1945), and *I See the Philippines Rise* (1946). Historian Augusto Fauni Espiritu has argued that during this era Romulo began to adopt more anti-colonial stance in his writing, which included the development of emerging pan-Asian and Third World perspectives. During World War II, General MacArthur sent Romulo to the United States where he gave hundreds of lectures throughout the country in support of the Pacific War. Although living in the United States, Romulo often thought of himself as an exile and this theme would imbue his later writings.

At the end of World War II, Romulo was appointed resident commissioner to the United States Congress by President Sergio Osmeña and thus began his career in Philippine politics. From 1949 to 1950 he was president of the United Nations General Assembly. He served as the Philippines' Secretary of Foreign Affairs from 1950 to 1952, 1963 to 1964, and 1968 to 1984. In 1953, Romulo unsuccessfully

ran for president of the nation. After his failed attempt to run for president, Romulo continued to write many books on both national and international politics, including *Crusade in Asia* (1955) and *The Meaning of Bandung* (1956). In these books, he further developed his ideas on various issues concerning decolonization, pan-Asian identity, the question of communism in Asia.

Among scholars and historians of the Philippines and Asian American studies, Romulo remains a controversial figure because of his complex relationship with the United States, and in the final period of his life, his association with the Marcos regime. Because of his support of Marcos, Romulo's writings have been largely overlooked until recently where the discourses of ethnic studies, transnationalism, and postcolonial theory have opened up new critical paradigms where these contradictory narratives can be examined. He died on December 15, 1985, in Manila.

S

Saiki, Patricia F. (1930–)

Patricia Fukuda “Pat” Saiki is a Japanese American politician and educator from the State of Hawaii. She represented Hawaii’s 1st Congressional District for four years (1987–1991) and served as the administrator of the Small Business Administration under President George H. W. Bush (1991–1993). She is a Republican.

Patricia Fukuda Saiki was born on May 28, 1930, in Hilo, Hawaii. She graduated from high school in 1948 and then from the University of Hawaii in 1952 with a bachelor’s degree. After graduation from college, Saiki got married and taught history in Hawaii’s public and private schools for many years. She began her political career by working in local party politics and would later become the vice chair of the state Republican Party (1966–1968). She was a very active member of the Hawaiian Republican Party organization. Her first public office was in the Hawaiian House of Representatives. Saiki was elected in 1968 and served for six years.

In 1974, Saiki was elected to the Hawaiian State Senate and enjoyed an eight-year tenure. During her time in the Hawaiian State Senate, she rose to occupy the position of assistant GOP floor leader. However, she left in 1982 and made an unsuccessful bid for the position of lieutenant governor.

During her time out of public office, Saiki returned to her political roots by working for the Republican Party. In her position as party chair (1983–1985), she played an instrumental role in reviving the Republican Party in Hawaii’s Democrat-dominant political climate. In 1984, President Ronald W. Reagan was able to become the second Republican presidential

candidate to carry the Hawaiian Electoral College during the presidential election.

In September 1986, Saiki was unsuccessful in the special election for the vacant seat of U.S. Representative that Cecil Heftel left behind when he entered the Hawaiian gubernatorial race. She lost the race to Democrat Neil Abercrombie. However, as Heftel’s original term ended, Saiki once again faced her Democratic opponents. In the same year (1986), Saiki ran a second time for the Representative seat from Hawaii’s 1st Congressional District, but this time against Democrat Mufi Hannemann (Neil Abercrombie had lost the primary to Mufi Hannemann). She was successful the second time around and was elected to Congress, thus becoming the only Hawaiian Republican to ever hold a House seat. She would serve for two consecutive terms, extending her tenure in Congress between 1987 and 1991.

Although Saiki served in Congress, she also took up important positions in the Republican Party. She served as a delegate and secretary of the Republican National Convention (RNC) in 1988.

Saiki was known for being fiscally conservative on economic issues. She was also a staunch supporter of the foreign policies of President Ronald Reagan and President George H. W. Bush. During her time in the House, she voted in support of funding for the Strategic Defense Initiative as well as aid for the Nicaraguan Contras. However, she was much more moderate when it came to social issues. She believed that women should have control of her own reproductive choices. This issue position stemmed from her own experience as a woman who had to work hard to prove herself professionally in a male-dominant field. Saiki also had a deep interest in the protection and

preservation of life in the ocean as well as offshore habitat. As a representative from Hawaii, it is perhaps unsurprising that the protection of ocean environment was an issue that she felt deeply about. In addition, as a person of Japanese descent, Saiki cosponsored the Civil Liberties Act of 1988, which provided monetary reparation and official government apologies for Japanese Americans that were interned during World War II. She was one of the few Republicans that broke rank to vote in favor of this bill. This landmark piece of legislation was signed into effect by President Ronald Reagan.

During her time in the House, Saiki served on the Committee on Banking, Finance, and Urban Affairs, the Committee on Merchant Marine and Fisheries, as well as the Committee on Aging.

In 1990, Saiki decided to enter the special election to fill the Senatorial seat that was left vacant when Senator Spark Matsunaga passed away unexpectedly. She was able to beat out other Republican hopefuls to win the GOP nomination but fell short of her efforts when she faced her Democrat opponent, Daniel K. Akaka, during the special election. She was succeeded in her congressional seat by Democrat Neil Abercrombie.

After departure from Congress, Saiki continued to serve in the government, but this time as the Director of the Small Business Administration working under President George H. W. Bush between 1991 and 1993. In 1994, she also made an unsuccessful bid for the Hawaiian gubernatorial race, losing to her Democratic opponent Ben Cayetano.

During her long and distinguished political career, Saiki had assumed many leadership roles. Some of those include the chairman of the National Women's Business Council, a delegate to the Emperor of Japan's funeral, a member on the President's Advisory Council on the Status of Women, and the President's National Commission on the Observance of International Women's Year.

Saiki has returned to her educator role as she retired from public life. She taught in Hawaii and briefly at Harvard University's Institute of Politics at the John F. Kennedy School of Government in 1993.

Sakata, Harold (1920–1982)

Harold Toshiyuki Sakata, born July 1, 1920 in Holua-loa, Hawaii, was the first American of Japanese ancestry to win a medal in the Olympics, a professional wrestler, and James Bond's bowler-hatted nemesis in the movie *Goldfinger* (1964).

Sakata grew up skinny, so at the age of 16, he started lifting weights. He won his first weightlifting competition in 1941, and in 1948, he won a silver medal at the Summer Olympics. All but one member of the U.S. Olympic weightlifting team of 1948 was the son of immigrants, and the exception was an African American. Thus, for American minority communities, the symbolism of the 1948 weightlifting team was that iron (and by extension, sport) did not discriminate.

During the winter of 1949–1950, Sakata quit amateur weightlifting to become a professional wrestler. The reason was that amateur weightlifting did not put food on the table.

During late 1951, Sakata participated in a pro wrestling promotion that toured Japan. Highlights of this tour included the debut of Japan's first pro wrestling superstar, a former sumotori called Rikidozan (Kim Sin-nak, 1924–1963).

Upon returning to the United States in early 1952, Sakata changed his image. No longer Mr. Sakata, the smiling weightlifter from Hawaii, he was now the glowering Tosh Togo, brother of the infamous Great Togo (Oregon's Kazuo George Okamura, 1912–1973). Audiences' cries of "Kill the Jap!" during appearances of the Togo Brothers led to a series of legal challenges spearheaded by the Japanese American Citizens League of Minneapolis. The uproar

eventually caused U.S. television networks to curtail the kinds of stereotyping allowed on national broadcasts and contributed to professional wrestling being relegated to regional rather than national markets until the 1980s.

Nonetheless, as Tosh Togo, Sakata traveled more widely and made more money than ever before, and it was his wrestling appearances in Britain in 1963 that caused the producers of *Goldfinger* to choose him to play Oddjob in the movie. Sakata reprised the Oddjob character in television ads for Vicks cough syrup, and from 1965 until his death from cancer in 1982 he played the villainous characters in television shows and movies. He died of liver cancer on July 29, 1982, in Honolulu, Hawaii.

Sam, Sam-Ang (1950–)

Sam-Ang Sam is a Cambodian American ethnomusicologist and performer who has also served the Cambodian American community as executive director of the Cambodian Network Council headquartered in Washington, D.C. during the 1990s. He was born on January 8, 1950, in Pursat Province, Cambodia. His family moved to a town on the outskirts of Phnom Penh, Cambodia's capital, when he was 13 years old. The following year, he enrolled at the École Nacional de Musique, which was absorbed into the Royal University of Fine Arts when the latter was established. After two years of study there, Sam transferred to the Faculty of Choreographic Arts. From 1968 to 1970,

the university's dance and music students, including Sam-Ang Sam, and some of its faculty were stationed in Siem Reap, where Angkor Wat is located, to perform for tourists and visiting dignitaries. In addition to studying under two of the royal palace's master musicians, Sam learned from village musicians in the Siem Reap area.

Prince Norodom Sihanouk, who had ascended the throne at age 18 but later abdicated the throne to participate more actively in his country's politics (changing his own title from "King" to "Prince"), was a strong patron of the arts. His favorite daughter was the star of the Khmer classical dance troupe. When Sihanouk was overthrown by his own defense minister, Lon Nol, in a 1970 coup, the new government sent the music and dance students back to Phnom Penh. In 1974, Sam-Ang Sam married Chan Moly, a Khmer classical dancer trained in both the palace and the Royal University of Fine Arts. That same year, he received a scholarship from the Conservatory of Music at the University of the Philippines to study Western music composition under José Maceda.

Sam and his wife were in the Philippines when the Khmer Rouge, the most radical wing of Cambodia's Communists, captured Phnom Penh on April 17, 1975, and launched a campaign to destroy all facets of modern, urban civilization as well as all aspects of Khmer culture. During the three years and eight months that the savagely brutal Khmer Rouge were in power, at least 1.7 million Cambodians out of a total population of slightly over 7 million people perished from executions, starvation, disease, overwork, and exposure to the elements. Like other Cambodians who were abroad when the Khmer Rouge came to power, Sam-Ang and Moly lost contact with all their family members in Cambodia. In 1977, the Sam family, which now included a daughter, resettled in the greater Philadelphia area as refugees. Sam supported his family by working in a bakery and both he and one of his brothers who had also managed to find his way to the United States got busy helping other Cambodian refugees. He also gathered together Cambodian refugee musicians and dancers to find ways to keep alive important elements of Cambodian culture. Sam's second daughter was born in the United States during this period.

In 1980, the family moved to Connecticut where Sam earned a BA and an MA in music composition from Connecticut College. Then he attended Wesleyan University where he received his PhD in ethnomusicology in 1988. During his years of graduate study, Sam-Ang Sam and Chan Moly Sam teamed up with Sam-Oeun Tes to form the Apsara Ensemble. Tes had been a former member of the royal palace's classical dance troupe. She had gone to the United States in 1971 to marry a Cambodian man living there and in 1980 she established the Cambodian-American Heritage Troupe. This troupe and the Apsara Ensemble have performed in numerous venues over the years.

After completing his PhD, Dr. Sam taught at Cornish College of the Arts (one of only three fully accredited private colleges teaching both performing and visual arts) and at the University of Washington, both in Seattle. Sam formed the Pin Peat Ensemble and performed all over the Puget Sound area from 1988 to 1992. He played the *shawm*, a quadruple reed instrument. In 1992, the Sam family moved again—this time to Washington, D.C., when Dr. Sam was chosen as the executive director of the Cambodian Network Council. The council was founded in Chicago in 1988 and incorporated as a nonprofit organization in Texas in 1989. It came into being because Cambodian American leaders felt it was important to coordinate the work of dozens of federally funded Mutual Assistance Associations that had sprung up in various locations where Cambodian refugees had settled. After receiving funding from the Office of Refugee Resettlement, the council moved its headquarters to Washington, D.C. It had two goals: to deal with domestic issues affecting Cambodian refugees in the United States and to support reconstruction and socioeconomic development in Cambodia. When serving as executive director, Dr. Sam received a MacArthur “genius” grant to honor and support his advocacy work as well as his efforts to preserve Cambodian culture.

After five exhausting years as an administrator, the Sam family moved back to Seattle. However, the family is in fact a transnational one. The two daughters have also become performers and all the Sams have traveled around the world introducing Cambodian classical dance and music to new audiences. Sam-Ang and Chan Moly Sam have also offered

master classes in their respective areas of expertise in North America, Europe, and Japan. Not only that, but Dr. Sam has recorded traditional Khmer music and his compact discs are now sold globally via the Internet. He also spends significant periods in Cambodia to teach and to help the Royal University of Fine Arts to develop its curriculum.

Santos, Bienvenido N. (1911–1996)

Born in Tondo, Manila, Philippines in 1911, Bienvenido Nuqui Santos was a Filipino American writer and intellectual who wrote short stories, novels, and nonfiction. Throughout his life he traveled back and forth between the Philippines and the United States, which influenced the forms, themes, and overall style of his writing. He is considered by many scholars to be an early example of an Asian American writer with a transnational and postcolonial perspective.

After completing his education in the Philippines in 1941, Santos traveled to the United States as a government *pensionado* (scholarship student). He studied English at the University of Illinois, Urbana-Champaign as well as Columbia and Harvard University. During World War II, Santos served for the exiled Philippine government in Washington, D.C., along with other Filipino American intellectuals such as the playwright Severino Montano and the avant-garde poet José Garcia Villa. He returned to the Philippines in 1946, where he taught and was a

university administrator. In 1958, he again returned to the United States, this time as a Rockefeller Foundation fellow, and enrolled in the University of Iowa's Creative Writing Workshop. After Philippine president Ferdinand Marcos declared martial law in the Philippines on September 21, 1972, Santos and his family did not return home for many years. From 1973 to 1982, he was the Distinguished Writer in Residence at Wichita State University. In 1981, his alma mater, the University of the Philippines, and Bicol University in Legazpi City awarded him honorary degrees in letters and the humanities. In the mid-1980s, he moved to Greeley, Colorado but also spent several months of the year living and teaching in the Philippines.

As a child, Santos was educated in American-run schools, which is where he learned English, the language he employed to write his numerous short stories, novels, memoirs, and essays. During this time he realized the complexities of growing up a colonial subject. For example, an American teacher who could not believe that a native Filipino could write English in such a sophisticated manner accused him a plagiarizing an essay, which had a devastating effect on Santos psychologically. This incident made Santos conscious of the inherent racism and overall spurious nature of American colonial ideology, and it also motivated him to choose writing as a profession.

Over the course of his lifetime, Santos produced many works of fiction and nonfiction, which were characterized by their explorations of exile and postcolonial identity. He often lamented feeling like an outsider in both the United States and the Philippines, and this outsider's perspective became a principal trait of his literary aesthetic. For example, his novel, *The Volcano* (1965), explores the fraught relationship between the United States and the Philippines in the newly postcolonial era. The novel revolves around attempts by altruistic but misguided Christian missionaries to convert the Filipino natives from Catholicism to Protestantism. Historian Augusto Fauni Espiritu argues that *The Volcano* highlights the themes of loyalty and betrayal, one of the recurring motifs in all of Santos's writing. His other novels are *Villa Magdalena* (1965), *The Praying Man* (1977), *The Man Who (Thought He) Looked Like Robert Taylor* (1983), and

What the Hell for You Left Your Heart in San Francisco (1987).

Although Santos wrote all his novels in the United States, the only work of his that was published there was his short-story collection, *Scent of Apples* (1979). This collection groups together 16 stories written from as early as 1955 up through the 1970s and is his most well-known work in the United States. Many of the stories focus upon poor, older Filipino exiles and explore the themes of loneliness and alienation as a result of physical and psychic displacement. In the "Scent of Apples," Santos created one of his most compelling characters, Celestino Fabia, an impoverished Filipino farmer. Fabia invites the unnamed protagonist of the story—a Filipino intellectual traveling around the United States during World War II giving lectures to groups of mostly white, female college students—to his house for dinner so his white wife and biracial son can meet an authentic, "first class" Filipino. Fabia keeps a faded photo of an unknown Filipino woman on his dresser, and Santos uses this image to illustrate nostalgic relationship to his motherland. Although *Scent of Apples* is his most well-known book in the United States, it is *What the Hell for You Left Your Heart in San Francisco* that scholars N. V. M. Gonzalez and Oscar V. Campomanes speculate might be "the quintessential Filipino American novel to date." Set in the United States, the novel examines the effects of an ever-expanding consumer culture upon various segments of the Filipino American community as well as the conflicts between first- and second-generation Filipino immigrants.

In the last years of his life, Santos published over 1,000 pages of autobiographical writing, which was yet another significant contribution to Asian American and postcolonial literature. Titled *Memory's Fictions: A Personal History* (1993), his personal memoir prioritizes the manner in which the subjective mind—and particularly, the imagination—shapes how we remember historical events, thus blurring the lines between what is fact and what is fiction. Some of his other works of nonfiction are *Postscript to a Saintly Life* (1994) and *Selected Letters: Book 1 and Book 2* (1995 and 1996). He died in Sagpon, Albay, Philippines, in 1996.

Sasaki, Sokei-an (1882–1945)

Sokei-an Sasaki was among the first wave of Japanese Buddhist missionaries who came to the United States in 1906 and founded the Buddhist Society of America 24 years later in New York (currently known as the First Zen Institute of America). He was remarried shortly before his death in 1945 to Ruth Fuller Sasaki (1892–1967), who was instrumental in carrying on Sokei-an's teaching legacy.

Born in Japan as Sasaki Yeita in 1882, Sokei-an was 15 years old when his father died. He apprenticed himself to a carpenter and eventually came to study sculpture at the Imperial Academy of Art in Tokyo, graduating in 1905. During this period he also became a disciple of the Rinzai Zen teacher Shaku Sōkatsu (1869–1954), who was the disciple of the famed Shaku Sōen (1859–1919), and in 1906 he moved with his teacher, fellow disciples, and new wife to a small parcel of land in Hayward, California to establish an American Zen community. In the end the missionary endeavor was not successful, and by 1913 Sokei-an remained alone in America.

Sokei-an traveled across America doing a variety of jobs, often involving his skills as an artisan or as a writer. He returned to Japan for two short stints to finish his Zen training, officially becoming Sōkatsu's teaching heir in 1922 and receiving his formal certification to teach in 1928. After founding the Buddhist Society of America in New York in 1930 (and incorporated the following year), Sokei-an spent the next

decade offering lectures on important Buddhist texts and formal Zen training to his students. His teaching style tended to emphasize traditional Rinzai *koan* practice over seated meditation practice. He also published a newsletter, the *Cat's Yawn*, from 1940 to 1941.

In June 1942, following the attack on Pearl Harbor, the Federal Bureau of Investigation arrested Sokei-an as an "alien enemy." Interned on Ellis Island and in Fort Mead in Maryland, his health deteriorated before finally being released in August 1943 after an ardent campaign by several of his American students. Within the year he married Ruth Fuller Everett, an American Zen practitioner, whom he had initially met in 1933. Shortly before his death he requested that the Buddhist Society of America be renamed the First Zen Institute of America, which continued its operation under the guidance of Fuller until her death in 1967.

Sokei-an died in 1945 in New York. Although Sokei-an was the first Japanese Zen lineage holder to settle permanently in America, he never named an official heir to his teachings. The First Zen Institute of America was his legacy and emerged as an influential center of activity during the "Zen boom" of the Beat generation in the 1950s and 1960s. It continues to offer classes and publish many of Sokei-an's scriptural translations and writings on Zen.

Saund, Dalip Singh (1889–1973)

Dalip Saund was the first Asian American to serve in Congress representing California's 29th district in the House of Representatives. Elected in 1956 and for

Dalip Singh Saund, U.S. congressman (1957–1963), with John F. Kennedy and Lyndon B. Johnson. (Courtesy Eric Saund)

three consecutive terms, Saund suffered a debilitating stroke in 1962 forcing him to relinquish his congressional seat. After years of poor health, Saund died in California on April 23, 1973, at the age of 83.

Dalip Singh Saund was born on September 20, 1889, in Punjab, India to wealthy but illiterate Sikh parents. Saund's father and uncles provided a primary education for the children of Chhajalwadi village, including Saund, by endowing a small one-room schoolhouse and paying the salary of the village schoolmaster. Saund continued his education and earned a BA in mathematics from the University of Punjab. Following the completion of his undergraduate studies in 1919, Saund traveled to the United States to pursue an advanced degree with the hopes of one day returning to India and establishing a canning

industry. Saund began at UC Berkeley in 1920 originally taking classes in agriculture, but he soon moved into mathematics at the department's invitation. Saund completed both his masters and doctoral degrees in mathematics in 1922 and 1924, respectively.

During his youth, Saund experienced deep disappointment because of Britain's failure to grant India independence following the conclusion of World War I; as a result, he became deeply influenced by figures such as Mahatma Gandhi and Abraham Lincoln. Saund's readings of Lincoln's works stirred within him a deep desire to learn about the United States and he eventually made his way to California to study at the University of California Berkeley. As a student at Berkeley, Saund lived at a clubhouse established and maintained by a Sikh Temple in Stockton, California

and joined the Hindustan Association of America. It was during this time that Saund began to write speeches, taking every opportunity to expound upon India's right for self-government. One particular experience proved to have a profound influence on Saund's life. After delivering a half-hour talk on India's right to independence at the Hindustan Association of America's annual convention, an invited political science professor proceeded to tear Saund apart flooring Saund with questions Saund could not answer. Saund learned from this experience and would later prove highly knowledgeable of politically relevant facts, often to the chagrin of his political opponents.

Despite offers of professorships from two colleges in India and initial plans to return home upon graduation, Saund's student years had instilled in him a great admiration of the United States' institutions and leaders. Even in the face of discrimination, Saund firmly believed that America exemplified the highest form of democracy given that its people had developed a system based upon the Declaration of Independence and the belief that all men are created equal. With these convictions in mind, Saund resolved to remain in the United States and forgo his return to India. Saund's time in the agriculture department at Berkeley and his contacts with Hindus in the Imperial Valley set him up with several job opportunities outside the field of mathematics and, upon completion of his doctorate, Saund accepted work as foreman of a cotton-picking crew in Southern California.

Discriminatory laws like the Alien Land Act, which prohibited Asians ineligible for citizenship from owning or leasing farmland made Asian immigrants in the Valley susceptible to the ups and downs of the farming business and Saund was no different. Saund dabbled in celery, melons, corn, lettuce, and beets, and though he had good years, bad years resulted in debt. Despite the fact that many of his fellow farmers had to declare bankruptcy, Saund was eventually able to pay off his debt over a series of years. Saund did more, however, than just farm. He met and married his wife Marian Koss, a second-generation Czech American, in 1928, and wrote his first book, *My Mother India*, in 1930. Saund also established a Current Events Club in 1937 and was active in the local Toastmasters. Saund's commitment

to the ideals expressed in the Declaration of Independence led him to campaign for an end to the restrictions prohibiting the naturalization of India natives as U.S. citizens by forming the India Association of America with Saund serving as its head. Saund's organization was eventually successful, and in 1946, President Truman signed the bill into law. Saund was one of the first to apply for citizenship under the law and on December 16, 1949, he took the oath of citizenship.

Saund moved his wife and children to Los Angeles for health reasons but continued to work in the Imperial Valley winning election as justice of the peace for Westmorland Township in 1950. His election was thrown out on grounds that he was not a citizen for the required year but in 1951 he became chairman of the Imperial County Democratic Committee, a post that gave Saund experience in campaigning for Congress. In 1952, he was victorious in his second bid for the judgeship of Westmoreland, a post he held until he resigned on January 1, 1957. Saund's resignation from the judgeship followed on the heels of his successful run for California's 29th congressional seat. Saund became the first Democrat elected from the 29th district. Once in Washington, Congressman Saund served on the House Foreign Affairs Committee, which provided him the opportunity to travel to Asia to promote greater understanding between the United States and Asian countries. Saund also worked tirelessly to serve his constituents in the Imperial Valley where he focused on issues such as flood control and the search for supplemental water for Southern California. Saund won his next two elections with more than 60 percent of the vote.

Throughout his life Dalip Singh Saund remained committed to liberal ideals of free-enterprise, human equality, and self-government. Saund firmly believed in the goodness of democratic institutions despite his own experiences with discrimination and pointed to his election as evidence that change is indeed possible. Despite all of his accomplishments, Saund's remarkable triumph over prejudice is perhaps the best-remembered aspect of his career.

Saxton, Alexander P. (1919–2012)

Alexander P. Saxton was a Marxist activist, union organizer, writer, and historian. He was one of the founding directors of the UCLA Asian American Studies Center. His book, *Indispensable Enemy: Labor and the Anti-Chinese Movement in California* (1975), was one of the founding texts in Asian American studies.

Saxton was born in Great Barrington, Massachusetts in July 16, 1919, and grew up in New York City. He was one of two children of Eugene Saxton. Eugene Saxton was an editor with Doubleday and then Harpers. His editorial list of authors included John Dos Passos, O. E. Rolvaag, and Richard Wright. Martha Saxton, Saxton's mother, was a literature teacher at a private girls' school in New York City. Educated at Friends Seminary in New York City and Phillips-Exeter in New Hampshire, Saxton attended Harvard University from 1936 to 1939. In 1940, as a result of the struggle for his ethnic and political consciousness, Saxton decided to transfer to the University of Chicago. One result was the release of his first novel, the autobiography-like *Grand Crossing*, in 1943; the other result was his decision to join the Communist Party.

Before he switched from fiction to history, Saxton had spent more than 20 years as a merchant seaman and carpenter, some of those years as an activist and union organizer. At age 43 he determined to pursue a doctorate in history at the University of California,

Berkeley, where he studied with Walton Bean, Henry Nash Smith, and Kenneth Stampp. In 1967, Saxton obtained his PhD. At age 49, he took his first academic job at Detroit's Wayne State University. After teaching for a year at Wayne State University, he joined the history faculty at the University of California at Los Angeles until his retirement in 1990.

During his teaching and research career in UCLA, Saxton contributed to the establishment of Asian American Studies Center and served as chair of its faculty board of advisers for almost 20 years. His contributions to the Center were best summed up by the creation, on the occasion of his retirement, of the Saxton Award for the best article in *Amerasia*, the Center's journal for scholarship in Asian American history.

Saxton's publications include (1) history books: *The Indispensable Enemy: Labor and the Anti-Chinese Movement in California* (1975); *The Rise and Fall of the White Republic: Class Politics and Mass Culture in Nineteenth Century America* (2003); *Religion and the Human Prospect* (2006) (2) novels: *Grand Crossing* (1943); *Bright Web in the Darkness* (republished in 1997); *The Great Midland* (republished in 1997). Saxton passed away on August 20, 2012, in Lone Pine, California, at the age of 94.

Science and Technology

As myriad popular observers and academic investigators have long noted, Asian Americans' aggregate educational and occupational profiles are highly concentrated in STEM fields. These fields, which include not only the science, technology, engineering,

and mathematics that together form the STEM acronym, also include fields like agriculture and natural resources, psychology, architecture, and food processing. The STEM fields comprise, in other words, those bodies of knowledge and practice, as the National Center for Education Statistics puts it, that are “of particular relevance to advanced societies.”

In high school, Asian American students are far more likely than their non-Asian American peers to plan on majoring in STEM once they get to college. In college, Asian Americans are more likely than their non-Asian American peers to choose STEM majors, more likely to stick with those majors when the going gets tough, and more likely to successfully complete bachelor’s degrees in STEM fields. Those who go on to graduate school demonstrate the same inclination. A recent Pew Research Center report found that although they accounted for only 5.5 percent of adults aged 18 or older, Asian Americans in 2010 earned 45 percent of doctorates awarded in engineering, 38 percent in mathematics and computer science, 33 percent in the physical sciences, and 25 percent in the life sciences. In the workforce, Asian Americans are nearly three times more likely to be employed in STEM than are non-Asian Americans. The U.S. Department of Labor’s Current Population Survey found that Asian Americans, who constituted 4.9 percent of the population of employed Americans for 2011, represented 8.8 percent of people employed in architecture and engineering, 9.8 percent in the natural sciences (including medicine), 16.6 percent of people working in computer and mathematical occupations.

Why are Asian Americans overrepresented in STEM fields? In historical terms, Asian Americans’ overrepresentation in STEM is a direct consequence of the increasingly close interaction that developed, over the course of the twentieth century, between Asian American desires for social mobility, on the one hand, and the high-level manpower needs of advanced economies, on the other hand. Until about the middle of the twentieth century, however, anti-Asian racism, most visibly in the form of barriers in immigration policy and the domestic labor market, retarded the growth of Asian American participation in STEM. Those barriers began falling during World War II. At the same time, opportunities in STEM

began rapidly expanding, and expanding in ways that meshed particularly well with Asian Americans’ circumstances and aspirations at midcentury.

More specifically, the inclination toward STEM fields grew out of two different Asian American projects: (1) the efforts, beginning in the late nineteenth century, to raise their homelands into the ranks of advanced nations through education and training in the disciplines of economic development and military preparedness, and (2) the attempts, on the part of native-born, second-generation Asian Americans, beginning in the early twentieth century, to move beyond the ethnic niches to which anti-Asian racism had often succeeded in confining their parents, and now sought to confine them. To students engaged in either of these projects, the STEM fields offered a set of distinct advantages, compared to other fields of study, for circumventing the barriers U.S. society erected to keep Asians out of America and Asian Americans out of its most privileged sectors.

As the various anti-Asian exclusionary movements achieved their purposes during the late nineteenth and early twentieth centuries, for example, the pursuit or possession of an advanced education became one of the few ways for Asians to enter the United States. Each exclusion, it must be remembered, focused on *laborers*; students and teachers, along with other classes of people like diplomats, tourists, merchants, and ministers, were specifically exempted. The growing thirst for economic development in Asia, which viewed scientific and technological educational exchange as an important tool, coupled with American interest, official and otherwise, in using educational exchange as a vehicle for the transmission of American values and the propagation of American influence abroad, resulted in the beginnings of numerically small intellectual migration streams between the United States and, most notably, China, the Philippines, and India—intellectual migration streams that emphasized STEM.

When Dalip Singh Saund, for instance, arrived in the United States from India to learn food-canning techniques, some three years after Congress had passed the 1917 Immigration Act in response to racist and nativist agitation about the “turban tide,” Saund, a Sikh from the Punjab region of India, found some

80 other Indian students already studying at UC Berkeley. Similarly, the first group of “Boxer scholars”—Chinese exchange students who came to the United States beginning in 1909, supported by the scholarships created out of the U.S. remission of Boxer Rebellion indemnity funds—were concentrated in technical fields useful for economic development: science, engineering, mining, and agriculture.

STEM training promised significant rewards to exchange students upon their successful return home. Recruitment efforts for Chinese Educational Mission of the 1870s (through which the Chinese government sought to acquire Western industrial and military technologies) promised those who volunteered to spend more than a decade studying in the United States that, upon their return to China, they would be given government jobs and awarded regular official rank, on a par with those who entered imperial service through the traditional examination system. In a similar fashion, the institutionalization of professional nursing in the Philippines under U.S. colonial rule likewise offered the prospect of social mobility outside the extant social order, by opening to young Filipino women not only educational and employment opportunities previously unavailable to them, but opportunities to burnish their professional credentials with a stint of advanced training in the United States.

During the early decades of the century, America’s official openness to Asian exchange students did not include openness to their immigrating, however. For example, although it exempted students from exclusion, the 1917 Act also required individuals in the exempted categories to “maintain” their status or face deportation. This meant that Asian students, upon the completion or cessation of their studies, had to go. Fully-trained Asian professionals in STEM fields, by contrast, were welcome to immigrate, but their welcome was conditional. Those admitted as “physicians, chemists, and civil engineers” for instance—some of the STEM occupations specified in the 1917 Act—had to stay put in those fields, or, if they changed jobs, to choose from among the other exempted occupations. Otherwise they, too, became subject to deportation. Combined with the widespread and episodically violent nature of anti-Asian racism well into the twentieth century, provisions like these helped to ensure

that the intellectual migration streams between Asia and America remained numerically small and mostly circular.

Some residual migration did inevitably occur before the lifting of the various anti-Asian exclusion measures. Mostly these were individuals who, through some combination of intellectual ability and academic achievement, the support and sponsorship of American individuals and institutions, and plain old good luck, were able to find employment commensurate with their educational backgrounds, and, for one reason or another, ended up staying permanently in the United States. This group included Japanese American bacteriologist Hideyo Noguchi, Chinese American physicist Chien-Shiung Wu, Chinese American biochemist Choh Hao Li, and Indian astrophysicist Subrahmanyan Chandrasekhar.

Most who sought to stay were not so lucky, as Dalip Singh Saund’s career trajectory illustrates. At the invitation of one of UC Berkeley’s mathematicians, Saund switched from the Agriculture Department, where he was studying food canning, to the Department of Mathematics, the field of his undergraduate degree. Saund earned a PhD but was unable to find a job in his field, and so went into the fields, finding work, as did the vast majority of other Punjabi Sikhs during that period, in agriculture in California’s Imperial Valley. (Saund later became a justice of the peace and then the first Asian American elected to the U.S. Congress.)

Native-born Asian Americans also saw white-collar work, and STEM occupations in particular, as a way to achieve social mobility. A survey, for example, of Nisei college students conducted in the late 1920s and early 1930s found that over 70 percent of them aspired to white-collar jobs, rather than to working in agriculture, as the majority of their parents had. For this generation of Asian Americans, social mobility was also linked to geographical mobility, albeit in different ways than for Asian exchange students. White-collar occupations offered the Nisei the chance to work in urban, rather than rural, settings; for second-generation Chinese Americans such jobs meant the possibility not just of working, but maybe even of living, outside of America’s Chinatowns; it held out the promise, to second-generation Filipina/o

Americans, of a chance to stop following the crops, or to patronize as customers those establishments where so many of their parents were only admitted as cooks or maids or janitors, if at all.

In statistical terms, second generation Asian Americans looked like they were poised to accomplish these goals surprisingly early in the twentieth century. They began reaching educational parity with White Americans during the second quarter of the century (based on the percentage of children and youth, 20 years old or younger, enrolled in school), and in some cases even surpassing them. Although they did receive some benefits from this accomplishment, however, the gains were limited, mostly helping them to avoid the kinds of poor outcomes suffered by other non-white minorities, but failing to approach the kind of returns to education enjoyed by whites. Whatever mobility into white-collar work they did see, moreover, was likely to have been realized in Asian America's ethnic economies—as the proprietors of businesses serving their coethnics or as providers of professional services to them—rather than in the mainstream of U.S. society.

Although these outcomes do not seem to have dampened Asian American desires for education, they may have channeled those desires in the direction of STEM fields. STEM fields had much to recommend them to people in just this situation: positioned for white-collar work but prevented from gaining equal access to it. STEM jobs, like other white-collar jobs, were of course of relatively higher status and higher income than manual labor. They were also then, and indeed continue to be, characterized by more objective criteria for evaluating an individual's ability—more objective than the criteria in fields like law or education.

Recent research has suggested, moreover, that today's Asian American students and their families survey the racial topography of the labor market as part of their educational decision-making processes and often choose STEM fields for the ways these fields seem to be more welcoming of Asian American participation, compared to other fields that are characterized by relatively lower Asian American participation rates, like professional sports or politics or entertainment. Whether or not education is an Asian cultural

value, these scholars argue, it definitely becomes more salient or functional as it becomes a part of Asian Americans' "strategic adaptation" to U.S. society.

Believing, moreover, that the dominant society perceives them as "nerds," for lack of a better term—not especially popular, or as socially active, or athletic, as their peers—and recognizing that they might suffer from deficiencies in what scholars term "cultural capital" (deficiencies in their understanding of, and facility with, the dominant society's artistic forms, cultural institutions, social mores, and behavioral expectations), Asian American students, so another line of investigation contends, look to fields like the sciences and engineering, where social skills and cultural capital seem to figure less importantly in who succeeds and who does not. In addition, it might be added that historically STEM practitioners have often been portrayed in popular culture as powerful figures, albeit ones who lack social skills and are disdainful or ignorant of social mores.

The point is that pressures like these on contemporary Asian American student choices would have operated with even greater force a century before, perhaps helping to explain why, for example, although about half of the Nisei in the survey previously described hoped to find positions in business, slightly more than half of them set their sights on STEM fields, aspiring to become doctors, dentists, pharmacists, and engineers.

Until about midcentury, however, racism succeeded in denying Asian Americans large-scale entrance to the world of white-collar occupations, just as it had succeeded in ensuring that the vast majority of potential Asian immigrants in STEM fields ended up back in their homelands. World War II and the onset of the Cold War changed all of this, for a couple of reasons. First, as many scholars have observed, the demands of a wartime economy swept aside obstacles to the labor force participation of marginalized groups. This was as true in STEM employment as it was in industrial employment. A 1947 survey of native-born Chinese American college graduates found the majority of them gainfully employed in not just white-collar, but professional work, and concentrated in particular in the sciences, engineering, and medical fields. The survey respondents cited things like

self-employment, occupational independence, and prestige as factors motivating their educational and career choices. Similarly, studies of native-born Japanese American men showed them taking advantage of the falling barriers after their release from the internment camps and moving remarkably quickly into professional occupations during the 1950s.

Second, and more important for the long term, World War II and the Cold War radically and irrevocably transformed the relationship between STEM fields and national security. Near the end of the war, U.S. federal government officials and military planners resolved to maintain contact with academic scientists and to do what they could to support basic academic research. Basic research had proved vital to the national defense during the war, in nuclear weaponry, certainly, but also in areas like radar detection (including radar's application to the proximity fuse), penicillin, and blood plasma. Federal support for academic science grew exponentially during the postwar decades, driving growth both in STEM training structures and in STEM employment. In combination with the later shift toward a postindustrial economy, this produced a 24-fold increase in the number of STEM jobs during the latter half of the twentieth century, from less than 200,000 to somewhere in the neighborhood of 4.8 million.

The federal government and the military were not only interested in scientists' (and engineers' and technicians') contributions, however. They were also increasingly interested in their movements, especially across national borders. Nuclear proliferation, it must be remembered, involves not only the unsanctioned transfer of nuclear devices, information, and materials, but also the human beings in possession of the knowledge and techniques that make nuclear weapons so monumentally destructive. Intellectual migrations had in fact played crucial roles in the United States' successful development of nuclear weapons in the first place. The contributions of Jewish refugee scientists figured importantly at every stage of the Manhattan Project. Even before that, a generation of American physicists and chemists had gone to Europe, many to Germany, for their graduate training, including, notably, the director of Los Alamos and acclaimed "father of the atomic bomb," J. Robert Oppenheimer.

One byproduct of the transformation of the relationship between STEM and national security, in other words, was a transformation of the national security significance of intellectual migration. "Operation Paperclip," a program the U.S. government operated in Europe beginning in 1945, illustrates the magnitude of this transformation. Before the war, and especially during the 1930s, thousands and thousands of European Jews fleeing the rise of Nazism in Europe were denied entry to a United States that had just finished closing its gates in 1924, with the passage of the Johnson-Reed Immigration Act. Some advocates for the refugees pleaded with the Congress to make minor adjustments to U.S. immigration policy, adjustments that would, at the very least, have allowed entry to what the advocates called "exceptional people"—distinguished writers and artists and scholars and scientists. The Congress refused.

The goal of "Operation Paperclip" was to locate and identify "exceptional" Germans and Austrians—the scientists, engineers, and technicians who had worked in war-related fields—to deny their skills to the new enemy on the horizon, the Soviet Union, by ensconcing and employing these highly skilled and highly educated folks in the West, and, in a few hundred cases, even bringing them to the United States. As scholars have shown, former Nazis and alleged war criminals benefited from Operation Paperclip.

Cold War concerns over the movements of highly educated people, especially in STEM fields, had a direct consequence on the demography of Asian America during the 1950s. There were some 5,000 or so students from China studying in American colleges and universities in 1949, when China became a Communist country. Many of the "stranded students," as they came to be known, were motivated by the desire to take part in the reconstruction of their homeland from the ravages of war and civil war, and thus were concentrated in STEM fields. As a result of that concentration and the change in political leadership in China, however, they became the focus of official American efforts during the 1950s to encourage them to abandon any plans that they might still have had of returning home, to formally adjust their statuses, and to become permanent residents and citizens of the United States—to deny their skills, in other words, to

the People's Republic of China. Some did manage to return, but most ended up staying.

Cold War competition over “hearts and minds” added another dimension to this transformation of intellectual migration. Just as the United States and the Soviet Union compared tallies of bombs and missiles, they were also acutely aware that each side's tally of people in STEM fields was a measure of its ability not only to win the arms race, but to deliver on its promises of economic modernization to “undecided” countries in the developing world. “We will see who has more engineers . . .!” Nikita Khrushchev once shouted, during a speech in Burma in the mid-1950s. Later in the speech Khrushchev offered to build and staff a technological institute in Rangoon “as a gift to the people of Burma from the people of the Soviet Union.”

It was against the backdrop of this level of Cold War competition—what contemporaneous observers called the “Battle for Brainpower”—that what scholars term the “global articulation of higher education” began to accelerate. The prohibitive cost of building an infrastructure for training high-level manpower forced many developing nations to rely, temporarily at least, upon the educational infrastructures already available in advanced nations. After World War II, for example, the United States became the most popular destination for international students, especially in STEM fields, and especially for students from those Asian countries that had experienced comparatively more economic development, and thus increases in educational levels, than other parts of the developing world at the time. The United States also used the power of the dollar to actively and vigorously compete on this Cold War playing field, and, in the process, shaped higher education in Asia in ways that also favored the migration of highly-educated Asians to the United States.

At the same time, and also motivated by Cold War concerns, the United States continued the process, begun during World War II, of dismantling the racist barriers in immigration and naturalization policy that severely restricted Asian immigration and prohibited Asian immigrants from becoming naturalized citizens. Not surprisingly, given the transformation of intellectual migration, the new system the United States

put into place with the 1965 Immigration Act featured preferences for highly educated people (as had the earlier McCarran-Walter Act of 1952).

Thus, just as native-born Asian Americans were positioned to take advantage of falling domestic barriers and to begin moving into STEM fields, so too were exchange students and visiting professionals from Asia positioned to take advantage, if they so desired, of the falling barriers in U.S. immigration and naturalization policy. And, as history has shown, thousands upon thousands of them did desire, finding more and better opportunities for social mobility in the United States than back home. The transformation of their migration stream into one that resulted in significant levels of immigration meant that the two Asian American projects were now aligned in their effects on Asian America's occupational structure. The positive feedback, in the form of gains in socioeconomic status experienced by Asian Americans in STEM fields during the 1960s and 1970s, produced a kind of institutionalization of the inclination toward STEM fields. The STEM pipeline, in other words, has in some sense become an element of Asian American culture—at great cost, to be sure, as scholars have argued, but also to profound effect; close to half a century later, it continues to generate surprising levels of Asian American participation science-based and technical fields, and will likely do so into the foreseeable future.

Scott, Robert (1947–)

Robert Cortez “Bobby” Scott is an American lawyer and politician. He is a member of the Democratic Party and has represented Virginia’s 3rd Congressional District since 1993. He is of African American as well as Filipino descent. Scott also served with the Virginia House of Delegates (1978–1983) and the Virginia State Senate (1983–1993).

Robert Scott was born Robert Cortez Scott on April 30, 1947, in Washington, D.C., but grew up in Newport News, Virginia. He is commonly referred to as “Bobby” Scott. His maternal grandfather is of Filipino descent. He later studied at Harvard University and received a bachelor of arts in 1969. He also received a doctor of jurisprudence from Boston College School of Law in 1973. As a young man, he was a member of the United States Army Reserve between 1970 and 1974 and member of the Massachusetts National Guard between 1974 and 1976. In the period between law school and Scott’s election to the House of Representatives, he worked as a lawyer at Newport News, Virginia.

Scott was first elected into public office in 1978 when he won a seat in the Virginia House of Delegates. After four years serving as a delegate, he moved on to serving in the Virginia State Senate in 1983.

During his time in the Virginia General Assembly, Scott devoted energy to providing healthcare benefits to women and children. He also worked to increase the minimum wage in Virginia. Scott was also concerned about crime prevention and sponsored the Neighborhood Assistance Act, which helped to provide tax credits to businesses that offered donations to programs committed to crime prevention.

Scott first ran for Congress in 1986 from Virginia's 1st District but lost to his Republican opponent. However, he left the Virginia State Senate in 1993 with 16 years of service after his victory in Virginia's 3rd Congressional District. Scott became the first African American to be elected into Congress from Virginia since Reconstruction and the second African American to ever be elected to Congress from Virginia. He is also the first person of Filipino descent to serve in Congress. Scott has since been reelected to Congress for nine more terms despite an incidence of redistricting in 1997 in which the court declared Scott's original 3rd District unconstitutional as race had been the main factor during the initial districting. However, the redistricting did not have as large an effect as many had anticipated. The newly drawn district was still comprised of a large African American population. Scott has been mainly unchallenged in his Congressional District.

After his election, Scott carried to Congress his adamant support of civil rights and his firm belief in the protection of civil liberties. Scott advocated for the reauthorizing of the Individuals with Disabilities Education Act (IDEA). This is a piece of legislation that protected children with disabilities so they can obtain an education that is free and appropriate. IDEA was first enacted in 1990 and reauthorized in 1997. Also, in recent years, as same-sex marriage and gay rights became topics of discussion, Scott has supported the prohibition of job discrimination according to sexual orientation. He was also opposed to a constitutional amendment prohibiting same-sex marriage. In terms of civil liberties, he was outspoken against President George W. Bush's wiretapping policies and was opposed to making the Patriot Act a permanent fixture.

Although Scott has had prior experience in the military and has been recognized for his support of

the military community, he was an outspoken opponent of the Iraq War. Scott supported and applauded the decision to change course in Iraq as well as the withdrawal of troops in a responsible and orderly manner.

Scott is a prominent and active member in the House of Representatives. He serves on the Committee on the Judiciary, where he is the chairman of the Subcommittee on Crime, Terrorism and Homeland Security. He also serves on the Subcommittee on the Constitution, Civil Rights, and Civil Liberties, and the Subcommittee on Commercial and Administrative Law. He is also a member of the Committee on Education and Labor, where he is committed to the subcommittee on Early Childhood, Elementary and Secondary Education and the Subcommittee on Healthy Families and Communities. Scott also serves with the Committee on the Budget.

Scott is also involved in caucus work. A few of the caucuses he is a member of include the Congressional Asian Pacific American Caucus, the Congressional Army Caucus, and the Congressional Black Caucus.

Scott has been the recipient of many awards and honors. An example is an award for dedication to public service and commitment to equal justice for all, presented to him by the American Bar Association in April 2008. He has also been recognized by the American Legion for his support of veterans.

In the 111th Congress, Scott sponsored legislations to provide better healthcare coverage for children and pregnant women. He also continued his long-term efforts to provide better public safety. One of those initiatives involved provisions for the establishment and operation of a National Center for Campus Public Safety.

Scott was reelected in 2010 with 70 percent of the vote and in 2012 with over 80 percent of the vote.

Scott Act (1888)

The Scott Act prohibited the re-entry of Chinese laborers into the United States. Beginning on October 1, 1888, those who left the United States with certificates of re-entry—issued in accordance with the Act of 1882 and as amended by the act of 1884—could no longer enter or re-enter the country. The re-entry certificates were declared void, and this took effect immediately. This action affected over 20,000 Chinese laborers who were visiting China, as well as 600 Chinese laborers on their way back to the United States.

The Scott Act embodied the terms of an 1888 treaty between the United States and China that never materialized. Congressman William Scott of Pennsylvania introduced a bill that attempted to do what the treaty was set out to do, and more. The bill would have excluded the re-entry of Chinese laborers into the United States, even those with re-entry certificates. The bill differed from the treaty in two ways: first, it put a stop to the immigration of Chinese laborers on a permanent basis instead of prohibiting immigration for 20 years; and second, there was no exception for the return of Chinese laborers. The treaty would have carved out an exception for Chinese laborers who had one of the following in the United States: wife, children, parents, property, or debts of at least \$1,000. The swift passage of the new bill was on the heels of the 1888 presidential election between Grover Cleveland and Benjamin Harrison. The bill passed the House without debate and passed the Senate with some debate. Thereafter, President Cleveland signed the bill into law.

The passage of the Scott Act was met with celebration throughout California by white voters. However, the Chinese laborers were concerned, as the new law would prevent their return to the United States following a visit to China. Chinese merchants were also concerned, as they feared the new law would be made applicable to them as well. The Chinese community responded by filing lawsuits. Before they could do so, they needed someone who was negatively impacted by the new law. They were able to bring legal challenges through Chae Chan Ping, a Chinese laborer, and Lau Ow Bew, a Chinese merchant.

Chae Chan Ping—*Chae Chan Ping v. United States*, 130 U.S. 581 (1889)—was on his way back to the United States when the Scott Act took effect and thus had no notice of the passage of the Act. He lived in California for 12 years and returned to China for a brief visit. When he left the United States, he obtained a certificate of re-entry. The certificate was issued to him by the collector of customs of the port of San Francisco. He arrived back in San Francisco on October 8, 1888 on the steamship *Belgic*. Upon arrival, he presented his certificate to a customs house officer, who refused him entry because of the newly passed Scott Act. Captain Walker of the *Belgic* steamship detained Chae Chan Ping on board the steamer. The federal District Court issued a *writ of habeas corpus*. Thereafter, the court found Chae Chan Ping was not entitled to enter the United States. An appeal was taken, in which the United States Supreme Court was asked to consider the validity of the Scott Act.

The Supreme Court stopped short of deciding whether or not Congress should have modified or repealed the 1864 and 1880 treaties the United States entered into with China for the terms of the Scott Act to be consistent with the treaties. The reason the court did not decide upon this issue is that there are limitations on federal court jurisdiction; one of the limitations is that courts will not address matters of political question (such as validity of treaties with foreign nations). Such political questions are constitutionally reserved for another branch of government to decide; in this case, the legislative branch (Congress).

Furthermore, in terms of the hierarchy of laws in the United States, the federal Constitution prevails

over all other laws. Next in line to the Constitution are federal statutes and treaties. As between federal statutes and treaties, the one dated last in time prevails. Therefore, the Scott Act prevailed over the 1864 and 1880 treaties. In addition, the Supreme Court found that the re-entry certificates amounted to a license, instead of a contract, between the Chinese people and the United States government. The Court added, “Whatever license . . . [the] Chinese laborers may have obtained, previous to the act of October 1, 1888, to return to the United States after their departure, is held at the will of the government, revocable at any time, as its pleasure.” The *Chae Chan Ping* case made it clear that Chinese laborers could no longer re-enter the United States, even after obtaining re-entry certificates. In March 1892, the Supreme Court in *Lau Ow Bew v. United States*, 144 U.S. 47 (1892), clarified whether or not Chinese merchants needed re-entry certificates and the validity of those certificates.

Lau Ow Bew came to the United States in 1874 and lived in Portland, Oregon for 17 years. During that time, he ran Hop Chong & Co., a wholesale and importing business. He left the United States for China with intentions of returning. Prior to leaving, he obtained the proper evidence of his merchant status from the United States government, in accordance with the 1890 treasury department regulation. On August 11, 1891, he reached San Francisco on the steamship, *Oceanic*. The collector of the port of San Francisco refused to permit him to land because he failed to produce a certificate from the Chinese government of his merchant status, per section 6 of the 1882 Act (and as amended by the 1884 Act). Captain Smith of the *Oceanic* steamship detained him on board the steamer. The District Court denied Lau Ow Bew’s writ of *habeas corpus* and ordered him deported; the Ninth Circuit affirmed this deportation order.

The Supreme Court wrote, “Chinese merchants domiciled in the United States have, and are entitled to exercise, the right of free egress and ingress, and all other rights, privileges and immunities enjoyed in this country by the citizens or subjects of the ‘most favored nation.’” In fact, “it is impossible to hold that this section was intended to prohibit or prevent Chinese merchants, having a commercial domicile

here, from leaving the country for temporary purposes, and then returning to and re-entering it; and yet such would be its effect. . . .” The court noted that Congress did not set a contrary rule to the Act of October 1, 1888, which prescribed an “absolute exclusion of Chinese laborers.” The *Lau Ow Bew* decision made it clear that Chinese merchants were a class separate from Chinese laborers and had the privilege of traveling freely to and from the United States.

Seattle Anti-Chinese Riot and Expulsion of 1886

On the morning of February 7, 1886, in Seattle a mob evicted hundreds of Chinese from their homes and attempted to send them out of the city by steamer or rail. The local Home Guard (and later federal troops) held back the mob, but a skirmish the next day left several rioters wounded, one of whom died. Despite a court order halting a steamer from transporting 97 Chinese against their will, 196 Chinese left by ship the next morning and another 110 fled by the next steamer the following week.

The Seattle riot followed a series of anti-Chinese attacks in many locations in the Pacific Northwest, the most notorious of which was the anti-Chinese riot in Tacoma, a city located 30 miles south of Seattle, the previous November. To prevent a violent outbreak in Seattle, federal troops were dispatched, and 15 leaders of the anti-Chinese movement in Seattle were arrested.

The vigilante action in Seattle in 1886 was planned during a meeting and rally the preceding evening on February 6. Groups of five entered the homes of Chinese on the pretext of checking on city health

regulations, and then with the support of a mob in the street, evicted the Chinese from their homes and escorted approximately 350 Chinese to the steamship dock. The territorial governor, Watson Squires, declared martial law (which President Cleveland later made official), and by February 10 federal troops were posted in Seattle, where they remained for several months.

Chinese workers had first been welcomed in Seattle as cooks, domestic servants, peddlers, and laborers for the many street and canal projects. However, with the economic slump in the 1880s, white workers saw them as competitors for jobs and blamed them for unemployment and low wages. Calls that “the Chinese must go” became increasingly shrill and prevalent among labor leaders, politicians, and in the press. By 1885 there were probably 400 Chinese residents, most of whom were male, but the community included wives of merchants and children, 40 of whom attended a church-sponsored Chinese school.

Unlike Tacoma, where the militant movement was led by the Sinophobic mayor overwhelmed the moderate “law and order” element, Seattle’s business leaders and other moderates openly opposed the violence and protected the Chinese with the aid of federal troops. Principal among this group was Judge Thomas Burke and Mayor Henry Yesler. On November 5, 1885, Burke delivered an impassioned speech before a crowd of 700 at the Opera House for the anti-Chinese mass meeting organized by the Knights of Labor. He opposed force and violence and urged respect for the laws and treaties, but he was hissed and booed. Mayor Yesler and Sheriff John McGraw also acted to maintain order and called upon the governor for military assistance.

The “law and order” element and government authorities were no more successful in prosecuting the rioters in Seattle than elsewhere in the Pacific Northwest, which reflected the widespread anti-Chinese and pro-labor sympathies. In 1885, a grand jury indicted 15 leaders of the militant anti-Chinese group on conspiracy charges, including Daniel Cronin, the Knights of Labor organizer from Eureka, California; Mary Kenworthy, a popular socialist leader; and George V. Smith, lawyer and utopian community organizer. As in nearly every case in the West, the Seattle anti-Chinese leaders were found not guilty by

the all-white jury, and in this case the defense did not even present an argument against the conspiracy charges. Among those arrested in February 1886 by the martial law authority for leading the agitation were the Chief of Police William Murphy, W. H. Pinckney, a policeman, and prominent lawyers Junius Rochester and George V. Smith. None of those arrested was ever convicted.

The events in Seattle reflected a combination of racial hostility toward the Chinese that crossed class lines and a growing conflict between labor and business in the Pacific Northwest. Advertisements for local businesses proclaimed “No Chinese employed” and newspapers regularly published derogatory stories and inflammatory editorials. Topics included the morals, habits, and living conditions of the Chinese, along with claims against the Chinese for economic woes and violations of immigration statutes. Although few publicly expressed direct support for the Chinese merchants and workers, the newspapers and many organizations in Seattle decried the lawlessness and violence of the anti-Chinese movement. Following the violence, the King County Bar Association adopted a strongly worded resolution against the lawlessness of the mob, supporting the necessity of martial law and respect for the laws and government.

A few dozen Chinese stayed in Seattle, mostly house servants in white households and several established Chinese merchants. One of the most prominent and successful of these was Chin Gee Hee, a partner in the Wa Chong Company and a labor contractor. During the riots Chin contacted the Chinese Consul in San Francisco to ask for assistance and later reported business damages sustained in the riots to the Chinese officials as part of the investigations for reparations. Chin Gee Hee’s family was among the victims, however. Rioters dragged his wife out of their house and down the stairs by her hair. Afterward, she became ill and miscarried. Other prominent merchants who remained and prospered were Chin Chun Hock, the first Chinese to settle in the city and founder of the Wa Chong Company, Chen Cheong, perhaps the first Chinese resident to start a business, and Eng Ah King.

Later, Chin Gee Hee founded the Quong Tuck Company, and after the great Seattle fire of 1889, he

erected the first brick building, which became the center of the new Chinatown. By 1890, the Chinese community was as large as it had been before the riots.

Seau, Junior (1969–2012)

Tiaina Baul "Junior" Seau was a 20-year veteran linebacker in the National Football League (NFL) playing for the San Diego Chargers, Miami Dolphins, and the New England Patriots. Over the course of his career he was a 12-time Pro Bowl selection, 10-time All-Pro selection, and was unanimously selected to the Pro Football Hall of Fame's, All-Decade Team for the 1990s on defense. Over the course of his career Seau accumulated 1,526 tackles, 11 forced fumbles, 18 interceptions, and 56.5 sacks. For the first 13 years of his career Seau was the face and leader of the San Diego Chargers, leading them to victory in the 1994 AFC Championship; however, they lost to the San Francisco 49ers in the Super Bowl. He also played in a second Super Bowl for the 2007 New England Patriots who lost to the New York Giants.

Seau, fifth of seven children of Tiaina Seau, Sr. and Luisa Mauga Seau, of American Samoan origin

was born and raised in San Diego. At Oceanside High School, Seau was a standout athlete in basketball and football and named to the *Parade* All-American team. After he graduated in 1987, Seau attended the University of Southern California. In 1989 he was named the PAC-10 Defensive Player of the Year, NCAA First Team All American, and helped the Trojans win back-to-back PAC-10 titles and played in two Rose Bowls. In 2009, USC inducted Seau into its Athletic Hall of Fame.

As Junior Seau earned praises for his meteoric rise in the NFL after he was drafted in the first round in 1990, he also gave back to the San Diego community. The NFL recognized his charity work and named Seau as Man of the Year in 1994. The Junior Seau Foundation has raised and dispersed almost \$4 million to children and young adults including \$800,000 in the Scholars of Excellence program. Seau was also an entrepreneur; he opened Seau's Restaurant in Mission Valley, California in 1996 and created the clothing line Say-Ow Gear.

In 2010, Seau drove his SUV off a cliff in Carlsbad, California after being arrested and jailed for domestic violence. He claimed he had fallen asleep at the wheel. On May 2, 2012, it was reported Seau took his own life with a gunshot wound to the chest. On May 3, a vigil was held outside of his home in Oceanside and on May 11, 2012, thousands of fans gathered at Qualcomm Stadium, the home field of the San Diego Chargers, to celebrate Seau's life and legacy. No suicide note has been found. On June 7, 2012, 81 lawsuits charged the NFL for failing to inform and protect players from long-term damages to the brain including concussions, strokes, dementia, and Alzheimer's disease.

Self-Employment

Asian America began to take shape in the late 1840s when a large number of Chinese immigrants arrived in the United States as contract laborers. In the span of more than 150 years, it has evolved into a vastly diverse ethnic community, consisting of people whose ancestors, or who themselves, were born in more than 25 Asian countries. As of 2008, the estimated number of Asian Americans had grown to 15.5 million (or 5 percent of the total U.S. population), up from less than 12 million in 2000 and from 1.4 million in 1970. The many-fold growth in the past 40 years is primarily because of immigration, which has accelerated since the passage of the Hart-Celler Act of 1965. Based on the 2000 U.S. Census, nearly two-thirds of the Asian American population are foreign born (the first generation), another 25 percent are native born with foreign-born parentage (the second generation), and only 15 percent are native born with native-born parentage (the third generation). Japanese Americans are an exception as this ethnic group is entering the fourth generation in America. This essay offers a demographic overview of the Asian American population at the dawn of the twenty-first century with a discussion on one of the trajectories of Asian American social mobility—self-employment.

The Asian American community includes a variety of ethnically distinct subgroups. In 1970, the size of the ethnic population was about 1.4 million, largely composed of three national-origin groups—Japanese (41 percent), Chinese (30 percent), and Filipino (24 percent). Those who fell into the "Other Asian" category (5 percent) included mostly Koreans and Asian Indians. Since 1970, immigration from Asian countries has accelerated and remained at a high rate into the twenty-first century. Immigration accounted for more than half of the Asian American population growth (e.g., for 70 percent of Indian growth, 63 percent of Filipino growth, 59 percent of Vietnamese growth). The share of immigrants from Asia as a proportion of the U.S. total inflow grew from a tiny 5 percent in the 1950s to more than a third since the 1980s. Prior to 1980, no Asian country was on the United States' annual list of top 10 immigrant-origin countries; since then, however, China, the Philippines, India, Korea, and Vietnam have shown up on the list repeatedly. Between 1980 and 2009, 8.7 million immigrants from Asia were legally admitted into the United States as permanent residents. Consequently, the ethnic community has been dramatically transformed to diversify into at least 28 national-origin groups, which were officially tabulated in the U.S. Census. Chinese and Filipinos are the largest subgroups (at 3.62 million and 3.06 million, respectively), followed by Indians (at 2.73 million), Vietnamese (1.73 million), Koreans (1.61 million), and Japanese (1.30), as estimated in 2008. National origins stretched out to many other Asian countries, many of which had no prior settlement histories on American soil, such as Cambodians, Pakistanis, Laotians, Hmongs, and Thais. The "Other Asian" category in the Census count includes Bangladeshis, Indonesians, Malaysians, and Singaporeans, among others.

Although most of the Asian immigrants have come directly from their ancestral homelands, others have arrived from a third country. For example, the Chinese today have immigrated into the United States not only from mainland China but also from the Chinese diaspora—Hong Kong, Taiwan, Vietnam, Cambodia, Malaysia, and the Americas. Indians have arrived not only from India but also from Fiji, Uganda, Trinidad, South Africa, and the United Kingdom.

Many of the Southeast Asians have been resettled in the United States after they fled their ancestral homelands and spent various lengths of time in refugee camps in other countries in Asia and Europe. Among foreign-born Asians in the United States today, about 42 percent have arrived in the United States after 1990, and 47 percent are naturalized U.S. citizens, which indicates that the Asian American population is still primarily an immigrant-dominant ethnic group.

Contemporary Asian immigrants are diverse not only by origins but also by socioeconomic status (SES). Unlike earlier immigrants from Asia, who were mostly low-skilled laborers and disproportionately single males, today's immigrants from Asia include those who come to join their families, who invest their monies the U.S. economy, who fill the labor market demands for highly skilled labor, and who escape war, political or religious persecution, and economic hardships. For example, scientists, engineers, physicians, and other skilled professionals tend to be overrepresented among Indians, Filipinos, Chinese, and Koreans, whereas less-educated, low-skilled workers tend to be overrepresented among Vietnamese, Cambodians, and Laotians, most of whom enter the United States as refugees. Middle-class immigrants are able to start their American life with high-paying professional jobs and comfortable suburban living, whereas low-skilled immigrants and refugees have to endure low-paying menial jobs and ghettoized inner-city living. In general, Asian Americans have shown remarkable achievements in key SES indicators—education, occupation, and median family income. As of 2008, 50 percent of them held bachelor's degrees or more, and 48 percent held managerial-professional or related occupations, as opposed to 28 percent and 35 percent, respectively, of all Americans. Their median household income was \$70,000 in 2007 dollars, as opposed to \$52,000 for American households. However, there were marked intragroup differences. Southeast Asian refugee groups fared poorly in all the listed SES indicators.

Asian Americans today tend to settle in urban areas all over the United States but are more concentrated in the West. According to the 2000 U.S. Census, one state, California, by itself accounted for more than a third of all Asians in the United States, and California

also had the largest number of each of the six main national-origin groups. New York accounted for 10 percent of all Asian Americans, second only to California. Chinese, Indians, and Koreans were heavily concentrated in New York, but not Filipinos, Japanese, and Vietnamese. Several other states deserved special mention: As of 2000, Texas had the second-largest Vietnamese population, next to California. Illinois had the third-largest Filipino population, next to California and Hawaii. Washington had the third-largest Japanese population, next to California and Hawaii. And New Jersey had the third-largest Indian and Korean populations, next to California and New York. Among cities with a population over 100,000, New York City, Los Angeles, and Honolulu had the largest number of Asians, whereas Daly City, California, and Honolulu were Asian-majority cities.

Trajectories of social mobility among Asian Americans vary from those of the past because of tremendous diversity in the contexts of emigration and host society reception. Three predominant trajectories are noteworthy. The first one is the familiar time-honored path of starting at the bottom and moving up through hard work. The second trajectory is the incorporation into professional occupations in the mainstream economy through extraordinary educational achievement. The third trajectory is ethnic entrepreneurship.

Self-employment has been viewed as an alternate and effective means of social mobility in the Asian American community. Historically, Chinese Americans and Japanese Americans depended on ethnic businesses as a way to climb up the socioeconomic ladder, especially during the era of legal exclusion and labor market discrimination. Since the 1970s, unprecedented Asian immigration, accompanied by the tremendous influx of human and financial capital, has set off a new stage of ethnic economic development. As of 2000, 11 percent of Asian American workers 25 years or older were self-employed, compared to 13 percent of white workers and 5 percent of black workers. Koreans, Chinese, Indians, and Vietnamese showed fairly high rates of self-employment (over 11 percent). Koreans in particular were nearly twice as likely as whites to be self-employed (24 percent versus 13 percent).

Growth in business ownership among Asian Americans is the fastest of any racial group. Although the number of black- and Hispanic-owned businesses grew rapidly from 1977 to 1997, neither came close to matching the phenomenal expansion of Asian-owned businesses, which grew at the fastest rate, increasing 768 percent (from 105,158 in 1977 to 912,960 in 1997), and having the largest gross sales receipts, at \$306.9 billion in 1997. As of 2002, the number of Asian-owned firms climbed to 1.1 million; three-quarters of all Asian-owned firms were owned by Chinese, Indian, Korean, or Vietnamese entrepreneurs. Asian-owned firms made up 4 percent of the total U.S. nonfarm businesses, 2 percent of their employment, and 1.4 percent of their receipts. But absolute numbers were significant as they employed more than 2.2 million people and generated \$327 billion in revenue. Thirty-one percent of Asian-owned businesses operated in the category “other services,” such as personal services, and repair and maintenance; they also owned 5.8 percent of all professional, scientific, and technical service businesses in the United States. Overall, there was approximately 1 ethnic firm for every 11 Asians, but only 1 ethnic firm for every 30 blacks and 1 for every 23 Hispanics.

Asian-owned businesses are spreading out all over the country but tend to be highly concentrated in states where there is a large Asian American population. As of 2002, nearly 60 percent of all Asian-owned firms in the United States were found in three states—California, New York, Texas, and New Jersey; among major cities, New York City took the lead in the number of Asian-owned firms (112,441), followed by Los Angeles (47,764), Honolulu (22,348), and San Francisco (19,639).

About 28 percent of Asian-owned businesses were home based, which was the lowest among all minority-owned firms. Typically, Asian-owned businesses rely heavily on pooled family savings and family labor. Such businesses include restaurants, sweatshops, laundries and dry cleaners, greengrocers, fish markets, liquor stores, nail salons, newsstands, swap meets, taxicabs, and motels. In New York City, there were about 500 Chinese-owned garment factories employing some 20,000 Chinese immigrant workers, and about 400 Korean-owned garment factories employing

more than 14,000 Hispanic workers during the industry’s peak in the late 1980s. There were about 2,000 dry cleaners run by Koreans, about 1,400 Korean-owned green grocers, and about 70,000 South Asian taxi drivers in New York City in the 1990s. Indian Americans also owned a disproportionately large number of motels around the country at the turn of the twenty-first century. In the last two decades, Asian-owned firms evolved out of the stereotypical mom-and-pop operations in the retail trade and labor-intensive, low-tech manufacturing operations. Many Asian entrepreneurs today offer various professional services in law, finance, real estate, and medicine, and are engaged in capital- and knowledge-intensive research and development in telecommunication, computer science, pharmaceuticals, biochemistry, and biotechnology. For example, Computer Associates International (a Fortune 500 public firm specialized in computer technologies based in New York) and Watson Pharmaceuticals (a large public firm based in Los Angeles) were Chinese- or Taiwanese-owned companies but rarely considered *ethnic* businesses because the immigrant entrepreneurs successfully shed their ethnic distinctiveness and incorporated their businesses into the core of the mainstream economy.

In the existing literature on Asian American entrepreneurship, ample empirical evidence has shown support for five major arguments about the effects of ethnic entrepreneurship. First, entrepreneurship creates job opportunities for the self-employed as well as for ethnic workers who would otherwise be excluded. Second, ethnic entrepreneurship relieves sources of potential competition with native-born workers by generating new employment opportunities rather than taking up jobs, or crowding out natives, in the existing labor market. Third, ethnic entrepreneurship not only fosters entrepreneurial spirit and sets up role models among coethnics but also trains prospective entrepreneurs. Fourth, ethnic entrepreneurship affects the economic prospects of group members as well as out-group members. Fifth, and perhaps most controversial, there is a significant earnings advantage of self-employment over other forms of employment net other observable human capital and demographic characteristics. Research regarding earnings benefits has yielded mixed results, however. Problems also arise that leave

some workers behind in their pursuit of upward social mobility, such as labor rights abuse and over-concentration of jobs that entail low wages, poor working conditions, few fringe benefits, and lack of mobility prospects.

At present day, ethnic entrepreneurship is not only pursued by first-generation Asian immigrants, it has increasingly been attractive to the highly assimilated second generation as a viable means for social mobility. Greater participation of highly skilled immigrants and the children of immigrants in entrepreneurial activity, in turn, is likely to facilitate the incorporation of the Asian American community into mainstream America.

Sexuality

Asian American sexuality evades fixed definition and description. As an expression of desire, sexuality ignites the erotic, physical, emotional, and imaginative senses of the body and mind. Sexuality is driven ultimately by the desire to connect and relate to others, so that any identity based on sexuality depends on relationships that reach beyond the boundaries of the individual self. Asian American sexuality includes the multiple experiences of desire described by the terms queer, transgender, intersex, bisexual, pansexual, polyamory, lesbian, gay, heterosexual, sexual outlaw, gender nonconforming, asexual, interracial, interethnic, intergenerational, interability, interclass, fetish, vanilla, kink, bondage, voyeur, exhibitionist, virtual, and more variations of sexual expression than can be named. Yet, the simplicity of naming can cover over socially enforced hierarchies of power that continue to uphold as natural, normal, and valuable sexualities that are modeled after the image of the binary gender (male/female) conformant, heterosexual, married,

reproductive, white American middle-class nuclear family. As a powerful set of affects that brings together self and others, sexuality is not just a personal or private matter. Sexuality is shaped and expressed at the points where social histories, institutions, images, and ideas interact with subjective perceptions, bodies, senses, and imaginations.

For Asian Americans and other racially subjugated communities in the United States, sexuality is an expression of desire, pleasure, and relationship that remains tied to struggles for self-determination in the face of market and state organized social perceptions and control. Dominant perceptions of Asian Americans, which often shift between images of hypersexuality and absent sexuality, aggression and submission, the model and the perverse, lack and excess, and the domesticated and exotic, have been shaped by linked cultural, political, and economic institutions, including the Hollywood media industry. Twentieth-century Hollywood narrative cinema and its twenty-first century transnational multimedia conglomerate counterparts have contributed to producing these stereotypes by limiting the representation of Asian Americans and Asians to a few reproducible formulas such as the inscrutable villain, hypersexual dragon lady or prostitute, the sexually repressed geek, the sacrificial lotus blossom, the subservient geisha, the technomartial arts body, the spy, and the terrorist. In each of these examples, racialization occurs through attributing deviant sexuality and/or gender. These stereotypical representations shape popular perceptions that reinforce U.S. state efforts to police and control migration, naturalization, citizenship, and access to wealth and resources based on heteronuclear family structures and relationships, HIV status, sexual orientation, gender identity and presentation, labor needs, trade and market benefits, military advancements, diplomatic relations, and distinctions between countries considered favored, enemy, or dependent. And these repeated images help to expand Hollywood's consumer markets within the United States and globally, while continuing to streamline production and maintain racial, sexual, and gender hierarchies within the media industry. In finding self-determined sexual expression, Asian Americans have had to navigate and counter the forms of sexual and social regulation

institutionalized by dominant sectors, including Hollywood. Asian American feminist, transgender, queer, radical, leftist, and decolonizing movements have participated in reimagining and creating forms of sexual expression, identity, and community that resist the normalizing demands of the state and capitalist market.

The undervalued, fragmented, and missing archives documenting the sexual histories of Asian Americans provide further motivation for transformative and diverse reimaginings of Asian American sexualities. These diminished archives are an effect of the regulation and destruction of heterogeneous forms of intimate relationships and sexual and gender expression through the racial normalizing of femininity, masculinity, and sexuality in securing the modern U.S. state and American national identity. Abstract American citizenship was granted to white males exclusively until 1870, thereby equating masculinity with whiteness in defining American national subjects. The granting of eligibility for citizenship to men of African descent in 1870 and then Asian men from 1943 to 1952 *assigns* these non-white subjects male or masculine status in secondary relationship to white masculinity, which was still considered the normal or ideal embodiment of national citizenry. In contrast, Asian women's eligibility for citizenship was indirectly and derivatively granted in relationship to the general category of Asian immigrant—presumed to be and pronounced male/masculine—and also in relationship to white American women, whose gaining of independent citizenship rights in 1922 depended on barring “alien women” from naturalization. In laws restricting Asian immigration, Asian women were addressed directly as gendered sexual subjects to be policed, even before the 1882 Chinese Exclusion Act. The 1975 Page Law outlawed the immigration of Chinese women suspected of being prostitutes and also barred the entry of male convicts and laborers. Despite the small number of Chinese female immigrants in the United States, the sexual moralism directed at those identified as Chinese prostitutes called for surveillance over *all* Chinese women and the general banning of Chinese immigration, which set the precedent for the 1882 Exclusion Act. Preempting a similar move to bar Japanese immigration based on perceived female prostitutes, the Japanese government chose to

self-regulate migration in the 1907–1908 Gentleman's Agreement with the United States. And before the Page Law, the state of California passed legislation targeting Chinese prostitution as a “public nuisance” in 1866 and then blocked the entry of “Mongolian, Chinese, or Japanese females, born either in the Empire of China or Japan or in any of the Islands adjacent to the Empire of China” suspected of being imported for “criminal and demoralizing purposes” in 1870. Sexual and gender subordination, normalization, policing, and surveillance were central to the prohibition of Asian immigration, citizenship, and social integration prior to 1965.

Recovered histories of Asian American sexuality and gender show the ways in which the presumed rationality of America's modernization relied on informally organized, sexually defined and engendered *extra-economic*, political, and social sectors. Before the mid-twentieth century, Asian men and women worked for substandard payment as temporary, flexible, or indentured workers under conditions dictated by their employers and segregated to the outskirts of formal workforces. Filipino, Asian Indian, Chinese, and Japanese immigrants provided the informal, second-tiered labor, and resources needed to develop more technologically standardized and specialized and also formally distinguished industrial, nonindustrial (agricultural), recognized service (including paid “domestic” work), and nonrecognized service (sex, intimate, and leisure work) sectors, positions, and labor. Along with anti-Asian immigration laws, state anti-miscegenation laws, disenfranchisement from naturalization and property ownership, and the legislated and informal segregation of work, living, and public quarters, including vice districts, brothels, and bachelor communities, further enabled the sexual, gender, and racial ordering of work, space, and bodies according to informal/ formal sectors and public/ private spheres. The flexibility, impermanence, and dependency demanded of Asian immigrants at work, at home, and in public was racially coded and interpreted as sexual and gender ambiguity, perversion, contagion, and threat. Accusations of sexual immorality and gender abnormality incited campaigns to drive out South Asian male workers through white mob attacks and to cleanse Chinese “houses of ill fame”

through legislated and public policing. Political and community leaders, media sources, organized labor, and company heads charged Asians with threatening to contaminate white civil society, often by evoking the vulnerable figures of the white family, women, and youth. The deviant sexing of structurally determined Asian immigrant spaces and bodies helped to establish “normal” white masculinity and femininity as embodying proper sexual behavior limited to reproductive heterosexuality, whereas displacing the sexual and gender self-determination of Asians. At the same time, the informal, marginalized, and deviant spaces and bodies assigned to Asians at the edges of formal, rational, and moral economies created new forms of social intimacy, erotic desire, family, and community, freed from convention.

Since the mid-twentieth century, the restructuring of the U.S. state and economy through transnational networks has meant the dominance of service, finance, science, technology, military, cultural sectors in the United States and the outsourcing of labor-intensive manufacturing and service as secondary, de-formalized sectors, including export processing or free trade zones, international domestic work, and sex tourism, to locations in the global South and in “peripheral zones” within U.S. cities and rural areas. Outsourced sectors continue to recruit and discipline Asian workers according to racialized sexual and gender presumptions and fantasies. For example, expressions of Filipino masculinity continue to negotiate the feminizing neocolonial strategies of the transnational shipping industry along with the masculinizing nationalist strategies of the Philippines state, which have both fueled the demand for Filipino male seafaring labor since the 1970s. In countering these attempts to enforce gender norms, Filipino seafarers, along with Filipino tomboys, have created nonconforming masculinities, undetermined by anatomical sex, through collective practices of remembering, cultural transmission, and social intimacy. The liberalization of naturalization, citizenship, and immigration laws by 1965, in addition to gains in civil rights, public participation and cultural representation, have enabled the partial inclusion of more resourced, technically skilled, and educationally privileged Asian Americans and Asian immigrants into formal sectors of the U.S. state, economy, and

public sphere. But, Asian immigrants and Asian Americans with fewer economic and educational resources and professional skills training and from war-torn, colonized, de-industrialized countries in Southeast Asia, the Pacific Islands, the Middle East, and South Asia continue to be confined to the edges of formal political, economic, and public sectors. And, since 9/11, U.S. state-sponsored profiling, policing, detention, and violence targeting people perceived to be Middle Eastern, Arab, or Muslim as potential “terrorists” have relied on the racial sexualization of Islam, Arabs, and the Middle East region as primitive, monstrous, and abnormal. As a counterpart, the U.S. “war on terror” has included efforts to recast and normalize sexual, racial, and immigrant communities previously excluded or marginalized within American national identity as model patriots and citizens, including gays and lesbians. The semi-institutionalization of cultural nationalist and modernist approaches to Asian American identity, history, and culture within dominant sectors by the 1980s has limited the capacity of Asian American social movements, cultural production, and historiographies to engage with sexuality and gender as ongoing technologies of racial control. These institutionalized approaches have also prevented engagement with more recent or previously unacknowledged formations of Asian American and Asian social identity and history shaped by changing relationships between the U.S. state and different Asian states and regions within the context of transnational war, migration, neoliberalism, and finance and cultural capitalism, beyond the East Asian-centered focus of Asian American racial politics as it emerged in the 1960s.

By the beginning of the twenty-first century, cultural production and social activism focusing on Asian American sexualities and genders emerged in mass at the borders of dominant sectors, institutions, and bodies of knowledge. Anthologies including *Lotus of Another Color*, *Q & A: Queer in Asian America*, and *Dragon Ladies: Asian American Feminists Breathe Fire*, along with poetry and fiction by Kitty Tsui, R. Zamora Linmark, Ginu Kamani, Jessica Hagedorn, Justin Chin, V. K. Mina, and Joel Tan, expanded and re-assembled Asian American racial identity and cultural imagining to include lesbian, gay, bisexual, gender nonconforming, queer, feminist, and women’s

experiences and accounts. Community-based groups, including TriKone, the Asian Pacific Lesbian Bisexual Network, Asian Immigrant Women Advocates, Gabriela Network, INCITE, San Francisco Women Against Rape, Community United Against Violence, and the Audrey Lorde Project organized based on an understanding of the interconnections between homophobia, heterosexism, transphobia, racism, local and global economic exploitation, gender and sexual oppression, and nationalism. Visual artists across mediums (zines, performance, video, and film), including Pratibha Parmar, Cheang Shu Lea, Erica Cho, Hoang Nguyen, Hima B. Ming Yuen S. Ma, Gigi Otalvaro-Hormillosa, Lynne Chan, D'Lo, Gregg Araki, Quentin Lee, Mimi Nguyen, Richard Fung, and Machiko Saito, worked to confront and recreate the dominant iconography of sexual and gender racialization to produce more critical, empowering, and playful relationships to Asian American visual representation. In conversation with these interventions, queer diasporic and queer of color critiques and also women of color and transnational feminist analyses addressed the centrality of sexual and gender normalization within the context of more recently decentralized and globally networked U.S. state and capitalism. During the first decade of the twenty-first century, transgender, gender queer, and gender nonconforming expressions of Asian American and Asian diasporic sexuality and gender, including media interventions by Kit Yan, Yozmit, Felix Endara, and Wu Tsang, contribute to the dynamic disassembling and re-assembly of Asian American social identity and history, coalitional movement, and cultural imagining. Together, they create possibilities—beyond re-normalization—for resistance and vitality in relationship to the changing conditions of racial sexualization and gendering.

Shimomura, Osamu (1928–)

Osamu Shimomura, a Japanese American biochemist, who shared the 2008 Nobel Prize in Chemistry for the discovery of green fluorescent protein

(GFP), is one of the world's foremost experts on bioluminescence.

Osamu Shimomura was born on August 28, 1928, in Fukuchiyam, Kyoto-Fu, Japan. Osamu Shimomura's father, Chikara Shimomura, was a captain in the Japanese Army. In 1933, Chikara Shimomura was stationed in Manchuria and required Osamu, his younger brother Sadamu, and his mother Yukie to move to Sasebo, Nagasaki Prefecture where they lived with Tsuki Shimomura, Osamu's grandmother.

In 1941, Shimomura entered middle school in Sasebo but moved to Osaka following his father's transfer during World War II. Japanese wartime militarism disrupted school studies frequently and students would sometimes perform military exercises in lieu of attending lectures. Heeding his father's advice, Shimomura's family moved to the countryside in Isayaha near Nagasaki in 1944. On the first day of tenth grade, the students were mobilized to the Omura

Osamu Shimomura, of the Marine Biological Laboratory (MBL) at Woods Hole, Massachusetts, won the 2008 Nobel Prize in chemistry for his discovery and development of the green fluorescent protein, GFP. (AP Photo)

Naval Aircraft Arsenal because the National General Mobilization Law had been enacted, requiring citizens to work in the wartime economy. Students like Shimomura no longer studied or attended lectures; they worked instead. In the spring of 1945, Shimomura's class graduated but the student mobilization continued.

On August 9, 1945, the air raid siren sounded in Shimomura's factory and instead of hiding inside a bunker, Shimomura and his friends waited on a hill and watched a B-29 drop a payload. Once the plane had passed, Shimomura returned to the factory and was blinded by a flash of light and hit by the pressure caused by the atomic bomb dropped on Nagasaki. On August 15, the Japanese emperor surrendered and brought an end to the war with the United States and the student mobilization.

Shimomura tried to enter college in 1946 and 1947 but was rejected because the student mobilization prevented him from receiving a proper education. In 1948, Shimomura was accepted into the Nagasaki Pharmacy College, which temporarily reopened nearby in a vacated military barrack. Lack of resources and equipment at the college made it challenging to conduct experiments. Because organic synthesis experiments could not be performed with the poor equipment, Shimomura studied inorganic ionic reactions under Professor Shungo Yasunaga. The work done in Yasunaga's lab would result in Shimomura's first paper in 1953 published in the *Journal of the Pharmaceutical Society of Japan* for the development of a glass capillary and alumina powder chromatography.

In 1951, Shimomura graduated from Nagasaki Pharmacy School and worked in Yasunaga's lab as a teaching assistant. After four years of work, Yasunaga introduced Shimomura to Professor Yoshimasa Hirata, an organic chemist at Nagoya University. Shimomura was offered a position in Hirata's lab and enrolled as a research student in 1955. Shimomura's first project was the purification and crystallization of the protein luciferin from *Cypridina*, which is involved in the small crustacean's luminescence. After 10 months of work, Shimomura was able to crystallize the protein and the results were published in 1957.

In 1959, Shimomura was invited by Dr. Frank Johnson to work in his Princeton University

laboratory. To Shimomura's surprise, professor Hirata granted Shimomura a doctoral degree for his *Cypridina* work, knowing the doctorate would open up opportunities for study like the Fulbright travel grant for his new position in Princeton. In August 1960, Osumu Shimomura married Akemi Okubo. In September 1960, Osumu traveled to Princeton and in the following month, Akemi would join him.

Dr. Johnson assigned Shimomura to study bioluminescent properties in the jellyfish *Aequorea*. To acquire fresh samples, Dr. Johnson, Shimomura, and other members of the lab traveled to Friday Harbor in Washington State. The group was hosted by Dr. Robert Fernald from the University of Washington. Jellyfish was collected along the lab dock and luminescent material was extracted in large quantities.

Back in Princeton, luminescent protein was purified and studied. The protein extracted was named aequorin, the first photoprotein discovered. They also discovered in the luminescent extract a green protein that is now called green fluorescent protein, the subject of Shimomura's 2008 Nobel Prize.

Shimomura's U.S. visa expired in 1963 requiring him to return to Japan. Shimomura took the position of associate professor at the Water Science Institute in Nagoya University under Professor Tadashi Koyama. Working with the graduate student Yoshito Kishi, the group determined the structure of *Cypridina* luciferin, the protein Shimomura crystallized and purified six years earlier.

Shimomura continued to study different bioluminescent organisms but decided to focus on understanding the mechanism of aequorin luminescence to generalize its use as an analytical tool for other scientists. To do this, he returned to Dr. Johnson's lab in Princeton and spent 12 years to determine a structural model of aequorin, which required multiple trips to Friday Harbor to collect the raw materials for study. In 1972, Shimomura was able to establish the understanding of the aequorin luminescence reaction and its usefulness as a calcium probe.

In 1977, Dr. Johnson retired and Shimomura moved to the Marine Biological Laboratory in Woods Hole, Massachusetts where he was a senior scientist and a professor at Boston University Medical School. By 1975, aequorin had been used by biologists as a

calcium probe and Shimomura was the primary supplier of aequorin, providing samples for investigators all over the world. In 1995, Shimomura began research in the three-dimensional structure of aequorin and published the results in 2000.

Shimomura retired from the Marine Biological Laboratory in 2001 but continued to work in his home where he set up his Photoprotein Laboratory. To teach the next generation of students about the chemistry of bioluminescence, Shimomura authored the book *Bioluminescence: Chemical Principles and Methods*, which was published by World Scientific Press in 2006. The book contains an overview of the chemistry of all known bioluminescence systems and organisms.

In 2006, Shimomura received the Asahi prize, a prize granted in Japan for achievement in scholarship and the arts that has made a contribution to society. In 2008, Shimomura received the Nobel Prize in Chemistry along with Martin Chalfie and Roger Y. Tsien for their discovery and development of green fluorescent protein. Osamu Shimomura's contributions of bioluminescent chemistry gave scientists around the world a tool to visualize biological processes and broaden scientific understanding of bioluminescence.

Shin, Paull (1935–)

Paul Shin is a Korean American Democratic legislator in the state of Washington. He was the first Korean American to be elected to the legislature in Washington when he was elected to the House of Representatives, and currently serves as a state senator. Shin is a former college professor of history and East Asian

civilization. As a legislator, he is an advocate for education, international trade, and Asian American affairs. A Korean American adoptee, Shin also reaches out to the adoptee community and shares his story with others.

Shin was born in Korea in 1935 during the Japanese occupation. His mother died when he was four years old, and he was abandoned by his father. His Korean birth name is Shin Hobom. Living on the street and turned away from schools, he was unable to attend school in Korea. During the Korean War, he was taken in by a group of soldiers in Seoul, who offered him a job performing domestic chores at the U.S. Army medical unit where they worked. Ray Paull, a dentist and soldier in the unit, developed a strong bond with Shin and adopted him at the age of 16. After the war, Shin immigrated to Salt Lake City at the age of 18 in 1954 and changed his first name to Paull to honor his adoptive father. Ray Paull and his wife, Donna, have two children, both adopted, and five grandsons.

Once in the United States, Shin sought the education that he had not been able to achieve in Korea. Turned away from schools because of his age and limited command of English, he was able to earn a GED (General Equivalency Diploma) and attend Brigham Young University, where he earned a degree in political science. He went on to earn an MA in public and international affairs at the University of Pittsburgh, and a PhD in Korean studies at the University of Washington. Shin taught at the college level in Hawaii and after moving back to the Pacific Northwest, he was a professor at Shoreline Community College for 26 years.

Shin was introduced to politics in 1976 when Governor Dan Evans sought advice on how to increase trade with Korea and Japan and appointed Shin as trade ambassador. Governor Booth Gardner succeeded in convincing Shin to run as a Democrat; in 1992, Shin was elected to the State House of Representatives where he served during the 1993–1994 session as the first Korean American representative. After unsuccessful bids for the U.S. House of Representatives in 1994 and lieutenant governor in 1996, he was elected in 1998 to the Washington State Senate for District 21.

Shin continues to advocate in favor of education, trade, and Asian Americans. He is vice chair of the

Higher Education and Workforce Development Committee; the Agriculture and Rural Economic Development Committee; a member of the Economic Development, Trade, and Management Committee; Transportation Committee; and Governor's Commission on Asian American Affairs. He coordinated efforts to secure funding for an endowment for the Korean Studies Program at the University of Washington, spearheaded legislation to bar the usage of the term "Oriental" in favor of "Asian" in state documents, and counts among one of his proudest accomplishments the establishment of January 13 as Korean American Day as a state holiday in 2007. In 2012, he came under criticism for being one of three Democrats in the Senate to vote against marriage equality.

Shin-Issei/Shin-Nisei Identity

The word "shin" in "Shin-Issei" and "Shin-Nisei" translates to "new" in the Japanese language. Issei meaning "first generation" and Nisei meaning "second generation" are borrowed from the popular language

of Japanese diaspora around the world. What is “new” about these immigrants and their offspring is that they were part of the second wave migration, post-World War II. Shin-Issei immigrants include those who are known as “war brides,” wives of U.S. military men, as well as any Japanese who immigrated to the United States after the 1965 Immigration and Nationality Act, which repealed the 1924 National Origins Act.

Context for Migration

The newcomer Japanese population is relatively low when compared to other post-1965 Asian immigration. However, the recent U.S. Census shows that Japanese newcomers make up as much as 30 percent of the Japanese American population in certain states such as New York, Illinois, Washington, and Hawaii. This confirms that certain parts of the United States are still popular destination places for Japanese emigration.

Japanese newcomers enter the United States with various motives. After the war, people may have left Japan because of widespread famine and war-torn environment. However, unlike the new wave of Chinese immigrants who heavily relied on the “family reunification clause” of the 1965 Immigration Reform Act, which allowed them to be with their naturalized children, spouse, or siblings, the new wave of Japanese immigrants typically had no relatives living in the United States and had to find other ways for legal entry.

One of the major forces of migration was the global economic restructuring of the post-war era. Particularly during the 1980s, Japan experienced a huge economic boom in which the value of the yen skyrocketed. This provided the outward push for Japanese capitalism and consequently, multinational corporations set up headquarters in places like Torrance, California operated by Japanese expatriates. Most of these male expatriates, along with their wives and children, usually came for two- to five-year periods on work visas, but some of them have remained or returned later, changing their status to more permanent forms such as “green cards” (permanent residency card) or obtained American citizenships, often with employer sponsorship.

Japan also went through massive reforms in education as part of its globalization efforts in which the

study-abroad experience, traditionally limited to upper-class elites during the Meiji era, was now being promoted to average citizens. Soon, Japan became one of the top nations in issuing student visas. Similarly, with the rising value of the yen, tourism was a new popular form of entertainment. Some of these Japanese *migrant* students and tourists became *immigrant* newcomers for one reason or another, including securing qualifying employment and marriage to American citizens. Although there are no data that clearly show what percentage of Japanese immigrants first entered on visa-status as opposed to immigrant-status, it has been noted by some that post-1965, more Japanese came as “non-immigrants” before adjusting their status to permanency. In Canada, Nobuko Chubachi found that most Japanese Canadian immigrants actually went through “gradual immigration” in which they took a step-by-step process, experiencing “the West” typically first through a travel, student, or work visa before finally deciding to immigrate permanently. It is highly likely that most Japanese in the United States also came first on visas before becoming permanent residents.

Japanese immigrants have low rates of naturalization when compared to other Asian immigrant groups. According to the 2009 Census, only 38 percent of Japanese foreign born in California became naturalized citizens. When compared to the 69 percent of Chinese and 67 percent of Filipinos who have naturalized, Japanese immigrants are not becoming American citizens. This may be attributed to many factors such as national pride, security of benefits, and/or economic and political stability of Japan. The Census also shows that Japanese female immigrants are more likely to naturalize than their male counterparts. This may be attributed to the fact that Japanese women marry American citizens more often as compared to marriages of Japanese men to American women.

The children of the Shin-Issei immigrants, the Shin-Nisei, are U.S. citizens by birth. As children of Japanese nationals, many Shin-Nisei also have Japanese citizenship by bloodline. Currently, Japan does not recognize dual-citizenship and thus, lawfully, Shin-Nisei must choose which nationality to keep. However, because Japan does not enforce this regulation, many Shin-Nisei have been able to keep both

citizenships, hiding their American passport from Japanese immigration officials.

Identity Formation

The Shin-Issei and Shin-Nisei identities are strongly influenced by the sociocultural and historical context of their local regions. For example, in areas such as California where ethnic resources (Japanese language schools, supermarkets, Japanese restaurants, travel agencies, banks, newspapers) are abundant because of the long history of Japanese and Japanese American communities, Shin-Issei and Shin-Nisei are able to maintain their Japanese lifestyles in America. On the other hand, if a Japanese newcomer and their children live their lives in less ethnic regions of the United States, their connection to Japan and Japanese language and culture will be limited, though not entirely cut off thanks to new modes of communication and affordable travel.

Particularly in California, a majority of the Shin-Issei and Shin-Nisei are bilingual and bicultural because of the availability of transnational resources such as language institutions and cultural products, ranging from Japanese television to hair and beauty products. For instance, in Southern California, because of the high number of expatriate families whose children must ease back into Japan at a later point in life, the Japanese government established the *Asahi Gakuen*, a formal Japanese language school that teaches based on a curriculum comparable to the one followed in Japan. Through language, the Shin-Nisei are inculcated Japanese values and traditions. Therefore, within these ethnic-rich areas, the Shin-Nisei individuals embody a highly transnational identity that navigates between what it means to be Japanese and American.

Partly because of this strong dual identity as Japanese and as Americans, Shin-Nisei's place within the old-timer Japanese American spaces is sometimes questioned. Growing up among Yonsei and Gosei Japanese Americans, Shin-Nisei's understanding of their ethnic identity may conflict with those understood as traditionally Japanese American. For instance, many Shin-Nisei do not have a culture of playing J-league basketball, learning *odori*, or participating in Nisei week although more and more of these activities and

events are being inclusive of the new wave of immigrants and their children.

In conclusion, Shin-Issei and Shin-Nisei identity, like all other forms of identity, are fluid and situational. Their identity formation depends heavily on the regional, social, and historical context in which they are raised as well as how close they identify with their Japanese side. No one description of identity can capture the diverse and dynamic nature of Shin-Issei and Shin-Nisei identity, and their ever-changing ethnic identity must be understood within the context of the larger local and global trends.

Sikh Temple Massacre (Oak Creek, WI) (2012)

Tragedy struck the Milwaukee suburb of Oak Creek, Wisconsin on August 5, 2012, around 10 a.m. when 40-year-old Wade Michael Page entered the town's

Sikh Gurdwara and opened fire. This white man shot and killed six Indian (Punjabi) men: Paramjit Kaur, Satwant Singh Kaleka, Suveg Sing Khattrra, Prakash Singh, Ranjit Singh, and Sita Singh. A white police officer Lt. Brian Murphy arrived to assist and was shot multiple times by Page. Soon afterwards Page shot himself after being shot in the stomach by another officer. A standard Sunday morning ritual, of people of faith gathering for community and prayer, became the site of a domestic terror attack. It is an ongoing process for family and friends of the victims to come to terms with their loss. In the words of Pardeep Kaleka, son of Satwant Singh Kaleka, “A lot of people say you go through certain stages of grieving . . . The thing they don’t tell you is that you go through those and you go back to one, and you go back to the next one. There’s disbelief, and acceptance, and there’s sheer terror” (Meidenbauer 2012).

The “sheer terror” of that morning quickly became connected within public discourse to a mass shooting a month earlier and the debate over gun laws. James Holmes opened fire at a movie theater during the screening of the film, *The Dark Knight Rises* in the Denver suburb of Aurora.

But, many differences between the shooting tragedies must be recognized, rather than conflating them as “mass shootings.” Both are horrible tragedies, but arguably what the Oak Creek massacre represents is a greater threat to our national fabric, despite the fact that it received less media coverage. It is a greater threat because although there will always be madmen bent on hurting others as in Aurora, the Oak Creek shooting represented the manifestation of how white supremacy interacts with the U.S. military and racial ideologies. Page was in the U.S. army before discharged for drunken behavior. Oak Creek indicates how the line between U.S. imperial exercises abroad bleed into racial profiling, violence, and detention policies at home.

Media coverage focused on Page as a white supremacist, thereby disconnecting him from everyday white supremacy. His tattoos and music received concentrated media attention. This framing made it easier to consider the shooting and the hatred it represented as atypical within American society. The discourse about the shooting focused on his mental and

emotional extremity rather than about the conditions of whiteness and Christian normativity that contribute to such hatred. For instance, how Page’s time in the Army interacted with his racist views is not well known.

The white supremacist framing, along with that of madmen and relaxed gun laws, has made it harder to recognize this attack as one in a long line of racially motivated violence on South Asian Americans both post- and pre-9/11. Bellingham riots of 1907 similarly involved white supremacists taking back “their land” from a perceived foreign invasion. The most infamous post-9/11 shooting had been of Balbir Singh Sodhi, a Sikh gas station owner in Mesa, Arizona. He was killed on September 15, 2001 in what was clearly a hate crime as well. Within 24 hours of that shooting, a mosque in Joplin, Missouri was burned down. The fire was not the first attempt of arson on that Islamic center. Attacks on mosques are common but rarely arouse national attention.

The massacre at Oak Creek received less attention than that of Aurora. The discrepancy in coverage can be explained by the fact that fewer people died in Oak Creek, that the shooter killed himself in Oak Creek but remained alive in Aurora, and that media had “shooting fatigue” after the Aurora incident. But, contributing to the discrepancy is the fact that the overwhelming number of journalists are not Sikh, South Asian, Asian American, or even minorities. As journalists tend to concentrate on stories that “hit home,” whose mythical home they imagine is racialized.

The lessons to be learned from Oak Creek are many. White supremacy is alive and well in the United States, but the pervasive conditions of whiteness, military imperialism, and Christian normativity should not be overlooked in the process. Attacks on religious and racial minorities deserve special consideration relative to other tragedies. The attack at Oak Creek is one of many such incidents on South Asian and other Muslim Americans over the course of a century. Framing the tragedy as akin to other mass shootings, such as at Aurora, misrepresents the conditions that lead to these racialized incidents. In turn, the attack at a Sikh gurdwara reminds the South Asian community that it is best to come together rather than try to forge one’s rights by avoiding association with other South Asian groups.

Racism and intolerance do not make nuance distinctions. Sikh and other religious organizations have joined with others to lead the way. Although religion is one organizing line within American society, the need to come together surpasses that as well.

Sikhism in the United States

Sikh Americans have made significant contributions in the United States, such as in public service, business, and military service, and in this respect they have

played a meaningful role in the history and development of the Asian American diaspora. In the wake of the September 11, 2001, attacks, Sikhs, because of their conspicuous articles of faith, have faced considerable challenges, which have compelled the community members to quell hostile reactions to their appearance, to diminish ignorance of Sikhism and Sikh identity, and to forge relationships with other affected groups, the government, and the media.

Sikhs are adherents of Sikhism, a monotheistic religion founded in the fifteenth century, in the Punjab region of South Asia that is now split between current-day Pakistan and India. There are three essential elements to the Sikh belief system. First, that one is to think about and recite the name of God; second, that one is to make an honest and decent living as part of society; and third, that one is to give back to and help the less fortunate when feasible. Guru Nanak, who began spreading this message in a time of conflict between Hindus and Muslims, was followed by nine other living spiritual teachers, or *gurus*. Guru Gobind Singh, the tenth and last living *guru*, installed a book of hymns penned by several *gurus* and other spiritually minded poets as the permanent guide for Sikhs. He also established the "*Khalsa panth*," or a group of saint-soldiers comprised of men and women who are to commit themselves fully to Sikh teachings and the Sikh way of life. Those Sikhs who want to become part of the *Khalsa* agree to a code of conduct, which, among other things, requires individuals to keep five articles of faith, including unshorn hair. Observant Sikhs thus do not cut their hair and wear a turban on their heads. (Most Sikh women elect to cover their heads with a scarf instead.) The Sikh turban is therefore an integral part of a Sikh's physical identity, carrying with it deep religious and symbolic meaning. The Sikh turban would serve, however, as a marker for prejudice and discrimination as Sikhs made their way from South Asia to the United States and especially as Sikhs contended with the post-9/11 backlash.

The Sikh footprint in the United States can be traced to the late nineteenth century. Early Sikh migrants arrived primarily to the West, where the agricultural landscape mirrored that which existed in Punjab. In this limited way, the transition to the United States was rather straightforward for early Sikhs settlers, who

Sikh worshippers eat lunch at the new National Gurdwara and Sikh Cultural Center in Washington, D.C. (Chip Somodevilla/Getty Images)

worked in farms, mills, and foundries. Some Sikhs were credited with helping build railroads in the West at a time when these railways were part of a developing national infrastructure and a network of commerce that was critical to the growing industrial economy. As a natural consequence of their presence, Sikhs developed community institutions in America. The first Sikh place of worship in the United States was founded in the 1910s in Stockton, California, where Sikhs still retain a sizable population. It was not uncommon during this time for Sikh male immigrants in the United States to marry women of Hispanic (mostly Mexican) ancestry, given shared values on the importance of family and similarities in their respective cuisine. (In California, the state's notorious antimiscegenation did not cover Sikhs who were Asian but neither "Mongolian" nor "Malay.")

Sikh immigration to the United States was relatively modest at the beginning and first part of the twentieth century; however, Sikh migration increased significantly thereafter. A wave of Sikh migration corresponded with the relaxing of federal immigration

laws in 1965. Modified immigration laws favored professionals, such as physicians, engineers, scientists, and Sikhs in these occupational areas were among those who were able to take advantage of these preferences. Today, though figures vary widely, roughly 500,000 Sikhs reside in the United States.

Despite the general, inherent difficulties that immigrant and minority groups encounter and despite the additional problems associated with discrimination and harassment tied to their unique appearance, Sikhs have prospered in various segments of American society. Perhaps most notably, Dilip Singh Saund became the first Asian American, let alone Indian American or Sikh American, member of Congress. Sikh achievements in public service continue to this day. Preet Bharara, for example, is the chief federal prosecutor in Manhattan, and Nikki Haley, the daughter of Sikh parents, currently serves as Governor of South Carolina and is a rising figure in the Republican Party.

Sikhs have brought an entrepreneurial spirit to the United States. Contemporary examples include

Dr. Narinder Kapany, generally viewed as the “father of fiber optics,” Ajaipal “Jay” Viridy, whose company is credited with supplying the underlying search technology to Twitter, and Ajay Singh Banga, CEO of MasterCard. White converts to Sikhism, who are concentrated in the American Southwest, have demonstrated the ability to start thriving businesses, such as Akal Security, the largest provider of physical security to American airports and federal courthouses. (These converts’ entrepreneurial initiative stemmed in part from their sense that non-Sikhs may not hire individuals with turbans and beards.) Sikhs’ knowledge and interest in business has translated into academic prominence. Jagmohan Raju, for example, serves as chair of the marketing department at the well-regarded Wharton school of business at the University of Pennsylvania. In terms of the arts, Sandeep “Sonny” Caberwal became the first turbaned Sikh model for a major designer, when he participated in Kenneth Cole print and online campaigns.

As Sikhism originated in a time of strife between the ruling Mughals and Hindus, Sikhs themselves became the object of religious persecution at the hands of the Mughal Empire. In response, Sikhs developed a martial culture, which was codified and perhaps best exemplified by Guru Gobind Singh’s establishment of the *Khalsa*. This interest and expertise in battle and military affairs was not lost on Sikh Americans. In fact, Sikh Americans, including Bhagat Singh Thind (who, in a seminal U.S. Supreme Court decision, was denied naturalized citizenship because he was not considered “white”), joined and fought with the U.S. Army in World War I and World War II. Sikh Americans joined the call to arms in the wake of the 9/11 attacks as well. In 2003, Sergeant Uday Singh was killed when in service in Iraq. The first Sikh American soldier in the U.S. forces killed in the war in Iraq, Sgt. Singh’s grave marker is the first at Arlington National Cemetery to contain a Sikh symbol.

The terrorist attacks of 9/11 represented the start of a defining era for Sikhs in the United States. Because of Sikhs’ physical appearance and the fact that the architects of the attacks, Osama bin Laden and others, wear turbans and have long beards, Sikhs encountered significant hate violence and discrimination. This mistreatment began almost immediately after the attacks

themselves and has continued in the years since that fateful Tuesday morning. For example, literally as the Twin Towers fell, Amrik Singh Chawla was chased, in Manhattan, by a group of men who insisted that Chawla take off his turban. (Incidentally, a Sikh, Dr. Navinderdeep Singh Nijher, was one of the first medical responders to Ground Zero.) The mistaken connection between Sikhs and al-Qaeda, and the backlash against Sikhs, were, in other words, almost instantaneously activated upon the attacks. Sikhs, as a result, were contending with both the general concern about the possibility of another attack on the American homeland, and an additional concern that they would be subjected to violence from their fellow Americans.

In a high-profile incident, on 9/11, Sher Singh was taken off of an Amtrak train in New England, for no other reason than his appearance and the belief that he was affiliated with the 9/11 terrorists. His detention attracted national attention, and he was portrayed, in his turban and flowing beard, as a suspected terrorist. (He was later cleared of all serious wrongdoing, charged only with carrying a concealed weapon, though his exoneration did not make the news, thus leaving the negative impression related to Sikh identity uncorrected as to the public.)

A number of other hate incidents occurred on 9/11, and this considerable spike in bias crimes were noted by the federal government and President George W. Bush, who was the most prominent official to, among other things, appeal for tolerance and implore Americans to be mindful of the view that targeting Muslims and those perceived to be Muslim was “un-American.”

Despite these formal protestations, Sikhs’ worst fears with respect to the backlash were realized on September 15, 2001, when Balbir Singh Sodhi was killed in Mesa, Arizona by a self-proclaimed “patriot” who sought that day to kill some “ragheads.” (The utterance of such epithets, including “raghead” and “camel jockey” were not infrequent prior to 9/11, but became a more regular part of the Sikh American experience after 9/11. “Bin Laden” or “terrorist” joined the catalogue of preferred insults hurled at Sikhs following 9/11.) Sodhi’s murder garnered national press and reinvigorated Sikh efforts to combat the misperception that they were connected to terrorist elements and the ignorance of Sikhism and Sikh identity.

Though Sikhs had been present in the United States for over 100 years at this point, and though the community had grown in large numbers in the last five decades, Sikhs lacked a structure or framework with which to manage and engage in these necessary efforts. The Sikh American response to 9/11 was therefore *ad hoc*. Springing from the tragedy and the backlash were two civil rights organizations, the Sikh Coalition and the Sikh American Legal Defense and Education Fund, which assumed responsibility, on behalf of the community, to respond to inaccurate representations of Sikhs in the media, remonstrate with the government about the mistreatment of Sikhs, build relationships and express solidarity with organizations from other affected groups, and to generally advocate for the welfare of the Sikhs relative to all aspects of post-9/11 discrimination.

This formal approach was critical, given the scope of the discrimination against Sikhs. Indeed, aside from murder, stabbings, physical assaults, and verbal harassment, Sikhs have been profiled, ejected from airplanes, terminated from and refused employment, and bullied in schools, among other things, all on account of their appearance and specifically some Americans' hostility to it. That is, Sikhs have encountered problems in various contexts and this mistreatment continues to the present day. The post-9/11 era exists nonetheless as a defining moment for Sikhs, not only as a people, but as a viable voice in the civil rights and national security policy arenas.

Singaporeans in America

Numbering about 29,000 among some 200,000 overseas Singaporeans, Singapore citizens (or former citizens) living in America probably constitute one of the smallest—and youngest—national communities of Asian origin in the United States. Many of them are students or white-collar professionals and can be found clustered around the major cities of New York, San Francisco, Los Angeles, and Chicago. Over the last few decades, this migratory trend has picked up its pace markedly as Singapore developed into a fully fledged market economy. As the United States has been instrumental in the past to growing the island state's entrêpot economy in service of (U.S.-led) international trade, Singapore today has become one of the largest business and (re)export hubs globally with deep economic, political and cultural links to America. This has translated into increasing numbers of Singaporeans who migrate to the United States each year, pursuing career, investment, and educational opportunities that have been opened up because of these ties.

Singaporean immigrants to the United States are usually young(er), single, and, if married, without children. Although a fraction of these migrants eventually relinquish their Singaporean citizenship in exchange for an American one, most of them eventually return to the city-state or move on to third destinations. It is not uncommon for some to start a family and have children while in America. These children would have grown up accustomed to American culture, and they often have dual citizenship status until 21 years of age by Singapore law. Given the differing ways that

Singaporeans come to be a part of American society, describing these migrants collectively as “Singaporean Americans” may be a bit of a misnomer. An understanding of the migration and national history of Singapore is necessary to fully appreciate the complexity of this demography.

Singaporean Emigration

As a young nation established shortly following the end of British colonialism, Singapore is a tiny island-state in Southeast Asia better known for being a product of immigration than as a major exporter of human capital. Even in the post-independence era, the demographic makeup of the country continues to draw strength from, not so much the natural increase of its native population, but rather the influx of large numbers of “new” immigrants. Because of this constant inflow, the percentage of noncitizens—or, roughly, the foreign-born—in the city-state has increased from 9.6 percent to 36.4 percent in the short span of four decades (Singapore Department of Statistics, 2010). In recent years, particularly, with rapidly declining fertility rates, the Singaporean state has sought to greatly liberalize immigration policies to enable the sustainable growth of the city’s population through immigration (Yeoh and Lin, 2012). More than just increasing in absolute numbers, these recent entrants now hail from a diversity of countries and regions, and range from students and expatriates to temporary contract workers, marriage migrants, and other sojourners.

Appreciating this historical context of immigration in Singapore is crucial to coming to grips with the equally salient event of emigration out of the city-state. Unlike in other societies, Singaporean emigration is not necessarily negatively correlated with population inflows. On the contrary, the two may increase in tandem. The continual attrition of people amid high rates of immigration in fact reflects the social psyche of a nation that has long been exposed to a culture of itinerancy and self-enterprise. As much as immigrants are valued for their pragmatic contributions to the city-state, emigration has likewise been regarded by the people as a means to gain greater cultural capital and new opportunities for oneself. It is, in short, another side of the same coin of mobility and cosmopolitanism,

which has always been an essential part of this “mobile city” (Oswin and Yeoh 2010).

Notwithstanding, the valorization of mobility in Singapore is seldom a result of organic evolution, but is heavily abetted by the state. Much like how immigration is employed as a demographic control valve for meeting the city’s manpower needs, outbound travel among Singaporeans is encouraged by the government for economic reasons as well. Most notably, the Goh Chok Tong administration articulated in the 1990s a roadmap for the country that involved expanding Singapore’s economic sphere through a process called “regionalization,” later recalibrated as “globalization.” Part of this strategy involved supporting highly skilled citizens to undertake international business assignments and greenfield ventures overseas as part of their career development (Singapore 21 Committee, 1999). Promising youths, with an obligation to return, are also frequently sent to the United States, among other countries, on government scholarships for tertiary education and learning. Implicit in this rationale is thus the desire that these “cosmopolitans” would in time acquire new skills, come back and serve as economic extensions of the nation, helping Singapore enlarge its pie in various high-value and technologically advanced industries both locally and abroad. In this sense, Singaporean emigration is always understood to be temporary and reversible by design.

Transnational Singaporeans

Partly as a result of these socio-political ideals, Singaporean emigration is also a far more complex phenomenon than simply a linear trajectory of uproot, resettlement, and assimilation in the host country. Often involving the highly skilled, Singaporean emigrants are able to lead extremely mobile lives that allow them to continue meaningful ties with their home-state while “away.” Some of the practices that these transnational citizens adopt include maintaining regular telecommunicatory contact (e.g., phone calls, e-mail, and Skype) with relatives, friends, and business contacts, making frequent return trips to Singapore (or having people visit them), and keeping themselves abreast on the latest developments and news in the

city-state. Reciprocally, albeit with an element of contrivance, the Singaporean state has also been conscientious to engage this economic diaspora by providing them with relevant online newsfeed on Singapore (e.g., job opportunities and policy updates), organizing events, forums, and food fests in their cities of residence, and establishing relations offices worldwide that double as clubhouses, to moor overseas Singaporeans back “home.” Both voluntarily and institutionally, therefore, there is ostensibly a strong interest for transnational exchange between citizen and country. This strategic sense of mutual identification is furthermore being mediated and strengthened by a slew of cultural, business, and student associations, which serve as important rallying sites for an increasingly deterritorialized Singapore.

Transnationalism, however, is not just a practice of economic pragmatism or for the sake of national affiliation. One of the most common reasons why Singaporean emigrants endeavor to straddle between America and Singapore simultaneously concerns their wish to preserve their kinship ties with family members who have not emigrated with them. In some ways, this desire buys into the Singaporean state’s frequent emotional appeals to emigrants to continue to regard Singapore as home and a place of contribution, on account of these familial ties (Ho 2008). But, at the same time, transnational practices are also an indirect result of the tendency for families to “split” upon one or more members’ decision to emigrate, thereby necessitating long-distance contact. This may be because of residency restrictions overseas, financial and household constraints (see Willis and Yeoh 2000), or simply a lack of desire among those “left behind” to follow suit. Whatever the case, the challenges and burdens of reconciling such transnational distances can quickly surface when migration stints switch from being a temporary stint to something more indefinite. This is particularly the case for migrations to the United States, given the fact that many Singaporeans manage to secure more highly paid jobs and/or better career prospects than in Singapore.

One pressing issue arising from this persistent reliance on transnationalism concerns the disruptions to family life that such separations may bring. Although the problem of long-term separation of spouses is not

a common issue, it is customary for married Singaporean women among these to migrate as trailing spouses. Often, they have to withdraw their labor from the work economy in Singapore and accommodate to their husbands’ career ventures in America. This in turn translates into a need for these women to start new lives away from their parental families and/or employment of choice. In yet other cases, children going abroad to study in the United States can similarly introduce a mobile and unstable factor to the family. In particular, these young adults typically “leave behind” parents in Singapore (Lam et al. 2006), who, unlike their Hong Kong and Taiwanese counterparts, seldom show a predilection for joining their children overseas. Instead, in responding to this unintended long-distance separation, the onus falls upon the (retired) parents to maintain the integrity of the family unit through making visits halfway round the globe.

This is not to say that Singaporean emigrants are pursuing an unprofitable dream by choosing mobility over the certainties of sedentariness. In a society where globalization is greatly revered, transnationalism offers to its patrons new opportunities, perspectives, and, at times, the mark of elitism—qualities that the state desires for its *crème de la crème*. Yet, the increasing appetite for transnational modes of living among Singaporeans can inject a new dimension of unpredictability for the city-state as much as for individual lives. Whereas a stringent nationality regime that does not permit dual citizenships may ensure that most overseas Singaporeans remain politically tied to the nation—if for the sake of facilitating their future return (Ho 2008)—the heightened state of world-mindedness in the populace also means that Singapore faces a perennial threat of “brain drain,” as its people become more globally marketable and footloose. Able to restrain this permanent transience is now only the kinship ties that sustain a sense of home for these emigrants. In a place where mobility is the norm rather than the exception, propensities to take flight again, even upon return, appear to be a constant challenge as much as an asset.

Singaporeans in the United States

Studying why transnationalism is very much a staple part of these Singaporeans’ everyday experience has

the added benefit of shedding light on their distinctiveness as a community apart from other, often ethnically based Asian groups in the United States. Turning now to the perspective of the host society, the vast majority of these Singaporeans are recent, first-generation immigrants, who inevitably retain fresh memories of, and as earlier outlined, strong ties with their hometown. Although many in this small, middle-class community hold professional jobs that are in demand in the United States, only about 30 percent of them eventually take up the American citizenship (U.S. Census 2011), proving again that, for most of them, their sojourn is meant only to be transitory. The most common type of foreign status that these migrants possess in the United States is, in fact, that of an international student or a foreign employee in a specialty occupation (H-1B visa-holder). Following the implementation of the U.S.-Singapore Free Trade Agreement in 2004, a growing number has furthermore sought the even more transient, but readily available, H1B1 professional visa, which allows them easy, renewable access to the opportunities in the United States without having to be subject to the onerous requirements associated with more permanent forms of residency status (e.g., America's worldwide tax regime).

This general state of transience is furthermore complicated by the diversity of pathways through which members of this community come to live and work in America. Although one can generalize that the majority of them are employed in advanced sectors such as finance (in New York) and information technology (in the San Francisco Bay Area), their migrations are not easily reducible to a single schematic of family chain migration or a calculated practice of flexible citizenship (Lin and Yeoh 2011); instead, they are funneled through different routes made available through elaborate networks. Moving as education seekers who subsequently stay on to work in specialized fields such as in the arts; as intra-company transferees who later acquire permanent residency; as entrepreneurs and academics returning to their alma mater in the United States; as bankers who later move on to other world cities such as London; or as government officials who are required to return to Singapore after completing their missions, there are

simply no easy archetypes among Singaporean immigrants in America. Yet in this diversity are already numerous successful figures that have helped reinvigorate the American scene with a Singaporean brand of talent and work ethic. In a short span of just a few decades, these people have included singers (Corrinne May; Sun Ho; Anita Sarawak), artists (Ng Woon Lam; Wee Hong-Ling; John Clang), academics (Shih Choon Foong; Simon Ng; Chua Nam-Hai), and business leaders—many of whom have excelled and accomplished respectable results in their respective fields.

On a more cultural note, Singaporeans in America also continue to draw their identity from their common cultural roots in Singapore. In many American cities, they can be found loosely connected in the form of informal associations and clubs, which regularly organize social events, sometimes in conjunction with overseas Malaysians, during festive seasons such as Chinese New Year, Deepavali, and Singapore's National Day. Such displays of (extra) national unity and solidarity, however, do not preclude internal imbalances and slippages that can sometimes be uncovered on a closer look. One case in point is the exceptionally high percentage of Singaporean immigrants to the United States (as well as elsewhere) who are ethnic Chinese, a phenomenon that seems to contradict the multiracial character of the city-state. Accounting for some 70 percent of the population in Singapore, the Chinese—as opposed to the Malays and Indians—are often more highly educated, wealthier, and therefore more mobile than their non-Chinese counterparts. It is then not surprising that they also constitute by far the largest group of Singaporean “cosmopolitans” shuttling between the city-state and the United States. This is not to say that minority groups from Singapore are absent in the United States, but that Singaporean immigrants to America broadly follow these socioeconomic conventions, which appear to also impress themselves upon the American landscape in fairly racialized ways.

Turning to a slightly different register, a final observation, and an interesting departure from the overarching themes of globalization and transnationalism is perhaps provided by the segment of Singaporean immigrants who *do* ultimately settle down and

acquire U.S. citizenship. Excepting a small group of Singaporean “dissidents” who have relinquished their former citizenship for more complex political reasons, these “Singaporean Americans” are typically of the older generation, who have built their careers and families in the United States over long periods of time. Although they may still identify with other Singaporean immigrants, they are naturally more rooted to their communities in the United States, and are unlikely to return to Singapore. Additionally, many of them have raised children in their adopted homeland, who often have little or no recollection of Singapore. This estrangement is especially so for male children, who may have consciously been registered as American-only, rather than dual, citizens by their parents at birth, so that the need for them to serve in Singapore’s military service can be averted. Given that “Singaporeanness” is not an ethnicity but a nationality, this termination of official ties with Singapore also puts an end to these children’s claim that they are, or ever were, “Singaporean.” Instead, they simply are reclassified as “Asian” in the American context. Herein also lies the possibility that the “Singaporean American” label is but a short-lived and limited category, only applicable to those who can identify with both nations at the same time.

Closing Remarks

Clearly, Singaporeans in America are a diverse community composed of multiple typologies of well-educated and highly skilled migrants. Indeed, despite the small population size of Singapore, they hardly arrive in America for the same reasons, or on the same terms. Some have newly arrived and are still exploring their various options to settle, return, or relocate to a third country; others adapt to their new living environment by adopting a transnational lifestyle, maintaining contact with people back home; yet others simply embrace their new identity to the fullest, acquiring American citizenships for themselves and their families. Yet, amid all these different pathways, one thing is sure: For a people long accustomed to the ideals of mobility, moving to a foreign land promises new opportunities and hopes for a better future. These developments look set to continue into the future, and become even more complicated in time to come for Singapore. Particularly, in

view of the rapid influx of “new” immigrants into the city-state, and the increasing dilution of what “Singaporeanness” (used to) mean(s), it is certain that the face of the island nation, and “Singaporean Americans,” will never cease to morph at each global turn.

Siv, Sichan (1948–)

Sichan Siv is a retired Cambodian American diplomat who has served the U.S. government in several capacities, rising to the rank of ambassador when he

was the U.S. Representative to the United Nations Economic and Social Council from 2001 to 2006. Siv was born on March 1, 1948, in Pochentong, a village near Phnom Penh, Cambodia's capital. His father, a police chief, and an older sister both died when he was nine. His remarkable mother relied on her skills as a cook and caterer to support Sichan and his two remaining older siblings, the three children of the sister who had died, and her own youngest brother. Throughout his life, Siv has drawn strength and courage from the lessons of love, resiliency, determination, and hope that his mother taught him.

After graduating from high school, Siv was accepted in a training program for aspiring airline flight attendants after demonstrating his fluency in French, English, and Khmer, his native tongue. French was the language of instruction in his secondary school, so he knew it well; he picked up English by reading many books from the United States Information Service Library in Phnom Penh. Because his work schedule was flexible, he also enrolled simultaneously in three different curricula at the Royal University in Phnom Penh: law and economics, the humanities, and pedagogy. He also studied Japanese and German. After graduating at the top of his class in the Faculty of Pedagogy, he became a teacher.

Siv was working for Royal Air Cambodge, Cambodia's national carrier, when the country's legislature deposed Prince Norodom Sihanouk when the latter was out of the country in March 1970. Lon Nol, the defense minister, seized power and became the Prime Minister, changing Cambodia's government from a monarchy to a republic. For the next five years, the Lon Nol regime, supported by military and financial aid from the United States, fought a civil war with the Khmer Rouge, the most radical faction among the Communists in Cambodia. Before Sihanouk was deposed, the United States had started a secret bombing campaign over eastern Cambodia near the Cambodia-Vietnam border to kill North Vietnamese Communist, as well as Vietcong (South Vietnamese Communist) troops, and to destroy their weapons and ammunition caches. Communist forces were using eastern Cambodia as a staging area and a sanctuary as they fought against South Vietnamese and American troops. The ground and air war killed hundreds of

thousands of people and drove some 2 million Cambodian peasants (about a quarter of the total population) from their homes into Phnom Penh and other urban areas.

In this chaotic situation, Sichan Siv quit his teaching job and went to work for CARE (Cooperative for American Relief Everywhere). He used his linguistic skills to help CARE manage its multimillion-dollar humanitarian program in Cambodia. By early 1975, the Khmer Rouge had destroyed the boats plying the Mekong River that brought supplies to Phnom Penh, thereby cutting off a major lifeline to several million people seeking refuge in Phnom Penh. The Khmer Rouge also blocked all roads to the capital and destroyed railway tracks, leaving airlifts as the only way to bring food and other necessities into the city. When Khmer Rouge troops began a siege of Phnom Penh, the U.S. embassy informed CARE that space would be reserved for the agency's American personnel and a few of its Cambodian senior staff on the helicopters that would be used to evacuate Americans from Phnom Penh. Siv missed, by 30 minutes, the last helicopter flight out of the capital on April 12, 1975, because he was busy arranging a food delivery and he felt he could not leave without saying goodbye to his mother.

Khmer Rouge troops in all-black clothing and sandals made from rubber tires and armed with AK-47s, machine guns, bazookas, and grenade launchers marched into Phnom Penh on April 17. Siv's extended family and other residents were ordered to leave the city and go to their ancestral villages. The Siv family headed to the village where Siv's father had been born. Siv threw away his eyeglasses because a rumor was spreading that the Khmer Rouge intended to kill all educated people whom they considered to be "lackeys of capitalism and imperialism." He knew that with his university degree and employment in an airline company, two schools, and an American relief agency, his presence would endanger the rest of his family. His mother urged him to escape and bid him farewell with the words, "Remember what I have been telling you since you were a child: No matter what happens, never give up hope." She gave him her gold wedding ring, a gold necklace that her own father had given her, and a scarf.

Siv escaped on a bicycle in May 1975, carrying a bag of rice, some dried fish, the gifts from his mother, and some money. He repeatedly outwitted Khmer Rouge guards at checkpoints by telling them that he had just come from “serving *Angka*” (*Angka* means organization in Khmer; it was what the Khmer Rouge called themselves) and had a pass to go to the next village. People needed passes to get through these checkpoints, so Siv wrote his own. Most of the teenaged Khmer Rouge soldiers were illiterate so they did not know that the piece of paper he showed them was a fake. He kept pedaling toward the west, hoping to reach Thailand.

About a month after he left his family, he was detained by Khmer Rouge soldiers traveling with a convoy of trucks, vans, and cars all chained to each other and pulled by a huge International Harvester truck towing all the vehicles to Sisophon, a town near the Cambodian-Thai border. For the next eight months, Siv was forced to work in a brigade of 30 people who labored 18 to 20 hours a day under the hot sun with no rest. Each person was fed only one bowl of thin rice porridge with a few grains of salt per day. When the cooks managed to catch insects, lizards, snakes, or rats, those were added to the meal. Siv’s forced-labor brigade built levees and dams, repaired irrigation canals, and rebuilt roads, all with their bare hands. Every night, before being allowed to sleep, they had to listen to lectures about the Khmer Rouge revolution.

In November 1975 Siv was asked whether he knew how to operate a crane. He said “yes” even though he had no idea how cranes worked. Luckily for him, he found an instructional manual in the crane, which was used several times a week to lift huge logs on to trucks. During these trips to the border region where the logging operation was located, Siv studied the terrain and talked to local villagers who told him that the Thai border was about a day’s walk away and that the area was full of land mines. As the work at the logging site appeared to be coming to an end, Siv realized he had to escape as soon as possible.

One day, riding on top of the logs, he jumped off the truck but his jacket got caught in the large metal clamps that held the logs in place. He was dragged for about a mile before he managed to free himself.

The red dust made by the truck’s wheels camouflaged his daring escape. He ran into the jungle. To get his bearings, he looked at the trajectories of the sun and the moon to figure out which direction was west. After walking for three days in the jungle, he fell into a booby trap—a deep hole full of sharpened bamboo spikes—used to catch wild animals. What saved his life was his height. At six feet tall, the bamboo spikes lacerated his legs and abdomen but not his chest or head. Bleeding and in severe pain, he used all the strength he could muster to pull himself out of the hole. When pushing forward through the thick underbrush and trees, he heard a loudspeaker inviting people to a celebration at a Buddhist temple. As he walked toward the sound, he noticed sneaker prints in the dirt and realized he must have reached Thailand because no Khmer Rouge wore sneakers.

The monks at the temple sent word to Thai border guards who came to take Siv to their boss, who fed Siv a large meal and gave some medicine for his wounds. The border guards took him to a police station and then a prison where he was strip searched and interrogated. When his clothes were returned to him, he discovered that his mother’s wedding ring and necklace, as well as the money he had hidden in his clothing, were gone. The only gift from his mother that was left was her scarf. The prison’s warden told him that if he wanted to leave, he had to pay a bail equal to about U.S.\$40. Because all his money had been stolen, he asked the warden for permission to send a letter to Bangkok where he knew his former Japanese language teacher was working. The teacher and his wife came to the prison and paid the bail. Siv was taken to a refugee camp on the grounds of Wat Koh, a Thai Buddhist temple, where about 3,500 Cambodia refugees were being housed.

Siv thought that his fellow refugees were likely to be resettled in English-speaking countries, so he began teaching elementary English to about 200 people who wanted to learn the language. He also had his head shaved and became a novice monk at the local *wat* (which means Buddhist temple in Thai). He wrote the U.S. embassy in Bangkok and asked for help. When his closest colleague from CARE, who had moved to Sri Lanka after being evacuated from Phnom Penh, discovered that he had made it to Thailand, she wrote

and promised to do everything possible to get him resettled in the United States. His resettlement offer came in June 1976 when Robert and Nancy Charles of Wallingford, Connecticut, who had lived in Thailand when Mr. Charles was the Peace Corps director in northeastern Thailand, offered to sponsor him.

After arriving in the United States on June 4, 1976, Siv was determined to become self-sufficient as quickly as possible. He found a job picking apples, then worked in a Friendly Ice Cream Store. He moved to New York City in January 1977 where he worked as an assistant cashier in a restaurant, then as a taxi driver, quickly memorizing the names and locations of streets in New York City. As refugees from Cambodia, Vietnam, and Laos landed in the United States in increasing numbers, Siv became a social worker first at the Lutheran Immigration and Refugee Service, then in the office of the Episcopal Church's Presiding Bishops' Fund for World Relief.

He yearned to go to graduate school and wrote letters to many universities seeking admission. Columbia University's School of International Affairs admitted him with a full scholarship. Just as he was packing up to move into a dormitory at Columbia, he received a letter from a childhood friend who had reached a refugee camp in Thailand. The letter told him that 15 members of his family, including his mother, had been killed by the Khmer Rouge. He found a Thai Buddhist temple in New York City and asked the head monk to shave his head so that he could mourn their deaths. After receiving his MA in international affairs, he worked as a financial analyst at a bank. He became a naturalized U.S. citizen in 1982; he married a Texan, Martha Lee Pattillo, who had worked at a United Nations agency in Bangkok, in 1983.

During the years when Siv was making a new life for himself in the United States, a momentous chain of events was taking place in Cambodia. On Christmas day 1978, 100,000 Vietnamese troops and a sizable contingent of Khmer Rouge defectors who had found sanctuary in Vietnam invaded Cambodia. They encountered no resistance along the way and marched into Phnom Penh on January 7, 1979. Khmer Rouge leaders fled into the jungle, taking about 40,000 soldiers with them. The Vietnamese set up a new government led by two young former Khmer Rouge

military commanders, Heng Samrin and Hun Sen, both of whom remain prominent today—Heng in an honorific position and Hun as prime minister of Cambodia.

A coalition of “strange bedfellows,” made up of forces loyal to Prince Sihanouk, adherents of Son Sann who had served as a prime minister under Sihanouk, and civilian leaders of the Khmer Rouge, held Cambodia's seat at the United Nations. The only thing these three groups had in common was their desire to kick the Vietnamese out of their country. The United States was so anti-Vietnam during this period that it ignored Khmer Rouge atrocities and supported the coalition because the United States also wanted to end the Vietnamese occupation. When former Prime Minister Son Sann discovered that Siv was in New York, he asked Siv to help his faction at the United Nations. Siv and his colleagues lobbied U.S. lawmakers, the White House, and UN delegations from Southeast Asian countries, meanwhile giving many interviews to the U.S. mass media and talks to organizations to tell Americans about the plight of the Cambodian refugees who had found their way to makeshift refugee camps along the Thai-Cambodian border where they faced starvation. After 10 years of armed conflict between the troops of the Vietnamese-sponsored government and those supporting the three coalition members on both sides of the Thai-Cambodian border, the Vietnamese finally withdrew their forces in 1989. The United Nations brokered a peace settlement in 1991 and supervised national elections in 1993 that finally brought a measure of peace to the devastated country.

Meanwhile, Siv got involved in U.S. electoral politics. He worked as a volunteer in the presidential campaign of George H. W. Bush (the father) who was President Ronald Reagan's vice president. After Bush won the 1988 elections, Republican operatives who had been impressed by Siv's dedication suggested that he be considered for a job in the White House. He was hired as President Bush's deputy assistant for public liaison—the first Asian American to hold such a high post within the White House. Siv and his colleagues in the Office of Public Liaison addressed a broad array of issues, helping the public to understand the Bush administration's policies and priorities. In addition, Siv participated in the planning process that led to the UN peace agreements on Cambodia.

He was one of the leaders of the U.S. delegation to the Paris Conference on Cambodia in October 1991. He was also a member of the U.S. mission to Cambodia in 1992 as UN peacekeeping troops arrived to carry out the repatriation of 370,000 refugees from the Thai-Cambodian border camps and get them resettled in Cambodia, to register people to vote, and to supervise the 1993 elections. Siv had a personal quest as well: by talking to villagers, he found the spot where his family had been killed. He had a Buddhist memorial service performed at that location and another one in Pochentong, his birthplace.

Siv left his White House job in January 1993 after Bill Clinton won the 1992 presidential elections. However, when George W. Bush (the son) became president, he appointed Siv to the UN Commission on Human Rights and soon after that as the U.S. Representative to the United Nations Economic and Social Council (ECOSOC) with the rank of ambassador in 2001—a post that required U.S. Senate confirmation. ECOSOC is responsible for promoting economic, social, and health-related developments around the world; dealing with humanitarian crises wherever they may arise; and coordinating UN General Assembly affairs. Siv was particularly concerned about human trafficking and worked hard to help find ways to end that evil practice. Veteran diplomat John Negroponte was the U.S. Chief of Mission at the time and he and Siv got along very well. The sociable, affable, and multilingual Siv tried to become friends with as many of the 250 other ambassador-level representatives at the UN as possible, but U.S. personnel did not socialize with representatives from Cuba, Iran, Iraq, North Korea, and Libya though they did work professionally with them. Siv recalls with pleasure that in November 2003 he delivered, in Spanish, the U.S. statement on the trade embargo against Cuba.

After five hectic years at the UN, Siv retired in 2006. He wrote his autobiography, *Golden Bones: An Extraordinary Journey from Hell in Cambodia to a New Life in America*, which was published in 2008. “Golden Bones” is a Cambodian term for people who are particularly lucky. He now spends time giving talks, traveling, riding horses as a Texas cowboy, and serving as the Texas State commissioner on holocaust and genocide. He had taken flying lessons in the

1980s and has a pilot’s license, which allows him to be a volunteer in the U.S. Air Force Auxiliary Civil Air Patrol and the San Antonio Aviation Police. He and his wife have settled down in San Antonio, Texas, but they still travel widely. He attends services at the Presbyterian Church in San Antonio, his wife’s denomination, but continues to say Buddhist prayers everyday in front of his mother’s scarf.

Son, Diana (1965–)

Born in Philadelphia and raised in Delaware, Diana Son became interested in writing at an early age. When she was in the fourth grade, an essay she wrote on Thanksgiving was chosen as the best in the class. This acknowledgment created her interest in writing. A few years later when in high school in Dover, Delaware, her class made a field trip to New York to attend *Hamlet* produced by Joseph Papp and featuring a woman, Diane Venora, as Hamlet. This feature of the play with a woman playing Hamlet impressed Son, who felt that this casting choice enabled her to better relate to the character of Hamlet as a woman. This kindled an interest in drama and literature, and Son went on to pursue a bachelor’s degree in dramatic literature at New York University from 1983 to 1987.

Her landmark play, *Stop Kiss* (1998), premiered Off-Broadway at The Public Theater. Reviewer Simon Saltzman referred to the play as “a funny, poignant,

horrifying, and finally inspiring urban play.” The play was named one of the best plays of 1999 by the *New York Times*. The play also won the GLAAD (Gay and Lesbian Alliance Against Defamation) media award for best New York production. *Stop Kiss* explored the lives of two young women in New York City, as they find themselves falling in love with each other. The key theme of the play was the simple basic fact that everyone is entitled to find love, no matter the gender or color of the individual. Indeed the play transcends the specifics of a gay romance and looks at the broader theme of commitment, personal identity, and love. *Stop Kiss* has been performed by over a hundred theater companies from New York to London to Seattle. The initial premise for casting the play was to examine the racial diversity of New York. However in productions outside of New York City, this has not been the case, much to the consternation of the playwright.

Satellites (2006), which opened at The Public Theatre in New York City, was a conscious effort to examine interracial relationships. The characters in question, a Korean American woman and an African American man, were in a sense complex, as they did not really have a clear sense of their ethnicity. It is indeed ironical that such a juxtaposition of characters would create an interesting dynamic between the black and Korean communities.

Boy (1996) premiered at the La Jolla Playhouse, San Diego under the direction of Michael Greif. The premise of the play revolved around a couple who are blessed with a fourth daughter, but are determined to let everyone believe that this child is a desperately needed boy. It is autobiographical to a degree, in that on Son’s mother’s side there were six siblings, all girls. A son was greatly desired, but after six daughters, her grandparents decide to adopt a boy.

Fishes (1998) opened first at the People’s Light and Theatre Company in Malvern, Pennsylvania and then moved on to New York City. In this play, Son turned to the intricacies of a mother-daughter relationship. *R.A.W. ('Cause I’m a Woman)* (1993) was a short play that premiered at the Ohio Theatre in SoHo. The letters in the title stand for Raunchy Asian Woman. It was first developed at the Asian American Playwrights Lab and featured four Asian women responding to images of Asian women stereotypes.

Son has been the recipient of many awards. She won a NEA/TCG Residency grant to work at the Mark Taper Forum, Los Angeles. She has also worked with the National Theatre in London with a Brooks Atkinson Fellowship.

Son has branched out from playwriting to include an impressive array of credits in television and screenwriting. Son has served as an executive producer for the television series, *Law and Order: Criminal Intent*. She has also written many television pilots, worked on a film for Showtime and also worked in the area of feature films for Fine Line Pictures and Robert Greenwald Productions. She is quoted as saying, “I write for TV, for the money, full stop.” On the other hand television writing has only served to strengthen her plot writing skills. Son has also taught at various educational institutions like Yale and New York University. Currently she has taken a hiatus from teaching to raise her children. However, teaching is something that she would love to go back to in a few years down the road.

Sone, Monica (1919–2011)

Born on September 1, 1919, Monica Sone (Kazuko Itoi) is best known for her semiautobiographical memoir *Nisei Daughter*, which illuminates the experience of a Japanese American girl coming of age during the pre-war and World War II era in the Pacific Northwest. Although her memoir is noted for its light and humorous tone, *Nisei Daughter* expresses some of the Nisei or second-generation Japanese Americans’ concerns and shows the struggles they experienced from the expectations of their families, communities, and mainstream society. For example, Sone’s first person narrative begins with her parents’ announcement that she is to attend Japanese language school. It is this shocking moment when she realizes that she is Japanese and must grapple with what it means to be different.

As the memoir progresses she continues to address these moments of difference as a young adult, from being denied as renters because she was Japanese American to furthering her education. She had originally intended to attend the University of Washington, but her parents decided to send her to business school to work as a stenographer or typist. Because it was difficult for Nisei to gain employment despite the degrees they held and because of the growing tensions between the United States and Japan, these types of decisions were not uncommon. She finishes business school early in the hopes of attending a four-year university only to find herself admitted to the North Pines Sanitarium for tuberculosis.

After being discharged after nine months of treatment, she returns home only for her world to change again with the bombing of Pearl Harbor and the subsequent internment of Japanese Americans. Although Sone does address the harsh conditions of internment: being forcibly moved from her home, harsh living conditions, and feeling like the enemy, she also documents family moments that are happier, including her brother's wedding. The narrative ends hopefully with Sone's character enjoying her college education and finally coming to terms with both her Japanese and American identities. This narrative of one Japanese American woman's coming to terms with the complexity of her identity that ultimately resolves in the blending of the two is a much discussed issue for the second generation. But at the same time, her life story is so much more than a commentary on being Japanese and American because it complicates this resolved narrative of assimilation by commenting upon the continuing racial discrimination and violence that lingers long after her release from internment.

Nisei Daughter was first published in 1953 and reprinted in 1979 coinciding with the Japanese American Citizens League's campaign for redress and restitution. Sone's tone is serious and urgent as she passionately writes in the 1979 edition's preface that the memories of internment are never to be forgotten, not only to acknowledge a wrong that was committed by a nation but to discourage further injustices. *Nisei Daughter's* articulation of a young Japanese American woman's experiences serve as one of those accusing memories. Its reprinting reminds other Japanese

Americans to also partake in a bit of storytelling, to share with the nation about a time when Japanese Americans were incarcerated because of their race and to point to the fragility of civil liberties. Sone's work is an important record of Japanese American history and continues to be taught in classrooms throughout the United States.

Much like her memoir, Sone was born to Issei (first-generation Japanese) parents in Seattle, Washington, both of whom were intellectuals in Japan. Her mother, the daughter of a Japanese Christian minister would often write poetry whereas her father was an aspiring law student before immigrating. Sone spent her childhood in a hotel managed by her father on Skid Road that allowed her more interaction with white society. Sone was also a patient at Firland Sanitarium in North Seattle where she met and befriended fellow writer, Betty MacDonald. During World War II, Sone and her family were forcibly relocated to Camp Harmony in Puyallup, Washington and later interned at Minidoka War Relocation Center in Idaho. Through the assistance of the Student Relocation Council, Sone was able to leave Minidoka to attend Hanover College in southern Indiana. From there she went on to Case Western Reserve University where she graduated with a degree in clinical psychology. She later married Geary Sone, a Nisei veteran and eventually settled in Canton, Ohio with their four children: Philip Geary, Susan Mari, Peter Seiji, and John Kenzo. Monica Sone passed away on September 5, 2011.

Soong Mei-ling (1898–2003)

Soong Mei-ling (Soong Mayling), also known as Madame Chiang Kai-shek, was born in 1898, the

fourth of six children and the youngest of three daughters of Charles (Charlie) Jones Soong (1863/1866–1918), a prominent Shanghai businessman and a Southern Methodist missionary, and Ni Kwei-tseng (Guizhen, 1869–1931), the favorite daughter from one of the most illustrious families in China. Madame Chiang was the first Chinese and second woman to address both chambers of the U.S. Congress, a patron of the International Red Cross Committee, honorary chair of the British United Aid to China Fund, and First Honorary Member of the Bill of Rights Commemorative Society. Ernest Hemingway called her the “empress” of China. She died in New York City in 2003, at the age of 105. Her published works include *This is Our China* (1940), *The Sure Victory* (1955), and two volumes of selected speeches.

Soong Mei-ling (Madame Chiang Kai-shek). (Library of Congress)

The Soong Family

Soong Mei-ling’s mother, Ni, was a Christian and received a Western education from a mission school for girls. Mei-ling’s father, Charlie, studied theology at Vanderbilt University in Nashville, Tennessee before returning to China as a missionary for the Methodist Church. He quickly vaulted into China’s aristocracy after marrying Mei-ling’s mother. Charlie met Sun Yat-sen in 1892 and later became one of Sun’s closest confidants and supporters.

Mei-ling and her sisters are known as the Soong sisters partly because of their prominent political involvement and influences in Modern China. Mei-ling’s eldest sister Ai-ling (Eling, 1890–1973) married Kung Hsiang-hsi (Kong Xiangxi, 1881–1967), also known as H. H. Kung, the finance minister in the Kuomintang (KMT, or Guomindang, GMD) or Nationalist Party. The second of the three daughters, Ching-ling (Qingling, 1893–1981), married Sun Yat-sen (1866–1925), the founder of the Republic of China, and became joint president of the People’s Republic of China from 1968 to 1972, and honorary president in 1981, just before the passing of the Constitution in 1982. Mei-ling married Generalissimo and President Chiang Kai-shek. After the defeat of Chiang Kai-shek’s Republic of China (ROC) government in the Chinese Civil War in 1949, Mei-ling followed her husband to Taiwan, whereas her sister Ching-ling, siding with the Communist People’s Republic of China, stayed on the mainland.

Education

Soong Mei-ling left home with Ching-ling to go to Wesleyan in 1907, following in their elder sister Ai-ling’s footsteps. They first studied for a year at a small private boarding school in Summit, New Jersey. Ai-ling returned to Shanghai after graduation in 1909. Mei-ling attended Piedmont College for a year, before returning to Wesleyan in 1910. After Ching-ling graduated from Wesleyan in 1913, Mei-ling transferred to Wellesley College near Boston where her brother T. V. was attending Harvard at the time. She graduated from Wellesley College in 1917 at the age of 20, as one of the 33 Durant Scholars, recipients of

the highest academic honor conferred by the college, with a major in English literature and a minor in philosophy. She was also a member of Tau Zeta Epsilon, Wellesley's Arts and Music Society.

After she returned to Shanghai following her graduation from Wellesley, Soong Mei-ling began teaching English at the Young Women's Christian Association (YWCA). In addition, Mei-ling founded the McTyeire Society with the support of Ai-ling and other upper-class Shanghai women to raise funds for the Shanghai private girls' school and served as president of the American Women's College Club in Shanghai. Mei-ling also served on the Film Censorship Committee of China, which screened all films before they were exhibited in China and censored those with derogatory portrayals of the country. Mei-ling's fluency in Mandarin was crucial to establish her legitimacy among the Chinese as the country tried to define a national culture distinct from foreign influences. During the next decade, Mei-ling increasingly participated in the civic culture of Shanghai as a socialite and as a volunteer in reform efforts.

Marriage with Chiang Kai-shek

Soong Mei-ling met Chiang Kai-shek in 1920 when she was 22 years old, and Chiang 11 years her elder. Chiang Kai-shek was educated abroad at a Japanese military academy, and was put in charge by Sun Yat-sen of founding and directing the National Military Academy, where he trained a loyal group of highly skilled army officers and quickly established his reputation in the KMT/Nationalist Party. Chiang Kai-shek was already married twice before he met Soong Mei-ling and had two children. Chiang Kai-shek and Soong Mei-ling met at a Christmas party at Sun Yat-sen's home in Shanghai given by her older brother, T. V.

Mei-ling and Chiang shared similar backgrounds, including an education abroad, merchant parents, an intense nationalism, a deep resentment of foreign imperialism, and a conviction that the Chinese would be shaped into a modern vital nation, even if force were required. It is also believed that there were political considerations from both sides. The Soong family would profit from Chiang's rise to power, and by marrying Mei-ling, Chiang could claim Sun Yat-sen as his

brother-in-law to gain further legitimacy in the KMT. Ai-ling's husband, H. H. Kung, a wealthy industrialist and banker, also was invested in opposing the Communists. The only person in the Soong family that did not like this alliance was Ching-ling, who had reacted strongly against Chiang's actions in Shanghai, when he killed over 5,000 people with leftist or Communist connections in an attempt to eradicate the Communists in Shanghai.

When Chiang and Mei-ling were married in 1927, they had two weddings, one traditional Chinese and one Christian. The secretary of the YMCA performed the Christian ceremony before 1,000 guests, followed by a traditional ceremony. The ceremony was covered in all of the local press and was one of the year's major social events. Ching-ling did not attend the wedding because she believed that Chiang had betrayed Sun and her late husband's ideals. T. V., Mei-ling's older brother was appointed by Chiang in 1928 to manage the finances of the KMT/Nationalist government.

Soong Mei-ling and Chiang Kai-shek's marriage was a local and international political event. Officials in the U.S. Department of State's Far Eastern Division noted their marriage with interest, as Mei-ling's devotion to Christianity and active involvement in civic and government activities were seen as signs of modernization and westernization of China. As Chiang continued to fight against Chinese Communists, Mei-ling formed a women's club to care for wounded foreign and Chinese soldiers, and proposed a committee of Protestant missions to evangelize in major governmental hospitals, and worked to involve churches in developing the rural areas that were affected by flood, famine, or war. She also began two schools in Nanjing for the children of Nationalist soldiers who had been killed.

Roles in International and Domestic Politics

Soong received greater international attention when Chiang Kai-shek was held hostage in Sian (Xian) in 1936 by his associate Chang Hsueh-liang, known as the Young Marshal. Mei-ling, her brother T. V., and Chiang's advisor, W. H. Donald flew to Sian to negotiate for Chiang's release. What was less known was that Chang and Chou En-lai of the CCP, during this

event, helped negotiate an end to the hostilities between the two parties, suspended China's internal political conflict, and Chiang Kai-shek emerged as the leader of the united front of China against Japan.

In the United States, the *New York Times* featured on its front page excerpts from Chiang's diary and Mei-ling's account of the event, which led to a book publicizing Mei-ling's role in converting Chiang to Christianity and her political leadership in China's political transformation. Although there were Americans, such as Pearl S. Buck, who had a more critical eye toward the couple, the publisher of *Time* and *Life* magazines, Henry Luce, along with many other Americans believed that the couple contributed to the positive relationship between the United States and China. Luce placed the Chiangs on the cover of *Time* as "Man and Women of the Year" in 1937.

Soong Mei-ling was a member of the Legislative Yuan from 1930 to 1932, and headed the conservative New Life movement from 1934 with the goals to raise public morals, impose modest dress, and uphold women's family roles. From 1935 on, Soong Mei-ling and her elder sister, Ching-ling, Sun Yat-sen's widow, worked together mobilizing women for the war. Speaking perfect English, Soong Mei-ling was invaluable to Chiang in his relations with the United States. She was appointed by Chiang as the Secretary-General of the Chinese Aeronautical Affairs Commission from 1936 to 1938. In 1945, she became a member of the Central Executive Committee of the KMT. As Chiang Kai-shek rose to become generalissimo and leader of the KMT, Soong Mei-ling acted as his English translator, secretary, and advisor. During War World II, Soong Mei-ling worked on promoting the Chinese cause and building a legacy for Chiang Kai-shek to be on par with Roosevelt, Churchill, and Stalin.

Soong Mei-ling's visible and official role in the Chinese KMT/Nationalist government was praised by some Americans as evidence of the influence the United States had on China, but this is questioned by many Chinese and Chinese military leaders. Even though it is difficult to ascertain how much power she actually had, the image of Mei-ling sharing power with Chiang, the generalissimo, in a companionate marriage gained sympathy from the United States, but did not endear her to Chinese nationalists.

After the United States entered World War II, with China and the United States now sharing a front against Japan, Soong Mei-ling was invited by then first lady Eleanor Roosevelt to visit the United States as a guest of the president and first lady at the White House in 1943. She was also invited to address both the House and Senate of the U.S. Congress. The speech was nationally broadcast and made a huge impact on the U.S. public. Madame Chiang then embarked on a six-week speaking tour across the country and gathered support along the way, increasing donations to China relief organizations by 200 percent. The media and the public were fascinated with the "new China" and Madame Chiang Kai-shek.

At the same time, during Madame Chiang's stay in the United States, rumors emerged among diplomatic circles that her marriage was failing, that Chiang Kai-shek's second wife had moved back to live with him in ChongQing (ChungKing), and Chiang had impregnated another woman. There were also speculations about her possible refusal to have children and if she was fitting to be a "first lady." By the time Madame Chiang reached Los Angeles, her last stop in the speaking tour, she was severely ill and rumored to have had a nervous breakdown. Chiang Kai-shek was furious with the rumor reports and demanded that she returned to ChongQing immediately. However, after returning to ChongQing in late October, Soong Mei-ling and her sister Ai-ling left soon after for Brazil, further fueling the speculation about her marriage to Chiang.

During the war, more than \$3 billion was appropriated by the Congress to China, and most of it was transmitted through T. V. Soong, Mei-ling's brother. In 1948, Soong Mei-ling traveled to Washington again to appeal for emergency aid for Chiang's war against the Chinese Communists, but she was unsuccessful this time. President Harry Truman kept her out of the White House. Later he told one of his biographers that Madame and President Chiang, the Soong family, and the Kungs had swallowed up too much money from the U.S. aid to China.

Late Life

After Chiang Kai-shek died in 1975, Soong Mei-ling assumed a low profile and moved to Lattingtown,

Long Island, New York. In 1976, she was diagnosed with breast cancer and had a mastectomy, and later, a second one. In 1981, she refused the invitation to attend her sister Ching-ling's funeral in China. When Chiang Kai-shek's successor and his eldest son, Chiang Ching-kuo, died in 1988, Soong Mei-ling returned to Taiwan briefly. She made her last visit to Taiwan in 1995. In the same year, Soong Mei-ling made a rare public appearance attending a reception held on Capitol Hill in her honor in connection with celebrations of the 50th anniversary of the end of World War II.

Soong Mei-ling sold her Long Island estate in 2000 and spent the rest of her life in Gracie Square apartment on the Upper East Side of Manhattan, in which she died in her sleep on October 23, 2003. Her remains were laid to rest at Ferncliff Cemetery in Hartsdale, New York, and it was stated that she wish to be buried in mainland China with Chiang Kai-shek after the political differences between the Republic of China and the People's Republic of China are resolved. Chiang is currently entombed in Cihu, Taiwan.

South Asian American Transnational Politics

On September 25, 2006, outside a hotel in Manhattan, hundreds of Pakistani immigrants were assembled in two separate groups on the eve of Pakistani President Pervez Musharraf's visit to New York City to attend the United Nations General Assembly. The two groups were there to express their views about the prevailing conditions in Pakistan, particularly about the legitimacy of military rule being led by President Pervez Musharraf. Those opposed to the military rule and Musharraf's regime were being led by Asian-American Network against Abuse of Human Rights (ANAA), a nonprofit U.S.-based group of Pakistani immigrants for restoration of human rights in Pakistan. The group held a meeting earlier that day to discuss the ways to highlight human rights violations in Pakistan through lobbying and activism in the United States. Pakistani immigrant activists from all across the United States had traveled to join the meeting and protest against the military regime in Pakistan. The counterprotest to express support for the military regime was also attended by a significant number of Pakistani immigrants.

On May 3, 2006, around 200 Indian Americans from all across the United States attended a White House briefing led by Karl Rove on the importance of the U.S.-India Civil Nuclear Deal for both the United States and India. The group traveled to Washington, D.C. to meet the members of Congress from their respective areas to lobby for the passage of U.S.-India Civil Nuclear Deal. The effort was a part of the lobbying campaign launched by various organizations of Indian immigrants to push for the passage of the U.S.-India Civil Nuclear Deal through the Congress.

The above two descriptions are contemporary examples of the numerous ways in which South Asian immigrants engage with transnational politics. South Asians in the United States have a long history of transnational political engagement. The earliest group of immigrants from South Asia came to the United States in the late nineteenth and early twentieth century when India was a British colony. The British colonial rule in India was an issue of major concern among

South Asian immigrants, and scholars have documented a rich history of transnational political engagement in the United States in support of the anticolonial struggle. The Hindi Association of Pacific Coast, more popularly known as the Ghadar party (meaning mutiny or revolution), was founded in 1913 in Oregon with the aim of liberating India from British colonialism by all means possible. The group had its ardent followers among laborers from India in California, Washington, and Oregon and a handful of Indian students enrolled in different U.S. universities. The racialized condition of migrants from India in the mills and farms of the Pacific Coast in early twentieth century also shaped the organizing efforts of the Ghadar party. The Ghadar movement in the United States was broad enough to draw Sikhs, Muslims, and Hindus, and it developed into a group that attracted political rebels, students, intellectuals, workers, and farmers alike.

The current forms of transnational politics emerged after the Hart-Celler immigration reform in 1965 that inaugurated a new phase of immigration from South Asian countries to the United States. The period after 1965 has seen immigration from India, Pakistan, Bangladesh, Sri Lanka, and other South Asian countries. This new phase of immigration from South Asia brought a significant number of educated professionals, particularly from India and Pakistan. The flow of immigration from South Asia has steadily increased in the last 40 years and now the community includes professionals, small entrepreneurs, and working-class populations. Technological innovations leading to ease of mobility and communication have brought the world closer and provided the immigrant communities the tools and resources to maintain strong transnational lives and strengthened their transnational political engagements. The recent trends of political engagement among South Asians in the United States suggest that there are three kinds of organizations that either directly or indirectly get involved in transnational politics. First, there are lobbying organizations that are active on U.S. foreign policy issues relating to their countries of origin. One of the most prominent examples of this kind is USINPAC, which claims to represent the interests of the Indian American community on Capitol Hill, and it gets heavily involved in lobbying on issues related to India. This commitment

of USINPAC was reflected in its important role in lobbying Congress in 2006 for the passage of the U.S.-India Civil Nuclear Deal. Along similar lines, Pakistani American Public Affairs Committee (PAK-PAC) claims to represent Pakistani Americans and lobbies with Congress on issues related to Pakistan. Bangladeshi immigrants have also been involved in attempts to create a group that can speak on behalf of Bangladeshi Americans in Washington, D.C. and can also support and lobby for Bangladesh on important issues. This kind of transnational political engagement is generally focused on countries of origin and can often lead to conflicting policy goals of different South Asian communities in the United States given the contentious relationship among South Asian countries. The continuation of the politics of ongoing rivalry between India and Pakistan by the Indian and Pakistani American community is an example of how transnational political engagements of diasporic communities can get entangled in nationalism emanating from the countries of origin.

The second category of South Asian groups engaged in transnational politics is more directly connected to political groups in the countries of origin. For instance, among Indian immigrants in the United States, there are groups that support two of the major political parties of India—the Indian National Congress Party (INC) and the Bharatiya Janata Party (BJP). The U.S.-based Indian National Overseas Congress (INOC) and Overseas Friend of BJP (OFBJP) support the Congress party and BJP in India, respectively. They work toward creating networks of support for these political parties among Indian immigrants in the United States. In the last 10 to 15 years, BJP and its affiliates such as Vishwa Hindu Parishad (VHP) and Rashtriya Swayamsewak Sangh (RSS)—the groups that espouse a political ideology aimed at transforming India from a secular state to a theocratic Hindu state and engage in virulent anti-Muslim politics—have established organizations and associations in different parts of the United States to mobilize resources and support in favor of their political program and ideology.

Pakistani and Bangladeshi immigrant communities also have similar kinds of political formations. Because of a long history of military rule, political

parties are not that strong in Pakistan and that gets reflected in a relatively weak presence of Pakistani political parties and their affiliates in the Pakistani American community. However, Pakistani political parties such as Pakistan Peoples Party (PPP), Pakistani Muslim League (N), and Pakistani Muslim League (Q) do have their U.S.-based formations active in the community. More important, the Pakistani American community has also been deeply divided on the question of military rule and has seen a number of campaigns, rallies, and political meetings in the United States either in favor or against a former military general who retained both the presidency and his military office until very recently. A significant section of the Pakistani American community has also been involved in the struggle for democratic governance in Pakistan. Bangladeshi immigrants are relatively new to the United States and there is a very distinct pattern of transnational political involvement among Bangladeshi immigrants, reflective of an intense engagement of the community with the political process in Bangladesh. The intensity of engagement is reflected in the presence of major Bangladeshi political parties—Awami League, Bangladesh Nationalist Party (BNP), and Jamaite Islam—in all the major U.S. cities where Bangladeshi immigrants are settled. There are state and city branches of these political formations and the intense political rivalry and factionalism of Bangladeshi politics is played out in the United States.

The third category of organizations is different from the earlier two because these organizations engage in transnational activities that do not involve the formal political process. There are a number of organizations active among South Asian communities that focus on developmental work in the countries of origin. Even though a large majority of South Asian immigrants do not engage with the political process of their home countries in terms of joining groups and participating in activities related to political parties, a significant number of them do get involved in developmental or charity work in their countries of origin. The presence of organizations such as ASHA, Association for India's Development (AID), and India Development and Relief Fund (IDRF) along with many smaller initiatives is indicative of the engagement of the Indian immigrant community in the social

and developmental process. Among Pakistani and Bangladeshi American communities there are also similar organizations that focus on developmental work. Organizations such as Development in Literacy (DIL) and Human Development Foundation (HDF) carry out similar work of resource mobilization among Pakistani American community for developmental work in Pakistan. Organizations working along similar lines among Bangladeshi immigrants influence and enhance transnational engagement of these communities. These developmental organizations are nonpolitical in terms of their professed distance from different political parties and groups and their focus on economic development and social issues. However, a closer look at these organizations suggests that they are involved in a broad array of philanthropic, charity, civic, and political work in their countries of origin. Moreover, there is no strict separation between political and nonpolitical engagement. The example of India Development and Relief Fund is quite illustrative in this context. The work of resource mobilization by IDRF among Indian Americans for developmental projects in India became highly controversial when a watchdog group of Indian Americans—Campaign to Stop Funding Hate (CSFH)—came out with a report concluding that IDRF was funneling all of its money to charity organizations linked to Hindu right-wing groups such as RSS, BJP, and VHP, which believe in virulent anti-Muslim and anti-Christian ideology. The transnational work of IDRF was criticized by CSFH and other such groups for contributing to the politics of hate and communal violence in India. Apart from these dominant trends of transnational political engagement, there are smaller formations that have explicitly defined themselves as South Asian groups such as Forum of Indian Leftists (FOIL), Friends of South Asia (FOSA), Alliance for a Secular and Democratic South Asia, who work on issues of social justice in the region and have campaigned on a range of issues such as human rights, environment, displacement, minority rights, and religious conflicts.

The broader understanding of immigrant transnationalism has often emphasized its radical potential in terms of moving away from an assimilationist framework in the country of settlement and also advancing democratic transformation in countries of emigration.

However, the experience of transnational political engagement among South Asians in the United States underscores the need to cast a more critical lens on transnational political engagement. Alongside expanding the horizon of politics and opening up of political space for immigrant communities, transnational political engagement often brings forth the issue of narrow nationalism and the possibility of fracturing panethnic solidarity. The politics of lobbying for home country governments, as evident in lobbying for the U.S.-India Civil Nuclear Deal, points to the role of narrow nationalism in shaping the transnational political engagements of immigrant communities. The espousal of the politics of religious majoritarianism—as evident in resource mobilization for Hindu right-wing politics among the Indian American community—through transnational means underlines the complex nature of transnational political engagement. The South Asian experience suggests that although the transnational political engagement of immigrant communities opens up the space for political engagements of immigrant communities, the engagement produces a range of political outcomes ranging from increased democratization and egalitarian development to national chauvinism and religious extremism.

South Asian Ethnic Identity

Since the late 1980s, the term South Asian has emerged as a panethnic category to refer to immigrants and the children of immigrants from the South Asian subcontinent, generally including the nations of India, Pakistan, Bangladesh, Sri Lanka, and Bhutan. Increasingly, organizations of all types, especially second-generation organizations define themselves as South Asian, choosing this label over Indian American or other labels that refer to the national origins of their members. “South Asian” is not a racial or ethnic category in the U.S. Census and there are no clear-cut ways of measuring the overall adoption of South Asian ethnic identity. Although the term “South Asian” is commonly used in academic circles and some media accounts, it is not a given that immigrants from the subcontinent will ethnically identify themselves as such. However, South Asian ethnic identity is an emergent phenomenon, especially among second-generation South Asians who choose it as part of a multilayered process of ethnic self-identification. It is also significant in organizational contexts where panethnic mobilization is an effective strategy for combating discrimination and gaining political influence.

The term South Asian as a designation can be read on a number of different levels. The first is that it is the result of a racialization process, where people who originate from the subcontinent are placed in a racial category that distinguishes them from other Asians. Another meaning is around the idea of South Asian ethnic identity as a self-designated panethnic identity that recognizes a set of shared culture and shared experiences as members of a minority group. Sociologist Ann Morning describes the first process using Census data, demonstrating great variation in the self-identification of people from the subcontinent depending on factors such as

social class, education, and national origin. Recent scholarship has addressed the idea that South Asian identity is particularly salient for members of the second generation, in contrast to first generation South Asian immigrants who prefer to identify and socialize with those who share the same national and regional origins. Many second-generation members, who were not exposed to the political and religious antagonisms of the region, are increasingly adopting a South Asian identity in addition to being Indian, Pakistani or Bangladeshi, Sri Lankan, and so forth. The emergence of South Asian identity can be seen by the proliferation of South Asian student organizations on college campuses, second-generation organizations, and in the emergence of South Asian American political organizing. Indeed, many second-generation individuals first encounter the term “South Asian” on college campus, as many groups changed their names from “Indian” to South Asian to be more inclusive mirroring a similar phenomenon in the development of Asian American panethnicity.

As noted, among the first places that “South Asian” emerged, other than just a geopolitical designation, are college campuses and student organizations. The other area is in social movement organizations that formed to address issues of discrimination and social problems faced by the South Asian community, such as South Asian Lesbian and Gay Association (SALGA) and South Asian American Leaders of Tomorrow (SAALT). Scholars have noted that many in the second generation appear to embrace this broader identity based on similar “racial” appearance and common cultural values much in the same way that the Asian American social movement had emerged. The creation of a self-conscious “South Asian American” identity as both a sociocultural phenomenon and as a basis for political mobilization is subject to the complex interplay between external structural pressures and internal conflicts, ambivalence, and inequality within the immigrant and second-generation community. In the context of the racial landscape of the United States, South Asian is for some, a racial category as they are neither black, white, nor what most people view as “Asian.” Racialization and the promotion of panethnic identity are also critical in the mobilization strategies of political and social organizations that serve the larger community.

Although essentializing South Asian as a racial category is problematic, it has been a way for both individuals and organizations to situate themselves in the larger racial context of the United States. However, South Asian, although it may replace “Indian” in the names of organizations, is not a term that even the second generation uses exclusively in their ethnic self-identification. Much in the way that is described by scholars of Asian American panethnicity, it is one of multiple identities that shift and change according to the social and political context of the lives of individuals. Although many hope that widespread adoption of South Asian identity will lead to greater solidarity in the face of racism and discrimination, the actual picture is much more complex. Although some embrace South Asian identity as the basis for activism and political and legal struggles, others may be ambivalent about identifying themselves with groups within the South Asian community, namely Muslims from Pakistan and Bangladesh, who are seen as suspect both by the United States government and by “ordinary Americans.” Some South Asians, especially members of the second generation, may embrace panethnicity in their organizations, whether political or social justice social service, professional, or cultural oriented. South Asian ethnic identity might be attractive in its possibilities for creating a liberating sense of personal identity, divorced from the pressures of history or family.

Conversely, resistance to South Asian ethnic identity may be unsurprising given the experiences of Muslim South Asian immigrants in the aftermath of the 9/11 attacks.

For some, being “South Asian” may not be preferable to just being “Indian American” in a post-September 11 world where looking South Asian or vaguely Middle Eastern subjects one to discrimination, racial profiling, and suspicion in a larger societal context. Being considered “South Asian” may not reap the same rewards as identifying with a clear model minority like “Indian American,” an option that South Asians from Muslim majority Pakistan and Bangladesh do not have. For these individuals, “South Asian” may be an easier identity to adopt when being “Pakistani” results in associations with Islamic terrorism. Indian immigrants and Indian Americans, who

have had model minority status since their arrival to the United States post-1965, feel no such need especially given India's current reputation as an emerging economic power and its cultural cachet. South Asian ethnic identity is problematized when the majority (Indian Americans) may not choose to identify with groups (Muslim South Asians) who are more likely to carry the double burden of suspicion and lower social class status.

The development of South Asian ethnic identity is still in progress as large-scale immigration from South Asia is a recent phenomenon and the population is growing and diversifying. Successive generations and changing political and social contexts may result in greater adoption of panethnic identity both on the individual and in institutional contexts.

Southeast Asian Academic Achievement

Southeast Asian Students in American Schools

The region of Southeast Asia includes the nations of Burma, Laos, Vietnam, Cambodia, Thailand, Malaysia, and the Philippines. American students who come from these countries or from families that trace their ancestry to these countries are relative newcomers to American schools. Before the 1970s, only the Philippines, a former U.S. colony, sent significant numbers of immigrants to the United States. However, even Filipino immigrants, and consequently the Filipino American student population, shot up sharply during the 1980s, a time of rapid growth for almost every part of the Asian American population. From 1980 to 1990, the numbers of Filipino Americans grew from about 800,000 to over 1,400,000. By 2000, their numbers had reached over 1,860,000 and increased further to nearly 2.5 million by 2009.

As the older Filipino American population expanded through large-scale immigration, new Southeast Asian groups began to establish themselves in American society and American schools. After 1970, some Thai immigrants began to arrive in this country as a result of loosened American immigration policies and connections between Thailand and the United States resulting from the alliance between these two countries during the Vietnam War. After the fall of Vietnam, Cambodia, and Laos to Communist forces in 1975, large numbers of Vietnamese refugees and smaller numbers of refugees from Cambodia and Laos began resettling in the United States. During the 1980s, refugees from Cambodia and Laos increased greatly and more refugees came from Vietnam. Consequently, Southeast Asian students became common in American schools by the end of the twentieth century. The newcomer status of these students and the fact that American-born Southeast Asians only began to make up a large part of their numbers in the late twentieth century are important considerations when looking at Southeast Asian educational achievement.

Growth and Composition of the Southeast Asian Student Population

Between 1980 and 2009, the numbers of Southeast Asian students in American elementary and secondary schools grew from an estimated 330,000 to 883,000 and the numbers in American colleges grew from 102,000 to over 465,000. In 1980, Filipino students made up the majority of Southeast Asian students in this country, because close to 60 percent (or about 254,000) of the Southeast Asians in American schools were of Filipino origin. The newly arrived Vietnamese were the second-largest group of Southeast Asian students, comprising 28 percent (121,000) of the Southeast Asian American school population. By 2009, the total number of Filipino American students had grown to 615,000, but because of the rapid increase in other groups, the proportion of Southeast Asian students who were Filipino had gone down to 46 percent. Vietnamese students by 2009 had grown to one-third of all Southeast Asians enrolled in American educational institutions (438,000 pupils). Filipinos and Vietnamese, then, have made up most of the Southeast Asian students in the United States, and the Vietnamese proportion has been expanding for decades.

Aside from the Vietnamese, the refugee groups from Southeast Asia include the Lao, the Hmong (a minority group from Laos), and the Cambodians (also known as Khmer). Because the resettlement of these groups had only begun in 1980, they constituted only a small proportion (roughly 6 percent) of all Southeast Asian students in 1980. Ten years later in 1990, though, 7 percent of Southeast Asian students were Cambodian, 7 percent were Lao, and 5 percent were Hmong, so that about one-fifth of the Southeast Asian students came from these three groups.

The Image of the Southeast Asian Valedictorian

By the early 1980s, refugee Southeast Asian students were already receiving national publicity for their performance in American schools. The *Christian Science Monitor*, in an article published on June 9, 1983, reported the cases of three Vietnamese young people who had arrived in the United States as refugees speaking no English and had graduated as valedictorians.

The *Monitor* described the case of Dung Nguyen, who had received a congratulatory call from President Ronald Reagan when Nguyen graduated as the top student from Pensacola High School in Florida. A month later, Hieu Pham gave the valedictory address at Red Bank High School in Chattanooga, Tennessee. One day after Pham's graduation, Hoan Binh La gave her valedictory address to Madison Park High School in Boston, Massachusetts. The newspaper predicted that the United States would see more high achievers among the children of Vietnamese refugees.

The *Monitor* article was the beginning of a long series of stories in the media of outstanding achievement by Southeast Asian students, especially among the Vietnamese. In 1985, President Reagan praised Jean Nguyen, the first woman of Vietnamese ancestry to graduate from West Point, calling her one of the heroes of contemporary America. Two years later, Vietnamese refugee Hoang Nhu Tran became West Point's valedictorian.

Reports of Vietnamese valedictorians became commonplace in school districts around the country. Although similar stories about other Southeast Asian groups did not appear as frequently, there were enough news articles about top-ranking Southeast Asian students that the other groups shared in the valedictorian stereotype. For example, on June 6, 1992, in an article on "All-Star Students," the *Toronto Star* praised young Lao refugee Phet Sayo who had received a prestigious 100,000 scholarship to study at the University of North Carolina in Chapel Hill. In its November 12, 1998, issue, the *Washington Post* reported that 16 of the valedictorians in the schools of Fresno, California, were Hmong. A piece in the May 29, 1999, issue of the *Dallas Morning News* celebrated David Toung, the son of Cambodian refugees who graduated as valedictorian of Newman Smith High School.

Evidence of School Performance

Evidence from educational research indicates that the news anecdotes reflected an underlying reality. Real differences in educational achievement did exist within and among the Southeast Asian groups. There were underachievers as well as high achievers in each ethnicity. The Vietnamese tended to show higher

achievement levels than people from Laos and Cambodia. Many of the Hmong and Cambodians lived in poverty and many of their children struggled in American schools. Nevertheless, grades and test results indicated remarkable accomplishments among Southeast Asian students in general.

In 1981, researcher Nathan Caplan and several colleagues began a study to assess the economic progress of the newly arrived Southeast Asian refugees. The study led them to note the reports already appearing in U.S. news media of extraordinary academic accomplishments among the children of refugees. These reports inspired Caplan and his colleagues to begin a second study of Southeast Asian educational achievement. They found that the children of refugees in their sample had generally high grade point averages and that school administrators praised the refugee children for excelling in schoolwork. Caplan's team examined California Achievement (CAT) results for 1984. They found that Southeast Asian children did have scores in language and reading that were slightly below general CAT averages. They attributed these scores to the fact that most of the children had been in the United States for only about three-and-a-half years and mostly lived in households in which no one spoke English. However, the refugee children had extraordinarily high scores in mathematics and, surprisingly, in spelling. About half the children scored in the top quartile of all students in mathematics and 45 percent scored in the top quartile in spelling.

The sociologist Alejandro Portes, in a study of the American-born children of immigrants in South Florida and Southern California found that Vietnamese American students in 1992 had higher mathematics test scores than students of other immigrant groups, including Cubans, Haitians, and Mexicans. Portes also found that the Vietnamese students reported spending more time on homework than members of other groups reported, which he suggested was a reason for their superior performance in mathematics.

In a 1995 article published in the February issue of the *American Journal of Education*, researcher Grace Kao found that Asian students in general tend to do better in mathematics than white students do, but that most of the difference could be explained by the

relatively advantageous socioeconomic situations of many Asian families. However, Chinese, Korean, and Southeast Asian students received higher mathematics grades than white students from family backgrounds similar to their own. Kao did not define Filipinos as Southeast Asians, so that her category referred primarily to the refugee groups, and especially to the Vietnamese. She also found that Filipinos, like Japanese, West Asians, and other Asians, earn mathematics grades approximately equal to whites from equivalent backgrounds. However, the higher grades of Chinese and Korean students could be explained by greater family investments in education. Only the Southeast Asians, in Kao's analysis, showed levels of achievement that could not be attributed to any family characteristics.

Educational Attainment

Educational achievement, or how well students do in school, is closely related to educational attainment, or how much schooling they complete. Both Filipinos and Vietnamese, the two largest Southeast Asian groups, show much higher levels of educational attainment than most other segments of the American population. For example, in 2007 one-third of native-born whites, 16 percent of native-born African Americans, and 16 percent of native-born Hispanics aged 25 to 29 had completed at least a bachelor's degree. In that year, though, two-thirds of American-born Filipinos and 57 percent of foreign-born Filipinos in that age group had completed at least a bachelor's degree. Among Vietnamese of these ages, 57 percent of those born in the United States and 38 percent of those born outside the United States were college graduates.

Explanations of Southeast Asian Educational Achievement

The educational achievement of Filipino American children appears to be related to the generally high educational level of their parents and to their parents' professional occupations. Adult Filipino American women, in particular, tend to be heavily concentrated in nursing, an occupation that requires advanced training. Still, culture may also encourage school achievement among young Filipino Americans. Traditional

Filipino culture places a high value on formal education and on respect for teachers. The combined socioeconomic and cultural explanations may also account for the educational performance of some of the smaller nonrefugee Southeast Asian groups, such as the Thai, because adults in these groups often arrive in the United States as professionals and come from cultures that hold teachers in high regard.

The refugee groups are often much more economically disadvantaged than all other Asians and more economically disadvantaged than native-born whites. This has led some researchers to suggest purely cultural explanations for the educational achievement of the children of refugees. Nathan Caplan and his coauthors argued that a cultural ethic of hard work combined with highly cooperative families promoted school performance among these children.

Sociologists Min Zhou and Carl L. Bankston III maintained that purely cultural explanations were insufficient. Using surveys and field work, they argued that many refugees had formed their own communities in the United States. As refugees, the people in these communities focused heavily on adaptation to their homeland and they formed tight social networks that directed and encouraged the upward mobility of children. The educational achievement of refugee Southeast Asian students noted by Grace Kao and others resulted from the closely interconnected social structures of refugee communities, as well as from cultural orientations. Zhou and Bankston found, further, that the refugee children who engaged in delinquency and showed poor school performance were alienated from their own ethnic communities. This type of community-level explanation may help to explain why young people in communities of refugee groups such as the Hmong, who are not only economically underprivileged but also have very limited adult literacy, often show surprisingly high levels of educational achievement.

Southeast Asian American Press

Newspapers and magazines targeting Southeast Asian communities have sprouted up across the United States anywhere those groups cluster. The publications generally serve one or all of three main functions: First, they resemble alternative media by reporting on events, trends, activities, and people seldom seen in the mainstream press, to the extent those elements reflect the interests of the particular Southeast Asian American audience. Second, they draw on stories that are covered by mainstream outlets but present them with Southeast Asian angles. Third, they relay major news happenings in the Southeast Asian countries from which their readers originate.

An ancillary but critical role of this journalism subgroup is the extent to which it can act as an intermediary between its audience and the government or other agency. This takes place in two directions, top-down or bottom-up. In the first, a Southeast Asian American outlet can convey official information, for instance by telling readers how to register for public services or by urging them to participate in the next U.S. Census. In the other direction, it can advocate as a surrogate for its community by taking an editorial stance on a controversial issue, such as pushing army brass to bury Hmong leader Vang Pao in Arlington National Cemetery.

Vietnamese and Filipino newspapers comprise the largest portion of the Southeast Asian American press,

in keeping with their constituencies. Other media provide news with a Burmese, Cambodian, Hmong, Indonesian, Lao, Malaysian, or Thai angle. The notable outliers are the Hmong, who rely on radio news because they did not have a written language until recently.

These outlets follow in the tradition of other ethnic media among blacks, Native Americans, and Hispanics. However, although those media are rooted in indigenous or settled populations with stronger cleavages to the country, Southeast Asian American media tend to cover fairly recent immigrants and their descendants. By definition, this journalism subgroup is run by and for Southeast Asian Americans, though some have made a reasonable argument that outsiders, either as individuals or as companies, can enter the market on the production side of these publications, while maintaining their identity within the communities. In a related aspect, these newspapers can fall under the umbrella of a media group like Minnesota's Asian American Business & Community Publishing, or they can spring up as a more grassroots product of the local community.

Historically, the biggest wave of print media among these enclaves likely followed the arrival of boat refugees fleeing the Vietnam War. Coming from a highly literate society, the Vietnamese took to desktop publishing in the 1980s, followed by family-run newspapers in the 1990s and early 2000s, particularly in San Jose and Orange County. California boasts the largest number of Viet Kieu, or Vietnamese overseas, which number 580,000 according to the 2010 U.S. Census. In similar examples, a Cambodian stronghold in Long Beach and a Hmong stronghold in St. Paul-Minneapolis have created a market for ethnic media in those cities.

These markets, however, are dwindling for a number of reasons: immigrant languages are declining; technology is advancing online, the news industry as a whole is struggling to find a business model; and the recession that began in 2007 wreaked irreparable damage to revenues.

Seemingly, the demand for Southeast Asian American news should increase because their populations are skyrocketing. Although the overall country grew 9.7 percent from 2000 to 2010, Cambodians

and Filipinos each jumped 39 percent, Hmong 44 percent, Thai 51 percent, and Vietnamese 40 percent, among the most significant increases. However, language acquisition does not keep pace, which is crucial to the survival of these media. Some newspapers print in English and others in their readers' native tongue, the latter being the advantage that these publications hold over the traditional press. That advantage is diminishing because the population boom rests not on immigrants but largely on younger people born in the country who are less likely to retain their parents' language. Fewer foreign language speakers render ethnic papers ever less relevant. Filipino American media is something of an exception because most of its audience knows English, which is an official language in the Philippines in addition to Tagalog.

Still, Filipino American journalists are not immune from other financial constraints hitting nearly all ethnic publications. The Southeast Asian American press initially appeared to provide an attractive strategy for marketers, who could zero in on a dense, often urban consumer base that has similar interests and that concentrates in just a few cities and states. Moreover, Asians bring great purchasing power to journalism because they have a larger median household income than average Americans, according to Pew Research Center's Project for Excellence in Journalism. However, the great recession of the late 2000s devastated this press landscape on several levels, in some cases irreversibly. One factor, the subprime mortgage crisis, did away with the real estate advertising on which so many outlets depended. New American Media, which represents 3,000 ethnic media organizations, noted that one magazine disappeared overnight because it relied heavily on real estate ads: *Nha*, which means "home" in Vietnamese, published a bilingual, bimonthly edition aimed at young adults from 2003 to 2008 in San Jose.

Other publications shed ad revenues as small businesses shut down amid the souring economy. The publications themselves are small businesses, too, meaning they could not tap into the kind of rainy-day funds that larger media conglomerates used to weather the downturn.

The most painful blow to Southeast Asian American news outlets comes from the same culprit for the

budget-slashing across journalism more broadly: the Internet. Craigslist eliminated the need for most classifieds sections, whereas career, dating, and other websites similarly poached from print advertising. More important, the Internet revolutionized how news travels. As newspapers, magazines, and journals migrated online, news consumers acquired exponentially more sources of information, thus crippling the monopoly that so many print dailies had enjoyed in their cities. Although everyone in some way benefited from the online transformation, news organizations have struggled to translate page views into ad dollars. Businesses simply do not pay as much for ads on web pages as they did on gray pages, because they can run figures on just how many (or how few) clicks are being generated for them at news sites.

For ethnic media, this unprecedented challenge means having to determine how to retain audiences online. Internet penetration is higher among Asian American households than most other demographics, but that hasn't equated to a higher readership for news sites catering to them. The Project for Excellence in Journalism speculates that people increasingly prefer to access Asian news via their countries of origin, thus driving down demand for similar information from outlets based in the United States. This is especially easy from the English-speaking Philippines, helping sites like *Inquirer.net* thrive as the self-described "virtual home away from home of the overseas Filipino community." Indeed, many Southeast Asian countries are ramping up their English news portals amid globalization, and therefore posing greater competition to Southeast Asian American media. The *Jakarta Globe* and *Bangkok Post* do especially well, although Indonesians and Thais in the United States have few domestic options.

In the face of these pressures, some newspapers have folded, whereas others have eased their pocketbooks by striking deals to share content. Seattle's *Nguoi Viet Tay Bac*, for instance, started partnering with a Spanish-language paper and another Vietnamese paper in 2009. *Nguoi Viet*, a powerhouse daily in Westminster that now offers news in Minnesota and Utah, shares content with the *Orange County Register*. Publications also are transitioning into different platforms, such as audio and video programming, as in the case of *Nguoi Viet's* online launch of *Nguoi*

Viet TV. The city of Fresno continues to boast strong broadcast numbers among Hmong, both on radio and at two television stations. The role of geography, however, could become less critical to the success of ethnic news. New American Media says it is collaborating with Audionow to help ethnic radio stations expand and reach listeners by telephone. That is, audiences would be able to tune in to broadcasts by dialing in.

None of these strategies alone will guarantee a future for Southeast Asian American media. They could, however, step into greater roles as the mainstream press pare down their staffs. Still, the main challenge for these ethnic media is that demand remains high mostly among older generations. Out of the largest communities, half of Vietnamese adults read an ethnic newspaper regularly, whereas one-fifth of Filipino adults read one at least a few times a month, according to a 2009 survey. Young people are much less likely to pick up a broadsheet or tabloid, or switch on radio news. Yet news organizations will have to build interest among this demographic as it gradually replaces older readers. For example, *Nguoi Viet* looked to draw more youthful consumers by publishing *Nguoi Viet 2* every week in English. To reinforce this pivot, news media are focusing on where young people live, online. For all its challenges, the Internet presents untold opportunities for Southeast Asian Americans to coalesce. In person, too, there will always be a need to bring people together. How well these media outlets connect to their communities, virtually or physically, will play no small part in their survival.

Southeast Asian American Youth and Crime

Background

The number of immigrant youth has sharply risen to compose one-fifth of the United States school-age

children. In fact, some argue immigrants and children of immigrants are the fastest-growing group among the youth population within the United States.

According to the U.S. Department of Health and Human Services, Southeast Asians account for approximately 39 percent of the refugee population since 1983. From 1983 to 1999, Vietnamese refugees were 71 percent of the arrivals from Southeast Asia with Cambodian, Lao, Hmong, and Mien refugees also being represented. Southeast Asian refugees mainly resettled in California. In the aftermath of resettlement, according to National Council on Crime and Delinquency, Asian American and Pacific Islander (AAPI) youth crime increased 11.4 percent from 1980 to 2000 although other groups' criminal activity decreased.

This phenomenon can be explained through a structural or cultural approach. The structural approach aligns with the economic condition of a racial or ethnic group in addressing delinquency. Race is highly correlated with social class, so race serves as a proxy for social-class status. The cultural approach identifies the root of deviant behavior in the norms and values of the ethnic group through assimilation or acculturation. Academics have distinguished between assimilation and acculturation. Assimilation implies the subjugation of the minority to the dominant culture. Acculturation signifies an interaction between the cultures of both groups allowing for various pieces of culture to take place beside another. Where crime has been determined as an abnormality of culture by assimilationists, acculturation assesses deviance as a social construct. To examine these trends and issues, this entry will provide a case study of Southeast Asian youth and crime in Oakland, California.

Historical Implications of Immigrant Policy

Immigration to the United States is largely reflected by U.S. policies and binational agreements. Inflow from Asia increased during the mid-twentieth century, and by the year 2000, it represented over a third of the immigrant population. Refugee inflow relies on a binational agreement between the host and receiving country. In the case of Southeast Asia, the Vietnam War was the root cause of refugees.

Initial migration of Southeast Asians was conducted through dispersal policy through resettlement across the nation and transitioned into concentrated resettlement into cities, such as Oakland. The transition to a focused resettlement policy after 1975 met economic disinvestment in education and social services, the criminalization of poor and immigrant groups, and increased police presence in California. This resulted in a concentration of Southeast Asians in poor urban communities. According to U.S. Census, Oakland had a population of 390,724 with significant numbers of Vietnamese (1.6 percent), Cambodians (0.7 percent), and Laotians (0.6 percent) in 2010. Chinese and Filipinos make up 8.7 percent and 1.6 percent, respectively, and they collectively make up the top five Asian American groups in Oakland.

Asian Youth Crime

Delinquency is defined as anti-social and illegal actions of youth, including bullying, cutting class, vandalism, substance abuse, selling drugs, and shoplifting. Asian youth do not follow typical criminal activity. In Oakland, 25.2 percent of all juvenile arrests between 1991 and 2000 were drug related, although there were only 4.3 percent of Asian and Pacific Islander juvenile arrests during the same period. Southeast Asians, particularly Vietnamese, Cambodian, and Lao/Mien, have some of the highest arrest rates in comparison to other racial groups.

Laotian, Thai, Cambodian, and Vietnamese youth are overrepresented in the California juvenile justice system. In the neighboring city of San Jose, four out of five Southeast Asian youths reported being arrested. In the past 20 years, Southeast Asian youth have maintained levels of increased arrest rates in contrast to decreasing arrest numbers of Latino, white, and other Asian groups in Oakland and the surrounding region.

Crime and delinquency are often associated with gang affiliation. Immigrant youth often turn to gangs to find a source of group identity, social support, and security. For Southeast Asian youth, gang relations fill the intergenerational gap left by their parents. According to California Healthy Kids Survey in 2011, Asian seventh- and ninth-graders in Oakland had the greatest proportion of respondents reporting harassment or

being bullied on school grounds as a result of race, ethnicity, or national origin when compared with other racial groups. Southeast Asian youth seek security from gangs in response to harassment by other youth.

Cambodians followed closely by Laotians and Vietnamese, consist of the largest Asian juvenile arrest rates in 2006. In the decade from 1995 to 2006, the overall number of juvenile arrests has fallen. Although Vietnamese and Laotian numbers have similarly decreased, Cambodian juvenile arrests and probations have remained fairly steady. The rise of Cambodian gangs in Oakland and the surrounding area occurred in the early 1990s and has taken root. Simply addressing Southeast Asians collectively does not identify the distinguishing factors facing each ethnic group.

Structural Theory: Acculturation to the Underclass

The “model minority” was first coined by William Petersen in 1966 in a *New York Times Magazine* article based on his observations of Japanese Americans. In the years following, other Asian and Pacific Islander communities were incorporated under the same classification. Despite perceptions of the model minority in the Asian community, Southeast Asian refugees and their families face severe hardships in the United States. As a result, marginalized Asian and Pacific Islander groups have struggled to secure government support. In one case, federal loans allotted for small business owners were withheld from Asian Americans because of perceived success in 1980.

In the case of Southeast Asians, the resettlement of vulnerable families into impoverished and high-crime neighborhoods in the United States is the main factor in increased crime rates among youth. There was a strong correlation between the arrest rate in 2000 and the per capita income in the year prior for youth. Cambodians had the lowest per capita income and Vietnamese fared better, but Chinese were highest in per capita income and lowest arrest rates.

In Oakland, one in two Cambodian residents was living in poverty in 1999. In 1999, 63 percent of Hmong families were living in poverty. In addition, the high school graduation rate for Hmongs was 31 percent. More notably, poverty rates according to the U.S.

Census Bureau were higher in 2007 for Southeast Asians in California, but the disparity between Southeast Asian families and the average American family with children under the age of 18 was greater still. Independently, economic factors do not fully answer delinquency, and cultural factors address the missing elements.

Southeast Asian Youth Crime: A Cultural Response

The cultural framework addresses an individual’s agency. Policy has often reflected a cultural approach. For example, police manuals published in the late 1990s outlined the beliefs of various Asian and Pacific Islander cultures to train officers to interact in culturally acceptable terms. On the one hand, retention of culture resulted in increased delinquency in Cambodian refugees, but on the other hand, it decreased deviance among Vietnamese.

Acculturation factors affecting Southeast Asian youth are visibly evident through stressors, such as the relational conflict between generations because of differing cultural norms. The deconstruction of social networks including family, school, and community relationships has played a major role in delinquency.

Family

The role of family is a significant part of Southeast Asian youth life. Parents are poorly equipped to assist youth adjustment because of intergenerational differences, intercultural conflict, and limited supervision. In Oakland, half of Vietnamese and two-thirds of Lao and Cambodians above the age of 25 have not received a high school degree. Southeast Asian youth reported higher levels of family violence than Chinese youth.

Traumatic experiences from Southeast Asian refugees are well documented. Vietnamese fled their homeland as war refugees and boat people and Cambodians fled genocide in their native state. Hmong and Lao refugees have struggled to adapt to the modernized American society from their isolated rural life. Southeast Asian adults have some of the highest rates of mental health issues including anxiety, posttraumatic stress disorder (PTSD), and depression. The

youth are indirectly affected through their family by decreased parental attachment, engagement, and discipline. Disciplinary practices of parents have moderate impacts on youth violence. Southeast Asian youth reported higher incidents of family violence in comparison to Chinese youth. Therefore, refugee communities do not conform to the Asian model minority stereotype.

The refugee experience is distinct from the typical immigrant. The environment of refugee camps, transit stations, and the bureaucratic process underwent to achieve refugee status has a long-term direct effect on the adults and a causal effect on the development of youth and tendencies toward violent behavior. Full incorporation is achieved only through mutual understanding from policy, the community, and family.

School

Southeast Asian youth are faced with various barriers including discrimination, a lack of connection, and poor academic performance. Among Vietnamese youth, there is a strong correlation between school attachment and delinquency. Without a strong family presence in school, Southeast Asian youth look to gangs to fill the family unit void.

Parent involvement in schools is a large factor in the outcomes of their children, but the definition of parent involvement is often misunderstood, and social and economic conditions act as barriers. Typical parent involvement includes school committees and volunteering. However, immigrant children are less likely to be involved in programs when parent participation is mandatory. Immigrant parents value education, but are rarely able to actively volunteer because of language barriers or employment conflicts. Furthermore, Southeast Asian communities see communication with school staff as an infringement of the teacher's expertise.

Anti-Asian sentiments are often expressed by youth through racial taunts and harassment producing isolation and conflict. Vincent Chong and his colleagues recount one male in Oakland who described his difficulties in being understood when he stated, "I hate it when people come up to me and ask me, 'Are you Chinese or Asian?' I hate that. It's because

there is more races than Chinese. So I'm like . . . man! [I'm] Mien. They don't even know what Mien is. I have to explain it. I have to give them the history . . . so I don't want to say I'm Mien. But I would still say it" (2009: 466). Ignorance among youth is often unchecked without awareness by the school administrators and teachers. The Asian model minority stereotype has heightened Southeast Asians as targets for robbery, harassment, and assault— influencing delinquent behavior as a response.

Community

Southeast Asians face struggles for which their communities are not prepared to respond. Vietnamese have the lowest English language proficiency rates among Asian communities. In 1985, the Oakland Police Department incorporated an Asian Advisory Committee on Crime and added a youth component in the early 1990s. More recently, they have agreed to give salary bonuses for bilingual skills. Measures by community-based organizations have also sought to increase awareness and prevent crime through partnerships.

Political representation is low as those able to secure citizenship often opt out from participation because of limited English skills. In Oakland, only one in five Vietnamese adults, representing the largest Southeast Asian ethnic group, is proficient in English.

Conclusion

Southeast Asian youth face a variety of stressors during their development. The structural approach aims to explain delinquency through economic hardship as youth struggle for acceptance into the "underclass." In contrast, cultural theory relies on an existing set of values and norms to determine the root of Southeast Asian youth crime as the individual is forced to negotiate multiple social environments throughout development. The identities of Cambodian, Laotian, and Vietnamese youth are strongly affected by the circumstances of their family's arrival into the United States causing both economic and social instability. Ultimately, the convergence of the two schools of thought is needed to adequately assess Southeast Asian delinquency.

Southeast Asian Archive at the University of California, Irvine, Libraries

The University of California, Irvine Libraries' Southeast Asian Archive (SEAA) documents the experiences of refugees and immigrants from Cambodia, Laos, and Vietnam who resettled in the United States and elsewhere after the end of the Vietnam War. The main focus is 1975 to the present, with the largest part of the collection focusing on the American experience. The SEAA has small collections from and about these refugees and immigrants who resettled in Canada, Australia, France, and other countries outside of Southeast Asia.

Materials concerning the Vietnamese American community are the strongest part of the collection because of UCI's proximity in Orange County to the largest community of Vietnamese outside of Vietnam. However, the Archive has significant collections for the other Southeast Asian American communities, including smaller ethnic groups such as the Cham and the Iu Mien. The Archive does not collect materials about people from other Southeast Asian countries, such as the Philippines, Thailand, and Indonesia.

From its beginnings in 1987, the SEAA has steadily grown to become the most significant collection in the United States to focus on Southeast Asians who have left the former Indochina. More details about the SEAA are on its home page at <http://seaa.lib.uci.edu>.

Since becoming a part of the UCI Libraries' Special Collections & Archives Department in 2001, the SEAA has been able to develop more formal archival practices and to reach a wider audience. The collections are open to all to use—faculty, students, researchers, film makers, journalists, community members—and include books, serials (journals, magazines, newspapers, newsletters, annual business directories, etc.), government reports, program and publicity materials from campus and community groups, news clippings, videos, boxed archival materials, and ephemera. The books, journals, videos, and vertical files are available in Langson Library room 360, and the unique, archival collections are kept in climate-controlled closed stacks in Special Collections & Archives (Langson Library 5th floor). The collection strengths are described in more detail at the SEAA home page: <http://seaa.lib.uci.edu>.

A representative sampling of the collection's texts and images are open to all at SEAAdoc: Documenting the Southeast Asian American Experience (<http://seaadoc.lib.uci.edu/>), a full-text, digital resource funded in 2004 by a grant from the National Endowment for the Humanities. The SEAA has also received grant funding from the California State Library to process archival collections, resulting in online finding aids and many digitized images in the Online Archive of California (<http://www.oac.cdlib.org/institutions/UC+Irvine::Southeast+Asian+Archive>).

In addition, the SEAA was highlighted in a book, *Celebrating Research: Rare and Special Collections from the Membership of the Association of Research Libraries* (<http://www.celebratingresearch.org/libraries/irvine/seasian.shtml>). This compendium celebrates ARL's 75th anniversary by describing one special collection from each of its over 100 member libraries.

Founding librarian Anne Frank began collecting materials about the new communities of Southeast Asian immigrants and refugees as part of her responsibilities to collect materials on Orange County. Thus, the SEAA began as a local history collection kept in a file cabinet in her office but soon grew beyond its Orange County boundaries to include materials on the wider diaspora. As the collection grew, she turned to other ethnic studies libraries in the University of California system, Berkeley's Asian American Studies Library (now part of Berkeley's Ethnic Studies Library) and UCLA's Asian American Studies Reading Room. They were the models for the Southeast Asian Archive, and Wei Chi Poon (Berkeley) and Marji Lee (UCLA), the librarians of these collections, provided invaluable advice and information.

Another important factor in the establishment and development of the Archive was UCI's students. A striking feature of UCI's undergraduate population is that roughly 50 percent are of Asian/Pacific Islander descent. The largest group is of Chinese origin, which includes many ethnic Chinese from Southeast Asia. Approximately 10 percent of the UCI students identify themselves as Vietnamese or other Southeast Asian. In the mid-1980s the Vietnamese students at UCI had first-hand experience of being refugees. Either they came over in the first wave in 1975, or they were "boat people" who came later.

At about the time when the SEAA was established in 1987, a student group on campus, Project Ngoc (PN) was organized. It started as a class—initiated by a non-Vietnamese graduate student, Tom Wilson—to increase student awareness of the Vietnamese refugee crisis. The UCI students decided to take it beyond the classroom and formed Project Ngoc to initiate more concrete projects to assist the refugees. PN sponsored activities to raise awareness and funds within the campus and the community, and it provided direct relief by sending volunteers to refugee camps in Hong Kong.

PN's activities also helped to bring attention to the fledging archive. PN disbanded in 1997, when the last refugee camps were dismantled, and its papers—including paintings by Hong Kong refugee camp internees—are part of the SEAA collection (<http://www.oac.cdlib.org/findaid/ark:/13030/kt8z09p8pd/>).

One of the first collecting challenges was the mind-set of many of the people first approached for materials. Their focus was on life in their country of resettlement, such as learning English, enrolling their children in schools, and getting jobs. They did not consider their modest possessions, such as photos, diaries, and correspondence, to be of value in an archive. Refugees involuntarily leave their country; they are forced out to escape political, religious, or ethnic persecution, and they usually leave with only the things they can carry. By contrast, immigrants leave of their own free will. In the mid-1980s it was only a decade after the first refugees had arrived, with many refugees still in survival mode and new refugees still on the way.

Another important element of the refugee experience documented in the Archive is the pathway to the new country. A substantial part of the Archive's collections documents the refugee exodus, including the arrival of the 1975 refugees at reception centers in the United States and, prominently, life in the refugee camps. Over time, more Southeast Asians have arrived as immigrants rather than as refugees through the resettlement of Amerasians, former political detainees, and family reunification programs. Relations with home countries change and develop beyond homesickness and nostalgia, but the ties persist. Transnational studies have become a field of growing academic interest. Documenting the ties between Southeast Asian Americans and their home countries is an important part of the collection.

Decades have passed since the first Southeast Asian refugees settled in the United States in the mid-1970s. A new generation has reached adulthood and has fully integrated into American life and taken leadership roles. The first refugees who arrived as adults are aging and passing away. Although researchers and others using the collection have often asked about oral histories, no funding or staffing was available to collect them until 2011, when an anonymous donor enabled the UCI Libraries to partner with the UCI

Asian American Studies Department to launch the Vietnamese American Oral History Project (VAOHP). The open-access audio and transcript collection, preserved at <http://ucispace.lib.uci.edu/handle/10575/1614>, is available to everyone without registration. Future acquisitions for the SEAA will focus on acquiring collections from Southeast Asian American organizations and individuals who are now fully part of American society.

Southeast Asian Migration

See Refugee Camps and Southeast Asian Migration

Southeast Asian Refugee Resettlement, Organizational Leadership of

The movement of refugees from Laos, Vietnam, and Cambodia in 1975 was the largest refugee immigration in recent American history, and there was no infrastructure in place to fulfill the goals of quick assimilation as a uniform practice. Organizations that had formed out of Jewish immigration post-World War II were then handed the authority to oversee the domestic resettlement process of these new populations. The unevenness of refugee sponsorship and state programs catalyzed many refugees' desire to reunite with relatives and recreate a sense of ethnic community. In the five years after initial resettlement, refugee secondary and tertiary migration to 10 states obliterated the

government's attempts to mitigate refugee migration and its emotional triggers to "the war America lost." Although the ethnic enclaves that formed from these migrations served to alleviate the issues of resettlement, it also created an ambivalent situation for subsequent cohorts. By 1979 the dispersal practice, spreading refugee families across the 50 states, had been abandoned for clustering practices, whereby small groups of refugees were resettled together—often in a designated set of government housing. Clustering helped fuel a perceived sense of government prioritization for refugee populations over some local communities that led to growing resentment and racial tension.

By the end of the 1970s and into the Reagan era, the economic turn of the country left working-class communities in states of recession or depression. The unprecedented move toward outsourcing manufacturing industries essentially shut down entire communities, and the "trickle-down" economics of this decade expanded the income gap to chip away the middle-class. With the discourse of individual responsibility against Reagan's attempt to rewrite the Vietnam War as a victory for Americans, the second and third cohorts of refugees from Southeast Asia received far less acceptance than the little offered to the first cohort. In 1980, 1982, and 1986, Congress passed reformed Refugee Acts that cut away at refugee assistance funding for programs and individual subsidies from 18 months slowly down to 3 months in 1986. In essence, besides a greater set of social capital that preconditioned the majority of the first cohort's ability to more quickly adapt to life in the United States, the resettlement policies and practices also played a key role in the future lives of refugee youth.

The Asian American Movement (AAM)

Between the late 1960s and late 1970s, the Asian American movement had reached a pinnacle of multifaceted activism and knowledge production. This included the coining of the term "Asian American" by Yuji Ichioka, the development of Serve The People programs similar to that of the Black Panther Party by various groups, and the student movement for educational transformation by Third World Liberation

Fronts for Ethnic Studies. When the Asian American Movement (AAM) was emerging, greatly inspired by the black liberation struggle and the teachings of Mao Tse-tung, a pivotal contribution of the movement was its articulation of American intervention in Vietnam as part of a historical pattern of American capitalist imperialism that was articulated in racist implementation of war crimes. This transformative period of Asian American history served as an ironic backdrop against which the first cohort of Southeast Asian refugees arrived on American shores, setting the stage for the contradictory ideologies of the movement against the very “imagined community” they had supported during the war. For example, in the October 1969 newspaper of the Asian American Political Alliance in Berkeley, California, the organization published a public position on the war in Vietnam. It began with a quote from Mao Tse-Tung and went on to identify the president of South Vietnam, Ngo Dinh Diem, as a U.S. “puppet” and yet conflated all Vietnamese as one people and standing in solidarity with the National Liberation Front:

The Vietnamese people, struggling for independence; democracy, peace, and neutrality, are resolved to drive out any imperialist forces from Vietnam. . . . The Asian American Political Alliance supports the ten demands of the National Liberation Front and recognizes the Vietnamese as people. (Dong 2008: 32–33)

This sentiment was generally shared by the radical Left in the antiwar movement, and it reveals the problematic oxymoron of these groups claiming to support and promote the voice of “those oppressed by American imperialism” without critically accepting the specific complexities of within the national politics of “these people.” In essence, AAM contributed to a highly complex set of emotional and political relations between the AAM and future refugee cohorts, who would be inserted into the very rungs of the socioeconomic ladder that AAM wanted to organize.

During the second and third cohort migrations, the radical facets of the movement began to merge with other nationally based racial groups, such as I Wor Kuen, the Chicano August Twenty-Ninth Movement,

and Revolutionary Communist League merging into the League of Revolutionary Struggle, to form multinational, national organizations. Simultaneously, the strategic evolution of Serve The People programs into social service organizations built an infrastructure of nonprofit organizations that rendered them vulnerable to funding sources, including local, state, and federal governments, and progressively restricted the larger realm of the Asian American movement’s representation and power in the hands of an elite, educated, professional class. The emphasis on knowledge production at the university level and policymaking and electoral inclusion at the “grassroots” level for the most part excluded first generation, working-class immigrants like incoming Southeast Asian refugees. In this process, the strategies of reform being preferred over revolution and the emphasis on symbolic identity politics of Asian American representation blinded many to the real issues affecting Southeast Asians, who were being integrated into urban housing projects and developing a separate track of political power through the wealth accumulation of ethnic enclaves. In essence, on both the landscapes of scholarship and of political activism, the evolution of the Asian American movement and Southeast Asian political power unfolded on two disparate tracks that did not publicly address the contradictions of the movement with the political orientation of this new demographic being labeled, “model minority.”

The Formation of Mutual Assistance Associations

As the Voluntary Agencies (VOLAGs) consisted of predominantly European American staff and the bulk of their experience had been with migration from Europe, they found difficulty in supporting Southeast Asian refugee communities linguistically and culturally. At first, the small number of Southeast Asians in America in 1975 assisted in translation and cultural adaptation although refugees stayed in refugee-processing centers across the country. It became apparent very early on, however, that community leaders were already forming within the centers. Almost immediately, members of the 1975 cohort with the most linguistic and educational expertise began

Mutual Assistance Associations (MAAs) to provide support and refugee resettlement services within their respective communities. By 1981, MAAs cropped up throughout the country. The speed with which these associations formed had everything to do with the founders' long-standing relationships prior to resettlement. Moreover, of 500 Southeast Asians that founded MAAs, 340 were Vietnamese, and thus the agenda setting of these groups was skewed based on class, ethnicity, and resettlement experience from their onset. MAAs did attempt to provide comprehensive services that the VOLAGs did not or could not successfully implement. According to the Indochinese Refugee Action Center, MAAs could be categorized as:

1. religious,
2. social and fraternal,
3. cultural and educational,
4. resettlement services provision,
5. professional,
6. student, or
7. political.

Of the 60 organizations originally created to address refugee resettlement, twenty-six of them were Vietnamese, ten Khmer, ten Laotian, nine Hmong, and five multi-ethnic. They became the "frontlines" of resettlement programs, but these grassroots organizations obtained very little funding initially. Funding usually came in the form of small subcontracting grants from the VOLAGs, which had the infrastructure, legitimacy, and linguistic and social capital to navigate the complicated bureaucratic process of obtaining government monies. Eventually, however, these very organizations became the infrastructure of Southeast Asian community power. Historian Tuyen Tran observes:

In addition to the social services that resettlement MAAs provided, the resettlement MAAs, particularly their leadership, became power brokers and cultural liaisons in the movement for greater inclusion and representation of all refugees, Southeast Asian or otherwise, within the refugee resettlement world. . . . The process of institutionalizing refugees as integral actors in refugee resettlement incited antagonisms that forced the refugees and

their respective associations to protractedly address and challenge private and public assumptions of the means and methods in ethnic incorporation in America. . . . Notwithstanding the trauma of disenfranchisement and dislocation, the development of Vietnamese mutual aid associations proved that they would not remain passive wards of the state. (Tran 2007: 6–7)

Regardless of the attempts to socialize Southeast Asian communities into the model minority mold, these refugee community leaders had a more complex understanding of that "American Dream." It was to be a "dream" on their terms, and the extent to which they participated in acclimating to the stereotypes imposed upon them could be viewed as a syncretic strategy of achieving what they understood to be justifiably their "terrain" within the niche of American political life. An IRAC document states,

While IRAC campaigned for federal fiscal commitments of MAA organizational development and capacity building in Washington, D.C. and networked with local MAAs for policy recommendations and needs, local MAA directors rallied state and local government agencies for refugee representation and consultation with resettlement policy with regards to design, implementation and assessment. Southeast Asian leaders attended and spoke at city hall meetings and sought refugee representation among federally mandated refugee resettlement advisory groups. They essentially availed themselves of all opportunities to educate the public and resettlement authorities of refugee needs and to garner support for refugee delivered services. (IRAC 1988: 24–25)

From the first arrival of Southeast Asian refugees, American policymakers witnessed a new politically viable voting bloc that could turn the tides of public opinion and public policy.

Ironically, the very formative political battles waged in the early arrival of Southeast Asian refugee cohorts dissipated by the mid-1980s with the establishment of ethnic enclaves and MAA that could withstand the onslaught of neo-conservative budget slashes. The claim to an

American identity of incorporative multicultural exhibition in simultaneity with the prevailing model minority discourse and the psychological loss of a “homeland” led many MAAs to set an agenda of integration and cultural preservation that no longer met the needs of the urban realities for many refugee youth. This generational gap created a fissure in which a new generation of leaders and organizations would try to address in the 1990s through Community Based Organizations (CBOs).

The 1990s represented the evolving paths for both AAM and MAAs through the younger generation of refugee children who were children of first generation refugee parents or who came as small children to the United States in one of the cohorts. As AAM became more professionalized and service-oriented, former movement leaders began mentoring Southeast Asian refugee youth professionally, politically, and as activists. Although MAAs were struggling to find relevance within their communities as refugee resettlement dwindled, youth were facing issues of urban life to which MAA programs were responsive. As this vacuum of coethnic leadership became apparent at the end of the decade, a critical mass of Southeast Asian, progressive refugee and second-generation children emerged as new political voices for the communities in media, policy, and in the development of new, youth-based organizations that represented a bicultural sensitivities with more progressive and politically diverse perspectives and agendas. From both strands of political determination, representation, and advocacy, Southeast Asian American youth have steered a new chapter in AAM and its incorporation of refugee communities from the Vietnam War.

Spickard, Paul Russell (1950–)

Paul Russell Spickard is a professor of history and a prolific author on matters of race, ethnicity, immigration, and religion.

Spickard’s first book, *Mixed Blood: Intermarriage and Ethnic Identity in Twentieth-Century America* (1989), is recognized as a highly influential and original work that contributed greatly to the formation of the field of mixed-race studies. *Mixed Blood* was named Outstanding Book on Human Rights in the United States by the Gustavus Myers Center for the Study of Human Rights. Spickard’s work on intermarriage and multiracial people, starting with *Mixed Blood*, is most recognized for his exploration of the notions of racial multiplicity and plasticity.

Among his other works, Spickard’s books, *Japanese Americans* (1996, 2009) and *Almost All*

Aliens (2007), are noted for his successful attempts to dethrone the traditional, monolithic, assimilation narrative of American immigration. *Race and Nation: Ethnic Systems in the Modern World* (2005), exemplifies Spickard's meaningful attempts to make comparisons among racial and ethnic systems in various parts of the world.

Spickard grew up in and around Seattle, Washington's Chinatown, immersed in the richness of the area's Japanese, Filipino, and African American neighborhoods. He credits his parents, Donald and Mary Alice Adkins Spickard, for their key role in his intellectual formation. He recognizes, especially, the influence of his mother, whom he described as the hungriest intellectual he ever met. She was always interested in and respectful of everyone Spickard brought into her life. Like his mother, Spickard is known among his colleagues and students for his down-to-earth hospitality complemented with his challenging intellectual curiosity.

In addition to his mother, Spickard has acknowledged several mentors as having major influences on his intellectual life. They include Jim Morishima, Kiyu Morimoto, Winthrop Jordan, Lawrence Levine, Roger Daniels, and William Kauaiwiulaokalani Wallace III, among many. The scholars whose methods and ideas framed the intellectual world in which Spickard grew up include E. P. Thompson, Joseph Levenson, Emory Bogardus, Robert E. Park, Franz Boas, E. Franklin Frazier, and W.E.B. Du Bois. These influences are reflected in the goal after which Spickard has strived in his own work, which is the "attention to structure and to culture, to the person and to the class, to social forces and to individual human choices, and especially to hearing the voices of people many other writers have taken to be voiceless."

Spickard graduated from Seattle's James A. Garfield High School, known, historically, for its racial and ethnically diverse student population. He proceeded to study Asian American society and culture and Asian languages at the University of Washington before going on to earn an AB with honors in history from Harvard University in 1973. At Harvard, he specialized in East Asia and American racial minorities. He remained at Harvard as a special graduate student in Asian studies and as a teaching fellow for the departments of history, sociology, and East Asian

studies—notably teaching the first Asian American studies course at Harvard with Kiyu Morimoto. He later earned an MA in American history in 1976, a CPhil in 1979, and a PhD in history in 1983 from the University of California, Berkeley.

Spickard's teaching career began with his position as a teaching fellow at Harvard and continues today in his current position as professor at the University of California, Santa Barbara (UCSB). Institutions where he has taught include Solano Community College, UC Berkeley, San Francisco State University, Bethel College, Nankai University in Tianjin, China (as a Fulbright Senior Lecturer), Capital University, and Brigham Young University-Hawaii. In the late 1990s, he left BYU-Hawaii to become the chair of Asian American Studies at UCSB. At UCSB, Spickard has taught courses on Asian American history, multiracial studies, Pacific Islander American studies, race and migration, United States and world history. Although history is his home department, he is an affiliate faculty member with UCSB's Departments of Asian American Studies, Religious Studies, and East Asian Languages and Cultural Studies. During his tenure at UCSB, Spickard has also been affiliated with the University of Washington's Department of Ethnic Studies (1997–1999) and Oregon State University's Center for the Humanities (2003–2004). He spent 2008–2009 at the University of Muenster in Germany as a Fulbright Specialist. In 2011, he received the Loving Prize, which is an award presented by the Mixed Roots Film and Literary Festival.

Spickard is the father of Naomi and Daniel.

Sri Lankan Americans

From an island nation of the Indian subcontinent in South Asia, Sri Lankan immigrants began to arrive in the 1950s. When the United States classified Sri Lankans in an independent category in immigration in 1975, it recorded 432 entries. There were 5,576 Sri Lankans in the United States in 1980; 14,022 in 1990; and 25,263 in 2000. In the 2010 Census 45,381 Sri Lankans were recorded. It is a relatively small South Asian American group.

Sri Lankan Americans are highly concentrated in California. Other states that have a relatively large population of the ethnic group include New York, Maryland, Texas, and New Jersey. The Los Angeles metropolitan area has the largest Sri Lankan population, followed by New York and Washington, D.C.

Sri Lankan America is an immigrant majority community. In the decade between 2001 and 2010, 7,999 individuals gained entry as immigrants. In 2010, about 75 percent of the population was foreign-born, of which 43 percent had gained U.S. citizenship. About 72 percent of Sri Lankans aged five and older spoke a language other than English at home, 22 percent of the population aged five and older had limited English proficiency, and 12 percent of the population lived in linguistically isolated households.

Sri Lankan Americans had relatively high educational attainment. In 2010, about 93 percent of the adult population had at least a high school diploma and 56 percent had a bachelor's degree or higher. In comparison, 91 percent of Indian, 87 percent of Pakistani, 81 percent of Bangladeshi, and 86 Asian

Americans had finished high school, and 68 Indian, 56 Pakistanis, 47 Bangladeshi, and 49 Asian Americans had obtained a bachelor's or higher degree.

The per capita income for Sri Lankan Americans was \$32,480 compared to \$28,342 for Asian Americans and \$27,100 of the U.S. total population in 2010. Poverty rate of the population group was at 9 percent, compared to 11 percent for Asian Americans, and 14 percent for the total U.S. population. Only 1 percent of the Sri Lankan household received public cash assistance. The unemployment rate for Sri Lankan Americans was 6 percent, the same as that of Asian Americans but lower than the 8 percent rate for the general American population. Most Sri Lankans in the United States are home owners (61%), compared to 56 percent of Indian, 55 percent of Pakistani, 44 percent of Bangladeshi, and 59 percent of Asian Americans who owned homes. About 6 percent of Sri Lankans in America lived in overcrowded homes.

Suburbanization

Unlike the mass suburbanization of middle-class Anglos after World War II, Asian Americans' flight to the metropolitan fringe occurred in distinct stages, and largely after 1965. Desires to participate in the "American Dream," moved by war and political instability in Asia, or lured by work opportunities, Asian Americans settled in the suburbs in large numbers throughout the mid- and late-twentieth century. By 1970, the majority of Americans called suburbia home, and by the 1980s, the majority of Asian Americans resided in communities outside the city. Generally, economic circumstances, racialized labor,

higher-performing schools, and widespread anti-urban sentiment influenced Asian Americans' shift toward "town and country living." Despite an economic downturn in the last decade, settlement in the hinterland is not slowing down anytime soon. Asian American populations in Southern California's Inland Empire; suburban and exurban Atlanta, Dallas, Houston, Las Vegas, and Phoenix in the Sunbelt; and the outlying communities of Washington, D.C., continue to swell the housing market. Asian American suburbanization is broken down into three temporal and thematic categories: 1840s–1945: rural and urban settlement; 1945–1980: suburbanization as assimilation; 1980–present: mass Asian American suburbanization and global suburbs. Because most Asian American suburbanization occurred after 1945, and certainly after the passage of the Hart-Celler Immigration and Nationality Act, their experiences are largely documented from 1965.

1840s–1945: Rural and Urban Settlement

Between the late 1840s and 1945, most Asians in the United States were of Chinese, Filipino, or Japanese descent. Many lived and worked as recruited farmhands in Northern or Central California towns such as Bakersfield, Delano, Sacramento, Salinas, Stockton, and Watsonville. Others worked in canneries and fisheries throughout Washington State, as plantation laborers in Hawaii, or as farmers in Los Angeles's South Bay and Pomona and San Gabriel Valleys. Though Asian immigrant laborers did not reside in communities we categorize as suburban today, these towns' sparsely dense populations and proximity to major urban industrial hubs are the earliest examples of Asian American suburbanization.

1945–1980: Suburbanization as Assimilation

After World War II and throughout the Cold War, Asians in the United States occupied a precarious position. Controversial American military interventions in Korea, the Philippines, Vietnam, and Southeast Asia along with continuously shifting state relationships between the United States with China and Japan kept Asian Americans straddling the line between domestic

friend and foe. At this moment, thousands of Americans—mostly Anglo—were abandoning downtown areas for the promised serenity and space of suburbia. Reflective of the anti-Communist and conformist politics of the time, middle-class and affluent Americans—including many Asian Americans—longed for the stability of suburban life free from the perceived chaos, danger, and unwelcomed racial and class diversity and tension of the city. For Asian American suburbanites, especially, the practice of suburban living demonstrated their ability to assimilate into a country threatened by their otherness and a society that demanded immigrants let go of their ethnic mores.

Prior to 1945, most Japanese Americans in California, Hawaii, Illinois, and Washington lived in urban Japantowns or in rural environments. Japanese Americans were primarily based in the agricultural industry or worked as grocers, domestics, and low-level professionals. During World War II, Japanese Americans were interned under Executive Order 9066. Japanese enclaves along the West Coast became ghost towns or were inhabited by non-Japanese. When suburban settlement gained traction after the war, a number of lower-middle and middle-class Japanese American Issei, Nisei, and Sansei settled in the outskirts of Bakersfield, Chicago, Fresno, Honolulu, Sacramento, San Jose, Seattle, and especially in the San Francisco Bay Area (Alameda, Berkeley, Fremont, Oakland, Hayward) and Los Angeles's South Bay or San Fernando and San Gabriel Valleys. Forced to rebuild their lives after mass incarceration, Japanese Americans created pockets of suburban Little Tokyos such as Gardena and Torrance, California where cherry blossom festivals and heritage schools became fixtures of everyday life. Other Japanese Americans settled in what would become multiethnic communities across the United States, most notably in Montebello, Monterey Park, and Pasadena, California and throughout the Hawaiian Islands.

Although Chinese Americans chiefly resided in urban neighborhoods and Chinatowns until the 1980s, thousands of Chinese Americans after World War II settled in suburbia. Whether they were World War II veterans or Chinatown business owners, Chinese Americans fought for their "rights to the suburbs" as a marker of cultural citizenship and as a

symbolic gesture toward their pro-democratic/anti-Communist political stance in Cold War America.

Between 1940 and 1950, the Chinese population living in San Francisco's Chinatown dropped from 70.2 percent in 1940 to 40.2 percent in 1950, whereas in New York City's Chinatown, the Chinese population fell from 50.2 percent to 31.0 percent with most migrating away from the metropolitan core. Finding suburban housing, however, was not met without challenges. White realtors, property owners, and bankers barred Chinese Americans from obtaining loans and purchasing homes. The 1882 Chinese Exclusion Act and other strict laws limiting immigration left Chinese Americans in bachelor societies centered in working-class ghettos throughout the West Coast and New York City. Moreover, restrictive job opportunities between Chinese and other struggling non-whites helped create a culture of violence for economic survival. These problematic images and discourses of immigrant vice permeated the American popular imagination, positioning Chinese Americans as sexually and morally deviant, cryptic, and barbaric thus effecting their access to fair housing. Nonetheless, Chinese American suburbanization steadily rose in the immediate Cold War period and later accelerated in the 1970s and well into the 1980s.

Filipino and Korean Americans, who rounded out the majority of Asians in the United States at this moment, were also mainly living in cities and "suburbanized" less dramatically than their Chinese and Japanese counterparts. However, Filipinos began moving to "suburban-in-feel" parts of Los Angeles, New York City, and San Francisco such as the Temple/Beverly/Virgil neighborhoods (Los Angeles), Eagle Rock (Los Angeles), Queens (New York), and SoMa (San Francisco). Filipinos also started to reside in communities adjacent to "global cities" such as Jersey City, New Jersey or South San Francisco; less cosmopolitan cities with primarily mid- or low-rise housing and commerce mirroring traditional suburban aesthetics. Korean American suburbanization was minimal, but was found in Northern California's East Bay and San Jose, Los Angeles's South Bay, and Bergen County, New Jersey.

Asian Americans' gaining a foothold in suburban communities after World War II was tremendous given

the widespread racism, classism, and exclusionary practices of a predominantly middle-class Anglo America occupying and controlling both the metropolis and the hinterland. Their movement to the suburbs was multilayered and rested on overlapping social, political, and economic reasons. On the one hand, postwar Asian American suburbanization was predicated on ubiquitous ideas that noncity life was the key to happiness thus propelling movement from urban ethnic enclaves, "crammed" neighborhoods, and apartment living to town and country suburbs that embodied the "best of both worlds." On the other hand, Asian Americans' urban exodus and suburban settlement signified a practice of U.S. citizenship that relied on the confluence of conformity, consumerism, and heteronormativity to prove their acculturation. By the mid-1970s, Asian American suburbanization took on new meaning with reforms to immigration policy, changes in the global marketplace, and shifting attitudes toward race, housing, and the American city influencing the spatial and ethnic organization of the nation.

1980–Present: Mass Asian American Suburbanization and Global Suburbs

The 1965 Immigration and Nationality Act attracted thousands of medical, technical, engineering, and business professionals from China, India, South Korea, Taiwan, and the Philippines to the United States. Job opportunities and the ease of obtaining H-1 and H-1B temporary work visas played a crucial role in Asian immigration. War, genocide, family reunification, and a political economy catering to an increasingly service and commodity-based First World-dominated marketplace also pulled immigrants from their homelands. Unlike their pre-1965 counterparts, many post-1965 Asian immigrants were moving directly to the suburbs bypassing Chinatown and Little Manila for modest or upscale communities with higher-performing schools, safer neighborhoods, well-manicured thoroughfares, and tony retail options. For this newer immigrant cohort, particularly those arriving in the late 1960s, 1970s, and 1980s, cities were considered less desirable places to raise families or build social networks predicated on antiurban rhetoric from media and

word-of-mouth, depleted municipal resources and governmental neglect, and individual experiences with metropolitan crime, violence, and poverty. Although most people of color lived in the city in 1980, thousands of Asian Americans resided in suburbia since a rising majority was educated immigrants recruited to work for established U.S. companies. Their immediate placement into the middle-class ensured their place in home ownership and in living the “American Dream.” Like suburban African American and Latino residents, Asian American suburbanites remain segregated from their white counterparts. However, Asian Americans were and are the most “integrated” into suburbia. This ticket to immigrant “success,” however, was not met without barriers, discrimination, or hardship. Moreover, although a majority of Asian Americans now lived in suburbia, thousands did not and thousands more did not have the financial resources toward suburban upward mobility despite widespread notions that Asian Americans were “model minorities.” Asian American suburbanization skyrocketed in the 1980s and 1990s as global economic restructuring, a liberalizing “racial state” via multiculturalism, and urban neglect consolidated myths of suburbanism as the ideal American lifestyle. For these reasons along with a skewed housing market in favor of single-family housing, the early 1980s through the 2000s witnessed mass Asian American suburbanization. The experiences between Chinese, Filipino, Indian, Korean, and by 1975, Vietnamese and Southeast Asian Americans feature common strands yet vary and are regionally and temporally specific.

Because home ownership was a quintessential symbol of Americana, Japanese Americans were among the earliest Asian Americans to “suburbanize.” The specter of Cold War Communism and the aftermath of World War II anti-Japanese discrimination pushed Japanese Americans to prove their “Americanness” by any means necessary. Key community organizations such as the Japanese American Citizens League (JACL) led campaigns to ensure that whites were aware of Japanese American loyalty to the American state. As a result, Japanese Americans are often considered the most “assimilated” since succeeding generations of Japanese Americans were primarily born in the U.S., spoke little or no Japanese,

were more likely to enter interracial marriages, and settled in heterogeneous suburban communities since the end of World War II. Recent Japanese immigration is a result of Japan’s growing prominence in international trade and transnational capital. Immigration from Japan minimally increased in the 1980s and 1990s and remained much lower than their Chinese, Filipino, or Indian counterparts. The majority of native Japanese also tend to live near American-born Japanese in suburbs throughout Hawaii, Seattle, Northern California’s Alameda County, Central California’s Fresno County, and Southern California’s South Bay, West Los Angeles, and San Gabriel Valley regions.

The Vietnam War tested America’s limits in military supremacy and its international control over the Cold War. The war was also a harbinger in domestic trends with a tremendous influence in Asian American suburbanization. After the Communists took over Saigon, approximately 125,000 Vietnamese refugees known as “Boat People” fled to the United States between April and December 1975. A second immigrant wave arrived between 1978 and 1985, and another cohort of Vietnamese arrived from 1989 to the present. Thousands settled in suburban Florida, Louisiana, Northern California, Virginia, and Texas. The majority moved directly to or eventually settled in Orange County, California—most notably in Garden Grove and Westminster—propelled by sympathetic anti-Communist Christian missionaries and activists residing in the politically conservative region. Orange County is home to the largest Vietnamese population outside Vietnam. Unlike their Asian counterparts, most Vietnamese arrived with relatively low levels of education. Vietnamese Americans are frequently relegated to the service economy or are forced to open their own businesses because of discrimination and limited skills needed for the U.S. job force. Their suburbanization process, then, is not necessarily stemming from work opportunities or immediate affluence affording them the opportunity to choose living in suburban areas. Vietnamese Americans were pulled into suburbia because of international forces working in tandem with local actors encouraging their suburbanization. What is also distinct about the Vietnamese American suburban experience is the way in which

their ethnic enclaves have always been suburban compared to Chinese or Japanese Americans whose first enclaves were historically located in the city.

Chinese American settlement patterns shifted dramatically after 1965. Unlike pre-World War II Chinese immigrants who mainly originated from China's Pearl River Delta, more recent immigrants come from diverse places including Hong Kong, Taiwan, Malaysia, Vietnam, and Central and South America. Most post-1965 Chinese immigrants obtained white-collar work and often settled in areas within commuters' distance from downtown Boston, Chicago, Los Angeles, New York, San Francisco, Washington, D.C., and other regional hubs. The most significant change between pre-1965 and post-1965 immigrants was near-universal Chinese suburban settlement. Rather than searching for housing in the city, contemporary Chinese immigrants relied less on the ethnic economy for jobs or services provided in Chinatown. They were less dependent on the enclave's social network as educated or skilled workers, and also found strong Chinese communities in the outskirts of downtown. However, a concomitant phenomenon occurred among post-1965 Chinese and other Asian immigrant settlement: the rise of the "ethnoburb"—a residential and commercial clustering of Asian immigrants in multiethnic suburban geographies.

Los Angeles's San Gabriel Valley is a particularly noteworthy ethnoburb. Chinese and Taiwanese Americans started moving to Monterey Park and San Gabriel in the mid-1970s, and then to adjacent suburbs such as Alhambra, Arcadia, Rosemead, San Marino, and Temple City. Shortly after, the eastern end of the Valley also experienced monumental growth with newly built homes and transnational industries attracting immigrant professionals to Diamond Bar, Hacienda Heights, Rowland Heights, and Walnut. By 2010, over 300,000 Asian Americans lived in these communities with the majority being of Chinese descent. This high concentration happened for a number of reasons. First, when Chinese developer Fred Hsieh moved to Monterey Park in the early 1970s, he purchased land for Chinese-oriented development and declared the community the future "Chinese Beverly Hills." He imagined its slower pace, proximity to downtown LA and Chinatown, and lovely yet reasonably priced

housing situated on hilly landscapes would entice Chinese to the area. He started to advertise in Asia for would-be buyers, and later realtors and other developers joined the bandwagon to turn Monterey Park into "Little Taipei." Second, as with most enclave communities, the movement of Chinese into Monterey Park triggered a snowball effect. With a rising Chinese population, came businesses and community services catering to new immigrants. The trend intensified later as white homeowners sold to wealthy immigrants wanting a piece of the pie. By 1980, the majority of Monterey Park residents were Asian. The drastic demographic change was palpable with commercial signage now donning Chinese characters and homes featuring traditional East Asian aesthetics. The 1980s, however, also ushered in a wave of nativism. In April 1985, the Monterey Park City Council proposed an "English Only" ordinance declaring English the city's official language and was thus required for business and municipal signage. This inspired similar legislation throughout the Valley and in other West Coast communities with growing non-white populations. Ironically, the newly multiethnic Monterey Park earned the title as "All-American City" for its attempts toward "racial harmony" amid demographic transformations.

Mirroring the direct-from-Asia settlement patterns of Monterey Park immigrant residents, communities in Northern California's Santa Clara County witnessed exponential Chinese suburbanization because of the "Dot Com Boom" of the mid- and late 1990s. Fortune 500 Internet and technological companies such as Apple, Google, and Yahoo aggressively recruited IT workers from China, India, Taiwan, and other parts of Asia to the Silicon Valley. In turn, Chinese immigrants' predominance in the flourishing Silicon Valley economy encouraged permanent settlement in the region. Cupertino, Fremont, and Milpitas, for example, are strongholds of Bay Area Chinese American life where exclusively Chinese strip malls cater to both post-1965 and "Dot Com" immigrants. Their growing regional prominence aggravated local Anglos accusing immigrants of creating Taipei-like neon districts and multifamily "McMansions" considered unsuitable to the landscape. In 2007, a controversial Fremont City Council resolution sought to curb future McMansion construction often associated with Asian homebuyers.

The Monterey Park and Silicon Valley examples illuminate the ways in which immediate suburbanization—and particularly ethnourbanization—was commonplace in post-1965 immigrant experiences. However, Asian Americans often struggled to secure a home and build community in spaces that were once reserved for Anglos and the middle-class. Fears based on racial difference and a “foreigner” coup d’état over local governance was not specific to California, but was also found in towns from Gwinnett County, Georgia, to Fairfax County, Virginia, to Hennepin County, Minnesota, to “suburban” Queens, New York.

Similar to experiences of other immigrants, political and economic forces happening in both the United States and the homeland directly influenced Filipino American suburbanization. For instance, the omnipresence of nursing schools in the Philippines established from the U.S. colonial period created a large and steady pool of nurses. By the mid-twentieth century, American hospitals heavily recruited from the Philippines given Filipino nurses’ familiarity with Western medical practices and English proficiency. Along with recruiting nurses, American hospitals and corporations imported thousands of Filipino doctors, care-workers, engineers, and accountants since jobs were few in the Philippines. Moreover, U.S. recruiters sought workers from Global South nations such as the Philippines believing Filipinos were easily exploitable. For instance, between the 1960s and 1980s, Chicagoland hospitals hugely benefited from Filipino nurse and physician immigration as they filled positions and worked overtime. Many immigrants settled in suburbs including Bolingbrook, Glendale Heights, Niles, or Skokie because they were affordable, comfortable, and close to work. California’s Bay Area, Los Angeles, New Jersey, New York, Florida, and Texas were also magnets of Filipino medical workers and white-collar professionals. Although most Filipino Americans who settled in suburbs at this time were from the post-1965 immigrant cohort, a large contingent of Filipino suburbanites had military ties. For instance, Filipinos serving in the U.S. military resided in San Diego and Vallejo, California and the greater Hampton Roads region of Virginia. After active duty, many purchased homes in suburban Chula Vista and National City or Virginia Beach. Las Vegas’s gaming

industry and housing stock exploded in the early 1990s attracting Filipinos to work as casino dealers and hotel concierge staff thus creating pockets of immigrant suburbs in southern Nevada. As with their Asian counterparts, overall, Filipinos typically clustered together creating suburban ethnic enclaves. Especially in California, Filipinos tend to live in suburban communities with sizable Filipino populations such as Carson, Cerritos, Daly City, Fremont, Glendale, Hayward, Milpitas, Panorama City, Union City, Walnut, and West Covina. Between these cities alone, one would find over 200,000 Filipino residents.

The contemporary Korean diaspora to the United States was less dramatic in scale compared to Chinese and Filipino immigration and mainly occurred in the 1980s and 1990s. Moreover, Korean immigrants were less likely to settle directly in suburban communities and still largely depended on urban enclaves for work, retail, and social networking. Koreatowns in Los Angeles and New York City were particularly central to everyday life, and in many ways, are still the epicenters of Korean America. Nevertheless, by the 1990s, Koreans were most concentrated in large metropolitan areas including Los Angeles, New York, Seattle, San Jose, and Baltimore/Washington, D.C. Within these regions, Koreans are visible in suburban towns such as Chino Hills, Diamond Bar, Fullerton, Irvine, Rowland Heights, and Torrance, California; Leonia and Palisades Park, New Jersey; Ellicott City and Gaithersburg, Maryland; Annandale and Centreville, Virginia; and Bellevue and Federal Way, Washington. Many Korean immigrants started such businesses as liquor stores, gas stations, and restaurants often located in working-class areas because land was cheaper and these communities were ignored by major chain stores. Korean suburbanization accelerated across the country particularly after 1992 when the Los Angeles riots marked cities as dangerous battle zones for Asian Americans. Although Korean Americans continue to hold high rates of entrepreneurship and incomes to support suburban homeownership, they also have significant poverty rates and face deep economic hardship like other immigrant households. Despite Koreatown and cities as increasingly en vogue with younger or second-generation Korean Americans, Korean suburbanization continues to rise with thousands migrating

to unlikely Asian destinations such as suburban Atlanta and even rural parts of the Midwest and South.

Prior to the late 1980s, Indian immigration was minimal compared to East Asians and Filipinos. From the mid-1990s through the early 2000s, Indian immigration ballooned as U.S. companies across the country hired students and workers from India to fill positions in the high-tech industry. Cities with the highest percentage or numbers of Indian Americans are all suburban communities including Cupertino, Fremont, and Sunnyvale, California; Hoffman Estates, Oak Brook, and Schaumburg, Illinois; Edison and Iselein, New Jersey; Garden City Park, New York; Millbourne, Pennsylvania; and Sugar Land, Texas.

Asian American suburbanization patterns continue to change, and trends are often specific to particular moments and geographies. A region's reputation as welcoming to immigrants, economic or work opportunities, prestige and municipal resources, and other material or social reasons shape the ways in which Asian Americans are drawn to and participate in U.S. suburbanization. Recent figures and studies show Asian Americans still prefer suburban communities—especially areas with an above-average percentage of residents with the same racial background. For instance, all 10 of LA's San Gabriel Valley suburbs with majority or near-majority Asian American populations in 2000 increased their Asian American populations by 2010. Suburban migration among Asian Americans is also booming in less traditional immigrant gateways such as Atlanta, Denver, and throughout the Southwest indicating a willingness to reside in less visibly Asian communities, areas with cheaper costs of living, and in regions with less job competition. At the same time, Asian Americans from Generations X and Y who grew up in suburbs are more likely to move to cities in adulthood abandoning their attachments to the urban periphery. Asian American suburbanization is multi-layered and is a narrative of struggle, privilege, and desire to succeed and belong. Although Asian Americans are located in all forms of geographic space, the suburb remains a pivotal part of understanding the Asian American experience.

Sue, Stanley

Stanley Sue has been a professor of psychology and director of the Center for Excellence in Diversity at Palo Alto University since 2010. He is nationally recognized for his pioneering role in drawing attention to the mental health needs of Asian Americans and other ethnic minority groups, helping service providers recognize the need for more culturally responsive mental health service delivery, and stimulating research on mental health service delivery to underserved ethnic minority populations. His seminal work in this area helped to establish Asian American mental health as a field of scholarly inquiry. He, along with his brother, Derald Wing Sue, cofounded the Asian American Psychological Association in December 1972, with

Roger Lum, Tina Tong Yee, and Marion Tin-Loy as its founding members. Sue has also been instrumental in securing several major grants and conducting groundbreaking psychiatric epidemiological research on specific Asian American populations in close collaboration with Nolan Zane and David Takeuchi, in particular.

Stanley Sue graduated from University of Oregon with a BS in psychology in 1966 and earned his master's degree and doctorate in clinical psychology from the University of California, Los Angeles (UCLA) in 1967 and 1971, respectively. He began his academic career at the University of Washington (1971–1981), and was professor of psychology at UCLA from 1981 to 1996. During his time at UCLA, he established the National Research Center on Asian American Mental Health (NRCAAMH), which attracted significant numbers of graduate students interested in psychological research on Asian Americans over many years. He served as director of NRCAAMH from 1988 to 2001, moving the Center to the University of California, Davis in 1996, where he was professor of psychology, psychiatry, and Asian American studies until 2010, attaining the rank of Distinguished Professor in 2004. After retiring from UC Davis as Distinguished Professor Emeritus, he moved to Palo Alto University in 2010.

In the 1970s, Sue and his colleagues began investigating the experience of ethnic minority clients seeking services in the Seattle area mental health system, documenting that Asian Americans were more likely to underutilize services and drop out of treatment prematurely compared to other ethnic groups. This early work initiated a long-term trajectory of scholarship for Sue characterized not only by its ethnic minority focus, but also by its impact on public policy and mental health service delivery to ethnic minority populations. Sue's lifelong commitment to improving human welfare through conducting timely, relevant empirical research arose out of his early realization in the 1960s that his passion for civil rights could be combined with his chosen profession to address ethnic minority experiences and concerns. From 1996 to 1998, for instance, Sue served on an interstate commission, which developed national guidelines and standards for providing culturally competent mental

health care; in 2001, he was asked to serve as science editor of the Surgeon General's Supplementary Report on Mental Health.

Sue has received many awards in recognition of his public service, mentoring, teaching, and scholarship, including several Distinguished Contributions to psychology from various divisions of the American Psychological Association (APA), and a 2009 Presidential Citation from the APA for Contributions to Psychology. In 2003, the Stanley Sue Award was established in his honor by APA's Division on Clinical Psychology to recognize an individual who has made remarkable contributions to the understanding of human diversity. He was the first recipient.

Sui, Anna (1955–)

Anna Sui is a Chinese American New York-based fashion designer. Sui is best known for her bohemian, glamorous rock-and-roll and vintage-inspired designs. She manages to combine rich fabrics and hippie and

mod aesthetics from the 1960s and Goth and glam rock from the 1970s in a way that is bold, funky, and feminine with a youthful spirit. Sui designs under her own label, Anna Sui, and also has cosmetic, shoe, and fragrance lines, and has partnered with other companies for limited edition items.

Anna Sui was born in the suburbs of Detroit, Michigan, on August 4, 1955. Her parents, Paul and Grace Sui, were both born in China, but met and married when studying abroad in Paris, France. Anna grew up in Dearborn, Michigan, where she had wanted to be a fashion designer since the age of four years old.

She moved to New York City in 1973 to study at Parsons School of Design. When at Parsons, she met and became friends with Steven Meisel, who would become a fashion photographer. However, she left Parsons in 1975 and began working at Charlie's Girls, a junior sportswear company, where she was in charge of her own design room. She later worked at other sportswear companies, including Glenora and Simultanee.

In 1981, Sui launched her own fashion line by designing five pieces to show at a shared booth in that year's Boutique Show, a fashion trade show in New York City. At the Boutique Show, she booked orders from Macy's and Bloomingdales. Sui left her full-time job to design for her own line, but struggled in the early years. For several years, Sui ran her business from her apartment. She also made ends meet by styling for photo shoots for Steven Meisel, and turned down a fashion editorship at *Vogue* to focus on her fashion line. In 1987, Sui began showing her line at the Annett B. Showroom and set up a new work space in the Garment District.

Anna Sui's first runway show during New York Fashion Week in 1991 helped to establish her as an up-and-coming designer. Though she lacked funds to pay models, with the help of Meisel, Sui was able to enlist the help of top supermodels such as Linda Evangelista, Christy Turlington, and Naomi Campbell, who walked in her runway show for payment in the form of dresses. Sui's runway show was a theatrical experience in which she showed her clothing line in the form of styled, head-to-toe coordinated runway looks, a backdrop, and music.

In 1992, Sui opened her first boutique at 113 Greene Street in Soho, complete with red floors, that

remains her flagship boutique today, and her brand has continued to grow. In 1993, she received the Perry Ellis Award for new fashion talent from the Council of Fashion Designers of America (CFDA). Sui has license partnerships for shoe, cosmetics, fragrance, eyewear, and other product lines. She also has a distribution deal with Isetan, a Japanese department store that has expanded her brand in Asia by opening free-standing Anna Sui boutiques.

Sui Sin Far (Edith Maude Eaton) (1865–1914)

The first Chinese woman writer in America, Sui Sin Far was born into a family of an English father and a Chinese mother. She immigrated with her parents to Hudson City, New York in 1871. Her family later resettled in Montreal, Canada.

Among the early Chinese American authors, Sui Sin Far was virtually the only one who engaged in writing imaginative literature rather than social-anthropological works. Owing to her talents in writing and deep insight into the themes she presents, she achieved great success. At a time when there was strong bias against writers of Chinese ancestry in mainstream American literature, her works were carried by major literary journals and newspapers throughout North America, including *Independent*, *New England*, *Overland Monthly*, *Land of Sunshine*, and *New York Evening Post*. Thirty-seven of her previously published stories later were collected in a volume entitled *Mrs. Spring Fragrance* (1913), which won critical and popular acclaim.

Although Sui Sin Far's artistry in writing enables her to achieve a literary success that is beyond the reach of most early Chinese American authors, what

really makes her stories attract critics' attention is her conscientious effort to create an objective image of Chinese Americans. As a freelance journalist covering Chinese communities, Sui Sin Far spent a significant part of her life with Chinese immigrants on the Pacific Coast, particularly in Seattle, where she lived for a decade and worked at a Baptist mission teaching Chinese immigrants English.

Because of her familiarity with the Chinese American experience, Sui Sin Far's portrayal of Chinese immigrants has a feeling of truth that did not exist in the popular American fiction of her time. Probing deeply into America's Chinatown and the complex lives of its inhabitants, she exhibited to her audience a hidden world that was largely ignored or grossly distorted by mainstream American writers. Her stories, especially those in *Mrs. Spring Fragrance*, were composed in an intimate, descriptive tone and, based on what she had learned in her life among Chinese immigrants, present a panoramic view and gives readers a truthful feeling of the daily life in the Chinese American community at the turn of the twentieth century. The issue of Chinese American identity, the contradictions between Westernized and tradition-oriented Chinese immigrants, the self-protective aspect of the Chinese community, the mental torment of Eurasians, and interracial marriage and its consequence are all ably examined in depth with responsiveness to the imperatives of her conscience. The rich diversity of themes and subject matter of her work cuts across lines of color, gender, class, and nationalities, thus satisfying almost all of the segments in the world of literary critics: whereas women scholars like Sui Sin Far's feminist stance, those who advocate writers' social responsibilities praise her consciousness in speaking for Chinese immigrant laborers; others are impressed by her exploration of the cultural conflicts in the Chinese American experience. In this sense, Sui Sin Far seems peerless among her contemporaries and her writing represents an unusual perspective in Chinese American literary history.

More significantly, Sui Sin Far's frequent contacts with Chinese immigrants helped her develop "Chinese instincts" and made her become part of the Chinese American community. Although as a Eurasian, her appearance would allow her to "pass" into mainstream

American society, she chose to identify herself publicly with Chinese who were then treated so contemptuously in American society. Throughout her life, she remained fiercely proud of her Chinese heritage and never let an insult to the Chinese go unchallenged. Her consciousness of her Chinese ethnicity is also subtly underscored by her selection of the Chinese pseudonym "Sui Sin Far"—meaning "narcissus" in Cantonese dialect, and her insistence in using the name in publications as well as in real life. Although adoption of a pseudonym is a frequent phenomenon among writers, the selection of a pseudonym itself often reveals a writer's particular intention or concern. In this case, Sui Sin Far's selection of the pseudonym reflects her affection for the Chinese. The full extent of her intention to select the name comes home when one finds that "narcissus" in Chinese culture, unlike the Western legend, symbolizes dignity, elegance, and love for homeland. This forms a sharp contrast to her sister Winnifred, who, as a best-selling writer of "Japanese culture," adopts a Japanese pseudonym "Onoto Watanna" and trades her birthright for recognition and popularity.

Sui Sin Far's gallant defense of Chinese Americans was widely recognized by Chinese communities and earned their praise in her lifetime. As she recalls in her lengthy, vividly written autobiographic essay, "Leaves from the Mental Portfolio of a Eurasian": "My heart leaps for joy when I read one day an article signed by a New York Chinese in which he declares '(The) Chinese in America owe an everlasting debt of gratitude to Sui Sin Far for the bold stand she has taken in their defense.'" When she died in Montreal in 1914, the Chinese communities of Montreal and Boston placed a memorial at her tomb to express their gratitude and admiration for her dedication to the cause of Chinese immigrants. The tombstone is carved with four big Chinese characters meaning "A righteous person who never forgets Chinese."

As the first Chinese American woman writer, Sui Sin Far's accomplishment is extraordinary. By exploring the life of the humble, law-abiding immigrants who shoulder the burden of daily toil in the new land, she has drawn an original and realistic picture that provides her readers with fresh glimpses into the lives, thoughts, and emotions of Chinese immigrants. It is

such an achievement that closely links her writing with the social reality of Chinese America and represents a major aspect of the early Chinese American literature. The fact that her work is favorably reviewed by both mainstream and Asian American critics today, whereas the writing of most Chinese Americans of her time has faded out, is a testimony to the recognition and success Sui Sin Far has achieved.

Sumida, Stephen H.

Stephen H. Sumida is a professor of American ethnic studies at the University of Washington in Seattle. His areas of expertise include Asian American literature and interdisciplinary studies, comparative American ethnic literary studies, and interdisciplinary and transnational American studies. Sumida has been the recipient of teaching and community service awards and is regarded as a pioneer in the field of Asian American studies. He has been recognized as an exceptional mentor and advisor to students, staff, and faculty. He has published and edited several academic studies of literature and also guided the development of fields of Asian American studies and American studies as president of the Association for Asian American Studies (AAAS) and the American Studies Association (ASA).

Sumida received his BA in English from Amherst College in 1968 and his PhD in English in 1982 from the University of Washington. In his career he taught in the Department of English Language and Literature and Program in American Culture at the University of Michigan (1990–1998), the Departments of

Comparative American Cultures and English and the American Studies Program at Washington State University (1981–1990), and the English and American Studies Departments of the University of Hawaii (1970–1980).

Upon graduating from college, Sumida was awarded an Amherst College-Doshisha University Teaching Fellowship and lived and taught in Kyoto, Japan for the first time. This experience shaped his interest in transnational studies and Asian and Asian American literature. In 1975 Sumida dedicated his career to the study and teaching of Asian American literature when he became the coordinator of the Pacific Northwest Asian American Writers' Conference. He went on to be a cofounder of Talk Story Inc., a cultural organization for developing research, creativity, and study in Hawaii's literature and arts.

In the 1980s and 1990s Sumida worked to establish the fields of Asian American literature and ethnic American literature. His 1991 book on Hawaii's literature, *And the View from the Shore: Literary Traditions of Hawaii*, (winner of the Cultural Studies Book Award from the Association of Asian American Studies), was the first on native, immigrant, and colonial literature of Hawaii in historical and comparative contexts.

In the 1990s he developed one of the first Asian American Studies undergraduate and graduate programs in the Midwest at the University of Michigan. Sumida worked with literary scholars in the Modern Language Association (MLA) of America as chair of the Committee on the Literatures and Languages of America to develop the study and presence of multicultural American literature. In 2001 he coedited (with Sau-ling Wong) the MLA's *A Resource Guide to Asian American Literature* and his work has been published in numerous scholarly and literary journals.

In his 2003 Presidential Address to the American Studies Association Sumida called for the association to engage with the international scholarship and study of American studies and integrate questions of how American culture and U.S. ethnic studies and international American studies transform and affect each other. In leading by example, he has participated in multiple American studies projects in India, Japan, and Korea and lectures widely around the world about

his interest in American studies in an international context.

In 2007–2008 Sumida was awarded a Fulbright Professorship to teach in Tokyo at Tsuda College and Tokyo Institute of Technology. In 2011 Sumida was honored with the James Dolliver Visiting Professorship in the Humanities at the University of Puget Sound.

Sun Yat-sen (1866–1925)

Sun Yat-Sen was a Chinese revolutionary and the first president and founding father of the Republic of China. He was born on November 12, 1866, in Guangzhou and died on March 12, 1925, in Beijing. Sun married three times, to Lu Muzhen, Kaoru Otsuki, and Soong Ching-ling (Song Qinling). Sun played an instrumental role in the overthrow of the Qing Dynasty or Manchu government during the Xinhai Revolution. He was the first provisional president when the Republic of China was founded in 1912 and later cofounded the Nationalist Party, *Kuomintang* (KMT), serving as its first leader. Sun is referred to as the "Father of the Nation" in the Republic of China (ROC, Taiwan) and the "forerunner of democratic revolution" in the People's Republic of China. He is the only Chinese politician who is widely revered among the people from both mainland China and Taiwan. Sun developed the political philosophy known as the Three Principles of the People: nationalism, democracy, and the people's livelihood.

Like many Chinese in his time, Sun had a few first names. He was born Sun Wen, with the genealogical name being Sun Deming. He used the name Yat-sen (the Cantonese pronunciation of Sun Yixian) when he

was at school in Hong Kong. Sun was also known as Sun Zhongshan, his most commonly known name in China and Taiwan.

Education

Sun was born in Guangdong province in China. In 1879, at the age of 13, he was sent to live with his elder brother in Honolulu. He enrolled in the Iolani School to learn English. After briefly attending Oahu College, the precursor of the present-day Punahou School, an American Congregationalist school, Sun returned to Cuiheng, China. He moved to Hong Kong in 1883 at the age of 17 for further Western studies at the Diocesan School, sponsored by the Church of England. Sun entered Queen's College the following year. In 1884, Sun was baptized as a Christian.

In 1885, the Sino-French War broke out. The Qing government signed the Tianjin Treaty to allow foreign subjugations in Shanghai. Sun entered the Canton

Sun Yat-sen, first president and founding father of the Republic of China. (Library of Congress)

Hospital Medical College in 1886, where he began advocating for political change and reform. In 1887, Sun entered the College of Medicine in Hong Kong and graduated in 1892 and began working as an intern at the Chinghu Hospital in Macao. In December of the same year, Sun opened the China-West Pharmacy in Macao providing free service to the poor and performing surgery at the Kian Wu hospital until he was stopped by the Portuguese authorities, who colonized Macao at the time.

Revolution

In 1894, Sun wrote a letter presenting his reform idea to Li Hongzhang, governor general of Tianjin, who was in charge of foreign affairs. Not receiving any responses from Li, Sun returned to Hawaii in the same year and organized the *Xingzhonghui* (Revive China Society) in November with the goal of overthrowing the Qing dynasty and setting up a republican government. However, the plot to start an uprising in Guangzhou, China in October 1895 failed. As a result, Sun fled to Hong Kong, and began recruiting supporters and raising funds for further revolutionary activities in Japan, Southeast Asia, the United States, and Europe.

Sun was kidnapped and captured by Qing legation officials during his trip to London in 1896. With the help from his British professor from medical school, his capture was publicized in the *London Globe*, which embarrassed the Qing officials and led to his release. Sun then became internationally recognized as a leading revolutionary figure in China. In 1897, Sun went to Yokohama, Japan, and adopted the Japanese name *Nakayama*. When in Japan, Sun established the East-West School, and befriended several influential people, including Inukai Tsuyoshi (1855–1932), who later became Japan's prime minister. Sun returned to China in 1899 and planned a series of uprisings. After all of these revolutionary activities failed, Sun returned to Japan for another three years, gaining support from Chinese students overseas.

From 1903 to 1905, Sun expanded his following in Southeast Asia, the United States, and Europe, unifying different political parties and student groups into a new organization, the *Tongmenghui* (United League,

or Revolutionary Alliance). He also established the journal *Minbao* (People's Journal) in 1905 in which he first discussed his ideological principles—*Sanmin Zhuyi* (Three Principles of the People). Sun later elaborated on his political beliefs and doctrine, *Sanmin Zhuyi* or The Three Principles of the People at a meeting of the Executive Committee of the National People's Party in the southern Chinese city of Guangzhou in 1921. They are *minzhou*—the ethnic nation, emphasizing elimination of all foreign domination and uniting Han Chinese and ethnic minorities; *minchuan*—the people's rights, a republic committed to prevent autocratic and tyrannical leadership and excessive liberty; and *mingsheng*—the people's well-being, a more equitable distribution of wealth and nationalization of large private industries, such as banking, railways, and navigations to prevent private capital from controlling economic life. In Chinese, “*min*” means “people.” The three principles also have been translated as nationalism, democracy, and socialism. Sun had likened his principles to President Abraham Lincoln's ideals of government from the 1863 Gettysburg address “of the people” (*minzhou* or nationalism), “by the people” (*minchuan* or democracy), and “for the people” (*mingsheng* or socialism).

After 10 failed uprisings, Sun finally succeeded on October 10, 1911, at the tricity complex of Wuhan. The Wuchang Uprising triggered revolutionary actions across the country that eventually led to the collapse of the Qing dynasty Manchu government. Sun was elected the provisional president on December 29, and on January 1912, the Republic of China was formally declared.

Sun's presidency was short-lived because of the complicated political struggles following the uprising. On February 12, 1912, Pu Yi, the last emperor of the Qing dynasty, announced his abdication. The next day, Sun relinquished his title to Yuan Shi-kai, who controlled the northern half of China at the time. On August 25, the Tongmenghui was reorganized as Kuomintang or the Nationalist Party with Sun as the chairman. In September 1912, Sun accepted Yuan's appointment to work out a plan on the construction of a national railway.

Unfortunately, internal conflicts, and political and power struggles continued. This resulted in Yuan's

disbandment of the KMT and accepting Japan's "21 Demands," which ceded parts of its territorial, political, military, and financial assets during World War I, and allowed military warlords to divide and control different parts of China. In 1921, a parliament was reformed and Sun was sworn in as the president of the Republic of China, but the Northern Expedition fighting with the warlords in the north continued.

In 1923, in an effort to reorganize and strengthen the KMT parliament in southern China, Sun sought assistance from the Communists, because he was impressed by Communist discipline, organization, and economic development in the Soviet Union. Sun took the titles of the head of government and party and established *Huangpu* Military Academy to prepare army officers. Chiang Kai-shek (1887–1975), trained in the Soviet Union, was made commandant. In 1924, the Central Bank of China was established in Guangzhou. Sun experienced a significant health decline in 1924. When Sun died on March 12, 1925, at the age of 59, China was still divided between KMT in the south, and a northern government ruled by *Duan Chiyu* (Duan Qirui, 1864–1936) in Beijing.

Sun had a vision of China's economic and industrial modernization. His book *The Strategy of Nation Building* lays out development programs that include a network of railways, coastal development with three major ports in the northern, central, and southern regions, mining industry, dams for flood controls, and river transportation. China's Four Modernization programs in agriculture, industry, science, and technology in China proposed by Deng Xiaoping (1904–1997) had been viewed as an echo of Sun's plan.

Family

In 1884, at the age of 18, following Chinese tradition, Sun married Lu Muzhen (1867–1952), a woman from his hometown, Cuiheng, through an arranged marriage. Lu took care of his parents when Sun was traveling and engaging in revolutionary activities. They had a son, Sun Ke (1891–1973), who was educated in the United States and became a political conservative in KMT. In 1895, the family moved to Honolulu to live with Sun's brother Sun Mei. Sun and Lu had two more daughters when Lu lived in Hawaii.

During a stay in Japan, Sun married a young Japanese woman, with whom he had a daughter. His most significant relationship was with Soong Ching-ling (1893–1981), a graduate from Wesleyan College in Macon, Georgia. She was a fervent supporter of Sun's revolution. They were married in 1915, when Sun was still officially married to his first wife, Lu. For the remaining 10 years of Sun's life, he was accompanied everywhere by Soong Ching-ling. After Sun died, Soong's position as his widow made her a significant public figure for the rest of her long life. Even though different political groups competed for her support, Soong herself believed that her primary duty was to remain faithful to Sun's political principles. She opposed Chiang Kai-shek when he assumed leadership of KMT, and became an advocate of civil rights and resistance to the Japanese occupation. Soong was involved in Chinese Communist affairs, and after 1949, became a vice chair of the New People's Republic of China.

Sung, Betty Lee (1924–)

Betty Lee Sung is a path-breaking Asian American historian, professor, activist and author of seven influential books that have had a major impact on the narrative and portrayals of Chinese immigrants in the United States. Although other historians focused on Chinese immigration to the West Coast in the latter half of the nineteenth century, Sung documented the significant communities and contributions of Chinese on the East Coast beginning in the eighteenth century. She was a founding member of the Organization of Chinese Americans and has been honored by numerous organizations such as the Asian American Higher Education Council and the American Library Association. Her extensive cataloguing of U.S. immigration files are housed in the “Betty Sung Lee Collection” of the Asian American Section of the Library of Congress.

Sung was born in the United States on October 3, 1924, the daughter of immigrant parents from Guangdong, China and grew up in Washington D.C. Her family moved back to Toishan, China during the Great Depression then moved back to the United States prior to the Japanese takeover of Guangdong during World War II.

After completing her BA from the University of Illinois in 1948, she settled in New York City and worked as a scriptwriter for the Voice of America radio program. One of her assignments was to cover the activities of the Chinese in the United States and she realized the lack of accurate information available and began her quest to fill that void.

Her extensive archival and ethnographic research led to the publication of her first book, *Mountains of Gold: The Story of the Chinese in America* in 1967. She directly and meticulously documented that, contrary to the prevailing stereotypes of the time, the Chinese were not “unassimilable aliens” who were content to voluntarily segregate themselves in insular ethnic communities. Rather, the Chinese wanted the opportunity to become productive and fully integrated members of the American mainstream, despite the overwhelming racial discrimination and injustices they experienced.

Mountains of Gold became one of the early classic foundational works for the creation of Asian American

studies in the late 1960s, including the Asian American Studies Program at the City College of New York, where Betty Lee Sung was appointed to teach its first course, eventually serving as the chair of the Asian American Studies Department until her retirement in 1992. She also completed her PhD from the City University of New York in 1983.

Sung authored numerous articles and books, including the award-winning *Survey of Chinese Manpower and Employment* in 1976. During her career, she compiled a comprehensive collection of archival records on the Chinese in the United States and eventually donated her records to the Library of Congress.

Sung was also a community activist and made significant contribution to the civil rights of all Asian Americans. Among her many community activities, she organized a City Hall protest against councilmember Julia Harrison’s derogatory remarks against Asians, which contributed to John Liu replacing Harrison in her Flushing Council seat and becoming the city’s first Asian American councilmember in 2002. In the aftermath of 9/11, Sung served on a Lower Manhattan Development Corporation committee as an advisor to the rebuilding of Manhattan’s Chinatown. Sung is married to Charles Chung and has eight children.

Survey of Race Relations on the Pacific Coast

The Survey of Race Relations on the Pacific Coast was a social scientific survey founded by Protestant missionaries who had served the YMCA in Japan in the

early 1900s. The project began in 1922 and was completed in 1925. The Survey took place in five major urban centers including Vancouver, British Columbia; Seattle, Washington; Portland, Oregon; San Francisco and Los Angeles, California; as well as in various agricultural regions in the San Joaquin Valley of California. The Survey received initial funding from the Institute of Social and Religious Research, a New York-based socioreligious reform organization founded by John D. Rockefeller, Jr. In 1923, Protestant organizers seeking to bring an air of scientific objectivity to the Survey commissioned sociologists to carry out interviews with Asian immigrants, North American-born Asian Americans, and white residents in the five focus regions. Seven general categories of interest framed sociologists' interviews. These included population demographics, immigration rates, birth rates, Americanization efforts, immigrant assimilation, agriculture, and social and business relationships in immigrant and white communities. In addition to questionnaires, Asian immigrant and Asian American participants contributed impromptu life histories that explored issues as diverse as racial discrimination, intermarriage, and the experiences of Asian immigrants in a transnational social and economic context. Inevitably, the Survey collected more than 600 interviews with white, Asian immigrant, and Asian American participants.

Disturbed by increasingly hostile anti-Japanese sentiment in California, and impending immigration legislation that would exclude the majority of new Japanese immigrants from entering the United States, Protestant missionaries envisioned the study as one that would send a message to Japan that the United States was serious about resolving anti-Japanese racial discrimination in the country. They also wanted to assure Japan that the United States intended to take measures to protect those immigrants already living in the United States from continued racial, social, and economic persecution. Protestant organizers deeply influenced by social gospel-era theology hoped the Survey would foster "mutual understanding" between white and Japanese communities and help to dismantle existing legislation that forbade Japanese immigrants to own land, form corporations, or attain naturalization rights in the United States. Finally, Protestant

organizers advocated through the study for the Americanization and assimilation of Japanese immigrants and North American-born Japanese Americans. They argued that assimilation would decrease anti-Japanese hostility and touted the central role Christian missions and the Christian church played in these efforts.

A number of challenges stymied the efforts of Protestant organizers. Ideological differences between Protestant organizers and sociologists hired to carry out the Survey created lasting tensions throughout the course of the study. Skepticism among anti-Japanese organizations on the Pacific Coast also made organizing the Survey difficult and financially cumbersome. Ideologically, Protestant organizers applied liberal Protestant theology to their efforts in the Survey of Race Relations and highlighted especially the role direct action on the part of advocacy groups such as the YMCA and the Federal Council of Churches in America could play in decreasing racial hostilities among white and Japanese communities. Sociologists on the other hand applied the theories of University of Chicago sociologist Robert Ezra Park as their methodological foundation. Park's theory of race relations relied on a static economic model that attributed racial discrimination to economic competition. Sociologists did not believe that social advocacy could change or impede what they considered a natural outcome of increased social and economic interaction in the post-World War I modern era.

In addition to ideological differences between organizers and sociologists, the Survey of Race Relations encountered challenges from anti-Japanese groups in the five regional centers where the Survey was to take place. These challenges impeded their efforts to raise funds for the Survey on the Pacific Coast. The Survey relied on an initial grant from the Institute of Social and Religious Research yet these funds were contingent on Protestant organizer's ability to raise matching funds among Pacific Coast donors. A general lack of interest in the Survey in certain regions as well as backlash from anti-Japanese organizations such as the American Legion, the Sons of the Golden West, and the Anti-Japanese League consistently challenged organizer's ability to raise sufficient matching funds. Anti-Japanese organizations accused Protestant

founders of favoring Japanese immigrants over white residents and for their sympathy in promoting racial liberalism in future immigration reform initiatives. To combat such skepticism and bring additional funds to the Survey among Pacific Coast donors, Protestant organizers expanded the geographic focus of the Survey to states outside of California. They also expanded the focus groups to be studied beyond Japanese immigrants and Japanese Americans. Inevitably, the Survey of Race Relations included studies of Japanese, Chinese, Sikh, Korean, and even some Mexican immigrant communities in California, Oregon, Washington, and British Columbia. This expanded model further strained the limited funds Protestant organizers initially received from the Institute of Social and Religious Research and did little to assuage anti-Japanese organizations charges of Protestant bias.

Despite ideological differences and strained financial resources, the Survey collected an astounding number of interviews among Asian immigrant and Asian American communities. Although organizers limited their interviews primarily to educated, English-speaking Asian immigrant and Asian American communities and marginalized the rural, laboring classes of Asian immigrant and Asian American populations, the Survey of Race Relations offered these participants the chance to voice concerns regarding racial discrimination, immigration restrictions, and international affairs shaping U.S.-East Asian policy in the interwar period. Collectively, the interviews provided a window into the lives of first-generation immigrants from East Asia. Their voices demonstrated both the challenges and discrimination immigrants faced as well as the adaptability and tenacity exhibited by the first generation. Interviews among North American-born Asian American youth provided insight into the social and economic challenges faced by the second generation as well as personal struggles Asian Americans faced as they sought to define themselves as both Asian and American amid an often hostile white American mainstream.

In the longer-term, the Survey of Race Relations formed the early conceptualization of the Institute of Pacific Relations founded at the University of Hawaii in 1925. That organization, founded by liberal Protestant organizers and collaborators from the United

States, China, Japan, and a handful of other Pacific Rim nations sought to increase dialogue among Pacific Rim nations in the pre- and post-World War II era.

Suzuki, Bob H.

Bob H. Suzuki is a former president of the California Polytechnic State University at Pomona. Promoting campus diversity was a hallmark of Suzuki’s 12-year tenure. Under his direction, Cal Poly Pomona added, among other resources, a multicultural center for students and a teaching and learning center for faculty and staff. Suzuki also helped establish the Leadership Development Program for Higher Education, a program targeting the underrepresentation of Asian Americans in leadership positions in higher education. He is an influential civil rights activist, having helped lead a campaign to repeal the 1950 McCarran Internal Security Act (also known as the Emergency Detention Act) in 1971, and another campaign to desegregate public schools in Pasadena, California in 1974.

Born in Portland, Oregon, to immigrant parents from Japan, Suzuki had yet to begin school when World War II broke out. He was interned with the rest of his family in Minidoka, Idaho, where he spent the

first three years of his schooling. Suzuki struggled with his early schoolwork, as he could barely speak English. When the war ended, Suzuki's family relocated to a rural town near Spokane, Washington, where his father had found work as a tenant farmer. Despite his earlier difficulties in the classroom, Suzuki would eventually graduate from high school at the top of his class.

He would go on to study mechanical engineering at the University of California, Berkeley, where he received a bachelor's degree in 1960 and a master's degree in 1962. After working as an engineer for Boeing for several years, Suzuki resumed his studies at the California Institute of Technology, where he received a doctorate in aeronautics in 1967.

Suzuki has taught and held administrative positions at a wide array of institutions. Upon receiving his doctorate from Caltech, he joined the Department of Aerospace Engineering at the University of Southern California, where he taught both undergraduate and graduate engineering courses. It was during this time that Suzuki's interest in the burgeoning civil rights movement was ignited. He decided in 1971 to leave USC to become a faculty member and an assistant dean at the School of Education at the University of Massachusetts, Amherst. In 1977, Suzuki published an influential article, entitled "Education and the socialization of Asian Americans: A revisionist analysis of the 'model minority' thesis," that analyzed the emergence of the "model minority" myth. He would continue to lecture, write, and publish about the subject for the rest of his career.

Suzuki returned to California in 1981, when he became Dean of Graduate Studies and Research at California State University, Los Angeles. He held this position until becoming vice president for Academic Affairs at California State University, Northridge in 1985. In 1991, Suzuki was selected to be the fourth president of Cal Poly Pomona, a position he held until his retirement in 2003.

At Pomona, Suzuki was heavily committed to diversifying the university's faculty, student body, and campus and academic programs. Under his direction, the university established several programs and facilities intended to increase campus diversity, including several student cultural centers, academic workshops for entering undergraduates, and an annual cross-cultural student retreat.

Cal Poly Pomona expanded in several other directions during Suzuki's tenure, adding an instructional technology and computing center, a small on-campus college preparatory high school, and numerous other buildings and facilities. Just prior to Suzuki's retirement, the university began construction on a \$250 million technology and business park intended to improve the university's engagement with the nearby community and to boost the region's overall economic activity. Also during his tenure, Cal Poly Pomona generated more than \$75 million in grants from the federal government, greatly enhancing the university's involvement in research.

Suzuki has held various advisory and leadership positions in addition to his academic roles. He chaired the National Education Commission of the Japanese American Citizens League, the Equal Opportunity Program Advisory Committee at Pasadena City College, as well as the Community Advisory Committee for the desegregation of public schools in Pasadena, California. He has also been a member of the National Science Board.

Suzuki is the recipient of numerous awards and honors. In 1976, he became the inaugural winner of the National Education Association's Human Rights Award for Leadership in Asian and Pacific Island Affairs. In 2001, he received the San Gabriel Valley Economic Partnership's Technology Leadership Award. In 2003, he was presented with the badge of the Order of the Rising Sun, Gold Rays with Neck Ribbon by the Japanese government.

Suzuki retired in 2003, leaving a legacy of promoting diversity, modernizing facilities, and improving research at Cal Poly Pomona. He is married to Agnes Suzuki (formerly Hirano) and has three children and three grandchildren. Suzuki continues to serve as an advisor and director to Leadership Education for Asian Pacifics (LEAP), an Asian American leadership training organization in Los Angeles, and to the Ahmisa Center, an interdisciplinary center for the teaching and study of nonviolence at Cal Poly Pomona.

Suzuki, Daisetz Teitarō (D. T.) (1870–1966)

Daisetz Teitarō Suzuki (more popularly known as D. T. Suzuki) was a Japanese scholar of Buddhism, a renowned author, and the most significant proponent of Zen Buddhism in the West during the twentieth century. Suzuki’s introductory books on Zen along with his captivating lectures, most notably at Columbia University in the 1950s, influenced a generation of American artists, musicians, poets, and writers. By the time of his death in 1966, Suzuki was hailed in popular American media as the “foremost authority of Zen,” and through his efforts Zen became a household word.

Born Suzuki Teitarō in Kanazawa, Japan in 1870, Suzuki’s interest in Zen Buddhism was piqued by his high-school mathematics teacher who was a student of the esteemed Rinzai Zen master Imakita Kōsen (1816–1892). Suzuki taught English at a primary school before attending university, and after transferring to Tokyo Imperial University in 1892 he began to study Zen under Kōsen at Engaku-ji, a Rinzai Zen monastery in Kamakura. When Kōsen died later in 1892, Suzuki continued his studies with Kōsen’s teaching heir, Shaku Sōen (1859–1919). Sōen later conferred the honorary name Daisetz (Daisetsu), “Great Simplicity,” upon Suzuki, although Suzuki was to remain a lay practitioner his entire life.

This relationship with Sōen would prove to be pivotal. In 1893, Sōen traveled to the United States to attend the World Parliament of Religions in Chicago and met Paul Carus (1852–1919), a philosopher and writer who was working for Open Court Press in La Salle, Illinois. Afterward, Carus sent Sōen a few of his publications, including his popular 1894 work, *The Gospel of Buddha*. Suzuki was deeply impressed by Carus’s scientific and rational interpretation of Buddhist thought, and translated *The Gospel of Buddha* into Japanese (entitled *Budda no fukuin*).

Furthermore, Suzuki asked Sōen to write a letter on his behalf requesting to study with Carus in America. Carus agreed and Suzuki arrived in America in 1897. He sustained himself by working at Open Court Press and was also exposed to the writings of influential Western philosophers such as William James. The writings of James, especially his *Varieties of Religious Experience*, proved to be formative in Suzuki’s mature views on Zen as an expression of a pure and unmediated mystical experience.

Suzuki returned to Japan in 1909 and two years later he married Beatrice Lane (1878–1939), a graduate of Radcliff College who shared an interest in Theosophy and mysticism with Suzuki. During this period Suzuki was also interested in the writings of the Swedish theologian Emanuel Swedenborg (1688–1772), whom he claimed was “the Buddha of the North.” In 1921 Suzuki took a position at Otani University in Kyoto and founded a journal called the *Eastern Buddhist* devoted to the study of Mahāyāna Buddhism. Although Suzuki would lecture internationally over the years, he would continue to have an association with Otani University until 1960.

Of Suzuki’s English language works published in the 1930s, the three-volume collection entitled *Essays in Zen Buddhism* (1927–1934) and *An Introduction to Zen Buddhism* (1934), were read by a wide range of audiences and were important catalysts in popularizing Zen in the West. The 1939 German edition of his *Introduction* contained a preface by the famed psychoanalyst Carl Jung (1875–1961), which was later translated and added to the 1949 English edition. At the heart of Suzuki’s interpretation of Zen was a nondual and ultimately transformative experience that transcended both history and culture, and thus was not restricted to any particular religion, but was at the core of all religions. Furthermore, Suzuki’s 1938 work *Zen Buddhism and Its Influence on Japanese Culture* (later republished as *Zen and Japanese Culture*) highlighted Zen as the bedrock of Japanese arts and as a quintessential element of Japanese culture.

Suzuki’s continued rise to prominence would culminate in the 1950s when he was in his 80s. Suzuki arrived in Hawaii in 1949 for his second extended lecturing stint outside of Japan, and between 1951 and 1957 he held a series of lectures at Columbia

University that garnered popular media attention in magazines such as *Vogue*, *Time*, and the *New Yorker*. During this period Suzuki's interpretation of Zen was particularly influential with Beat generation writers such as Jack Kerouac (1922–1969), Allen Ginsberg (1926–1997), Gary Snyder (1930–), as well as the psychologist Erich Fromm (1900–1980), composer John Cage (1912–1992), and the Trappist monk and author Thomas Merton (1915–1968). Suzuki's books, lectures, and appealing media persona ultimately ushered in a period of intense interest in Zen Buddhism during the late 1950s and early 1960s in America.

Suzuki died in Tokyo in 1966 at the age of 95. Although Suzuki contributed to the scholarly study of Buddhism, writing prolifically in both Japanese and English, these works are generally overshadowed by his cultural impact in the West as an ambassador of Zen.

Suzuki, Shunryū (1904–1971)

Shunryū Suzuki was a Japanese Sōtō Zen priest who helped found the well-known San Francisco Zen Center in 1962 as well as the Tassajara Zen Mountain Center, the first Zen Buddhist monastery in the United States, in 1967. His efforts helped shape and further popularize Zen Buddhism during the Beat Generation and counterculture movement of the 1960s in Northern California. Suzuki's seminal work, *Zen Mind, Beginner's Mind*, published shortly before his death, is a collection of his lectures that has also become influential in spreading Zen philosophy and meditation practice to popular America audiences.

Suzuki was born in Kanagawa Prefecture in 1904 as the son of a Sōtō Zen priest who oversaw a small family temple. Suzuki would go on to take Gyokujun So-on, his father's disciple, as his teacher and moved to Shizuoka Prefecture to train at So-on's temple and to attend school. On his thirteenth birthday he became a novice monk. In 1926 he entered Komazawa University, a school established for training young monks, and was certified by So-on as his teaching heir the same year. After graduating in 1930, Suzuki would continue his training at Eihei-ji and Sōji-ji, the two head temples of the Sōtō Zen sect. It was during this period that Suzuki began studying with the renowned teacher Kishizawa Ian, a scholar of the twelfth century Sōtō Zen master Dōgen, who would continue to shape Suzuki's understanding of Zen and meditation practice for the next two decades. In 1934, So-on died before naming a successor, and Suzuki assumed responsibility over his temple, Rinso-in. A large monastic complex with a long history, Suzuki was determined to rebuild Rinso-in's prestige and develop it as a place where both monks and laypeople could practice meditation. During the 1930s and 1940s Suzuki gave lectures at Rinso-in that questioned the widespread support for Japanese nationalism and military expansion, two areas that were supported by many Japanese priests at the time.

By the end of the 1950s an opportunity arose for Suzuki to go to the United States. In 1959, at the age of 55, Suzuki accepted a three-year position as priest of Soko-ji in San Francisco to serve the Japanese American community. By the time Suzuki arrived a growing number of non-Japanese Americans had become interested in practicing Zen meditation, and a small group began to join Suzuki during his morning meditation sessions. The group soon outnumbered the Japanese American congregation and they formed the San Francisco Zen Center in 1961, officially incorporating it the following year. Suzuki soon realized the need for proper accommodations to suit more intense meditation practice. In 1966 he organized the purchase of a 100-year-old resort nestled in the mountains of Carmel Valley in California and converted it to a meditation center named Tassajara Zen Mountain Center in 1967. Two years later Suzuki left his abbacy at Soko-ji to become the first abbot of the San Francisco Zen

Center. His disciples would come to gather some of his lecture material and publish it in 1970 under the title *Zen Mind, Beginner's Mind*. This work remains a popular introductory text to Zen meditation and bears the clear influence of Dōgen's thought. Suzuki's emphasis on seated meditation practice was often held in distinction to the writings of his older contemporary D. T. Suzuki, who frequently highlighted the importance of the direct realization of enlightenment and *koan* practice. In the fall of 1971, Suzuki fell ill and installed his American disciple Richard Baker as abbot.

In December 1971, Suzuki died in San Francisco. The San Francisco Zen Center and affiliate organizations that Suzuki left behind currently constitute the largest Sōtō Zen group in America.

Swap Meet

There are two types of swap meet: indoor and outdoor. Outdoor swap meets, also known as flea markets, originally dealt mainly in secondhand goods. They were an extension of garage sales, where the sellers of used goods would come together in one area, such as a drive-in movie theater, to sell their wares. The obvious advantage of a central location was the ability to attract customers. Outdoor swap meets have evolved to include professional salespeople marketing bargain goods. These professionals commingle with the amateurs and are not completely distinguishable from them. Still, they compete with the prices offered by "garage sale" people, and offer very cheap merchandise. To open an outdoor swap meet booth, one must obtain a permit from the Board of Equalization to

cover sales taxes. Some swap meets require a business permit from the city. As with garage sales, an outdoor swap meet operator requires a secondhand article permit from the city.

An outdoor swap meet requires very little investment capital and equipment. In fact, one can start an operation with very little capital depending on the items one chooses to sell. It costs about several hundred dollars to purchase basic equipment such as a tent, table, clothes racks, and so on. In recent years, however, one must pay a premium to lease space because of increasing demands for spaces at outdoor swap meets. Consequently, the start-up costs have gone up. In addition, one may need additional equipment depending on the items one sells. For example, if a vendor sells clothing, he/she will need a van or truck and clothes racks to carry the clothes. Once, anyone could have leased an outdoor swap meet space because spaces were reserved on the basis of first come, first served. However, as competition for good locations has intensified, rental costs have risen to a premium. One may lose a booth space if one does not pay a monthly reservation fee. Still, the start-up costs for entering an outdoor swap meet business do not compare with those for opening a liquor store, grocery market, or laundry business, which are other popular forms of Korean immigrant enterprises. Outdoor swap meets appear to serve several functions for recent immigrants. They provide a unique opportunity to make extra income during the weekends. They allow immigrants to learn how to operate a small business in the United States, without much risk. And they allow immigrants to learn about American culture by dealing with diverse clientele.

The next stage in the evolution of swap meets was to move them indoors. This concept was borrowed from markets in Asia. Outdoor swap meets had several drawbacks. They depended on clement weather. They required that vendors unpack and pack their items each day of the swap meet. And they depended on low real estate values; as the price of land skyrocketed in Southern California during the 1980s it became increasingly difficult to lease or buy land to hold outdoor swap meets. Moreover, outdoor swap meets tended to be weekend affairs. Indoor swap meets could be held all week. Indoor swap meet booths, like

mini-mall stores, do not require secondhand permits, making it easier to obtain a permit from the city.

Indoor swap meets are essentially a new form of retailing, in which individual sellers lease booths in a large building and sell their wares independently. According to the Planning Commission of the City of Los Angeles, the indoor swap meet is “where new or secondhand goods are offered or displayed for sale or exchange by ten or more independent vendors within a completely enclosed building which has a large open assembly area offering, for a fee, rented, or leased spaces for individual vendors.” In other words, the sales personnel are not employees of single retailers, but are, instead, entrepreneurs who buy and sell their own goods. Most indoor swap meet buildings have mini-mall permits from local agencies, enabling them to sell new items. Although indoor swap meets have lost the connotation of amateur salespeople getting rid of their excess secondhand goods, the swap meet name still connotes bargain prices.

The first indoor swap meet was opened in Koreatown in 1982. The idea was transplanted to the surrounding economy, with the opening of the Compton Fashion Indoor Swap Meet in June 1985. The Compton Fashion Indoor Swap Meet was established in a huge building vacated by Sears Roebuck Co. in 1978. The building had been abandoned and stood vacant for seven years before five Korean American investors converted it into an indoor swap meet with the active support of the city of Compton.

An indoor swap meet is a place to buy very cheap goods. Indoor swap meets experienced tremendous growth during the 1980s. The *Southland Swap Meet Directory* listed 48 indoor swap meets in Southern California in 1990; the number grew to 160 in 2003. Although outdoor swap meets have been located in suburban areas, indoor swap meets are typically located in poor and urban neighborhoods. They cater to low-income families, and are usually found in African American and Latino areas. In recent years, however, indoor swap meets have branched out to the greater LA areas, toward the Inland Empire and beyond.

During the 1980s, Korean immigrants were active in developing this new sector of the Los Angeles business community, and they virtually monopolized

indoor swap meet businesses in Southern California, though there are exceptions. The number of Korean indoor swap meet vendors in Southern California is estimated to be more than 10,000 according to the Korean Indoor Swap Meet Association. Ethnic preference among Koreans may help to explain why Korean immigrants dominate the indoor swap meet business. The ethnic solidarity factor may explain why Korean immigrants have dominated the indoor swap meet business in Los Angeles. The number of Korean-owned outdoor and indoor swap meets grew rapidly during the 1980s and 1990s. Clothing is the predominant item being sold. Other items include luggage, sporting goods, jewelry, shoes, and electronic items. Some Korean Americans run more than one booth, especially when they have many family members to help run them. For many recent Korean immigrants, operating an outdoor or indoor swap meet booth represents a path for starting a new life in the United States. Instead of working as janitors, garment workers, restaurant workers, gardeners, painters, or gas station attendants earning minimum wage for several years and hoping to save enough start-up capital for a small business, Korean immigrants have a chance to own businesses themselves with very little initial capital or overhead costs.

In general, though, it is easy for new immigrants to get involved in the swap meet business because it requires no special skills or experience. Of course, experience is always an asset for any kind of business operation, but it is not a necessary condition for starting a swap meet. Location of one’s booth may prove to be a more crucial factor in separating successful from unsuccessful merchants. To enter this line of business, being Korean is an advantage. Building operators often prefer renting the spaces to fellow Korean Americans because they believe Korean American merchants are more reliable in terms of paying rent on time, and tend to cause fewer problems. A third factor is that the suppliers of goods sold in swap meets—the importers and wholesalers—are often Korean immigrants, providing the prospective swap meet operator with ready access to his or her wares. Finally, because Korean immigrants already have a foothold in this business, it is easier for new entrants to learn the business than non-Koreans.

Opening an indoor swap meet booth is more difficult than opening an outdoor one. The capital requirements are much higher, because of higher rent, a premium price for prime locations, utility costs, and other related expenses.

In the past, large department stores were slow to adapt to rapidly changing economic conditions. Many stores left African American and Latino neighborhoods during the 1960s and 1970s because they were unable to cope with the rising costs and risks. The combination of department stores leaving these neighborhoods and their inability to adapt quickly to a changing clientele created a niche for Korean entrepreneurs to establish indoor swap meets in Latino and African American neighborhoods. Compared to liquor stores or grocery markets, indoor swap meets are a good investment. They generate good profits with a relatively small investment. They require shorter hours of operation, typically from 10 a.m. to 7 p.m. They provide a safe environment for conducting business. And they afford the vendors a neighborhood atmosphere, where they converse with fellow Korean American merchants.

The globalization of the economy has also played a part in the proliferation of swap meets in Los Angeles. Swap meets flourished during the years of tremendous Asian imports growth. Large quantities of certain imports, such as garments, shoes, and electronic products, are imported from South Korea, Taiwan, and other Asian nations. Swap meets have become significant retail outlets for these imports. It is important to note that some imported items from Asia are knock-offs or copies of name brand products. Swap meets are not only linked to the rise in imports but also to the burgeoning garment industry in Los Angeles. The fact that Korean immigrants are playing a large and growing role as contractors and wholesalers in the industry provides a useful connection for Korean swap meet operators. Swap meet operators buy cheap garments from Korean garment producers to retail them at swap meets.

During the 1980s, Wal-Mart, K-Mart, Target, and other large chain stores adopted new sales policies of selling relatively good quality goods at low prices. Because indoor swap meet stores are now competing for the same customers by “selling reasonably good

quality products at cheap prices,” it is increasingly difficult for small indoor swap meet vendors to compete with larger chain stores. In recent years, some Korean businessmen have established “Swap Malls.” A swap mall is a combination of a shopping mall and a swap meet. The Swap Mall is clean and equipped with the modern facilities of a shopping mall, such as escalators, elevators, a children’s playground, a food center, and a stage. At the same time, it retains the swap meet characteristics of selling quality goods at low prices.

The evolution of the swap meet business, from outdoor swap meet to indoor swap meet, and now to swap malls, illustrates the creative role that Korean immigrants are playing in altering the retailing landscape of Los Angeles. They are developing innovative ways for providing cheap quality goods to consumers, and thereby building a strong economic base for the Korean immigrant community. Korean American merchants seem to adopt to the consumption patterns of Latino immigrants better than Anglo merchants as Korean American merchants are slowly replacing Anglo businesses in heavily Latino areas in pockets of San Fernando Valley.

Indoor swap meets seem to fill a niche vacated by department stores, enabling inner-city and barrio residents to gain easier access to budget items. Indoor swap meets do appear to afford these neighborhoods alternative forms of retailing service, at affordable prices. The evolution of the swap meet needs to be understood in the context of the restructuring of the Pacific Rim economy. The polarization of Los Angeles along class and race lines has created the need for budget stores in poor neighborhoods of color. At the same time, certain Asian countries have developed as exporters of low cost, manufactured products, many of which are being imported into the United States. Korean swap meet operators help to bring these two trends together, helping to distribute cheap imports to poorer neighborhoods. In the future, however, Korean immigrant merchants must pursue ways to become part of local community rebuilding efforts such as economic joint-venture programs in South Los Angeles. Both the businessmen and inhabitants of these communities must be sensitive and responsive to policy makers. State and local leaders as well as policymakers, must formulate public policies that can adequately

address complex and conflicting issues facing multiracial communities.

Sylvanus, Thomas (1845–1891)

The service record of Thomas Sylvanus (Ah Yee Way) in the American Civil War is unparalleled: Fighting the Union, he persisted despite a battle-related disability, distinguished himself in his regiment's Color Guard, and survived 10 months as a prisoner of war in the notorious Andersonville stockade.

Born in Hong Kong, Ah Yee Way was brought to America as a nine-year-old by a Mrs. McClintock, who inexplicably turned him over to a Dr. Sylvanus Mills, who gave the boy to his sister Mary Duvall in Baltimore, Maryland. Renamed Thomas Sylvanus, he was a servant for the Duvall family when he ran away to Philadelphia and, adding three years to his 16, enlisted in the Eighty-first Pennsylvania Voluntary Infantry, Company D, on August 31, 1861.

In the 1862 Peninsula Campaign, Sylvanus fought in the Battles of Fair Oaks, Orchard Station, Allen's Farm, Peach Orchard, Savage Station, Charles City Cross-roads, and Malvern Hill. When the Army of the Potomac withdrew to Harrison's Landing on the James River, July 1, he seemed unscathed, but within nine days, his eyesight began to fail, and he became completely blind. Medical officers in camp and in later years determined he'd been attacked by a disease of the eyes that was variously attributed to fumes from an exploding shell or excessive heat, hard marching, and smoke from powder. His Certificate of Disability for Discharge dated December 10, 1862, reads:

"incapable of performing the duties of a soldier [due to] partial blindness from cataract of both eyes."

A civilian in Philadelphia during the Battle of Gettysburg, Sylvanus enlisted on the third day of the fighting, July 3, 1863, in the Fifty-first Regiment Infantry, Company B, Pennsylvania Emergency Ninety-Day Militia. That same day, the battle ended in a narrow victory for the Union, but the carnage was so overwhelming that when the Fifty-first Regiment arrived in Gettysburg for provost duty in August, many sickened from the stink of rotting horse carcasses still being buried and the thousands of decaying human corpses in overly shallow graves.

The army constantly needed replacements for its sick and fallen, and Sylvanus, mustering out of the Emergency Militia on September 3, enlisted as a substitute in New York City, on September 11. Sent as a replacement to the Forty-second New York Voluntary Infantry, Sylvanus was promoted to corporal after six months in Company D and made a member of the Color Guard. Soldiers often relied on Colors—the national and regimental flags—for guidance in the heat of battle. Colors also served to rally flagging troops. To be a member of the Color Guard was considered an honor—and made the soldier a particular target for sharpshooters.

On May 12, 1864 at The Salient, a horseshoe-shaped bulge encompassing high ground that the Confederates occupied near the Spotsylvania Court House, the fighting—much of it in pouring rain—was demonic. The upper logs of the breastworks, slick with rain and gore, splintered. Flags shredded into tattered streamers. The Forty-second New York's Color Guard fell wounded or killed one by one. Finally, only Sylvanus remained, and he kept the regiment's flag flying until the Confederates withdrew, ending 20 hours of relentless slaughter. The following month, Sylvanus struck his knee on the snag of a broken tree or limb and cut the skin at the head of the tibia during a charge at Cold Harbor, but kept fighting. Then, when the regiment's capture seemed certain on June 22 at the Jerusalem Plank Road, Sylvanus concentrated on tearing up the Colors with those near him "so that the Johnny Rebs got nothing but the naked staff" (*Indiana Weekly Messenger*).

As one of 1,700 captives, Sylvanus was paraded through Petersburg to Richmond, Virginia, for

registration as a prisoner-of-war. Briefly interred on Belle Isle, he was then among 700 prisoners alternately packed like cattle into freight cars and marched with minimal rations, sometimes none, to Andersonville, an open stockade surrounded by guards, in Georgia. Without treatment, Sylvanus's leg wound became infected and after six months, he became so enfeebled that he was hospitalized for two weeks. Paroled in the final days of the war, he mustered out on May 22, 1865, in New York City. He was not quite 20 years old.

The same dogged perseverance that Sylvanus showed as a soldier served him well as a civilian. Connecting with a Reverend Speer that was almost certainly William Speer, a former missionary to China then living in New York, Sylvanus worked his way back to Hong Kong on a steamer. Neither his intent nor his length of stay is known. But in 1866, he attended a school in New Jersey for training as a missionary—a course from which he was soon dismissed, with no apparent regret, because of poor vision.

Offered work in Indiana, a township in Eastern Pennsylvania's Indiana County, Sylvanus jumped at the opportunity. Because of increasingly poor eyesight and problems from his leg injury, however, he never remained long in any job, but worked wherever and whenever he could, most often as a day laborer or peddler.

His earnings were not enough to support his wife and three children, but securing his due of an invalid pension was problematic: If he admitted his service subsequent to discharge from the Eighty-first Pennsylvania, he could not claim his eye injury was disabling; and his decision to keep fighting at Cold Harbor instead of seeking treatment meant there was no record of his leg injury in the Forty-second New York.

Despite assistance from attorneys devoted to his cause and strong support from Post # 28 of the Grand Army of the Republic (GAR), which he joined in 1885, Sylvanus never did receive his due in over two decades of wrangling with the Bureau of Pensions. Yet his persistence never wavered. Indeed, Sylvanus fought injustice in every sphere, prosecuting anyone who accused him unfairly, cheated him of pay, verbally or physically abused his children—with mixed results. After one failed suit, he even ran for town constable, although by then he could scarcely walk or see.

GAR Post #28 supplemented his inadequate earnings and pension, and when Sylvanus died on June 15, 1891, they arranged the funeral. Sylvanus had been a naturalized American citizen since October 28, 1868, and voted in every election. The respect of his GAR comrades for his service in preserving the Union was both sincere and deep. Nevertheless, they mourned him as “one far from his island home, buried in a strange land among stranger.”

Tacoma Anti-Chinese Riot of 1885

On November 3, 1885, the anti-Chinese agitation in the city of Tacoma, in Washington Territory, culminated with the forced expulsion of hundreds of Chinese residents. An estimated 700 Chinese men and women had been living in Tacoma in 1885. After months of anti-Chinese rhetoric, discriminatory city ordinances, boycotts, threats, and warnings, the anti-Chinese organization headed by Mayor Jacob Weisbach issued a deadline of November 1 for all Chinese to leave the city. Approximately 150 left before the deadline, but on the morning of November 3 an organized vigilante group of at least 500 armed men, led by the "Committee of Fifteen," began attacking and ousting Chinese workers and merchants from homes and workplaces. By the afternoon, some 200 Chinese residents had been rounded up and were then marched miles out of the city to a railroad stop where they waited in the cold rain with no cover. Many waited all through the night, and two died of exposure.

Two Chinese settlements including at least 35 Chinese businesses, homes, and boarding houses were burned to the ground three days later. By then, no Chinese remained in the city. The forced eviction of the entire Chinese community by means of boycotts, threats, and force came to be known as the "Tacoma method." The sheriff stood by during the mayhem and rioting, and later claimed that the police feared that more violence would have occurred if they had acted.

The first Chinese resident, Lung Fat, came to Tacoma in 1873 when Tacoma had only several hundred residents. Over the next 12 years the Chinese community of laborers and small business owners grew to an estimated 700, as Tacoma's population

boomed from 1,098 in 1880 to 7,000 in 1885 and 36,000 by 1890. The anti-Chinese movement in Tacoma grew in intensity following the election of Mayor Weisbach in May 1884 and with the clamor of the two city newspapers, which used vehement anti-Chinese rhetoric to boost circulation. Weisbach, a German immigrant and the owner of a small business, became the president of the local Anti-Chinese League. Shortly after hearing about the forced eviction of Chinese from Eureka, California in February 1885, Weisbach called a public meeting to discuss the "Chinese question." Some 900 people attended the meeting at the opera house where they heard a series of impassioned speeches and adopted a resolution calling for the departure of the Chinese and a boycott on their employment.

In September 1885 Weisbach became president of the statewide Anti-Chinese Congress, which met in Seattle. In 1885 labor and business both supported the departure of the Chinese, led by the newly organized Knights of Labor who used "the Chinese must go" as a recruiting slogan. Despite the widespread hostile attitude of most community notables and the newspapers along with the refusal of the governor to aid the Chinese, a few Tacoma leaders spoke out against force and violence, suggesting tolerance toward the Chinese. The most important defenders were the pioneer settler and hops broker Ezra Meeker and several protestant ministers.

After the riot U.S. Attorney William H. White charged 27 of the ringleaders of insurrection and conspiracy to deprive the Chinese of equal protection of the laws. The leaders included Mayor Weisbach, Probate Judge James Wickersham, Fire Department Chief Jacob Ralph, two city councilmen, and the president of

the YMCA. The federal grand jury in Vancouver, Washington promptly issued the indictment and all were arrested and taken to Vancouver. After posting bail, the “Committee of 27” returned to Tacoma, where they were treated as heroes by a cheering crowd and a festive parade. After a delay of many months, the case was transferred to Tacoma. A new grand jury heard 12 witnesses, only one of whom was a Chinese victim, and promptly dismissed the case. The following year another grand jury failed to indict any of the accused.

The organized anti-Chinese violence became an issue between the governments of the United States and China and investigations were required because of treaty violations and requests from Chinese diplomats for reparations. In July 1886, the Territorial Governor, Watson Squires, issued a report to the United States after an investigation of the Tacoma riot and other attacks on Chinese the previous year. The report on the Tacoma riot property listed losses totaling over \$96,000 and presented 40 affidavits including those from six Chinese victims—Lum May, Mow Lung, Kwok Sue, N. K. Gow, Sing Lee, and Tak Nan—who gave detailed descriptions of the terror and of their losses of property, protection, and livelihood. In 1888 Congress passed an act to pay reparations to the Chinese government for treaty violations and losses because of the series of attacks on Chinese residents and their property, including the Tacoma expulsion. The victims never received any compensation for their losses.

For decades Tacoma bore a reputation for lawlessness and continued to be an unwelcoming city for Chinese Americans—the only city on the Pacific Coast with no Chinatown. In 1993 the city passed a resolution expressing regret and apologizing for the treatment of Chinese, and the Chinese Reconciliation Project began to raise support for the Chinese Reconciliation Park, which was dedicated in 2011.

Taekwondo in America

Taekwondo is the national martial art of South Korea. It is also the most popular martial art in the world today. Estimates show Taekwondo being practiced in 123 countries by over 30 million students. In 2000, Taekwondo became one of only two martial arts to be a competitive Olympic sport in the Sydney Olympic Games. From 1988 to 1992, Taekwondo was a demonstration sport in the games and made its first appearance at the Summer Olympics in Seoul, South Korea. The United States Taekwondo Olympic team has consistently medaled at the games.

Taekwondo can be loosely translated to “The Way of the Hand and Foot.” It has roots in many traditional Korean martial arts, but its current structure originated after the Japanese occupation of Korea ended in 1945 and developed throughout the Korean War. In the 1950s, the teaching of Taekwondo was taking place throughout the nation primarily in the South Korean military as ordered by then President Syngman Rhee, and also in compulsory schools, universities, and other organizations. April 11, 1955, is the official birthday of the art. In the 1960s, Taekwondo was brought outside of South Korea and introduced to the world. It has since gained a strong U.S. and international following. The primary governing body of Taekwondo in the United States is the World Taekwondo Federation.

Taekwondo is a combat sport, but is also a form of self-defense, a combination of rigorous mental and physical discipline, and a practice of etiquette and deference to higher ranks. Taekwondo training emphasizes cardiovascular, strength, and flexibility conditioning. Practice of the art places a significant amount of emphasis on kicks and blocks, but also incorporates various punches, stances, body and foot movements, and board, brick, or block breaking. Sparring is also an integral part of Taekwondo training as it readies students for competition and enables students to combine and apply various techniques at once. Sparring in Taekwondo is full contact. Participants wear headgear and a hogu (body shield) to protect against powerful kicks and/or punches. Winning a Taekwondo competition is done by having a higher number of points at the end of three rounds or by technical knockout or knock-out of one's opponent.

The practice of Taekwondo can be started at a very young age. Children in the United States often begin their training at the age of five or six, sometimes even younger. Introducing children to Taekwondo and the high level of focus, and the respect for authority and regulations that it requires is believed to help instill discipline. In the United States, Taekwondo is often practiced as an extracurricular activity or sport rather than as part of an educational curriculum. Dojang (training spaces) are often privately run.

Although many martial arts in the United States brought over from Asia retain the use of an Asian language, Taekwondo in the United States incorporates a significant amount of English and students often need not know much Korean to adequately follow along in class. Though most martial arts involve bowing as a form of reverence to the training space, the teacher, and fellow students, Taekwondo also requires saluting the Korean and American flags. Advancement in Taekwondo is through promotional tests for belts. There are several belts in various colors that students receive prior to testing for their first black belt. Belt color determines rank in Taekwondo and lower-ranked students must defer to senior students when in the dojang.

The United States Taekwondo team has repeatedly performed very strongly in Olympic competition. Thus far, U.S. teams have earned a total of six medals, two

gold, two silver, and two bronze. Only Chinese Taipei and South Korea have higher medal counts. Olympic Taekwondo teams are made up of two women and two men. The Lopez family from Sugar Land, Texas, is referred to as "Taekwondo's First Family" and each of the three competitive Lopez siblings medaled at past Olympics. Steven Lopez was an Olympic team member in 2000, 2004, and 2008 and won gold in his first two games and bronze in his third. The 2008 Olympic team was comprised of the younger three Lopez siblings; Steven and younger sister Diana took bronze medals, and brother Mark won silver. Steven and Diana were part of the 2012 Olympic team, their oldest brother Jean is their coach. Other members of the 2012 team were Terrance Jennings and Paige McPherson.

Tahir, Saghir

Saghir "Saggy" A. Tahir is a former member of the New Hampshire House of Representatives, where he served from 2001 to 2010. Born in India, he is the first foreign-born Muslim to be elected to a state house of representatives in the United States, and the only elected official foreign-born Muslim who is a member of the Republican Party.

Saghir Tahir was born in New Delhi, India, but considers Sahiwal, Pakistan, where he lived from the age of two, to be his hometown. He immigrated to the United States from Pakistan in 1972. He holds bachelor's degrees in civil engineering, physics, and mathematics. After immigrating, he worked in the construction industry and in real estate investment, and was the president of a consulting firm specializing in roofing and waterproofing.

In 1998, his son encouraged him to run for office to give back to the community. New Hampshire state representatives are paid \$100 a year, so their positions are seen largely as volunteer work. Though he did not win in 1998, he campaigned again for election in 2000. Emphasizing the issues of education, taxes, and senior centers, he was elected as the representative of District 38, Ward 2, a predominantly white community with few other Pakistani Americans. He was reelected four times and served until 2010. When serving in the New Hampshire House of Representatives, Tahir was a member of the Science, Technology and Energy Committee. He also served as the secretary (1999), vice chair (2000), and chair (2001) of the Manchester City Republican Committee and was active in the New Hampshire chapter of the American Muslim Alliance. During his political career, Tahir advocated for political ethics, supporting community homeless shelters, and giving back to the community.

As a Muslim American elected official in the immediate aftermath of the September 11, 2001 terrorist attacks, Tahir attempted to play a conciliatory role between Muslims and non-Muslim Americans, Pakistan and the United States, and Muslim Americans and the Republican Party. He cites his religious faith as a Muslim as his primary motivation to fulfill his civic and religious duty through public service by giving back to the entire community, not just other Muslims. He came under fire by other Muslim community representatives concerned with incidences of hate crimes and civil rights violations against Muslims when he made a statement in conjunction with the Overseas Pakistani Foundation that Pakistanis were not the targets of threats, discrimination, or harassment by the general public or law enforcement officials in the United States.

Tahir spearheaded efforts to send American officials on a goodwill delegation to Pakistan. With assistance of the U.S. State Department, but with independent funding, Tahir led the group in 2001 as they visited Islamabad, Lahore, Karachi, and Quetta to promote understanding between people of the two countries. In 2003, Tahir and Representative Robert Giuda (R-Warren) visited Pakistan and toured the Line of Control, the military line between India and Pakistan in the disputed region of Jammu and Kashmir. Following this trip, Representatives Giuda and Tahir sponsored a resolution in the New Hampshire House of Representatives condemning human rights violations in the region, and calling for an increase in diplomacy to bring about a peaceful end to conflict in Kashmir. They also led efforts to have a similar bill introduced in the U.S. Senate, but it died in committee during the 2009–2010 session of Congress and was reintroduced in the following session. Members of the Indian press criticized the introduction of the bill as ignorant and a sign of the United States' lack of regard for India. Saghir and his wife, Nusrat, have three children: Misbah, Adeel, and Sanam.

Taiwanese Americans

Taiwanese Americans constitute a relatively new group in the Asian American population, which began to grow in the period after the passage of the Immigration and Nationality Act of 1965. Because the society and culture of Taiwan shares much in common with China, Taiwanese Americans are often categorized with Chinese Americans. However, among Taiwanese Americans there are those who regard Taiwan as an independent country and prefer a political and cultural identity that is set apart from that of China and the Chinese. As a consequence, Taiwanese Americans have lobbied for the U.S. Census to count them as a separate population from Chinese Americans. In the 2010 Census, the number of Taiwanese Americans, alone was 196,691, and alone or in any combination, amounted to 230,382.

Immigration

Early Taiwanese immigration to the United States took place under the shadow of the Cold War. At the end of World War II when Japan was defeated, China was enveloped in a civil war between the Chinese Nationalist government and the Chinese Communists. The Communists prevailed in the struggle and set up the People's Republic of China in 1949, while the Nationalist government retreated to the island of Taiwan. With the onset of the Korean War in 1950, the United States provided military aid to the Nationalists and eventually signed a Mutual Defense Treaty with Taiwan in 1954. This close association between the United States and Taiwan led to a small trickle of migrants to America.

The watershed for increased immigration from Taiwan came with the Hart-Celler Act, also known as the Immigration and Nationality Act of 1965. The legislation favored the admission of those who possessed professional skills and technical expertise. It also placed an emphasis on furthering family unification, giving preferential access to people related to

residents in the United States. These two aspects were to help the growth of the Taiwanese population in the years that followed. The additional passage of legislation in 1982 gave Taiwan a quota that permitted the migration of 20,000 persons per year.

Several factors encouraged this migration to the United States. One was that because of a close association with America, many Taiwanese sought to further their university and graduate education in this country. Second, after completing their studies, many believed that economic and professional opportunities in the United States were better than in their native Taiwan. As a result, a large number decided to remain here rather than to return home. Finally, the international position of Taiwan vis-à-vis China led many to seek a new residence in America. In 1979 the United States recognized the People's Republic of China and broke off diplomatic relations with the Republic of China on Taiwan. Uncertainty as to how Beijing might deal with Taiwan only increased the anxiety and concern among many people on the island. Moreover, when Taiwan scheduled its presidential election in 1990, China fired missiles as a warning against any attempt to seek independence or political separation.

Population and Settlement Pattern

Although the Taiwanese community largely took shape after 1965 and is a relatively small population when compared to many Asian American groups, the population has experienced rapid growth. With a population of 144,795 in 2000, it rose 59 percent to 230,382 in 2010 (Asian American Center, Appendix A, 59). For the Taiwanese community as a whole, its median age is 35. The largest component, 59 percent, are between the ages of 18 and 64. About 19 percent are less than a year old to age 17, 9 percent are at the age of 65 and over. Reflecting the importance of migration in the Taiwanese American experience, 68 percent of the Taiwanese are foreign-born. Of this foreign-born population, 67 percent have naturalized.

Substantial numbers of Taiwanese continue to migrate to the United States. From 2001 to 2010, 42,182 immigrant visas were issued for Taiwan. For those who obtain legal permanent residency in 2010, 40 percent or 2,090 entered as the immediate relatives

of U.S. citizens. The next highest category, 31 percent or 2,090, was under employment-based preferences, followed by 26 percent or 1,729 as family-sponsored preferences. H-1B visas are issued to those who can provide specialized expertise, often in a scientific or technical field, required by American employers. For fiscal year 2011, there were 1,705 approved H-1B visas issued for Taiwan. Students from Taiwan continue to value higher education in the United States, and, in 2011, there were 24,818 Taiwanese who came to study in this country. Although the H-1B visa holders and the international students from Taiwan are not United States citizens or permanent residents, their presence does contribute to the life and activities of the Taiwanese American community.

In the past five decades, Taiwan has demonstrated economic success as a country renowned for its educational, scientific, and technical achievements. Touted as one of the four dragons, it was categorized with Hong Kong, South Korea, and Singapore as four countries, who exhibited dynamic economic growth behind Japan in the 1970s. But fearing the loss of talent or a brain drain of those with important skills, Taiwan launched an aggressive campaign to persuade Taiwanese Americans with engineering and scientific expertise to return. In 1980, it set up the Hsinchu Science and Industrial Park, which was modeled on California's Silicon Valley, to lure investment and foster research. The effort was successful and led to the return migration of many Taiwanese American scientists, engineers, and educators. A prime example was Yuan-Tseh Lee, a Nobel laureate in chemistry, who left the University of California at Berkeley in 1994 to head Taiwan's Academia Sinica, its most prestigious academic organization.

Taiwan with its Confucian heritage places a high value upon schooling and higher education. Not surprisingly, this is reflected in the educational attainment of the Taiwanese American community. Thus, 95 percent have a high school degree or higher, and 73 percent have a bachelor's degree or higher in their educational background. This is the highest for all groups of Asian Americans. The Taiwanese also show the highest per capita income among Asian Americans, listed at \$38,312. Their unemployment rate is also relatively low at 5 percent.

Taiwanese Americans in the United States for the most part do not reside in the older urban areas known as Chinatowns. Instead, they prefer to live in the suburbs of California, New York, and elsewhere. In the 1970s and 1980s, many of those in Southern California concentrated in Monterey Park, which led to its being called "Little Taipei." As more Chinese settled in the area, the Taiwanese moved elsewhere around the San Gabriel Valley to sites such as San Gabriel, Rowland Heights, Hacienda Heights, Diamond Bar, and Irvine. Those in Northern California were located in Cupertino, Milpitas, and San Jose. In New York, many moved to the neighborhood of Flushing in the borough of Queens. Others have bought homes in the vicinity of Houston in Texas.

Community Life and Organization

The Taiwanese American community is home to a wide array of organizations. Many of them offer activities and programs that appeal to a particular audience. Simultaneously, they seek to promote awareness of Taiwan as a sovereign country that is separate from China. One example is the Taiwanese American Citizens League (TACL), which has several chapters in California. It has lobbied to have Taiwanese Americans recognized in the U.S. Census as a group separate from Chinese Americans. Another example is the North American Taiwanese Women's Association (NATWA), which holds annual meetings that focus on issues related to women. Taking a more political stance, the Formosan Association for Public Affairs (FAPA) keeps an office in Washington, D.C., and acts as a lobby to gain support for an independent Taiwan.

Aside from these organizations, there are also Taiwan Centers in different parts of the country. Located in cities such as San Jose in Northern California, Rosemead in Southern California, San Diego, Seattle, Flushing in New York, and Houston, the Taiwan Centers offer cultural activities and recreation to its members and the general public. This includes folk dancing, choral singing, karaoke, language instruction, photography, ping pong, concerts, and musical performances. There are also programs for the youth and senior citizens.

Buddhist temples and Christian churches are prominent in the Taiwanese American community, too. The Tzu-Chi (*ziji*) and Fo Guang Shan (*foguangshan*) orders of Taiwanese Buddhism have followers throughout the United States. Both orders emphasize charitable activities as an important facet of their faith. Tzu-Chi is especially prominent in many American locales because of their medical and dental clinics that routinely provide aid to many. They have also dispatched missions to sites of natural disasters, such as New Orleans that suffered from Hurricane Katrina. Fo Guang Shan maintains a large Hsi Lai Temple in Hacienda Heights, California that has drawn large numbers of visitors. In addition, temples devoted to Mazu are present. Mazu is a popular goddess venerated by Buddhists and Daoists in Taiwan and southeastern China. Finally, there are Taiwanese American Christian churches of different denominations throughout the United States.

Complementing the organizations, centers, and churches, festivals and observances throughout the year serve to affirm the presence of Taiwanese Americans in various communities. Chinese New Year, the Dragon Boat festival during the summer, and the Mid-Autumn festival are among the notable events in traditional Taiwanese society. More recent is the commemoration of the February 28 Event of 1947, usually recognized by Taiwanese American communities during that month. Another relatively new observance is Taiwanese American Heritage Week. Proclaimed by President Clinton in 1999, this week takes place in the May of each year during Asian Pacific American Heritage Month. The week is an opportunity for different communities to showcase the culture and heritage of Taiwan and Taiwanese Americans. In recent years, the week has been observed in cities such as San Francisco, Monterey Park, Seattle, Chicago, New York, and Houston. The programs often include songs and dances from aboriginal tribes in Taiwan, folk singers, choirs, and other entertainment.

Taiwanese Americans welcome opportunities to highlight their cultural heritage in several other ways. One is the enactment of Taiwanese-style night markets at activities or at student organization functions. Familiar foods and snacks are served, such as *boba* tea drinks with tapioca balls. Another is the airing of

traditional Taiwanese tunes such as “The Girls of Alishan” (*alishan de guniang*) or “Green Island Serenade” (*lu dao xiao ye qu*). With the popularity of Taiwanese pop songs in the Chinese cultural sphere, it is not uncommon at events to have the voices of a singer such as Wang Leehom, Jay Chou, Jolin Tsai, A-Mei, or the group S.H.E. as background music.

At some functions, songs sung in Hokkien may be seen as associated with the Taiwan independence movement or the Democratic Progressive Party, although they could also be expressions of a love for Taiwan. Examples of this are “Maritime Nation” (*haiyang de guojia*), “Taiwan March” (*taiwan jinxing qu*), “Taiwan’s Green Jade” (*taiwan yuqing*), and “Join Together to Win” (*aipin cai huiying*). Still another way is that at parades or happenings, there may be images of Mazu, the popular goddess of Taiwan, or Nezha (*nazha*), a familiar Daoist deity in Taiwan (*san taizi*), also known as the Third Prince or the Central Altar Marshal.

Like many other ethnic groups, Taiwanese Americans are planning for the future of their community. There is a desire for greater visibility of the youth in the activities of the community and the cultivation of new leadership. As a result, in recent years, various measures have been devised to encourage awareness and participation by the younger generation of Taiwanese Americans. Initiatives for the youth have been developed to offer summer camps, internships in Washington, D.C., and summer trips to Taiwan. This has certainly been on the agenda of several foundations, such as the Taiwanese American Foundation, FAPA, the Formosa Foundation, and others. The Taiwanese American Citizens League has enhanced the chances for young adults to network socially by establishing chapters of Taiwanese American Professionals (TAP) in several cities. Moreover, the Intercollegiate Taiwanese American Students Association (ITASA) links students in higher education through conferences and regional meetings.

The use of social media has not been neglected either. Internet sites, Facebook, twitter, and other venues have been explored as a means to foster Taiwanese American identity and to increase participation in community events. Taiwaneseamerican.org is a prime example of this approach. Started by Ho Chie Tsai,

it draws attention to activities being staged by Taiwanese Americans throughout the country. It promotes artists, singers, film producers, scientists, writers, and others of note in the Taiwanese and Taiwanese American community. The exploits of Taiwanese American and Taiwanese athletes have received considerable coverage here. Thus, basketball guard Jeremy Lin of the Houston Rockets, pitcher Wei-Yin Chen of the Baltimore Orioles, and professional Yani Tseng in golf have all been given extensive exposure. In particular, Lin, who had been with the New York Knickerbockers, generated such excitement and enthusiasm that a word, “Linsanity,” was coined just for him.

Takagi, Dana Yasu

Dana Yasu Takagi is a professor of sociology at the University of California, Santa Cruz. She is also affiliated with the American Studies Department, Latin American & Latino Studies, and East Asian Studies. Takagi received all her degrees from the University of California, Berkeley: BA in math (1976), and MA (1979) and PhD (1986) in sociology. Throughout her career, she has served in numerous important capacities including: the president of the Association for Asian American Studies in 2002 to 2004 and the co-director of the Center for Justice, Tolerance and Community at UC Santa Cruz from 2003 to 2006. She practices soto zen and was lay ordained in 2001.

Takagi notes that her philosophical approach to research is, “to study the world-as-it-is in order to imagine the world-as-it-should-be.” This commitment is reflected in her diversity of her research and publications, which engage in a wide variety of topics including affirmative action, queer studies, Buddhism, and globalization.

Takagi’s first book, *The Retreat From Race: Asian American Admissions and Racial Politics* (1992), remains one of the seminal books examining identity politics, public policy, and race in sociology and Asian American studies. In this book, she examines allegations by Asian Americans that top universities used quotas to limit the enrollment of Asian Americans. The debates that unfolded around Asian American admissions, according to Takagi, were central to a shift in how affirmative action policies were implemented—whereby policies shifted away from racial preferences to

class-based preferences. She argues that this shift is indicative of a broader political shift by policy makers who became increasingly reluctant to identify any social problem as explicitly racial. Her book chronicles this political shift, and the dangers of using class as a “proxy” for race. Twenty years later, this book remains relevant for understanding racial politics in general, and the important role race plays in the politics of higher education admissions, particularly in light of budgetary cutbacks in higher education across the country.

Takagi’s work is particularly influential because of her ability to continually challenge scholars to look past their preconceptions about social issues and rethink the ways that identity politics informs social and political life. Just as important, she challenges to think past “check the box” configurations of identity formation, and look instead at the complexity that exists within and across these categories. Takagi’s *Amerasia* article “Maiden Voyage: Excursion into Sexuality and Identity Politics in Asian America” exposed the silences and absences in both queer studies and Asian American studies by focusing on the ways that homogenous constructions of homosexuality and Asian Americanness inevitably marginalized the experiences of Asians within queer studies and LGBTQ individuals within Asian American studies. She argues that awareness and understanding of the complexities of identity can help reveal the situatedness of knowledge and provide new perspectives and theories that create important conversations and arguments within and among marginalized communities. In her most recent writings on Hawaii and on Buddhism, she demonstrates the important lessons that can be learned by thinking outside the proverbial box and honoring the complex and always changing ways in which identities inform and structure social life.

Takaki, Ronald Toshiyuki (1939–2009)

Ronald Takaki was a pioneering historian and activist who played an important role in the establishment of the field of ethnic studies and Asian American history. Takaki authored and edited more than 20 books that addressed the study of cultural diversity and critical and comparative race studies in the United States in a career that spanned over four decades. In 2009, the Association for Asian American Studies honored Takaki with its Lifetime Achievement Award.

The grandson of Japanese plantation laborers in Hawaii, Takaki attended the College of Wooster and became the first member of his family to graduate from college. He went on to earn an MA in 1962 and PhD in 1967 in history from the University of California, Berkeley. Demonstrating an early interest in analyzing intersections of race and class in American history, Takaki’s dissertation addressed efforts in the American South to reopen the slave trade in the nineteenth century. Takaki joined the faculty of the University of California, Los Angeles (UCLA) in 1967 and taught its first course in African American history. From UCLA, Takaki joined the faculty of the University of California at Berkeley until his retirement in 2004.

In his early studies, Takaki developed a comparative framework for analyzing racial and ethnic formations that challenged the black/white binary that had dominated prior historical studies. *Iron Cages: Race and Culture in 19th-Century America* examined common patterns of stereotyping that were used to marginalize African Americans, Asian Americans,

Latinos, and Native Americans and to shore up the status and power of whites. *Pau Hana: Plantation Life and Labor in Hawaii, 1835–1920* was a groundbreaking social history of work and life on the plantation fields of Hawaii that challenged Eurocentric grand narratives in U.S. immigration and labor history by highlighting Asian immigration and labor history beyond the continental United States. *Pau Hana* laid the groundwork for studies that broadened the scope of analysis of America's history of racial and ethnic diversity.

Takaki's *Strangers from a Different Shore: A History of Asian Americans* was the first effort to write a history of Asian Americans for a mass general audience. An ambitious, broad, synthetic work, *Strangers* drew praise and national media attention, creating greater visibility for Asian Americans. The study was also met with criticism from scholars within the field of Asian American studies for not adequately crediting primary and secondary sources and for its lack of assessment of gender. In the end, *Strangers* and the debate about the book that ensued also generated discussion and debate about the definition of "Asian America" that would be taken on by the next generation of scholars in the field.

In many respects, *A Different Mirror: A History of Multicultural America* represented the culmination of Takaki's efforts to develop a broad and comparative historical synthesis of American diversity. Published during the "culture wars" of the 1980s and 1990s, *A Different Mirror* sought to challenge neoconservative arguments by scholars who argued for a return to a Western canon of "great books." Where *Strangers* had addressed the diverse history of Asian American ethnic groups, *A Different Mirror* broadened the comparative history of the marginalized to also include those from other racial, ethnic, and religious backgrounds.

Takaki's later works addressed the intersection of race and warfare. *Hiroshima: Why America Dropped the Bomb* contributed to debates about the dropping of the atomic bomb, which emerged in the midst of the 50 year anniversary and commemoration of the event. Takaki argued that, in addition to the U.S. goals of ending the war with Japan and signaling its atomic readiness to the Soviet Union, race, and particularly

the racialization of the Pacific front of the war and the racist views of President Harry Truman, needed to be taken into account to understand why America dropped the bomb. *Double Victory: A Multicultural History of America in World War II* examined the impact of World War II in shaping aspirations, opportunities, and a shift toward the incorporation of ethnic, religious, and racial groups that had previously lived at the margins of American society and culture.

Takaki was also an activist who promoted diversity in higher education. At Berkeley, he played an instrumental role in establishing the university's PhD program in Ethnic Studies. In 1996, Takaki took a public stance against California ballot initiative Proposition 209, which rolled back affirmative action policies in state-funded institutions. Takaki struggled for nearly two decades with multiple sclerosis and took his own life in 2009 at the age of 70.

Tan, Amy (1952–)

Amy Tan is one of the most successful, well-known American writers of Asian ancestry. She is the author of *The Joy Luck Club* (1989), *The Kitchen God's Wife* (1991), *The Hundred Secret Senses* (1995), *The Bonesetter's Daughter* (2001), *The Opposite of Fate: A Book of Musings* (2003), *Saving Fish from Drowning* (2005), and *Rules for Virgins* (2011). Tan is also a noteworthy children's literature writer, who, along with illustrator Gretchen Schields, published *The Moon Lady* (1992) and *The Chinese Siamese Cat* (1994), and produced a children's television series for PBS, *Sagwa: The Chinese Siamese Cat* (2001). She has also edited and contributed to several collaborative works, including *Mid-Life Confidential* (1994), *Mother* (1996), and *The Best American Short Stories 1999*.

Tan received her BA and MA in English and linguistics from San José State University and studied in doctoral programs in linguistics at UC Santa Cruz and UC Berkeley. She is the recipient of an honorary doctorate of letters from Simmons College.

Born in Oakland, California, in 1952, Amy Tan was the middle child and only daughter of John and Daisy Tan, who had emigrated from China just a few years prior to her birth. Tan, whose Chinese name "An-mei" means "blessing from America," was raised with two brothers, Peter, born in 1950, and John, born in 1954. The Tan children were brought up in a sheltered home by parents who set high behavioral and intellectual standards of religious devotion and academic excellence. This strict upbringing resulted in undue pressure against which Tan frequently rebelled and escaped by reading fairy tales, Bible stories, and Laura Ingalls Wilder's prairie stories.

Chinese American author Amy Tan. (Joe Tabacca/AP/Corbis)

Tan's love for reading and literature eventually led to a double concentration in English and linguistics during Tan's undergraduate career—a move that directly contradicted her mother's arbitrary decision for Tan to become a neurosurgeon. Instead, Tan chose to start a career in writing—first in journalism, and then in technical speech-writing. Though her career was financially lucrative and extremely successful, it brought Tan little happiness. As a result, Tan began to spend time playing jazz piano and reading fiction by writers such as Alice Walker, Toni Morrison, Louise Erdrich, Jamaica Kincaid, Maxine Hong Kingston, and Flannery O'Connor. Inspired by their work, Tan composed her first story, "Endgame," which was published in *FM Magazine* and later reprinted in *Seventeen*, and gave her entrance into the Squaw Valley Community of Writers. "Endgame" also

began Tan's relationship with literary agent Sandra Dijkstra.

In 1987, with Dijkstra working as her agent, Tan proposed a collection of six short stories under the title *Wind and Water*, a project that eventually became *The Joy Luck Club*. Published by G.P. Putnam's Sons in 1989, *The Joy Luck Club* immediately became a critical and popular success and remained on the *New York Times* bestseller list for nearly a year after publication. It was nominated for and was the winner of a number of prestigious literary awards such as the National Book Award, for which it was a finalist, and was adapted into three plays and a feature-length film. The episodic structure of the novel traces the intergenerational and cross-cultural conflicts that occur in the lives of four pairs of mothers and daughters who represent the immigrant and second generations.

Central to *The Joy Luck Club* is a conflict that can only be resolved when cross-cultural connections are formed through the second generation actively listening to their mothers' talk-stories—a theme derived from Tan's own difficult relationship with her mother. It was only later on in Tan's life that she sought reconciliation with her mother and began to willfully listen to her mother's life stories with interest. The stories her mother recounted provided Tan with rich source material for her second book, *The Kitchen God's Wife*, which pays homage to Tan's parents, older brother Peter, and grandmother Jingmei.

Tan's second novel, *The Kitchen God's Wife*, was an immediate success and became the number one bestseller on the *New York Times* list within four weeks of its release, and remained there for the following 38 weeks. Its success was reflected internationally in Australia, Canada, and Europe, and it won the *Booklist* Editor's Choice award.

Shifting from mother-daughter relations to sisterly bonds, *The Hundred Secret Senses*, in a plot that transgresses time, incorporates Tan's half-sister through a character who can communicate with the spirit world. Unlike Tan's previous works, her third novel was released to mixed reviews; although some found it noteworthy, others criticized Tan for weaknesses in the novel's conclusion and a tendency to employ Orientalist tropes in her writing.

The Bonesetter's Daughter was inspired by her mother, who had passed away from Alzheimer's-related symptoms in 1999, and functions as Tan's literary plea for her mother's forgiveness. Her fourth novel is based on the difficulty of intergenerational and cross-cultural conflict that occurs between immigrants and their American-born children. *Saving Fish from Drowning* was released as Tan's first novel set primarily outside the United States. The novel documents the trials and tribulations of American tourists in Burma. Her sixth novel, *Rules for Virgins*, tells the tale of a courtesan in 1912 Shanghai.

As a children's literature writer, Tan has produced two illustrated storybooks with Gretchen Schields, as well as an animated television show. *The Moon Lady* describes a six-year-old who encounters the Moon Lady, who grants secret wishes. *The Chinese Siamese Cat* details the story of a pearl cat, Sagwa, who alters the fate and appearance of Chinese cats forever.

Tan is the winner of the Academy of Achievement's Golden Plate Award as well as the Writer for Writers Award. Her work has won numerous awards including Bay Area Book Reviewers Award, Commonwealth Gold Award, American Library Association's Notable Books Award, Honorable Mention in Asian Pacific American Awards for Literature, *New York Times* Notable Book award, and many others. She was also selected for the National Endowment for the Arts' Big Read. Tan resides in Sausalito, California with her husband, Louis DeMattei. Her upcoming book, *The Valley of Amazement*, will be released by HarperCollins in 2013.

Tao, Terence (1975–)

Terence Chi-Shen Tao was born July 17, 1975, in Adelaide, Australia, to migrant parents from Hong Kong, China. Tao's father is a pediatrician, and his mother was a high school math teacher in Hong Kong, with double degrees in math and physics from the University of Hong Kong.

Terence Tao was recognized as a prodigy from an early age. In 1986, at age 10, Tao qualified for the Australian team and won a bronze medal in the International Mathematics Olympiad (IMO). To date, Tao is the youngest competitor in the IMO. In 1987 and 1988, Tao competed again in the IMO, winning a silver and gold medal, respectively. He is still the youngest bronze, silver, and gold medalist in IMO history.

Tao attended Flinders University in Adelaide, earning a BS degree at age 16 and an MS degree at age 17. He received his PhD in mathematics from Princeton University at age 20. Tao joined the faculty of the University of California at Los Angeles (UCLA) after his graduate study and was promoted to full professor at age 24.

Tao's research encompasses many areas of mathematics, including harmonic analysis, nonlinear partial differential equations, combinatorics, and compressed sensing. By the end of 2012, Tao had published over 260 research papers. He has made important contributions to a wide range of subjects, including the Horn's and Kakeya conjectures, the solutions of equations of Einstein's general relativity theory that govern gravity, and solutions of the non-linear Schrödinger equation that governs quantum physics. In 2010, Tao and Van H. Vu solved the circular law conjecture.

In 2004, mathematician Emmanuel Candès spoke to Tao about a problem he had been working on: how to reconstruct images from an incomplete and minimum amount of information. Though Tao first thought the problem was unsolvable, he came up with a solution the next day. The work of Candès and Tao helped set up a new research field—compressed sensing. It has wide application in such areas as computational mathematics and signal processing and has been implemented in single-pixel cameras and medical magnetic imaging.

Tao's most well-known research is the Green-Tao theorem, a collaborative work with British mathematician Ben Green, which states that many arithmetic progressions infinitely exist consisting of prime numbers of any length. Prime numbers are integers that can be divided only by 1 and themselves, such as 2, 3, 5, 7, 11, 13, 17, 19. . . . They are the fundamental building blocks of mathematics. An arithmetic progression is a group of numbers that are of equal difference between adjacent numbers. For example, (7, 13, 19) is an arithmetic progression of length 3 with common difference 6 and (5, 11, 17, 24, 29) is an arithmetic progression of length 5, also with a common difference 6; both these arithmetic progressions consist of only prime numbers. For hundreds of years, mathematicians have studied properties and patterns of prime numbers. The conjecture that there are infinite numbers of such arithmetic progressions of any lengths has been proposed but had remained unproven for over two hundred years until Tao and Green made their breakthrough.

Tao was awarded the Fields Medal in 2006, "for his contributions to partial differential equations, combinatorics, harmonic analysis and additive number theory." The Fields Medal citation states:

Terence Tao is a supreme problem-solver whose spectacular work has had an impact across several mathematical areas. He combines sheer technical power, another-worldly ingenuity for hitting upon new ideas, and a startlingly natural point of view that leaves other mathematicians wondering, “Why didn’t anyone see that before?”

In the same year, Tao was also awarded the MacArthur Fellowship, commonly known as the Genius Grant. Tao has received numerous other awards and prizes, including the Salem Prize (2000), Bôcher Memorial Prize (2002), Clay Research Award (2003), Australian Mathematical Society Medal (2005), Ostrowski Prize (2005), SASTRA Ramanujan Prize (2006), Levi L. Conant Prize (2005), Fellow of the Royal Society (2007), Alan T. Waterman Award (2008), Onsager Medal (2008), King Faisal International Prize (2010), Nemmers Prize in Mathematics (2010), Polya Prize (2010), and Crafoord Prize (2012).

Tape v. Hurley (1885)

In the late nineteenth century, legalized racial segregation existed in primary and secondary public schools across the United States. In San Francisco, California, children of Chinese and other Asian ethnic backgrounds, regardless of their U.S. citizenship, were barred from matriculating in the city’s public schools. One family’s decision to challenge the unjust and racist laws and fight for their daughter’s right to free and geographically accessible education resulted in the

Tape v. Hurley (1885) case. Unlike the outcomes of most court cases brought by people of Asian descent in the late nineteenth and early twentieth centuries, the courts sided with the Tapes giving Chinese immigrants a rare legal victory over whites. Both the local Superior Court and the Supreme Court of California ruled in favor of Mr. and Mrs. Tape and their young daughter Mamie. In the midst of an era of tremendous racism against Asians, Asian Americans, and other nonwhites, Mamie Tape was told by the highest court of the state that she was entitled to the same rights to education as white children and all other children residing in California.

The facts of *Tape v. Hurley* are fairly straightforward. In the fall of 1884, Joseph and Mary Tape tried to enroll their eight-year-old daughter Mamie in Spring Valley Primary School in San Francisco. The principal of Spring Valley, Jennie Hurley, denied Mamie Tape admission based on her Chinese American ancestry. Principal Hurley seemed to be acting in accordance with the public opinion of the day as racial segregation in the public school system was legal in 1884. In many instances, especially in areas with significant nonwhite populations, there were separate schools established for nonwhite students to attend. Had this been the case in San Francisco, the Tapes would have not had a case against Hurley or the Board of Education. However, in the city of San Francisco, in 1884, there were no Chinese schools where Mamie Tape could enroll. A review of the history of Chinese Americans and the public school system in San Francisco shows that in the late 1850s and early 1860s, Chinese schools did exist for a very short period of time, but were closed because of lack of attendance. However, attending school was more of a burden for Chinese children than white children because the schools they could go to were extremely limited and often far from their neighborhoods. One school was located so far from Chinatown, where most of the Chinese children lived, that the lengthy commute stood in the way of regular attendance. Other schools that existed for short durations often failed because they were theoretically for Chinese children, yet they did not involve the Chinese American community. When attendance rates were low, School Board officials did not take into account the difficulties Chinese students faced in their attempts

to regularly attend school. Instead, they blamed intermittent attendance on the Chinese families' lack of desire to see their children receive a formal public education.

With no other educational options for Mamie after her exclusion from Spring Valley Primary School, Mr. and Mrs. Tape brought a lawsuit against Principal Hurley and the San Francisco Board of Education. Though it was Principal Hurley who barred Mamie from admission, Hurley attempted to include her employer, the Board of Education in the court proceedings. However, later on in the litigation process, the Supreme Court dismissed the action against the Board of Education and held Jennie Hurley solely responsible for violating the law that would have allowed Mamie Tape to enroll in Spring Valley.

As plaintiffs, Joseph and Mary Tape relied on an amended California State Political Code pertaining to school admittance policies. The Amendment to the California Political Code section 1662 of the year 1880 affirmed that unless the law stated otherwise, all schools must admit all children in the district between six years and 21 years old. The only children who could be legally excluded under the code were "children of filthy and vicious habits, or children suffering from contagious or infectious diseases" (CA Pol Code, § 1662 [passed 1880]). Thus, according to state law, Principal Hurley's denial of Mamie Tape's admission should be deemed illegal. In his essay, "The Fight to Go to S.F. Public Schools," attorney and legal scholar Bill Ong Hing discusses how the School Board defended their exclusion of Mamie Tape and refuted the Tape family's argument. Hing (2012) explains that by drawing from the language of the California State Constitution that stated Chinese people were "dangerous to the well-being of the state," the School Board concluded that San Francisco schools did not have a duty to educate Chinese people. Though, the School Board's argument did not prevail, the extreme xenophobia of the day would still continue to keep Mamie Tape from attending Spring Valley Primary School the next year even after the highest court in the state ruled in her favor.

The Tape family easily prevailed in front of the trial court. There, Judge McGuire ruled that denying Mamie Tape admission to public school based on her

Chinese ancestry was a violation of both the California and federal laws. Principal Hurley and the School Board then appealed the lower court's decision to the Supreme Court of California. The Supreme Court affirmed Judge McGuire's ruling. They concluded that the laws indicating who can and cannot be excluded from public schools were simple and straightforward. Thus, no laws were in effect that barred students of any race or national origin from attending the state's public schools. Mamie Tape was again victorious in court.

Members of the San Francisco Board of Education must have known they were unlikely to prevail on their appeal because as the litigation was starting, Superintendent Andrew Jackson Moulder almost immediately proposed Assembly Bill 268 to the state legislature. This "emergency" addition to the California State Political Code section 1662, motivated by the desire to keep schools racially segregated, provided a legal means of keeping Mamie Tape from attending Spring Valley Primary School. Unfortunately for the Tape family and other Chinese children, Assembly Bill 268 was quickly approved and remained in effect for over 60 years. The language of Assembly Bill 268 stated that separate schools for Chinese children and children of "Mongolian descent" would be created and as long as those schools existed, Chinese and Mongolian children would be mandated to attend them and barred from attending all other schools. Thus, although the Tape family was successful in two court proceedings, the Board of Education (and their racist beliefs and behaviors) also triumphed as they were allowed to keep the San Francisco schools racially segregated under new legislation.

After the Supreme Court of California ruled in their favor, Mr. and Mrs. Tape attempted to enroll their daughter in Spring Valley Primary School for the 1885 spring semester. Once again, the Tapes were told that Mamie was not eligible for admission. This time, the school authorities did not indicate that Mamie Tape's Chinese ancestry or race was the reason for her exclusion but claimed that not only was the school at maximum capacity, but that Mamie lacked proof that she had the requisite vaccinations to attend public school. Mary Tape, Mamie's mother, did not quietly accept the school's rejection of her daughter, but continued

to advocate for racial equality for Mamie and all Chinese people. She responded to the denial of Mamie's admission by standing up for her daughter and for all Chinese children by sending an angry and disgusted letter to the school authorities.

Mary Tape's sending her outraged letter to Spring Valley Primary School was a rare and bold move for a woman in 1885. That Mary Tape was an immigrant Chinese woman and able to compose the letter in English, her second language, was exceptional. Mrs. Tape was well aware of the school's rejection of Mamie based on her Chinese ancestry, regardless of how they attempted to justify their exclusion, and she chastised them for their discriminatory actions. Mrs. Tape also rejected their proposal of sending Mamie to a separate school for Chinese children. Additionally, Mrs. Tape informed the school that young Mamie was so Americanized in culture, socialization, behavior, and dress that she had more in common with Caucasian children than with other Chinese children. The only thing that Mrs. Tape conceded that Mamie had in common with other Chinese children was a similar phenotype. She also shamed the school authorities for the way they mistreated a young child.

Because Mamie Tape still needed a means to an education and a Chinese school was established in San Francisco in the spring of 1885, against her mother's earlier wishes, she inevitably ended up being one of the first students of the Oriental Public School. Mamie's brother Frank was also enrolled in the first class at the Oriental Public School. However, the Tape parents, being of upper-middle class financial means and status, also supplemented their children's education with the help of private tutors and music lessons.

Though Chinese and Chinese Americans have suffered racial, immigration, employment, housing, voting, and various other forms of discrimination in the United States since their arrival, very little is remembered about the educational discrimination that they both faced and fought against. American history often centers the sole narrative on educational discrimination around the tumultuous and violent occurrences in the United States during the *Brown v. Board of Education* era of the 1950s and 1960s, especially in the American South. Writing on Asian American exclusion from

American history, Asian American scholar, Joyce Kuo, states that leaving Asian Americans out of the history of school segregation perpetuates an inaccurate picture of how "separate but equal" legislation impacted different racial groups. Unless we continue to write and include Asian Americans and their early advocacy for equal rights to education into the national narrative, their struggles, sacrifices, and achievements could be forgotten.

Today, the events leading up to and surrounding the *Tape v. Hurley* case as well as the lives of the Tape family are finally being included in Asian American historical narratives, legal and social histories, online archives, local museums, and within Asian American studies curricula. Joseph, Mary, and young Mamie Tape were early civil rights activists who fought for equal rights many decades before the major civil rights movements in the United States took place. Their struggle for justice also stands apart from many of the more commonly remembered heroic acts on behalf of attaining civil rights. The Tape family's fight against disparate racial treatment was partially spearheaded by an immigrant Chinese woman and was for the purpose of securing the educational rights and opportunities for a female child at a time when immigrants, women, and especially women of color lacked most of the basic rights and social privileges that American-born men, and especially white men, possessed. Thus, adding *Tape v. Hurley* and the Tape family to the American historical civil rights narrative inserts women, racial minorities, and Asian Americans, and immigrants into the very masculine and African American movement.

Tarak Nath Das (1884–1958)

A pioneering South Asian immigrant, Tarak Nath Das was a prominent scholar of international relations and one of the most well-known leaders of the anti-British movement for Indian independence in North America.

Born in West Bengal, Tarak displayed his brilliance in school at a young age. He went to college at age 16, in 1901, and first arrived in the United States in 1907. In Seattle and Berkeley, Tarak worked briefly, as a farm labor and a laboratory employee, and studied before taking a job as a translator and interpreter at the Department of Immigration in Vancouver, Canada. An advocate for Indian independence from Britain, Tarak was the cofounder of the Indian Independence League and the editor of *Free Hindustan*, the first South Asian publication in Canada. He also founded the Hindustani Association in Vancouver and was recognized as a community spokesman.

Tarak played an important role in the Indian community in Canada. He established the Swadesh Sevak Home, a boarding school for immigrant children, which also offered English and mathematics classes in the evenings and provided a letter-writing service to immigrant laborers.

By the time he returned to the United States in 1908, Tarak had already established himself as one of the most prominent leaders of the anti-British movement. He brought *Free Hindustan* to the United States to be published in New York City. At Norwich University in Northfield, Vermont, Tarak received military training but was suspended by the university in late 1909 for his radical advocacy of Indian independence. In March 1912, he cofounded the Hindi Association of the Pacific Ocean, which later became known as the Ghadar Party. Two years later in 1914 he was admitted

to graduate school at the University of California, Berkeley, where he taught classes while working on his dissertation on international relations. He received his PhD in political science at University of Washington. He gained U.S. citizenship in the same year.

In 1915, Tarak traveled to Berlin to meet several Indian revolutionary leaders and prepared to support the Kabul expedition, a part of the Indo-German efforts to launch a nationalistic revolution in India. He also spent some time doing research in Japan, and published a book, *Is Japan a Menace to Asia?*, in 1917. Before he could embark on another trip to Moscow, however, Tarak was called to appear in the Hindu German Conspiracy Trial. In 1918, he was convicted and sentenced to a 22-month prison term in Leavenworth federal prison. In addition, his U.S. citizenship was taken away.

In 1924, after his release from prison, Tarak married Mary Keatinge Morse, a founding member of the National Association for the Advancement of Colored People and the National Woman's Party. The couple traveled to Europe and established the India Institute in Munich, which provided scholarships to Indian students to study in Germany. He later returned to the United States and accepted a professorship in political science at Columbia University. He and his wife founded the Taraknath Das Foundation in 1935.

After 47 years of exile, Tarak revisited his homeland for the first time in 1952 and founded the Vivekananda Society in Calcutta. He passed away in 1958, at age 74.

Tatupu, Mosiula Faasuka (1955–2010)

Mosiula Faasuka Tatupu was a National Football League (NFL) special teamer and running back. Born

in Pago Pago, America Samoa, Tatupu was a high school football star at Punahou High in Honolulu, Hawaii, setting the state's high school career rushing record (3,367 yards), which stood for 17 years. Tatupu was at the University of Southern California from 1974 to 1977 and was a member of the Trojans' 1974 national championship team. He ran for 1,277 yards on 223 carries during his Trojan career and was USC's Offensive Player of the Year and Most Inspirational Player in 1977.

Tatupu was drafted by the New England Patriots in the eighth round of the 1978 NFL draft. Tatupu was a fullback and special teams ace for the New England Patriots from 1978 to 1990. He had 612 carries and 2,415 yards over his NFL career. Tatupu made the 1986 Pro Bowl as a special teamer and was named the NFL Alumni's Special Teams Player of the Year. One of the most popular players to play for the New England Patriots, Tatupu had his own section of fans, "Mosi's Mooses," who all adorned moose heads and continually chanted his name throughout every home game.

Tatupu became the head coach at King Philip High in Wrentham, Massachusetts, where he coached his son Lofa, who is now a Pro Bowl linebacker for the Seattle Seahawks. He also coached running backs at Curry College in Milton, Massachusetts.

Prior to the San Diego Chargers' Junior Seau in the 1990s and the Pittsburgh Steelers' Troy Polamalu in the 2000s, Tatupu was the precursor to the now-prevalent Samoan presence in mainland collegiate and professional football. Tatupu was born on April 26, 1955, in America Samoa, which is an unincorporated territory of the United States located in the South Pacific Ocean, southeast of Independent Samoa. With a total population of approximately 55,000, the total land area of America Samoa is 76.1 square miles, slightly more than Washington, D.C. The per capita income of American Samoa is \$4,357, which is the lowest in the United States and is on an economic tier similar to Botswana. Sixty-one percent of residents live below the United States' poverty line and almost 40 percent of residents do not have adequate indoor plumbing (piped water, a toilet or both). More than 25 Samoans play in the National Football League and every Pac-10 team will have at least one Samoan

player on its roster. It has been estimated that a Samoan male is 40 times more likely to reach the NFL than a young man growing up in the United States. Scholars have critiqued the "Polynesian Male Warrior" stereotype of Samoan players in the NFL. Tatupu died on February 23, 2010.

Tenzin Gyatso (14th Dalai Lama) (1935–)

Tenzin Gyatso is the 14th and current Dalai Lama of Tibet, former head of the Tibetan government in exile, a Nobel Peace Prize laureate, and recognized spiritual leader of Tibet. The Dalai Lama has been successful in garnering international sympathy for greater Tibetan autonomy and has emerged in Western consciousness as one of the most recognized and revered teachers of the Buddhist tradition. Since the 1980s he has become a well-known author and is known for his gentle and sometimes humorous disposition.

Born Lhamo Dhondrub in the Amdo region of Tibet in 1935, he was recognized as the 14th incarnation of the Dalai Lama at the age of two and received the name Tenzin Gyatso upon ordination as a monk. After years of intense training he assumed full temporal and religious control of Tibet in 1950, but in the face of encroaching Communist Chinese forces in 1959 he fled with his advisors to India to begin a life in exile.

In 1987, decades after establishing the government of Tibet in Dharamsala, India, the Dalai Lama proposed a new plan for a negotiated settlement with the Chinese government, and although it was rejected, he drew international praise and his efforts led to his selection as the recipient of the Nobel Peace prize in

1989. The following decades saw an increased exposure of the Dalai Lama and the Tibetan cause in American media, and the Dalai Lama has since received numerous honors and rewards for his human rights advocacy and commitment to nonviolence.

In 2011, the Dalai Lama formally submitted his resignation as the temporal ruler of Tibet. Although the Dalai Lama remains the spiritual leader of Tibet and continues to tour and offer public lectures on Buddhism, the Office of His Holiness the Dalai Lama officially stated in 2011 that he is unsure if he will choose to be reincarnated and will need further consultation as to whether the institute of the Dalai Lama will continue in the future.

Tết

The lunar new year is arguably the most important holiday for Vietnamese, whether in the homeland or overseas. Known as Tết Nguyên Đán, or simply Tết for short, the holiday can be divided into three periods: Tết Niên (before New Year's Eve), Giao Thừa (New Year's Eve), and Tân Niên (the New Year). The customs and traditions associated with Tết have changed for Vietnamese Americans, as with other cultural forms that have endured international migration.

Historically, Tết was a tradition passed on from Chinese to Vietnamese during the two thousand years of Chinese colonial rule of Vietnam. Despite the contentious relationship between colonizer and colonized, Tết was a cultural tradition that Vietnamese have adopted and kept relatively intact. This vexed colonial history has resulted in the need among many Vietnamese to emphasize that Tết is not synonymous with

Chinese New Year, as often understood in the mainstream. Some key differences in Vietnamese observance of the lunar new year is the difference in three of the 12 animals chosen to represent the lunar-solar calendar used by Chinese and other Asian countries. The lunar-solar calendar is based on both the moon and the sun's cycles. Chinese use 12 different animals to represent the 12 months that are part of one full year's cycle. Vietnamese lunar calendar replaces the Chinese's sheep, rabbit, and ox with the goat, cat, and buffalo, respectively.

Traditionally, customs in the observance of Tết include cleaning and decorating the house, making special delicacies such as bánh chưng (rice cake wrapped in banana leaves), buying new clothes to be worn for the festivities, visiting family and friends, giving children lucky gifts of money in red envelopes (lì xì) and wishing each other prosperity, good health, and good luck in the new year. Tết also provides the occasion for Vietnamese to settle debts and disputes and clear the way for a brighter new year. Some games often played by children and adults during the new year include lô-tô (bingo), bầu cua (dice toss), and cờ tu'ớng (chess). The most common greetings, often found printed in gold on the lucky red envelopes, are "chúc mừng năm mới" (Happy New Year) and "cung chúc tân xuân" (gracious wishes of the new spring).

According to Vietnamese belief, the first visitor to enter a home on the first day of the New Year is considered to signal the family's fortune for that year. Thus, Vietnamese will invite prestigious, successful, and educated persons to enter their home as the inaugural visitor to usher in all those desired qualities in the new year.

On New Year's Eve, many Vietnamese families will make offerings at the family altar, lighting incense and bidding farewell to the kitchen god, Ông Táo, who must ascend to heaven to report on the family's news to the jade emperor. Besides the domestic rituals and social engagements, Tết also signals a time for remembering and paying respect to one's ancestors. Thus, many families visit the graves of their deceased family members to clean, decorate, and provide offerings during Tết. Family altars are cleaned and decorated with flowers and fruit and offerings are made there as signs of respect to the ancestors.

Vietnamese Americans at a Tết parade in Little Saigon, Westminister, California. (Beth Suda/ZUMA Press/Corbis)

After migration, Vietnamese American communities have continued to observe Tết rituals and have established the annual Tết festival wherever there is a large population of Vietnamese. Even as Vietnamese refugees awaited new lives in transitory refugee camps, they organized Tết celebrations as a way to maintain Vietnamese culture, create a sense of community and belonging, and seek pleasure in the midst of abrupt and difficult change. In different regions of the United States, Vietnamese have celebrated Tết with other Southeast Asian communities, primarily Hmong, Cambodian, and Laotian. The largest Tết festival, by far, is put on annually in Westminister, California by the Union of Vietnamese Student Associations (UVSA). The festival includes a variety of food booths, local business and service vendor booths, games and rides for kids of all ages, and a main stage where live music, dance, and martial arts

performances and fashion shows are presented. The UVSA Tết festival currently attracts over 100,000 visitors over the course of one weekend.

Although Tết connotes a joyous occasion among Vietnamese, the term itself is weighted by the legacy of the Vietnam-American War for many non-Vietnamese. For those unfamiliar with Vietnamese history, culture, and community life, the word Tết itself may denote the Tết Offensive of 1968, a moment considered by historians as a major turning point in the Vietnam-American War. North Vietnamese forces attacked strategic hamlets and villages across South Vietnam during the Tết ceasefire, resulting in devastating losses on both sides of the civil war. Militarily, the Tết offensive was considered a failure for the North, but ideologically the Offensive worked to widen the deep divisions over the war in American society. The loss of American morale has often been cited as

one of the major reasons the war was lost in for South Vietnam and its American ally.

Thus, the connotations and denotations of Tết point to major contradictions in Vietnamese American lives as understood by the larger public. Tết signals the negotiation of Vietnamese Americans with their inextricable ties to the most unpopular war in U.S. history to date. Whenever the term “Vietnam” emerged in conversation, it would inevitably be conjoined with the term “war.” Similarly, whenever the term “Tết” emerged, it would also be conjoined with the term “offensive,” conjuring the tumultuous history of Vietnam, Vietnamese refugees, and a dark period of American history as well. In the 1990s Vietnamese American writers and artists resisted the totalizing narrative of the Vietnam War with the refrain, “Vietnam is not a war.” For Vietnamese Americans, Vietnam signifies homeland, community, and family. Tết, like Vietnam, also signifies homeland, community, and family and so Vietnamese Americans continue to redefine its meaning, moving the public memory of Tết away from the bloodshed of 1968 to imbue Tết with new and dynamic meanings over time.

Thai American Organizations

Thai organizations in the United States are diverse, ranging from business and professional associations to university student and alumni societies; from cultural academies and Thai boxing associations to health and religious organizations. Most of them are regional. Some have rudimentary websites in Thai or English; others boast state of the art bilingual websites; still others have no web presence at all. The term “Thai” employed in the title often means the organization emphasizes Thai identity, although “Thai American”

is the designation most often used by the second generation for those born and raised in the United States.

Regardless of their differences, these organizations all share a connection with both the United States and Thailand and a commitment to articulate and practice Thai culture and Thai identity. They organize various events, festivals, and performances to raise the visibility of Thai culture and foster Thai identity in the United States. Moreover, these organizations typically maintain close connections with family, friends, colleagues, and associates in Thailand. Many are also simultaneously involved in projects to improve education, health care, technology, and/or economic development in Thailand and the United States.

A few Thai organizations are national. For example, the Thai USA Association explicitly endeavors to unite Thai migrants in the United States and to support nonprofits in Thailand that work to enhance the lives of the poor as well as promote better education and good health. The Thai Cultural and Fine Arts Institute in Chicago aims at the promotion of Thai culture and fine arts throughout the United States, but it also engages with top performing art schools and artists in Thailand. Similarly, the Thai Cultural Art Association based in Las Vegas aims at promoting classical and folk dance from the four regions of Thailand: the north, northeast, central, and south. In addition, they introduce Thai culture, music, and dance, and conduct workshops, or demonstrations of traditional crafts, food carving, or Thai cuisine, providing Americans with a snapshot of life in Thailand.

Thai business associations tend to meet the more specific needs of a particular constituency. The Thai Commerce Association, established in 2004, supports Thai businesses through the development of Thai Americans within the Thai community and beyond. Its main goal is to help the Thai community overcome barriers, while simultaneously forging networks with larger American society. In contrast, the Thai-American Chamber of Commerce serves as a transnational broker and matchmaker between manufacturers in the United States and in Thailand. It is well connected with the Thai government through the Department of Export Promotion within the Thai Ministry of Commerce.

Thai alumni associations can be divided into three categories. The first type are Thai Student Associations that are generally comprised of graduates, students, staff, and faculty at American universities such as California State University, San Bernardino, Harvard, Brown University, UC Berkeley, Columbia University, the University of Florida, the University of Oklahoma, the University of Maryland, the University of Michigan, and so on. Thai *Smakom* or Thai community, founded in 1980 at UCLA, is a multifaceted association. It provides members with social, cultural, and educational assistance; its mission is to serve as a bridge between the Thai community in Southern California and Thais in Thailand, as well as serving the larger Asian American community. It hopes to create greater awareness of issues Thai Americans face in the United States. The second type of alumni association is comprised of former students, faculty, program participants, grant recipients, and friends who have graduated from or attended American universities but now are living in Thailand. This category includes the Thailand Chapter of the Indiana University Alumni Association (founded in 1948). The Wisconsin Alumni Association Thailand engages in philanthropy in the United States and in Thailand. Alumni organizations tend to maintain a link between the graduates and their respective universities. The third type is comprised of graduates and students from universities in Thailand such as the Chulalongkorn University Alumni Association and the Thammasat University Alumni Association. Graduates of these prestigious schools continue to have relationships with their alma mater. Chulalongkorn University Alumni celebrate their “Chula Spirit.” These alumni provide scholarships and financial assistance to students, and foster a sense of community among alumni of Chulalongkorn University. Thammasat University Alumni Association raised money for reconstruction after the December 26, 2004 tsunami devastated portions of Thailand and for victims of Hurricane Katrina. All these alumni associations collaborate with colleagues in Thailand and support educational activities, especially in science, technology, and education. They also raise funds to provide scholarships and financial assistance for needy students and disabled children.

Many new Thai student organizations have been established over the past 10 years as the number of Thai American college students continues to rise. These student organizations share similar goals: to increase awareness on campus about Thai Americans, Thais, and Thai culture. They raise money through cultural events and food fairs, and sponsor panel discussions, and cultural presentations. At Iowa State University, the Thai student organization assists newly arrived Thais to meet the challenge of living in the United States and provides prearrival assistance, information on housing, visas, work and financial opportunities, as well as advising on personal and cross-cultural matters.

Some Thai American college students identify themselves and their organizations as Thai American. These include the Thai-American Association of Illinois, the Princeton Thai-American Student Organization, and the Stanford Thai-American Intercultural Society. At USC, a Thai club for students from Thailand exists side by side with a Thai American Students Association composed of second-generation Thai Americans. On occasion, a non-Thai establishes a Thai American organization. For example, in 1995, an American man married to a Thai woman cofounded the Thai American Association of Milwaukee. This organization provides service not just to Thais and Thai Americans but also to their families.

Thai health-related organizations come in two main forms: nonprofits such as the Thai Health and Information Services (THAIS), and professional associations such as the Thai American Physicians Foundation, Thai Nurses’ Associations, and a Thai Association of Orthodontists. THAIS is a community-based organization incorporated in 1995 that provides service to Thais in Southern California who are low-income and who have been overlooked by other social service providers. In addition, THAIS provides health education, outreach, such as breast cancer screening, job training, as well as assistance for seniors. In contrast, the Thai-American Physicians Foundation, established in 2000, is made up of medical professionals whose goal is to improve medical education, research, and service in Thailand. They hold conferences in Thailand, sponsor Thai medical students to train

in the United States, fund medical research in Thai schools, and provide an exchange program between American doctors and Thai doctors. It is worth pointing out that, in the early 1990s, the Thai Nurses Association was the biggest and most influential Thai organization in Chicago. Another professional medical organization, The Thai Association of Orthodontists, established in 1982, is somewhat smaller. It offers associates continuing education classes, and presents programs that inform the public about the care and prevention of dental abnormalities.

Some Thai professional associations make an effort to help the Thai American community and promote Thai identity. The Thai Association of Conference Interpreters provides expert language professionals (translators and interpreters) in a variety of disciplines including the medical, technical, and legal fields. The Thai American Young Professionals Association in Los Angeles brings Thai immigrants and the second generation together via social activities and claims “No matter how we identify ourselves, we are always Thai first.”

Los Angeles has more Thai organizations than any other city. Among them, the Thai Community Development Center (Thai CDC), founded in East Hollywood in 1994, is one of the most influential. Its mission is to encourage tourism and economic development and provide access to social services to the Southern California Thai community. The Thai CDC played a major role in establishing Thai Town as a cultural destination in Los Angeles. For years, it has collaborated with the city of Los Angeles and private companies, including Singha Beer and Coca Cola, to improve existing facilities in Thai Town and to decorate the surrounding streets in a Thai manner. The Thai CDC pays particular attention to the working class and subjects of human trafficking. It sponsors community development projects including affordable housing and access to health care, as well as promoting small businesses. This organization is also responsible for Thai Cultural Day and the L.A. International Curry Festival.

There are a few Thai sports organizations, mostly tennis, golf, and kickboxing. The Thai Golf Association of Baltimore attempts to help Thais enjoy golf at the lowest cost. At the same time, it strives to build

friendships and field a team to compete in the Thai Interstate Golf Tournament. On the other hand, the Thai Tennis Association of Southern California appears to be more active in the community, and works to help boost tennis participation among Thai children and adults alike. The Thai Boxing Association of the U.S.A., founded in 1968, is the oldest and biggest Muay Thai (kickboxing) organization in the United States. Over the last decade, Western mixed martial arts fighters have been greatly influenced by the fighting style of Muay Thai kickboxers, for example, kicking with the shin instead of the foot. Similarly, many of Thailand’s kickboxing champions have adopted elements of Western-style boxing, which includes throwing hard punches.

The most influential Thai religious organization is the Thai Buddhist temple because Buddhism is Thailand’s official state religion and the vast majority of Thai immigrants self-identify as Buddhist. (See the entry “Thai temples” in this volume.) The Council of Thai Bhikkhus in the United States is an organization for Thai monks who serve at Buddhist temples in the country. The monks get together once a year to exchange ideas and discuss issues that they all confront.

Because Christianity is the unofficial state religion, the number of Thai American Christians, Presbyterians in particular, has rapidly increased. Currently, the Thai Yellow Pages lists 37 Thai Christian churches; they are concentrated in seven states. California has the most churches with 19. The Thai Christian Fellowship Church, established in Los Angeles in 2005, organizes weekly Bible studies, prayer meetings, and youth ministries; it stresses the need for outreach and community development. Other churches, for example, the Barcroft Bible Church Thai and Lao Ministry in Fairfax, Virginia, has members with multicultural backgrounds for it offers the mass in Thai, Lao, English, Spanish, and Korean.

In short, a wide array of national and regional Thai organizations has blossomed like wildflowers following a spring rain. They embody the diversity of Thai Americans. As transnational agents, young and old, professionals and entrepreneurs, monks and kickboxers, they are not only planting roots to improve their circumstances in the United States, but also

giving back what they can to Thailand. Thus, by connecting themselves to the country where they come from and the country where they now dwell, Thai American organizations serve as a bridge between the two.

Thai Americans

Thai Americans are among the fastest-growing Asian ethnic groups in the United States, increasing nearly 131 percent over the period 1990 to 2007 (see Table 1). However, the total number remains relatively small compared to that of Chinese Americans and Filipino Americans. Thus, Thai Americans tend to emphasize a collective Thai identity and minimize intragroup differences to promote solidarity in the public discourse.

Nevertheless, the history of Thai immigration is inscribed with ethnic, class, and gender differences.

Table 1. Thai American Population in the United States

Year	1980	1990	2000	2010
Thai Americans	45,279	123,553	150,093	237,583

Many ethnic Chinese with Thai nationality were among the first to immigrate to the United States. Most came from wealthy families in central Thailand. Under the shadow of a Thai nationalist movement in the 1940s and 1950s, rich ethnic Chinese sent their Thailand-born sons and grandsons to college in the United States as a part of a family strategy to gain a foothold abroad. Chinese Thai invested almost exclusively in their sons' but not daughters' education. There were very few female Chinese Thai students at that time. In contrast, in the 1960s and 1970s, a large number of Thai immigrants were women who had married American servicemen. Many were ethnic Lao from northeastern Thailand (ethnic Lao also are called Thai *Isan*, a geographic identity). And the Thai nurses who immigrated to the United States in the 1970s and 1980s were mostly females from all different classes, regions, and ethnic backgrounds.

So it should come as no surprise that Thai American women have outnumbered men by about 20 percent over the past 30 years. This stands in sharp contrast to the "bachelor societies" of the early Asian Indian, Chinese, Filipino, Japanese, and Korean migrant laborers whose wives and children were barred from entering the United States. Thai women have a high labor force participation rate: 61 percent. They also have the second-highest divorce rate among all Asian Americans, 7.5 percent, behind only Japanese Americans at 7.8 percent.

Thai Americans are a young population: the median age was 31.8 in 1990 and 35 in 2000. More important, Thai Americans are well educated: the percentage of Thai Americans age 25 years and older who hold bachelor's degrees or higher is much greater than the percentage of Americans as a whole in that age cohort, 37.50 percent compared to 24.40 percent. Compared to mainland Southeast Asian Americans such as Khmer, Hmong, Lao, and Vietnamese, Thais have higher median earnings, and a greater percentage of Thais hold bachelor's degrees, participate in the labor force, and work in managerial and professional occupations. Unlike many mainland Southeast Asian refugees who are forced to live in cheaper inner-city housing, a large proportion of Thais dwell in suburbs and exurbs. Even though some Thai immigrants purchase houses in the most desirable

areas, send children to pricey private schools, and drive expensive cars, many people in the United States still equate them with refugees. What conceals their middle-class identity is not the type of job they perform, but their immigrant status and skin color, as well as linguistic and cultural differences.

Why Did Middle-Class Thais Immigrate to the United States?

The first Thai immigrants we have records for were the famous conjoined twins Chang and Eng. A British merchant, Robert Hunter, and an American skipper, Abel Coffin, contracted to put the twins, who were joined at the lower part of their chest by a strip of flesh “five to six inches long and eight inches in circumference,” on exhibition. The twins arrived in Boston on August 16, 1829. In Thailand, Chang and Eng were called the “Chinese Twins” because they were born to an immigrant Chinese father and a Chinese Siamese mother. In the United States, however, the twins introduced the term “Siamese Twins,” emphasizing where they came from instead of their ethnicity. Chang and Eng overcame being perceived as biologically and racially “alien” and became enormously popular entertainers, world travelers, successful entrepreneurs, skilled carpenters, slave holders, and gentlemen farmers. They married sisters, Adelaide and Sallie Yates, and raised 21 children after retiring to North Carolina. Their achievements and interracial marriages can be, at least in part, attributed to having arrived in the United States before many of the discriminatory laws aimed at Asian immigrants were implemented.

After Chang and Eng, we know of very few Thais who immigrated to the United States up through the first half of the twentieth century. However, we do know that a student, whose Thai name was Phraya Sarasin Sawamiphakh, and whose Chinese name was Huang Tianxi graduated from New York Medical College in 1871. According to immigration records, from 1951 to 1960, only 458 Thais were registered immigrants. A small number of travelers and visitors became permanent residents or American citizens. Some immigrated to the United States through

connections with American missionaries, and others came through interracial marriages. For example, a Thai military officer came for training, then married a white woman and settled in Texas in the mid-1950s. The majority of early migrants were male students.

From 1960 to 1968, the number of foreign students in the United States nearly doubled. Furthermore, 29.9 percent of students from Thailand received financial support from their family, a rate much higher than students from India (5.1 percent), China (4.6 percent), Japan (1.9 percent), and Korea (10.3 percent). Meanwhile, the number of Thai immigrants increased more than tenfold to 5,256 during the period 1961 to 1970. Over the years, many graduating students did not want to return to live under the Thai military regime, especially after the massacre on October 6, 1976, in Bangkok, so they stayed and found jobs, climbing up the corporate ladder, joining the professional and managerial class. Some opened the first Thai restaurants throughout the United States. Others used capital from Thailand to start import and export businesses, hotels, print shops, gift shops, gas stations, travel agencies, or jewelry stores. A few even opened banks. Thus, white collar professionals and an entrepreneurial class have quietly but steadily emerged from the former student body.

The proportion of professionals among the Thai immigrants grew from the 1960s through the 1980s. In 1967, 29 percent held professional or technical or related occupations, a much higher percentage than immigrants from Korea and Japan. The Immigration and Nationality Act of 1965 abolished the quota system and established seven preferences for immigrants, including one for professionals, one for skilled or unskilled workers in occupations for which labor was in short supply, and one for family reunification. (The Act did not fully take effect until 1968.) In response, thousands of female Thai nurses seized this opportunity to come to the United States. Whereas the United States was relaxing its restrictions on immigration, Thailand was unable to absorb many of its own highly trained people into nonagricultural jobs, despite a booming economy. High inflation and low salaries in Thailand during the late 1960s and 1970s led many

Table 2. A Comparison between Thai Americans in Las Vegas (Clark County, Nevada) and Thai Americans in Silicon Valley (Alameda, Santa Clara, and San Mateo Counties, California) in 2000

	Clark County (Thai Americans)	Alameda County (Thai Americans)	San Mateo County (Thai Americans)	Santa Clara County (Thai Americans)
Bachelor's degree or higher (%)	17.66	50.23	46.82	51.73
Median household income	\$36,847	\$42,150	\$69,091	\$60,729
Median family income	\$39,034	\$41,908	\$75,849	\$67,000

doctors, scientists, and engineers, in addition to the nurses, to come to the United States. In 1976, the number of Thai immigrants reached its peak of 8,096. By the early 1980s, there were about 1,000 Thai physicians practicing medicine in the United States.

The Vietnam War also provided many Thai women an unexpected opportunity to immigrate. From 1968 to 1977, 14,688 Thai women came to the United States as wives of American servicemen. Most were from peasant families and had only a primary school education. They tended to work at air bases, travel agencies, hotels, bars, dance clubs, or brothels. A significant number were young single mothers who had suffered abusive or unfaithful relationships before they married American men. When they first came to the United States, many lived on or near an air force base, and some continued to move from base to base, not only in the United States but also overseas, following their husbands from assignment to assignment.

The United States has the largest Thai population outside of Thailand. However, the Thai American population is unevenly distributed. California has the greatest concentration of Thais; Los Angeles is sometimes called "Thailand's 77th province." Los Angeles was the first city in the nation to establish a Thai Buddhist temple and to officially designate an ethnic Thai neighborhood, Thai Town. (See the entry "Thai Town" in this volume.) Many Thais have followed the job market according to their education and skills. There is a clear correlation between educational attainment and the distribution of the Thai immigrant population. Those who work in the computer industry or as engineers in Northern California's Silicon Valley are better educated than those who work in the service industry in Las Vegas. The percentage of Thai

Americans in the Silicon Valley age 25 years and older who hold bachelor's degrees or higher is twice the percentage of Thais in Las Vegas; this educational attainment gap corresponds with an income gap (see Table 2).

Thus, we need to comprehend the formation and transformation of Thai Americans in relation to the political and economic conditions in Thailand and the United States. Today, Chang and Eng's independence, striving for liberty and economic success has become part of America's legacy. Like Chang and Eng, Thai immigrants have overcome many obstacles and taken advantage of any possible opportunity to build a new home in the United States.

Relationships with the Ancestral Land

Thai Americans are involved in two separate but intertwined processes. At the local level, they carve out space that otherwise would not exist in American society, for example, the creation of a Thai civic school in a Buddhist temple. At the transnational level, the process is primarily expressed through reterritorializing Buddhism, articulating identities, and the movement of people back and forth across the ocean—those who dwell in the United States and members of the royal family, monks, and teachers from Thailand. Not only do individuals stretch their cultural life and activities across national borders but many nonprofit Thai American professional and business associations and alumni groups work with their counterparts in Thailand via various educational, charitable, and cultural programs. Simultaneously engaging with local and transnational networks have become defining characteristics of Thai American middle-class practices.

Each year many Thai Americans and Thai organizations celebrate the birthdays of Thailand's King Bhumibol Adulyadej and Queen Mom Rajawongse Sirikit. In the official discourse, the king is considered the father of the nation and the queen, the mother of all her subjects. Many Thai Americans celebrate Mother's Day twice: first on the second Sunday in May as is customary in the United States, then again in August on the queen's birthday, as is customary in Thailand. Celebrating the birthdays of the king and queen strengthens the connection between the monarchy and their overseas subjects, helps to raise money for royal charity projects in Thailand, and serves as a form of making merit.

Since the mid-1970s, Thai monks have been sent from Thailand to help reterritorialize Thai Buddhist temples in the United States. In 1979, the Supreme Patriarch of Thailand, who governs approximately 300,000 monks, dedicated Wat Thai, and an estimated 40,000 Thais and Southeast Asians from all over the United States attended the celebration. King Bhumibol Adulyadej, and the Supreme Patriarch each sent a Buddha statue to Wat Dhammaram in Chicago in 1978. Wat Thai Los Angeles, the first Thai Buddhist temple set up in the United States, also received a Buddha statue from the king. Queen Sirikit and other royal family members have visited various Thai American temples numerous times and often participate in ceremonies and rituals. High-ranking Thai officers also participate in temple activities when they are in the United States. The impact of the nation, the monarchy, and Buddhism—long regarded as the three “pillars” of Thai society—has been felt by Thai Americans.

Thai American temples play an important role in connecting Thai Americans to the Thai nation-state. Via these temples, the Thai state invests in teaching American-born youth the Thai language, music, and dance to cultivate “Thainess.” Beginning in 1983, the Thai government, through the Teaching Thai Language and Culture Abroad Program in Bangkok, has sent music, dance, and language teachers to temple schools throughout the United States. The Ministry of Education and the Teaching Thai Language and Culture Abroad Program also provide textbooks specifically designed for use by overseas Thais.

The reified notion of the Thai nation, the monarchy, and Buddhism consistently inform the curriculum and extra-curricular activities. Learning the Thai language, songs, music, dance, martial arts, and meditation are cultural tokens of being middle-class Thai Americans.

Although the Thai authorities understand that the second generation grew up overseas, they remind them that they have “full Thai blood” (*sailuat khuampentai tempiam*). The logic is that it is “natural” for those with Thai blood to learn the Thai language, to be a Buddhist, and to identify as Thai. By associating blood with Thainess, the state reinforces the notion of a shared Thai identity outside Thailand. Young Thai Americans learn songs such as Thailand's national anthem, the temple anthem, and “I am Thai,” all of which emphasize the importance of Thai and Buddhist identities. “I am Thai” (*chan ben khunThai*), in particular, is directly aimed at young Thai Americans:

I am Thai.
 I was born and dwell in a different country.
 When I grow up, people will ask who I am.
 Yellow skin, beautiful face, thin waist, small
 body.
 Neither black nor white.
 Good manners and high spirits.
 They say I am a good person.
 Although I live in a different land, my blood
 is Thai.
 Although I live far away from my homeland,
 I am proud to be a Thai, faithful to the nation,
 my religion, and the monarchy throughout
 my life.
 Cultivate virtue and live up to being a
 Buddhist.

In addition to learning to be Thai in the United States, many youngsters visit Thailand. The Council of Social Welfare invites Thai Americans from a few big temples in the United States to come and participate in ceremonies such as the anniversary of the King's accession to the throne. The stated goals of these visits are to “help these youth understand and take pride in being Thai and develop a passion for

and bond with their homeland,” and to raise money for national charity projects by having the students perform Thai music and dance live on television.

The student performances have received a lot of attention from the Thai media. What made it special was not just the quality of the performances but the performers—Thai Americans born and raised outside of Thailand. For many viewers, these performances were conceived of as a national celebration of Thai-ness. Sometimes a royal princess attends the concert and has her picture taken with the students. Some students said they felt like minic celebrities; some described performing in Thailand as a once-in-a-lifetime experience; others said that it was “really cool” to be a Thai American.

Besides performing, the students and chaperones more often than not meet heads of state, military leaders, and may receive a blessing from the Supreme Patriarch. The prime minister usually gives a speech encouraging the students to serve Thailand as “informal ambassadors” (*tut*) and to come back to help build Thailand after they grow up. The prime minister often poses for pictures, signs autographs, or shares a meal with them. Military officers also find time to meet the group. The commander of the Thai navy encouraged the students to “understand, maintain, and be proud to be Thai and love and connect with the motherland.” Their tours have included an excursion to the King’s Palace, a trip to Ayutaya, the ancient capital, and visits to several famous Buddhist temples, the national and military museums, and a top university.

Equipped with higher education, expertise in different fields, and U.S. citizenship or permanent residency, Thai Americans and their children have become more worthy and valuable than ever before in the eyes of the Thai elite. The Thai state, royal family and monastic leaders regard Thai Americans as a national resource and often embrace them. Ironically, if they still lived in Thailand, it is highly unlikely that they, as ordinary citizens, would have been entitled to the privileges and opportunities that they now enjoy when they visit Thailand. It is their Americanness makes their Thainess more appreciated by the Thai state.

Thai Cuisine in the United States

Thai cuisine stands out for its rich and harmonious flavors. An inexhaustible assortment of dishes—from complicated curries to simple hot sauces—can be created by combining five primary flavors: sweet, sour, salty, pungent, and bitter. If a dish combines equal parts tart and salty, a touch of sweetness can connect the two and bring the dish into balance. Sometimes one flavor is emphasized, ably assisted by other flavors, whereas in another dish the secondary flavor takes the spotlight. Different flavors coexist and are considered equal players; one should not overpower the others. To best use each constituent to create something delicious, the cook has to orchestrate the differences between individual ingredients, flavors, and condiments. Coordinating the entire effect is the test and thrill of cooking Thai fare. Not only is harmony

emphasized in making a dish, it is also emphasized in creating a meal. Such a conception of harmony, to a certain degree, echoes the Buddhist notion of peaceful coexistence.

Furthermore, Thai cooking styles, ingredients, and spices often reveal regional variations influenced by the local weather, agriculture, and foodways in neighboring countries.

Unlike the northern and northeast regions where herbs play a greater role in seasoning and taste, southern dishes are influenced by Indian and Malay cuisine in terms of using spices, coconut milk, and chilies. Indian-style *gaeng massaman kai* (chicken massaman curry) and Malay-style *opor ayam* (chicken sautéed in coconut milk and turmeric) are prime examples. In addition, southern Thais are known for enjoying strong flavors: extremely hot fresh or dried chilies, tamarind, and even sour-to-the-point-of-bitter herbs.

Northern Thai cuisine is well known for its strong spices including turmeric and ginger and chili pastes and for having its fare influenced by neighbors Burma and Laos. It is also known for *namphrik ong* a spicy dipping sauce for steamed and raw vegetables made with tomato, mild chilies, and minced pork. Today, partly as an effect of the tourist industry, *khun toke* has become very popular. *Khun toke* is an entire meal that consists of several northern dishes such as *gaeng hung lay*, a Burmese-inspired pork and ginger curry dish; *gaeng hoa*, a vegetable soup; *namphrik ong*; chicken salad; crispy pork rinds; pork sausages; and steamed vegetables.

Northeastern cuisine is known for *som tam* (shredded papaya salad), barbecue chicken, and *larb*, a signature sour salad dish consisting of minced pork or beef, fresh herbs (often mint and cilantro), chilies, green onion, and lime juice. Another popular dish is *nua dak dio*, which means “meat dried one day.” As the name indicates, the meat is dried for an entire day to give it just the right texture and flavor. Another delicious dish with an evocative name is *numdok*, which means “water drops,” referring to the juice dripping from the barbecued meat; the meat is then ground and mixed with onions, herbs, and hot peppers. Nearly all northeastern dishes go well with white sticky rice.

Central Thai cuisine, especially in Bangkok, has been influenced by so-called palace-style cooking and Chinese cuisine. Bangkok is home to the Thai monarchy and numerous Chinese migrants who at one point made up a majority of the city’s residents. Palace dishes tend to be sweet rather than spicy and make use of much coconut milk. Palace favorites include *mah haw*, minced pork with fresh pineapple; *kanome jeen sao nahm*, a strongly Chinese-influenced rice noodle dish topped with fresh ginger, dried shrimp, garlic, and pineapple chunks served with a coconut sauce.

Thai noodle dishes often reflect a Chinese influence. One of the most popular dishes is *kway teo* (rice flour noodle). *Kway teo*, a mildly sweet slightly salty wide noodle, can be eaten at any time of the day. It can be seasoned with oyster sauce, fish sauce, garlic, lime, palm sugar, chili, and mixed with a wide variety of meat including barbecued pork, beef, and chicken. Whereas wide rice noodles are used to make *kway teo*, *bami* or flour noodles are used for wonton noodles or chow mein. Thai restaurants in the United States often offer *pad Thai* and *pad si ew*. In Thai, “pad” means stir-fried. “Si ew” is Teochiu Chinese for soy sauce. Although both dishes are stir-fried, each contains different ingredients and each has a distinctive taste. *Pad Thai* noodles are flat rice noodles that typically are sautéed in the restaurant’s special sauce and stir-fried with bean sprouts, green onion, meat, and sprinkled with crushed peanuts. *Pad si ew* uses much wider rice noodles and is seasoned with oyster sauce or a sweet dark-colored soy sauce. It often is stir-fried with *gailan cai* or Chinese broccoli. Chinese cuisine in Thailand also is continuously being transformed. For example, soy sauce, a key ingredient in Chinese cooking, often is replaced with fermented fish sauce.

Thai cuisine also makes use of many different kinds of curries including some that are unique to a region. In the United States, the most commonly available Thai curries are yellow curry (certain versions of which go well with potatoes, beef, or chicken and are often thickened with coconut milk or cream); massaman curry (which goes well with red meats); green curry (probably the most popular curry in Thailand and used in pork dishes or with vegetables); red curry (complements roast duck); and panang curry (excellent

with lamb or beef). There also are countless other dishes where curry powder is added to meat, fish, or vegetables to create a spicy sauce.

Thai soup can be classified into two broad categories: *tom yam* and *kaeng jeut*. Tom yam is flavored with lime leaves, lime juice, lemongrass, ginger, fish sauce, shallots (*hom*), tamarind, and hot chilies. This gives the soup its distinctive tangy taste. If one adds prawns, it becomes *tom yam kong* (spicy shrimp soup). This probably is the most popular version but the shrimp can be replaced with squid, chicken, or pork. However, *tom yam pak* (spicy vegetable soup) was created in the United States to meet the demand of vegetarians. *Kaeng jeut* is influenced by Chinese cuisine. It is lightly flavored and not seasoned with ingredients such as coconut milk, hot chilies, or tamarind, but rather with ginger, green onion, cilantro, and salt.

Rice is the major grain that Thais consume. Indeed, in Thai society rice is considered as important as earth and water; there is even a Rice Mother or Rice Goddess (Mae Pra Posop). Thai jasmine rice, known for its distinctive fragrance and subtle nutty flavor, is the most popular rice served at Thai restaurants. White sticky rice, or glutinous rice, is sweeter and heavier than jasmine rice.

Thai restaurant menus in English usually list desserts, but the Western notion that desserts are sweet and the last course of a meal does not really exist in Thai cuisine. The closest word in Thai that can be translated as dessert is *kanom*, which simply means “sweets.” Kanom mostly work their way into the daily Thai diet in the form of between-meal snacks. *Kanom krok*—a silver-dollar sized sugary hotcake prepared from rice flour, salt, sugar, and coconut milk and a wide variety of fillings—is very popular.

Variation and complexity are not only expressed in terms of regional differences, various ingredients and cooking styles, but also by the ways in which utensils are used. In the past Thais ate with their hands, especially in the north and the northeast, in part because their primary food was sticky rice that is eaten with the fingers. They take their fingers and knead glutinous rice to make it chewy. Then they dip the little ball of rice into a sauce or into a dish in which meat, fish, or vegetables are finely ground or chopped. Today in private settings—especially in rural northern

and northeastern Thailand—many still eat with their fingers. However, because of new table manners promoted by the Western-educated Thai elite, Thais have gradually changed to using forks and spoons. Holding the spoon in the right hand and the fork in the left, the fork is used to push the food onto the spoon and then eaten. Thais rarely use knives because the meat is already chopped. Nevertheless, Thais often switch to chopsticks to eat noodles, partly because it often is sold by ethnic Chinese. Fingers, forks, spoons, and chopsticks are all employed in everyday life. The key is to know which implement is considered “proper” according to the circumstances.

Thai American restaurants usually provide forks and spoons, distinguishing themselves from Western and Chinese food culture. However, some customers do ask for chopsticks. This may reflect an assumption they make about chopsticks and Asian foodways. In response, some Thai restaurants in the United States lay out not only forks and spoons, but also Chinese chopsticks. This reminds us of the Thai saying: “When you move to a city of cross-eyed people, you also have to become cross-eyed” (*khaomuang tariu, tong riuta tam*). More recently, however, fewer Thai restaurants lay out chopsticks as many American diners have learned that Thai table manners are different from those of the Chinese, Japanese, Korean, and Vietnamese.

Thai restaurants refashion and tinker with flavors and dishes to varying degrees to better suit the taste of American customers. Most Thai restaurant dishes are much less spicy in the United States. (Likewise, Kentucky Fried Chicken modifies its menu in Thailand by offering hot and spicy shrimp sandwiches.) Fish sauce, one of the most important ingredients in Thai cooking, is sometimes replaced with salt or soy sauce. The amount and kinds of herbs also are reduced. Some chefs substitute instant curry for fresh, because instant curry has a much milder flavor and takes less time to prepare. Some use American ingredients and offer “Hawaiian curry,” in addition to Thai red, green, and yellow curries. In Thailand, sliced raw cabbage is rarely served with *larb*. Here it is, because Americans are familiar with eating uncooked cabbage; this also makes the size of the portion seem larger. For shrimp *gapow*, zucchini is added to make the color of the dish

more attractive, the green zucchini contrasting with the red shrimp. Spring rolls usually are made with ground pork, but in the United States tofu sometimes replaces the meat. Similarly, for a spicy basil dish, ground turkey is sometimes used instead of chicken or pork. Cooks have to be creative to make dishes out of the ingredients at hand and find flavors that are popular with new customers. We need to understand Thai food as a subject of adaptation, a subject of change, and a subject of re-creation.

Looking back 40 years ago, Thai cuisine was practically unknown to most Americans. Now it has become one of the favorite styles of cooking in the United States. Indeed, as of 2006, approximately 4,000 of the 9,000 Thai restaurants worldwide were in the United States. Thailand's Minister of Foreign Affairs, Kantathi Suphamongkhon, proudly claimed: "We were once known as the Rice Bowl of Asia. People are now referring to us as the 'Kitchen of the World.'" More important, Thai cuisine serves as a gateway for introducing Americans to Thai culture and history, as many first learn about Thailand not through Buddhism or the arts but through Thai food.

Thai Temples

The first Thai Theravada Buddhist temple in the United States, Wat Thai Los Angeles, was founded in 1972. Since then over 100 Thai temples have been

established in at least 27 states: from Alaska to Hawaii; from Massachusetts to California. Often, a second temple spins out of the mother temple because of internal conflicts, the need for expansion, or because adherents want to practice a particular form of meditation. Nevertheless, all Thai American temples are nonprofit organizations under the umbrella of the Council of Thai Bhikkhus in the United States.

Thailand currently is home to more than 300,000 monks and approximately 30,000 Buddhist temples including 180 to 200 temples that are under royal patronage. However, in the United States, a Buddhist monk or a Buddhist temple still is a relatively rare sight; for many Americans monks are mysterious beings. Indeed, monks are frequently asked basic questions such as why do you shave your head? Why do you wear a yellow robe? Can you have a girlfriend? Can you watch television or eat meat? Americans might not know that a monk follows 227 precepts; these disciplinary rules define who he is. He shaves his head and his eyebrows to show that he is detached from his family and this worldly life; his saffron-colored robe is the emblem of Buddhism. He lives a celibate life. It is against the rules for him to have any physical contact with a female, even shaking hands. He can watch television, although not for entertainment. He eats meat whenever people offer it to him, but he does not harm or take the life of living beings not even a pesky mosquito.

More important, a monk's position is considered "the most esteemed role" in Thai society and the sangha (community of monks) is highly respected. There, the Thai government provides monks with many free or inexpensive services including transportation and medical care. The nation, the monarchy, and Buddhism are regarded as the three pillars of Thai society. However, in the United States there is a wall of separation between church and state, at least according to the constitution. There, an overwhelming majority is Buddhist; here, a majority is Christian. There, Thais tend to respect and trust monks more than they do government officers. Here, a monk's prestige and his religious and symbolic capital go largely unrecognized; he experiences a dramatic drop in status. There, he is addressed as "Venerable"; here he is addressed as "Mr." Thus, being a Buddhist monk in the United States is a very

Wat Thai Buddhist temple in Los Angeles. (J.G. Hunter/Dreamstime)

different proposition and monks must act differently here compared to monks in Thailand in part as the effect of dislocation.

Monks have to negotiate monastic regulations in response to different social conditions. In Thailand, it would be sensational news if a monk went shopping at a big mall. Here, however, especially when a temple is just getting off the ground, monks may have no choice but to purchase building and maintenance supplies themselves. Accordingly, monks often emphasize that they do not shop for pleasure or go window shopping but rather get the job done as quickly as possible. There, monks are prohibited from driving out of concern over accidentally taking another person's life. Here, at most temples at least, one monk must learn to drive because physical mobility depends upon having a car. Monks who drive often state that it is not done for enjoyment or to look at the scenery but to get from one place to another. Monks who use cell phones often state that it is for the sake of communication and not to

play music or games. In other words, monks redefine the ways in which they act in the United States by redrawing the boundaries between work (*ngang*) and pleasure (*sanuk*).

A new temple may begin with a single monk and then increase to four. A few big temples may have more than 10 monks. In Thailand, a temple usually has a minimum of five fully ordained monks and a large temple may have a few hundred resident monks. Thai monks in the United States rarely go out to convert people but rather open the temple doors, welcoming anyone interested in Buddhism to participate. In other words, the temple provides a cultural window that allows locals to take a look, get to know fellow participants, and even join in but without having to change their faith. If an individual or an institution invites monks to talk about Buddhism or to conduct rituals, the monks say they are happy to do so. These monks not only serve as spiritual leaders, meditation teachers, and social workers, but also as laborers,

who mow the lawn, rake the leaves, sweep the floor, fix mechanical problems, recycle paper, plastic, glass, and aluminum cans, and empty the trash. Many adherents respect the monks for following the monastic code and for providing spiritual guidance and physical labor to make the temple into a place the community can call home.

A Thai temple in the United States usually starts out in a rented house that from the outside looks like an ordinary residence. Once inside, however, there are the Buddha statues and customary temple accoutrements. Building a temple requires considerable economic power and political clout as well as local and international connections. More important, tension and clashes between sacred and secular space make it much more complicated to build a Buddhist-style temple in a predominantly Christian society. Today only a few Thai American temples are built in a modified Thai Buddhist architectural style. And even those temples must combine Thai and American features into the temple space, as they have to negotiate with two distinct codes—U.S. building codes and Theravada Buddhist codes. Thai temple space therefore symbolizes the transplanting of Theravada Buddhism into American territory and serves as an outward marker of the Thai American community.

Temples rarely charge a membership fee and the number of members fluctuates. A casual visitor can turn into a regular member; a regular member may leave for a few years and then return. Some temples may have only 20 or so regular members, whereas others boast several thousand. Some temples have members from many different backgrounds including Laotian, Cambodian, Vietnamese, Chinese, Malaysian, Indian, Sri Lankan, Burmese, whites, and a sprinkling of African Americans and Mexican Americans.

Eighty or even 90 percent of regular temple visitors are women. (In Thailand the percentage of female visitors is even higher.) Thai cultural logics significantly inform gender-specific patterns of practicing Buddhism: men make merit (*thambun*) and pay back their parents by ordaining temporarily as monks; women make merit by taking care of their family, parents, and supporting the temple and its monks. Although it is a rite of passage for a man to ordain as a monk at least once in his life, it is the women who

are expected to take care of monks' daily needs. Most laymen offer alms only on special occasions such as birthdays or important Buddhist holidays. Offering alms and giving birth to a son who later ordains as a monk are the most common gendered practices among women. Thus, childbearing, motherhood, nurturing, and contributing daily necessities to monks are regarded as moral actions that lead to improving a woman's karma. Nevertheless, for some in the United States today, visiting a temple is no longer just a "woman's activity" but rather a social endeavor in which both husband and wife participate. So the proportion of men who visit Thai temples in the United States is higher than it is in Thailand.

Temples often serve as the religious, socioeconomic, educational, and cultural hub of the Thai American community. The religious, spiritual, educational, social, and economic realms are intertwined. Although one facet might stand out more than another in one particular context, all the activities are interconnected and mutually constituted.

After saying this, Thai temples in the United States, first and foremost, are religious centers, where monks and lay people worship Buddha, practice meditation, and conduct rituals. The most common rituals are life cycle ceremonies such as birthdays, weddings, and funerals. And these rituals are usually embellished with offerings, chants, blessings, and sometimes a dharma talk. The following description of a birthday ritual may shed light on some procedures that other rites and rituals share. The person celebrating a birthday, sometimes together with family members and friends, recites a sutra (*sutmon*) in the presence of the monks and pays respect to "the triple gems of Buddhism," that is, the Buddha, the dharma, and the sangha, by genuflecting and chanting. Then he or she asks for and receives "the Five Precepts" from the monks. (The Five Precepts—not to kill, not to steal, not to lie, not to use false or harmful speech, and to abstain from sexual misconduct and intoxicants—constitute the basic moral rules that Buddhists obey.) Then the abbot or a senior monk gives a dharma talk and discusses the meanings of a birthday: why one should perform good deeds, demonstrate generosity, and express gratitude to one's parents for the gift of life. At the end of the ritual, the celebrant would typically

offer alms to the monks. In return, one is blessed by the monks with a wish for good health, happiness, and prosperity. In addition to rituals for individuals, a temple conducts communal rituals on Buddha's Day, Visakha, Buddhist Lent, birthdays of the King and Queen, and for ordinations.

Temples are a popular site for meditation. The monks, temporary novices, and nuns chant and meditate once every morning and once every evening. Laypeople also participate. In the evening after meditation, monks and adherents sometimes discuss the Buddha's teachings, or a monk answers questions that practitioners have raised. Most temples hold daily or weekly meditation sessions and annual retreats. Monks teach different styles of meditation including how to look within oneself by developing a "third" or "inner" eye. Buddhists and people of many other different religious faiths often meditate together at the temple.

Some scholars have concluded that immigrant Buddhists are ritual-oriented and white American converts meditation-oriented because immigrants have been influenced by a Buddhist cosmology and the converts have been influenced by individualistic psychology. However, this might be a bit too simplistic. Many Thais participate both in rituals and meditation. So do some whites, especially those married to Thai women. The practice of meditation takes many different forms in addition to sitting silently. For some, being "mindful" is a form of practicing meditation. Mindfulness can be expressed in every act: talking, cooking, eating, working, chanting, and being kind and loving to people and animals. Gardening, too, can be a form of meditation. A few women even meditate while giving birth.

Festivals and rituals at any Thai American Buddhist temple invariably include making merit. Merit making has long been the most popular practice among Thai Buddhists to accumulate good karma for this life and future lives. Merit-making activities range from big to small actions including building a temple, providing financial support, feeding the monks, or "doing good things" throughout one's life. The ability to raise money is directly connected to a temple's survival and prosperity, as money is required for almost everything in American society. Making merit is meaningful for the practitioners because it combines so many things

—the religious, the survival of the temple, morality, folk beliefs, this life and the next life—together.

Merit making takes place both within and outside the temple. Monks are invited to conduct blessing rituals at a grand opening or a shop's anniversary and at restaurants, travel agencies, grocery stores, hair salons, and so on. In addition to food and a bundle of daily necessities such as toiletry items, bottled water, and laundry detergent, the host usually offers the monks sealed envelopes with cash inside. One envelope goes to the temple, typically from \$40 up to a few hundred dollars in cash, depending on individual circumstances. Each monk who participates in the ritual usually receives his own envelope containing \$10 or \$20 or so to be used as pocket money. Some monks donate their accumulated pocket money to the temple or to charity.

Providing monks with food and daily necessities is the most common merit-making practice. According to monastic codes, monks should not prepare their own food but eat only whatever people offer them. In Thailand, monks go forth at dawn from their temples to receive alms from neighbors. The proffered food is then divided into two meals: breakfast and lunch. However, in the United States, monks' receiving alms on the street can easily be misunderstood, for many locals are not familiar with this practice. In response, individuals and restaurant owners take turns bringing food to the temple to offer to the monks. Locals sometimes attend alms offering rituals regardless of whether they believe that making merit in this life leads to a better rebirth. Some give alms to donate money; others simply because it is fun for their children or grandchildren to participate. After the monks have finished their meal, everyone else at the temple eats the rest of the food like a potluck.

A temple is out of necessity an economic center and must focus on fund raising. To raise money, temples often set up a food court where volunteers prepare and sell food and donate the proceeds to the temple. Others hold garage sales. Some put on cultural performances and donate ticket sales to the temple. Still others organize night markets. At big religious events such as the demarcation ritual, offering-packages presented to the monks will range in price from \$10 to \$100 or \$150. Although the prices of the baskets vary,

the practice is very similar. The cost of a gift basket is much higher than its monetary value, but the items in the basket are imbued with symbolic capital. A \$10 package usually includes a spool of thread, needles, pencils, and gold leaves. The thread indicates a long life; needles symbolize intelligence; a pencil, the ability to learn; and the gold leaf, each about one-inch square, is used to gild Buddha statues or the boundary stones. A \$50 package may also include a robe, canned food, more thread, soap, sugar, paper, and envelopes. The most expensive gift-basket may sell for \$150 and include \$50 in cash along with all the items previously mentioned. After purchasing a basket, adherents offer it to the monks, and, in return, receive a blessing. These baskets, however, are never opened. Instead, they are brought back out to be resold over and over again.

A temple also functions as an educational center. Many Thai temples in the United States have revived a “Thai tradition” that no longer exists in urban Thailand, namely, operating a civic school within a Buddhist temple. These schools typically offer three subjects: Thai language, dance, and music. The purpose is not just to pass on knowledge but to cultivate Thai-ness (*khuam ben Thai*) and promote Thai identity among the second generation. At the same time, some temple schools have adopted certain local practices such as a Parent Teacher Association and a Student Council. Monks and parents tend to view the temple school as a complement to American schools. Many parents want their children to appreciate their cultural heritage and know how to act properly in both societies. The ability to switch between different languages and to appropriately follow the rules of etiquette for social interactions in both Thai and American society are important Thai American cultural practices.

Temple schools also are open to adults. Adults may become interested in Thai music after attending a concert. A few come to the temple school to learn to play Thai musical instruments. However, most adult students want to learn to speak Thai. These students, predominantly white males, can be divided into three groups. The first is men married to Thai women. They aim to develop their oral communication skills. The second group is men who are dating or going to marry a Thai woman. In class, they often compare notes and

seek advice on such things as what kind of visa should one get for a Thai girlfriend? Is it easier to get married in Thailand or the United States? The last group is made up of those who plan to move to Thailand to work or to retire. Often they are motivated to learn both the language and about Thai culture.

For the language classes, students are usually divided into several levels. Along with memorizing, students learn the Thai alphabet by solving puzzles. Younger students often find it more fun to learn dance and music than to study the language. In response, teachers use dance, music, and games to introduce students to Thai culture, history, and Buddhism.

In the dance classes, the teacher often integrates Thai history, literature, gender norms, and the moral order into the ways in which she teaches Thai dance. Thai dance is a source of national pride and considered a cultural treasure that has been handed down from generation to generation. A Thai audience usually understands the story being depicted by the dancers’ hand gestures, finger movements, and stances, just as a typical American-born Thai student would instantly recognize the story of Noah’s Ark when they see a boat and animals being led on board two by two. By learning these dances, Thai American youth also learn about Asia, ethnicity, and the relationship between Thailand and its neighboring countries. For example, in studying *Ramakien* drama, perhaps the best known classical art form in Thailand, students are exposed to a mix of different elements that originated in Southern Thailand, Java, and Indonesia.

What differs from the students’ previous experiences in taking music lessons in an American setting is that the students are now urged to pay respect to their instruments, because “a teacher is located inside the instrument” (*mi khru u nai khruang*). Initially, students often carelessly toss the bamboo mallets used to play the Thai hammer dulcimer (*khim*) on the floor. A good teacher always corrects them, explaining that a student must be “polite” to the teacher within the instrument. Even if a stage is small and crowded, students are forbidden to step over a musical instrument. (Similarly, a classical dancer has to *wai* the headdress and say “*kho khama*,” an extremely polite phrase for “excuse me” before donning it.) In addition, shoes are not allowed when students dance or play instruments. Some say

this is a way to pay respect to the deity that resides within an instrument; others say this is to demonstrate modesty because, in the past, only the King was exalted enough to wear shoes. Over time, through these practices, the students become aware of the similarities and differences between Thai and American culture.

Temples also are community centers. Some newcomers visit a temple to combat homesickness and to find psychological comfort and relief from stress. Some come to seek advice from monks regarding marital conflicts, or trouble between kids and parents, or financial problems. Elderly Thai tend not to talk about their difficulties for many of them believe that performing good deeds will solve their problems. They find peace in visiting the temple and worshipping Buddha. Some come to the temple to seek jobs through connections made there. Some come to seek advice on meditation methods. People often share economic, medical, and job information. Real estate, insurance, and travel agents also look for clients there.

Many people come on Sunday to enjoy Thai food at the temple's food court. The food and cooking smells and the colors of various dishes and desserts remind many transmigrants of home. The food court's informal, open-air seating, clean and convivial environment, and good but inexpensive food make for a pleasant dining experience. Eating together, exchanging news, and joking with one another is considered *sanuk*, or fun. Some non-Thais initially come to the temple for Thai food and then begin to participate in other activities as well. Food plays an important role in breaking down cultural barriers and opens lines of communication.

Temples also serve as cultural centers, teaching locals about Thai culture and Buddhism. Some teachers bring their students to the temple to observe rituals and celebrations. Some come with research projects; others simply to expose students to different cultures and different ways of doing things. Some teachers visit temples in an attempt to understand the multicultural aspects of the community and reach out to students and parents from different linguistic and cultural backgrounds. Often projects are aimed at learning how to effectively teach a highly diversified student body, and how to teach students to become good citizens

and upstanding members of the community in their own cultural terms. These teachers attempt to break free from the conventional assimilation model that aimed at erasing cultural practices and values immigrants brought with them to the United States.

In short, it is a very different proposition being a monk, or being a Buddhist, or operating a Thai temple in the United States than it is in Thailand because of dislocation. Furthermore, just as Buddhism is as much a way of life as an amalgam of religious and spiritual practices, a temple is as much a socioeconomic, cultural, educational, and community hub. Thai temples become the anchor of the Thai American community, helping to define Thai Americans, showcasing Thai culture, and enriching the fabric of America's diverse society and culture.

Thai Town

More Thais live in Southern California, especially Los Angeles County (25,094), than anywhere else outside of Thailand. Thai Town is the first and only officially

designated ethnic Thai neighborhood in the United States. Los Angeles City Councilwoman Jackie Goldberg recommended the name Thai Town. Her proposal was unanimously passed by the full council on October 27, 1999, after several years of intense lobbying by the Thai Community Development Center (Thai CDC) and other Thai civic organizations. The dedication ceremony took place on January 29, 2000. In July 2008, First Lady Laura Bush recognized Thai Town as a “Preserve America Community.” This designation, which has been awarded to over 500 communities nationwide, confers eligibility to apply for up to \$250,000 in federal grants and another \$250,000 in matching funds for economic development, community revitalization, and heritage tourism programs.

Thai Town proper consists of a six-block area centered on Hollywood Boulevard from Western Avenue east to Normandie Avenue. Many early residents were Thai college students who arrived in the United States in the mid-1960s. As of 2009, Thai Town is home to approximately 50 Thai businesses and over 10,000 Thai residents. Serving as the cultural and economic heart of the Thai community, the district contains an assortment of restaurants and cafes, grocery stores, two bookstores, hair salons, silk clothing stores, video stores, import shops, and health spas offering Thai massage, along this approximately 1 mile stretch of road, just east of Highway 101.

Although much of the property in Thai Town is not owned by Thais, distinctive Thai cultural symbols are prominently displayed. Two six-foot tall golden Apsonsi statues, a mythical half-human half-lion figure from Thai folklore, welcome visitors at the Thai Town Gateway with hands forming the customary Thai greeting, a *wai*, and serve as guardian angels, bringing good fortune to all. These sculptures, along with a donation for the installation, were a gift from Bangkok, Thailand’s own “City of Angels.”

Since 2004, Thai Town has been the site of the largest Thai New Year or Songkran Festival in the United States. The festival includes a beer garden and more than 200 booths offering a wide variety of regional Thai cuisine, as well as arts and crafts. Many locals and visitors take part in an alms offering to Buddhist monks, a 5K run, and a cultural parade.

A range of events including a Muay Thai boxing exhibition, classical Thai music and folk dance performances, curry cook-off, fashion show, and beauty pageant attract thousands of visitors. Typically, the mayor of Los Angeles, other political figures and local notables participate. ThaiTV, the main Thai language TV station for overseas Thais, broadcasts live and interviews celebrities, mostly actors and musicians, who fly in from Thailand to take part in the fun. The 2008 Songkran Festival attracted over 100,000 celebrants and the 2009 Festival was also a great success. Indeed, Thai Town has become a key North American site for celebrating Thai American culture and accomplishments.

Thao, Cy (1972–)

Cy Thao is a Hmong American politician from Minnesota. He is a four-term member of the Minnesota House of Representative (2002–2011) from District 65A, which includes portions of St. Paul and other parts of Ramsey County, Minnesota. He is also one of the few Hmong Americans that has served in an elected public office. Thao is a registered Democrat although he was first elected to office representing the Democratic-Farmer-Labor Party.

Born on March 2, 1972, in a Communist Laos, Thao is one of his parents’ nine children. His family left their native Laos in 1975 in search of a new life. After spending five years in a refugee camp in Thailand, Thao and his family eventually made their way to Minnesota, in the United States in 1980 (Asian American Press 2010). Thao graduated from

Minneapolis North High School and has a teaching credential from the University of St. Thomas. He graduated from the University of Minnesota, Morris with a BA in political science and studio art. When Thao was in college, he worked in the Minnesota Senate as an intern.

After college, Thao worked as the director of the Center of Hmong Arts and Talent. He also worked as an art teacher in the Minneapolis Public School System. Thao has also served on the board of directors of the Women's Association of Hmong and Lao as well as the board for the Hmong Development Corporation. In addition, Thao is a prolific artist, whose work has garnered wide recognition from within and outside of the Hmong community and is exhibited at several prominent venues, including the Minneapolis Institute of Arts.

Thao first ran for a public office in 2000 as a candidate from the Independence Party but was unsuccessful. In 2002, Cy Thao tried again and won the seat left vacant by former Minnesota State Representative Andy Dawkins. During this winning election, Thao ran as a candidate of the Democratic-Farmer-Labor Party and garnered 79.5 percent of the vote.

During his first term in the Minnesota House of Representative, Thao served on the Committee of Health and Human Services as well as the Committee on Judiciary Policy and Finance (Minnesota Legislative Reference Library 2010). As a freshman representative, Thao also earned a reputation for taking on controversial issues. Specifically, he championed the idea of a more proportional board membership composition on the State Council of Asian Pacific Minnesotans and was opposed to the "Hmong marriage solemnization bill," which Thao believes has a negative impact on the Hmong culture by allowing the "mej koob," a go-between person that negotiates marital terms for the families involved, to have the power to legalize marriages and enforce state-sponsored marital laws (Asian American Press 2010). Thao went on to win three reelections and by his fourth term (2007–2009), he was the chairman of the Health and Human Services Subcommittee of Licensing.

Alongside former Senator Mee Moua, Cy Thao strived to serve the local Hmong American population. Many viewed Thao as a trailblazer not only because of

his achievement as the first Hmong American to serve in the Minnesota House of Representative, but also for his dedication to his community.

In early 2010, Thao has been ordered to pay more than \$4,700 in penalties for irregularities in his campaign finances. It was found that Thao had paid friends and relatives excessive amounts for services out of his campaign funds without declaring them as gifts. In response to the penalty decisions, Thao said he may ask for a probe into whether the initial complaint was racially and politically motivated.

In February 2010, Thao announced that he has decided not to seek a fifth term in the Minnesota House of Representatives. He was succeeded by Rena Moran of the Democratic-Farmer-Labor Party.

Third World Strikes

In the late 1960s, two major student strikes took place on the West Coast: one at San Francisco State College (SF State) and the other at the University of California, Berkeley (UC Berkeley), which sought to radically restructure education and to challenge race inequalities. First, the strikes established the nation's first school of ethnic studies and a new field of academic

study. Second, they advocated a radically alternative view of public education. Third, the strikes, led by Third World Liberation Fronts (TWLF) at each campus, represented leading racial solidarity movements and connected local struggles with worldwide Third World and student movements. Despite the significance of the Third World strikes, however, was that their histories are overshadowed by the Free Speech and antiwar movements that privileged white student movements have in the recounting of San Francisco or Berkeley in the '60s. Even more invisible than the strikes themselves was the Asian American participation in these struggles.

On November 6, 1968, students at SF State began what would become the longest student strike in U.S. history. At its height, 80 percent of classes were closed and the strike endured for five months. The struggle had been brewing for a few years, centering on concerns about the sharp decline in black student enrollment and thwarted efforts to establish a Department of Black Studies. The 1960 California Master Plan for Higher Education, passed by the legislature, coordinated the governance of the state's tripartite system of higher education: the University of California (UC) system, the California State University (CSU) system, and the community or junior college system. The Plan was widely hailed for curtailing the explosion in college enrollment, brought about by the coming of age of the baby boom generation and the GI Bill making college within reach for ordinary Americans. But critics asserted that the Plan was masterfully designed to attract widespread support, while consolidating decision-making power in hands of business and political leaders and catering to corporate interests in the postwar economy. The Master Plan, critics contend, diverted students away from the UCs and CSUs and into the junior colleges by raising admission criteria at top tiers—a strategy that appealed to popular beliefs in meritocracy and an unbiased education. This curbed the problem of overenrollment at the expensive UCs and created a major cost savings to the state, with local taxes providing the majority funding for junior colleges. But, predictably enough, students of color and working-class students were disproportionately diverted to the community colleges. At SF State, the drop in black student enrollment from 11 percent in

1960 to 3 percent in 1968 helped spark the TWLF strike. The Master Plan also benefited the postwar industrial-technological economy. By channeling students to the junior colleges, the Master Plan facilitated the training of technicians, who were needed in much larger numbers than the professionals produced by the UCs.

At SF State, the Black Student Union (BSU) played the leading role in the strike. Strongly influenced by Black Power politics, the BSU, which had been the Negro Students Association until March 1966, promoted ideas of nationalism and self-determination, connected with the Black Panther Party, and developed tutorial and other community-based programs. The BSU's 10 strike demands focused on establishing a Department of Black Studies, authorized to grant bachelor's degrees; the admission of black students; and defense of instructor George Murray, outspoken black militant and Black Panther Minister of Education, who was fired from his part-time teaching position days before the strike began. After the strike victory, the BSU-led Department of Black Studies identified six goals, including "to educate our people to understand that the only culture we have is one that is revolutionary (directed toward our freedom and a complete change in our living conditions), and that this will never be endorsed by our enemy"; "to educate ourselves to the necessity of relating to the collective and not the individual"; and "to redistribute the wealth, the knowledge, the technology, the natural resources, the food, land, housing, and all of the material resources necessary for a society and its people to function."

When promoting black nationalism, the BSU also forged Third World alliances. In spring of 1968, BSU organized the TWLF to involve other ethnic groups in the struggle for minority inclusion and ethnic studies. The Intercollegiate Chinese for Social Action (ICSA), Philippine-American Collegiate Endeavor (PACE), and Asian American Political Alliance (AAPA), as well as the Mexican American Student Confederation, Latin American Student Organization, and BSU comprised the TWLF. Although half of the six TWLF groups, Asian American activism was largely invisible in the strike's historiography until the publication of Karen Umemoto's essay in an

Amerasia Journal special issue commemorating the strike's 20th anniversary. ICSA formed in October 1967 to focus on social, cultural, and community activities, but by the next fall, more militant leadership pushed the organization to join the strike. PACE began in spring of 1968 to struggle for the rights of Pilipino youth to determine their own lives. Formed in late summer 1968 by mostly Japanese American women, the AAPA at SF State was explicitly political from its start and was influenced by the radical politics of UC Berkeley's AAPA.

Three themes underlay the TWLF demands. First, the TWLF promoted education as a human right and demanded open admissions for all non-white students. Second, the TWLF challenged the fundamental purpose of education by defining a "relevant education" as one that prioritized the needs of working-class communities above the job-training needs of corporations. Ethnic studies were designed not only to include the experiences and perspectives of racially marginalized groups, but also to develop a community-based curriculum. Third, the TWLF fought for "self-determination" and the power of students and people of color to develop their own curriculum and to hire and fire faculty.

Three presidents presided over SF State in 1968 and 1969. The first two, white liberals, were fired or resigned. Then in late November 1968, the Trustees appointed S. I. Hayakawa, a semantics professor and future Republican senator, as the college's acting president. Hayakawa's appointment was controversial for numerous reasons, and became even more so when the Trustees bypassed faculty governance in unilaterally appointing him. Hayakawa operated as a law-and-order autocrat who was not afraid to face down student militants. On the first day of an open campus under his administration, Hayakawa, angered that students dared to defy his order banning amplified sound, jumped on top of the sound truck and wildly pulled out the wires of the amplifier. Before the press that evening, Hayakawa glibly stated, "This has been the most exciting day of my life since my tenth birthday, when I rode on a roller coaster for the first time." Hayakawa's impulsive theatrics, his disrespect for faculty governance, his inattention to university procedure, and of course, his unabashed opposition to student demands gained him the ire of the Academic Senate (the main

faculty body), the Associated Students, and activist students. But Hayakawa's approach won him widespread approval from the general public. A Gallup poll selected him as the nation's top educator. The National Council of Churches named him Man of the Year. And California governor Ronald Reagan declared: "I think we have found our man."

Hayakawa had a polarizing effect, but there were internal tensions as well. The students did not necessarily trust the faculty, who initiated their own strike late and ended it early. There were tensions between white students and students of color, as well as within the TWLF. But in the end, the resources of the university, violent police attacks against students, and massive arrests, including 453 on a single day, rendered negotiable the students' "non-negotiable" demands. Although some contend that the TWLF accomplished little, others saw it as a major victory. Significantly, they established the first School of Ethnic Studies in the nation. They gained 22 faculty positions, a Black Studies department, student participation on committees, and a commitment to increase the percentage of special admission slots.

Across the Bay, at UC Berkeley, another TWLF formed, comprised of the Afro-American Student Union, Mexican American Student Confederation, Asian American Political Alliance (AAPA), and United Native Americans. At Berkeley, black students were frustrated by what they viewed as the administration's thwarting for nine months of their proposal for a Department of Black Studies. Chicano students, who had pressured the university to boycott grapes in solidarity with Cesar Chavez's United Farm Workers strike, also wanted more classes focusing on their histories and communities. Through AAPA, students had won Berkeley's first Asian American studies course scheduled for the winter of 1969. Inspired by SF State's strike, Berkeley's strike began on January 22, 1969. By comparison to SF State, Berkeley's TWLF groups shared power more equally, the Black Panther Party exerted a lesser influence, and the largely middle-class campus suffered fewer arrests. Still, police violence was high at Berkeley, with TWLF leaders and bystanders alike being beaten to the point of needing hospitalization. In one case, a white nonstriker tried to stop the police beating of a black reporter, first by shouting and then by

kicking an officer. For his efforts, the police took him to the basement, where they beat him into semiconsciousness and knocked out his front teeth.

By and large, Asian American student organizations supported the TWLF strikes. In fact, when Asian American groups from various campuses met at UC Berkeley in mid-January 1969, they passed a resolution to support the SF State strike and the general movement for ethnic studies. During the first week of winter quarter, students attending Berkeley's first Asian American Studies course met after class to discuss the strike. Although there was some opposition, the AAPA-led group decided to join the strike. The TWLF used a collective model that rotated leadership among the four groups, while also promoting organizational autonomy. AAPA contributed visible leadership; most notably, Richard Aoki, a Japanese American Black Panther Party leader, who became a strike spokesperson and symbol of Asian militancy. Many Asian American women and men developed militant tactics on the picket line and attended lengthy late-night meetings promoting participatory democracy.

The contrast between UC Berkeley's Chancellor Roger Heyns, widely regarded as a liberal, and SF State's President S. I. Hayakawa illustrates the far-reaching goals of the strikes for radical restructuring. In an open letter, printed in the campus newspaper on the first day of the strike, Heyns stated that early on, he initiated the Educational Opportunity Program to increase the number of minority students. In 1966, there were 15 EOP students; by 1968, there were over 800 EOP students. He also claimed to have already promised to work toward a Black Studies program. But to students, the crux of the issue was self-determination and power. Although Heyns found it reasonable and appropriate to work through established university procedures, the TWLF wanted educational transformation. They wanted the curriculum to include not only ethnic studies, but also community-oriented courses. They also wanted to change institutional structures and procedures so that students would have increased power to affect decision making at the university.

After striking for six weeks, on March 4, 1969, UC Berkeley's Academic Senate reversed their earlier position and voted near unanimously to establish a Department of Ethnic Studies. Following the strike

victories at SF State and Berkeley, numerous black, Chicano, Asian American, and/or ethnic studies programs were established nationwide. Inspired by the TWLF strikes, these programs emerged as a result of student protest or were implemented by administrators seeking to avert potential student rebellion. The strong community commitment and student control of many of these departments has long since disappeared, but an emphasis on issues of inequality and social justice has become the tradition of these academic units. Despite ongoing attempts to dismantle ethnic studies, such as Arizona's 2010 ban, ethnic studies is now widely viewed as a legitimate field of academic study and ethnic studies departments or programs have been created in colleges and universities, as well as some high schools, throughout the nation.

Third World Unity

In the 1960s and 1970s, a period in which cross-racial solidarities flourished, Asian Americans were arguably the strongest practitioners of Third World unity. From

the start, the new pan-Asian identity created in the Asian American Movement (AAM) was consciously linked to Third World unity. It was important to Asian American activists, labeled as politically passive model minorities, to assert that their subjugation was intertwined with the oppression of peoples everywhere. In the shadow of Bandung and in the milieu of Black Power, opposition to racism and imperialism formed the basis for Third World unity, domestically and globally.

In *Asian American Panethnicity*, Yen Le Espiritu noted that prior to the late 1960s, “ethnic disidentification” characterized Chinese, Japanese, and other “Oriental” groups. During World War II, Chinese, Korean, and Filipino Americans distanced themselves from Japanese Americans to avoid the fierce anti-Japanese stigmatization and to oppose Japanese expansionism in their homelands. As Espiritu observed, by the late 1960s when the baby boom generation came together on college campuses, the social conditions existed, including a common language and youth culture, that enabled the forging of a shared identity. Moreover, after Bandung, the political conditions existed to create pan-Asian and Third World unity. From the start, pan-Asian formation was a political strategy—rather than an assumption of shared cultures, traditions, or histories—to draw together small numbers of disparate groups to contest racial oppression. Although Asian Americans were a domestic minority, AAM activists understood that by forging cross-racial and international ties, they formed a global majority. AAM activists thus developed their panethnic Third World identity through two interrelated processes—their connectedness with Asia and the global Third World and their connectedness with Black Power and other U.S.-based Third World movements.

Spurred by the fight for democracy espoused during World War II, numerous Third World countries struggled for freedom against colonial rule. In 1955, 29 newly independent countries came together at the Asian-African Conference in Bandung, Indonesia, to work for world peace and against racism, formal colonialism, and neo-colonialism (or the continuing colonial control via international economic arrangements of Third World development). The newly independent countries became known as the Third World

or the Non-Aligned Movement, seeking to avoid being caught in the Cold War conflict between the First World of the capitalist sphere and the Second World of the Communist sphere. For the U.S. New Left, the national liberation struggles in Asia, Africa, and Latin America not only provided revolutionary visions for transforming society, they also inspired Third World solidarity. By demonstrating that a small nation could defeat a powerful one, Vietnamese freedom fighters inspired Cuban revolutionary Che Guevara to call for “Two, Three . . . Many Vietnams.” Cuba itself provided strong support and resources to liberation struggles in Angola and elsewhere. And China became the foremost revolutionary model for U.S. radicals.

The U.S. black militant Robert F. Williams became a leading symbol of Third World radicalism. Williams was an imposing figure who dared in the 1950s U.S. South to arm and organize blacks to defend themselves against the violence of the state and white vigilantes. After being forced to flee death threats by the Ku Klux Klan, Williams resided throughout the 1960s in exile in Cuba, China, North Vietnam, and Tanzania. In an essay in the *Asian Americans for Action* newsletter in New York, Yuri Kochiyama discussed the famed black leader’s relationship to Asians—his eliciting two widely read statements from Mao in support of black liberation, his admiration of Mao and Ho Chi Minh, and his meeting with exiled Thai freedom fighters in Peking. Kochiyama herself had corresponded with Williams during his exile in China and distributed his banned newspaper, *The Crusader*, as had fellow Japanese American Richard Aoki. Aoki joined the Black Panther Party, in part, because of the Party’s promotion of Third World unity. The Panthers studied Mao and Fanon, sold Mao’s Red Book, and connected black oppression to Japanese American concentration camps, the bombing of Hiroshima, the war in Vietnam, and the genocide of Indigenous Peoples. Party leaders Huey Newton and Eldridge Cleaver, on separate delegations, traveled to North Korea, China, and/or North Vietnam, and several Party leaders resided in exile in Cuba and Algeria.

For Asian American activists, the global gaze was particularly important. In 1966, the same year that birthed the Black Power slogan and the Black Panther Party, the model minority image of Asian Americans

was popularized in two widely read, respected mainstream publications—the *New York Times Magazine* in January and *U.S. News and World Report* in December. Both articles were titled “Success Story” and lauded the upward mobility of Asian Americans. The more sophisticated of the two, written by sociologist William Petersen, compared Japanese to “Negroes” as “object[s] of color prejudice,” but quickly turned into a story of Japanese American exceptionalism: “By any criteria of good citizenship . . . the Japanese Americans are better than any group in our society.” Despite decades of discrimination, Japanese Americans had gained higher educational and occupational success—but lower incomes—than whites. The article included a telling quote from a second-generation Japanese American: “I’m not smart, so if I am to go to college, I have to work three times as hard.” The article on Chinese Americans stated that “still being taught in Chinatown is the old fashion idea that people should depend on their own efforts—not a welfare check—to reach America’s ‘promised land.’” The mainstream Japanese and Chinese American communities appreciated their now positive image and embraced the model minorities logic of success through hard work, frugality, and self- and community reliance.

By contrast, AAM activists contested the model minority image—for erasing problems within the community, for promoting apolitical models of individual upward mobility, and for separating them from black and brown protest traditions. Activist Amy Uyematsu wrote an influential article, “The Emergence of Yellow Power in America,” printed in the UCLA student-activist publication *Gidra* (October 1969), that captured the AAM generation’s rejection of their parents’ assimilationist and integrationist aspirations. Though not by design, Uyematsu was writing in conversation with scholars from the famed Chicago School of Sociology, which in the 1920s, argued for assimilation as a solution to the “Oriental Problem.” By the mid-1960s, leading Black Power activist Stokely Carmichael argued that integration meant moving toward whiteness and thus promoted whiteness as superiority. Uyematsu was clearly influenced by Stokely Carmichael when she positioned Black Power, with its bold efforts at self-definition and self-determination, as a model for the nascent AAM. She turned the racial order on its

head by asking Asian Americans to see a shared oppression with black Americans and to challenge the anti-black racism harbored by many Asian Americans.

Many Asian American activists and organizations promoted Third World unity, some well before the onset of the AAM in the late 1960s. In the postwar years, Chinese American Grace Lee Boggs worked with the famed C. L. R. James and Raya Dunayevskaya in the Workers Party and later the Socialist Workers Party to argue that—rather than singularly promoting international workers unity against capitalism—the struggle for socialism also ought to prioritize the fight against racism. They thus supported an autonomous black movement, not subordinated to class struggle. Boggs later worked with black labor activist and organic intellectual James Boggs, her comrade and spouse, to combine Marxism, Black Power, and labor activism in Detroit’s vibrant social movements. In California, Filipino farm workers united with Chicano laborers to start the grape strike and boycott, famously associated with Cesar Chavez and the United Farm Workers of America. Yuri Kochiyama gained prominence for her work with Malcolm X, the Republic of New Africa, and in defense of political prisoners, prior to becoming a leader of the New York AAM. Richard Aoki, the highest-ranking non-Black in the Black Panther Party, brought his Marxist-Leninist ideas and his penchant for self-defense to the Third World strike at UC Berkeley and the Asian American Political Alliance (AAPA).

In the period of Vietnam and Black Power and in the spirit of Bandung, AAM activists developed a Third World unity that contested racism, capitalism, and imperialism and connected with global liberation struggles. In 1968 in Berkeley, one of the first AAM organizations, AAPA, stated: “We Asian Americans support all oppressed peoples and their struggles for Liberation and believe that Third World People must have complete control over the political, economic, and education institutions within their communities.” AAPA member Victoria Wong expressed: “These AAPA founders also consciously and carefully chose ‘Political’ and ‘Alliance’ in the group’s name . . . to forge an openly anti-imperialist *political* organization for *all* Asian nationalities, one that could stand on an

equal basis with the other dominant Third World groups at the time, as part of the *international* Third World liberation movement for self-determination” (Wong 23). In the late 1960s, Asian Americans worked through Third World Liberation Fronts, most famously at San Francisco State College and UC Berkeley, but also at Yale and elsewhere, to struggle to establish ethnic studies and to transform education to serve working-class communities. During the 19-month Native American occupation of Alcatraz island in the San Francisco Bay, Asian American activists, both young and middle-aged, brought crates of food, clothes, and other supplies to demonstrate solidarity with Indigenous Peoples’ efforts to reclaim land and human rights.

The work to forge cross-racial solidarities was not always easy. The differential racialization between Asian American “model minorities” and black “militant minorities” affected activists as well as the general population. In her racial comparative study of Los Angeles activism, Laura Pulido found that many black and Chicano activists viewed Asian Americans as immune from racism and thus not allies in the struggles for justice. Manuel Delgado, Chicano leader of the Third World strike at UC Berkeley, acknowledged: “We didn’t know much about Asian Americans except that they kept to themselves and were non-confrontational.” During the Third World strike at San Francisco State College, tensions existed among Third World groups as the administration’s offering of differential incentives created divisions. But the very act of working together also diminished stereotypes and brought unity in unexpected ways. During the Third World strike at UC Berkeley, a black activist and complete stranger gave his father’s gas card to Richard Aoki to provide unlimited fuel for strike activities. Aoki physically backed up Manuel Delgado against police batons, and for his support, got arrested. Not only did Delgado’s “erroneous perception . . . change during the course of the strike,” but 30 years later, he would state: “The heart and soul of the strike was the AAPA. They were the best organized, hardest working and most committed to the common struggle of the Third World” (TWLF Strike, 1969).

It was not only their relatively small numbers, their relative invisibility, and the model minority image, but more so, their view that their own liberation was intricately linked to the liberation of peoples everywhere that motivated the strong Third World unity embraced by Asian American activists.

thúy, lê thi diem (1972–)

lê thi diem thúy is a poet, fiction writer, and solo performance artist (lê is the family name, and the lower case inscription of the name is her personal preference). lê and her father escaped their native country of Vietnam and came to the United States by boat in 1978. They settled in Southern California, where lê learned English quickly so that she could translate for her father.

Born in Phan Thiết, the Republic of Vietnam, in 1972, lê received her BA in 1994 from Hampshire College, where she focused her studies on cultural studies and postcolonial literature. In 1993, she went to Paris to conduct research on French colonial photo postcards made in the early 1900s.

lê has written two solo shows, *Red Fiery Summer* and *the bodies between us*, which she has performed at the Whitney Museum of American Art at Philip Morris, the International Playwright's Festival in Galway, Ireland, and the Third New Immigrant's Play Festival at the Vineyard Theater in New York City, among other venues. Her first novel, *The Gangster We Are all Looking For*, was published by Knopf in 2003. Her work has also appeared in *The Massachusetts Review*, *Harper's*, and the anthology *Watermark: Vietnamese American Poetry and Prose*.

lê's writing spotlights individual narratives and histories within larger historical events. In a statement she made as a Lannan Foundation fellow in 2001, lê states that much of her work focuses on the "presence of the dead on the lives of the living." lê's interest in the lingering presence of the dead and the ways in which the past constantly presses upon the present is given shape in *The Gangster We Are All Looking For*, where memories of the narrator's dead brother, the Vietnam War, and the extended family that is left behind, exert an acute, albeit obliquely told, impact on the day-to-day struggles of the narrator and her family.

She was recipient of a United States Artist Fellowship in 2008. lê is currently working on her second novel.

Tibetan Americans

Tibetan Diaspora

In 1949, the People's Liberation Army of China marched into Tibet's eastern provinces of Amdo and Kham and subsequently occupied the eastern Tibetan

headquarters of Chamdo. In 1951, the CCP imposed "The 17-Point Agreement for the Peaceful Liberation of Tibet." The Chinese army advanced further west and crushed the Tibetan national uprising of Lhasa in 1959. This year saw the consequent flight of the Dalai Lama (spiritual and temporal head of Tibet), and approximately 100,000 Tibetans to northern India. The Tibetan exile government was relocated in the hill station of Mussoorie in North India. In May 1960, the exile government was moved to Dharamsala and the Central Tibetan Administration (CTA) was established. Since then, the Tibetan government-in-exile headed by His Holiness the Dalai Lama, along with the support of the Indian Government, has provided the diaspora community with a sound infrastructure. The bulk of the Tibetan exiles approximating over 130,000 are concentrated in India, Nepal, and Bhutan. A small percentage are scattered in Australia, the Far East, Canada, Britain, Denmark, Norway, and Sweden with the largest concentration in Switzerland. In the last 14 years, the support of the United States government has encouraged more and more Tibetans to immigrate to the United States.

Central Tibetan Administration

Notwithstanding the ambiguous legal standing, the exile government functions with a cabinet (*kashag*) and an assembly elected by members of the exile community worldwide. The diaspora community looks to the CTA as their legitimate government and true representative of the Tibetan people. The principal task of the CTA is the rehabilitation of Tibetan refugees. This program involves promoting education among the exile population, building a culture of democracy, and paving the way for self-reliance. According to the exile government, "the CTA's experiment with modern democracy, in particular, is a preparation for the reconstruction of Tibet when freedom is restored there." On September 2, 1960, the Commission of Tibetan People's Deputies was instituted, maturing in time into a full-fledged legislative body known as the Assembly of Tibetan People's Deputies (ATPD). The Assembly was empowered to elect the Tibetan *Kashag* or the Council of Ministers, which was made answerable to the people's elected representatives. The

Kashag (Cabinet) is the apex executive body. Similarly, the Tibetan judiciary, known as the Supreme Justice Commission, was instituted.

The newly empowered Assembly of the Tibetan People's Deputies issued the exile Tibetan constitution under the title of *The Charter of the Tibetans in Exile*. In 2001 the ATPD, on the advice of His Holiness the Dalai Lama, amended the Charter to provide for direct election of *Kalon Tripa* (the highest executive authority) by the exile populace. The *Kalon Tripa*, in turn, nominates candidates for the post of other *kalons* (cabinet members), and seeks the parliament's approval for their appointment. The candidates winning a simple majority in the parliament are declared appointed. Incidentally, the first directly elected Kalon Tripa was Professor Samdhong Rinpoche, a Gandhian with lifelong commitment to education, nonviolence and local self-rule. He took the oath of office on September 5, 2001. Today, the CTA functions with the departments and attributes of a free democratic government.

Tibetan Pioneers in America

Because of the invasion by China, the understanding of Tibet in the West is tied to the exile situation and Tibetans as refugees. Literature on Tibetans largely ignores Tibetans who are citizens of countries in South Asia. Such domicile Tibetans comprise a sizable number of the Tibetan populace in the Himalayan belt. One such domicile Tibetan was Tenki Tenduf Davis, granddaughter of Sardar Bahadur S. W. Laden La, the Chief of Police in Darjeeling under the British in India. Tenki was the first lay Tibetan to set foot on American soil. She came to the United States in 1951 and studied medicine at Columbia University. Later she became the director of a medical establishment in North California.

On an official level, the first Tibetans to see the "New World" were a small delegation led by Tsepon Shakabpa, representative of the Tibetan Government in Lhasa, to Washington, D.C. in 1948. However, the U.S. President, Harry S. Truman refused to meet the delegation to avoid creating tension with China.

Among the exiled Tibetans who immigrated to the United States, a sizable number were monks. In 1949,

Telopa Rinpoche arrived at Johns Hopkins University to teach Tibetan language. Then, three years later, Thubten Jigme Norbu, the elder brother of the Dalai Lama arrived. Norbu, retired professor of Tibetan history at Indiana University, was also the founder of the Tibetan Cultural Center in Bloomington, Indiana. By 1989 about 500 Tibetans had settled in North America. In 1967, six young Tibetans were employed as woodcutters by the Great Northern Paper Company in Maine. The low cost involved in employing them must have been an advantage, for subsequently 21 more Tibetans were employed. By 1985 approximately 500 Tibetans had settled in North America.

United States-Tibet Policy

Western interest in Tibet and its people received a tremendous boost following His Holiness the Dalai Lama's visit to the United States in 1979. His address to American politicians, scholars, scientists, religious groups, and in particular his meetings with President Bill Clinton and George W. Bush—though as a religious leader—were welcomed as very positive.

On September 21, 1987, in an address to the United States Congressional Human Rights Caucus, the Dalai Lama put forth his Five Point Peace Plan for Tibet. The Plan called for the transformation of Tibet into a zone of peace, an end to China's population transfer policy, respect for the fundamental rights and freedoms of the Tibetan people, protection of Tibet's environment and an end to any nuclear activity in Tibet, and sincere negotiation on the future status of Tibet. This public appeal, popularized as the "Middle Way," was introduced to the Chinese government and the European Parliament in Strasbourg in June 1988. In it, the Dalai Lama elaborated the final point of his peace plan. He said the whole of Tibet—that is U-Tsang, Kham, and Amdo—should become a self-governing entity "in association with the People's Republic of China," and that the PRC could remain responsible for Tibet's foreign policy and could maintain limited military installations for defense purposes. This "Middle Path" represented the exile government's genuine willingness to compromise. Despite its conciliatory position and despite giving up the demand for independence, the PRC rejected the

Strasbourg Proposal as a call for “disguised form of independence.” Since then, all attempts for discussions have ended in rebuffs. In April 1997, during his visit to Washington, the Dalai Lama told reporters he seeks only autonomy and not independence for Tibet.

Despite President Reagan’s 1986 statement that Tibet is part of the People’s Republic of China, the U.S. Congress recognized Tibet as an occupied country. Under section 355 of Public Law 1991, the U.S. Congress declared Tibet, including those areas incorporated into the Chinese provinces of Sichuan, Yunnan, Gansu, and Qinghai, as an occupied country and claimed Tibet’s true representatives to be the Dalai Lama and the Tibetan government in exile.

This recognition of Tibet by the U.S. Congress as an occupied country was celebrated by Tibetans as a triumph in their struggle. However, this statement was not intended to require the U.S. president to make a new national interest determination specific to Tibet. Therefore, critics have argued that this recognition has no effect on U.S. policy toward China. The United States has commended the Dalai Lama’s decision to give up independence, and since November 1997, the U.S. administration has appointed a special coordinator to help facilitate dialogue between the Dalai Lama and Beijing. The United States does not support Tibetan independence but maintains its policy is to preserve Tibet’s unique religious, cultural, and linguistic heritage. The United States has clearly stated that its effort is part of its objective to promote the protection of human rights in China. During his presidency, Jimmy Carter relentlessly emphasized human rights in U.S. foreign policy. Since the late 1980s, the United States has made special efforts to work with the exile government. Under Section 134 of the U.S. 1990 Immigration Act, sponsored by Congressman Barney Frank, Edward Kennedy, and Tom Lantos, 1,000 immigration visas were issued to Tibetan refugees from India and Nepal. According to reports, some 10,000 applications were received. The successful rehabilitation of the 1,000 immigrants in different parts of the United States depended on American sponsors and Tibetan cosponsors.

Initially sponsored by the New York Tibet Fund, the new arrivals were received at the airport and carefully coached to adjust to the new environment.

Lacking proper education, most of them were employed as unskilled laborers. A small percentage was professionals such as nurses, accountants, and teachers and some students. Although falling within the purview of the international definition of refugee as contained in the 1951 United Nations Convention relating to the Status of Refugees and its 1967 Protocol, which has been incorporated into U.S. law, political considerations dictated that Tibetans be categorized as immigrants and not refugees. According to U.S. government agencies, Tibetan immigrants arrive with documents from India, Nepal, and other countries and hence do not qualify for refugee status in the United States. This is indicative of how the refugee is reconceptualized in various institutions. Consequently, this classification made them ineligible for refugee assistance from the government.

The Dalai Lama’s special envoy in the region was Lodi Gyari. On September 30, 2002, under the Foreign Relations Authorization Act of 2002–2003, the Tibetan Policy Act was signed into law by President George W. Bush. Considered to be the most comprehensive legislation passed by the U.S. government on Tibetan affairs, its principal task is to help the Tibetans and encourage efforts to find a negotiated solution for Tibet. Under this Act, the U.S. special coordinator for Tibetan issues is expected to promote substantive dialogue between the government of the People’s Republic of China and the Dalai Lama and his representatives, foster a policy to protect the distinct religious, cultural, linguistic, and national identity of Tibet, press for respect for human rights, and consult Congress on policies relevant to Tibet, its future and the welfare of the Tibetan people. In addition, the Act makes a pledge to support and monitor the economic development of Tibet, to request access to prisons and release of Tibetan prisoners, to urge the PRC to stop religious persecution in Tibet and to require the Tibetan language training for U.S. Foreign Service officers in the PRC responsible for monitoring developments in Tibet. Provisions have been made by the U.S. Congress to provide financial assistance including scholarships to Tibetans in India and Nepal. For the fiscal year 2003, the amount of \$2,000,000 was authorized as humanitarian aid to Tibetan refugees in India and Nepal. The entire U.S. financial aid is allocated

by the exile government to support the continuous inflow of new refugees arriving from Tibet.

Tibetans in the United States

Under the 1990 Immigration Act, the Tibetan-U.S. Resettlement Project identified its beneficiary to be those Tibetans not firmly resettled in India or Nepal. Between April 1992 and June 1993, the 1,000 immigrants were settled in 21 cities. Finally, in 1995, after waiting anxiously, the 1,000 immigrants were able to bring their family members whose number eventually far exceeded the original estimate of 1,480.

The Tibetan community in North America exchanges information with the assistance of the Tibetan Community Assistance Project (TCAP) that was established in October 1993. Wherever more than 15 Tibetans settle, Tibetan Associations are set-up. In the first phase of resettlement in North America, the Association assisted newcomers in finding jobs and securing housing. A prototype of the Tibetan *Kidu* in exile in India, Nepal, and Bhutan, the Associations provide assistance to Tibetan families during periods of crisis such as death or illness. It provides a platform for a broad diversity of events, ranging from commemorating the March 10 uprising in Lhasa, to celebrating his H.H. the Dalai Lama's birthday, to staging protest vigils when Chinese delegates visit the United States and Canada. The Associations also organize visits by monks, artists, cultural specialists, and performance groups, or even weekend prayer gatherings and parties. Some Associations undertake politically neutral events such as weekend Tibetan language classes for younger children and dance and music classes for both youth and adults. In sum, the Tibetan Associations aim both to promote Tibetan culture and to raise awareness of the Tibetan cause. The members of the community are required to pay annual *Rangzen* (Tibetan Freedom) dues to support the Tibetan government in exile. This monetary pledge is a pledge of loyalty, representing one's identity as a Tibetan irrespective of whether one is a "displaced immigrant," a refugee, or citizen of the country of residence. The Tibetans are encouraged to play an active part in the exile administration by participating in elections. Intended to engender values of democracy,

representatives from the three regions of Tibet, the five religious sects, and the two overseas constituencies are elected to the Assembly of the Tibetan People's Deputies.

In 2004, the Tibetan population in North America was estimated to be 8,730. As of 2006 the numbers fluctuate between 10,260 and 10,500 as more continue to arrive through legal and other means. According to the Conservancy for Tibetan Art and Culture (CTAC) findings the majority of Tibetans live in or near cities of 500,000 or more. The largest populations in the United States are on the East and West Coasts and in the Midwest region. They are clustered mostly in urban centers such as Washington, New York City, and Boston in the Northeast; Chicago, Madison, and Minneapolis in the Midwest; Salt Lake City, Santa Fe, and Denver in the Mountain West; Los Angeles and San Francisco in California; and Seattle and Portland in the Northwest. Of these cities, Minneapolis and New York City have the highest numbers because of better employment opportunities. Tibetans in these areas are employed in a variety of professions that range from business, administration, teaching, health and nursing, to housekeepers, nannies, store clerks, construction sites, and a host of unskilled work. A newsletter maintained by the North American *Chitue* (Association) keeps the community informed of all decisions taken by the exile government. In addition the cluster sites maintain their own newsletters. For instance, the Twin Cities (Minneapolis-St. Paul), the largest cluster site, keeps the community connected and informed through their newsletter "Yakkety-Yak."

As with many other immigrants in North America, the pressure to succeed is enormous for Tibetan families. Many Tibetan parents work 40 hours or more in a week often leaving their children to the care of friends and neighbors. They came with a certain mind-set to succeed economically. Most of the Tibetans in North America have extended families living in India and Nepal or Tibet and regularly remit money to help support their families. This support gives strength and cultural continuity in the larger exile communities in India and Nepal.

The trade-off between the imperative to succeed and live cultural constraints seriously challenge parental ability to transfer cultural values to their children.

The United States and Canada are multicultural societies ideal for cross-cultural experience but not the environment in which to foster Tibetan cultural continuity. According to a Tibetan community member it is important to develop a deep appreciation of what it means to be Tibetan; otherwise, it becomes too easy to lose one's Tibetan identity.

Indeed, Tibetans in North America form but a tiny fraction of diverse immigrants. Still, Tibet and the Tibetans appear to capture disproportionately the interest of millions of people. Whether through the popularity of H.H. the Dalai Lama, Western attraction to Tibetan Buddhism, or Hollywood portrayals of Tibet, the influence of Tibetans has grown far beyond their numbers. Tibetan culture and religion continue to influence social change in the United States and elsewhere. Since the 1950s, with the arrival of the first monks to North America, Dharma Centers of all four major traditions of Tibetan Buddhism have been established across North America. There are about 500 Dharma centers in the region. Tibetans in general belong to one of the four major Tibetan Buddhist schools: Gelug, Kagyu, Nyingma, and Sakya. The Centers run primarily by Tibetan monks and aided by Western monks has brought a dynamic aspect of Tibet's spiritualism within the reach of the Westerner. Today, the Dharma Centers in North America continue to captivate Western audiences.

This spate of Tibetans immigrating to the United States has increased the numbers of Tibetans in neighboring Canada from a mere 240 in the 1970s to close to 2,000 today. Of these, adults comprise over 70 percent, youth about 20 percent, and children and elders comprise a comparatively very small number. Clustered in Vancouver, Calgary, Toronto, and Montreal, the Tibetan community actively participates in the activities of the Canada Tibet Committee to promote awareness of the Tibet issue.

Conclusion

Tibetans have so far successfully retained their Tibetanness in a very foreign environment. With the support of the Dalai Lama's Office of Tibet in New York and with Tibet support groups such as Students for Free Tibet, International Campaign for Tibet based in

Washington, D.C., the U.S.-Tibet Committee in New York City, Friends of Tibet, and Hollywood celebrities like Richard Gere, Tibetans continue to actively promote the cause of Tibet. Free Tibet Concerts, hunger strikes, and demonstrations against the Chinese occupation of Tibet are events that draw much media attention. Opera troupes and Tibetan monks from India and Nepal regularly tour North America, familiarizing the Western audience with Tibet's rich cultural heritage and keeping the Tibet issue alive and burning.

Tien, Chang-Lin (1935–2002)

Chang-Lin Tien was the eighth Chancellor of the University of California, Berkeley. Though his term lasted seven years, from 1990 to 1997, he spent nearly four decades with the university as an assistant professor, full professor, and vice chancellor. An expert in the field of heat transfer, Tien published prolifically and served as a consultant to several governments, including the United States and Hong Kong. From the latter, he received the Grand Bauhinia Medal, Hong Kong's highest award, in 2002. As an educator, he was honored with UC Berkeley's Distinguished Teaching Award, becoming the youngest recipient of that honor in the university's history. As chancellor, he was

known for his commitment to diversity, pledging resources to nearby schools with disadvantaged students, and writing to the *New York Times* in 1996 in defense of affirmative action programs.

Tien was born in mainland China in 1935, but fled with his family to Taiwan following the end of the Chinese Civil War in 1949. He received a bachelor's degree in mechanical engineering from the National Taiwan University in 1955. Shortly after, he immigrated to the United States, where he received a master's degree from the University of Louisville in 1957 and a master's degree and doctorate in mechanical engineering from Princeton University in 1959.

Upon receiving his doctorate, Tien became an assistant professor in the Department of Mechanical Engineering at UC Berkeley. Nine years later, he became a full professor and eventually chaired the department from 1974 to 1981. Tien briefly left the university in 1988 to become executive vice chancellor of another University of California campus, UC Irvine, but returned to become chancellor of UC Berkeley. In doing so, he became the first Asian American to head a major research university in the United States.

Tien's accomplishments as an academic and engineer were prolific. He was a widely published authority on heat transfer processes, having published more than 300 journal articles on the subject. He is credited with establishing a new subfield in thermal science, microscale thermophysical engineering, and with notable contributions to numerous other fields of research, including fluid flow, phase-change energy transfer, heat pipes, reactor safety, cryogenics, and fire phenomena. In the late 1970s, Tien was asked by the United States government to assist with the Space Shuttle program, as well as the Three Mile Island nuclear meltdown in Pennsylvania.

In 1981, Tien was awarded the Max Jakob Memorial Award, considered the highest honor in the field of heat transfer, by the American Institute of Chemical Engineers and the American Society of Mechanical Engineers. In 1999, he became a "University Professor" at Berkeley, a position reserved for the most eminent faculty members in the entire University of California system. Since 1960, only 35 professors have been similarly honored.

As chancellor of UC Berkeley from 1990 to 1997, Tien was known for his commitment to campus diversity. In 1995, the Regents of the University of California voted to eliminate racial preferences in admissions. In response, Tien announced a five-year "Berkeley Pledge" of \$1 million annually to 25 nearby schools as part of an effort to help disadvantaged students meet UC admission standards. The pledge also provided academic guidance to students in grades K-12, professional training to teachers, and college and admissions information to parents. In 1996, Tien wrote a letter to the *New York Times* in which he defended affirmative action policies. He cited earlier brushes with racism at the University of Louisville, where he was a graduate student, as inspiring his dedication to maintaining UC Berkeley's diverse student body.

Tien's chancellorship was also characterized by improvements to undergraduate education at UC Berkeley. As part of his "Smooth Transition" plan for entering undergraduates, he instituted small seminar classes for first-year students, allowing them to interact more closely with faculty. This, among other initiatives, resulted in improvements to the university's undergraduate retention rate. Though the university faced significant budget cuts during his tenure as chancellor, Tien managed to diminish their impact through consistent fundraising efforts, gathering a record \$156 million in 1995. Tien's relationships with private benefactors, several of whom were Asian and Asian American, helped UC Berkeley add a number of significant features, including the Tang Center, a student health center funded by the Tang Foundation; and Tan Hall, a chemistry and chemical engineering building funded by friends of Chinese industrialist Tan Kah Kee.

As chancellor, Tien was beloved on campus for his efforts to connect with students on a person level. He consistently attended university sporting events and was known for his enthusiastic cheering. During the final examination week, Tien was also known to frequent the university's library to support studying students.

Tien stepped down as chancellor in 1997, and retired from the university soon after. He left a career and legacy that had accumulated numerous accolades

and honors. In 1962, only three years after receiving his doctorate and joining the faculty at UC Berkeley, Tien received the university's Distinguished Teaching Award, becoming the youngest professor to do so at age 26. In 1976, Tien joined the National Academy of Engineering, which awarded him its highest prize in 2001. In 1997, Tien became the first recipient of the UC Berkeley Presidential Medal. UC Berkeley's Chang-Lin Tien Center for East Asian Studies, the asteroid Tienchanglin, and the Chevron oil tanker Chang-Lin Tien are all named in his honor.

In 2000, Tien was diagnosed with a brain tumor. Shortly afterward, he suffered a stroke from which he never fully recovered. Just two years after his diagnosis, Tien died at the age of 67. He was survived by his wife, Di-Hwa, three children, and four grandchildren. His son Norman Tien is the dean of Case Western Reserve University's Case School of Engineering. His daughters Phyllis and Christine Tien are, respectively, a physician at the University of California, San Francisco, and a senior program officer at The California Endowment, a philanthropic health foundation.

Ting, Samuel Chao Chung (1936–)

Samuel C. C. Ting is a prominent Chinese American physicist best known for his experimental discoveries in the field of high energy physics, including that of the J/ψ particle for which he shared the Nobel Prize in Physics for 1974. He has also been active in promoting U.S.-China scientific exchange.

Samuel Chao Chung Ting (Ding Zhaozhong in *pinyin*) was born on January 27, 1936, in Ann Arbor to father Ding Guanhai and mother Wang Junying,

two Chinese students who had just received their MAs at the University of Michigan. At the time, Ting's father, a civil engineer, had already returned to China to take up a professorship at the Jiazuo Institute of Technology in Jiaozuo. His mother, an educational psychologist, followed suit with Ting in tow in April of that year. In the next few years, Ting became a young refugee as the family fled the Japanese invasion, eventually to Chongqing, the wartime Chinese capital in southwest China, where Ting's father and mother both found jobs as college professors. Following the Japanese defeat in 1945, they moved to Nanjing after a short detour in Qingdao by Ting and his father. In 1949 the Nationalists lost the civil war to the Communists and Ting moved again with his family to Taiwan, where in 1955 Ting enrolled at Tainan Institute of Technology in Tainan.

In 1956, Ting transferred to the school of engineering at his parents' alma mater at Ann Arbor but switched to physics in 1957. His passion for the new field was soon bolstered even further by the exciting news of Chinese American physicists Chen Ning Yang and Tsung Dao Lee's winning the Nobel Prize in Physics later that year. From Michigan he earned bachelors of science and engineering in physics and in mathematics in 1959, a master's degree in 1960, and a PhD in 1962 in experimental physics.

Choosing challenge over stability, Ting turned down an offer of assistant professorship at the University of Rochester and instead went to the Nevis Laboratory at Columbia University as a research associate in 1962 where he had opportunities to work with the well-known Chinese American experimental physicist Chien Shiung Wu before moving soon to CERN, the European center for nuclear research in Geneva. There Ting worked with Giuseppe Cocconi, an Italian physicist, conducting experiments on a proton synchrotron. In 1965, Ting returned to Columbia as an instructor in physics, promoted to assistant professor a year later.

In 1966, Ting made his first mark in the world of physics: leading an international group at the Deutsches Elektronen-Synchrotron (DESY) in Hamburg, Germany, Ting conducted an experiment that helped establish the validity of quantum electrodynamics (QED), a foundational theory of modern physics, against several earlier purported experimental

challenges. The QED experiment brought Ting international fame in physics as well as an associated professorship at the Massachusetts Institute of Technology in 1967, followed two years later with a full professorship.

In the late 1960s and early 1970s, Ting worked on high energy particles of light, or photons. When photons reached a high energy, they sometimes, as a fascinating physical phenomenon, turned into other particles called vector mesons that actually have masses several times that of protons. Because these mesons shared most other qualities with the photons except their masses, Ting called them “heavy photons.” At the time, there were three known heavy photons: the “rho,” “phi,” and “omega.” Theorists believed that these particles, which were very short lived, were, like protons and neutrons, made up of more fundamental particles called “quarks.” The prevailing theories assumed that there were three kinds (“flavors”) of quarks and their antiparticles (antiparticles are the same particles with opposite charges)—“up,” “down,” and “strange”—and they made up the heavy photons: up-antiup (rho), down-antidown (phi), strange-antistrange (omega). Ting, however, followed his intuition and believed that more heavy photons might exist and require a revision of the existing quark theory.

In 1972, Ting led a team of collaborators to conduct a difficult experiment at Brookhaven National Laboratory in Long Island to detect new heavy photons, likening it to “looking for a particular pair of raindrops on a rainy day in Boston.” All the hard and meticulous work by Ting and his team paid off in September 1974 when analysis of the experimental data indicated the appearance of a new particle at the energy level of 3.1 GeV (giga or billion electron volts). It was a sensational discovery but Ting decided to postpone publication for rechecking and for investigating the possibility of the discovery of a second particle. Finally, news that another team of physicists at the Stanford Linear Accelerator Center (SLAC), with collaborators from the University of California, Berkeley, and headed by Burton Richter of SLAC, made an apparently independent discovery of the same particle pushed Ting into making the announcement.

The almost simultaneous discoveries naturally provoked controversies about priority claims. The Nobel committee settled the matter, to some degree, with its awarding the Nobel Prize in Physics for 1976 to both Ting and Richter. (Ting made his Nobel acceptance speech first in Chinese and then in English.) The new particle was named “J” by Ting, “ ψ ” by Richter’s team, and later officially “ J/ψ ” by the physics community. Soon it became clear that “ J/ψ ” revealed the existence of a fourth quark, “charm,” which had been predicted by the Harvard theoretical physicist Sheldon Glashow. Glashow explained the “ J/ψ ” as a meson made up of a charm and an anticharm, thus completing the November Revolution in physics that eventually helped unify electromagnetic and weak interactions, two of the four fundamental forces in nature (the other two are strong and gravitational forces).

The hard-driving Ting continued to be a major force in experimental high energy physics following the J/ψ discovery, leading international experimental groups, often with participation by scientists from China, at DESY, CERN, and elsewhere. In the late 1990s, Ting led the international effort to construct the so-called Alpha Magnetic Spectrometer (AMS) to detect dark matter and antimatter in space. The AMS was flown and tested in space shuttle Discovery in 1998 and a newer version of it was to be put on the International Space Station in 2009 or 2010.

Ever since his first trip back to China in 1975, Ting has made frequent visits there, involving a large number of Chinese scientists in international scientific collaborations, and otherwise promoting science and education in mainland China, Taiwan, and Hong Kong.

Tokyo Rose

Tokyo Rose was a moniker used to describe nearly a dozen female radio personalities working for Radio Tokyo in Japan during World War II. Although Tokyo Rose was actually many different women, the name became a near mythic phenomenon among American soldiers serving in the Pacific who claimed that she tried to demoralize them with stories of Allied defeats, taunts, American music, and tales that made them long for home. Many American servicemen reported that these efforts often had the opposite effect of lifting their spirits. Still others claimed that Tokyo Rose possessed detailed information about the American military's movements in the Pacific Theater. Regardless of the fact that no one person could lay claim to the title of Tokyo Rose, the name is most commonly associated with Iva Ikuko Toguri D'Aquino, a Japanese American citizen who broadcasted for the Radio Tokyo program "Zero Hour" and who was later convicted of treason by a U.S. court for her association with this organization. Although the court convicted her under questionable circumstances, she has, however, erroneously been branded as the face of the Tokyo Rose persona.

D'Aquino's path to infamy was a convoluted one, which began in the United States. She was born Ikuko Toguri in Los Angeles on July 4, 1916, but used the name Iva. Her father, who was a merchant who owned a small business, raised his daughter as an American and did not teach her the Japanese language. After graduating from the University of California, Los Angeles in 1941, she hoped to pursue a medical degree. However, she left for Japan that year without a passport to either study medicine or care for a sick relative. She possessed a letter verifying her citizenship and planned on acquiring the necessary return

Correspondents interview Tokyo Rose (Iva Ikuko Toguri D'Aquino) in September, 1945. (National Archives)

documents at the American consulate in Japan. Those arrangements would not be completed, as later that year the Japanese attacked Pearl Harbor. She elected to remain in the country but refused to renounce her citizenship, despite being labeled by the Japanese government as an "enemy alien."

In the following years, Toguri worked as a typist for the Domei News Agency and, by August 1943, for Radio Tokyo. Later that year Toguri was asked to broadcast for the Japanese propaganda show "Zero Hour," which was tasked with lowering American troops' morale. An Australian broadcaster named Charles Cousens, who also worked for Radio Tokyo, had recommended Toguri for the position, hoping to make a mockery of the show due to her deep voice and slight lisp. Japanese troops had captured Cousens in Singapore and coerced him into working for Radio Tokyo in exchange for allowing him to read the names of Allied POWs, which Cousens believed would assist American families. For her part, Toguri went along with Cousens's subtle jests toward the station and its psychological warfare campaign. The Japanese authorities seemed none the wiser regarding the nuance of the

show and considered Toguri highly effective in her propaganda role, which she shared with several other English-speaking female broadcasters, on “Zero Hour.”

During her “Zero Hour” broadcasts, Toguri used the show name “Orphan Ann” or “Orphan Annie” and later stated that her comments supposedly aimed at lowering American morale were meant to be tongue-in-cheek. Rather, she hoped to raise American servicemen’s spirits by playing American music and reading the news. After the war, the army analyzed these broadcasts and confirmed that most troops reported that these broadcasts improved their morale. At the same time, the army expressed concern over Toguri’s reported awareness of American military movements in the Pacific Theater. By the spring of 1945, Toguri married Felipe D’Aquino, a citizen of Portugal of Japanese and Portuguese ancestry. Despite her marriage, Toguri did not renounce her American citizenship and continued performing her “Zero Hour” broadcasts until the war’s conclusion.

Following Allied victory in the Pacific, Mrs. D’Aquino resumed her efforts to secure a passport so she could return to the United States for permanent residence. Throughout the war, the Japanese government had pressured her to renounce her citizenship but she remained stalwartly against this. After the Japanese surrendered, the American military and press began to search Japan for those who may have committed war crimes against the United States. In the fall of 1945, two reporters, Harry Brundidge of *Cosmopolitan* and Clark Lee of the International News Service, located D’Aquino and offered her \$2,000 to admit to being Tokyo Rose and to give an exclusive interview. Foolishly, D’Aquino attempted to capitalize on this notoriety and consented. At the behest of *Cosmopolitan*’s editors, she then gave a press conference confirming she was Tokyo Rose, which led to her eventual arrest by U.S. military authorities in Japan. The magazine’s editors had deceived D’Aquino into her damning public admission and reneged on their financial offer. More than anything else, it was these incidents that led the American public and media to condemn her as the hated propagandist Tokyo Rose.

When imprisoned, D’Aquino received harsh treatment from the guards and limited contact with her

husband. At the same time, the FBI and the Army Counterintelligence Corps investigated her, but after over a year of searching found insufficient evidence to merit prosecution and released her in October 1946. Upon her release, she applied once again for a U.S. passport, but this was met with outrage on behalf of veterans groups and broadcaster Walter Winchell who railed against the notion of the woman reported to be the traitorous Tokyo Rose returning to the United States. In light of the vitriol surrounding the issue, the Justice Department reopened the investigation into D’Aquino’s wartime activities and interviewed former servicemen, and gathered information regarding her broadcasts. Evidence appeared scant, all the more so because many of her recordings had been destroyed after the United States decided not to prosecute D’Aquino in 1946. Even after many of her colleagues at Radio Tokyo, including Cousens, were exonerated, the Justice Department labored to find members of the armed forces who had heard Tokyo Rose’s broadcasts and who could match her voice with D’Aquino’s. Additionally, Harry Brundidge compelled a contact of his to commit perjury to implicate D’Aquino. With these developments, a grand jury in San Francisco convened and she was indicted on eight counts of treason. Consequently, she was detained once again in Japan in September 1948 and sent back to the United States under guard to face trial.

The trial commenced in 1949 and even after hearing all the evidence over a 13-week period, the jury deadlocked over a decision. The judge in the case pressured the jury to come to a decision, which led to D’Aquino’s conviction on one of the eight counts of treason regarding speaking into a microphone concerning the loss of ships on a single occasion. This referred to a statement she made in the wake of Allied victory at Leyte Gulf in which she said “Orphans of the Pacific, you are really orphans now. How will you get home now that your ships are sunk?” D’Aquino was only the seventh person in U.S. history to be convicted of treason. In October 1949, the judge stripped her of U.S. citizenship, sentenced her to 10 years in prison and a \$10,000 fine. Brundidge and his witness did not testify at trial because news of the witness’s perjury and Brundidge’s complicity in the matter came to light. In spite of his illicit conduct, the reporter was never charged with a crime as

the FBI only had the witness's word that Brundidge compelled him to commit perjury.

Having served six years of her sentence, D'Aquino was released from prison in 1956 and moved to Chicago to work for her father in the hopes of paying off her fine. Once she completed her stint in a West Virginia prison, D'Aquino labored to have her name cleared. She gained many supporters particularly as members of the jury spoke to the press regarding the shaky foundations of the charges and the questionable manner in which the court arrived at a conviction. Former colleagues of D'Aquino's at Radio Tokyo who had testified against her reported being bullied into doing so by the government. Some groups started disseminating petitions calling for her exoneration. She eventually received a pardon from President Gerald Ford as one of his last acts in office in 1977.

Because of her dubious conviction and treatment by the American government, many see D'Aquino as a victim of a public looking to rationalize its views about the traitorous nature of its Japanese citizens. Others believe she fell prey to a government witch hunt or conspiracy. Regardless, D'Aquino truly misjudged the impact her claim to the Tokyo Rose title would have. She maintained her assertion that she had hoped to undermine the Japanese propaganda campaign from within, but the American public had been whipped up into such a frenzy that objectivity was impossible. As a result of the anti-Japanese fervor sweeping the United States, D'Aquino's life was torn asunder and her name associated with a personification of Japanese evil.

Tomney, John (d. 1863)

John Tomney (also Tommy) is the only Chinese soldier known to have been killed in action during the American Civil War. He enlisted in New York City on May 15, 1861, in the First Regiment Excelsior Brigade, Company D, making him one of the earliest volunteers. According to his military records, he was Chinese and 18 years old.

A newspaper article published in *New York World* after his death claimed Tomney knew no English at his enlistment. Bright, smart, and honest, he nevertheless fast became a favorite in his regiment, which trained at Camp Scott on Staten Island. The entire brigade mustered into the service of the United States on June 21 and was rushed to duty in Washington a month later when the Confederates routed Union forces in the war's first real fight, the Battle of Bull Run. In December, the brigade was incorporated in the volunteer forces of the State of New York and the official designation of Tomney's regiment became the Seventieth New York Infantry.

All winter, small detachments of the brigade crossed the Potomac River into Virginia in hopes of capturing Confederate pickets, but with no success. Tomney made his own attempt after falling out of ranks on March 17, 1862, during an expedition from Dumfries to Fredericksburg. The rebel doctor that Tomney was trying to take prisoner, however, wrested Tomney's musket from his hands and delivered him to a scouting party from the Texas Brigade. Tomney, as recorded in Private J. C. Barker's diary, was "giving lip." Furious, Barker threw Tomney "across his lap and with his leather belt administered such a chastisement as that 'ruthless invader' had probably not received since childhood" (Davis).

The Texans identified Tomney as a "Celestial." Confederate General John Magruder was confused and asked if he was a mulatto, Indian, or something else. When Tomney said he was from China, Magruder invited him to join the Confederate Army. Tomney assented on condition of promotion to brigadier general. Magruder and his officers, amused by the retort, treated Tomney kindly, but did not release him, and he was delivered to Richmond's newly opened Libby Prison.

Paroled on May 12, Tomney was given the option of terminating his military service or going on paid furlough. Tomney, choosing the latter, devoted himself to his sick and wounded comrades in New York, nursing them and buying them delicacies. Ordered to report to Camp Parole, Maryland, he became a member of Captain Dimmick's Detachment, Second Battalion of Paroled Prisoners on September 23, 1862. Two months later, he returned to the Seventieth New York and was promoted to corporal on February 8, 1863. He finally experienced the full heat of battle in May at Chancellorsville, a humiliating defeat for the Union.

When the Battle of Gettysburg started on July 1, Tomney's regiment was still in Emmitsburg, Maryland. Marching nine hours, they arrived in Gettysburg, Pennsylvania, close to midnight, and the next day, July 2, Tomney was among those trapped in a murderous bombardment in the Peach Orchard. A shell tore off both his legs at the thighs, and he bled to death not long after.

Tongs and Tong War

Tongs (from the Mandarin *tang*, meaning hall) were secret societies formed through oaths of brotherhood. Tongs first emerged in China, most notably following the Qing overthrow of the Ming Dynasty in 1644 when Han Chinese formed the *Zhigongtang* in a failed

attempt to oust the new Manchu rulers. Significantly, the *Zhigongtang* had its base in Guangdong province, which was the home of many early Chinese migrants to America. The tongs formed in America lacked the political aims of their China-based counterparts. First established in San Francisco in 1852 and Hawaii in 1869, tongs in America retained the traditions of secret rituals and brotherhood oaths, and their membership came from similarly disaffected members of society. However, rather than large-scale political movements, tongs in mainland America concentrated on controlling key vice trades and fighting for power within Chinatowns.

Tongs in America drew their membership from migrants whose needs were not being met by the lineage associations or the merchant-dominated district associations (known as *huiquan*). Because tongs were societies based on rituals and oaths of brotherhood rather than family name or place of birth, they exercised greater control in selecting members than *huiquan* or clan associations could. This selectivity allowed tongs to form hierarchical brotherhoods that appealed to Chinese migrants because of the perception that all brothers benefitted from the organization. By the 1870s, this fraternal feeling and strong hierarchy helped tongs pose a real challenge to *huiquan* control of American Chinatowns. Tongs challenged *huiquan* control because they provided resources and opportunities to their members, and also because tongs did not concern themselves with being the face of the Chinese community. Whereas the merchant-led organizations largely shunned violence, tongs became synonymous with "highbinders" and hatchet men who both provided protection and exacted revenge for their sworn brothers.

Initially organized as mutual benefit societies meant to foster community and friendship among strangers in a strange land, tongs eventually became highly organized gangs intent on controlling the major vice trades of western Chinatowns: opium, gambling, and prostitution. Although merchants and their *huiquan* associations had benefitted from these same vices, in the late 1870s, as police extended their patrols into Chinatowns and American laws began to criminalize these previously accepted vices, tongs took almost total control as merchants receded in an attempt

Police examine the body of a Hip Sing Tong member in Chinatown, New York, in 1924. The shooting death was, allegedly, the result of a gang war among rival Tongs. (Bettmann/Corbis)

to maintain their respectable faces. Indeed, despite ostentatiously respectable names, such as the Tong of Peaceful Tranquility (On Leong Tong) or the Tong of Shared Victory (Hip Sing Tong), Chinatown tongs derived their status, power, and income from controlling the vice trades and demanding protection money from businesses within the territories they controlled.

As notable battles, such as the dispute between the Suey Sing Tong and the Wong clan and the war against Little Pete's (Fung Jing Doy) Sanyi Huiguan illustrate, tongs fought other groups for monopolies on vice trades, control of territory, and personal and organizational honor. Indeed, tongs might even fight as a reaction to *huiguan* failures to protect the community, as can be seen in the violence following the passage of the Geary Act (which required all Chinese residents to carry registration cards or face deportation) in 1892. The Chinese Consolidated Benevolent Association (CCBA), a coalition of the six largest *huiguan* also known as the Chinese Six Companies, lead

the fight to have the Geary Act declared unconstitutional, but their failure lead to both boycotts and violence in California Chinatowns. Still, most often tong violence was aimed against other tongs in what the press often sensationalized as "Tong Wars."

So called "Tong Wars" could start for many reasons. For instance, the early battle between the Suey Sing Tong and the Kwong Dock Tong briefly raged over the affection of a prostitute named Kum Ho. This conflict had the character of a formalized battle. The Suey Sing Tong first posted its "chun hung" declaring a grievance and seeking a fight to resolve it. The Kwong Dock Tong responded with their own "chun hung" accepting the fight. Rather than an all-out war, the two sides sent their fighting men to the agreed-upon place at the decided time and fought until the Kwong Dock fighters retreated and the Suey Sing Tong was declared the victor, based on a comparison of the wounded. As was typical of tong disputes, the fighting was just one stage and the conflict ended only after lengthy negotiations. Tong Wars were not always so formalized. Indeed, the anonymity of tong warriors, as opposed to members of lineage associations who were easily identified by their family names, was a key advantage for tong assassins, especially once tongs adopted guns rather than knives or hatchets as primary weapons.

Though feuds over individual slights or the affection of a woman continued sporadically, there were two main stages to tong violence based on competition over territory and control of vice trades. The era of large-scale and frequent tong violence on the West Coast lasted from roughly the 1870s to the early 1900s when tourism began to replace vice as a key part of the Chinatown economy. Indeed, in 1913 the Chinese Peace Association was formed to mediate tong disputes and bring the groups together as a sort of CCBA for tongs. However, as Chinese migrants spread east, new territories opened up and new tongs began to contend over control of these territories. These East Cost tongs, most notably the On Leong and Hip Sing tongs, did not have to contend with powerful and established *huiguan* or clan associations. So, rather than fighting for territory within Chinatowns, these two tongs fought for the total control of individual Chinatowns into the mid-1900s. The

conflict between the On Leong and Hip Sing tongs took on a national scope after each group established itself as a federation (the On Leong in 1910 and the Hip Sing in 1918), so that a dispute in Cleveland could lead to fighting in Newark, Chicago, or even Mexico. (Although violence could extend outside of the United States, tong tradition held that it would not extend to China.) Though the On Leong and Hip Sing tongs rebranded themselves as “associations” in an attempt to escape the negative connotations of “tong,” they continued to peddle protection and invest in vice for their key sources of income.

Tongs were distinct organizations within the social, political, and economic fabric of American Chinatowns, but they were not wholly exceptional. Following the failed China-U.S. negotiations and the Supreme Court’s *Ju Toy* decision in 1905, tongs joined with lineage associations, the CCBA, and other Chinatown organizations to support the Chinese boycott of American imports. Additionally, like the CCBA, tongs derived much of their legitimacy and their power within the Chinese community from the isolation of Chinese in America.

Tourist Industries

Tourist industries are significant economic factors in Asian American communities and are also venues for the representation of ethnic culture and heritage to the broader society. They are most evident in more established communities like Chinatown and Little Tokyo, but are increasingly spreading to emerging communities like Koreatown and Little Saigon. Although the

trope of “Orientalism” surrounded touristic representations of Asian American spaces during their initial popularization at the turn of the twentieth century, growing economic and political clout gives Asian Americans new power to control their own cultural representations in the contemporary era. As Asian American communities are increasingly more integrated with urban political and economic interests as well as global dynamics, tourist industries present opportunities and also risks for the livelihood of their small businesses and residential populations.

Chinese American communities have attracted touristic outsiders since the late nineteenth century. An author for the *Harper’s New Monthly Magazine* wrote glowingly about the exotic sights and sounds of the Chinese New Year in San Francisco Chinatown in 1880. In New York City in the 1880s, entrepreneurial white hucksters and impresarios such as George Washington “Chuck” Connors popularized “slumming” tours of Chinatown that drew gawkers and rubberneckers with lurid sights such as mock opium dens. Louis Beck capitalized on the public fascination with a sensationalistic pulp travelogue on New York’s Chinatown in 1898. More genteel observers such as the photographer Arnold Genthe also capitalized on the market for Oriental exotica by doctoring and retouching his photographs of San Francisco Chinatown published in 1906. He removed white pedestrians and English signage to more effectively portray Chinatown as a foreign place.

Although the earliest tours of Chinatown were generally commandeered and exhibited by white outsiders, the Chinese were also beginning to represent themselves to the general public. In 1894, the Chinese American community of Los Angeles participated in the Fiesta de Los Angeles parade with a dragon dance that proved so popular they were invited back for several years following. This was a maneuver of cultural diplomacy at a time that Chinatown was still publicly denigrated as a place of vice, immorality, and a danger to public health. Chinese immigrants were still denied citizenship because of the Chinese Exclusion Act of 1882. Alien Land Acts in the state of California additionally excluded them from property ownership. Negative perceptions of the Chinese continued through the following decades, and in the 1930s, Los Angeles

Chinatown was slated for removal to make way for the Union Station train terminal. A local preservationist and socialite, Christine Sterling, helped create a tourist-oriented development called China City that featured stage sets and costumes previously used in the 1937 film, *The Good Earth*, donated by the studio MGM. China City shamelessly pandered to demeaning ethnic stereotypes, and visitors were encouraged to ride rickshaws and feast on “Chinaburgers.” A second project, “New Chinatown” was led by Peter Soo Hoo, a second-generation Chinese American leader with the Los Angeles Department of Water and Power that had good relations with the city business leadership and the media. Second generation Chinese Americans born on American soil had full rights of citizenship including property rights. The New Chinatown was similarly designed as a tourist attraction, but architects were more concerned to create an authentic replication of a *hutong*, a historic lane or alley typically found in Chinese cities. The development was completed with courtyards and elaborate gateways and opened in 1938 to much celebrity fanfare including an appearance by the actress Anna May Wong.

The year 1938 also witnessed the start of Nisei Week in Los Angeles Little Tokyo as a collaboration of the mainly *Nisei* (or second-generation) Japanese American Citizens League and *Issei* (first-generation) leaders. As such it was a collaboration of the mostly younger American generation and immigrants that were still Japanese nationals, and staged to boost the local economy and foster Japanese identity as well as promote American public understanding of Japanese culture at a time when anti-Japanese action was flaring among Americans who felt threatened by the geopolitical advances of Japan. The festival was halted for six years during wartime, but reorganized afterward. Events in the two-week festival include a grand parade, exhibitions, car show, art show, tofu festival, and a beauty pageant whose winner, the Nisei Week Queen, serves as an official cultural ambassador to the American public. For some years there was a dog show, and the official Nisei Week mascot, Aki the Akita, still survives as a cartoon and costumed character. The spirit of patriotic allegiance to America imbued in the festival generated a sense of ideological consent especially in the wartime and conformist

McCarthy years but the rise of the Civil Rights Movement and arrival of new flows of immigrant labor and capital after the 1960s gave the festival a more cosmopolitan and progressive character.

Chinese Americans launched similar festival celebrations in their communities in the postwar era. Wartime alliance between the United States and China against Japan assisted in bringing an end to the Chinese Exclusion Act in 1943. Leaders in San Francisco Chinatown in 1952 began to stage expansive Chinese New Year celebrations that could encompass and promote the participation of the American public. In 1955, the Los Angeles Chamber of Commerce was created and they also began to stage an extended Chinese New Year festival with street parade, car show, food festival, and Miss Chinatown beauty pageant. The Asian American tourist industries during the postwar years married tools of urban boosterism with civic discourses of American patriotism and community spirit.

With the social and economic changes of the 1960s came a new chapter in the growth of Asian America communities and their tourist industries. The Hart-Celler Immigration Act of 1965 lifted decades-long restrictions against foreign immigration into the United States, and higher quotas were designated in a variety of family reunification and manpower categories. Federal and regional banking and foreign investment laws were also liberalized. These neoliberal economic policies were an outcome of America’s growing involvement in the global-economy and military intervention abroad, as well as innovations in global transportation and communications technology. Rising prosperity in the nations of East Asia boosted the flows of immigrant labor and capital to the U.S. There was expansion in the Chinatowns and Little Tokyos of America, and growth in communities of other groups such as Koreans and Vietnamese, especially into immigration gateway cities like New York, Houston, Los Angeles, and San Francisco. Some of the East Asian flows were motivated by political uncertainty surrounding Taiwan and Hong Kong, and the evacuation of Vietnamese following the Communist victory in Vietnam.

The expansion of Asian American communities stimulated the development of diversified ethnic

enclave economies. Ethnic enclave economies are characterized by a sector of unregulated or informal sector work that typically offers low wages, poor working conditions, and little job security but offers recent immigrants with poor English-speaking skills, educational or professional qualifications, and even lack of citizenship papers, a chance for a livelihood in America. The sweatshops of the garment industry are a leading sector in Chinese American enclave economies, generating export income that is subsequently recirculated and multiplied through interindustry and consumption linkages with other coethnic enterprises. Tourist industries are another significant export sector in a variety of Asian American communities, with restaurants being a principal business activity, along with other retail trade enterprises such as jewelry shops, antique and curio shops, gift shops, food markets, and ethnic niche service activities such as Buddhist temples, martial arts schools, massage therapists, herbalists and Chinese medicine centers.

Asian American tourist industries also include a growing arts and heritage sector that promotes cultural preservation, education, and the sustaining of ethnic arts and performance cultures into the future. The Chinese Historical Society of Southern California was founded in 1975 and given a home in 1995 that is now the location of the Chinatown Heritage and Visitors Center. The Chinese American Museum of Los Angeles opened in 2003 with more spacious exhibition space under the support of the Los Angeles Recreation and Arts Commission. The New York Chinatown History Project was founded in 1984 and it became the Museum of the Chinese in the Americas in 1995. In Los Angeles Little Tokyo community opposition blocked the city clearance of historic properties for redevelopment, and subsequently given protection as a National Historic Landmark District. Business leaders obtained support from overseas Japanese investors in the creation of the Japanese American National Museum, now one of the largest ethnic heritage and arts museums in America. Little Tokyo also has a lively performing arts scene that attracts Japanese Americans and the general public, with venues at the Japanese American Cultural and Community Center, and the David Henry Hwang Theater.

In the new Chinatown and Little Tokyo of the contemporary era, the leadership of these Asian American communities has new economic and political power amid an environment of global economic change and the gains of the Civil Rights Movement. Similar transformations can be seen in more recently developed Korean and Vietnamese American communities. Asian American ethnic enclave economies have helped to revitalize the downtown districts of many U.S. cities suffering urban disinvestment with the out-movement of jobs and people to the suburbs and outsourcing to overseas locations. As Asian American communities work increasingly with transnational investors and become integrated with U.S. urban growth coalitions, they are beginning to promote a type of commercial redevelopment and residential gentrification that threatens the vitality of the existing low-income population and small business sector. There have been conflicts between local and overseas circuits of labor and business capital in Los Angeles Little Tokyo and New York's Chinatown. In Los Angeles Chinatown, a fashionable new arts scene has emerged through the entry of white gallery owners and property developers drawn by the presence of undervalued real estate in the midst of an appreciating property market. The Los Angeles Chinatown Business Improvement District was created in 2000 with a white developer with Chinatown investment interests, Kim Benjamin, as its leader. In New York's Chinatown, Chinese American leaders worked with public agencies and private booster interests to create an Explore Chinatown tourist campaign, erect a manned tourist advisory kiosk, and launch a new Chinatown Partnership Local Development Corporation.

Asian American communities have reached a new stage in their economic and political development and have a chance to employ tourism to generate income and expose the American public to ethnic culture in a cosmopolitan and global environment. The spirit of civic boosterism and consent to American patriotism can conflict at times with the progressive legacy of civil rights and political self-determination. There can be slippage back into Orientalist stereotypes, as evident in a logo used by the Los Angeles Business Improvement District that depicts a "Chinaman" with

pointed hat who sports a carrying pole on his shoulders. Unbridled capitalism threatens to lead to crass commercialism and the transformation of Asian American communities into ethnic theme parks. Authenticity and cultural ownership are at stake unless Asian American tourism can be presented in a way that honors the struggles of the past and promotes public education and the interests of the community rather than unmitigated profit and commerce.

In the Vietnamese American communities of Little Saigon in Boston and Southern California's Orange County, lingering anti-Communist sentiment and American patriotism has conflicted with a second-generation discourse of civil rights and progressive politics. Overseas Korean investment capital is threatening the existing community of Los Angeles Koreatown with redevelopment gentrification. There is also evidence of interethnic conflict, with leaders in Los Angeles Koreatown in 2009 disagreeing with Bangladeshi leaders over the siting of tourist signage too close to Koreatown.

Townsend, Raymond Anthony (1955–)

Raymond Townsend is a former professional basketball player and the first Filipino American to play for the National Basketball Association (NBA). He was also the first Asian American to be selected in the first

round of the NBA draft. Standing at 6 feet 3 inches tall, the talented guard played three seasons professionally in the United States, and several years abroad, before he retired from basketball in 1988.

Townsend was born and raised in San Jose, California. His mother, Virginia Marella, is from Batangas Province, Philippines. His father, also named Raymond, is American. Townsend played point guard for three years at Archbishop Mitty High School, where he had a stellar career and was awarded the league's Most Valuable Player. He would later be inducted into the Archbishop Mitty Athletics Hall of Fame. For his senior year he played at Camden High School, where he averaged an impressive 27.2 points per game. He earned All-American honors and was recruited, among other schools, by athletic powerhouses the University of Southern California (USC) and University of California, Los Angeles (UCLA).

Townsend chose to attend UCLA. As a freshman, he played under the revered coach John Wooden, and that season (1974–1975) was a member of Wooden's tenth and last NCAA National Championship team. For the next three years Townsend was the starting guard for the Bruins. He finished his final season with numerous accolades, including team MVP, PAC-10 All-Conference First Team, and Coaches' All-American. He also made the school's record books with free throw and perimeter shooting percentages that remain among the best in UCLA history.

Though most known for basketball, in college Townsend was an accomplished baseball player as well. He filled UCLA's starting shortstop position, earning three varsity letters and amassing a batting average of more than .300. At one time Townsend considered pursuing a professional baseball career, and as a senior was drafted by both Major League Baseball and the NBA. Ultimately, however, he decided to continue with basketball.

In the 1978 NBA draft, Townsend was selected by the Golden State Warriors. He was the 22nd pick overall, the final spot of the first round. He stayed with the Warriors for two seasons (1978–1980), eventually moving into the starting lineup and playing a total of 140 games. From 1981 to 1982, Townsend briefly signed with the Indiana Pacers and added 14 more games to his NBA tally. He then took his career

abroad. Over the following years Townsend played in Europe, including with the prominent Italian team Banco di Roma. In 1985, he became the second leading scorer in the Italian Serie A, one of Europe's premier leagues.

After retiring from professional basketball, Townsend returned to California and worked as a coach, educator, and public speaker. He is the founder of the RT Basketball Development League, which promotes the establishment of basketball leagues for youth in the San Jose area. Townsend has also sought to develop stronger ties between the NBA and Filipino communities in the United States. In 2009, he was recognized by the UCLA Pilipino Alumni Association as its Distinguished Alumnus of the Year.

Toyota v. United States (1925)

In this landmark case, the U.S. Supreme Court denied Hidemitsu Toyota, a Japanese immigrant and a World War I veteran, the right to naturalization, holding that Japanese were not entitled to privileges of the Filipinos because the latter were not aliens. Although this ruling cast another blow to the Japanese, it established an important principle that would allow Filipinos to become naturalized citizens.

Prior to this decision, in *Ozawa v. United States* (260 U.S. 178, 192), the U.S. Supreme Court had categorized Japanese as "alien ineligible for citizenship." Takao Ozawa, a native of Japan who immigrated to

the United States at a young age, petitioned for citizenship based on his moral character and loyalty to the United States. Regardless of his background as a Christian and an educated American who had little connection with Japan, the Court declared that Ozawa was not entitled to naturalization because he was clearly not Caucasian. Nevertheless, the Japanese American community did not take the court decision as their final defeat. Using a different line of argument, one that allowed Filipino American servicemen to gain citizenship, Japanese immigrant made their case to the Supreme Court a second time.

Born in Japan, Hidemitsu Toyota arrived in the United States in 1913. He served in the United State Coast Guard Service, a part of the naval force, throughout World War I and received eight honorable discharges. Toyota filed his petition of naturalization in the United States district court in Massachusetts in 1921. The petition was granted, and he received a certificate of citizenship issued by the court. But the same court later changed its decision and canceled the certificate. At issue was whether a U.S. serviceman of the Japanese race, born in Japan, may legally be naturalized under two laws that allow American servicemen of Filipino descent born outside the United States to become citizens of the United States. As subjects of a U.S. territory, a large number of natives of the Philippines were recruited by the U.S. navy each year. The Act of May 9, 1918 (40 stat. 542) permitted "any alien" who had served in the U.S. military to gain citizenship without the required declaration of intention and proof of five years' residence within the United States. Similarly, the Act of July 19, 1919 (41 stat. 222) allowed "any person" of foreign birth who had served in the U.S. military to petition for naturalization without providing declaration of intention and proof of five years' residence. Both legislations were enacted to facilitate the naturalization of Filipino and Puerto Rican servicemen, but neither specified whether excluded Asian groups were granted the same benefits. An appeal filed on behalf of Toyota argued that if Filipinos who served in the U.S. military were entitled to naturalization rights, regardless of their race and color, then the same should also apply to Japanese. Based on the plain language of the legislation to the above laws, Japanese are included in "any alien" or "any person."

Delivering the opinion of the Supreme Court, however, Justice Butler held that literally, the phrase “any alien” meant “free white persons” and persons of “African nativity.” He argued that until the act of 1918 was passed, it was unclear whether citizens of the Philippines were entitled the privilege of naturalization because they were neither “free white persons” nor persons of “African nativity.” The law was to make Filipinos eligible to naturalization. At the same time, he continued, “it has long been the national policy to maintain the distinction of color and race,” and that “the limitations based on color and race remain.” The intention of Congress was not to reverse this national policy, except in respect of Filipinos qualified by the specified service. The Court declared with its Chief Justice dissenting that Toyota, a person of the Japanese race, born in Japan, may not be legally naturalized under both the 1918 and 1919 laws, regardless of his service in the U.S. military.

Although the ruling of the Supreme Court reaffirmed that individuals born in Japan were “aliens ineligible to citizenship,” *Toyota v. the United States* has been considered as a major victory of the Filipino American community. Until 1918 it was unclear whether Filipinos were eligible to naturalization. Some of them were held eligible for naturalization (*In re Bautista*, 245 Fed. 765 and *In re Mallari*, 239 Fed. 416). But in *In re Alverto* (198 Fed. 688), *In re Lampitoe* (232 Fed. 382), and *In re Rallos* (241 Fed. 686), their petitions were denied by the court because Filipinos were neither “free white persons” nor persons “of African nativity.” Now the Supreme Court declared that there were strong reasons for the government to relax its race and color restrictions in favor of Filipinos because they were not aliens and they owned allegiance to the United States. Such an opinion was most significant. By implication, not only were Filipinos who served in the U.S. military eligible for naturalization, according to the 1918 and 1919 laws, but those who were not were granted the same privilege. Unlike the Chinese, Japanese, Koreans, and Asian Indians, Filipinos could not be categorized as “aliens ineligible to citizenship” simply because they were not aliens. The case cleared the way for Filipinos to gain citizenship in the United States. Until 1943,

alien Filipinos were the only Asians who could gain U.S. citizenship.

Tran, Ham (c. 1974–)

Writer, producer, director, and film editor, Ham Tran dedicates his creative energy to documenting the story of the Vietnamese diaspora. Loyal to the perspective of the Vietnamese people in Vietnam and abroad, Tran’s work presents a history that has thus far been told only through the eye of the American G.I. and the American consciousness. As troubling and difficult as his representations are, Tran’s aesthetic lens also provides a path to healing through remembrance. Tran is best known for a 28-minute short film entitled “The Anniversary” (2004) and a feature-length historical drama, *Journey From the Fall (Vu’ợt Sông)* (2006), the first film to capture the compelling experience of postwar reeducation camps and the plight of Vietnamese boat refugees.

Tran received a BA in English at UCLA before working toward his MFA in directing at UCLA’s School of Film and Television. His short film, “The Anniversary” (2004), focused on the separation of two siblings by civil war in Vietnam and was produced as a master’s thesis. The film received much acclaim internationally and domestically, winning the USA Film Festival Award and being named a semi-finalist for the 2004 Academy Award for Best Live Action Short. Two other films produced by Tran at UCLA, “The Prescription” (2001) and “Pomegranate” (2002), earned the honor of national finalists for the Student Academy Awards.

Born in Saigon, Vietnam, of Chinese descent, Tran was eight years old when he and his family fled Vietnam in 1982. Unlike the boat experience depicted in *Journey*, they immigrated to the United States under the aegis of the Orderly Departure Program. Familiarity with the boat experience, however, surrounded him. Growing up among the Vietnamese community in Little Saigon, Orange County, Tran absorbed stories obliquely, a form of transmission that he felt needed to be rectified.

In making *Journey from the Fall*, Tran retained his artistic vision for the film, turning down financial backing by Hollywood executives who wanted to add more mainstream elements to the film. Production for the film was funded entirely by the Vietnamese community, allowing Tran to choose a Vietnamese cast and retain Vietnamese as the dominant language of the film (with English-language subtitles).

Only two cast members of *Journey* (Kieu Chinh and Long Nguyen) had professional acting experience. Tran recalls, “It was an intentional choice that was made. . . . [I]n order for this film to film right and have that authenticity, we needed people who had gone through that experience personally. So we put an ad in the Vietnamese newspaper.”

“I had to be really careful, too,” Tran continues. “What I was looking for were people who could go back to a very specific emotional point in their lives, but at the same time, people who could make it back afterwards. Cause there were people who went there and could not stop crying; going back to that moment was so traumatizing. I knew that would be detrimental to their own personal well-being” (Asia Pacific Arts 2007).

In a separate interview, Tran observes pointedly that resounding silence surrounding the Vietnamese experience is very much engrained into the generational relationship within the Vietnamese community. “My producer and I interviewed more than a hundred survivors of the re-education camps and boat refugees, and I would say that 7 out of 10 of everyone we spoke to have not told their own children what they revealed to us,” Tran recalls. “[T]hey would carry these important stories to their graves, and never realize that our youth of today need to know why they are here. The so-called generation gap is not one created by age.

It’s created by silence, a deep burrowing kind that hollows the heart” (Nguyen 2006).

Since its debut at the 2006 Sundance Film Festival, *Journey From the Fall* has been showered with accolades from the Vietnamese American community, the professional film circuit, and the international community. The film has garnered 16 international honors, including nomination for Best ASEAN Film at the Bangkok Film Festival and the Best Film Award at the 2007 Vietnamese International Film Festival. It was an Official Selection of the 2006 Sundance Film Festival. Keeping with Tran’s effort to maintain autonomy from commercial investors, the film was released into theaters in March 2007 by ImaginAsian Entertainment.

Several interviews with Tran are available online, including an interview conducted by Asia Pacific Arts in concert with the UCLA Asia Institute from which quotes have been excerpted for this entry. The interview with Charles Nguyen may be found on VietQ News Blog. Among ongoing projects, Tran is currently completing two film projects entitled *Distant Country* and *Breaking Point*.

Transnational Political Behavior

The transnational political behavior of Asian Americans refers to political acts practiced by Asian Americans that transpire in America but transcend American borders. They involve a range of activities

performed by individuals, groups, organizations, and governmental or nongovernmental units that aim to influence the political process and policies of the country of origin in Asia or those in the host society of the United States, or both, and the communities within each political entity. Examples of the types of political activities include direct participation in home-country political parties, elections, and hometown associations, as well as fund-raising, political donations, lobbying government officials, and participating in meetings, discussions, or events related to home-country politics without actual travel across the borders.

Politics on both sides of the Pacific has played a key role in the formation and maintenance of the Asian diaspora in the United States. Studies of Asian diasporic communities suggest that Asian immigrants often maintain connections to their homelands through involvement in transnational voluntary associations based on shared geography, dialect, religion, alumni association, or political and other interests. These voluntary associations often exist both within the national boundaries and across national borders. In the Chinese diaspora, for example, they comprise a transnational network made up mostly of business leaders interested in transnational investments and in maintaining cultural ties to their ancestral villages or home provinces.

Influenced by the tidal waves of globalization, Asian governments have shown an increasing amount of interest in the potential functions and roles of the overseas communities. Homeland governmental officials are sent to attend the annual conventions of these organizations and many have pressed for policies favorable to the overseas compatriots. Nevertheless, political ideological divides originated in the ethnic homelands, compounded by racial subordination and overt ethnic discrimination in the United States, have created grounds for “dual domination” of Asian Americans by governments on both sides of the Pacific. A notorious example is the “confession program” run by the U.S. State Department and the Immigration and Naturalization Service (INS) in the 1950s to stop immigration fraud. It was assisted by the operatives of the anti-Communist, Taiwan-based nationalist government in U.S. Chinatowns. U.S. government agents increased surveillance and harassment of (mostly) U.S.-born Chinese leftists, especially those

who were considered supporters of the Beijing-based Communist government in China.

The complexity and dynamics of transnational politics practiced by Chinese and other Asian American communities with a foreign-born dominance hold the potential to unite and divide the multiethnic population. Its ability to both energize and stifle political activism has set apart the brand of political participation of Asian Americans from that practiced by other major U.S. racial and ethnic groups.

Long before the idea of “transnationalism” became a trendy research concept, immigrants from Asia were found to maintain strong connections with their ethnic homelands. For example, Chinese Americans in the second half of the nineteenth century and the first half of the twentieth century were found to draw on a complicated network of transnational resources to fight racial injustice in the U.S. immigration, social, legal, and political system, to negotiate their identities between being Chinese and being American, and to help improve the political and economic status of the homeland in the process. The overseas community in the United States, in turn, maintained a prolonged and tenacious but also shifting relationship with the ethnic homeland through various transnational projects such as homeland modernization, defense, liberalization, and democratization.

Because of American racism, which severely limited the flow of goods, capital, and people across the Pacific Ocean, early Chinese immigrants turned their struggle into a trans-Pacific effort by sending money from the United States to help strengthen and modernize their native land of China. The overseas community became a major source of fund-raising for various projects dealing with homeland political change. Particularly significant in volume and frequency were political donations, which started with giving money to political factions that established an extensive presence in Chinese America and peaked in the eight-year long Chinese war against Japanese aggression. Similarly, early Korean and Asian Indian immigrants actively supported the homeland independence movements and attempted to influence U.S. policy toward the empires of Japan and Great Britain, respectively. On the other hand, lacking power and in search of tactical resources, Japanese American

immigrants in the early twentieth century formed a strategic alliance with the homeland government and the social elite in Japan to combat one of California's defining acts of institutional racism: the Alien Land Law of 1913.

With the lifting of restrictive immigration quotas for Asian immigrants and the assurance of equal civil and political rights for minorities in the mid-1960s, the frequency and variety of transnational political activities engaged by Asian Americans only increased in the post-1965 era. Treating the pursuit of democracy in the Asian homeland as an equally important project as the protection of their civil rights in the United States, Filipino Americans organized opposition across the Pacific with Filipino nationals in the 1970s and 1980s to overthrow Philippines President Ferdinand Marcos. Around the same time, Taiwanese Americans lobbied the U.S. Congress and worked in concert with Taiwan's *danwai* (outside of the party) elites to push for political liberalization and a democratic form of government. During the Kwangju democracy movement in South Korea in 1980, Korean American students staged several rallies in Koreatown and sit-in demonstrations in front of the Korean Consulate in Los Angeles to protest against the corrupt homeland government. Following the collapse of the Vietnamese economy in the early 1980s, refugees from Vietnam in the United States built a transnational grassroots movement to counter but also to negotiate with the former adversary of the Communist Party in Vietnam. Prior to the signing of the India-U.S. Civil Nuclear Deal in 2006, Asian Indian American groups actively lobbied U.S. Congress to make an exception for India, a country that refused to sign the Nuclear Nonproliferation Treaty, from U.S. laws limiting trade in nuclear technology—a deal that promised to forge a closer relationship between the homeland and the host-land governments.

In 2007, U.S. Congressman Mike Honda (D-CA 15), a third-generation Japanese American interned during World War II, introduced U.S. House Resolution (H.R.) 121, calling on Japan's government to offer an official apology for "comfort women" kidnapped in Korea, China, and Southeast Asia by the Imperial Army during World War II. Meanwhile, Korean

American Sam Yoon won a historic victory to be the first Asian American to sit on Boston's city council in 2005 in part because of his ability to respond to the diasporic perspectives and priorities of his Vietnamese and Chinese community-based constituencies. His active involvement and leadership role advocating for the passage of H.R. 121 motivated, in turn, Korean American voter registration, political fundraising, organizational development, coalition building, and mass political mobilization across the nation.

Although most publications in Asian American Studies allude either directly or indirectly to the concept and influence of their transnational linkages, most accounts are historical and/or qualitative in nature. As a result, we know little about the precise scope of transnational politics practiced by Asian Americans and the people who are engaged in these activities. Neither can we be sure if the observed political impacts of transnational political behavior can be attributed directly to a certain type of attitude and behavior of immigrants but not others. To provide a more accurate account of the extent of transnational politics practiced by ordinary Asian Americans in the present day and to help unpack the relationship between transnational ties and political participation on both sides of the Pacific Ocean, we report in the following sections findings from the Pilot National Asian American Political Survey (PNAAPS).

One major research question in studying transnational political behavior at the individual level is the extent of involvement in home country politics, either before or after migration, and the relationship between the two. Research on Latinos finds that the number of immigrants that engage in sustained and regular politics related to the country of origin after migration is relatively small. We find this to be true in the case of Asian Americans who participated in the survey where three-fourths of the respondents are Asian-born and only one-tenth are in the third generation or beyond. Only a tiny percentage (6 percent) of foreign-born Asian Americans in the survey report participating in home country politics after entering the United States. Those in the Vietnamese community report the highest level of participation (10 percent), although those in the Chinese and Korean communities report the lowest

levels (4 percent, respectively). There is no statistically discernible difference across Asian ethnic groups in the rate of direct participation in homeland politics.

The very limited direct participation in home country politics by ordinary Asian Americans is confirmed by the recent experience of Filipino Americans. Although the Filipino government began in 2003 to allow members of the Filipino diaspora to cast absentee votes from overseas, participation has been quite limited—of the 8 million Filipinos living abroad, only about 500,000 had registered to vote by 2006, and a much smaller number actually turned out. Furthermore, registration and turnout among Filipinos in the United States were among the lowest of overseas Filipino communities. The lack of participation may be partly explained by the need to go personally to the Philippine consulate to cast the vote. This requirement was relaxed in 2007 to allow postal voting. Overseas turnout improved from 16 percent in 2007 to 23 percent of the registered in the 2010 election. However, many Filipino citizens abroad were either unaware of the availability of absentee voting or the modification to the Overseas Absentee Voting law or both.

If few ordinary Asian Americans are directly involved in Asian homeland politics, a different picture emerges when we examine their level of participation in transnational politics from the amount of close attention paid to news stories regarding their homeland in Asia. To wit, as many as 56 percent of Asian Americans indicate that they paid either “very close” or “fairly close” attention to news and other information from Asia. The amount of close news attention is particularly high among Korean Americans (80 percent), followed by Chinese Americans (68 percent); it is relatively low among Japanese Americans (38 percent) and Vietnamese Americans (41 percent). Among immigrants born in Japan, the majority also report paying close or “fairly” close attention to news in Asia (54 percent).

As in the case of participation in homeland politics *after* arriving in the States, Asia-born respondents who indicate that they were members in a political party or other political organization or took part in other types of political activities *before* one’s arrival in the United States are also few in number (8 percent in total). Those from the Philippines and China/Taiwan/Hong

Kong report slightly higher levels of activism than those from Vietnam and India or Pakistan. Again, differences across ethnic groups are too small to be statistically meaningful.

Being a member of a political party/organization or participant in other political activities in the homeland prior to one’s immigration increases the incidence of participation in homeland politics after migration. Namely, 21 percent who were active in the homeland report being active in home country politics after arrival, compared to only 4 percent among those who were not politically engaged prior to emigration. Nevertheless, a significant amount of drop-off in participation takes place after immigration, as over 3 in 4 of the formally active do not report participation in home country politics after their U.S. arrival.

Another major research question in analyzing transnational political behavior is the relationship between the involvement in home country politics and participation in host society politics. Pundits on the conservative side have asserted a negative relationship between these two types of political involvement and urged immigrant communities to completely cut off their political ties to the country of origin so as to facilitate their rates of assimilation into the U.S. system. We find this assumption of competition to be mostly unfounded among PNAAPS respondents. First, there is little relationship between being a member of a political party in the Asian homeland and becoming affiliated with a major political party in the United States. Second, a respondent’s level of party or other organizational activism prior to immigration has little to do with his or her degree of major party identification in the United States. Third, those Asian Americans who were politically active prior to emigration are not more or less likely to naturalize, vote, or participate in other political activities related to American mainstream politics after immigration. Fourth, none of the indicators of ethnic attachment such as using non-English language at home, keeping frequent contacts with friends and relatives in the home country, or planning to eventually return to Asia are found to increase their participation in homeland politics.

Instead of an inverse relationship, an individual’s level of premigration activism in Asia has a positive and significant relationship to one’s level of activism

in ethnic organizations and related activities in the United States. Thus, those immigrants who were the most politically active in their countries of origin are also found to be more active in political activities related to the Asian homeland after immigration. In addition, those Asian Americans who are more active in homeland politics after migration or pay a greater attention to homeland news are also more actively involved in ethnic community organizations in the United States and participate more in political activities related to Asian American causes. These patterns further contradict with the fear of unassimilation of Asian Americans because of their transnational linkages. Nevertheless, other conditions being equal, we find that those immigrants who are more active in homeland politics are less likely to become naturalized U.S. citizens, even if they are not less likely to become registered and vote, once they pass the citizenship hurdle.

In sum, few ordinary Asian Americans are directly involved in transnational politics despite its lengthened and colored history in the community. Although political activism can travel across borders, but the scope and influence of prior activism may vary by the spheres of politics in the host society and that the influence is far from being a wholesale import of past activism. Based upon extant survey-based findings, there is some evidence that transnational political activity may deter naturalization, but there is little evidence that it depresses voting in the United States. Rather, transnational political activity is related positively to political activities beyond voting. Thus, Asian Americans' transnational political activities may largely coexist with, and even reinforce, political or civil society activities in the hostland of the United States.

Trungpa, Chögyam (1939–1987)

Chögyam Trungpa was a Tibetan Buddhist teacher, high-ranking incarnate lama, and influential, if not controversial, popularizer of Tibetan Buddhism in the United States. Before his death in 1987, Trungpa published his seminal work *Cutting Through Spiritual Materialism* in 1973, founded the Naropa Institute (now Naropa University) in 1974, and established an international network of centers offering instruction in secular forms of meditation called Shambala Training.

Born in the Kham region of Tibet in 1939, Trungpa was recognized at a young age as the eleventh incarnation of the Trungpa Kagyu lineage, became a novice monk at nine years old, and was fully ordained in 1958. The following year he escaped advancing Communist Chinese forces and fled to India with a group of refugees. In 1963 he received a scholarship to study comparative religions at Oxford and four

years later he opened the first Tibetan monasteries in the West, Samye-ling, in Scotland. A car accident in 1969 left him partially paralyzed and this event precipitated Trungpa's decision to reinvigorate his attempts to spread Buddhist teachings. Ultimately, this led Trungpa to relinquish his status as a monk to more closely engage Western students who were unfamiliar with, and potentially distracted by, traditional Buddhist monastic code and Tibetan dress.

In 1970, Trungpa moved to the United States and eventually settled in Boulder, Colorado, a mainstay of the counterculture movement. Trungpa's lectures were well attended and he became known for his colloquial and charismatic style of teaching, as well as his eccentric behavior, which included the copious consumption of alcohol and use of psychedelics. His early lectures warning against the egotistical search for spiritual accomplishment formed the basis for his seminal 1973 work, *Cutting Through Spiritual Materialism*. In 1974 he founded an educational center, the Naropa Institute, which eventually became the first accredited Buddhist university in the United States in 1988. Furthermore, inspired by a vision in 1976, Trungpa began to teach methods of secular meditation, called Shambala Training, which ultimately aspired to bring about individual and societal liberation.

Trungpa died in Nova Scotia in 1987 having designated Ösel Tendzin (formerly Thomas Rich, 1943–1990) as his teaching heir in the Kagyu lineage in 1976. Trungpa's eldest son, Sakyong Mipham, became the heir to the Shambala teachings and head of Shambala International, the organization that oversees the operation of a network of worldwide practice centers.

Truong, Monique (1968–)

Monique Truong is a Brooklyn-based novelist, essayist, and scholar. Born in Saigon in 1968, Truong and her mother came to the United States in April 1975. What began as a precautionary measure against daily bombings of the city became forced migration for Truong and her family when Saigon fell later that month.

Truong is a graduate of Yale University and Columbia University School of Law. After graduating from Columbia, she worked as an attorney specializing in intellectual property in New York City. In 1999, Truong became a contributing coeditor to the anthology *Watermark: Vietnamese American Poetry and Prose*. "Seeds," the short story that she submitted to the anthology, became the beginning of her first novel, *The Book of Salt*. Revising the story for publication also kindled her desire to become a full-time writer.

The Book of Salt has garnered numerous awards, including the New York Public Library Young Lions Fiction Award, the Bard Fiction Prize, the Stonewall Book Award-Barbara Gittings Literature Award, a PEN Oakland/Josephine Miles National Literary Award, an Association for Asian American Studies Poetry/Prose Award, and a Seventh Annual Asian American Literary Award. In 2003, *The Book of Salt* was also selected as a *New York Times* Notable Fiction Book and a *Chicago Tribune* Favorite Fiction Book. The novel explores the relationship between the materiality of the body and the social construction of the body, the connection between language and desire, and the exile's sense of displacement and loss, a theme that is shared by the work of other Vietnamese American writers of Truong's generation, such as Lê thi diem thúy and Dao Strom.

Truong has received numerous awards, including a PEN/Robert Bingham Fellowship, a Princeton University's Hodder Fellowship, and a Guggenheim Foundation fellowship. She has also been in residence at the Lannan Foundation, Yaddo, The MacDowell Colony, Hedgebrook, Ucross Foundation, among other foundations and residence programs.

Truong has contributed to publications such as the *New York Times*, the *Times of London* (*Saturday*

Magazine), *Gourmet*, *Condé Nast Traveler*, *Food & Wine*, *Men's Vogue*, *Real Simple*, *Allure*, and *Time Magazine* (Asia Edition). She also contributed an article on Vietnamese American literature to the anthology *An Interethnic Companion to Asian American Literature*, edited by King-Kok Cheung.

Truong's second novel, *Bitter in the Mouth*, was published by Random House in 2011.

Tsao, Chin-Hui (1981–)

Chin-Hui Tsao is the first Taiwanese pitcher to play in Major League Baseball (MLB). He had already been a shining star since high school and made remarkable contributions to the Taiwanese team in international games. In 1999, the Colorado Rockies signed Tsao to a minor league contract and regarded him as one of their top prospects. His contract bonus of \$2.2 million is still the highest among Taiwanese players. Tsao underwent Tommy John surgery to reconstruct his elbow ligament in 2001 when he was still in the minors. After four years in the minors, he debuted in the Major Leagues in 2003 as a starting pitcher. In 2005, he suffered from a torn labrum and torn rotator cuff. After the Rockies decided not to offer Tsao a contract in the end of 2006, Tsao signed with the Los Angeles Dodgers in 2007. Unfortunately, he encountered injuries again and left the Dodgers as a free agent in the end of 2007. Tsao joined the Kansas City Royals in 2008 but was released in June of the same year. He went back to Taiwan and was drafted by the Brother Elephants in Taiwan's Chinese Professional Baseball

League (CPBL). He was a superstar in 2009 and attracted a large fan base.

However, all of his splendid achievements were tainted by his involvement in scandals of gambling and game-fixing. The prosecutor investigated his case at the end of 2009 but did not charge Tsao of any crime. Nevertheless, according to the prosecutor, Tsao did look for chances of fixing games and had a close relationship with one gambler even before he signed with the Brother Elephants. After the 2009 season began, Tsao received sexual services paid by another gambler and did agree to fix two games, one on August 8 and another on August 22. The game on August 8 was cancelled because of a typhoon. On the day before the game of August 22, Tsao told the gambler that he would like to renege because there were not enough players to cooperate to fix the game. Although the prosecutor found that Tsao's performance plummeted after his meetings with the gambler, there was not clear and specific evidence to connect his performance to his meetings with the gamblers. Despite not being charged of any crime, Tsao was expelled from the CPBL after 2009.

Tsiang, H. T. (1899–1971)

H. T. Tsiang was a Chinese American novelist, playwright, poet, and actor. He was born Hsi-Tseng Tsiang in China in 1899 and left for the United States in 1926. His emigration was complicated by American immigration officials who challenged its legality. He was eventually permitted to stay after the American Civil Liberties Union (ACLU) successfully intervened on his behalf. Tsiang faced such threats of deportation throughout his life, including detainment at Ellis Island

for eight months between 1940 and 1941 because of visa issues.

In 1927, he attended Columbia University for a short period and became active in the Greenwich Village literary scene. Tsiang began to write poetry during this time and his poems were regularly published in Leftist publications such as *New Masses* and *Daily Worker*. His protest poems “Chinaman, Laundryman” (1928), and “Sacco, Vanzetti” (1928) were particularly influential and were set to music three years later by composer Ruth Crawford-Seeger. In 1929, he self-published a collection of his poems entitled *Poems of the Chinese Revolution*, which was received positively.

Tsiang was a staunch Leftist and his membership in the International Communist Party introduced him to a network of activists and writers who shared his political leanings. His writings became increasingly well known within his circles, and he gradually shifted from journalistic propaganda to more sophisticated pieces.

The 1930s were the most prolific years for Tsiang as a novelist; he wrote three leftist-themed novels: *China Red* in 1931, *The Hanging on Union Square* in 1935, and *And China Has Hands* in 1937. Of these, *And China Has Hands* is considered by some scholars to be his most important work, as it portended the institution of Communism in China.

In the 1940s, Tsiang began seriously developing his acting career. He had played a role for Tretiakov’s *Roar China* on Broadway in 1930, but as World War II began, he permanently moved to Hollywood and committed himself to acting. Over the next 30 years, Tsiang played roles in several major films, including: *Behind the Rising Sun* (1943), *Tokyo Rose* (1946), *Black Gold* (1947), *The Babe Ruth Story* (1948), and *Ocean’s Eleven* (1960). He often played traditionally stereotyped roles such as a “Houseboy,” “Japanese Spy,” and a “Cook.” In the 1960s, he played several recurring roles on television shows, including *Bonanza* (1965), *I Spy* (1965), and *Gunsmoke* (1966).

Tsiang died on July 16, 1971, in Los Angeles, California.

Tsien, Roger Y. (1952–)

Roger Tsien is a Chinese American biochemist, a recipient of the 2008 Nobel Prize in Chemistry, and the scientist whose discoveries broadened the spectrum of fluorescent proteins, which has proven invaluable for studying biological processes.

Roger Tsien’s father, Hsue Chu Tsien, came from a scholarly class of citizens in Hangzhou, China. In 1930, Hsue Chu Tsien won a national scholarship to study in MIT’s Mechanical Engineering Department. There, he obtained a master’s degree for research on aircraft engines but, before he could pursue further studies, he had to return to China to serve in the Kuomintang Air Force. Hsue Chu Tsien courted and later married Yi Ying Li, a nurse trained at Peking Union Medical College and the sister of a fellow engineer and close friend. Their first son, Yongyou (Richard), was born in 1945. Soon afterward, Hsue Chu Tsien became a liaison to the United States on behalf of the Chinese air force to extract funding from allies for their war against the Japanese. In 1945, the Japanese surrendered to the United States, rendering his job unnecessary. Believing there was an impending civil war in China, Hsue Chu Tsien arranged for his family to move to the United States in 1947.

Hsue Chu Tsien was unable to find work as an aircraft engineer in the United States because most employers required security clearance, which he could not obtain as a Chinese citizen. Instead, he started an export-import business in New York City and later an engineering consultancy firm in Westchester County. In 1949, the Tsien family had their second son, Yonglo (Louis) and, in 1952, their third son Yongjian (Roger) was born. In 1959, Hsue Chu closed his consulting firm and began working at RCA in Harrison, New Jersey. The next year, Hsue Chu changed jobs again to work at Esso Research and Engineering where he would work until retirement in 1983.

Roger Tsien, Nobel Laureate in chemistry in 2008. (AP Photo/Lenny Ignelzi)

As a child, Roger Tsien was fascinated with chemistry. In elementary school, Roger played with a Gilbert chemistry set and performed experiments out of a book from his school's library. Early experiments included growing colored silica crystals, changing the color of a solution of potassium permanganate from purple to green. As Tsien grew older, he replicated classical experiments such as generating hydrogen gas and burning it, exploding gunpowder, and generating pure sodium and dropping it in water. Indeed, Tsien was fascinated with flashy and visual chemistry.

In 1967, Roger Tsien entered a National Science Foundation funded summer research program at Ohio University. He worked in Professor Robert Kline's laboratory and studied thiocyanate and its binding properties to other metals. Using this research, he entered the Westinghouse Science Talent Search, a national science fair competition for high school students. Despite believing his own research was imperfect, Tsien won first place.

In 1968, Tsien enrolled in Harvard University. He did not like Harvard's chemistry courses and

developed interests in molecular biology, quantum mechanics, and astrophysics. These new interests drove Tsien away from chemistry. Tsien decided to focus on neurobiology and applied to the Massachusetts Eye and Ear Infirmary where he analyzed signals from the cochlear nucleus.

In 1972, Tsien received a Marshall Scholarship to attend Cambridge University in the UK. Tsien's PhD supervisor was R. H. Adrian, a skeletal muscle electrophysiologist. Tsien found traditional attempts to analyze the central nervous system inefficient. These strategies required an electrical probe to analyze signals in a brain. These experiments were often oversimplified, slow, and did not reflect the true complexity of the brain. Tsien's ideal strategy for neuron analysis involved using dyes that can detect a neuron's action potentials or changes in intracellular ion concentration. In 1975, Tsien was able to synthesize a dye, BAPTA, which could produce a detectable signal in response to changes in intracellular calcium. After earning his PhD, Tsien continued his postdoctoral research at Gonville & Caius College, collaborating with Timothy Rink on developing calcium selective electrodes. In 1976, through Timothy Rink, Tsien met his future wife Wendy.

In late 1981, Tsien's fellowship ended and he searched for independent positions in England. His unique position was between a biologist and chemist, but no English institution could accommodate the interdisciplinary specialty of chemical biology. Luckily, two University of California, Berkeley faculty members, Richard Steinhardt and Robert Zucker, were interested in Tsien's calcium sensing work, and Tsien became an assistant professor of the university. UC Berkeley's financial situation at the time limited the funding of his new lab. Despite these issues, Tsien and his lab remained productive leading to the development of improved calcium and sodium indicating molecules are still use today by researchers. With an image processor and his indicators, Tsien and his lab were able to monitor ions in a cell with unprecedented resolution.

In 1989, Roger Tsien moved to the University of California, San Diego to pursue research on more complex biochemical signals. UCSD's faster growing environment enabled Tsien bargain for a larger lab equipped for his fluorescence microscopy

experiments. By this time, Tsien had moved onto developing a system to monitor the protein cAMP within cells by adding a fluorescent marker that would indicate its presence.

Roger Tsien's work on Green Fluorescent Protein (GFP) began in 1992. The hope was to design a fluorescent protein that could be attached to proteins a researcher is interested in monitoring and extrapolate quantity of product from brightness of fluorescence. GFP was chosen because research conducted by Martin Chalfie, the future cowinner of the 2008 Nobel Prize in Chemistry with Roger Tsien, reported that GFP would fluoresce outside of the source organism, the jellyfish *Aequorea victoria*. To increase the utility of this protein, Tsien's group worked to develop a brighter green version of GFP and variants of the protein that would fluoresce yellow, blue, and cyan.

In 2008, Roger Tsien was awarded the Nobel Prize in Chemistry along with Martin Chalfie and Osamu Shimomura for their combined contributions to the development of GFP. Tsien's contribution to the understanding of how GFP fluoresces and subsequent development of potent variants has proven invaluable as a powerful tool for the scientific community for the simple visualization of complex processes.

Robert O'Dowd

Tsoi Sim v. the United States (1902)

An important court case during Chinese exclusion, *Tsoi Sim v. the United States* (116 F. 738, 1902) allowed an alien Chinese wife of an American citizen the right to reside with her husband and thus established one of the most important principles for the Chinese to bring in their wives. During the exclusion, Chinese women were largely barred from entry.

Only wives of Chinese treaty merchants could still enter with their husbands. The case arose when police in San Francisco arrested Tsoi Sim because she did not carry an alien registration card required by the Geary Act and immigration authorities. The Chinese challenged the government, and the case was heard by the Circuit Court of Appeals for the Ninth Circuit. The appellant Tsoi Sim was three when she came to the United States with her father in 1882, before the Chinese Exclusion Act was enacted. She had resided in the United States since then, attended both public and private schools in California, and married Yee Yuk Lum, a U.S.-born Chinese. Delivering the opinion of the court, district judge Thomas Porter Hawley declares that a citizen of the United States should be entitled to greater rights and privileges than an alien merchant. Upon marriage, Tsoi Sim's husband's domicile becomes hers, and she should be entitled to live with her husband. If she were to be deported for violating the Geary Act, the judge reasoned, Tsoi Sim would have the unquestioned right to immediately return, and would be entitled to land, and remain in this country, upon the sole ground that she is the lawful wife of an American citizen.

The principle established in this court case was extremely important to the Chinese American community. Up to this point only wives of Chinese merchants are allowed entry. As the argument shifted from the rights of an immigrant applicant (an alien excludable) to the rights of her sponsor (an American citizen), a small door for female Chinese immigrants opened. Not only did the court decision allow Chinese wives of American citizens to remain in this country, but it also implied that male citizens of Chinese ancestry could bring their alien Chinese wives to the United States regardless of their economic or social status. After the 1906 San Francisco earthquake destroyed many civic documents, some Chinese immigrants claimed U.S. citizenship by birth. They then used their citizenship to bring in their wives. Only 44 Chinese women were admitted to the United States in 1902; in 1924, 938 were admitted. A total of 2,848 Chinese women gained entry as wives of American citizens between 1906 and 1924. This group of women was crucial to the early

development of family life in the Chinese American community.

Tsoi Sim v. the United States became void in 1924, when a new immigration law bars all aliens ineligible to citizenship. Section 13 (c) of the 1924 Immigration Act stipulated that no alien ineligible to citizenship shall be admitted to the United States, providing legal grounds for immigration authorities to turn down any immigrant applicants from China. The number of Chinese women admitted quickly declined. But the Chinese American community refused to give up. To reestablish the principle in *Tsoi Sim v. the United States*, a lobbying campaign was launched. In 1926, 1928, and 1930, Chinese American representatives repeatedly argued in Congress that an American citizen should have the right to his wife's companionship, that his domicile should be hers, and the Chinese American citizens should be entitled to no less protection than alien Chinese merchants. A new law in 1930 amended the 1924 Immigration Act by granting entry to alien Chinese wives of U.S. citizens who had married prior to May 26, 1924 (Act of June 13, 1930).

Tsunoda, Joyce S. (1938–)

Joyce Sachiko Tsunoda (née Nishimura) is a college administrator who became the first Asian American woman to serve as the chancellor of a multicampus community college system. She was born on January 1, 1938, in Osaka, Japan. Her father, Yukio Nishimura, was a Japanese professional baseball player. When he was still in college, he twice traveled with his college baseball team to compete in Hawaii. During his first visit, he met Tsunoda's mother, Edith Sueko Higashi, a Hawaiian Nisei who was on the welcoming and

hospitality committee. During his second visit, he proposed to her and she soon left Hawaii to marry him in Japan. The couple had four daughters; Joyce was the oldest. During the 1930s, as Japan created a puppet regime called Manchukuo in northeastern China, the Japanese Telephone and Telegraph Company, Mr. Nishimura's employer, transferred him and his family to Manchuria. He was drafted into the Japanese Army in 1944 and served in the Philippines where he died in action. When Joyce was 10 years old, her widowed mother moved the family back to Hawaii. Mrs. Nishimura's daughters had no problem adjusting to an American school system because she had taught them English and had tried to imbue them with American cultural values and norms. Joyce Nishimura became a naturalized U.S. citizen in 1952.

She graduated as the valedictorian in her high school's class of 1956 and received several scholarships that helped pay for her undergraduate education at the University of Hawaii. Initially she intended to become a science teacher but during her sophomore year she transferred out of the College of Education into the College of Letters and Science. She graduated Phi Beta Kappa and cum laude in chemistry in 1960 and married Peter T. Tsunoda, a public accountant, the same year. A four-year National Science Foundation pre-doctoral fellowship supported her graduate studies, during which she gave birth to two daughters. She received her PhD in biochemistry from the University of Hawaii in 1966.

Tsunoda was working as a researcher in the University of Hawaii's Biochemistry and Biophysics Department when one of her dissertation committee members asked her to help him develop a chemistry program in the newly established Leeward Community College. When teaching there she participated actively in faculty governance and discovered she had a penchant for administrative work. The provost of Leeward Community College and the president of the University of Hawaii nominated her for an American Council on Education Administrative Internship; Tsunoda was the first individual from Hawaii to be selected for this program. That internship gave her a chance to travel to universities on the United States mainland to observe how college and university administrators function.

When the one-year internship ended, Tsunoda returned to Leeward Community College where she became associate dean of Special Programs and Community Services. From 1976 to 1983, she served as provost of Kapiolani Community College. In 1983, she was chosen as chancellor of the University of Hawaii's seven-campus Community College System—the first Asian American woman to serve as chancellor of a multicampus community college system in the United States. Later she served simultaneously as chancellor and as the University of Hawaii's Vice President for International Education. She remained in those two posts until she retired in 2003. She says her success as an administrator came from her willingness to delegate responsibilities—that is, her ability to “not worry about all the details all the time.” She believes that college faculty members and administrators are “here to serve the community, but we are not simply the public's servants but also its educators.” As educators, they need to formulate, articulate, and present the pros and cons of a variety of educational issues so that the public (and state legislators who appropriate funds for the nation's public colleges and universities) can make informed decisions.

During her busy career, Tsunoda served in a wide range of professional associations, including the American Association of Community Colleges Commission on the Future of Community Colleges, the Northwest Association of Schools and Colleges, the American Council on Education's Advisory Committee on Undergraduate Education in Foreign Languages and International Studies, the Pacific Regional Education Program, the Pacific Postsecondary Education Commission, the Western Association of Schools and Colleges Accrediting Commission for Community

and Junior Colleges, the National Center for Higher Education Management Systems, the National Council of Community Services and Continuing Education, and the U.S. Office of Education's Advisory Council on Developing Institutions. She has also served on the boards of directors of dozens of community, local government, and private organizations.

In recognition of her participation in so many endeavors, the Organization of Women Leaders gave her its 1988 Outstanding Award in Public/Private Partnership, the Western Region of the National Council of Community Service Directors honored her as Person of the Year in 1988, the University of Hawaii Alumni Association gave her its 1990 Outstanding Community Service and Distinguished Alumna Award, the Young Women's Christian Association bestowed on her its 1990 Outstanding Individual in Education Award, and upon her retirement a fundraising campaign was launched to establish the Joyce S. Tsunoda University of Hawaii Community Colleges Leadership Development Endowment Fund to offer seminars and fellowships that will enable students, staff, faculty members, and administrators to develop their leadership skills and advance up the professional ladder. However, in an interview that I conducted with her in 1992, she told me, “I am more proud of having raised two girls to be independent and self-sufficient women who also happen to be happily married than of anything else I've done.”

U

Ung, Chinary (1942–)

Chinary Ung, a multiple-awards-winning Cambodian American composer, is a professor in the Music Department at the University of California, San Diego. In 2013 the department promoted him from professor to “distinguished professor,” a rare honor. He was born on November 24, 1942, in Takeo, Cambodia. A member of the first graduating class at the École Nacional de Musique in Phnom Penh, Cambodia’s capital, he left for the United States in 1964 to study the clarinet with Charles Russo at the Manhattan School of Music where he received both his BA and MA degrees. Then he enrolled in Columbia University to study music composition with Chinese American composer Chou Wen-chung. He received his PhD in musical arts with distinction from Columbia in 1974. His first two compositions, *Tall Wind* (1970) for soprano, oboe, and cello, and *Mohori* (1974) for soprano and chamber ensemble, were well received.

After the murderous Khmer Rouge established their regime called Democratic Kampuchea in Cambodia on April 17, 1975, Ung, like thousands of other Cambodians who were abroad at the time, waited in vain for information about what was happening in their homeland. The Khmer Rouge had kicked out all foreigners and sealed the country off from the outside world as they carried out a draconian program to root out all manifestations of modern civilization. Out of Cambodia’s total population of a little over 7 million at the time, at least 1.7 million people died from executions, starvation, overwork, untreated disease, and exposure to the elements during the three years and eight months that the Khmer Rouge were in power. The Socialist Republic of Vietnam, along with

thousands of former Khmer Rouge mid-level officers and refugees who had earlier fled across the Cambodian-Vietnamese border, invaded Cambodia on Christmas day, 1978. This army reached Phnom Penh on January 7, 1979, and toppled the Khmer Rouge regime. In 1980 Chinary Ung discovered that four of his siblings and several nephews and nieces had been killed. He did his best to help his remaining family members to get out of Cambodia.

During this period of turmoil and agony (1975–1986), Ung composed only one work, *Khse Buong* (1980) for solo viola. The far more urgent task Ung undertook was to try to preserve Cambodian music that the Khmer Rouge had tried to wipe out along with all other aspects of the country’s centuries-old culture. He compiled and produced two collections of traditional music performed by refugee musicians on Cambodian instruments for the Folkways label in 1977. He himself learned to play the *roneat-ek*, a solo instrument similar to a xylophone that traditionally accompanied court dances, dance dramas, and ritual ceremonies. He was determined to “employ music as an agent of spiritual healing.” He also established the Khmer Studies Institute, headquartered in Connecticut, to help preserve Cambodian culture through various programs and publications.

In 1977, Ung became a professor. He has taught at Northern Illinois University, Connecticut College, the University of Pennsylvania, Arizona State University, and since 1995 at the University of California, San Diego. His composition for chorus and orchestra, *Inner Voices*, commissioned by the Philadelphia Orchestra, premiered in 1986. A piece for cello, piano, and percussion, *Spiral*, came out in 1987, to be followed by *Spiral II* for soprano, tuba, and piano in

1989. The music world took notice of these new works: Ung received the prestigious and coveted Grawemeyer Award in 1989 for *Inner Voices*; he was the first American composer to ever get that honor. The John F. Kennedy Center bestowed the Friedheim Award on him for *Spiral*, also in 1989.

Since then, one work has followed another, the most important of which include *Spiral II* (1989) for mezzo soprano, tuba, and piano; *Grand Spiral* (1990) for symphonic band that he expanded to an orchestral score; *Desert Flowers Bloom* (1991), dedicated to the Cambodian people; *Spiral VI* (1991) for clarinet, violin, cello, and piano; *Antiphonal Spirals* (1995) for orchestra; *Grand Alap* (1996) for a single amplified cello and a one-person percussion; *Seven Mirrors* (1997) for solo piano; *Rising Light* (1998), a tone poem; *Radiant Samadhi* (1999) for a cappella chorus; *Oracle* (2004) for flute, clarinet, violin, cello, and percussion; *Spiral X: In Memoriam* (2007) for an amplified string quartet, each of whose players also had to sing while playing their instruments; and *Spiral XII: Space between Heaven and Earth* (2008) for singers, instrumentalists, and dancers that the Los Angeles Master Chorale premiered at the Walt Disney Concert Hall in Los Angeles in November 2008.

Ung has received awards, honors, and grants from the American Academy of Arts and Letters, the Asian Cultural Council, the Asia Foundation, the Rockefeller Foundation, the Ford Foundation, the Guggenheim Foundation, the Koussevitsky Foundation, the Joyce Foundation, the Barlow Foundation, and the National Endowment for the Arts. He has also received numerous commissions from various symphony orchestras, chamber music ensembles, and individual musicians, not only in the United States, but also in Europe and Asia.

In 2002, Ung returned to visit Cambodia for the first time since he left in 1964. He has gone there several times since then to perform and to promote and support various educational and cultural preservation programs. He remains devoted to the preservation of Cambodian culture and is the principal curator of the 2013 “Season of Cambodia Festival” in New York City.

Music critics have noted that Ung’s works meld Asian and Western music. However, he says he does not do this consciously; rather, “I just lump all sounds

together as external influences. It’s the interaction within yourself, between the self and the external elements, that is the main thing.” He has also incorporated poetry by e.e. cummings, the mystic Sufi poet Rumi, and Indian philosopher Rabindranath Tagore into his scores. As for the spiral motif, it is inspired by “the image of a translucent piece of sculpture that is constantly moving and rotating . . . while reflecting sunlight as perhaps a prism would.” As musicologist John Kays has put it, Ung’s work “flows over different tonal centers, where melodies and harmonies cascade continually over each other, ever changing shapes and colors, ever being reinvented.”

Chinary Ung is married to Susan Lee Pounders, a violist, and they have two daughters.

United States v. Gue Lim (1900)

United States v. Gue Lim, 176 U.S. 459 (1900) is a notable United States Supreme Court decision whereby the Supreme Court held that the wives and minor children of Chinese merchants domiciled in the United States could enter the country without the certificates required by an 1884 amendment to the Chinese Exclusion Act of 1882.

The situation giving rise to this landmark decision concerned Mrs. Gue Lim, several Chinese minors unrelated to her, and an 1884 law that prohibited Chinese laborers from entering the United States

without certification. Gue Lim was the wife of a Chinese merchant lawfully domiciled in the United States. When she arrived at the port of Tacoma, Washington in May 1897 with her husband, Fook Kee, the Collector of Customs allowed her arrival without requiring her to produce a certificate. However, five months later she was found to be a Chinese laborer unlawfully in the country without a certificate as required by the 1884 law. After she was arrested for this stated violation, she filed suit contesting the finding that she needed a certificate under the 1884 law to enter the United States. The district court hearing the suit agreed with Gue Lim, ruling that she was not a Chinese laborer, but instead the wife of a Chinese merchant lawfully domiciled in the country and, thus, was not excluded by the laws of the United States from coming to or remaining in the country.

In a factually unrelated case elsewhere in the state of Washington, three Chinese minors, Ah Tong, Yee Yuen, and Ah Quong, were initially admitted by the Collector of Customs into Port Townsend, Washington as the children of bona fide Chinese merchants, lawfully residing and doing business within the state. However, the three minors were later found to be Chinese laborers unlawfully within the country and arrested by a United States immigration officer. The Chinese minors appealed the finding, and the applicable district court decided that the three minors were indeed children of Chinese merchants not needing certificates, and that they were lawfully entitled to be and remain in the United States.

In spite of the district courts' respective decisions in favor of Gue Lim and the Chinese minors, the government appealed both rulings and the two controversies reached the United States Supreme Court in 1900 as a single case given the similar legal issues they presented.

Before the Supreme Court was the issue of whether wives and minor children of Chinese merchants domiciled in the United States were privileged to enter the country without the certification required by the 1884 law. In affirming the lower district courts' decisions in favor of Gue Lim and the Chinese minors, the court noted that, although the 1884 law did not specifically exempt the wives or minor children of domiciled Chinese merchants from obtaining the required certificates, they were nevertheless guaranteed the

right to enter the country because of an 1880 treaty between the United States and China. The court further explained that when the facts satisfactorily established that the person claiming to enter the country, either as wife or minor child, was in fact the wife or minor child of a Chinese merchant (one of the members of a class entitled to enter America under the 1880 treaty) then that person was entitled to admission without a certificate. Thus, the court, per Justice Rufus Wheeler Peckham's majority opinion, concluded that Gue Lim and the three Chinese minors were entitled to come into the country without the certificate mentioned in the 1884 law by virtue of their relationship to their merchant husband or father.

Although the wives and minor children of Chinese laborers were still legally barred from entry into the United States, the result in *United States v. Gue Lim* proved encouraging for the Chinese community's survival, as Chinese merchants now had the opportunity to establish or reunite their families in the United States. As Zhao has pointed out, the Supreme Court's decision allowed some Chinese to increase the number of new entries into America by pooling resources together to start businesses or partnerships with the hopes of establishing merchant status. However, because establishing such status usually required resources unavailable to the average Chinese laborer, even when pooled with his peers, the majority of Chinese immigrants were unable to take advantage of the *Gue Lim* court's favorable holding.

United States v. Thind (1923)

In *Ozawa v. United States*, Sutherland admitted that “Caucasian” was a vague term that would probably require clarification as other cases will “arise from time

to time,” and that the court would get to these when they arose, and not attempt an a priori definition of who is or isn’t Caucasian. Bhagat Singh Thind’s naturalization petition was like a yo-yo, first granted, then rescinded, then granted again after the decision in *Ozawa*, then rescinded again when the federal government appealed. He was an immigrant from India, a “high caste Hindu, of full Indian blood,” and thus Caucasian according to the leading anthropological definitions of the time.

Bhagat Thind was yet another model minority: he graduated from Khalsa College in India with honors, he then immigrated in 1913 to study at the University of California at Berkeley, and he supported himself by working at lumber mills in Oregon during the summers. When the United States entered World War I, Thind served in the army, becoming an acting sergeant before his honorable discharge in 1919. After less than a decade in the United States, Thind petitioned for American citizenship, and while his case was moving back and forth in the federal courts, he sought the help of leading attorneys to sharpen his arguments.

Thind’s lawyers suggested that “whiteness” was more than ancestry or skin color, but also about race-based attitudes. They suggested that their client was himself a white supremacist of sorts: “The high-caste Hindu regards the aboriginal Indian Mongoloid in the same manner as the American regards the Negro, speaking from a matrimonial standpoint.” In other words, their client held a dim view of miscegenation and so was sympathetic to the wide range of miscegenation rules that were common throughout the United States. As the descendant of European conquerors, Thind hinted that he was not really South Asian at all. He was “Caucasian.”

The Supreme Court heard the case in oral argument in January 1923, less than two months after the decision in *Ozawa*. Here again was that vexing question of how to define race, and this time, Justice Sutherland expressed frustration with the experts: “The various authorities are in irreconcilable disagreement as to what constitutes a proper racial division.” “Caucasian” was as indeterminate as “white,” and the scientists couldn’t seem to agree which group belonged where. Instead of science—as if rejecting

scientific definitions altogether—Sutherland proposed a more political definition: “What we now hold is that the words ‘free white persons’ are words of common speech, to be interpreted in accordance with the understanding of the common man, synonymous with the word ‘Caucasian’ only as that word is popularly understood. As so understood and used, whatever may be the speculations of the ethnologist, it does not include the body of people to whom the appellee belongs. It is a matter of familiar observation and knowledge that the physical group characteristics of the Hindus render them readily distinguishable from the various groups of persons in this country commonly recognized as white.”

Sutherland then turned again to the question of assimilability: “The children of English, French, German, Italian, Scandinavian, and other European parentage quickly merge into the mass of our population and lose the distinctive hallmarks of their European origin. On the other hand, it cannot be doubted that the children born in this country of Hindu parents would retain indefinitely the clear evidence of their ancestry.” Men like Sutherland, born in England, could “merge” into American citizenship, but Thind and his descendants couldn’t do that.

And finally, as he had in *Ozawa*, Sutherland reiterated a desire not to offend anyone: “It is very far from our thought to suggest the slightest question of racial superiority or inferiority. What we suggest is merely racial difference, and it is of such character and extent that the great body of our people instinctively recognize it and reject the thought of assimilation.” By referring to the “great body of our people,” Sutherland grounded his decision in a democratic theory in which popular will and common sense were the true foundations for this race-based exclusion. It wasn’t based on scientific learning, and it certainly wasn’t the United States Supreme Court itself that was, again, saying no to men like Thind. Rather, the court was giving the people what they wanted. For many hundreds of South Asian farmers, and for a much smaller group of South Asians who’d acquired American citizenship *prior to* Thind’s case, this decision was a catastrophe.

Unlike Takao Ozawa, Bhagat Thind did not disappear from public life. In fact, he became an even more outspoken figure after his case than before. He wrote

several books based on themes in comparative religion, and he gave dozens of public lectures on these works throughout the United States. He criticized Great Britain and advocated for an independent Indian state after World War II, at a time when such activity was regarded as politically suspicious. Before the war, Thind even married Vivian Davis, a woman who had been attracted to his religious and spiritual teachings, a woman whom Justice Sutherland would certainly have considered white by any one of his own definitions. They had two children. According to his son, David, after India became an independent country, Thind traveled there and was well received by several prominent Indian political leaders, including Radha Krishna and Pandit Nehru.

By then, though, India was no longer his country. Thind had become an American citizen. Congress had passed a new rule in 1935 allowing all veterans of World War I to naturalize. Thind petitioned immediately. The next year, a federal court in New York granted his petition, and he swore allegiance to the United States for the third and final time in 1936. For over 30 years, until his death in 1967, Thind was an American citizen.

United States v. Wong Kim Ark (1898)

United States v. Wong Kim Ark, 169 U.S. 649 (1898), is a landmark United States Supreme Court case concerning the very definition of United States citizenship. In its decision, the court held that all children born in the United States are American citizens and stated that the Chinese Exclusion Act could not overrule the citizenship of Chinese persons born within the United States to Chinese immigrant parents.

The circumstances surrounding the facts leading up to this Supreme Court decision relate, in large part,

to the implications of the Chinese Exclusion Act of 1882. This law not only barred persons from China from coming to the United States, it also declared Chinese immigrants already in the United States ineligible for naturalization. The Act and its amendments allowed Chinese immigrants already within the United States to stay, but provided that they could generally not return should they leave the country.

Wong Kim Ark was born in the city of San Francisco in 1873. Both his father and mother were persons of Chinese descent and subjects of the emperor of China. Even though they enjoyed permanent domicile and residence in San Francisco at the time of Wong Kim Ark’s birth, they were not classified as United States citizens. In 1890, Wong Kim Ark’s parents returned to live in China, and later that same year Wong Kim Ark departed for China as well. His visit abroad was temporary and upon his return was permitted by the Collector of Customs to enter the United States on grounds that he qualified as a native-born citizen of the United States. Four years later in 1894, Wong Kim Ark again temporarily departed for China with the intention of returning to America. However, when he arrived back in the United States in August 1895, he was detained at the Port of San Francisco and denied permission to land when the Collector of Customs determined he was not a citizen of the United States. The cited reason for his 1895 denial of entry was that, in spite of Wong Kim Ark’s birth within the country, he was not an American citizen by virtue of his parents’ status as Chinese persons who were subjects of the emperor of China.

Wong Kim Ark contended that his native birth in San Francisco entitled him to the full privileges of United States citizenship and filed a writ of habeas corpus. His case eventually reached the United States Supreme Court in 1898. There, the Supreme Court considered the issue of whether the government’s denial of naturalization to persons born within the United States violated the Fourteenth Amendment to the United States Constitution. On March 28, 1898, the court decided six-to-two in favor of Wong Kim Ark, embracing the judicial principle of *jus soli*, whereby a person obtained citizenship simply by virtue of being born in America, and held that the fundamental rule of citizenship by birth includes all

children of resident aliens born within the United States. Justice Horace Gray, writing for the majority, expressed that because Wong Kim Ark was born in San Francisco, he was a naturalized citizen and the Chinese Exclusion Act of 1882's restrictions could not apply toward him. In a notable dissenting opinion, Chief Justice Melville Weston Fuller turned to the racial principle of *jus sanguinis*, and expressed his opinion that citizenship of a child should be determined by the citizenship of his or her parents. He further insisted that all Chinese persons, whether native or foreign born, remained ineligible for citizenship because of their owed allegiance to the emperor of China.

Although this legal battle proved successful for Wong Kim Ark and the Chinese community, the victory did not necessarily translate into new respect for the Chinese in America as a people. As maintained by Chang, by the turn of the century, numerous anti-Chinese laws, both local and federal, reminded the Chinese that court rulings were meaningless unless local officials abided by and properly carried out its provisions.

United States v. Wong Kim Ark holds a special place in constitutional law history as the first case in which the Supreme Court interpreted Section I of the Fourteenth Amendment to mean that all persons born within the United States are defined as American citizens. It compelled the Supreme Court to decide whether nonwhites born within the United States would be entitled to American citizenship on equal footing as to white Americans.

University of California (Berkeley) Asian American Studies Collections

The Asian American Studies Library at the University of California at Berkeley was established in 1979 to rescue and to preserve community organization resources for the future generation. Under the pressure of an economic downturn in the early 1990s, the Asian American Studies Library was merged with the Chicano Studies Library and the Native American Studies Library into the Ethnic Studies Library in 1992. Asian Americans include the following groups: Asian Indians, Chinese, Filipinos, Japanese, Korean, South Asians (Bangladeshi, Bhutanese, Indian, Nepalese, Pakistani, and Sri Lankan Americans) and Southeast Asians (Burmese, Cambodian [Kampuchean], Lao, Hmong, Iu Mien, Thai, and Vietnamese Americans). Asian American Studies Collections mainly focus on Chinese, Filipinos, Japanese, Korean, Southeast Asians—Cambodian, Lao, Thai, and Vietnamese Americans with the emphasis on Chinese American research materials. It collects materials on historical and current issues of the cultural, political, and socioeconomic life of Asian Americans and Chinese Overseas. Why the Chinese? The library budget's constraint and the San Francisco Bay Area had been the center of the settlement of the earliest Chinese immigrants. San Francisco Chinatown still is the headquarters of many cultural societies and associations. The University of California (UC) campus-wide Asian American Studies librarians decided that UC Berkeley would focus on Chinese Americans, whereas the UC Los Angeles campus would emphasize Japanese American research materials, and UC Irvine would be the center of the Southeast Asian American sources.

The uniqueness of the Asian American Studies Collections is that it includes the valuable research resources from the Asian Americans' perspectives as recorded by their own community organizations. It contains organization reports, occasional publications and serials, ephemera materials from political activities and community events, and archives from family associations and other community organizations and non-print media. The monograph collection has the most

comprehensive scholarly Asian American publications about Asian Americans and communities from pre-1970 to the present. It also obtains materials from ethnic and small publishers. There are hundreds of dissertation covers from the early 1970s to the 1980s. It includes 184 dissertations on Chinese Americans donated by Iris Chang; the serial collection contains scholarly journals and periodicals published by Asian American community organizations, in China and by Chinese overseas around the world—Europe, Australia, Southeast Asia, and so forth. It provides homeland relationships information, reports of the changing conditions in their home villages, life, and local activities of returned Chinese overseas; Asian American newspaper collections in English and Chinese from the East and West Coasts dating from January 2, 1882, to the present which is the largest and most comprehensive Asian American newspaper collection in the United States. These newspapers are the voices from the heart and soul of Asian Americans and their communities; the subjects' relevant ephemera pamphlet files include organization reports, event fliers, newspaper clippings on major issues and a unique collection of posters made by Asian American artists for community events; nonprint media contain a slide collection on Chinese and Japanese American history, films, video tapes and DVDs.

There are 105 Chinese American archive collections. There are also five Asian American archive collections: materials relating to the Topaz Relocation Center, ca. 1942–1945, InterAction records (1987–1994), also known as American Council of Voluntary International Action to protect refugees, Jitsuo Morikawa's sermons: photocopies, 1973–1987, and materials from Personal Justice Denied: The Legacy Continues National Conference, 1998. For the list and detailed descriptions of each archival collection, please visit UC Berkeley Oskicat under "other call number" AAS ARC 2000 or visit Online Archive of California (OAC).

The Chinese American Archives are divided into the following major categories: Chinatown organizations, history of associations, memberships, by-laws, regulations, publications, occasional publications and convention proceedings and activities; business records from the 1900s to document the type of goods

imported from Asia and their business relationship with different firms, business correspondences, accounting books; political activities, the Vincent Chin case (1981–1990), a racially motivated murder case. The lenient sentencing of the criminals caused the first Pan-Ethnic Asian American outrage and protest. American materials relating to the Henry Liu case (1984–1986); he was a Chinese writer in Taiwan and Chinese American journalist. He was murdered at his home in Daly City, a neighbor city of San Francisco to punish him for writing about Taiwan's ruling family and its history; immigration document files contain affidavits to establish nativity and identity, certificates of entry, residency, departure, coaching papers, and other travel documents. The archives of Asian American newspapers include: *Chinese World*, a San Francisco Chinatown Chinese-language newspaper. It began in 1892 and ceased publication in 1969. It was the organ of the Chinese Empire Reform Association and the leading daily in Chinatown from the 1940s to the 1950s. It documented the activities of the Empire Reform Association and its relationship with other political organizations. *East West*, a bilingual English and Chinese newspaper founded in 1967. Its aim was to document the injustice and discrimination against the community and to portray the positive aspects of Asian Americans through print and photograph and other media. Photograph collections include: thousands of Asian American images from Kem Lee Photo Collections covering the period from the 1940s to the 1980s. Mr. Lee was the photojournalists for San Francisco Chinatown and the official photographer of the Miss Chinatown beauty contests. The images recorded the activities of its family associations and celebrate their ethnic heritage. They also depicted their vibrant communities. They cover local, state, and national politicians interacting with Bay Area Asians to gain political support. There are individual collections such as materials related to Ng Poon Chew, the founder of the *Chung Sai Yat Po* (1901–1964), the first Chinese American daily newspaper; Ray Jones, an active Chinese American anarchist from the 1920s to the 1940s; Yuk Ow, the pioneer amateur historian who was the first to study Chinese American history; and Him Mark Lai known as the dean of Chinese American Studies, and his archival collection, 1778–1995,

which includes his research files, professional activities, his writings and personal papers.

U.S.-Korea Treaty of 1882

The U.S.-Korea Treaty of 1882, also known as the Treaty of Chemulpo (Incheon), was the first treaty between Korea and a Western nation. Modeled after the “unequal treaties” between Western powers and East Asian countries during the period of imperial expansion, the U.S.-Korea Treaty of 1882 reflects the complex political circumstances of the Korean nation caught between China, Japan, Russia, and the United States.

The origin of the U.S.-Korea Treaty of 1882 began with the signing of the Korean-Japanese Treaty of 1876 (Ganghwa Treaty). Only 17 years after signing the U.S.-Japan Treaty of 1858, Japan itself imposed an unequal treaty with Korea that shattered centuries of self-imposed isolation and opened the country to Japanese political, economic, and military ambitions. The signing of the Korean-Japanese Treaty was seen as a major insult to China that had maintained suzerainty over Korea: China would provide Korea with protection against foreign enemies in exchange for Korea’s deference to China over foreign affairs. Weakened by external wars and internal strife, China was forced to acknowledge ascendant Japan by accepting the Korean-Japan Treaty, but it decided to aggressively play the intermediary role in the negotiation behind the U.S.-Korea Treaty. In an attempt to regain its influence in Korea, the Chinese government issued an edict in 1881 that paved the way for the U.S.-Korea

Treaty. From the Chinese government’s point of view, the U.S.-Korea Treaty would achieve two goals: first, by leading the negotiations, China would reassert its suzerainty over Korea and have the U.S. government validate this “special relationship”; second, by inviting the United States to establish economic and political interest in Korea, China could use the United States to check Japan’s dominance.

Given these circumstances, the U.S.-Korea Treaty was negotiated in the Chinese port city of Tianjin between the Chinese official Li Hung-Chang who controlled Chinese foreign relations in the last days of the Qing Empire and Commodore Robert W. Shufeldt away from the watchful eyes of the Japanese diplomatic mission in Seoul as well as members of a Korean faction headed by Daewongun—the powerful regent of the Korean court—who rejected all forms of foreign influence. The official negotiations began March 25 and a provisional version of the treaty was signed on April 19, 1882. To ensure security, Li dispatched three warships to Chemulpo to meet Commodore Shufeldt’s U.S.S. *Swatara*. On May 22, 1882, the official treaty was signed aboard a Chinese warship with Shufeldt representing the U.S. government and Shin Chen and Chin Hong-chi representing the Korean government. The Chinese government was represented by Admiral Ting Ju-Ch’ang and Ma Chien-chung in one of the last truly significant acts of Chinese suzerainty over Korea.

Significant provisions of the treaty were as follows: (1) the establishment of trade and diplomatic relations, trading ports, and foreign settlements; (2) protection of American citizens and their rights of extraterritoriality in which American citizens would be subject to arrest and punishment only by the American Consul and other public functionaries of the U.S. government; (3) most favored nation clause for American trade and commerce; (4) freedom of residence and purchase of real estate for citizens of both governments; (5) a ban on import and export of opium; (6) a ban on export of Korean grain and red ginseng; and (7) all possible protection and assistance to the students of both countries.

The treaty paved the way initially for American missionaries to establish a thriving and influential presence in Korea. Missionaries in turn played a crucial role in the development of economic interests

beginning with a monopoly over gold mines in Unsan in 1895. In addition to companies such as the Korean Development Corporation that was established by Americans to take advantage of these new economic opportunities, more established American corporations including the Oriental Consolidated Mining Company, the American Trading Company, the Thomas Edison Company, and others arrived in Korea to profit from activities ranging from logging and mining to laying railroads and telegraph lines. Along with missionaries and economic interests, the U.S.-Korea Treaty of 1882 made possible the first wave of immigration from Korea to the United States and its territories, most notably Hawaii.

The issue of China’s suzerainty over Korea would be resolved with the conclusion of the Sino-Japanese War (1894–1895). The Shimonoseki Treaty of 1895 ended the war and declared Korea independent from China. The Russo-Japanese War of 1904–1905 resulted in the withdrawal of the Russian legation and troops from the Korean peninsula, and the Treaty of Portsmouth of 1905 ended the war and affirmed Japan’s paramount interest in Korea. Theodore Roosevelt mediated the negotiations for the treaty between Japan and Russia and his effort won him the Nobel Peace Prize in 1906. However, the U.S. government’s support for Japan’s primacy in Korea would result in peace for neither East Asia nor the world. As Japanese imperial ambitions increasingly clashed with American interests, Japan objected to the American flag flying over Seoul and forced Korea to stand alone with Japan. On August 22, 1910, the Treaty of Annexation would end the Korean American Treaty of 1882 by making Korea a colony of Japan under the rule of a Japanese Governor-General. The United States and Japan would move inextricably toward war as Japan launched military campaigns deep into China. Against this backdrop, Koreans—including Korean Americans—would dive into an existential struggle that would be nothing less than to recover their nation.

Ut, Huynh Cong “Nick” (1951–)

Huynh Cong “Nick” Ut is a Vietnamese American Associated Press photographer known for his iconic photograph of the Vietnam War. On June 8, 1972, while working with other AP photographers, he snapped a photograph of a young Vietnamese girl, Phan Thi Kim Phuc, running from the village of Trang Bang after being severely burned in a South Vietnamese napalm attack. Ut saw Phuc, naked after her clothes had been burned off, running toward him, screaming “Too hot! Too hot!” She was 9. After bringing her water, Ut took her to the Cu Chi hospital where he used his press status to get her immediate attention. Ut and his colleague Christopher Wain helped Phuc and the other villagers receive medical attention. Although the AP prohibited publishing nudity, they made an exception for this image. Ut’s picture appeared on the front page of the *New York Times* the next day.

Although there was a variety of disturbing war images circulating at the time, Ut’s picture is widely considered the defining image of the Vietnam War. Although not initially published as a critique of American intervention, the picture came to be associated deeply with antiwar sentiment. In particular, it brought focus to the dangers of napalm as a weapon against the North Vietnamese. Napalm, manufactured by the American company Dow Industries, was brought to Vietnam by the American military. In the years since the war, Ut’s image has been credited as being a visual catalyst for the antiwar movement and has become emblematic of the Vietnam War’s tragedies. Many scholars within visual culture studies have written about the visceral response this particular picture invoked. Susan Sontag noted in her seminal work, *On Photography* (1977), that Ut’s piece was an indexically rendered slice of time that conjured the horrors of war in a way that suggests how images at times can challenge regimes of power. In 1973, Ut won a Pulitzer Prize for the photo.

Ut and Phuc have remained in touch intermittently over the years and reestablished contact when Phuc

and her husband sought political asylum in Canada in 1992. Recently, in response to the 40th anniversary of the “Accidental Napalm” photo’s publication, news outlets sought out both Phuc and Ut for personal stories on both. In these interviews, Phuc noted she maintains a closeness with Ut, calling him “Uncle Nick.”

Ut still works as a photographer for the Associated Press, covering a variety of different news stories. However, he remains best known for his work in Vietnam during the war but none of his images received the same level of widespread acclaim as he did for “Accidental Napalm.” On June 8, 2007, he took a picture of Paris Hilton crying in the back of a police car. It was exactly 35 years to the day that he took the image of Phuc, and news outlets and opinion pieces contrasted the two images—one of a child in a war-torn conflict, and the other, of a celebrity caught in an embarrassing situation.

V

Vera Cruz, Philip (1904–1994)

Philip Vera Cruz came to the United States from the small rural village of Saoag, in the province of Ilocos Sur, Philippines. He was born on December 25, 1904, to Andriano Sanchez Vera Cruz and Maria Villamin Vera Cruz. He had younger siblings, a sister Leonor and a brother Martin. Philip Vera Cruz passed away on June 12, 1994, at the age of 89 in Bakersfield, California of emphysema according to his life partner, Deborah Vollmer. During the farm worker strikes of the 1960s, Vera Cruz helped unite Filipino and Mexican laborers, which turned the union into a major force in the American labor movement. “I took it as a duty to fight for the union,” he told *The Los Angeles Times* in 1992, then retired and picked grapes only in his garden.

As a young man Vera Cruz arrived in Seattle, Washington in 1926 after pooling money he received from selling some of the family farm and loans from relatives with the intention to go to school. With only \$25 in his pocket he set out to find work. Although he performed a wide variety of jobs, including working in an Alaskan cannery, North Dakota sugar beet farm, Chicago restaurants, and a Spokane box factory, his life journey lead him to become a farm worker labor leader and eventually a vice president and cofounder of the United Farm Workers Union (AFL-CIO).

After learning of his father’s death in 1928, he decided to go back to Spokane, Washington after working in Chicago. Vera Cruz earned his high school diploma in 1932 from Lewis and Clark High School when working as a houseboy and in restaurants as a busboy. He enrolled in Gonzaga University in Spokane, Washington, but he decided to leave after

his mother asked him to send money back home to the Philippines every month so his brother and sister could afford school.

Vera Cruz was drafted during World War II in August 1942, and assigned to the 2nd Filipino Infantry Regiment at Camp Cook, California. However, he was discharged along with others who were over 38 years old and assigned to work in the Vallejo shipyards. Instead he headed to Delano and started his life as an agricultural worker. As part of the migrant farm labor force he moved with the seasons and the crops. Vera Cruz thinned plums, cut cantaloupe, and picked asparagus, but he primarily tended the grapevines and their fruit. He didn’t stop picking grapes until the Great Delano Grape Strike of 1965.

In the late 1950s, Vera Cruz was a member of the National Farm Labor Union (NFLU), AFL-CIO and in fact served as president of their Delano local. In 1959 the AFL-CIO formed the Agricultural Workers Organizing Committee (AWOC). Larry Itliong, a Filipino, and Delores Huerta, a Chicana, were its early leaders. Vera Cruz joined the AWOC when residing in Richgrove, California, just before the Great Delano Grape Strike of 1965 began on September 8. Vera Cruz attend that historic AWOC meeting held at the Filipino Hall in Delano. He said in his 1992 biography, *Philip Vera Cruz: A Personal History of Filipino Immigrants and the Farmworkers Movement*, “I attended that meeting and that was the start of my career with the farmworkers movement and later on, with the UFW which became the most important part of my life. It became my way of life, as a matter of fact.”

Filipino agricultural workers had been organized as early as in the 1930s by the country’s first Filipino-led union—the Cannery Workers and Farm

Laborers Union Local 18257 (later the Food, Tobacco, Agricultural and Allied Workers, Local 7). An example of industrial organizing, the union was based in Seattle and represented the “Alaskeros”—migrant workers who toiled in the Alaska salmon canneries in the summer and the fields of California during the rest of the year. As union organizers talked to farmworkers about organizing in Stockton, California in 1948, Filipino workers cutting asparagus went on strike. Led by Chris Mensalvas and Ernesto Mangaoang of Local 7, the 1948 walkout involved over 4,000 workers, 90 percent of whom were Filipino. It was a long three-month strike, and one of the largest agricultural actions in American history; it was unsuccessful but included notable participants such as Larry Itliong, Philip Vera Cruz, Carlos Bulosan, and Claro Candellario. There was even a thousand-man march held in downtown Stockton.

The Delano AWOC membership was mainly made up of Filipinos and they initiated the 1965 Great Delano Grape Strike, which was led by Larry Itliong, Philip Vera Cruz, Benjamin Gines, and Pete Velasco. The 1,500 Filipinos were more seasoned with labor actions, and they took the first step by striking nine grape growers during harvest season. The workers voted to launch a strike against the gross disparity in salaries between their pay of \$1.10 per hour and the higher \$1.40 per hour paid to the braceros (temporary workers brought in from Mexico). AWOC had just previously called for a strike in Coachella, California and won the \$1.25 per hour wage increase. Fearing that Mexican workers would be brought in as scabs to break the strike, AWOC leaders approached the National Farm Workers Association (NFWA) led by Cesar Chavez who was reluctant to commit his relatively young organization, which was mainly composed of Mexican immigrants.

On September 16, just 11 days after the Filipinos had started the strike, AWOC was joined by NFWA. This marked the beginning of the Great Delano Grape Strike with their very effective secondary strike—the call for a national boycott of grapes that was not settled until contracts were signed in 1970. In August 1966, AWOC and NFWA merged into the United Farm Workers Organizing Committee, AFL-CIO. Cesar Chavez of the NFWA was elected president and Larry

Itliong of AWOC was elected one of the vice presidents.

Vera Cruz served as the highest-ranking Filipino American officer of the UFW as a vice president from 1971 to 1977. One of his responsibilities was the building and management of Agbayani Village, a retirement home mainly planned for the elderly UFW Filipino farmworkers. It was a 60-unit, one-story structure designed by Luis Pena, a Chicano architect and had a central kitchen, dining hall, living room, and recreation room with a donated pool table. It even had air-conditioning, a real luxury for farmworkers who had lived most of their lives in bunkhouses. Agbayani Village was named after Pablo Agbayani, a manong (a Filipino term of endearment and respect for an elder) who died on the picket line during the Grape Strike. It was built mostly by donations from other unions and volunteer brigades of students and community activists from all along the West Coast and beyond. It gave the opportunity for many young Filipinos to meet and learn from the manongs living there.

Over the years Vera Cruz felt that the Filipinos who initiated the Grape Strike were gradually being pushed aside within the UFW. Earlier in 1971 Larry Itliong had left the UFW also feeling Filipinos were losing their voice to affect decision making. In 1977 Cesar Chavez as president of the UFW accepted an invitation to go to the Philippines from the dictator Ferdinand Marcos where he accepted a special Presidential Appreciation Award. Vera Cruz felt this was the last straw and resigned from the UFW during their 1977 UFW Convention where Marcos’s Philippine officials were being honored as guest speakers.

In his years after leaving the union, Vera Cruz was a much sought after speaker for student college events and community conferences, including the annual F/Pilipino People’s Far West Conventions held through the 1970s to the mid-1980s.

In 1987, Vera Cruz was awarded the first Ninoy M. Aquino Awards for lifelong service to the Filipino community in America. Included with the award was a trip to the Philippines in early 1988 to meet with Philippine President Corazon C. Aquino in Malacanang Palace, Manila. It was his first time to return to the Philippines since he left in 1926. He was accompanied by his longtime companion, Debbie Vollmer.

In 1992, the AFL-CIO's Asia Pacific American Labor Committee honored Philip Vera Cruz at its founding convention.

Carey McWilliams, past editor of *The Nation* magazine said of him: "Vera Cruz is thoughtful, reflects critically on his experience, is not tricked by appearances, has a sharp eye for social realities, and is neither bombastic nor egocentric. What he has to say about the union is of particular importance."

Victorino, Shane (1980–)

Shane Victorino is a talented outfielder for the Boston Red Sox of the American League. Born in 1980 on Maui, Victorino possesses Filipino ancestry. Called the "Flyin'Hawaiian," Victorino was originally drafted out of Wailuku High School by the Los Angeles Dodgers of the National League in 1999. He made his Major League debut with the San Diego Padres of the National League in 2003 but gained national attention as a swift, dynamic outfielder carrying a potent bat. His best year in the majors so far has been with the Philadelphia Phillies in 2009 when he hit 13 home runs and batted .292.

Vietnamese American Anticommunism

Since the end of the Vietnam War in 1975, Vietnamese Americans have utilized their refugee status as a form of political and cultural thread stitching together a sense of identity and community out of displacement and loss. Among those classified as anti-Communist ethnic minorities by social scientists, Vietnamese in the United States are often compared to Cuban Americans who have been able to collectively align with the Republican Party to leverage representation and power in mainstream politics.

With South Vietnam's collapse and the exodus of Vietnamese refugees from the homeland after the Communist takeover, overseas communities that formed in the wake of the war have been staunchly anti-Communist and vigilantly opposed to the new unified Vietnam under a socialist regime. Given the outcome of the Vietnam War, anticommunism has been the dominant community politics for Vietnamese Americans. This political ideology has often erupted in violence and controversy in the last three decades of the twentieth century.

Vietnamese American anticommunism cannot be simply absorbed under the broader umbrella of Cold War McCarthyism that pervaded much of American politics in the 1950s until the fall of the Berlin Wall in 1989. This form of ethnic politics should be understood as a particular *minority discourse* fraught with tension and irresolution. Vietnamese American anticommunism ideologically opposes socialism in general, but must be historicized as a discourse emerging from the North Vietnam/South Vietnam civil strife, the evacuation of the South's urban elites in 1975, the exodus of the boat people from the late 1970s to mid-1980s, and the reeducation camp experiences of men and women from the former South Vietnam. These particular historical events frame and help to reinvigorate anticommunism as a social movement in the United States.

Normalization and Community Politics

From 1975 until the mid-1990s, the U.S. government enforced sanctions toward their former enemy primarily through a trade embargo with Vietnam. Under

the Clinton Administration in the early 1990s, the United States made a move toward repairing its relationship with Vietnam by lifting the trade embargo in 1994 and extending full diplomacy in 1995. The Vietnamese American community responded to the move toward “normalization” between the United States and Vietnam with mixed emotions. Normalization meant easing communications and travel between homeland and overseas communities that would allow for Vietnamese Americans to keep in touch with family and friends in the old country, send remittances, and travel back to the homeland. However, grievances expressed by this refugee community over human rights abuses and “reeducation” policy under the Communist government continued to go unaddressed, thus the “forgive and forget” gesture of normalization was viewed as an affront to many in the Vietnamese American community.

In 1987, Tap Van Pham, an editor of a Vietnamese-language newspaper in Southern California that ran ads of U.S. companies doing business in Vietnam, was murdered. He was rumored to be a Communist sympathizer. Firebombing, protest, boycotts, and intimidation were all strategies deployed by vocal anti-Communist extremists in the community to draw the boundaries of community and identity for Vietnamese Americans. Pham’s murder was one among a handful of other extreme anti-Communist incidents in Vietnamese America. However, these are by far the more sensationalized incidents in the community that have allowed mainstream media to represent Vietnamese Americans as a fractious group bound by their “homeland politics.” Although anticommunism has certainly created tension and rifts within the community, it has also effectively brought the community together in solidarity against human rights injustices in the homeland and the historical omission of South Vietnamese stories in the U.S. and Vietnam publics.

Flag Controversies

Arguably, the main symbol of Vietnamese American anticommunism is the former South Vietnam flag: bright yellow with three horizontal red stripes. This flag has come to represent a refugee community’s difference from the homeland, now united under a red

flag with one large yellow star at center. The yellow flag has been dubbed the “Freedom and Heritage” flag of the Vietnamese American community. In 2003, Vietnamese American leaders launched a nationwide movement, originating in Little Saigon (Westminster, California), to seek formal recognition of the Freedom and Heritage flag by city and state municipalities. Westminster was the first city to pass a resolution recognizing this flag as a symbol of Vietnamese Americans and since then over 80 cities and 20 states have done the same.

As important icons in contests over political representation, history, and cultural memory, the red flag and the Freedom and Heritage flag have gone head-to-head in public spaces all across the United States, from parks to video stores to universities and colleges. Flag controversies have erupted whenever the red flag has been displayed. Vietnamese American community members and their allies would usually negotiate with or stage a demonstration against the offending institution to replace the red flag with the Freedom and Heritage flag. For example, in 2004, Vietnamese American students at California State University, Fullerton, threatened to walk out of graduation because of the university’s display of the red flag to represent them. They demanded the Freedom and Heritage flag represent them instead. The university responded by removing all national flags from graduation ceremony. In 2008, *Nguoi Viet Daily News*, the most established Vietnamese-language newspaper in the United States, was the target of protests and boycotts because it reprinted a photo of an art installation foot-spa painted as the Freedom and Heritage flag. What these two examples demonstrate is the enduring force of the symbol of anticommunism in the Vietnamese American community.

The Hi-Tek Protest of 1999

Although the anti-Communist movement was said to have lost much of its momentum in the 1990s for Vietnamese Americans, one major event in January 1999 proved to be a historical watershed for the consolidation of anti-Communist politics. In response to Truong Van Tran’s display of the red flag and a portrait of late Ho Chi Minh, Vietnamese Americans protested for

months outside his video store on Bolsa Avenue at the heart of Little Saigon, the commercial and cultural headquarters of America's Vietnamese. Although displaying the red flag and the portrait of Ho Chi Minh may not seem like such a radical move to most Americans who believe in free speech rights, to many Vietnamese Americans these icons serve as cruel and blatant reminders of the reason for their forced exodus from the homeland. Although Tran's intentions were not clear at the beginning, the Vietnamese American community responded in a way that could leave no room for doubt about their feelings on this issue. A 53-day protest ensued as a result of Tran ignoring the demands of community members and refusing to take down the flag and poster. This exhibition of his freedom of speech came at an enormous price, costing him his business as well as his foothold in the Vietnamese American community. The protest proved to be a watershed in the short history of Vietnamese American politics because of the overwhelming participation of Vietnamese Americans from all over the country. The turnout for this event was sometimes over 15,000 protestors, consisting of Vietnamese Americans of first, 1.5, and second generations as well as Vietnam War veterans and other sympathizers.

The Hi-Tek protest can be understood within a discourse of nationalism and community-building. Vietnamese Americans have constructed a nationalist discourse by situating their identities in opposition to the Communist regime in Vietnam. Furthermore the dominant anti-Communist ideology of the community suppressed any deviant political views, thus allowing for a solidarity that is often achieved at the expense of symbolic scapegoats such as Tran.

The Hi-Tek protest, now memorialized by Lindsay Jang and Robert Winn's documentary, *Saigon, U.S.A.*, functioned to unearth the tensions and divisions within the community. The protest served as both a vehicle for the demonstration of conservative, U.S. Cold War politics as well as an outlet for new, critical voices to dissent from the majority view. Thus, Hi-Tek proved to be pivotal in forcing the Vietnamese American community to confront its ideological issues and strategically enact a stance for the sake of mainstream political coherency.

Tran was not the only scapegoat of the Hi-Tek event. Westminster City Council member, Tony Lam, was under attack for his alleged lack of support for the community's cause during Hi-Tek. At that time, Lam was a third-term council member and the first Vietnamese American to be elected to this office in the nation's history. During the months after the Hi-Tek protest, demonstrators gathered outside his restaurant in Garden Grove to chastise him for being disloyal to the community and not hard enough on communism. A group of community organizers attempted to recall Lam from his position.

Although the political consciousness of the Vietnamese American community can be characterized as conservative, underneath the superficial exterior of anti-Communist solidarity lies many different types of affiliations. Even if the only flag allowed to represent Vietnamese Americans is the Freedom and Heritage flag, many Vietnamese Americans may indeed sympathize with the Hanoi regime without an outright display of the Communist flag. Although Tran vocally and visually exhibited his affiliations, there is a silent population who do not choose to be so blatant about displaying their affiliations. One way to read the protest is as a failed effort at reinforcing anti-Communist ideologies because what it actually does is expose the contradictions and cleavages in the community, leaving the space open for new debates and future activism. Furthermore, it is within the nationalist rhetoric of U.S. anti-Communism that Vietnamese American hardline anti-Communists find legitimation and ideological support.

The False Divide: Culture and Politics

Since the 1999 Hi-Tek protest, numerous other national and local protests have occurred in Vietnamese America. In 2007, Vietnam President Nguyen Minh Triet made a landmark visit to the United States to discuss trade relations with former President George W. Bush. He was met with protest in Washington, D.C., as well as in Orange County, California where he also visited.

Yet, the Vietnamese American community is not only interested in political venues. Another significant

indicator of Vietnamese American anti-Communism can be found in a protest against the Bowers Museum of Cultural Arts in Santa Ana, California. In the summer of 1999, two American corporations, Coca Cola and Mobil, cosponsored an art exhibition from Vietnam at the museum. Vietnamese American community members came out to rally against what they deemed a “communist ploy.” What mainstream media focused on in reporting these types of events is the unwillingness of Vietnamese Americans to move beyond anti-Communism to establish stronger relations with Vietnam despite the fact that the United States has been able to accomplish this, as evidenced by the sponsorship of the exhibition. The same message came across in many media representations of the Hi-Tek protest as well.

On a much smaller scale, local protests against performers from Vietnam have erupted all over the United States because they are often viewed as agents of the Communist government. Vietnamese Americans not only make large political statements through events such as the Hi-Tek protest or President Nguyen Minh Triet’s visit, but they also see the important role of culture and cultural production in the dissemination of history and memory. Thus, sites such as art exhibitions and music performances are also cause for concern and demonstrations.

Vietnamese American public expressions of anti-communism must be understood as a performance of rightful belonging to the democratic American nation and a critical engagement with the historical erasure of South Vietnamese stories. Vietnamese Americans’ insertion into American society and “indebted” position toward the U.S. government as political refugees circumscribe a particular intelligible “voice” they have learned to manipulate and claim as a marker of identity and community. Because their entry into the United States was contingent upon their status as victims of communism and therefore freedom-seekers, their expression of anti-Communism may also be understood as a strategic enactment of conformity and assimilation into U.S. democracy while also enabling a writing of a different Vietnamese history from what has been officially sanctioned within the Vietnam and U.S. nations.

Vietnamese Americans

Introduction

On or around April 30 of each year for the last 35 years thousands of Vietnamese Americans gather to commemorate the Fall of Saigon on April 30, 1975.

In addition, during the Lunar New Year celebration, thousands of Asian Americans celebrate the coming of the New Year and all the possibilities that it offers. Across the country, from Falls Church, Virginia to San Jose, California, there are hundreds of Têt (New Year) celebrations organized by Vietnamese Americans. Thousands of Vietnamese Americans and others participate in these activities and these are some of the occasions when the media covers this community extensively. There are more than one million Vietnamese Americans living in the United States according to the 2000 Census. The United States is home to the largest Vietnamese community outside of Vietnam. However, the word Vietnam is still largely associated with the Vietnam War that the United States was involved in until 1975. This word itself is controversial and invokes a wide range of emotions. We have finally begun the healing process resulting from this war. This is their immigration history and development of the Vietnamese American community in the United States since 1975.

Immigration History

On January 28, 1973, after having spent years and millions of dollars financing the Vietnam War, the United States' government reluctantly agreed to withdraw its financial and military assistance after signing the Agreement on Ending the War and Restoring Peace in Viet Nam. The peace agreement was signed by representatives of the United States government, the Government of the Republic of Vietnam (South Vietnam), and the Government of the Democratic Republic of Vietnam (North Vietnam) in Paris. The main features of the Agreement committed the United States and other signatories to respect the independence, sovereignty, unity, and territorial integrity of Vietnam. It called for prisoners of war to be exchanged, and declared an in-place cease-fire. In addition, the agreement required the United States to "stop all its military activities against the territory of the Democratic Republic of Vietnam by ground, air, and naval forces wherever they may be based; and end the mining of the territorial waters, ports, harbors, and waterways of the Democratic Republic of Vietnam." Furthermore,

it required the United States to "not continue its military involvement or intervene in the internal affairs of South Vietnam." This historical agreement was enthusiastically approved by the North Vietnamese but reluctantly signed by the United States and South Vietnam's President Nguyen Van Thieu.

However, soon after the withdrawal of the United States military and economic support, the military situation deteriorated rapidly for the government of South Vietnam. The flight of the Vietnamese refugees began within the country, with the North Vietnamese military offensive of mid-March 1975 resulting in the defeats at Pleiku, Kontum, and Ban Me Thuot. As a result of this military offensive, about 1 million refugees poured out of these areas and headed for the capital city, Saigon, and the coast. Most traveled by foot, few were fortunate enough to travel by car, truck, bus, or motorbike. The coastal city of Da Nang was evacuated March 27–28, 1975. This was soon followed by other coastal cities, such as Nha Trang and Cam Ranh. By the end of April 1975, South Vietnam, under the direction of General "Big" Minh surrendered to the North Vietnamese Communist government. On April 30, 1975, Saigon, the capital of South Vietnam, came under the control of the Provisional Revolutionary Government. This resulted in the plight of the newest Asian Pacific immigrant group to the United States at the time.

The Vietnamese Refugee Immigration Experience

Vietnamese emigration is generally divided into two periods, each with several "waves." The first period began in April 1975 and continued through 1977. This period included the first three waves of Vietnamese refugees in the United States.

The first wave of refugees, involving some 10,000 to 15,000 people, began at least a week to 10 days before the collapse of the government. The second wave, and probably the largest in numbers, involved some 80,000 who were evacuated by aircraft during the last days of April. The evacuation of American personnel, their dependents, and Vietnamese affiliated with them was achieved through giant helicopters under "Operation Frequent Wind." According to

Newsweek magazine (May 12, 1975), it was a “logistical success . . . the biggest helicopter lift of its kind in history.”

These individuals were relatively well educated, spoke some English, had some marketable skills, came from urban areas, and were Westernized. Members of these two waves were primarily Vietnamese who worked for the United States’ government, American businesses and corporations, or the Vietnamese government. All were thought to be prepared for life in the United States on the basis of their contact with the U.S. government and their association with Americans.

The final wave during this period involved 40,000 to 60,000 people who left on their own in small boats, ships, or commandeered aircraft during the first two weeks of May 1975. They were later transferred to Subic Bay and Clark Air Force base in the Philippines and Guam Island after having been picked up, in many cases, by the U.S. Navy and cargo ships standing off the coast of Vietnam.

The second period of Vietnamese refugee migration began in 1978 and continues even today, but the numbers are now very small. Since the fall of South Vietnam, many Vietnamese have tried to escape the political oppression, the major social, political, and economic reforms instituted by the authoritarian government of North Vietnam. Although the influx was steady for many years, the numbers are no longer as substantial as they once were. A significant characteristic of this period, especially between the years 1978 to 1980, is the large number of ethnic Chinese migrating out of Vietnam and Cambodia.

In addition to the Vietnamese ethnic Chinese, there were many Vietnamese who also left during this period. These individuals have been called “Vietnamese boat people” because the majority of them escaped in homemade, poorly constructed boats and wooden vessels. Because of the lack of seaworthy vessels that could not withstand the forces of nature, their scant knowledge of navigational skills, the very limited amount of food and water they were able to bring, and finally, numerous attacks by Thai sea pirates, the death rate of the “Vietnamese boat people” was very high. Some verbal testimony from surviving refugees has estimated it to be as high as 50 percent, although

Grant and Wain have placed it much lower at 10 percent to 15 percent. However, the percentage will never be accurately known because there is no systematic way of knowing how many refugees actually left Vietnam, and only survivors are accounted for. Since 1979, many former receiving countries are turning away refugees because of the economic toll, political cost, and social strain that they are putting on their economies.

The exodus of Vietnamese refugees to the United States was a difficult process. Regardless of which wave they arrived in, the journey to America left a long-lasting impression on all those involved. For some, the long journey was made easier because they were able to leave during the earlier period, or when they were younger. For others, the journey was more traumatic because of their circumstances and the uncertain journey across the ocean to a new and unknown destination.

The United States’ Response

The Vietnamese exodus and their resettlement in the United States could not have come at a worse time in that period of American history. The Vietnam War was an extremely unpopular war at home in which 57,692 American men and women died with 2,500 listed as “missing in action” or as prisoners of war. The war deeply divided the nation.

Indeed, the general atmosphere of the American public at the end of the war was hostile toward the Vietnamese refugees. The Gallup Poll taken in May 1975 showed “54 percent of all Americans opposed to admitting Vietnamese refugees to live in the United States and only 36 percent were in favor with 12 percent undecided” (*Time*, May 19, 1975). A common concern of the American public was one of economic self-interest—a fear of having jobs taken away as well as having too much public assistance and welfare given to the refugees. During this time, the United States was in a period of recession with an unemployment rate of 8.3 percent.

The United States’ Government Dispersal Policy

To minimize the social impact of the large influx of Vietnamese refugees on an American public that was

unfavorable to the Vietnam War, the United States government adapted the Refugee Dispersion Policy. This policy served four purposes: (a) to relocate them as quickly as possible so that they could achieve financial independence; (b) to ease the impact of a large group of refugees on a given community, which might otherwise increase the competition for jobs, social services, and housing; (c) to make it easier to find the largest pool of sponsors possible; and (d) to prevent the development of an ethnic ghetto. The logic was that if this policy was carried out successfully, the Vietnamese refugees would quickly assimilate into the American society. The goal was for a rapid and, hopefully, smooth and seamless transition for the refugees into society. The goal was for them to become economically and financially independent as quickly as possible without much consideration of the social impact that might result from this dramatic event.

As a result, nine voluntary agencies (VOLAGs) were contracted by the federal government's Inter-agency Task Force to handle the resettlement of the refugees in the United States. The primary task of these voluntary agencies was to find sponsors that would have the ability to fulfill both financial and moral responsibilities and match them with refugees' families. The responsibilities included providing temporary food, clothing and shelter, assistance in finding employment or job training for the head of the household, enrolling the children in school and finally, providing ordinary medical care. In other words, the sponsors would serve as a resource to introduce the Vietnamese refugees into the society as they became economically self-supporting.

The Resettlement of Vietnamese Refugees

There were four ways for the refugees to leave the four temporary refugee camps (Camp Pendleton, California; Fort Chaffee, Arkansas; Eglin Air Force Base, Florida; and Fort Indiantown Gap, Pennsylvania) and enter American society: (1) resettlement to a third country, (2) obtain repatriation to Vietnam, (3) demonstrate proof of being financially self-supportive, and (4) find a sponsor through one of the nine voluntary agencies.

Although third-country resettlement was encouraged by the United States government, this avenue was hardly chosen by the Vietnamese refugees. Very few other countries offered their assistance unless the refugees fulfilled at least one of the following requirements: (a) be certified professionals in needed areas, (b) had relatives in that country, or (c) could speak that country's language. Because most refugees were not likely to be certified in professional areas as a result of the long war and lack of research and development, it was unlikely that they were qualified for this option.

Only a small number of refugees chose to return to Vietnam. Darrel Montero, an anthropologist, reported "by October 1975, repatriation had been granted to 1,546 refugees by the new government of Viet Nam" (Montero 1979). The majority were military men who were forced to leave their families behind at the time of their evacuation. Upon realizing that they might be not see their loved ones again, they decided to return to see if they could be reunited and were probably aware of the uncertainties that awaited them. There is no record of what happened to those who returned under this repatriation process.

The third method by which the refugees were allowed to leave the camps was to demonstrate their financial independence. Kelly and Montero again documented, the Task Force required a refugee family to show proof of cash reserves totaling at least \$4,000 per household member. However, because of their abrupt plight, only very few refugees were qualified to use this avenue. This was a rather large sum of money and it was unlikely that they were able to bring such a large sum of cash under the conditions they were forced to leave their country. In addition, not many refugees would report to the authorities their financial savings for the fear of the unknown that awaited them in this new country. Thus, the first waves of Vietnamese refugees entered the United States' society primarily through the family sponsorship method.

The sponsors found by voluntary agencies consisted of religious congregations, parishes or affiliates, individual families, corporations, and companies with former Vietnamese employees. In addition, if the refugees had relatives who could fulfill the same requirements, they could qualify as sponsors as well.

However, Skinner, reported only 15,000 Vietnamese living in the United States prior to 1975. Most of these individuals were students staying temporarily on visas or wives of United States soldiers. In essence, the Vietnamese did not have an established ethnic community in the United States and, therefore, this method hardly applied to the first waves of refugees.

Nevertheless, the family sponsorship method was used more frequently at a later time by the Vietnamese from the first waves to sponsor family and relatives who were stranded in Vietnam after 1975. The primary ways this method was used was through the implementation of two federal government sponsored programs that resulted from the Conference on Indochinese Refugees held in Geneva, Switzerland on June 14, 1980: (1) the Orderly Departure Program and (2) the Humanitarian Operation Program.

The goal of these programs was to provide Vietnamese a ‘viable alternative’ to dangerous clandestine departure by boat or over land. However, this viable alternative was not as successful as originally anticipated as many Vietnamese refugees continued to leave by boat. As a result of these avenues, many Vietnamese families who arrived during the first and second period, who now have citizenships or permanent residence status, are using the first category to bring family members to the United States. In summary, as a result of the United States Federal Government Dispersal Policy, Vietnamese refugees were dispersed throughout the United States.

The Vietnamese Adaptation Process

These were the structural conditions in the United States that the first Vietnamese refugees had to face at the time of their arrival. How did this affect their experience? First, as a result of the Refugee Dispersion Policy, the first group of Vietnamese refugees were resettled throughout the United States. Second, the extended family network that existed in their homeland was temporarily broken by the different processes of migration. To find churches, social organizations, families and individuals that were willing to sponsor Vietnamese refugees, extended families were broken up. Only immediate family members were allowed to stay together. Despite the chaotic and abrupt nature of

the Vietnamese refugees’ departure, a substantial number of people came in family groups, accounting for approximately 62 percent of all the immigrants from the first two waves.

In addition, many of the social networks that formed when they were abandoning their homeland as well as in refugee camps were also temporarily disrupted. This forced the Vietnamese refugees to interact with, and depend on, the sponsors and the immediate environment for social and emotional support. In essence, the Vietnamese were deprived of the emotional, social and psychological support generated from the extended family and also the support that was generated from shared culture, language, customs, and experience.

Third, to minimize the strain put on local economies by the refugees, the government encouraged the American sponsors to help the refugees to become financially independent as soon as possible. Therefore, to survive, many Vietnamese accepted jobs of lower status than the ones they had in Vietnam. The majority of these jobs were concentrated in the periphery economy or were service jobs that required no skills and little or no English proficiency.

The consequence of this policy resulted in the relocation of Vietnamese across the United States, which temporarily disrupted their mutual support systems. These systems included extended family members and friendships that were formed during these tumultuous times. Weather conditions that exist in many parts of the country where they were relocated were substantially different from that in their homeland. In only a few states was the weather similar to that of Vietnam (among these California, Texas, and Florida). This fact played a significant role in the formation of a secondary migration initiated by Vietnamese refugees that took place later.

The 1980 U.S. Census Data ranked the states with the highest Vietnamese populations as California with 34.78 percent, Texas with 11.34 percent, Louisiana with 4.43 percent, Washington State with 3.65 percent, Virginia with 3.86 percent, Pennsylvania with 3.31 percent, and, finally, Florida with 2.89 percent. This illustrates that a disproportionate number of Vietnamese immigrants reside in only three states—California (34.78%), Texas (11.34%), and Louisiana

(4.43%)—which constitute 50 percent of the entire Vietnamese population. In addition, almost two-thirds (64.26%) live in only seven states, including the aforementioned three states, plus Virginia (3.86%), Washington State (3.65%), Pennsylvania (3.31%), and Florida (2.89%).

As the harsh winter conditions hit the cities throughout the United States where Vietnamese refugees were initially resettled, the desire to find a location with a warmer climate and a Vietnamese community increased for those who had settled in colder parts of the United States. California's warm climate and its abundance of unskilled jobs, especially in San Jose's "Silicon Valley," Santa Ana, and San Diego along with the existence of small Vietnamese communities in Los Angeles and San Jose, attracted refugees. Baldwin found that 43 percent of Vietnamese who had relocated to Orange County gave "climate" as their primary reason for migrating, whereas 22 percent gave "job/finances/education" as their second reason, followed by "family nearby" with 13 percent. This secondary migration pattern is repeated as many Vietnamese communities have been established throughout the United States, but the largest communities are primarily concentrated in California, Texas, Washington, and Virginia.

The latest Census data on Vietnamese in the United States indicate that those states in which the immigrants concentrated their secondary migration are still those most populated by Vietnamese. The data reveal that California is still the state of preference by Vietnamese immigrants of where to live with 45.36 percent of the population; Texas is still second at 11.27 percent; Washington State with 4.81 percent and Virginia 3.30 percent have moved ahead of Louisiana with 2.85 percent. Florida is still fifth with 2.65 percent, and Pennsylvania is now sixth with 2.57 percent. These seven states together combine for almost 73 percent of the total number of Vietnamese immigrants living in the United States.

The Vietnamese American population is relatively young with a median age of 35.5 years old. The majority are between the ages of 18 and 44 (45.7%) followed by those under 18 (24.8%), people between 45 and 64 make up 22.7 percent, and only 6.5 percent are 65 years or older. The majority of the people reported

as being married (55.8%), whereas 32.4 percent reported "never married," with a very small divorce rate (5.3%). The average Vietnamese American average family size reported in the Census 2000 data is 3.99 or compared to 3.14 for the total United States population. Vietnamese Americans are typically found in large metropolitan areas and in larger cities. There is an important Vietnamese American community in Louisiana that has been in the news recently because of Hurricane Katrina. The community is primarily made up of Vietnamese American Catholics working in the fishing and shrimp industries that were devastated by Hurricane Katrina. Similar to other communities that were devastated by the British Petroleum Oil Spill, the Vietnamese American community is also dealing with the devastations that occurred as a result of this disaster. When Vietnamese enclaves are mentioned, they are usually shopping enclaves, mini-malls and ethnic-specific businesses and services.

Vietnamese Americans report a relatively low level of educational attainment. For the 2000 Census data, 30 percent report having less than a high school education, 70 percent report having high school degrees or better, and 23.5 percent report having bachelor degrees or better. Although Vietnamese Americans are relatively well educated, only 11.8 percent report they only speak English at home. The majority (55.1%) still report that English is not well spoken at home. Because this is a relatively new group to the United States, it seems natural for many of the older people to not feel as comfortable speaking English as it is for the younger people as well as those from the knee-high or second generation. As this is a recent population, it will take some time for the family to be completely bilingual.

The economic attainment of this group is a complex topic because it involves a variety of subgroups as well as different times of arrival to the United States. The 2000 data from the Census Bureau indicate that 29.2 percent are engaged in "management, professional, and related occupations," whereas 24.6 percent classify themselves in "service occupations" with 19 percent reported "sales and office" as their occupations. Although these data are interesting at the macrolevel, it does not provide specific information

Group of Vietnamese American students in traditional dress, *ao dai*. (Visions of America, LLC/StockphotoPro)

regarding what types of occupations within each category Vietnamese Americans are likely to be employed. For example, Linda Vo, a sociologist, found that throughout the country, many Vietnamese American women found work as pedicurists, hairstylists, and manicurists. This is a profession that requires a limited education, minimal English proficiency, relatively easy licensing, and small start-up funds. If one examines the types of businesses that Vietnamese Americans are engaged in, the majority are in small businesses that require only limited English proficiency, modest start-up funds and reasonable licensing requirements. As a result, they are concentrated in small restaurants, gas stations, and car repair shops, “Pho” or noodle shops, ethnic bookstores, gift shops, clothing stores, herbal medicines, entertainment (music, videos, DVDs, soap operas), and those that cater specifically to their own ethnic group, including travel agencies, insurance companies, home repair,

landscaping services, and after school tutoring programs.

Ethnic Identity

Because Vietnamese Americans are very diverse with respect to their time of arrival, their status upon arrival, their family’s social economic class, their level of English proficiency, and so forth, their experiences growing up in the United States has been just as diverse and dependent on a variety of factors. The development of an ethnic identity is dependent on a number of factors, including the strength of the ethnic community, racism, and discrimination, class differences, parents’ relationship to the child, educational institutions, availability of opportunities, and many others. As a result, the identity of Vietnamese Americans ranges from those who only identify with the American culture to those who only identify with

the Vietnamese culture and everything in between. On one end of the spectrum, there are those who see themselves as members of the larger Vietnamese American community and participate in all of the available cultural, social, political, and religious practices and traditions that the local community has to offer because they identify themselves more with their parents' or family's ethnic community. Because there are so many Vietnamese American communities throughout the United States, it is easy for someone to spend the majority of the time interacting only with other Vietnamese. In essence they can conduct all their daily activities in Vietnamese. They can reside in a largely Vietnamese neighborhood. They can obtain employment and work in a Vietnamese-owned business, eat at Vietnamese restaurants, attend social, cultural, and religious activities in the community itself. They can get their news through Vietnamese newspapers and magazines. They can even watch television programming or listen to radio programs that are exclusively Vietnamese. Should they decide to watch soap operas, movies, and other entertainment activities, they can go to their local Vietnamese video store and rent them there. This is especially available after the first group of Vietnamese refugees established Vietnamese American communities and provide many of the needs that were not available at the time. In short, they can live as if they were living in Vietnam and not have any interactions with the larger American society.

At the other end of the spectrum, there are those who see themselves as Americans who "happen" to be of Vietnamese ancestry. There are several factors that might lead to this identity formation. They have not been exposed to their parents' culture or have chosen not to participate in it. As their parents become economically more stable, they may purchase homes and reside in a neighborhood that does not have a large Vietnamese American presence. As a result, they might attend schools that are more diverse and have fewer Vietnamese American students and therefore develop friendships with non-Vietnamese students. In other words, they have forged a new identity growing up and attending American schools that does not include their ethnic identity and cultural heritage. They may occasionally attend Vietnamese churches and

temples but they may just as well attend a church or temple close to their house. Similar to other middle-class children, they may participate in club sports, music lessons, and activities that are more class based and less ethnic based.

The majority of the second generation are probably somewhere in between, forging and creating a new identity that is uniquely theirs by combining elements from both cultures because they are products of both cultures. It will be interesting in the future to see how well they are going to negotiate their identity and create an identity that is uniquely their own.

Educational Attainment

The 2000 U.S. Census Bureau data regarding Vietnamese American educational attainment indicate that they are the lowest group. For individuals under the age of 25 years old, 30 percent have less than a high school education as compared to 16.1 percent for the overall population. They are also the lowest when compared to the other larger Asian American populations (Asian Indian 9.8%, Chinese 19.2%, Filipino 9.2%, Japanese 6.6%, and Korean 9.8%). Although 70 percent report having a high school education or better, this is the lowest percentage when compared to other groups in the United States. This trend continues as only 23.5 percent of Vietnamese Americans report having a bachelor's degree or better as compared to 27 percent for the overall population. For other Asian American groups, the percentages range from a low of 43.7 percent for Japanese Americans to a high of 67.9 percent for Asian Indian. This is also reflected in the reported median household income where Vietnamese Americans are second from the bottom of all larger Asian American groups (Koreans reported the lowest household median income). The final statistic is that 14 percent of all Vietnamese Americans live below the poverty rate as defined by the federal government. These statistics may come as a surprise to those unfamiliar with Vietnamese Americans because they are often reported to be doing well and are thought of as the "model minority." These statistics reveal a much more complex and wide range of educational attainment, household income, and poverty level within this community.

According to the 2010 Census, the Vietnamese American population in the United States was 1,737,433, including mixed-race individuals.

Vietnamese Cuisine in the United States

Bánh mì and *phở* have become a staple in the culinary vocabulary of diners in urban centers with strong Vietnamese populations across America. From the cost-sensitive college student to the fanciful gourmand,

Vietnamese cuisine has made its mark on the palates of a broad spectrum of the U.S. public. Even Anthony Bourdain, the antihero of the new food celebrity caste, former chef, and current television personality, has professed his admiration and near devotion to the Vietnamese *bánh mì* on his highly popular cable television show *No Reservations*. Vietnamese food in the United States has hit the big time.

The rise in the popularity of Vietnamese food in the United States keeps pace with the span of globalization, which has made cosmopolitan dining a sign of the diner's comfort with and knowledge of the world. The relative prominence of Vietnamese food in major cities is taken for granted but that was not the case for the earliest Vietnamese populations in the United States. Upon refugees' first settlement in the United States shortly after 1975, most were unable to cook traditional Vietnamese foods because of a lack of availability of primary Vietnamese ingredients and herbs such as the ubiquitous *nuớc mắm* or other staples such as anise for use in soups. And even as sojourners from Vietnam arrived yearning for the flavors of Vietnam, this would belie the food situation in Vietnam for much of the twentieth century. War, occupation, and drastic economic reforms sent the country into periods of severe food shortages with whole areas reaching near starvation. The ease of enjoyment of Vietnamese cuisine both in the United States and Vietnam has only relatively recently become accessible. Economic restructuring in Vietnam in the late 1980s involved decentralizing market practices and revitalizing the population's experience of self and community. The Vietnamese government crafted new cultural initiatives that included encouraging its citizens to once again embrace the celebratory elements of everyday life, including its food culture. And the establishment of Vietnamese communities in critical mass in the United States have allowed for people to return to Vietnamese food practices, including the important social bonds made through celebratory feasts and more casually, *nhậu*, which is an everyday form of rousing socializing over small plates. In metropolitan areas in the United States, Vietnamese communities have established ethnic enclaves with richly stocked markets, fisheries, and restaurants.

Though popular Vietnamese foods in the United States include the beef noodle soup, *phở*, and the baguette sandwich, *bánh mì*, Vietnamese place a high premium on acknowledging the regional derivation of particular foods. *Phở* originates in northern Vietnam, where colder climates permitted the use of fewer spices and therefore promoted more balanced flavors. The central region, holding the original national capital at Hue and being warmer in climate, produced dishes richer in spice and presentation. From the central region originates the very spicy noodle dish *bún bò Huế* full of heat and red with oils. The southern region, lush with agriculture, bustled with the meeting of various foreign contacts (i.e., French, U.S., Chinese, Indian, Thai). The foods from the south are robust with flavors from the liberal use of garlic, herbs, sugar, and coconut. *Cà ri*, a derivation of the Indian curry using coconut milk, is a popular dish in the south.

Traditional Vietnamese cuisine is rooted in the cultural influences of Chinese, French, and Indian food practices (though other culinary influences can be traced to Thai, Cambodian, and American cuisine). For instance, the use of chopsticks is not indigenous to Southeast Asian eating, but Vietnamese cuisine has borrowed this practice from Chinese influence. The *bánh mì* sandwich, developed after the French introduced French baguette, pate, and mayonnaise to the Vietnamese diet, which melded in complementary balance with the addition of pickled daikon, carrots, cilantro, peppers, and Vietnamese cold cuts. The importance of *cà phê sữa* to the Vietnamese routine has made its way into the U.S. mainstream as well. Vietnam is the world's second-largest exporter of coffee behind Brazil, and in both cases their climate and arid land have allowed for the harvesting of varied and abundant coffee harvests. In the 1800s in Southeast Asia, French and Dutch planters brought coffee into the mountainous highlands where farmers have for over a century produced a variety of coffee beans, with Vietnam becoming the leading national producer. *Cà phê sữa* is brewed strong, it can be drunk hot or on ice, using a single and small tin filter that brews dark espresso that gets mixed with condensed milk—used in the early history of coffee drinking in Vietnam in lieu of the more difficult to attain fresh milk.

Vietnamese cuisine taken abroad has also enjoyed a thorough reinterpretation by Vietnamese and non-Vietnamese chefs alike. The proliferation of Vietnamese restaurants and the appearance of Vietnamese and Vietnamese inflected dishes on menus across the United States reflects the playfulness with which chefs, cooks, and restaurateurs have found in the blending of Vietnamese flavors with the Western palate. Although ethnic enclaves, such as in Westminster, California's Little Saigon abounds with authentic restaurants specializing in regional flavors, further away, in metropolitan cityscapes where food adventurism is part and parcel of city living, diners and chefs alike explore new flavor territories. At the Gorbals Restaurant in downtown Los Angeles, a *bánh mì* poutine appears (that's a mound of fries topped with the traditional components inside a Vietnamese sandwich—daikon, carrots, mayonnaise, pate). And it is now not uncommon to find *nước mắm* as a go-to ingredient for chefs looking to blend a distinct savoriness into their next culinary creation.

But whether the flavors are “elevated” or “stripped down,” Vietnamese food has been a tremendous player in the ethnicizing of the urban palate. The store brand Lee's Sandwich prefigured the craze of food trucks currently found sweeping through metropolises such as Los Angeles and has helped make Vietnamese food a regular staple of urban fare since it first began catering to the San Jose State University population in San Jose in 1983. It has since become a ubiquitous presence in Southern California with stores now branching internationally, even one opening in Ho Chi Minh City in 2008.

Vietnamese Ethnic Economy

The Vietnamese ethnic economy (VEE) consists of a variety of businesses with Vietnamese nail salons as one of its most distinct and well-known businesses. The U.S. Census Bureau's Survey of Business Owners (SBO) in 2007 classifies Vietnamese-owned firms as businesses where at least 51 percent of the owners are of Vietnamese descent. Similar to other ethnic economies, some businesses within the VEE cater specifically to a Vietnamese clientele whereas other businesses provide goods and services to the general public. With a high proportion of businesses in the service sector, one unique feature of these businesses is the amount of interaction that occurs between people of different races and classes. Although these interactions may not always be cordial, they are a rare opportunity for people to forge relationships and learn about one another's history and culture. In this section, the VEE will be defined as a sector of businesses owned by an ethnic group and also a sector of businesses that employ a large number of people from a single ethnic group.

In 2007, the SBO reports that Asians owned approximately 1.5 million nonfarm businesses and generated a total of \$507.6 billion in receipts. These Asian-owned businesses represent 5.7 percent of all nonfarm businesses in the United States. In comparison, the survey observes that there were 229,149 Vietnamese-owned businesses accounting for 14.8 percent of all Asian-owned firms in the country. These Vietnamese-owned firms generated \$28.8 billion in receipts representing 5.7 percent of all Asian-owned businesses. The SBO also observes that 59 percent of the 229,149 Vietnamese owned business firms were in the sectors of repair, maintenance, personal, and laundry services. The next largest sector for Vietnamese-owned firms was in the retail industry and represented 7.8 percent of all Vietnamese-owned

firms. These statistics represented businesses owned by Vietnamese; however, they did not include firms in fishing or other agricultural firms. As much as non-farm businesses are substantial to the VEE, fishing and agricultural businesses also play a significant role to this ethnic economy.

Types of Businesses

From Florida to Texas, the VEE surrounding the Gulf Coast revolves around fishing, shrimping, and crabbing industries. Vietnamese refugees originally from fishing and shrimping families easily transitioned to the U.S. industry because of these skills. Initially, commercial fishing firms were in need of workers and provided on-the-job training opportunities for these new workers with the help of volunteer agencies in charge of dispersing Vietnamese refugees throughout the United States. These Vietnamese women and men worked in both seafood-processing plants and the wholesale markets. After learning the trade, many Vietnamese broke off with the help of family members, who pooled money or took on business partners to start their own businesses. Unfortunately, there was racial tension between native fishermen and Vietnamese fisherfolk over the ways fishing had traditionally been done by the local community and the ways Vietnamese fisherfolk ran their businesses. Nevertheless, racial tensions have not prevented first- and second-generation Vietnamese from making a living in this industry.

More recently, there has been a surge of Vietnamese as well as other Asian ethnic groups entering the agricultural industry. A large number of Vietnamese turned to poultry farming where they raise chickens. These Vietnamese poultry farmers can be found in the southeastern part of the United States, where poultry farming is on the rise in South Carolina and Georgia. Vietnamese farmers are raising chickens for large commercial poultry processing plants that own and provide the chickens. Besides raising poultry, these farmers also grow traditional crops such as fruits, vegetables, and other varieties of plants and produce. Venturing into occupations in agriculture is perceived as something natural for many Vietnamese farmers

because it is likely an occupation where they had previous experience. It also provides a stable living as well as some freedom that is not afforded to those who do not own and run their own businesses.

As demonstrated by their continued participation in fishing and agriculture, the VEE includes industries that put to practice skills traditionally used in Vietnam. But the VEE comprises industries that were previously not as common in Vietnam such as in manufacturing and the service industry. Whereas manufacturing contains factory work throughout the United States, the service industry includes work in Vietnamese nail salons, hair salons, and lawn maintenance and/or landscaping.

For instance, Vietnamese were increasingly drawn to manufacturing when they first arrived in the United States. Ethnic networks as well as a need for workers offered these refugees and immigrants an opportunity to easily find jobs. Many found employment in the high-tech industry as factory workers. It should be noted that these Vietnamese were more likely to work as factory workers rather than owning firms in this industry. Similar to Vietnamese refugees in commercial fishing, Vietnamese refugees received on-the-job training for factory work and technician jobs in Silicon Valley. In addition to on-the-job training, community members encouraged middle-class refugees to find jobs as technicians because they believed these jobs were more likely to match their previous status in Vietnam.

In addition to factory work, a large number of Vietnamese are entering businesses in the service industries particularly, the nail salon industry. A number of Vietnamese continue to work in landscaping and lawn care, especially Vietnamese men. But more commonly, Vietnamese women and men are in beauty work and have been in the industry for over 20 years. Nail salons are highly saturated with Vietnamese workers and nail salon owners and are exceedingly visible throughout the United States. More important, they are a unique aspect about this particular ethnic economy. The beauty industry has seen a large growth of nail salons since the Vietnamese arrival to the United States. The proliferation of Vietnamese nail salons provides accessibility and affordability for

a broader population to receive nail salon services, a service that was only afforded by the wealthy in the past. (See Vietnamese nail salons in this volume.)

Entrance and Other Aspects of the Vietnamese Economy

Entry into the VEE depends on the type of business. According to Linda Võ, the first waves of refugees were educated and skilled professionals who established businesses and the foundation for ethnic enclaves like Little Saigon. The latter waves of refugees and immigrants were less educated, were not as skilled and had limited English skills. It was this subsequent wave of refugees and immigrants that have sustained these businesses through their labor and use of these services especially in places like Little Saigon.

A more formal means of entering these businesses was through recruitment by various firms because a lot of industries such as in agriculture and manufacturing were in need of laborers. Another common form of entrance is through ethnic networks. Ethnic networks are more informal and occur when those already in the Vietnamese economy introduce family members and friends. Experienced workers such as those from the first wave of refugees often provide various resources for those attempting to get into these businesses.

Entrance into various businesses in the VEE also provides opportunities for Vietnamese refugees and immigrants to gain experience in various businesses and save enough money to one day open their own business. Workers also received other forms of assistance, which includes apprenticeships, providing loans to get formal training and licensing, and taking on partnerships. Some scholars perceived these relationships as reciprocal obligation, where more experienced owners receive cheap or free labor and refugees and immigrants received valuable training and skills to run their own businesses. Unfortunately, some warn that these relationships can become exploitative leaving workers very vulnerable.

Besides saving to finance one's own business, there are other formal and informal means of financing businesses in the VEE. A common formal means of financing a business is applying for a small business

loan through financial institutions. In poultry farming, lenders and bankers established a system requiring seasoned farmers to sponsor borrowers that are new to poultry farming. More often due to the lack of credit or credit history, Vietnamese utilize informal methods of financing businesses. One strategy is to obtain funds by borrowing capital from multiple family members. Partnerships often allow multiple people to invest in a single business because each partner only needs to invest a small amount of capital. An alternative strategy is the use of a rotating credit system. Rotating credit systems are commonly used among many different Asian ethnic groups. A group of people will come together and each member contributes the same amount. Each member can pull out the money and repay with interest using the system. The system allows members to borrow a larger amount of money than simply borrowing from family members.

The location of the VEE varies and includes businesses in Vietnamese ethnic enclaves and businesses that exist outside of ethnic enclaves. Vietnamese-owned businesses outside of Vietnamese ethnic enclaves typically provide goods and services meeting the needs of the general public. Businesses that are often seen in Vietnamese ethnic enclaves are similar to many other businesses seen throughout the United States. One difference about the VEE in Vietnamese ethnic enclaves is that Vietnamese is more commonly spoken than English. From restaurants, grocery stores, retail shops to everyday services, these businesses specialize in products and services that cater distinctively to Vietnamese tastes and preferences.

According to the Survey of Business Owners in the 2007 Census, 30 percent of all Vietnamese-owned businesses reside in California, which is the largest number of Vietnamese-owned firms of all the states in the country. In California, there are 68,812 Vietnamese-owned businesses and 17,695 of those businesses are located in Los Angeles County. This county has the most Vietnamese-owned firms of any U.S. county. Texas came in second with 36,171 firms and the state of Florida had the third largest number of Vietnamese-owned firms in the United States with a total of 14,780 firms.

Similar to the location of businesses, the size of businesses in the VEE varies. The SBO reports that

199,367 Vietnamese-owned firms do not employ paid workers. Even though these firms did not report any paid laborers, this statistic does not include the number of family members, relatives, and friends who may also “help out” in these businesses. Of the 29,782 Vietnamese-owned firms that the SBO surveyed, a little over 60 percent of Vietnamese-owned firms employ 1 to 4 workers whereas only 1 percent of this population employed 50 people or more. In general, ethnic entrepreneurs are mom and pop businesses and are a lot smaller in terms of business scales. For example, the business scale for nail salons ranges in size from one or two to some as large as 12 to 15 working at one time. This is also similar for lawn maintenance. On the other hand, businesses that hire factory workers are likely to be larger in scale and tend to employ a lot more people.

Conclusion

The VEE is likely to mirror other ethnic economies in the United States. Each ethnic economy may be recognized for one or two businesses but generally consist of a multitude of businesses. Similar to other ethnic groups, some people are more comfortable doing business with coethnics and are looking for specific products and services that are common to an ethnic group; therefore, businesses in ethnic enclaves can thrive and sustain themselves because of this clientele. In addition to catering to a distinct clientele, the VEE has been able to hone a particular business niche. The nail salon industry is highly regarded as an industry dominated by Vietnamese in the United States. Beginning with Vietnamese refugees entering nail work in the 1970s, Vietnamese involved in nail work have deeply rooted networks and have expanded the industry throughout the country. Besides creating new jobs for first- and second-generation Vietnamese, they continue to develop and create new types of services of their clientele.

Vietnamese Nail Salons

Current Situation

Since 1996, consumers have spent over \$6 billion annually on salon services. Furthermore, the U.S. Bureau of Labor Statistics (BLS) states that the national mean income of a nail technician was \$22,150 with an hourly wage of \$10.65 (2010). The total number of nail technicians is not entirely clear. The BLS reports a total as low as 53,000 nail technicians in the country. On the other hand, *NAILS Magazine*, a trade magazine based in Southern California, estimates the number of nail technicians to be as high as 375,000 in the United States. These statistics demonstrate a large variation in their approximations because of their methods of collecting data; however, sources have acknowledged this inconsistency in data. Nevertheless, the use of multiple resources attempts to yield a glimpse into multiple aspects of nail work in the United States. Thus, we can safely state that the

number of nail technicians falls somewhere between 53,000 and 375,000.

First- and second-generation Vietnamese nail workers are one of the most highly visible concentrations of an immigrant and ethnic group in a business niche. From a small group of refugees, nail work has grown into a profitable industry that offers many Vietnamese lucrative occupational opportunities in the United States. The Vietnamese dominate the nail industry representing 40 percent of all nail salon workers while Koreans only represent 2 percent. The state of California has more nail technicians and nail salons than any other state in the country ranging from 12,890 to 93,000 nail technicians and 7,700 nail salons. Compared to California, Florida and Texas trail behind with approximately 46,000 nail technicians and 4,100 nail salons, and 25,000 nail technicians and 5,100 nail salons, respectively.

In the past, a visit to a salon was a luxury reserved for wealthy upper-class women. As nail services became more popular, the emergence of Korean and Vietnamese nail technicians transformed nail culture of the past. These nail salons made beauty services significantly more affordable and accessible to the masses by charging services at half the cost of full-service beauty salons and at half the amount of time. Researchers credited Korean women as the pioneers of the nail salon industry in New York. But in more recent years, first- and second-generation Vietnamese have gained notoriety in popularizing the nail boom and creating a new market for nail work rather than taking existing jobs.

Defining the Industry

According to the BLS, the description of the job of manicurists and pedicurists is to “clean and shape customers’ fingernails and toenails,” and it may also include “polish or decorate nails” (U.S. Bureau of Labor Statistics 2010). The requirements for a nail license usually require 400 hours of schooling and/or apprenticeship and low start-up capital to open a salon. Technical skills require nail technicians to be proficient in many aspects of nails from nail care to aesthetics. Nail technicians specialize on the proper care of artificial and natural nails especially in dealing with

unhealthy or damaged nails as well as maintaining and protecting nails of differing shape, size, and thickness. They also need to be knowledgeable about different chemicals used to remove nail polish, soften and remove dead skin, and apply artificial nails. Finally, nail technicians stay updated on popular trends regarding the aesthetics of nails.

Historical Roots

Multiple sources pinpoint the entrance of Vietnamese into the nail industry after the arrival of Vietnamese refugees because of the fall of Saigon in 1975 (Nguyen 2010, 54). In Jody Hammond’s (2002) documentary *A Hand Up*, she credited Tippi Hedren, an actress best known for her role in Alfred Hitchcock’s film *The Birds*, as largely responsible for introducing Vietnamese women to nail work. In a tent city known as Hope City in Sacramento, California, Hedren visited refugees as part of a humanitarian effort. An idea was sparked when one of the women curiously asked about Hedren’s polished nails, which prompted Hedren to bring her manicurist to the camp to teach the women about nail care. She was able to convince a local beauty school, the Citrus Heights Beauty School, to allow the women to study and obtain their nail licenses. With the help of Tippi Hedren, this small group of 20 refugee women pioneered the entrance of Vietnamese into the nail industry.

Although refugees from the initial wave had difficulty finding jobs that matched their qualifications, second-wave Vietnamese refugees were trapped in unstable, low-skilled, and low-wage work without the possibility for advancement. Because they were in search of more immediate opportunities, many Vietnamese eventually turned to nail work as a solution to their financial responsibilities. It offered them greater income, flexibility, work autonomy, and jobs when many lack formal education and English language skills. Most important, it opened new opportunities for first- and second-generation Vietnamese. It became a pivotal stepping-stone for novice nail technicians to learn how to run their own businesses and provided many with the economic capital to pursue their ideal careers. In general, nail work was a second chance for many Vietnamese.

Pivotal Transformations

Fortuitously, new innovations to nail work coupled with a downturn of the economy and the arrival of Vietnamese refugees paved the way for the growth of the nail industry. Many Vietnamese refugees fled the country after the fall of Saigon in 1975. More groups of Vietnamese refugees came as part of the boat people and through U.S.-sponsored government programs. Low levels of human capital combined with the state of the U.S. economy during the 1980s left many Vietnamese refugees with limited occupational opportunities and dependent on government assistance. Many of these first-generation Vietnamese had young families to support and other pressing financial obligations. Consequently, their responsibilities added a sense of urgency to find work and discouraged them from pursuing an education or investing time in learning skills for higher-paying jobs. Though governmental assistance alleviated financial concerns upon arrival, these refugees needed to secure economic stability for the future. This arrival of Vietnamese refugees and later immigrants to the United States and the need to find work coincided with the transformations in nail work.

Two of the innovations that have had a significant role in the growth and success of the nail industry is the electric drill used for filing and acrylic nail products. Though long-time nail technicians were initially skeptical and resistant to the use of the electric drill, the electric file transformed the industry by reducing the amount of time that nail technicians spent filing and was more efficient in shaping nails. Another innovation significant to the nail industry was the creation of acrylic nail products. Dr. Stuart Nordstrom, a dentist, created an acrylic compound derived from products typically used for dental crowns for artificial nail extensions that looked more natural. The use of acrylic nail products assisted in the growth of the nail industry because it offered customers an alternative that was less expensive, more durable and natural looking compared to previous products used. It also played a role in changing the industry because the care of acrylic nails was more expensive and required customers to return every two weeks to upkeep their nails.

Furthermore, Vietnamese nail salons received the label of “discount salons.” Discount salons were

described a way of doing nails that was quicker and more efficient, but it also lost the quality of pampering and intimate conversations in nail services of the past. “Discount salons” provided more affordable services and allowed more women to obtain a service that were once unavailable to them. In addition to affordable services, they were conveniently located because of numerous salons that opened up throughout the United States. In general, the industry was and continues to be successful because nail salons continuously adapted to the latest trends and innovations and catered services to a broad range of clientele.

Consequences of the Industry

Unfortunately, work opportunities in nail work came with some drawbacks. The idea of the “discount salon” received a negative reputation with critiques that cheaper services meant unsanitary conditions and the use of short cuts when providing services. These salons were heavily criticized in popular media leaving many Vietnamese salons with the responsibility of proving to customers that they were legitimate salons. Moreover, Vietnamese salons were criticized for not speaking enough English in the salons. Customer complaints revolved around the possibility that Vietnamese nail technicians were talking about customers in front of their faces, which made many uncomfortable. Thus, many salons make accommodations to prevent these negative perceptions.

Another consequence is that the work is labor intensive. Nail technicians constantly bend over, scrub, and massage clients’ feet. The work itself is stigmatized because it requires nail technicians to work closely with clients’ hands and feet. Vietnamese men, who worked as nail technicians, felt self-conscious about their participation in nail work because of the perception of nail work as women’s work. Nail technicians also worked long hours from early in the morning until late at night and seven days a week to accommodate clientele. Their long work hours often impact family life and the time they spend raising their children.

The media has also addressed numerous health concerns involving the chemicals used in nail salons.

In 2007, *Time* magazine named nail salon workers as one of the worst jobs in America because of health hazards. Although the attention has mostly focused on the health concerns of clients, a growing movement is concerned about the effects of the chemicals on nail workers. Nail work exposes nail technicians to chemicals that are harmful to workers, thus workers need to be taught of the proper way to handle various nail products and be aware that ample ventilation is needed in the nail salons to prevent inhalation of toxic chemicals. These issues have prompted the formation of the California Healthy Nail Salon Collaborative where community members and organizations work together to protect the health and safety of workers. Other organizations include VIET-AID, a non-profit organization that helps identify the multiple health problems nail salon workers face. Another concern is the exploitation of workers. California organizations educate nail workers about their rights such as having an adequate number of breaks, sufficient wages, and health benefits. Issues involved in nail work have mobilized various organizations across the United States to come together and teach nail technicians about workers' rights and health and safety concerns.

Future Direction

The future of nail work is unknown but as time passes, more organization are raising awareness about the various issues affecting nail technicians. There are salons that are attempting to go green using organic products and less harmful chemical. Although there are no green certifications for nail salons in the United States, these Vietnamese entrepreneurs are trying to reduce use of products that contain chemicals, provide better ventilation, and use more sustainable products in their salons. However, Nguyen brings up a significant point in her research that Vietnamese nail technicians cannot stop working even with the awareness of health issues plaguing nail technicians. Many nail technicians recognize the potential hazards of their job, but they take those risks to provide for their families. The need to provide a living is especially dire when one considers the few options available to Vietnamese immigrants and refugees who have no previous education or skills other than their background as nail salon

owners and nail technicians. Thus, the future of nail work will need to find a middle ground between nail technicians' necessity to work and provide for their families and to reduce and alleviate their exposure to harmful chemicals.

Vietnamese Women in America

Vietnamese womanhood is traditionally interpreted through its adherence to the "four virtues": Right Occupation (cong), Right Speech (ngon), Right Appearance (dung), and Right Conduct (hanh).

Additionally, traditional cultural expectations state that the Vietnamese woman should align her loyalty first with her father, then her husband, and then to her son. These notions are fully manifested in Vietnam's most celebrated epic poem, *The Tale of Kieu*, in which the protagonist Thuy-Kieu lives a life marked by intense talent, beauty, and unyielding love and loyalty to father and family. This perspective of Kieu exemplifies the title character's ability to stand as cultural bearer of Vietnamese national identity. But this is only one interpretation of Thuy-Kieu's femininity; for in the very same narrative, the protagonist establishes herself as a loyal lover to not one but three men, is seduced and manipulated into prostitution, and then unknowingly causes her husband's death. Through this perspective, Thuy-Kieu fails to live up to ideal femininity and is instead seen as immoral, nonvirtuous, and disloyal. Consequently, she either represents a distorted view of Vietnamese national identity, brashly exposing its morally dubious entanglements throughout its wending past, or that she is decisively incapable, by virtue of her moral shortcomings, to be representative of Vietnam. These multiple readings of Vietnam's most celebrated poem illustrate how persistent claims to ideal Vietnamese womanhood underwrite discourses and texts related to ideas of true Vietnamese cultural identity.

Claims to the proper role for Vietnamese women are tested when put in the context of exile, migration, and diaspora. Sociological studies of Vietnamese family life in the diaspora illustrate that the pressures of post-Vietnam War movement and resettlement has upended the traditional structure of the Vietnamese family largely by enforcing new gender roles in the household. Catalysts for changes in gender roles include the gendered expectations of new labor markets and life in new cultural environments. The first waves of postwar Vietnamese families in the United States encountered a labor market that preferred the low-wage labor of Asian immigrant women, often turning Vietnamese women into primary breadwinners and causing a reconfiguration of men's and women's roles within the family.

Negotiations of what Vietnamese womanhood in the United States can and should be have problematically included ideas of its duty to represent Vietnamese

identity and culture, which since the end of the war has been an especially sensitive topic for refugee communities. Two areas of cultural and social life that both implicitly and overtly illustrate ongoing debates about the meaning of Vietnamese womanhood include the stage performance, such as beauty pageants and variety stage shows and local politics in Vietnamese American communities.

Vietnamese American beauty pageants and the musical variety show epitomized by the *Paris By Night* Thuy Nga series, began as efforts to remember the fallen but never forgotten South Vietnam nation through the presentation of Vietnamese women's bodies. Pageants stressed the ability of young Vietnamese women to bridge the traditional Vietnamese sensibilities and the modern West, to remarkably represent authentic Vietnamese by wearing the *áo dài*, the traditional dress for Vietnamese women, and by speaking proper Vietnamese. These celebrated pageants allowed Vietnamese communities, still adjusting to new locations, to feel at once as a cohesive community with an identity as authentic members of South Vietnam.

The musical variety show similarly allowed Vietnamese Americans to be consumers of traditional and newer expressions of Vietnamese America. Although women performers were often staged in traditional and classical Chinese and Vietnamese garb, Americanized performances allowed Vietnamese performers to try out new identities in the cultural presentation of women's bodies to Vietnamese American communities. The singer Lynda Trang Dai became a household name when she first performed onstage in the mid-1980s. Emerging on the Vietnamese American stage during the height of Madonna's career, Lynda Trang Dai copied the style and sound of one the country's most popular and provocative pop stars. Through her revealing dress, bold makeup, and blending of Vietnamese and English lyrics, her musical persona suggested a new direction for Vietnamese women's representational roles.

Although the beauty pageant and the musical stage performance allow for ongoing cultural representations of Vietnamese womanhood and identity, the arena of electoral politics situates an obvious site for representational politics. Vietnamese Americans have

had a presence in local city and county politics in areas of high Vietnamese American demographics since the early 1990s, but more recently Vietnamese American women elected to office by Vietnamese American constituents have drawn particular criticism for their perceived failures to procure the cultural and nationalist agendas of the community. Madison Nguyen was 30 years old when elected to San Jose's city council in 2005. She was the first Vietnamese American to be elected to that position in the city and her campaign had put her against fellow Vietnamese American Linda Nguyen in a divisive election. Nguyen's win turned her into a "golden child" of the Vietnamese community in San Jose. In 2008, Nguyen was faced with a proposal to name a Vietnamese business district. The Vietnamese American community proposed "Little Saigon," which was the accepted district name for other Vietnamese business districts in the United States. But Nguyen voted against it, preferring "Vietnam Town," that she likened to Chinatown and Japantown already present in the area and that other constituents in her district wanted. This incensed Vietnamese Americans and drew forth protests, a hunger strike, and a special recall election to unseat her. "Little Saigon" was seen as a claim to the lost homeland and any other designation would constitute a rejection of those claims. Nguyen faced accusations of being a Communist sympathizer and a traitor to the Vietnamese American community.

Nguyen's turbulent first term and the issues of civic representation for a Vietnamese American woman, knowledgeable of and sensitive to the desires of the Vietnamese American community and yet obligated to represent the interest of other constituents in the city, places her in a precarious position as representative of national, gendered, and cultural identity. In the same instance, it's important to identify the current moment as one that is marked by cultural and social reconfigurations of Vietnamese identity in the diaspora as the first generation of Vietnamese refugees are raising a second generation that give rise to contested and negotiated as well as traditional and hybridized formations of self and community.

Villa, José García (1908–1997)

José García Villa is considered a pioneer of modern Filipino literature, the first Anglophone Filipino modernist poet, and the most influential and important Filipino literary icon of the twentieth century. He was an award-winning poet, short story writer, artist, and literary critic, as well as the associate editor of New Directions Publishing Corporation (1949–1951), the Poetry Workshop director of the City College of New York, and a lecturer at the New School for Social Research (1964–1973). He also served in the United Nation's Philippine Mission (1954–1963) and became vice-consul in 1965. He is best known as an aesthetic formalist who developed the "reverse consonance" rhyme scheme and "comma poems."

Villa has won multiple awards, including the Poetry Award of the American Academy of Arts and Letters (1942), the Guggenheim Fellowship in Poetry (1943), the Bollingen Foundation Fellowship (1950–1951), the Pro Patria Award (1951), the Heritage Award (1952), the Shelley Memorial Award of the Poetry Society of America (1959), and Rockefeller Fellowships for poetry, as well as the PEN Oakland-Josephine Miles National Literary Award (2000), which was posthumously granted. He has also received many of the Philippines' most prestigious

José García Villa in 1953. (Library of Congress)

literary awards, including honorary doctorates from Far Eastern University (1959) and the University of the Philippines (1973). He was named National Artist in Literature by the Philippines in 1973.

Born in 1908 in Manila, the Philippines, Villa was one of Guia García and Dr. Simeon Villa's six children. His father was the personal physician of General Emilio Aguinaldo and an anti-American revolutionary. At his father's behest, Villa initially took courses at the University of Philippines in medicine and obtained an associate in arts degree in 1925. Against his father's wishes, he later transferred to the School of Law in 1928. Villa helped found the University of Philippines Writers' Club, a group that attracted the attention of the authorities because of their artistic iconoclasm. By 1929, writing as "O. Sevilla," Villa was branded by the authorities as subversive because of his published fiction and poetry in the *Philippines Herald*, and was charged with printing obscene material for

his erotic publications, "Man Songs" (1929), a series of poems published in the *Herald*, and "Apassionata" (1929), a short story published in the *Philippine Collegian*. Because of the charges, Villa was suspended from the university for a year, during which he won the *Philippine Free Press Contest* for his short story "Mir-i-misa." The prize money allowed him to immigrate to the United States in 1930.

Villa completed his BA at the University of New Mexico in 1933 and later took graduate courses in literature at Columbia University in 1941. During his time at the University of New Mexico, Villa founded the literary magazine, *Clay: A Literary Notebook*, which attracted prominent short-story critic Edward J. O'Brien's attention. O'Brien later dedicated *The Best Short Stories of 1932* to Villa and published 12 of Villa's stories in the anthology. In 1933, Villa published his first collection of writing, an anthology of short stories, *Footnote to Youth: Tales of the Philippines and Others*. The anthology featured an introduction by O'Brien, who lauded Villa as one of the most important American short-story writers. Yet despite this adulation, Villa decided to turn from prose to poetry after reading e.e. cummings's *Collected Poems* in 1936.

In 1941, writing as "Doveglion," a moniker that combined dove, eagle, and lion, and "meant to present the poet 'gentle as a dove, free as an eagle, and fierce as a lion'" (Espiritu 2005), Villa published his second work, a collection of poetry, *Poems by Doveglion*. His 1942 publication, *Have Come, Am Here* led critics and prominent poets, which included e.e. cummings, Edith Sitwell, Marianne Moore, and Mark Van Doren to hail him as a major new American poet. Most notable about this work is that it introduces Villa's "reversed consonance," a new rhyme scheme that reversed the last sounded consonants of the last syllable or word for the first letter of the corresponding word. In his 1949 collection of poetry, *Volume Two*, he introduced "comma poems," where he placed a comma after every word in lieu of a space as an aesthetic device that called time and space to readers' attention. He also experimented with poetic adaptation of prose into poetry, playing with movement and shape, taking from sources that included short stories and novels as well as letters, newspaper articles, and book reviews.

Unlike other Asian American writers, with the exception of *Footnote to Youth*, Villa's work does not contain or deal with ethnic or nationalist politics. A self-proclaimed formalist who practiced art for art's sake, Villa eschewed writing "socially significant" literature, which he considered to be propaganda. He focused instead on the formal aspects of poetry, such as poetic diction. According to Villa, "Poetry is—first of all—expertness in language and form, not in meaning; and the true meaning of a poem is its Expressive Force rather than its content—the language of poetry being a mode of action, a transmitter of energy rather than of information" (*Doveglion* flap).

Between the 1940s and 1950s, Villa's poetry was widely included in major anthologies of literature. However, by the 1960s, Villa began to disappear from the American literary scene; with the exception of *Apassionata: Poems in Praise of Love* (1979), his poetry was no longer published or included in anthologies, and eventually his books went out of print in the United States. As Villa had stopped writing poetry in 1953 in favor of focusing on critical and philosophical writing, he fell into obscurity in America. Despite this fact, he continued to be a major literary figure in the Philippines, where his work continued to be anthologized, including: *A Doveglion Book of Philippine Poetry* (1962), *Poems 55: The Best Poems of José García Villa as Chosen by Himself* (1962), *The Essential Villa* (1965), and *Makata 3: Poems in Praise of Love: The Best Love Poems of José García Villa* (1973). *The Parlement of Giraffes: Poems for Children—Eight to Eighty* (1999), a collection translated into Tagalog that also featured Villa's original drawings, was published posthumously.

Villa died in New York City on February 7, 1997. He was previously married to Rosemary Lamb (1946–1960), with whom he had two children, Randall and Lance.

Villafuerte, Brandon (1975–)

Born in Hawaii in 1975 and possessing Filipino ancestry, Brandon Villafuerte pitched Major League Baseball in the early years of the twenty-first century. After pitching high school baseball in Morgan Hill, California, Villafuerte was a late round draft choice of the New York Mets in 1994. A right-hander,

Villafuerte hurled his first Major League game in 2000 for the Detroit Tigers of the American League. His most successful season was as a reliever for the San Diego Padres of the National League in 2002, when he recorded an excellent 1.41 ERA in 32 games. He pitched his last Major League game in 2004 but continued to pitch minor league ball through 2008.

Vivekananda (1863–1902)

Swami (“master”) Vivekananda is one of the most celebrated Hindu missionaries to the West and an acclaimed Indian activist and reformer. A disciple of the spiritual teacher Ramakrishna (1836–1886), he arrived in Chicago in 1893 as a delegate of the World Parliament of Religions. His inspirational speech on opening day garnered him much favor at the proceedings and in the American media, and he is often credited with introducing Hinduism to a mainstream American audience. Vivekananda also founded the Ramakrishna Mission and inspired the formation of Vedanta Societies around the globe before his death in 1902.

Born Narendrath Datta in Kolkata (formerly Calcutta), Vivekananda was raised in a middle class, professional family and eventually undertook the study of law. As a student he showed keen interest in Western philosophy, which he would later draw upon to communicate more clearly to Western audiences. Vivekananda was also influenced by his involvement in the local faction of the Brahma Samaj, a liberal Hindu reform movement, as well as the local chapter

of the Freemasons. He met Ramakrishna in December 1881, but was initially resistant to some aspects of his beliefs, especially Ramakrishna’s deep devotion to the goddess Kali. The death of Vivekananda’s father in 1884, however, spurred him to pursue a religious life, and he became a disciple of Ramakrishna. After Ramakrishna’s death in 1886, Vivekananda became the leader of his small religious community and began an extended period of peregrination around India’s sacred sites. During this time he became familiar with India’s crippling social problems and this experience crystallized his intention for future social reform. It was also during this period that he took on his name, Vivekananda, which means, “he who has the bliss of true spiritual discretion.”

In 1893, Vivekananda set out for the United States to attend the World Parliament of Religions as a representative for Hinduism. His original hope was to raise awareness of famine in India and to gather funding for his humanitarian interests. He opened his first speech by addressing the audience as “sisters and brothers of America.” This seemed to aptly capture the universalistic sentiment of the Parliament and was immediately received with a standing ovation. His eloquence and oratory style was widely acclaimed even by his harshest critics, and by the close of the Parliament Vivekananda emerged as one of the best-known delegates. This exposure brought him to the attention of American metaphysical culture and in particular to groups such as the Theosophists.

Following the Parliament, Vivekananda toured the United States and Europe giving lectures on Hinduism. These mainly focused on the monistic philosophy of Vedanta as interpreted by Ramakrishna, and emphasized the potential divinity of the soul. In 1894 he founded Vedanta Society of New York. Sensing the negative perception of Indian culture in America, Vivekananda also defended traditional Hindu practices and highlighted their more universalistic aspects. In 1896 he published *Raja-Yoga*, a treatise that elaborated on Patañjali’s system of yogic meditation to still the fluctuations of the mind. The book was an immediate success, the first edition selling out in a matter of months. Vivekananda returned to India in 1897 as a national hero and founded the Ramakrishna Mission to coordinate social reform programs, such as the

opening of schools and medical dispensaries. In 1899 he returned to the lecture circuit in the United States and opened a Vedanta Society in San Francisco.

By the time Vivekananda left the United States a year later, his health had deteriorated significantly because of complication with diabetes, and he died in India in 1902. Vivekananda's efforts proved to be instrumental in promoting Vedanta and Asian forms of meditation in the United States and Europe, and he is celebrated in India for his activism and instilling Indian national pride during British colonial rule.

Voting Patterns

The voting patterns of Asian Americans have been a subject of curiosity for observers of U.S. racial and ethnic politics for many years. A focus on Asian Americans, a relatively affluent, majority immigrant, and multiethnic population that represents one of the nation's fastest-growing nonwhite groups, advances understanding of the American electorate from a unique and increasingly relevant perspective. Yet, until very recently, nobody could describe with any certainty the candidate choice, political party affiliation, political ideology, and issue opinion of this emergent community in American politics. Some even suggested that no one would have the faintest idea how the Asians will vote in any given presidential contest. This sentiment of frustration in predicting the voting orientations of Asian Americans may be attributed to myriad reasons. Chief among them is the dearth of objective scientific data about the political behavior of the community—a fact that is directly related to

the unique sociodemographic characteristics of the population. Another major reason may be the inscrutable, forever-foreigner image of the group, which has prevented major political parties, candidates, and organized groups from considering Asians an equal and valuable voting bloc in their recruitment and mobilization efforts. The lack of data about the former makes it difficult to dismantle the alien myth of the latter. The community's fledgling record of participation in American electoral politics and the lack of infrastructure for sustained engagement are another reason and fact to reckon with.

Although Asian Americans are the fourth-largest racial and ethnic group in the United States, with an estimated 16 million individuals who were solely or partly of Asian descent as of July 2009, they are about one-twentieth of the national population in the present day. Besides the smallness in overall population size, the Asian American population is dispersed and skewed in its geographic distribution, and is heterogeneous in race, ethnicity, nativity, class, home language, religious belief, and other aspects of culture. The demographic limits embodied by this numerically small, unevenly distributed, and extremely diverse population have prevented the Asian American community from being visibly included or fairly represented in a typical national opinion survey based on a random sample of U.S. adults. Even if Asian American respondents may be oversampled to ensure sufficient inclusion in a multiracial survey, the data gathered tend to disregard interethnic differences within the multiethnic community although being biased toward those Asian Americans who are English proficient and more settled into the U.S. system. To help rectify the data problem, a number of Asian American community organizations and scholars have taken the initiative to design and conduct Asian-centered multilingual and multiethnic surveys. These surveys are the bases for analyzing the voting patterns of Asian Americans in this essay.

Candidate Choice

Most research devoted to Asian Americans' candidate choices focuses on their voting patterns in U.S. presidential elections. In the National Asian American

Survey (NAAS), a major preelection survey conducted between August and September 2008, 41 percent of Asian Americans indicated their preference for Barack Obama, whereas 24 percent supported John McCain. The majority of Asian Americans who voted in the 2008 Democratic primary supported Hillary Clinton over Obama by nearly two to one; however, 59 percent of Clinton supporters planned to vote for Obama and 10 percent for McCain in the general election. National exit poll data conducted by the mainstream media found Asian American voters supported Barack Obama over John McCain by roughly a two-to-one margin in the 2008 general elections.

This pattern of a clear edge for Democratic Party candidates among Asian American voters nationwide was first reported in the Pilot National Asian American Political Survey (PNAAPS), which is the nation's first multiethnic, multilingual, and multisite survey on the political attitudes and behavior of Asian Americans. Among Asian American voters in the November 2000 election, 55 percent report casting a vote for Al Gore and 26 percent for George Bush. Eighteen percent of respondents either refused to report their vote choice or were not sure. The percentage of voters favoring Gore ranged from as high as 64 percent among the Chinese to as low as 44 percent among Koreans. Gore received a higher proportion of the presidential vote than Bush in every ethnic group, nevertheless. Although Vietnamese voters gave the highest percentage of support for Bush (35%), it was almost 20 percentage points below the group's support for Gore (54%). The unusual situation in Florida following the election may account for the 18 percent of respondents who either refused to report or are uncertain about the vote they cast.

To gauge their support for candidates of Asian descent, all the PNAAPS respondents, voters or not, are asked this hypothetical question: You have an opportunity to decide on two candidates for political office, one of whom is Asian American. Would you be more likely to vote for the Asian American candidate, if the two are equally qualified? Sixty percent answer affirmatively; support is especially high among the Vietnamese, Chinese, and Korean respondents. When these respondents are asked if they would vote for the Asian candidate even if he or she is less

qualified, only a quarter answer affirmatively; support is particularly low to that question among the Vietnamese. This response pattern suggests that, for Asian Americans, ethnicity may be an important factor but candidate quality may be an even more important consideration.

Limited data from exit polling done by media and community organizations in several states and cities with concentrated Asian American population show that Asian American voters generally cast more votes for Democratic than Republican candidates at the congressional level. However, in the example of the 1998 election in California where Matt Fong, a former California state treasurer and a Republican of Chinese descent, ran for a U.S. Senate seat against incumbent Senator Barbara Boxer, Asian voters gave Fong the edge in the primary election; those in Southern California also cast more votes for Fong than for Boxer in the general election. This pattern seems to suggest that, when a well-qualified candidate of Asian descent is in the running, the candidate's Asian ethnicity may be more important for Asian voters than his or her partisan affiliation.

Political Party Affiliation

Political party identification is traditionally the most reliable and important measure of political behavior. Extensive research done with American voters as a whole has found party ID to be a strong predictor of their candidate choice, political ideology, and issue position. Targeted research of Asian Americans affirms the utility of the party concept in studying their voting behavior—that is, Republican/Democratic identifiers would be more supportive of Republican/Democratic candidates and the respective party platform; voters with a stronger sense of partisanship are more likely to turn out and vote than those with a weaker sense of partisanship. However, these observations are made only among those Asians who identify with a mainstream American party. The challenge in understanding the political behavior of voting-age Asian Americans is that about half of them do not identify with either of the major parties in the United States. In the 2008 NAAS, 32 percent of all Asian Americans identify themselves as Democrats,

14 percent as Republicans, 19 percent as independents, and 35 percent as nonpartisan. Vietnamese Americans identify with the Republican Party over the Democratic Party by nearly a two-to-one ratio, although the opposite is true for other ethnic groups such as Asian Indian Americans and Chinese Americans.

Asian Americans' lack of identification with the two major American political parties is not a phenomenon unique to the 2008 election. In a post-2000 election survey, 36 percent of PNAAPS respondents identified as Democrats, 14 percent as Republicans, 13 percent as Independents, and 38 percent either did not think of themselves in partisan terms or were uncertain or mum about their party identification. Thus, roughly half of Asian Americans in the survey did not identify with a major political party. Among independents, a higher percentage leaned toward the Democratic Party (32%) than the Republican Party (21%); again, close to half refused to think in partisan terms. Several theories have been extended to explain the tenuous relationship between Asian Americans and political parties: Prior to 1965, racial animosity, fears of economic competition, and political calculations drove both the Democratic and Republican parties to actively campaign to exclude or limit Asian immigration. After 1965, reduced organizational resources, changes in the ballot system, rise of candidate-centered politics, and biases in party recruitment strategies limited the major parties' interest in outreach programs to new immigrant voters.

Among those Asian Americans who identify with a major party, group differences exist in patterns of party affiliation. Japanese, Chinese, and South Asians are most likely to affiliate with the Democratic Party over the Republican Party. Filipinos and Koreans favor the Democratic Party over the Republican Party by a smaller but still two-to-one margin. Only Vietnamese identify themselves as Republicans more frequently than as Democrats, but the difference in percentage term is small. The anticommunist, political refugee background of Vietnamese Americans explains their distinctive partisanship from other Asian Americans. The Democratic Party image of being prominority and proimmigrant explains its popularity among most Asian Americans. Still, more than half of the Vietnamese and Chinese respondents either did

not think in terms of a party affiliation or are not sure with which party they would prefer to identify.

Political Ideology

If half of Asian American adults do not identify with the two major parties in the United States, would they have similar trouble locating themselves in the liberal-conservative continuum of American political ideology? Not according to PNAAPS respondents. Only 10 percent are not sure where to place themselves along the ideological scale; 8 percent class themselves as very liberal, 28 percent as somewhat liberal, 32 percent as middle of the road, 18 percent as somewhat conservative, and 4 percent as very conservative. Whereas over 4 in 10 Chinese and Vietnamese respondents classify themselves as moderate, 6 in 10 among South Asians and 4 in 10 among Filipinos classify themselves as very liberal or somewhat liberal.

Interestingly, in a rare aggregation of Asian American opinion by a leading survey house (Gallup) from its daily tracking data conducted for the entire year of 2009, Asian Americans are found to be the only major racial and ethnic group in the survey that has a higher proportion of respondents who identify themselves as more liberal than conservative (31% versus 21%). Asians are proportionally more likely than (non-Latino) whites, African Americans, and Latinos to be moderate in ideology (46%), too. These statistics seem to account for the greater appeal of the Democratic than the Republican Party among those Asians who identify with a party as well as the large number of voting-age Asians who do not identify with either of the major parties.

Issue Opinion

The liberal-leaning, pro-Democratic orientation of Asian Americans is reflected in their policy opinion. The PNAAPS respondents are asked to express their support for or opposition to a number of public policy issues affecting racial and ethnic minorities and immigrants. On language policy, an overwhelming proportion (73%) of Asian Americans support a government provision of social services and public information to immigrant communities in English as well as in the

immigrants' native language. Fifty-four percent strongly support this provision. Japanese and South Asians are least likely to support bilingual materials, but even here, more than two-thirds are supportive. Close to 9 in 10 Vietnamese support such bilingual materials; at least 7 in 10 Koreans, Filipinos, and Chinese also do. On the issue of setting legal immigration quota, a plurality of Asian Americans (45%) support a quota on legal immigration to the United States, but up to three in 10 either hold no preference on the matter or do not have an opinion. There is a great deal of overlap across ethnic groups on this question, with the exception of Korean Americans: a plurality of Koreans (37%) opposed limits on immigration, with only one in four favoring it.

The issue of affirmative action has been controversial for Asian Americans because of the nonwhite group's relative affluent and mostly foreign-born status. PNAAPS respondents are asked three questions about their opinions on this policy: their general views on affirmative action, support for targeted job training and educational assistance programs, and support for race-based hiring and promotion. In the most general formulation, Asian Americans are overwhelmingly supportive of affirmative action. Of respondents who hold an opinion on affirmative action, 72 percent believe it is a "good thing," whereas only 7 percent believe it is a "bad thing," and 22 percent believe that affirmative action does not affect Asian Americans. Comparing across ethnic groups, nearly all Vietnamese, about eight in 10 Koreans and Chinese, and nearly seven in 10 Filipinos are supportive of affirmative action. Although South Asians and Japanese show lower support, the percentages are still above the 50 percent mark.

One of the most consistent findings in public opinion on affirmative action is that support varies wildly depending on how the question is framed. Asians are not different in this regard. Support for special programs in job training and educational assistance mirrors general support for affirmative action: 62 percent of all respondents favor it, 14 percent oppose it, and 18 percent neither favor nor oppose it. Vietnamese (86 percent) are much more favorable toward such programs than other groups (where levels range from 40 percent to 68 percent). Support for race-based

preferences in employment decisions, however, is drastically lower: only 37 percent of all respondents support such "special preferences," whereas 32 percent oppose them, and 22 percent neither favor nor oppose. Here again, with three out of four in favor of the employment-based preference, Vietnamese preferences are starkly different than those of other Asian groups. Japanese and Chinese are least supportive of such targeted affirmative action, whereas Koreans, Filipinos, and South Asians are more moderate on this question. Advanced research finds that the fluctuation and ethnic differences in policy opinion are mostly explained by differences in ideological orientation.

This essay shows that, although the voting preferences of Asian Americans seem to be less of a puzzle now than before, especially regarding the increasing solidification of the Democratic vote at the presidential level, their opinion on voting for other candidates, development of identification with the two major parties, and issue opinions are still very much in flux and are highly sensitive to survey methods. Changes in the political context such as regarding the political campaign strategy, shape of the economy, immigration reform efforts, and relations with governments in Asia may also bring changes to the existing voting patterns.

W

Wang, An (1920–1990)

An Wang was an applied physicist and technology entrepreneur whose main technical achievement involved magnetic core memory and who founded Wang Laboratories, an important player in the personal computing revolution of the 1970s and 1980s.

Born on February 20, 1920, the second child and the eldest son of a Chinese family in Shanghai, Wang spent his earliest years at his mother's family compound in Shanghai. There he began learning English—when his father was home from his job teaching that subject at a private elementary school in Kun San, a town of about 10,000 people some 30 miles inland—and the traditions of Chinese thought and literature from his maternal grandmother. Then, when he was six years old, the family moved to Kun San, where his father's ancestors had lived for hundreds of years. "I grew up," An Wang remembered, "with a sense that my culture and my family had been around for a very long time."

Wang began his formal schooling at the primary school in Kun San where his father taught. Because the school had no first or second grade, he started in the third grade. Rather than being overwhelmed, Wang not only survived, but prospered. He excelled in mathematics and the sciences. At 13 years old, Wang was admitted to the Shanghai Provincial High School, a very prestigious institution that has been compared to the Bronx High School of Science. Because the school was in Shanghai, Wang had to leave home. Little did Wang or his family know that he would never again live with them for any extended period. In high school, Wang displayed an increasing brilliance in science and especially in math.

Upon graduation from high school, Wang matriculated in electrical engineering at Chiao Tung University, his father's alma mater and one of the most prestigious institutions of higher education in China. He flourished in the more specialized atmosphere of the university and excelled at his chosen field. His time at university was not unmarred by the turmoil wracking the rest of China, however. When the Japanese invaded Shanghai in 1937, Chiao Tung was forced to move to the French concession, an area of the city whose French sovereignty the Japanese respected. Wang spent his remaining college years there. During his spare time, when he wasn't playing ping-pong, he translated articles from American technical magazines like *Popular Mechanics* and *Popular Science*. In addition to helping him improve his English language skills, the pastime acquainted him with the electronics marketplace of the United States, knowledge that would one day come in handy.

Wang graduated first in his class in 1940. He stayed on at Chiao Tung as a teaching assistant for a year, and then took a job with the Chinese Central Radio Corporation. He spent the better part of the next three years in Kweilin, designing and building radio transmitters for Chinese troops until the Japanese army overran the area in 1944. Wang heard about an exam that was being held to choose a small group of engineers to go to the United States for advanced training, and he decided to apply. During the 1940s, the United States and China together operated a series of programs that sent thousands of students to America to prepare them for rebuilding China from the wreckage of war and civil war. Not surprisingly, Wang was among those chosen, and in the spring of 1945, he set course of the United States.

Wang later reminisced that: “When I arrived in the United States I did not have any idea what I would be doing during my two-year visit. But although America was different, it did not present the dangers of the China I had left. It was unlikely that I would be bombed in the United States. I also knew that I would be doing something in a technical field, and science is the same the world over—a language,” he emphasized, “I *could* speak” (Wang 1986, 31).

Wang earned an MS and then a PhD in applied physics from Harvard University in 1948. By the time he earned his PhD, it was clear to him and to other Chinese students in America that the Communists under Mao Zedong were winning the civil war against the Nationalists under Chiang Kai-shek. The community of Chinese students in America was individually and collectively faced with a decision: should they return, as they had intended when they set out? Or should they stay in the United States to await a change in leadership in China? Many did not want to live under a Communist government, and Wang was among those who chose to make America their adopted home. Like many others of the Chinese student community who chose to try and stay, he began casting about for more permanent arrangements in America. Luckily, his search took him no farther than across Harvard’s campus.

Wang applied to work for Harvard’s Computation Laboratory. He was hired by the head of the laboratory, Howard Aiken, a pioneer in the field of computer science. Although Wang’s graduate studies had not dealt with computers (indeed, few courses did in those early days of the computer), he had taken courses on digital electronic circuitry. Soon after he started at the Computation Laboratory, Aiken set him the task of finding some way of magnetically storing and accessing information without mechanical motion. Wang struggled with the problem for a few weeks before hitting upon the solution one day as he was walking through Harvard Yard. “I realized in that moment that it did not matter whether or not I destroyed the information while reading it,” he recalled in his autobiography. “With the information gained from reading the magnetic memory, I could simply rewrite the idea immediately afterward” (Wang 1986, 56–57). “This simple, novel, and elegant concept, applied to all the

magnetic core memories that followed,” one of his biographers noted, “was Wang’s greatest technical achievement” (Weiss 1993, 62).

Wang left the Computation Laboratory in 1951 to start his own company. There were many obstacles in Wang’s way, the most significant of which was a pervasive and long standing American ambivalence toward the Chinese and, indeed, toward Asians in general. Although the Chinese Exclusion Acts had been repealed in 1943, the attitudes that had legalized anti-Asian racism in the first place continued to be an important part of the reality faced by Chinese Americans in their day-to-day lives. Upon meeting a potential landlord face-to-face, for example, Wang was told that the apartment he had planned to rent had suddenly become unavailable. Wang, of course, was not without resources: a Harvard PhD and an expert in an emerging and important field, he possessed a substantial amount of confidence in his own abilities. Recognizing that he had something to sell that others would want to buy, he formally incorporated Wang Laboratories in 1951. He became a naturalized U.S. citizen in 1955.

From a one-man shop that manufactured magnetic core memories and sold them for a few dollars, Wang Laboratories eventually grew to a multinational, multi-billion dollar enterprise. After surviving patent troubles with IBM that dragged out over much of the company’s first decade, Wang Labs entered the market that would make its reputation and began manufacturing business calculators in the mid-1960s. These calculators made Wang a recognizable brand name among office equipment manufacturers, as did the company’s entry into the minicomputer market in the early 1970s. The most important office products that Wang Labs manufactured, however, were its word processors, which were responsible for the height of the company’s profitability during the mid-1980s. Wang, like many before him, was mindful of the responsibilities that wealth and success bring, and donated generously to charitable causes.

In 1986, during the festivities celebrating the Statue of Liberty’s centennial, An Wang received the Medal of Liberty from President Ronald Reagan. The medal was awarded to 12 naturalized citizens who by their achievements had demonstrated the promise embodied in the statue’s welcome. Two years later he was inducted into the National Inventors Hall

of Fame. At his death from cancer in 1990, Wang left behind substantial legacies in the form of philanthropic contributions supporting education, technological innovation, and entrepreneurship.

Wang, Chien-Ming (1980–)

Chien-Ming Wang is the most famous Taiwanese player in Major League Baseball (MLB). He was born in Tainan, a city in southern Taiwan. As a pitcher, he began to draw scouts' attention when he was in college because of his outstanding performance in international baseball games. In 2000, he signed a contract with the New York Yankees for a bonus of \$2.01 million. Although the Yankees did not offer the highest bonus money, Wang joined them because Roger Clemens is his hero. In his minor league years, the Yankees trained him to become a starting pitcher. In 2005, he was promoted to the major leagues by the Yankees and became the third Taiwanese player to reach the majors after Chin-Feng Chen and Chin-hui Tsao. On May 10, 2005, the Yankees defeated the Seattle Mariners and helped Wang earn his first win. He ended his first year in the majors with 8 wins, 5 losses, and an earned run average (ERA) of 4.02.

Wang reached the summit of his career in the 2006 season. He pitched 218 innings, won 19 games, had an ERA of 3.63, and was well-known for his two-seam fastball, which contributed to a lot of groundouts. Along with Johan Santana of the Minnesota Twins,

Wang led the league in wins in 2006. Wang's number of wins set a new MLB record for Asian pitchers. At the end of the season, Wang finished second to Johan Santana in the voting for the Cy Young award. In addition to his outstanding regular season, Wang earned his first win in the Division Series playoffs against the Detroit Tigers. This victory is the first win for Asian pitchers in the playoffs.

Although Wang suffered an injury to his right hamstring at the beginning of the 2007 season, he won 19 games again that year. He finished the year by losing two playoff games in the American League Division Series against the Cleveland Indians. With his splendid performances in 2006 and 2007, Wang became a pillar of the Yankees rotation in 2008. Unfortunately, in a game against the Houston Astros on June 15, Wang injured his right foot running the bases. The diagnosis showed that his right foot suffered a torn Lisfranc ligament and a partial tear of the peroneus longus. Because of these injuries, Wang's season ended early, with 8 wins, 2 losses, and an ERA of 4.07.

The 2009 season was a worse nightmare for Wang. In July, he had right shoulder surgery because of a capsule ligament tear. After the end of the season, the Yankees decided not to tender Wang a contract, and he became a free agent. In 2010, Wang joined the Washington Nationals with a one-year contract for \$2 million. After a year of rehabilitation, Wang finally pitched three innings in two games in the Instructional League and allowed no earned runs.

Aside from his baseball career, Chien-Ming Wang established a fund in 2009 to assist vulnerable children.

Wang, Vera (1949–)

Vera Wang is a Chinese American fashion designer. She is best known for her bridal and formal wear,

which features modern, elegant styles in couture and ready-to-wear, and her custom outfits for elite figure skaters.

Vera Wang was born on June 27, 1949, in New York City to father Cheng Ching Wang and mother Florence Wu, who had fled China during the 1940s. Throughout her childhood, Vera would go with her mother to attend fashion shows in Paris. She studied ballet at the School of American Ballet, but her true love was figure skating, which she started at the age of seven. In 1968, she paired with partner James Stuart and they competed together in the 1968 and 1969 U.S. National Championships. They placed fifth in the 1969 championships.

In 1968, Wang began premedical studies at Sarah Lawrence College. However, she left Sarah Lawrence in her sophomore year, gave up skating, and moved to Paris to date French Olympic skater Patrick Pera. Wang realized she was more interested in art history through classes at the University of Paris-Sorbonne. In 1970, she moved back to New York City and later returned to Sarah Lawrence, where she majored in art history.

During college, Wang worked in the Yves Saint Laurent boutique on Madison Avenue as a sales clerk. When at work, her eye for fashion impressed Frances Patiky Stein, editor at *Vogue*. Wang followed through on Stein's request for her to call after graduation and found a position as an editorial assistant. In her 16 years with *Vogue* magazine, Wang was promoted to fashion editor, senior fashion editor, and European editor for *American Vogue* in Paris, but returned to New York City to again serve as senior fashion editor. In 1985, Wang left to work as design director for Ralph Lauren, where she was responsible for accessories, and some sportswear and lingerie.

In 1989, as Wang planned for her June wedding to Arthur Becker, her unsuccessful search for a wedding dress to suit her taste sparked what was to become a multimillion-dollar fashion empire. After months of searching for a dress that was modern, elegant, simple, and mature, but also pretty and romantic, Wang designed her own dress and hired a seamstress to execute her elaborately beaded design. Though she was not completely satisfied with the final design, she had identified a need within the fashion industry. Vera's father, whom she had repeatedly asked for help

in launching her own fashion label, suggested that she design her own line of bridal gowns and offered to lend her money to start a company.

In September 1990, with business partner Chet Hazzard, Wang opened Vera Wang Bridal House Limited. In addition to offering wedding dresses from established designers, the shop also offered style consultations for brides on jewelry, gloves, shoes, and flowers. By 1994, the boutique was making a profit, and Wang decided to launch a collection of her own designs. Offering ready-to-wear and couture, Vera Wang quickly became known for her gowns in high-quality fabrics with simple lines, high-quality details, and intricate beadwork. She was also one of the first to offer wedding gowns in colors other than white. She has dressed many celebrities, including Mariah Carey, Victoria Beckham, Jennifer Lopez, and Sharon Stone.

Over time, Wang has expanded her business from bridal to include a line for bridesmaids, and more general women's wear. She designed a custom figure-skating costume for Nancy Kerrigan to compete in the 1994 Winter Olympics in Lillehammer and has also designed for Michelle Kwan and Evan Lysacek. Wang has several licensing partnerships, including shoes, a beauty cream, fragrances, fine jewelry, flatware, and home décor. In 2001, she wrote a book, titled *Vera Wang on Weddings*. She has also recently partnered with Kohl's for a diffusion line, Simply Vera.

Wang, Wayne (1949–)

Wayne Wang, born on January 12, 1949, in Hong Kong, is a Chinese American director, who got his big break by directing *The Joy Luck Club* (1993).

Before that, he made smaller but critically acclaimed films such as *Chan Is Missing* (1982) and *Dim Sum* (1989). He then made more mainstream films such as *Maid in Manhattan* (2002), *Because of Winn-Dixie* (2005), and *Last Holiday* (2006). Wang has been nominated for and won many awards, including the BAFTA Best Foreign Language Film Award and the Sundance Film Festival Grand Jury Prize for *Dim Sum* (1989), and the Berlin International Film Festival Silver Berlin Bear Award and the German Film Best Foreign Film Award for *Smoke* (1995). *Snow Flier and the Secret Fan* (2011), a more recent film, is based on Lisa See's novel about the relationship in nineteenth-century China between two *laotongs*—female friends who swore a lifelong commitment to each other.

Wayne Wang, named after his father's favorite movie star, John Wayne, moved to California in the late 1960s for school. His parents being of Christian background arranged for him to stay with a Quaker family, who turned out to be prominent activists who had frequent meetings with Black Panthers and anti-draft protesters. Wang studied painting, filmmaking, and TV production at the California College of Arts and Crafts in Oakland, California. After graduating from film school, Wang went back to Hong Kong and worked on a popular soap opera but was fired after three months. He then returned to the United States and taught English to Chinese immigrants in San Francisco's Chinatown for the next 4 years. Wang credited this experience as the origin of his first movie, *Chan is Missing*, which is now considered an Asian American independent classic. It stands out as the first Asian America independent theatrical feature ever made in the United States. It was screened extensively outside of the Asian American community and, with a budget of \$20,000, employed an all-Asian cast and crew. It offered an insiders' perspective into San Francisco's Chinatown that is multidimensional and diverse. It challenged the stereotypes about the homogeneity of the Asian America community.

Inspired by Japanese director Yasujiro Ozu, Indian director Satyajit Ray, and British filmmaker David Lean, and his own bilingual and bicultural backgrounds, the themes of Wang's films have focused on a sense of community, identity crisis, loss, family,

and mother-daughter relationships. In his interview with *Asian Week* in 2000, he talked about coming from a disjointed family and having a difficult relationship with his own parents. He has a brother who has schizophrenia and relatives who don't talk to each other. Wang's *Dim Sum* is a typical mother-daughter story, focusing on the generation gap between an assimilated daughter and her tradition-bound widowed mother. *The Joy Luck Club* is a fourfold multigenerational version of the mother-daughter saga, adapted by Amy Tan and Ronald Bass from Tan's bestseller. *Anywhere But Here* (1999), which was based on the same-name novel by Mona Simpson, was about a divorced mother and a young reluctant daughter leaving a small Wisconsin town for Beverly Hills.

Wang's critically acclaimed but less financially successful films include *Smoke* (1995) with Harvey Keitel and William Hurt and the follow-up film, *Blue in the Face* (1995), with Michael J. Fox, Lily Tomlin, and Lou Reed, about a Brooklyn smoke shop and the characters that frequent the store. Wang also made a few films that were not well received by critics or by the public. *Chinese Box* (1997), starring Jeremy Irons and Gong Li, deals with the transition of Hong Kong from British rule back to Chinese control. *The Center of the World* (2001), starring Peter Sarsgaard and Molly Parker, addressed the topic of sex and sexual fantasy in a serious feature film. After feeling depressed and angered by the reaction of critics and the public toward *The Center of the World*, Wang returned to make mainstream movies, such as *Maid in Manhattan* (2002), *Because of Winn-Dixie* (2005), and *Last Holiday* (2006).

Wang released two films in 2008, *A Thousand Years and Good Prayers* and *The Princess of Nebraska*, exploring the evolving immigrant experiences. In *A Thousand Years and Good Prayers*, an aging Chinese widower visits his recently divorced 40-year-old daughter in the United States. They share a common language, but cannot communicate. The father went through the Cultural Revolution and suffered a lot of injustice, and the daughter came to the United States to distance herself from her past in China. *The Princess of Nebraska*, released free on YouTube, tells the story of a younger Chinese immigrant who just arrived in the United States to

figure out what to do, which is embedded with themes of globalization and political transformation. The heroine speaks English and is westernized, and knows little about events such as Tiananmen Square, and is now dealing with the issue of freedom and accompanying responsibilities.

bell hooks said Wang's film *Blue in the Face* "raises questions of ethnicity and identity . . . contests all sorts of construction of pure identity and it reminds the viewer that so much is mixed, and that it's in the mixing and sharing that the magic rises" (hooks 1996, 134). In an article Wang wrote for the Huffington Post in 2011, he said that he would never define his films as men's films or women's films, or Chinese films or American films, but rather films that appeal to an international audience, "as a filmmaker straddling different cultures." In his interview with *Asian Week*, Wang shared that he enjoys being displaced, because it gives him an advantage from looking at things on the inside and outside and not stuck in one perspective. Wayne Wang is married to Cora Miao and lives in San Francisco and New York City.

War Brides Act (1945)

Enacted on December 28, 1945, this law granted entry to alien spouses and children of American World War II veterans. Several million U.S. military personnel were engaged in combat around the globe for nearly four years, facilitating romantic relationships between them and citizens of foreign countries. According to one estimate, between 75,000 and 100,000 American soldiers married abroad during World War II, mostly in Europe. About 50,000 American war brides were from Great Britain. When the soldiers were called home at the war's end, the U.S. government was pressured by European governments, the soldiers, as well as the Immigration and Naturalization Service to simplify the immigration process and make it easier for family unifications of American soldiers.

The law is one of the least restrictive pieces of immigration legislation in U.S. history; it made possible for all Americans serving in the military to bring their spouses and children to the United States outside the quota. Applicants for entry under the law were only required to have certificates of marriage and documentation of military service records. The law is also gender neutral, providing male and female war veterans the equal privilege to sponsor their family members. Because relatively few American women gained war veteran status, not many were eligible. The law admitted a total of 114,691 women, but only 333 men. The number of male adults who gained entry under the legislation was so small that both the INS and popular parlance categorized all of these spouses as "war brides."

To further assist family unification of the veterans, INS officials went to England and France to expedite the admission process. The U.S. government also provided transportation for war brides, bringing thousands of war brides and their babies from Europe, Australia, or other parts of the world to this country on brides' ships. The war brides received very positive publicity as they landed on American soil.

The War Brides Bill (HR 4857) passed both Houses of Congress with little dispute partly because the lawmakers had mainly European women in mind. No one thought about the impact of the law on Asian immigration. A few thousand American soldiers were

stationed in East Asia, but for only a short period of time. Reports of wartime marriages between American military personnel and citizens of Asian countries were relatively few. Stipulating that only “admissible” aliens would be eligible at a time when most Asians were still excluded, the issue of Asian immigration was apparently not a major concern.

It was unclear whether members of Congress were fully aware of the implication of the law on Chinese immigration. After Chinese exclusion laws were repealed, the Chinese became the only Asian group admissible. The number of American soldiers married Chinese women during the war was indeed small, but because the law did not require the marriage to take place during the war, some Chinese American war veterans went to China after the war, got married, and brought their brides back to the United States. Thousands more Chinese American war veterans had been married before the war. Because of exclusion, however, their wives were unable to join them in the United States. The War Brides Act opened the door for the immigration of longtime wives of Chinese Americans. Most of the Chinese war brides were middle-aged women with children. Their arrival changed the sex ratio of the Chinese American community. With thousands of families settling down in the United States, the Chinese began to build a family centered-ethnic community in their adopted country.

The War Brides Act was amended in 1947 to grant admission to all spouses and children of American World War II veterans regardless of their race and ethnicity.

Ward, Hines (1976–)

Hines E. Ward, Jr. is best known as a National Football League (NFL) player who played the position of wide

receiver on the Pittsburgh Steelers from 1998 to 2011. Along with Roman Gabriel, he is one of the most widely recognized Asian American to have played in the NFL. In 2006, he was chosen as the Most Valuable Player for his performance in the Steelers’ Super Bowl XL win and used the publicity he garnered to bring attention to issues of discrimination against mixed-race children. Through a widely publicized tour of South Korea, Ward helped generate a public dialogue around issues of racism and discrimination against foreigners and mixed-race people in an increasingly multicultural nation.

Ward was born on March 8, 1976, in Seoul, South Korea, to a Korean woman, Young-hee Kim and an African American G.I., Hines Ward, Sr. When Ward, Jr. was a year old, the family moved to the Atlanta area and soon after his parents divorced. A family court determined that Young Hee Kim was not fit to raise her son given her financial instability and her inability to speak English. After living with his paternal grandmother until the age of seven, he returned to live with his mother. To support herself and her son, Kim held a number of low-wage jobs, including positions as a janitor and high school cafeteria worker. This narrative of a self-sacrificing Korean mother who displayed the qualities of determination, hard work, and dedication to her son played an important role in cementing his popularity within Korean communities.

After playing quarterback at Forest Park High School in Georgia, Ward attended the University of Georgia where he became a key player as wide receiver, tailback, and quarterback for the Bulldogs. He graduated from the university with a bachelor’s degree in consumer economics in 1998. In that same year, he was a third-round draft pick by the Pittsburgh Steelers. Ward is one of the most decorated players in Pittsburgh Steelers’ history and holds several team records, including the most career receptions and the most 100-yard receiving games. He is also considered one of the top wide receivers in the history of the NFL in career receptions and receiving yards. Ward was named to the Pro Bowl four times between 2001 and 2004. As a wide receiver, he was an aggressive blocker, and his reputation for hard hits resulted in his being named “dirtiest player” in the NFL twice in a *Sports Illustrated* poll of NFL players.

Throughout his career, Ward's biography as a biracial NFL player was widely publicized, and he was often asked to discuss his personal history in interviews. Ward recalled incidents of discrimination by African American children who teased him because he was half-Korean. He also detailed moments of being excluded in the Korean American community because he was black. Through the publicity around his difficulties in fitting into either community, he became a multirace icon. Yet even despite the slights he experienced, Hines laid claim to his Koreanness by embracing his Korean mother and the Korean cultural traditions passed on to him by her. This was especially clear in his personal decision to engage with Korea through a publicity tour and charity work on behalf of biracial children living in the country.

Ward's success in the 2006 Superbowl resulted in overnight celebrity in South Korea. Nearly two months after his MVP win, he traveled with his mother to South Korea for the first time since he moved to the United States. There he met President Roh Moo Hyun and received an honorary Seoul citizenship from Mayor Lee Myung-bak. He also met other biracial children who shared their stories in tearful "hope sharing" meetings. He was swarmed by the Korean media who publicized his story as a Korean immigrant narrative of triumph against the odds. Mainstream Korean media tended to emphasize his Korean heritage by highlighting his Korean mother's influence on his life and career, and diminishing the circumstances of his birth as the son of an African American G.I. Yet his message of inclusiveness for other races, especially those of mixed-race Koreans, played a powerful role in inspiring a proposed law banning discrimination against mixed-race Koreans, and perhaps most consequentially, in helping to spur a public dialogue about multiculturalism in Korea. On April 30, 2006, he proclaimed the establishment of the Hines Ward Helping Hand Foundation in partnership with the Pearl S. Buck Foundation, which he pledged to endow with \$1 million dollars as a way to help mixed-race children.

After the 2006 trip, he has returned to visit Korea on a number of occasions. He also sponsored the visits of groups of mixed-race Koreans to the United States.

In 2010, President Barack Obama appointed him to the President's Advisory Commission of Asian Americans and Pacific Islanders, further promoting his reputation as an advocate for Asian Americans. In that same year, Ward established the Hines Ward Helping Hands Foundation in the Pittsburgh area to aid in childhood literacy and also officially established the Hines Ward Foundation in partnership with the Beautiful Foundation in South Korea. In the spring of 2011, Ward won the highest honor, the "mirror ball" trophy, in the popular television dancing competition, *Dancing with the Stars*. His personal story was again featured during biographical vignettes toward the end of the season, thus extending the reach of his story beyond American football fans. He has demonstrated the ability to navigate commercial media contexts as a telegenic on-screen character and as a radio personality. Furthermore, his willingness to openly share his personal story and to actively seek to improve the lives of those who have experienced racism and discrimination has further cemented his reputation as an advocate for social change.

Watsonville Riots (1930)

The 1930 Watsonville Riots against Filipinos have been described as one of California's worst incidents of vigilante terror. They erupted in a time of economic struggles, racial bigotry, and jealousy. During this time of heightened tension, signs of "NO FILIPINOS ALLOWED" greeted Filipinos coming to America. This attitude was also the instigator for the 1930 Watsonville Riots that left a young Filipino, Fermin Tobera, dead from a gunshot through his heart and drew much attention in the United States and in the Philippines.

Filipinos have been coming to America since the beginning of the twentieth century following the Philippine-American War and the colonization of the Philippines. Although many came initially as *pensionados*—government-sponsored students tasked to return to the Philippines as trained colonial government workers—many more came to fill the agricultural labor shortages in Hawaii and on the West Coast because of restrictions placed upon Chinese and Japanese alien workers. Classified as "nationals" because of the Philippines colonial status, young Filipino men could easily be contracted in large numbers to work the plantations of Hawaii and farmlands and orchards of the West Coast. These Filipino men had learned English with colonial American teachers, which made them highly desirable as a cheap workforce.

However, the same racism that previously shut off other Asian immigration became refocused on Filipinos as "little brown monkeys," job stealers, and sexual threats to white women.

On the night of October 24, 1929, the day of the Wall Street Crash, Filipinos were harassed as they escorted white girls at a street carnival in Exeter, California, southeast of Fresno. A fight broke out and a white man was stabbed, and a riot ensued in which 300 vigilante whites, led by Chief of Police C. E. Joyner, stormed a Filipino camp and stoned and clubbed about 50 Filipinos. About 200 Filipinos were driven out of the district. This event occurred after white workers were displaced by Filipinos in harvesting Kadota figs and Emperor grapes in Exeter.

The Northern Monterey Chamber of Commerce also adopted anti-Filipino resolutions, proclaiming that Filipinos were undesirable, depressed the wage scale of other nationalities, possessed unhealthy habits, and brought in disease.

To add more fuel to the fire, according to the *Salinas Index-Journal*, early on the morning of December 2, 1929, police raided the room of Perfecto Bandalan, 25, and found in the darkness two scantily attired white girls, Bertha and Esther Schmick, ages 10 and 16. To a shocked public it was announced in court that the father of the girls had wanted to sell Esther to Bandalan for \$500. Subsequently, he charged that his wife had urged the deal so that she could "live on easy street." In the period just prior to the riots this case was a constant topic in the local papers. A photo also appeared on the front page of the *Watsonville Evening Pajaronian* of Bandalan embracing Esther.

Between December 8, 1929 and January 10, 1930, a series of Filipino run-ins with the law were reported in the local press, including violent brawls over women, hit-and-run driving, and sexual assault; in addition, the Schmick/Bandalan case continued to attract notoriety. By themselves all these articles were trivial, but viewed together they added to the heightened tension.

The first riot in Watsonville took place in a pool hall on New Year's Eve 1929 when a group of Filipinos boldly escorted white girls to a dance. The Pinoys were beaten down and stoned. As time went on, the string of riots became more intense and more violent. Men were beaten, shots fired, and farm bunkhouses were burned down.

The *Watsonville Evening Pajaronian* printed a resolution authored by Judge D. W. Rohrbach on January 10, which included the following quotes:

...if the present state of affairs continues ... there will be 40,000 half-breeds in the State of California before ten years have passed. ... We do not advocate violence but ... the United States should send those unwelcome inhabitants from our shores ... I hope that we overcome this menace to our general welfare. ... (cited in Akers Chacon and Davis 2006: 41).

Rohrbach further stated: “The worst part of his being here is [the Filipino’s] mixing with young white girls from 13 to 17. He gives them silk underwear and makes them pregnant and crowds Whites out of jobs in the bargain” (cited in Akers Chacon and Davis 2006: 41).

On January 11, 1930, a small Filipino social club leased the Palm Beach dance hall from William Locke-Paddon. The thought of Filipinos dancing with white women further angered Watsonville citizens. On January 20, 1930, things took a turn for the worse when 200 angry white citizens came to the Filipino club to disrupt the dance and take away nine white women who were inside the tax-dance hall. They came with clubs and weapons and attempted to burn down the dance hall, but were stopped by its white owner, William Locke-Paddon and his brother Edward, who had fired shotguns loaded with salt to repel the mob. Local authorities used tear gas to break up the riot. Two men were hit and severely injured.

On Wednesday, January 22, the riot had reached its peak with mobs of hundreds that dragged Filipinos out of their homes, whipped and beat them, and threw some of the defenseless Filipinos off the Pajaro River Bridge. These mobs attacked Filipinos at the Storm and Detlefsen ranches; the facilities of a Chinese-owned apple-dryer that employed Filipinos was demolished, and volleys of shots were reportedly fired into a Filipino home on Ford Street. At Riberál’s labor camp, 22 Filipinos were dragged out and beaten. The vigilante mob had leaders and moved with “military-like” precision. The police in Watsonville, led by Sheriff Nick Sinnott, rounded up as many Filipinos as they could rescue and guarded them in the City Council’s chamber and Monterey County Sheriff Carl Abbott tried to hold the Pajaro side of the river to prevent the spread of violence.

The violence culminated in the morning of January 23, when Fermin Tobera, a 22-year-old Filipino worker, was shot and killed in his sleep as bullets were fired into the Murphy Ranch bunkhouse on San Juan Road in Watsonville. Eleven other Pinoys in the bunkhouse escaped injury and Tobera was not discovered to be dead until dawn arrived.

As Tobera was laid out at Mehl Undertakers, Judge D. W. Rohrbach deplored the murder, but

maintained his stand that the Filipinos were only 10 years removed from savagery and should not be part of the nation. Sheriff Sinnott arrested seven whites for the murder, one of whom had left his shoe at the scene of the crime. Unexpectedly, they were not unemployed “roughs” or “lettuce tramps”; in fact, several were the sons of respected members of the community. All charges were eventually dropped; the fact that the presiding judge, Rohrbach, had received a threat to free those who faced charges, or that prominent Filipino leaders, anxious to placate the white community, pleaded for leniency may have influenced the court’s decision.

There were protests from the Philippines and the resident commissioner spoke before Congress to deplore the violence against Filipinos. The body of Fermin Tobera, now viewed as a martyr, was sent back to Manila, where it lay in state in the capitol. He had become a symbol for the independence movement of his country.

In the aftermath, although tempers subsided in Watsonville, five days later, on January 28, 1930, another camp of Filipino workers was dynamited in Stockton as the workers slept in their bunks. In August 1930, a bundle of dynamite was also thrown in the camp of Filipinos near Reedley to protest the presence of 500 Filipinos in the region. Minor riots and clashes occurred in Filipino communities in San Jose and San Francisco.

In 2011, the California state government formally apologized to Filipinos and Filipino Americans in an Assembly resolution authored by Assemblyman Luis Alejo, D-Salinas:

Filipino Americans have a proud history of hard work and perseverance, California, however, does not have as proud a history regarding its treatment of Filipino Americans. For these past injustices, it’s time that we recognize the pain and suffering this community has endured. (Jones 2011)

Wei Min She (WMS)

The Wei Min She (WMS), or "Organization for the People," was an anti-imperialist Marxist-Leninist-Maoist organization founded in 1972 by students, activists, and community members from the Asian Cultural Center (ACC) and Everybody's Bookstore in San Francisco Chinatown. Its political, theoretical, and activist roots were intimately connected to the student activism that gave birth to the ACC and Everybody's Bookstore.

In December 1969, approximately a dozen students and alumni from the Asian American Political Alliance student group at the University of California, Berkeley, founded the Asian Cultural Center and Everybody's Bookstore in the International Hotel in San Francisco Chinatown. These activists were heavily influenced by the multiracial, student-led struggles of the Third World Liberation Front to establish Ethnic Studies at San Francisco State University and the Third World Strike at Berkeley, the radical praxis of the Black Panther Party, and the antiwar movement to end United States imperialism in Southeast Asia. Committed to extending their politics beyond the walls of elitist universities, these students devoted themselves to "serve the people" by building a community-based, anti-imperialist, and anticapitalist revolutionary movement. They created an intergenerational space where young and old Asian Americans could dialogue, play ping pong, discuss politics, read Marxist literature and Chinese-language newspapers, and watch films and documentaries about the revolutionary resistance

occurring in the United States, Asia, Africa, and South America.

Students, activists, working class youth, and community members engaged in numerous dialogues about the most pressing issues facing local residents. Their observations developed into a radical political platform that demanded access to meaningful education, housing, health care, employment, education, and cultural preservation and integrity. In 1972, they formed the WMS as a disciplined revolutionary organization that not only directly addressed these issues but saw them as symptomatic of the ills of capitalism, imperialism, and the exploitation of working people everywhere.

Inspired by the Chinese Cultural Revolution, WMS arose from the conditions and experiences of its membership and their commitment to revolutionary theoretical and practical development. The WMS engaged in a wide range of community organizing and labor campaigns that reflected their belief that monopoly capitalism could be toppled by a revolution led by the multinational working class. Their main areas of focus were labor, education, human rights, improved United States-China relations, and gender justice. They supported workers in the restaurant, electronic, garment, and agricultural industries; bolstered student organizing for ethnic studies; and organized workshops, classes, and forums to raise the collective consciousness around United States foreign policy, educational access, employment, gender discrimination, women's health, and access to health and childcare.

The WMS strongly supported the campaigns of the Jung Sai garment workers and Lee Mah electronic workers for fair wages and working conditions. The organization ran a rigorous campaign of daily picket lines, weekly actions, car caravans, and successfully recruited a multiracial constituency of African American, Latino, and white allies who supported the cause. Critical of the mainstream labor movement, the WMS attempted to offer a more radical alternative to unions by organizing workers into an independent, multinational vanguard organization.

In addition to their activities, the WMS published the *Wei Min Bao*, a bimonthly, bilingual Chinese and English newspaper that articulated their

anti-imperialist critique of U.S. society. The newspaper complemented the polemical discussions about Marxist ideology, women's issues, and class struggle that occurred in regularly held WMS study groups. They distributed the *Wei Min Bao* and other political pamphlets throughout the community, even inserting them into the bags of food that were distributed in their Chinatown Food Program, which served hundreds of families per month.

At each moment, their grassroots work was consciously and explicitly linked to their critiques of monopoly capitalism, and it sharpened their stance on the hotly debated national question. Although they recognized the important role of oppressed nationalities, or people of color, the WMS believed that the international, multinational working class was the vanguard party that would end the oppression caused by global capitalism. This political position brought them in direct conflict with other Marxist-Leninist-Maoist organizations, most notably the I Wor Kuen (IWK), another influential Asian American revolutionary organization.

The WMS was located in the International Hotel, which also housed the IWK and the anti-imperialist Katipunan ng Demokratikng Pilipino (Union of Democratic Filipinos) whose organizers worked closely with the elderly Filipino and Chinese residents to fight the eviction when the city of San Francisco attempted to demolish the low-cost residential hotel for urban renewal. Each organization was heavily involved, albeit in disparate ways, in the Hotel's landmark housing struggle. The steady grassroots organizing, flurry of political and cultural activity, and grueling nine-year anti-eviction struggle rendered the International Hotel a landmark site for Asian American revolutionary politics and praxis. In 1975, the WMS merged with the Revolutionary Union and formed the Revolutionary Communist Party.

Williams, Sunita L. (1965–)

Sunita L. Williams is a National Aeronautics and Space Administration (NASA) astronaut and captain in the United States Navy. An American of multiethnic ancestry, Williams is the second woman of Indian ancestry and the second astronaut of Slovenian ancestry to fly in space. She is also the first person to run a marathon in space. Williams holds the world record as the woman with the longest space flight.

Williams was born on September 19, 1965, in Euclid, Ohio, to parents Dr. Deepak and Mrs. Bonnie Pandya, who are of Indian and Slovenian ancestry, respectively. She grew up in Needham, Massachusetts. Sunita is married to Michael Williams, a federal police officer.

After earning a BS in physical science from the U.S. Naval Academy in 1987, Williams was commissioned as an ensign in the U.S. Navy. In her naval career, she has primarily worked as an aviator and test pilot. For a brief stint, Williams was designated as basic diving officer. She later served as a naval aviator and in Helicopter Combat Support Squadron 8. In the build-up to and the aftermath of the Persian Gulf War, Williams deployed to the Mediterranean, Red Sea, and the Persian Gulf for Operation Desert Shield and Operation Provide Comfort. In 1992, she was the officer-in-charge of a detachment participating in relief efforts for Hurricane Andrew in Miami, Florida. In 1993, Williams attended the United States Naval Test Pilot School, where following graduation, she flew test flights, and later became an instructor and school safety officer. She was deployed on board the USS *Saipan* as aircraft handler and assistant air boss when she was selected for astronaut training.

Williams reported for astronaut training in 1998. After training and evaluation, she worked in Moscow in collaboration with the Russian Space Agency on the Russian contribution to the International Space Station (ISS) and with the first crew to the ISS. In her NASA career, Williams has been assigned to the Robotics branch and participated on projects with the Robotic Arm and the Special Purpose Dexterous Manipulator, and worked as the deputy chief of the Astronaut Office. Williams was also a crewmember for the NASA Extreme Environment Mission Operations (NEEMO) 2, during which the aquanaut crew lived underwater for nine days as part of simulation that replicated some of the difficult conditions of living in space.

Williams broke several space records during her assignment as flight engineer on board the ISS from 2006 to 2007. On December 9, 2006, she launched as a crewmember of the Space Transportation System (STS)-116, which docked with the ISS on December 11, 2006. As flight engineer for Expedition 14, after a series of spacewalks ending on February 8, 2007, Sunita Williams held the world record as the woman with the most number of spacewalks and with the longest time spent in space walks, with four Extravehicular Activities (EVAs) totaling 29 hours and 17 minutes. These records were broken later in 2007 by Peggy Whitson. Williams returned to earth on STS-117, which landed at Edwards Air Force Base on June 22, 2007, after logging 195 days in space. On September 17, 2012, Williams became the second woman to serve as a commander of the International Space Station.

Wong, Anna May (1905–1961)

Anna May Wong was the preeminent Chinese American actor of her time with work that spanned silent cinema, sound films, television, and live performances in the United States and in Europe. Wong fashioned a career for herself in entertainment at a time when possibilities for Asian American women were very limited. Many of the roles she played were stereotypical representations of Asian women, which were often critiqued, including by Wong herself, but she insisted upon a distinction between her roles and the realities of Chinese American community life. She was also vocal in her dissatisfaction with Hollywood's images of the Chinese. In her lifetime she achieved an unprecedented level of international fame and celebrity, and today she is recognized as a pioneer in Asian American screen history.

Wong, whose Chinese name was Wong Liu Tsong, which she translated as "Frosted Yellow Willow," was born in Los Angeles, California on January 3, 1905, to Wong Sam Sing and Lee Gon Toy, who was Wong Sam Sing's second wife. Her first acting experience was as an uncredited extra in the film *The Red Lantern* (1919). Wong was given her first starring role in the film *Toll of the Sea* (1922), known within the history of cinema for its early use of Technicolor Process 2. The film's story is a version of the Madame Butterfly narrative, set in China instead of Japan, and featuring Wong as Lotus Flower, a young Chinese woman who falls in love with, and then is abandoned by, a white American man named Allan Carver. *Toll of the Sea* was a financially successful production and Wong's performance in it was well reviewed.

The role that brought Wong to national and international attention was that of a Mongol slave girl in the big-budget spectacle *The Thief of Baghdad*

(1924), starring Douglas Fairbanks. Wong, as a deceptive and manipulative character clad in revealing and exotic costumes, captivated audiences and critics from around the world. The notoriety Wong gained from her turn in *The Thief of Baghdad* led to greater publicity and fame, yet the roles that she was offered remained those of minor supporting characters, often of a stereotypical nature. Frustrated with Hollywood, Wong sailed for Europe in 1928 where she made several films and was warmly received by fans and critics. She spent time in Berlin, Paris, and London, where she made *Piccadilly* (1929), one of her most compelling films. She plays Shosho, a kitchen maid who is spotted dancing by a club owner desperate to find a new act. Shosho's elevation to star attraction at the club, and her troubled affair with the club owner, showcases a complex, engaging, and empowered female character despite her death at the film's conclusion.

Anna May Wong, the first Chinese American movie star. (Library of Congress)

In London, Wong made her theatrical debut in *The Circle of Chalk*, an adaptation of a classical Chinese play, with a young Laurence Olivier in a supporting role. She also made the transition to sound films, most notably playing the lead role in the English, German, and French versions of the same film, for which she learned dialogue in all three languages. Wong's success in Europe elevated her reputation in the United States, and upon her return in the fall of 1930 she played a role in the Broadway production of the play *On the Spot*, and she was offered a long-term deal with Paramount.

Wong returned to Los Angeles in the summer of 1931. Her first role in her new contract with Paramount was as Princess Ling Moy in *Daughter of the Dragon* (1931), a film adaptation of the Sax Rohmer novel *Daughter of Fu Manchu* with Warner Oland in the lead role. Later in 1931 production began on *Shanghai Express*, Wong's most well-known film. Directed by Josef von Sternberg and starring Marlene Dietrich as Shanghai Lily, the film follows the travails of a group of travelers on a train bound for Shanghai from Peking. Wong plays Hui Fei, a mysterious Chinese woman with dubious morals, who travels in the same car as Shanghai Lily. The film was a commercial success, but Chinese officials banned the film for its negative portrayals of the Chinese.

Despite the popularity of *Shanghai Express*, the roles Wong was offered by Hollywood did not improve, and she spent the early 1930s traveling to New York City and to Europe, making films primarily in Britain. Perhaps the biggest professional disappointment of her life came when she was not considered for the role of O-Lan in Metro-Goldwyn-Mayer's cinematic adaptation of Pearl Buck's novel *The Good Earth* (1937). The role was given to Luise Rainer who won an Academy Award for her work in the film.

In 1936, Wong made a highly publicized visit to China, ostensibly to see her father and several of her siblings who had relocated there. "Newsreel" Wong (no relation) recorded her travels on film, she wrote regular dispatches about her experiences, and reporters interviewed her at each stop. She spent most of her time in Shanghai though she also visited Chang On, the small village in Guangdong Province where her

father then resided, as well as other cities in China. Her reception by the Chinese was mixed at best. Although she was fêted as a celebrity, her history of playing stereotypical characters was strongly criticized and government officials as well as journalists did not always treat her with kindness.

After her return from China, her film roles were of a more positive nature. She starred in *Daughter of Shanghai* (1937) with Korean American actor Philip Ahn as the male lead, making them the earliest Asian American onscreen couple. She also became heavily involved in Chinese war relief efforts, auctioning off her gowns to raise money and donating her salary from two films, *Bombs Over Burma* (1942) and *Lady from Chungking* (1942), to United China Relief.

In the 1950s Wong made the transition to television. Most notably, in 1951 she starred in her own television series *The Gallery of Madame Liu-Tsong* about the owner of an art gallery who was also involved in detective work. On the eve of her death in 1961 from a heart attack, she was scheduled to play Auntie Liang in *Flower Drum Song* (1961), a role that was eventually taken by Juanita Hall. The years around the centennial of Anna May Wong's birth occasioned a well-deserved reconsideration of her career in the form of retrospectives of her films, two full-length biographies, as well as a documentary film.

Wong, Elizabeth (1958–)

Born in Southern California, Elizabeth Wong came from first-generation Chinese working-class roots. Her parents came from mainland China. After obtaining a degree in journalism from the University of Southern California, Los Angeles, Wong worked as a field producer at KNXT-TV Channel Two News and also as a journalist for the *San Diego Tribune* and the *Hartford Courant*. Her need to "express who I am" prompted Wong to turn to playwriting. Her personal experiences shaped her as a playwright. The negative portrayals of Asians in the media influenced Wong to look at herself as a person, a writer, and an Asian American. Theater seemed a logical outlet. She was influenced by Wakako Yamauchi's play *And The Soul Shall Dance* and later by David Henry Hwang's *FOB*.

It was when she was at New York University, Tisch School of the Arts, that she started work on her play *Letters to a Student Revolutionary* (1991).

In 1984 Wong visited China with her parents. Upon returning home, she established a letter writing correspondence with a young Chinese woman. Five years later in 1989 when Tiananmen Square shocked the world, Wong reexamined the old correspondence and began work on *Letters to a Student Revolutionary*. The play examined the concept of freedom as seen through the eyes of these young Chinese women from culturally different backgrounds. The play, staged by the Pan Asian Repertory Theatre, premiered Off Broadway in 1991.

Wong's next play, *Kimchee & Chitlins* (1994), premiered at the Victory Gardens in Chicago and explored the clash of cultures between Korean Americans and African Americans in New York City. It was staged by the West Coast Ensemble Theater in 1994. The play proved timely and relevant and extended its issues far beyond the confines of New York City.

China Doll (An Imagined Life of an American Actress) (1996) premiered at the Northwest Asian American Theatre, Seattle and traced the life of Anna May Wong. She was the first Asian American star in Hollywood and a film personality far ahead of her time. The play questioned the racism inherent in the

film industry. It examined through the characters the cultural and social issues of the time and sought to dispel misconceptions about women in general and women of color in the arts.

Wong has also written several children's plays targeting young audiences:

- *Amazing Adventures of the Marvelous Monkey King* (1991) (Denver Center for the Performing Arts)
- *Prometheus* (1999) (Denver Center for the Performing Arts)
- *The Happy Prince, Musical/Opera* (2003) was commissioned by the Kennedy Center for the Performing Arts and performed at the Prelude Festival, Washington D.C. in 2003.
- *Ibong Adarna: A Fabulous Filipino Folktale* (2006), Mu Performing Arts
- *The Magical Bird: A Fabulous Filipino Folktale, a Musical* (2007), Honolulu Theatre for Youth.
- *Dating and Mating in Modern Times* (2003) premiered at the Theatre Emory in Atlanta. Eleven women with 11 stories form the basis of this play, as it examines the funny and frustrating side of love and sex.
- *Quickdraw Grandma* (2004) and *Love Life of a Chinese Eunuch* (2004)

Currently Wong has adapted *Hans Christian Andersen's Goloshes of Fortune* (2005), which takes a modern look at what makes people happy. This adaptation commemorated the 200th anniversary of Andersen's birth.

Wong is also a part of *The DNA Trail*. Along with Jamil Khoury, Shishir Kurup, Philip Kan Gotanda, Velina Hasu Houston, David Henry Hwang, and Lina Patel, she took a DNA test, following which the playwrights examined ancestry and identity. Wong's contribution was *Finding Your Inner Zulu*. The show premiered in Chicago in March 2010.

She has been commissioned by the Silk Road Theatre Project to work on *Dragon/Sky*, a new play for family audiences dealing with astronomers, legends, and videogames. She also worked as a staff writer for

the ABC television comedy series *All American Girl* featuring Margaret Cho.

Elizabeth Wong's prodigious output of work in the theater has led to her winning the following awards:

- Jane Chambers Playwriting Award, 1998.
- Kennedy Center For The Performing Arts, Lazarus New Play Prize for Young Audiences, 1999.
- The Mark David Cohen National Playwriting Award, 2001.
- Tanne Foundation award for artistic achievement in 2007.
- Outstanding Playwrights Award, 2009, Asian Pacific American Friends of Theatre.

The Elizabeth Wong papers are now housed in the California Ethnic and Multicultural Archives (CEMA) at the University of California, Santa Barbara.

Wong, Jade Snow (1922–2006)

Jade Snow Wong is best known for her autobiographical novel *Fifth Chinese Daughter* (1950). First appearing as an autobiographical sketch in the California magazine *Common Ground* in 1945, *Fifth Chinese Daughter* was the most widely read book by a second-generation Chinese until the publication of Maxine Hong Kingston's *The Woman Warrior* in 1976. Recommended by critics as "required reading for all those who are interested in the Sino-American experience," the autobiography was a selection of both the Book-of-the-Month Club and the Christian Herald Family Book Club in 1950 and awarded the Commonwealth Club's Medal for Non-Fiction in 1951. It has

gone through many reprintings since then, has been translated into a dozen foreign languages, and was made into a PBS special for the U.S. Bicentennial. Because of her accomplishments, Wong is often deemed a symbol of the success Asian women have achieved in the United States. Honors such as the Outstanding Art Achievement Award and the Woman Warrior Award for Outstanding Contribution in Literature made her one of the best-known Asian women in America in her lifetime. During the 1976 U.S. Bicentennial, Wong was named the person who best represented the Asian American community.

Wong was the fifth daughter of Hong and Hing Kwai Wong. Her parents were immigrants from Guangdong, China, and they owned a small garment workshop in San Francisco's Chinatown. As a younger daughter growing up in a traditional Chinese family, Wong took care of the housework from the age of 14, cooking, laundering, and buying the groceries for a family of seven. Because her parents were neither able nor willing to support her ambition for higher education, Wong had to work as a housemaid for white American families when attending San Francisco Junior College and then Mills College.

Narrated in the third person, *Fifth Chinese Daughter* vividly captures the life, aspirations, and triumphs of Wong's first 24 years and reveals the lives of second-generation Chinese who came of age around World War II. For the most part, the autobiography concerns the common aspects of the Chinese American community. Wong's lucid and carefully researched account of daily activities in San Francisco's Chinatown deftly outlines a fascinating picture. She examines in detail such varied but typical experiences as mounting a traditional Chinese wedding, treating people with herbal medicine, and staging an annual funeral service.

Wong also devotes a large portion of her autobiography to discussing Chinese food because she finds the topic to be among the most popular aspects of Chinese life. To satisfy the curiosity of readers, Wong describes the details that make Chinese food unique and even includes recipes for such popular dishes as sweet and sour pineapple pork and "Fuyoon (Furong) Eggs." Considering the soaring interest in Chinese food in American society since the World War II era, this

treatment of food has surely made Wong's work more attractive to non-Chinese readers.

More significantly, Wong has demonstrated a strong desire to acquire social prominence in her autobiography. In her family and in the Chinatown community, Wong was repeatedly advised, kindly or contemptuously, to be a modest daughter who would rather stay at home than be ambitious and mix with people in the larger society. However, Wong made up her mind early that she would strive to win respect and honor as a solemn reply to male chauvinism in Chinatown life. In this sense, Wong's pursuit of success is an open identification with mainstream American culture rather than traditional Chinese guidelines.

The vital quality of Wong's literary achievement derives from many aspects. Her ability to appreciate the style of simplicity as an art in writing an autobiography is an important element. The even-tempered, calm, yet lyric narration resembles that of Richard Wright's in *Black Boy*, and it is illustrated in Wong's refreshing, personal approach to Chinese American life throughout the book. Her use of third-person narrative is also a key factor in the book's popularity.

As the first American-born Chinese author who gained international popularity, Wong's greatest accomplishment is her successful portrayal of the life of a second-generation Chinese woman who realized her American dream and achieved it through self-struggle. Despite a tendency to filter her experience to satisfy the reading public, Wong considers issues indigenous to her historical and cultural milieu and has created a new image of Chinese American women. Although modest in tone, the book reveals the inner fire of a determined second-generation Chinese woman who overcame all difficulties, fought prejudice, both within and outside the Chinese community, and achieved ultimate triumph. It is a serious and engaging account of how an American-born Chinese daughter grew up during a transitional period in Asian American history. For this reason, the book has been highly praised by most Asian American readers and critics.

Furthermore, *Fifth Chinese Daughter* paved the way for a new generation of Chinese American writers. Praising Wong as the "Mother of Chinese

American literature,” Maxine Hong Kingston recalls that Wong was the only Chinese American author she had read before writing *The Woman Warrior*. It was *Fifth Chinese Daughter* that inspired Kingston to start a literary career: “I found Jade Snow Wong’s book myself in the library,” she recalls, “and [I] was flabbergasted, helped, inspired, affirmed, made possible as a writer—for the first time I saw a person who looked like me as a heroine of a book, as a maker of a book.”

Wong’s other writing includes “Puritans from the Orient,” a chapter she wrote for *The Immigrant Experience* (1971) and her memoir *No Chinese Stranger* (1975). In addition, she is a celebrated ceramist. Her pottery has won numerous awards, been put into various exhibitions, and is part of the collections of the Metropolitan Museum of Arts and the Smithsonian Institution as well as more than 20 museums throughout America and the world.

Wong, Kailee (1976–)

Kailee Wong was born on May 23, 1976, in Eugene, Oregon. Wong is best known for his nine-year career in the National Football League (NFL) as a member of the Minnesota Vikings and then the Houston Texans from 1998 to 2006. Warner Wong, his father, is half Chinese and half Hawaiian, and his mother, Linda Wong, is Caucasian. In 2000, Kailee and his mother cowrote, *Mom’s Pocketguide to Watching Football*.

During his collegiate football career at Stanford University, Wong was selected First Team All PAC-10 and an Honorable Mention All-American during

his Junior Year in 1996. In 1998, he graduated with a BS in economics and the Minnesota Vikings selected him in the second round (51st overall) of the NFL draft. He played there for four seasons before signing with the expansion franchise Houston Texans in 2002. Wong held the Houston Texans sack record until Mario Williams broke it in 2007. Wong and the Texans reached an impasse when the team decided to go with younger players; however, Wong did not want to take a backup role and decided to retire.

Wong began his post-football career building on his economics degree by completing programs in executive educations at Harvard Business School; The Wharton School of Business, the University of Pennsylvania; and then returned to his alma mater, Stanford. In 2005, he cofounded Cardinal Management, a commercial real estate firm based in Houston. In August 2011, Wong left Cardinal Management to join ION Energy Group, LLC as a derivatives broker.

Wong, Sau-ling

Sau-ling Cynthia Wong is a literary critic specializing in Asian American literature and a professor emeritus of Ethnic and Asian American at the University of California, Berkeley. Her areas of expertise include

Anglophone and Sinophone Chinese American literatures; the Chinese diaspora; Asian American literature; autobiography; immigrant writing and film; transnational and comparative reception studies; transnationality, globalization, and mobility; gender and sexuality; and canon formation. Wong has written and edited numerous books on Asian American literature; she is considered one of the field's leading scholars, and is author of *Reading Asian American Literature: From Necessity to Extravagance* (1993). Her other publications include *Language Diversity: Problem or Resource? A Social and Educational Perspective on Language Minorities in the United States* (1988), *Maxine Hong Kingston's The Woman Warrior: A Casebook* (1999), *New Immigrants in the United States: Readings for Second Language Educators* (2000), *A Resource Guide to Asian American Literature* (2001), and *AsianAmerican.net: Ethnicity, Nationalism, and Cyberspace* (2003).

Born and raised in Hong Kong, Wong immigrated to the United States in 1968 to study at Indiana University, where she graduated summa cum laude with her BA in English and American Literature in 1970. She continued on to Stanford University, where she received her PhD in British and American Literature in 1978. She also received an MA in Teaching English as a Second/Foreign Language from San Francisco State University in 1980. In 1981, she joined the faculty at University of California, Berkeley. Her work has been honored by the *Journal of Transnational American Studies*, which released a special issue in 2010 commemorating her retirement. She is also the recipient of the Asian Alumni Association's Distinguished Asian Pacific American Alumni Award from Indiana University (2010).

Reading Asian American Literature: From Necessity to Extravagance (1993) is a groundbreaking work that establishes a coherent Asian American literary tradition by examining the intertextuality of Asian American works that deploy similar motifs. *Reading Asian American Literature* is most invested in "how mutual allusion, qualification, complication, and transmutation can be discovered between texts regarded as Asian American" (11). She identifies "Necessity" and "Extravagance" as two modes of existence and operation through which the four intertextual motifs are

mediated: food and eating; the Doppelgänger; mobility; and artistic play. She demonstrates that a rich interaction occurs between cultures, ethnicities, genders, classes, and generations—and their negotiations of "Asian," "America," and all that falls in between. The book was awarded the 1994 Outstanding Book Award in Cultural Studies by the Association for Asian American Studies.

Wong has also worked to promote transnational modes of exchange and reading, and has become an important figure in biculturalism and bilingual studies; she has also engaged in dialogues that challenge the tradition of limiting Asian American studies to the physical boundaries of the United States, as well as calling for the "denationalization" of Asian American and diasporic subjects.

Wong, Shawn (1949–)

Shawn Wong is a pioneer of Asian American studies and literature, an author, and a professor of English at the University of Washington. He previously served as the director of the Creative Writing Program (1995–1997), chair of the English Department (1997–2002), and director of the University Honors Program (2003–2006). Wong is the author of two novels, *Homebase* (1979) and *American Knees* (1995). He has also taught at Universität Tübingen, Jean Moulin Université, and at the University of Washington Rome Center. Wong is best known for his work with the Combined Asian-American Resource Project (CARP), which he cofounded, and the pioneering anthologies, *Aiiieeeee! An Anthology of Asian-American Writers* (1974) and *The Big Aiiieeeee!* (1991). He has edited several anthologies, including *Literature* (1991), *Literary Mosaic: Asian American Literature* (1995), *Asian Diasporas: Cultures, Identities, Representations* (2004), and *Asian American Literature: A Brief Introduction and Anthology* (2006). He is also coeditor of *Before Columbus Foundation Fiction/Poetry Anthology: Selections from the American Book Awards, 1980–1990* (1992). He currently serves as a consulting and contributing editor for *Transtext(e)s/Transcultures*, a transnational French/Chinese journal jointly published by Université Jean Moulin and University of Henan.

Wong completed his BA in English at UC Berkeley in 1971 and his MA in creative writing at San Francisco State University in 1974. He is the recipient of multiple awards, including a Rockefeller Foundation residency in Italy, the National Endowment for the Arts Creative Writing Fellowship, and a first prize from the Society of Professional Journalists in the humor category in 1997. Wong was featured in two PBS documentaries, "Shattering the Silences" (1997) and "Becoming American: The Chinese Experience" (2003).

Born in Oakland, California, in 1949, Wong grew up in Berkeley and spent time in the Sierra Nevada Mountains and the Pacific Islands. From a young age, Wong had a passion and talent for writing. By the time

he was 19, he decided that he would pursue a career as a professional writer. His career choices would eventually lead him to teach the second Asian American literature course offered in the United States at Mills College when he was still working on his coursework for his MA. This part-time faculty position eventually laid the foundation for Wong to become part of the pioneering group of Asian American male writers and academics including Jeffery Paul Chan, Frank Chin, and Lawson Fusao Inada, who would cofound the Combined Asian-American Resources Project (CARP) with the intention of searching for and reviving works of Asian American writers.

CARP not only organized the first Asian American writers' conference in 1975, it also collaborated to publish two landmark anthologies of Asian American literature, *Aiiieeeee!* in 1974 and *The Big Aiiieeeee!* in 1991. In the preface to *Aiiieeeee!*, the editors explain that the anthology emerged because of a collective anger of "Asian America, so long ignored and forcibly excluded from creative participation in American culture" (viii). Working to revivify forgotten and obscure Asian American writers, members of CARP were determined to create an Asian American canon that would legitimate and give Asian American writers visibility. Largely, the anthologies seek true representation of Asian American experience free from stereotype. Because the two volumes feature only works by Chinese American, Japanese American, and Filipino American writers, it has been criticized as not being truly representative of Asian American identity, despite its declaration of authentic representation. Regardless of this criticism, the anthologies have become staples in Asian American literature and ethnic studies courses across the United States. The impact *Aiiieeeee!* had on Asian American studies was significant, as it brought into focus forgotten writers such as John Okada, Hisaye Yamamoto, Carlos Bulosan, and Toshio Mori, who, at present, are some of the most widely read and studied writers of Asian American descent.

Besides his work with CARP, Wong has also published two novels. His first novel, *Homebase*, which was issued in 1979, is about a fourth-generation Chinese American orphan growing up in the 1950s. Desperate to forge an understanding of his ancestral

lineage, Rainsford Chan sets upon a path to uncover the forgotten and buried history of the Chan family men. Moving through dream passages, letters, poetry, journal entries, and scenes that shift between time, place, and point of view, Rainsford uncovers not only the history of his family, but also the Asian American history erased from the public consciousness, including the Chinese Exclusion Acts, detention on Angel Island, the ghettos of Chinatown, and the building of the transnational railroad through the Sierra Nevada Mountains. His journey functions on one hand as an attempt to excavate the past and on the other as a quest to claim his American citizenship.

Wong's second novel, *American Knees*, was published in 1995. The novel, whose title is derived from a childhood taunt, "What are you—Chinese, Japanese, or American Knees?" follows Raymond Ding, who struggles with negotiating his relationships with Asian Americans as he deals with racism in various forms, both internalized and institutionalized. The narrative charts subtle movements between inter- and intraracial prejudices and conflicts, and attempts to navigate the multicultural domain of America. Notably, it features a male protagonist as a multiethnic romantic hero—a role traditionally reserved for non-Asian men. Although the novel does delve into Raymond's misadventures in love, it should not be mistaken as purely a romance. At its very core, Raymond's winding path through his relationships symbolizes his attempt to find a sense of belonging within a larger community although simultaneously laying claim to a space within America—a similar theme as that illustrated in *Homebase*. In 2006, *American Knees* was adapted into a feature-length film, written and directed by Eric Byler.

Outside of his professional writing career, Wong plays a large role in Seattle's art community and serves as chairman of the Seattle Arts Committee, coordinator of Seattle's Bumbershoot Festival Commission, as well as consultant for the National Endowment for the Arts. He is also a professional drag racer and has won national titles such as the National Hot Rod Association Northern Pacific Division finals in 1984.

Woo, Hong Neok (1834–1919)

Hong Neok Woo was born on August 7, 1834, in An Tow Village near Shanghai. In 1848, Woo's father, a

poor but ambitious farmer, sent him to study and board at a free school attached to the city's American Episcopal Mission, the first step in a journey that would lead to his participation in America's Civil War and outstanding ministry in Shanghai.

A plodding but diligent and patient student, Woo liked the mission's school and made lifelong friends among its teachers and boys. After only five or six years, however, he quit over a new superintendent calling him a dunce. By then baptized and confirmed, Woo continued to attend services at the mission until he secured employment as a "table-boy" on the navy frigate *Susquehana*, which was headed for America. During the eight-month journey, Woo waited on the ship's surgeon, John S. Messersmith, and upon landing at the Philadelphia Navy Yard in March 1855, Woo accompanied the doctor to his home in Lancaster and began an apprenticeship as a printer at the *Lancaster Examiner Herald*.

Woo became a U.S. citizen on September 22, 1860, and when Civil War erupted the following April, he wanted to join the fight because he opposed slavery. But his friends argued against his enlistment, saying his own people and family were in China. So Woo completed his training as a printer and went to work for the *Daily Express*. When oiling a machine, the middle finger of his right hand caught in a cogwheel that stripped it of skin, nail, and flesh down to the bone, a terrifying and painful accident that aroused his interest in medicine.

After the Confederate army invaded Pennsylvania and threatened Lancaster, Woo threw off his friends' counsel that with neither property nor family to defend, he should not risk his life. Volunteering on June 29, 1863, he listed as Neok Ung Hong in the rolls of Company I, Fiftieth Regiment Volunteer Infantry, Emergency Ninety-Day Militia, and was initially sent to Safe Harbor, a key area of defense at the mouth of Conestoga Creek. But on July 2, at news of a great battle in Gettysburg, Woo's company was sent to Harrisburg, where it was equipped, then transported by train through the Cumberland Valley to Chambersburg for a short stay, after which the men marched on to Hagerstown and Williamsport, Maryland, doing picket duty at Dam No. 5 on the Potomac River. The regiment mustered out on August 15.

Since his arrival in Lancaster, Woo had seen only one other Chinese, a schoolmate who had attended Kenyon College in Gambier, Ohio, and who had chosen to return to China upon graduation. Despite the pleas of friends to stay and an offer of higher wages, Woo decided to go back, too. Working his way on the *Kukiang*, he arrived in Shanghai on May 1864.

With both his parents dead and his younger brother and sister virtual strangers, Woo lived with his former schoolmate until establishing a family of his own. Supporting them by working as an interpreter for an English company, Woo prepared for Holy Orders and became deeply involved in medical mission work with Daniel Jerome MacGowen in a one-room dispensary that they opened together with seed money an American benefactor had given the doctor. By the time Woo was ordained a priest in 1880, the dispensary had developed into one of Shanghai's earliest hospitals, St. Luke's, which later became affiliated with the city's renowned St. John's University Medical School.

Woo brought to his ministry a unique combination of practicality, patience, imagination, and a commitment to meeting physical as well as spiritual needs, winning the respect of Christians and non-Christians, Chinese and Westerners. His dedication and energy undiminished by age, he established the Yin Tak Institute in 1908 as a refuge for abused wives and widows regardless of religious affiliation.

When Woo died on August 18, 1919, thousands attended his funeral. He is buried in Shanghai's Westgate Cemetery.

Woo, Shien Biau (S. B.) (1937–)

Shien Biau Woo, commonly known as S. B. Woo, is a Chinese American educator and politician. He is also a former lieutenant governor of the state of Delaware, serving from 1985 to 1989. Woo's work extends across the academia as well as the political landscape in the United States. His most recent political involvement includes the promotion of the 80/20 Initiative within the Asian American community.

S. B. Woo was born in Shanghai in 1937 in a war-torn China. He came to the United States from Hong Kong with his family when he was 18 years old. Woo later received his Bachelor of Science, *summa cum laude*, in mathematics and physics from Georgetown College, Kentucky. In 1964, he earned a PhD in physics from Washington University in St. Louis. After obtaining his doctorate degree, S. B. Woo joined the faculty of the University of Delaware in the late 1960s and taught physics and astronomy until his retirement in 2002.

During his time at the University of Delaware, Woo was highly involved in his profession and the academia. Not only is he recognized as a long-standing educator of 36 years, Woo is also an important founder of the Faculty Bargaining Unit and a trustee of the University of Delaware. He also served as an institute fellow at the Institute of Politics, the Kennedy School of Government at Harvard University. Woo's professional contributions has been widely recognized by his peers in academia.

Woo is also considered one of the most prominent Asian American politicians and a courageous political pioneer. He is still highly esteemed as one of the first Asian Americans to break into mainstream American politics. In his first bid for public office, Woo was able to defeat other candidates in the Democratic primaries to earn a nomination for the office of lieutenant governor of Delaware. Woo later narrowly defeated his Republican opponent by less than 500 votes and became the first Chinese American lieutenant governor and the highest-ranking Asian American office holder at the state level at that time. His tenure as Delaware's 21st lieutenant governor spanned from 1985 to 1989.

After serving one term as lieutenant governor, Woo turned to the prospect of other political offices

and narrowly won the Democratic primary election for U.S. senator in 1988. However, he was later defeated by the Republican incumbent, U.S. Senator William V. Roth, Jr. After another run for public office in March 2000, Woo announced that he would not run for public office again and switched his party affiliation from Democratic to Independent.

Although out of public office, Woo has been active within the Asian American community. He is one of the founders of the 80-20 Initiative, a political action committee that strives to encourage and consolidate Asian Americans as an effective voting bloc during presidential elections. A staunch advocate for the Initiative, Woo believes the concentration of Asian American support for one major party label candidate is a way to attract attention to the Asian American community and raise awareness for Asian American issues among the primary presidential candidates.

Woods, Tiger (1975–)

In contemporary American sports, Tiger Woods is that rare presence: a golfer with exceptional athletic talent, whose on-course accomplishments and off-course decisions are constantly read in the context of the long, complicated history of race in America.

Eldrick "Tiger" Woods was born on December 30, 1975, in Cypress, California, to Earl and Kultida Woods. His father, a Vietnam War veteran, was a

Tiger Woods, 2013. (David Cannon/Getty Images)

mix of African American, Chinese, and Native American, and his mother is Thai, Chinese, and Dutch. Woods has referred to himself as “Cablinasian,” a term he created to reflect this ethnic and racial mix.

The world witnessed Woods’s prodigious golf talent long before he ever won a tournament. At the age of two, he appeared on *The Mike Douglas Show*, demonstrating a putting stroke he would perfect as an adult. Between that first television appearance and his decision to turn pro at the age of 21, Woods had an unprecedented amateur career. He won the Junior World Championships, the U.S. Junior Amateur Championship, and the U.S. Amateur Championship multiple times. In 1994, Woods enrolled at Stanford University, where he was voted Pac-10 Player of the Year and won the NCAA individual golf championship in 1996.

After two years, Woods left Stanford, turned professional, and signed a \$40 million contract with Nike. Nike recognized Woods’s commercial appeal very early on, and Woods’s endorsement of the shoe

company, and various other companies in the years since, has made him both very wealthy and cautious about his public persona.

As a professional, Woods quickly established himself as the most dominant player of his era, and perhaps the most dominant player in the history of the sport. To date, he has won every single major tournament (the Masters, British Open, U.S. Open, PGA Championship) multiple times, and has won over 70 titles on the PGA Tour. In 2000–2001, Woods held all four major titles at the same time. In golf, the number of majors won by a player is one primary measure of success, and Woods’s 14 majors at the end of 2009 is second only to Jack Nicklaus’s 18. For many, it is a foregone conclusion that Woods will replace Nicklaus atop the list in the years to come.

Woods’s on-course achievements are too numerous to name. But two victories—at the 1997 Masters and at the 2008 U.S. Open—symbolize the dimensions of Woods the athlete and oft-debated social figure.

In 1997, Woods played in his second Masters tournament held annually at the Augusta National Golf Club in Georgia. More than any other sport in the United States, golf has embodied the history of racial discrimination and segregation. And Augusta National, which did not accept an African American member until the early 1990s, is the most famous symbol of this history. It did not allow female members until 2012.

Woods won that year by an unheard of 12 strokes, the largest margin of victory in the 60-year history of the tournament. The symbolic nature of the win was not lost on many.

By referring to himself as “Cablinasian,” Woods has distanced himself from an exclusively African American identity. And when he turned pro in 1996, both his parents cast Woods in an equally broad ethnic context. His father saw him as a “bridge between East and West,” with greater power than Nelson Mandela, Gandhi, and the Buddha to bring humanity together. His mother referred to him as the Universal Child.

But when Woods won the Masters, it was clear that there was a difference between how Woods saw himself and how the world saw him. Sportswriter Rick Reilly captured one aspect of Woods’s historic significance well:

Almost 50 years to the day after Jackie Robinson broke major league baseball's color barrier, at Augusta National, a club that no black man was allowed to join until six years ago, at the tournament whose founder, Clifford Roberts, once said, "As long as I'm alive, golfers will be white, and caddies will be black," a 21-year-old black man delivered the greatest performance ever seen in a golf major.

This narrative of racial progress was marred when fellow golfer Fuzzy Zoeller commented, referring to Woods and the Master's Champions Dinner, for which the defending champion selects the menu, "That little boy is driving well and he's putting well . . . and tell him not to serve fried chicken next year . . . or collared greens or whatever the hell they serve."

Woods did not respond angrily to either Zoeller's form of address ("that little boy") or the racial stereotype about the menu. And more recently, Woods kept his distance and said through his agent that the golf commentator Kelly Tilghman meant no harm when she said that young players who wanted to challenge Woods should "lynch him in a back alley."

His silence in such moments has earned him criticism that he does not take enough of a public stance on controversial issues, lest he jeopardize his commercial interests. In this, he has been placed in the apolitical tradition of a Michael Jordan, as opposed to that of Muhammad Ali.

Scholarship on Woods, particularly by the historian Henry Yu, has concentrated on how the complicated intersection of Woods's racial self-identification and the public's perception of him as African American still uses old biological configurations of race, even as there are attempts to move beyond them. Yu notes that in the rush to celebrate Woods's barrier-breaking success in a sport long associated with white racial hierarchy, his mother's Asian roots have been completely elided.

If the 1997 Masters placed Woods squarely within a conversation on race in America, the 2008 U.S. Open reminds us that after all the debate over the nature of his identity, there will be no argument about his skill as a golfer. Playing on a clearly weakened knee that would have sidelined most players, Woods defeated

Rocco Mediate in an 18-hole playoff. Days after the victory, Woods announced that he would undergo reconstructive surgery of his left ACL that would eventually keep him off the golf course for eight months.

Woods referred to the U.S. Open win as his "greatest triumph," which says a lot considering the storied career he has had thus far. A year after this victory, Woods was embroiled in a very public sex scandal that led to a divorce from his wife, with whom he has two children. And to date, he has not moved past 14 major championships. But in a sport where players play well into their 40s, Woods has time yet to pass Jack Nicklaus in the record books.

Workingmen's Parties

Workingmen's parties had formed in America at least as early as the Jacksonian era as expressions of laborers' political concerns. However, the parties gained their greatest prominence and had their most lasting effects beginning in the 1870s with the push for Chinese exclusion in California. Although the Workingmen's Party of the United States (WPUS) began the protests, but not necessarily the violent rioting, that convulsed San Francisco in July 1877, the Party was originally formed on the East Coast and had strong Marxist leanings. The mostly German-speaking WPUS had limited success organizing labor votes throughout the United States. The WPUS was not particularly anti-Chinese in its sentiments; its original San Francisco sandlot speeches criticized railroad companies and the increasing control of capital over citizens' rights. However, the political space and social context in which the WPUS acted in California gave rise to the significantly less radical and dramatically more nativist Workingmen's Party of California

(WPC). Whereas the WPUS had a large German-speaking contingent, the WPC was led by Irish immigrants, who also formed a significant part of the rank and file of the party. However, the WPC drew its membership from all European-born ethnic groups in San Francisco; the WPC was not simply an Irish party even if its most prominent leaders were Irish immigrants. Still, political aims, style, and accomplishments, not linguistics or ethnic background, distinguished the two Workingmen's parties.

From its outset the WPC was not a single issue party. Though some have argued that the party's slogan—"The Chinese Must Go!"—was also the only plank of its platform, this is not completely true. When the WPC formed in September 1877 in San Francisco, it objected to land monopolies, advocated tax reforms that penalized the superrich, and sought to unite California's workers under a common banner in addition to calling for the deportation and exclusion of all Chinese laborers from California. Indeed, the WPC framed its anti-Chinese message in both nativist and class-conscious terms that decried the Chinese as a foreign menace that served to perpetuate the power of monopoly capitalists over the common workingman.

The multiple classes that formed the WPC help explain this dual anti-monopoly capitalist anti-Chinese message. The WPC drew from the city's ranks of laborers and unemployed, including migrant farm workers contending with statewide drought as well as the statewide depression, for its membership, and it was these men who saw themselves as directly competing with Chinese laborers. However, the leadership of the WPC, as seen most prominently in the drayman Denis Kearney, also had successful businessmen and lawyers who saw their chances of advancement forestalled by the Nob Hill capitalists who enriched themselves through unfair monopolies and by exploiting Chinese labor and using the Chinese as a foil against the labor of European immigrants.

Almost from its inception, internecine struggles characterized the WPC. The most prominent of these struggles, between Denis Kearney and Frank Roney, impacted both the party's message and its organization. Both Kearney and Roney were Irish immigrants, but whereas Kearney had left as an orphan to try to

make a living, Roney fled Ireland under the specter of execution because of his work for an Irish revolution. Although Roney drafted the party platform, he thought the anti-Chinese measures were "brutal" and he preferred to concentrate on the good that trade unionism could do for the workingman. Roney also preferred a more hierarchical style of party in which elected leaders formed a skilled and stable cadre advocating for change. Kearney, on the other hand, emphasized the anti-Chinese planks of the platform because these were most popular with the rank and file. Moreover, Kearney believed that the party's rank and file members were its only legitimate power. Kearney was ultimately successful in his struggle with Roney before the California state constitutional convention began in 1878. Under his leadership, the rank and file would express their will through club elections (whose winners could be recalled at any time), and all party officers were ineligible for nomination to a political office.

In part because of Kearney's message of rank and file empowerment, and his virulent opposition to Chinese in California, along with his electioneering throughout the rural areas of the state, the WPC sent 51 delegates (among them all 30 of San Francisco's delegates) to the state constitutional convention. The Democrats and Republicans in the state had formed a nonpartisan coalition to oppose what they saw as the radicalism of the WPC, and they sent 77 nonpartisan delegates, along with 24 other delegates who represented individual parties but would vote with the nonpartisan bloc, to the convention. The National Labor Party (NLP), which advocated the most discriminatory Chinese legislation, sent no delegates to the convention. At the convention, the WPC accomplished very little beyond support for the Granger program of reform aimed primarily at railroads and the anti-Chinese Article XIX. This article made it illegal to employ Chinese in the state of California. The constitution also barred Chinese suffrage, and, most important, sanctioned the legislature to pursue acts that would prevent Chinese immigration and encourage Chinese emigration from California. Though the lines barring Chinese employment were symbolically important, the federal government was the acknowledged arbiter of both employment and immigration;

therefore, the key anti-Chinese measures in the 1879 constitution were those that allowed and encouraged state action against the Chinese. As scholars have argued, even if anti-Chinese legislation proved unenforceable by the state, its passage would encourage vigilante violence putatively condoned by an unfairly limited state.

The WPC's success in electing delegates to the constitutional convention, where they achieved little of what they championed, was mirrored on the city level in San Francisco with the election of WPC candidate Isaac Kalloch as mayor in 1879. Despite being shot by the editor and publisher of the *San Francisco Chronicle*, Charles De Young, a few days before the election, Kalloch along with other WPC candidates in key city positions swept the elections. The notable exception to WPC success, which has led scholars to speculate about a vote-counting scheme hatched to share power, was the board of supervisors. Thus, when Kalloch tried to push through WPC-backed policy such as the "abatement" of Chinatown, his efforts were blocked by the board of supervisors.

Beyond the WPC's work in advocating for a constitutional convention and spearheading the ratification of the 1879 constitution, their key contribution to California politics, and, as some have argued, by extension national politics, was their virulent anti-Chinese sentiment. Though this sentiment and the positions advocated by WPC leaders and rank and file remained and were realized, especially after the 1882 Exclusion Act, the WPC itself quickly faded from both national and local politics. Scholars debate whether this hasty exit was because of political naiveté, a misguided partnership with the Greenback Party, an agreement with the Democrats that saw most WPC voters return to their Democratic roots, or the accomplishment of its major goals that left no reason for the WPC to remain on the political stage. That its major goals were anti-Chinese underscores David Roedinger's assertion that in California "labor and anti-Chinese movements overlapped so thoroughly as to be indistinguishable."

Wu, Chien-Shiung (1912–1997)

Chien-Shiung Wu was one of the leading experimental physicists of the twentieth century and a prominent leader of the Chinese American scientific community. As the first female and first Asian American president of the American Physical Society (APS), she fought for equal opportunities for women in science and promoted science and education in the United States and China.

Born in Shanghai, China, on May 31, 1912, Chien-Shiung Wu (Wu Jianxiong in *pinyin*) grew up in a turbulent time in modern Chinese history, but enjoyed a happy childhood primarily because of the encouragement and support of her enlightened father, Wu Zhongyi, who instilled in her a pride in Chinese culture, a love of science, and a belief in herself and in the equality for women. From 1923 to 1929, she attended the Suzhou Women's Normal School in Suzhou where, inspired by stories of Marie Curie, Wu became interested in physics. In 1930, Wu entered the National Central University in Nanjing to study physics and graduated four years later with a senior thesis on X-ray diffraction.

Wu worked as a teaching assistant in the Physics Department at Zhejiang University in Hangzhou for a year before taking up a research assistant position in the Academia Sinica's Institute of Physics in Shanghai in 1934. In 1936, she set sail for the United States and enrolled in the University of California at Berkeley to pursue a PhD in physics. She quickly impressed all her professors, which included Ernest Lawrence, J. Robert Oppenheimer, and Emilio Segré, with her

intellectual acumen, experimental talent, and personal charm. She thrived scientifically at Berkeley. By 1940 Wu had completed two separate experiments in nuclear physics for her PhD thesis, but, frustrated in her search for a tenure-track position, stayed at Lawrence's lab as a researcher for two more years, working on nuclear fission.

World War II brought more opportunities. In 1942, Wu married Luke Chia-Liu Yuan, a fellow Chinese American physicist, and together they moved to the East Coast, he working on radar for RCA at Princeton and she teaching physics first at Smith College and then at Princeton University. In 1944 Wu moved to Columbia University in New York to develop radiation detectors for the Manhattan Project. After the end of the war, she stayed at Columbia as a research scientist and gave birth in 1947 to a son, Vincent Wei-chen Yuan (later a physicist). Political uncertainties in China following the Communist revolution in 1949 led Wu and Yuan, like many others from China, to stay in the United States, and in 1954 they became naturalized American citizens.

Scientifically, Wu focused, from 1946 to 1952, on the problem of beta decay, an important area of nuclear physics, and her experiments gained her a reputation for accuracy and technical sophistication. Her achievements helped overcome resistance to women in Columbia's Physics Department and brought her a promotion to associate professor with tenure in 1952.

The most celebrated experiment of Wu's career started as a result of a conversation she had in the spring of 1956 with her Columbia colleague and fellow Chinese American physicist Tsung-Dao Lee. At the time, Lee and Chen Ning Yang, another Chinese American physicist at Princeton's Institute of Advanced Study, were investigating the possibility that particles involved in weak interactions—beta decay was one example—might not follow the long-established law of parity governing their spinning. Wu decided to test Lee and Yang's theory by lining up the spins of the ^{60}Co nuclei and then detecting the spin directions of the beta particles (electrons) that were emitted from the nuclei. She conducted the difficult experiment in collaboration with scientists at the National Bureau of Standards in Washington, D.C. By late 1956 and early 1957, they found that indeed

the law of parity was violated in beta decay—more beta particles were emitted in the direction opposite that of the nuclear spin than along it—which was soon confirmed by other scientists.

A surprise to most physicists, the breaking of parity led to new advances in many directions in physics and eventually paved the way for the unification of the weak and electromagnetic forces. Yet, when the Nobel Prize in Physics for 1957 was announced, it went only to Lee and Yang, not Wu, who felt happy for her friends but was clearly disappointed by her exclusion, a feeling shared by the laureates and many other physicists. Nevertheless, Wu received, over the years, just about every other award for a scientist, as she continued to conduct influential experiments after her parity triumph. She was promoted to full professor and elected a member of the National Academy of Sciences in 1958. In 1972 she was made the first Michael I. Pupin Professor of Physics at Columbia and elected a member of the American Academy of Arts and Sciences. Three years later she was elected APS president and received the National Medal of Science. Then, in 1978, she received the prestigious Wolf Prize in physics from the Wolf Foundation of Israel.

Taking advantage of her increasing prominence, Wu began to speak out on social and political issues, especially on equality for women in science. At a symposium in 1964, for example, she lamented the lack of women in science because of both cultural biases and professional discrimination. Counting proudly the achievements of women nuclear physicists such as Marie Curie and Lise Meitner, she declared that “never before have so few contributed so much under such trying circumstances!” (Mattfeld and Van Aken 1965: 47). In 1975, from the platform of the APS presidency, she urged the federal government to increase funding for education and basic research.

During the later stage of Wu's life, her Chinese heritage and connections began to take on growing importance for her. She had always maintained contact with the scientific community in Taiwan, urging the Nationalist government that had fled there in 1949 to carry out democratic reforms and to resist temptation to make atomic bombs. The reopening of U.S.-China relations in the early 1970s made possible her first

return to the mainland with her husband in 1973, where they were received by Premier Zhou Enlai. Following retirement from Columbia in 1981, Wu traveled more frequently to both sides of the Taiwan Strait to advise on science policy, to promote education and science, and to receive honors and awards. A household name among Chinese all over the world, Wu, as the “Chinese Curie,” became a role model for many Chinese students, especially girls and women, with scientific aspirations.

When Wu died on February 16, 1997, in New York, her ashes were buried, according to her will, in the courtyard of Mingde school in her hometown that was founded by her father, and were joined several years later by those of her husband.

Wu, David (1955–)

David Wu was a Taiwan-born American politician representing the Democratic Party and was the congressional representative for Oregon’s 1st District. An attorney by trade, Wu held his congressional seat between 1999 and 2011. He was the first Chinese American from Taiwan who served as a member of the House of Representatives.

Wu is what one would consider a 1.5-generation American. He was born in Hsinchu, Taiwan and immigrated to the United States in 1961, after President

John F. Kennedy’s executive orders lifted the ban on unfair immigration quotas. Wu was six years old at that time. And upon arrival in the United States, Wu and his family initially settled in the town of Latham, New York for two years where they were the only Asian American family in town.

After graduating from high school, Wu went to Stanford University as an undergraduate and earned a Bachelor of Science degree in biology in 1977. He later went on to pursue medical studies at Harvard Medical School but decided to drop out before completing his degree. Although his family was displeased at Wu’s decision to leave medical school, he left Harvard in pursuit of a law degree. In 1982, Wu graduated with a *Juris Doctor* from the Yale Law School

In the beginning of his legal career, David Wu worked as a clerk for a federal judge in Portland, Oregon. He later joined the Miller Nash law firm and also cofounded the law firm of Cohen & Wu in 1988. For more than a decade, Cohen & Wu served as the legal consultant for many high-technology industries and small businesses in the northwest Oregon area. Wu sees his work at his law firm as one of the most important accomplishments in his life. He believed that Cohen & Wu helped to build new businesses and, in turn, provided many well-paying jobs for his fellow Oregonians. His credentials from working at Cohen & Wu gave Wu many of the qualifications he needed to represent his high-tech, so-called “Silicon Forest” district.

In 1998, when former Democratic Congresswoman Elizabeth Furse declined to seek reelection in Oregon’s 1st District, David Wu stepped in, won the election, and started his first congressional term in January 1999. He won seven reelection bids for his congressional seat until resigning in August 2011 following accusations that he had made unwanted sexual advances on the teenage daughter of a campaign donor and friend.

When in Congress, Wu served on the Committee on Education and Labor and the Committee on Science and Technology. He was the chairman of the Subcommittee on Technology and Innovation. Wu was also a member of the New Democrat Coalition (NDC), a group of moderate House Democrats that supported moderate and pro-growth policies.

As an immigrant and a Democrat, Wu was a staunch supporter of civil liberties and human rights in the United States and abroad. He was a former chairman of the Congressional Asian Pacific American Caucus and chaired the Education Taskforce. Wu was also very much concerned about U.S.-China relations and was a member of the Congressional-Executive Commission on China.

Xiong, Joe Bee (1961–2007)

Joe Bee Xiong was a Hmong American politician from Wisconsin. He served on the city council of Eau Claire, Wisconsin from 1996 to 2000. Xiong was the first Hmong American to be elected to a city government in Wisconsin. An advocate for Hmong culture and causes, Xiong passed away on March 31, 2007, at the age of 45 after suffering a massive heart attack.

Xiong was born in 1961 in Xiengkhoung, Laos. Xiong and his father were among the Hmong farmers from the mountains of Laos recruited by the CIA in the 1960s and 1970s to fight a guerilla-style “Secret War” against Communist forces in Vietnam. Like many others, Xiong’s family fled Laos after the Pathet Lao, the Communist regime, took over Laos. Especially because of their associations with the United States in the Secret War, the family feared retaliation from the Communist regime. They escaped to neighboring Thailand and spent eight months at a refugee camp. In the early 1980s, Xiong and his family came to the United States as refugees and settled in Eau Claire, Wisconsin.

In his new home, Xiong quickly learned English and graduated from high school. He also earned a bachelor’s degree from Mount Scenario College. Xiong was always very involved in the Hmong American community. He spent much of his time introducing the Hmong culture to all those who were interested. Xiong was also talented in the *qeej*, a traditional Hmong musical instrument (that resembles a bamboo flute) he picked up as a teenager in Laos.

In 1996, Xiong was elected to the city council of Eau Claire and became the first Hmong American to be elected to a public office in the state of Wisconsin. He was reelected in 1998 for a second term and served until 2000. Aside from his work on the city council, Xiong was renowned for his involvement in the local Hmong community. According to Eric Lindquist, a reporter for the *Eau Claire Leader Telegram*, Xiong was a landlord who rented homes to many Hmong families who were in need. He was also at one time a reserve officer for the Eau Claire Police Department.

Aside from being a leader who served his community, Xiong was also a source of inspiration for many. For other Hmong Americans, the success and dedication of Xiong in the political arena was an inspirational example for many Hmong Americans and showed that with hard work and perseverance, anything is indeed possible.

After Xiong’s retirement from the city council, he ran unsuccessfully against Republican Terry Moulton for the 68th Assembly District seat in 2004. It was also reported that Xiong had been struggling with many health problems; at one point, he suffered a heart attack that almost took his life. In March 2007, Xiong left home with the intention to travel to Thailand for alternative treatment for his heart problems; however, Xiong suffered a heart attack and passed away in Vientiane, Laos when visiting some friends and family en route to Thailand.

His death was deeply mourned by his family and others in the Hmong community.

Yamaguchi, Kristi (1971–)

Kristi Yamaguchi is an American female figure skater who won the gold medal at the 1992 Winter Olympics. She was born on July 12, 1971, in Hayward and grew up in Fremont, California. Born with clubfeet, Yamaguchi had to wear corrective shoes when she was a kid. Fortunately, this did not influence her later career of skating. Her parents, Jim Yamaguchi and Carole Doi, raised three children: Lori, Kristi, and Brett. Yamaguchi's grandparents on her mother's side were sent to an internment camp in World War II, like most Japanese Americans during that time.

Yamaguchi met her singles coach, Christy Kjarsgaard, in a summer skating camp in Santa Rosa. Yamaguchi liked Kjarsgaard and decided to take lessons with her. The training was quite rigorous. Everyday Yamaguchi had to wake up before dawn and practice for five hours. After practice, she rushed to school. After school in the afternoon, she went to another training session. The reward for this hard training was the gold medal for singles at the 1988 World Junior Championships. But this was not the only gold medal that Yamaguchi won at these Championships. She also placed first in the pairs competition with her skating partner, Rudi Galindo. Yamaguchi met Galindo in 1983 and received the instruction of their pairs coach, Jim Hulick. They won the national junior title in 1986 and the world junior title in 1988. Unfortunately Hulick died of cancer in December 1989, five days before Yamaguchi's grandfather died. Unable to find another pairs coach, Yamaguchi and Galindo could not reach a better standing at the 1990 World Championships than the previous year.

Yamaguchi then made a difficult decision to terminate her pairs career and to concentrate on singles.

With her focus on singles, Yamaguchi took first place at the 1991 World Championships in Munich, Germany. More important, at the 1992 Winter Olympics in Albertville, France, she defeated tough competitors, Tonya Harding and Midori Ito, and earned the championship. This was the first Olympic gold medal for U.S. women's figure skating since Dorothy Hamill won in 1976. The Olympic victory pushed her into the media limelight, and she became a celebrity. Shortly after the Olympics, Yamaguchi won the gold medal again at the 1992 World Championships. She was the first American female skater to win the world championship twice consecutively since Peggy Fleming in 1968.

Yamaguchi started her professional career in September 1992, which was as successful as her earlier career. From 1992 to 2002, she joined Stars on Ice and won several competitions. She placed first at the 1992 and 1993 World Challenge of Champions. She won first place in 1992 and 1994 and second place in 1993 and 2001 at the World Professional Figure Skating Championships.

Yamaguchi has received numerous awards, such as the Great Sports Legends Awards in 2004, the Inspiration Award of Asian Excellence Awards in 2008, and the Thurman Munson Award in 2008. She became a member of the U.S. Figure Skating Hall of Fame in 1998, the World Skating Hall of Fame in 1999, and the U.S. Olympic Committee Olympic Hall of Fame in 2005.

Besides skating, Yamaguchi is involved in social issues as well. She established the Always Dream

Kristi Yamaguchi, 1992. (Junji Kurokawa/AFP/Getty Images)

Foundation in 1996 to help children in the San Francisco Bay Area. According to the website of this foundation (<http://www.alwaysdream.org>), the foundation has raised funds, held events for kids with disabilities, provided computers for an after school mentoring program, and supported summer camps for disabled children.

Yamanaka, Lois-Ann (1961–)

Lois-Ann Yamanaka is considered one of the most prolific and influential local Hawaiian writers today. She has published a collection of poetry, *Saturday Night at the Pahala Theatre* (1993), and is the author of *Wild Meat and the Bully Burgers* (1996), *Blu's Hanging* (1997), *Heads by Harry* (1999), *Name Me Nobody* (2000), *Father of the Four Passages* (2001), *The Heart's Language* (2005), and *Behold the Many* (2006). Yamanaka spent 12 years teaching English, drama, and speech, and currently co-owns Na'au, a writing school for all ages. Presently she is working on a forthcoming book, *Snow Angel, Sand Angel*.

Yamanaka was born in 1961 as a third-generation Japanese Hawaiian in Ho'olchua, Molokai, Hawaii to Harry and Jean Yamanaka. Along with her three sisters, she grew up in the plantation town of Pahala on the Big Island, but also lived in the Hilo, Kau, and Kona districts of Hawaii—towns that often serve as the backdrop to her work. Both of her parents had careers in education, and Yamanaka followed them into the profession, earning her BEd in 1983 and MEd in 1987 from the University of Hawaii at Manoa.

Despite the fact that, like many local Hawaiian writers, Yamanaka incorporates pidgin English into her work, it was not until she took a writing course with Faye Kicknosway at the University of Hawaii that she began to write in her first language. Like most Hawaiian children, Yamanaka was discouraged from using pidgin as she was growing up. As such, she now frequently uses pidgin in her writing to promote the decolonization of language and culture within Hawaii. As Yamanaka says, "I write in the pidgin of the contract workers to the sugar plantations . . . Our language has been labeled the language of ignorant people, substandard, and inappropriate in any form of expression—written or oral" (1993a: 544). Creating cultural works in pidgin thus subverts the colonial notion of pidgin as a substandard and inappropriate language.

In 1993, Yamanaka published her first work, *Saturday Night at the Pahala Theatre*, a collection of pidgin poems that are organized as a four-part novella. The characters within the prose-poetry novella are all

working-class Hawaiian teenagers. Upon its release, the book won numerous awards, including the Pushcart Prize, Elliot Cades Award for Literature, and Association for Asian American Studies Literature Award. She also received several grants from the National Endowment for the Humanities and the Carnegie Foundation. Though the book's reception was initially quite positive, members of the Filipino American Caucus of the Association for Asian American Studies protested against the derogatory and stereotypical portrayal of Filipino Americans in her work, which they considered racist.

Wild Meat and the Bully Burgers, which was published in 1996, is about a young Japanese Hawaiian girl growing up in Hilo, Hawaii during the 1970s amid anti-Japanese sentiments. Stylistically, the novel comprises a series of short narratives and prose poems and explores familial relations and intergenerational conflict. The novel also navigates racial and gendered identity struggles, and grapples with the effects of white dominance and conceptions of beauty, sexuality, and claims to national identity. The heroine, Lovey Nariyoshi, desires *haole* (foreign/white) features such as blonde hair and blue eyes, as well as a white husband so that she might have a *haole* last name. Parts of the novel were eventually adapted into an award-winning film, *Fishbowl* (2005).

The following year, in 1997, Yamanaka published *Blu's Hanging*, which tells the story of Ivah, a young girl who must raise her younger siblings Blu and Maisie by herself after her mother dies. The story documents the children's lives as they grieve over the loss of their mother and struggle with the difficult conditions of extreme poverty in which they live, which exposes them to sexual predators and racist *haole* schoolteachers. Upon publication, the novel's reception was extremely polarized: some critics gave it extremely positive reviews, whereas others lambasted Yamanaka for her depiction of Filipinos as sexually deviant and morally corrupt. When the novel initially won the National Book Award from the Association of Asian American Studies (AAAS), it caused outrage and controversy. A major protest resulted, which included the Filipino American Caucus, local university students and professional scholars, and members of the local community. Though high-profile writers

such as Maxine Hong Kingston, Amy Tan, and Jessica Hagedorn stood in solidarity with Yamanaka in support of her artistic freedom, the AAAS ultimately decided to rescind the award and issue an apology to the Filipino community.

Since that time, Yamanaka has published four more novels and one children's book. *Heads by Harry* tells the life story of Toni, who struggles with growing up in Hawaii with a dysfunctional family while trying to establish a coherent identity in the face of racism and the aftermath of Hawaii's plantation society. *Name Me Nobody*, specifically written for young adults, is about the intersections of sexuality and racism in the life of Emi-Lou Kaya, who is a "nobody" in her small town. *Father of the Four Passages* tells a tale of motherly love in the midst of drug addiction. *Behold the Many* resonates with heartbreak, guilt, and loss. Abandoned by her abusive father and weak-willed mother, Anah is haunted by the vengeful spirits of her sisters, who die after the three of them are sent to an orphanage when they contract tuberculosis in 1913. She struggles to find the power to forgive herself and find happiness.

The Heart's Language, Yamanaka's first foray into children's literature, is a picture book about a disabled boy who is incapable of communicating with other people, but possesses the ability to communicate with nature and animals. He learns the "heart's language" to communicate with those he loves.

As a whole, Yamanaka's work features strong female protagonists and unflinching portraits of dysfunctional families in tragic circumstances. Yamanaka strives to deconstruct the notion of Hawaii as an exotic paradise and redefine what it means to be "Japanese American." She offers complex and sometimes brutal representations of marginalized life in Hawaii while struggling to capture the raw authenticity of local cultural politics and family life.

Yamasaki, Minoru (1912–1986)

Minoru Yamasaki was a Japanese American architect. He is most renowned as the designer of the World Trade Center in New York City, the tallest buildings in the world at the time of their completion in 1976 and were later destroyed as a symbol of American capitalism in the 9/11 terrorist attacks of 2001. Yamasaki melded classical Asian and European forms with modernist, minimalist structures. His signature style included a combination of iconic arches, vertical elements, grand plazas, and fountains. Over his career, though continually battling health problems, Yamasaki designed over 350 residential, commercial, and industrial buildings.

Minoru Yamasaki was born on December 1, 1912, in Seattle, Washington to John Tsunejiro and Hana

Yamasaki. He became interested in architecture when his uncle, Koken Ito, visited en route to a job in Chicago after graduating from the University of California, and showed the family his architecture coursework sketches. Having earned tuition working in Alaskan salmon canneries, Yamasaki pursued studies in architecture at the University of Washington. However, he considered pursuing engineering instead because he struggled creatively and excelled in math and science courses; he was persuaded by a professor who recognized his potential in architecture to stay with it, and he graduated in 1933.

Yamasaki moved to New York to find more opportunities. He hoped there would be less anti-Japanese discrimination on the East Coast, as local racial tensions and international relations between the United States and Japan flared in the 1930s and early 1940s. In doing so, Yamasaki missed the government mandated removal of Japanese Americans from the West Coast and provided refuge for his parents during the war. In New York, he pursued a master's degree in architecture from New York University by taking

Japanese American architect Minoru Yamasaki, designer of the World Trade Center in New York. (AP Photo)

night classes, and worked his way through school wrapping dishes for a Japanese company that was a distributor of Noritake china in the United States.

In 1935, Yamasaki began his professional architectural career with a position at Githens and Keally. From 1936 to 1943, he was in charge of production and checking shop drawings at Shreve, Lam and Harmon, the firm that designed the Empire State Building. He also worked briefly at Harrison, Fouilhoux and Abramowitz, and industrial design firm Raymond Loewy Associates.

In 1941, Minoru Yamasaki married Teruko Hirashiki. They had three children: Carol, Taro, and Kim. The couple divorced in 1961, but reconciled in 1969 after Minoru had been married two more times in the interim.

In 1945, Yamasaki moved to Detroit to join Smith, Hinchman and Grylls as chief designer. He left the firm to establish his own partnership, Yamasaki, Hellmuth and Leinweber, in 1949. Their first major job was the design of the St. Louis Airport, built in 1956. In this period, Yamasaki also designed the American Concrete Institute, the Reynolds Metals Company offices, and the McGregor Memorial Building for Wayne State University, all in Detroit, and the American consulate in Kobe, Japan.

By 1955, Yamasaki had moved to establish his own firm, Yamasaki Associates, in Troy, Michigan. In the 1960s, the firm saw a dramatic increase in business and completed projects that included the Dhahran Air Terminal in Dhahran, Saudi Arabia (1961), the United States Pavilion for the World Agricultural Fair in New Delhi, India (1960), the Queen Emma Gardens in Honolulu, Hawaii, Federal Science Pavilion at the Seattle World's Fair (1962), and the Woodrow Wilson School of Public and International Affairs at Princeton University (1965). The Science Pavilion in particular established what was to become known as Yamasaki's "gothic modernist" style, which included iconic arches, vertical elements, plazas, and fountains.

Yamasaki's most prominent achievement was winning the commission from the Port Authority of New York and New Jersey for the World Trade Center in Manhattan's financial district in 1962. Yamasaki Associates, together with Emory Roth and Sons, had

won out over much larger and more established firms for the project, which was initially projected to cost around \$280 million. At the time, Yamasaki's office had only 55 people on staff, whereas other offices had over 1,000.

Yamasaki's design for the World Trade Center included two 110-story towers, 1,360 feet tall, with office space, a transportation center for railways, a shopping center, and a large plaza. The height of the Twin Towers, the tallest buildings in the world at the time of completion, required engineering innovations to support the weight of the building and withstand the wind. They also included a series of "express" and "local" elevators to minimize space used by elevator shafts in the towers. The otherwise solid and minimalist rectangular towers featured narrow vertical windows and a façade with pointed gothic arches.

Yamasaki interpreted the location, facing the New York Harbor and the Statue of Liberty, as a symbol of the importance of world trade to the country, and to New York City. He considered the World Trade Center design as a physical manifestation of the connection between world trade and world peace. Though initially built to withstand the impact of a 707 jet, the towers fell on September 11, 2001 in the Al Qaeda terrorist attacks, after the impact of the larger jets and fires weakened their infrastructure. Yamasaki, who had passed away in 1986 of cancer, did not live to see the destruction of the World Trade Center.

After the World Trade Center, Yamasaki designed the Century Plaza Towers in Los Angeles (1975), the Rainier Bank Tower in Seattle, Washington (1977), the Eastern Province Institutional Airport (now known as the King Fahd International Airport) in Saudi Arabia (1977), and the Federal Reserve Bank tower in Richmond, Virginia (1978).

Yamashita, Karen Tei (1951–)

Employing magic realism and postmodernist writing strategies and exploring a broad range of issues related to global capitalism, Karen Tei Yamashita stands out as one of the most talented, versatile, and productive Asian American authors. She not only directs Asian American imagination from the traditional East and West division to the increasingly important North and South division, but she also captures the most important social and political problems in the age of globalization—the devastating impact of global capitalism upon the environment and the local communities, migration of human population on a global scale, as well as the widening gap between the First World and the Third World, between the rich and the poor. From *Through the Arch of the Rain Forest* to *Circle K Cycles*, Yamashita engages the different dimensions of global capitalism, experiments with diverse genres and forms, and offers us understandings of our time and globe from a variety of perspectives.

Yamashita was born in Oakland, California, on January 8, 1951, but spent most of her childhood in the Los Angeles metropolitan area. She received her BA in English and Japanese from Carleton College in Minnesota, and studied at Waseda University in Japan as an exchange student during her junior year. As a recipient of the Thomas J. Watson fellowship, Yamashita conducted extensive research on Japanese immigration to Brazil in the city of Sao Paulo and extended her stay in the country from one to nine years. She married Brazilian architect Ronaldo Lopes de Oliveira and started experimenting with creative writing. By the time the family moved to Los Angeles in 1984, Yamashita had tried her hands at diverse genres that include plays, screenplays, poems, and novels.

Yamashita's first novel, *Through the Arch of the Rain Forest*, caught immediate critical attention upon its publication in 1990 and received prestigious awards such as the American Book Award and the Janet Heidinger Kafka Award. Blending magical realism and pop culture, Yamashita creates a cast of strange characters that include a Japanese man with a small ball bouncing around before his forehead, an American executive with three arms, a Brazil man who invented the science of "featherology" to cure diseases and brings them together through global capitalism, which has gradually penetrated Third World countries for natural resources and consumer markets. With the discovery of a plastic landmass that may have extensive usage and application in industry, transnational corporations move in and people start seeing cash rolling in. Before long, they realize that they have destroyed the rain forest and their future livelihood.

In 1992, Yamashita published her second novel, *Brazil-Maru*. Based on her research in Brazil concerning Japanese immigration, this novel offers the perspectives of four main characters and their senses of the rise and fall of the Japanese colony in Brazil in a time span of 70 years. They tell the stories of how the founders of the colony try to blend their Japanese values with those of Christians and experiment with their socialist ideals and communities. The novel ends with the narration of a nephew of a founder of the colony who died when surveying the land for a new colony.

Published in 1997, Yamashita's third novel, *The Tropic of Orange*, deploys magical realism and pop culture and explores diverse characters in the increasingly divided city of Los Angeles. Offering a glimpse of lives across social strata and racial lines in the borderland of Los Angeles, Yamashita not only creates complex characters who vary from the Chinese refugee from Singapore with a Vietnamese name living in Koreatown to the Latin American mythical figure of Archangel, but she also describes the new dimensions of the underworld, which includes organized crime in trafficking in human organs to the homeless conducting music on a highway bridge in the city. She highlights various lines of division between the North and the South, between the First World and the Third World, between the rich and the poor.

In her fourth novel, *Circle K Cycles*, published in 2001, Yamashita changes the setting of her novel from the Americas to East Asia, and explores the issue of how Japanese Brazilians live and work in Japan. In exploring these characters, Yamashita concludes that Japanese Brazilians identify more with the Brazilian culture than with that of their parents' country of origin. Like other Brazilians, they love soccer, music, and leisure.

Working on her new novel concerning the Asian American movement in the late 1960s and early 1970s, Yamashita will continue to redefine Asian American literature and bring our attention to important issues underlying global capitalism. A productive and innovative writer of novels, plays, poems, and essays, Yamashita has already emerged and distinguished herself as one of the most important American authors of the twenty-first century.

Yamato Colony of California

Between 1906 and 1917, Japanese immigrants made three separate efforts to establish intentional settlements in the United States: one in Florida (1904), one in California (1906), and another in Texas (1917). All were named the "Yamato Colony." Of the three, only the colony in California survived.

An examination of the history of California's Yamato Colony provides insight into the impact of prejudice and anti-Japanese legislation on one

community. It gives a view of a people whose tenacity, strategic thinking, and ability to cooperate with one another made it possible to establish themselves and thrive.

Founding (1906–1914)

California's Yamato Colony began as 3,214 acres of undeveloped land south of Sacramento between the cities of Modesto and Merced. The community's founder, Kyutaro Abiko, was an idealist and entrepreneur who believed in America as a land of freedom and opportunity—a place where the Japanese could make major contributions and where they should put down roots.

Abiko was born in 1865 in the village of Suibara, Niigata Prefecture. In 1885, he was able to make his way to San Francisco. After trying his hand at a restaurant and a laundry, he founded a major newspaper (the *Nichibei Shinbun*), the Japanese American Bank (the Nichibei Ginko), and the Japanese American Industrial Corporation (the Nichibei Kangyosha labor contracting firm). At its peak, between 1904 and 1907, Abiko's contracting firm supplied Japanese workers to American mines, farms, and railroads in Wyoming, Idaho, Nevada, California, and Utah (where it had a state-wide monopoly on contracts with sugar beet owners).

In 1906 and 1907, using capital from the bank and labor contracting firm, his personal resources, and money from investors, Abiko, with a handful of colleagues, financed the purchase of three contiguous tracts of empty land near the town of Livingston, California. The area offered several advantages. The Southern Pacific Railroad linked it to major markets in San Francisco and Los Angeles, the land was inexpensive, and prior plantings of vegetables and berries testified to the soil's fertility. The first settlers were truly "pioneers"; however, the colony consisted of empty sand, overrun by thousands of jackrabbits and seared by the desert sun.

Between 1906 and 1908 approximately 32 people moved to the Yamato Colony. As has been the case throughout its history, the community's greatest strength lay in its people. Most of the original settlers could speak some English. Two were fluent and played

important roles as intermediaries with the town. Most were older. Several were upper class and highly educated, including a civil engineer, a college professor of agriculture, a writer, a high school teacher, and two graduates of a farming school. Some who bought land were already wealthy and functioned as both settlers and financial backers of the colony project. About 16 were Christian. Three families, including four women and seven children, brought additional stability to the group.

As anti-Japanese prejudice intensified throughout the West Coast, the new community benefited from several advantages. Given their age, class, education, and in many cases their Christianity, the earliest settlers could not be easily demonized or dismissed by the people of the nearby town. Livingston also had a natural interest in the successful establishment of the farms as a potential boon to the local economy. Equally important, the Japanese adopted a cautious approach. There has never been a Japanese store inside or near the community, and community members have always attributed this to a promise of no competition made by their earliest leaders. Friendly relations were quickly cultivated, notably with the editor of the town's newspaper.

On the land, the colonists survived by endurance, hope, and collaboration. They planted grapes and orchards for the long-term future, stubbornly replanting whenever their crops were eaten by rabbits or buried by sandstorms. In 1908, they formed a Colony Association for discussion of community-wide issues. The organization of a purchasing cooperative for bulk foods was followed by the establishment of a cooperative marketing association, popularly called the *kumiai*. The community hired the *kumiai*'s first manager in 1914 and celebrated the building and opening of a community hall that year.

Establishment (1915–1919)

Despite the strength of anti-Japanese forces in California, the passage of the state's Alien Land Laws, and the Gentlemen's Agreement of 1908, the Yamato Colony took shape as a notably successful settlement, benefiting from a period of national prosperity.

The colony's survival depended upon the ability of would-be settlers to circumvent the Alien Land Laws, which prohibited the Japanese from owning or leasing land. Like Japanese throughout California, many early and later colonists bought land and protected their holdings through corporations created in the names of trusted friends or, increasingly, their own American-born children. Even a partial list of the colony's farm companies rings with poetry and hope: Delicious Fruit, Belle Terre, Eagle, Lucky, Mercy, Grace, Paradise, Peace, Sunnyside, Truth.

Marriage became another issue as the colony's crops reached maturity and provided means enough for workers to buy their own land and to marry. Again like many of their countrymen, the colony settlers found a way around government restrictions. In Japan, marriage is accomplished when a woman's name is added to the registry listing of the man's family. Once the men settled on their own farms in the Colony, they found brides, some by returning home and others by *shashin kekkon* (with the help of intermediaries, an exchange of photographs and family information that led to an arranged marriage finalized in Japan).

As Abiko had hoped, the colony gave the Japanese settlers roots. Reconstructing the population growth between 1915 and 1919, old timers later remembered the arrivals of 15 brides and the start of 16 new farms (7 in the contiguous colony of Cressey, which had been bought by Abiko and his associates in 1918).

A more complex community developed as the colony's population expanded and its farms reached full production. In 1916, with more fruits than it could sell in the San Francisco area, the colony's *kumiai* joined the California Fruit Exchange, a statewide cooperative with access to national markets. At about that time, the organization legally incorporated as the Livingston Cooperative Society and built a \$10,000 packing shed by the railroad tracks in town.

New organizations emerged. In 1917, 46 community members officially founded the Livingston Church of Christ. That year, the settlers dragged the old colony hall to 10 acres they purchased in the heart of the colony. Through donations, they built a modern parsonage, expanded the hall, and hired a minister, probably through the Methodist Conference. Church

groups and programs took stronger shape, and in 1918, the Colony Association and church created the area's first kindergarten. A white woman, hired to prepare the Japanese children for grade school, offered English and religious instruction and taught the children the Pledge of Allegiance and patriotic songs.

Maturity (1920–1940)

During the 1920s, anti-Japanese prejudice intensified. California passed two more alien land laws, Japan stopped issuing passports to picture brides, and in 1924 a national exclusion act halted any further immigration from Japan. The colony offered Issei and Nisei a haven, but external prejudice and the stress of the Depression affected every individual, every farm, and the community as a whole.

As recalled by Issei elders, between 1920 and 1922, approximately 23 families and couples moved to the Yamato Colony or to land next door in Cressey. Somewhere around that time, almost 10 men also found brides. Reacting to the population growth and influenced by anti-Japanese agitation in nearby towns, Livingston's Farm Center and Board of Trade endorsed an anti-Japanese resolution drafted by the newly formed California Exclusion League, calling, among other measures, for the removal of citizenship from American-born children. In 1920, for several months, two signs on the highway at either side of town proclaimed "No More Japanese Wanted Here."

Anti-Japanese sentiment among people in the town was far from universal. The colonists still had some allies and friends, but life changed. The vast majority of the colony's children grew up aware of anti-Japanese feelings in the town. Though they participated in high school sports teams and the boys joined the Boy Scouts, interracial dating was unthinkable and visits to the homes of white school friends happened rarely, if ever. The children of the earliest settlers had experienced no apparent barriers to relationships with their high school classmates. They left the community for college, but several returned home after graduation, forced back by prejudice and the bad economy of the Depression.

The mature Yamato Colony was far too complex to be described as "a family," a term often used by

the original settlers to indicate the intimacy of the early settlement. Years later, entering a community known as a Christian one, non-Christian settlers had to adjust. Informal separations emerged as people drew nearer to those who had come to the United States from their own prefectures. Financial pressures intensified the differences between larger, more established settlers and those who had come later, buying smaller plots and facing a bad economy that made it difficult for them to establish themselves. Probably reflecting these strains, in 1927 the *kumiai* divided into two separate organizations: the Livingston Fruit Exchange (dominated by members of the original *kumiai*) and the Livingston Fruit Growers Association.

Like any other community, the colony was no utopia, but it offered a rich life to all its members. The church served as a social center for men and women, young and old. In 1934, the colonists built a church social hall, which was used for Japanese language lessons, classes for *kendo* (a martial art), and occasional Japanese movies. Tennis courts were installed and open land made available for baseball games. Looking back, the Nisei remember growing up in what they describe as a haven.

War (1941–1945)

The bombing of Pearl Harbor and the "evacuation" of all Japanese Americans from the West Coast could have ended the Yamato Colony. Instead, utilizing friendships, business connections, and the strength of their cooperatives, the colonists were able to maintain ownership of all but a few farms, and the community regrouped after the war.

Like all other Japanese Americans throughout the West Coast, those in the Livingston area had little time to prepare for the evacuation. The final order for imprisonment was given on April 30, 1942, setting a deadline of May 13 for incarceration. In less than two weeks, workers put up an "assembly center" on the Merced County Fair Grounds. Intended for approximately 4,500 people—all the Japanese Americans in seven counties—the site was to include the Issei and Nisei of the Yamato Colony, their neighbors in Cressey, and those from nearby Cortez, a third colony opened by Abiko and his colleagues in 1919.

Preparing to leave, the families from all three colonies were confronted with the immediate need to arrange for the harvest of thousands of acres of fruit. They also had to find someone who could be trusted to manage the farms during their absence. The decision to define these as community problems proved critical. Members of the two *kumiai* from the Yamato and Cressey colonies, and the *kumiai* in Cortez, met to discuss options. Because of their fluency in English and their status as citizens, older Nisei took the lead. Ultimately, they made it possible for *kumiai* members to place their lands under the care of a joint trusteeship of three: a local lawyer and one representative each from the California Fruit Exchange and the Pacific Fruit Exchange (statewide marketing groups to which the *kumiais* belonged). The combined acreage and income from the three colonies enabled the group to hire G. A. Momberg, a manager who had handled foreclosed land for the Bank of America. With a legally binding agreement and trusted allies in key positions as advisors, trustees, and, in one case, as an employee, the farmers had done all they could to protect their interests. All but a few of the families in the Yamato, Cressey, and Cortez colonies chose to place their land under the joint trusteeship.

On May 13, 1942, the Issei, Nisei, and a handful of children born to Nisei couples entered the Merced Assembly Center under armed guard. Three months later, they were moved to the Amache Relocation Camp in Granada, Colorado. From there, the young people of the community dispersed. Some found jobs outside the camp. The National Japanese American Student Relocation Council, a group spearheaded by the Quakers, advocated for the Nisei and helped many of them enroll in colleges and universities far from the West Coast. Over two-thirds of the community's draft-age men served in the military, either as members of the 442nd combat team or in the Military Intelligence Service. Three young Nisei from the community lost their lives on battlefields in Europe.

When the exclusion orders were revoked on January 2, 1945, the Japanese Americans whose land had been managed by Momberg had the option to return to California. Care of the ranches varied according to individual renters, but none of the trust's farms were lost. Reentry was not easy, but in spite of open

hostility, shunning, and, in several cases, drive-by shootings, many chose to return.

The Nisei/Sansei Era

The community that reassembled following the war was smaller, but it again grew strong. The elderly Issei retired, and under the care of their Nisei children, the farms flourished. In 1957, the two *kumiai* merged to form the Livingston Farmers Association (LFA). Expansion became possible, and between 1958 and 1959, the group modernized its town packing shed, put up an almond shelling plant, constructed a new office building, and began constructing space for cold storage.

The church again became the center of community life. A new chapel was dedicated in 1950, and the church was renamed Grace Methodist. Though Issei, Nisei, and the Nisei's Sansei children met regularly with their contemporaries and worshipped in their own languages, services and events drew all three generations together. With time, the number of Issei decreased, and in 1968, the colony and town churches merged. Unified worship continued in the colony church.

By the 1960s and 1970s, the Colony had fulfilled its founder's dream. It provided the base for a good life rooted in America, and it served as a springboard for opportunities far beyond its borders, particularly for the community's Sansei children, who entered a world in which all professions were open to them and interracial relationships and marriages were possible.

Afterword (the Colony Today)

Changes in agriculture and the economy have made life challenging for anyone who wants to sustain a family on a small farm. Nonetheless, the community once known as the Yamato Colony still exists with surprising strength today. Though the majority of Nisei have died or moved away, 22 Nisei households may be found in or near the Colony. Eleven Sansei children have returned home, nine of whom are running the family farms (either themselves or through a spouse). The *kumiai* (still the Livingston Farmers Association) handles over \$6 million in business and includes a few of the original Nisei among its members.

The city of Livingston has encroached on the family farms, but the Colony exerts a powerful hold on the hearts of its members, many of whom now live thousands of miles away. In 2007, advised by a small group of Nisei, a committee of Sansei planned a two-day celebration honoring the 100th anniversary of the Colony's founding. This drew more than 500 people, some of whom traveled from the East Coast and Japan. A committee of Nisei and Sansei also created and in 2010 dedicated a memorial on the Merced Fairgrounds to recognize and warn against the kind of hatred that led to the community's imprisonment during the war.

Year in and year out, the church still unifies the community. Nisei and Sansei gather annually for a church fundraiser that has roots in the Japanese celebration of the New Year. Working together, they steam, pound, and form five hundred pounds of sweet rice into the *mochi* that is traditionally eaten on New Year's Day. Sansei parents are also drawn back to the community every summer from far distances for *Tomodachi Gakko*, a one-week program introducing their children to the songs, language, and crafts of Japan.

During its height, the Yamato Colony robustly nurtured three generations of Japanese Americans and, later, the children of the small number of Sansei who returned to the farms. It is a community treasured by those who trace their roots there.

Yamauchi, Wakako (1924–)

Born in the Imperial Valley of Southern California to Issei parents, the Nakamuras, Wakako Yamauchi could rightly be described as the “matriarch” of Asian American theater. The road to playwriting did not come automatically to her. She started writing prose in her 30s. Her literary background lay in reading *The Book of Knowledge* her father purchased, plus pouring over newspapers and magazines. As a young girl growing up in the vastness of the Imperial Valley, Yamauchi listened to the stories of her mother, which proved to be an invaluable source for her writing. These were pastoral tales of loyalty, tragedy, and love. The other inspiration came from the set of *The Book of Knowledge* that her father had purchased from a traveling salesman. These sources, plus pouring over newspapers and magazines, served to establish a lasting love of writing and literature. However, the alien land laws of that period made it mandatory that the family move on every few years. One can sense the theme of constant shifting and dislocation of family life in the works of Yamauchi. In the wake of World War II, the Nakamuras were interned in Poston, Arizona where Yamauchi got to meet the Japanese American writer Hisaye Yamamoto. Her interest in books plus a talent for painting soon had her working for the camp's *Poston Chronicle*.

The initial attempt at writing by Yamauchi was in the form of prose. It was a short story, *And the Soul Shall Dance* (1966), which was first picked up by the Japanese American periodical, *Los Angeles Rafu Shimpu*. In 1973, the editors of *Aiiieeeee* (Frank Chin, Lawson Inada, Shawn Wong, and Jeffery Paul Chan) published the story in an anthology that came to the attention of Mako Iwamatsu, then artistic director of the East West Players. He encouraged Yamauchi

to adapt the short story into a play. A Rockefeller Foundation grant was awarded Yamauchi, and in 1976 the story was turned into a play. “I was sort of pushed into playwriting” says Yamauchi.

Converting prose to drama was in itself a daunting task. Dialogue had to be added and this meant a creation of a different kind of poetry. Yamauchi is of the opinion that her writing has a sense of the Japanese *enryo* or self-restraint. Say less, be simple. She feels she is more “earthy” in her writings as compared to the intellectual acumen of her friend Hisaye Yamamoto: “Every story reflects its economic and political times. Nothing is in a vacuum.”

And the Soul Shall Dance won the Los Angeles Drama Critics Circle Award for best new play of 1977. The following year it was shown as a television film on PBS and was repeated on the Arts and Entertainment Channel in 1987. Intergenerational bonding and collective action versus individual self-interest form the basis of Yamauchi’s work. She is firmly of the opinion that “Every story reflects its economic and political times. Nothing is in a vacuum. I simply felt the need to put down a few footprints of our sojourn here.”

This play was followed by *12-1-A* (1982), which like *Soul* addressed the issues of economics, power, racism, and the new specter of war. The characters were simple but not of simple minds. The society and politics of the time were vividly captured by the playwright. This is also very evident in *The Music Lessons* (1980) (based on her short story *In Heaven and Earth*), which preceded *12-1-A* and again addressed the issues of being a woman and growing up in the harshness of the Imperial Valley. Yamauchi’s next effort was a departure in theme. *The Chairman’s Wife* (1990) focused on a public figure; in this case the wife of Chairman Mao. But here again the woman in question is faced with the challenges posed by power.

Yamauchi did return to prose with the seminal *Songs My Mother Taught Me* (1994), a looking back at a writing career spanning over four decades. Her simple, lyrical plot structures were a testament to her growing up during the Great Depression. As she herself stated, “We are a tribe of wanderers remembering a garden we’d left or looking for an Eden that waits.”

Yamauchi’s writings seem to follow a timeline of Japanese American history, early immigration and rural settlement, World War II and the camps, and postwar readjustment.

The East West Players and The Mark Taper Forum have staged readings of Yamauchi’s *Shirley Temple*, *Hotcha-Cha* and *Songs That Made the Hit Parade*. The East West Players have also premiered one-act plays, *A Fine Day*, *The Trip*, and *Stereoscope*. Yamauchi has won the American Theater Critics Regional Award for Outstanding Play (1977) and two Rockefeller Foundation playwriting fellowships (1979, 1985).

In October 2010, the University of Hawaii Press published *Rosebud and Other Stories*, a collection of short stories by Yamauchi. Commenting on the book, Professor Paul Spickard of the University of California, Santa Barbara, wrote: “It is not often that we get to hear a voice of an older Asian American woman in fiction, and that voice is richly present here in stories that celebrate change, memory, relationships, things that are lost . . . and kept.”

Yang, Chen Ning (1922–)

Chen Ning Yang is one of the leading theoretical physicists in the world and an influential leader in the Chinese American scientific community. Sharing the Nobel Prize in Physics for 1957, he has played a key role in facilitating U.S.-China scientific and educational exchanges and in promoting basic scientific research and education in mainland China, Taiwan, Hong Kong, and the rest of Asia.

Chinese American Nobel Laureate Chen Ning Yang with Richard Feynman in 1955. (SSPL/Getty Images)

Chen Ning Yang was born on October 1, 1922, in Hefei, Anhui, China. His mother, Luo Menghua, taught him to read, and his father, Yang Wuzhi, received a PhD in mathematics from the University of Chicago and became a professor, eventually at the prestigious Qinghua (Tsinghua) University in Beijing, where the family moved in 1929. Yang excelled in school but his sheltered environment collapsed when the Japanese invaded China in the mid-1930s and his family joined the refugees eventually to Kunming in Southwest China.

In 1938, Yang enrolled in the Southwestern Associated University in Kunming, which combined the three most prestigious Chinese universities (Beijing, Qinghua, and Nankai). Yang at first majored in chemistry but soon switched to theoretical physics, finishing with a bachelor's in 1942 and a master's degree in 1944, impressing his professors with his talent in using

mathematics to solve physics problems. After teaching in a middle school in Kunming for a year, Yang won a Boxer fellowship, which enabled him to follow in his father's footsteps to the United States to pursue a PhD at the University of Chicago, where he gave himself the English name "Frank" in honor of Benjamin Franklin. He initially worked on experimental physics under the eminent Italian American physicist Enrico Fermi, but in the end proved to himself and others that it was not his cup of tea. "Where there is a bang, there is Yang," his friends joked. He returned to theoretical physics but remained in close touch with experiments. He collaborated with Tsung-Dao Lee, a fellow student from Southwest, on a paper on the so-called "weak interactions" among subatomic particles. Both of them also took classes with the Indian American astrophysicist Subrahmanyan Chandrasekhar on Chicago's faculty. In 1948, Yang finished a theoretical paper on

nuclear reactions under the supervision of the Hungarian American physicist Edward Teller and received his PhD.

Yang stayed on for another year at Chicago as a physics instructor before moving to the Institute for Advanced Studies at Princeton where he married Du Zhili, one of his former students from Kunming in 1950, and gained the prestigious status of a “Permanent Member” of the institute in 1954. That same year, Yang spent the summer visiting the Brookhaven National Laboratory on Long Island where he devised, with a graduate student Robert Mills, the so-called Yang-Mills gauge field theory to describe patterns of interactions between elementary particles. It has since become one of the most fundamental theories in physics with far-reaching impact even in mathematics. In fact, Yang would later recognize that the mathematical framework of his theory is the so-called theory of connections on fiber bundles, an area pioneered by the Chinese American mathematician Shiing-Shen Chern, Yang’s former teacher and lifelong friend.

Yang’s best-known work on the breakdown of left-right parity in the microcosm derived from his renewed collaboration with T. D. Lee in the 1950s. In 1956, the two studied the problem of theta and tau, two so-called “strange particles” that shared everything except for their decay patterns, which puzzled physicists. There was one solution to the problem, but it would lead to a violation of parity conservation. In physics, when a physical system and its mirror image behave identically and follow the same laws, it is said that parity was conserved. In all of physics up to that point, it was widely believed that all processes in nature obeyed this law of parity conservation.

Yang and Lee, however, decided to check whether parity conservation was ever explicitly tested in a relatively new process in physics—weak interactions that governed how a particle from an atomic nucleus decayed into others. To their surprise, they found that parity conservation had never been experimentally established for weak interactions as for the other three fundamental forces in nature: the electromagnetic, gravitational, and strong interactions. They published a paper entitled “Question of parity nonconservation in weak interactions,” suggesting that parity conservation was violated in weak interactions and proposed

several experiments to test their hypothesis. Against widespread skepticism, Chien Shiung Wu, Lee’s Chinese American colleague at Columbia, conducted an experiment with scientists at the National Bureau of Standards in Washington, D.C., and proved Yang and Lee to be right. The news electrified the world of physics as a fundamental law of physics was overturned. Yang and Lee received the Nobel Prize in Physics in 1957 “for their penetrating investigation of the so-called parity laws which has led to important discoveries regarding the elementary particles.”

Lee and Yang continued their fruitful collaboration when Lee visited Princeton in the early 1960s. In 1962, however, personal friction developed and their collaboration stopped, partly over a dispute about credit for their famous discovery. In 1966, Yang accepted an invitation to become the Albert Einstein Professor and the founding director of an Institute of Theoretical Physics at the new State University of New York at Stony Brook. His work in this period led to the so-called Yang-Baxter equation with widespread applications and growing importance in both physics and mathematics.

In 1971, Yang became one of the first Chinese American scientists to visit the People’s Republic of China. Yang felt strongly about the need to modernize his country of origin and sought to help revitalize Chinese science and technology partly by re-establishing U.S.-China scientific exchanges. He pushed for reforms in science and education policy when he met with Zhou Enlai, the Chinese premier, during his 1971 trip, and with Mao Zedong, the Chinese communist leader, in 1972. In the United States, he became a prominent voice in promoting U.S.-China reopening of relations. In 1977, he became president of the National Association of Chinese Americans and pushed for the reestablishment of U.S.-PRC diplomatic relations, which finally took place in 1979. Traveling frequently to mainland China, Taiwan, and Hong Kong, Yang became an influential advisor to policy-makers and a popular lecturer on science and culture in the greater China. He retired from SUNY in 1999, and in 2003, after the death of his wife, moved to Qinghua in Beijing where he works as a professor and lives in a special residence built for him by the university with his second wife, Weng Fan, whom he married in 2004.

Yang, Henry T.

Henry T. Yang is the fifth and current chancellor of the University of California, Santa Barbara. He has held the chancellorship since joining the university in 1994. A professor of mechanical engineering, Yang continues to teach an annual undergraduate engineering course, and guides several graduate students at UC Santa Barbara.

Born in Taiwan, Yang received a BS degree in civil engineering from the National Taiwan University. He received a master's degree in structural engineering from West Virginia University before completing his doctorate in the same field at Cornell University.

Yang formerly held the Neil A. Armstrong Distinguished Professorship of Aeronautics and Astronautics at Purdue University. When at Purdue, Yang also served as dean of engineering, a post he held for 10 years, as well as director of the university's Computer Integrated Design, Manufacturing, and Automation Center.

A widely published authority in the field of structural engineering, Yang has authored or coauthored over 170 articles in scientific journals. He is regarded as an expert in numerous subjects, including aerospace

structures, structural dynamics, transonic aeroelasticity, wind and earthquake structural engineering, intelligent manufacturing systems, and finite elements, having authored a commonly used textbook on the last subject. He has garnered numerous awards and accolades over the course of his academic career, including five honorary doctorates, the Benjamin G. Lamme Medal from the American Institute of Electrical Engineers, as well as the Structures, Structural Dynamics, and Materials Award from the American Institute of Aeronautics and Astronautics.

In addition to his academic career, Yang has also served in a number of advisory capacities, consulting for the United States Department of Defense, the Air Force, the Navy, the National Aeronautics and Space Administration (NASA), and the National Science Foundation (NSF). In 2009, he became one of 14 appointees to the President's Committee of the National Medal of Science, an award bestowed by the NSF. Yang is also a member of the board of the Kavli Foundation, which promotes the advancement of science, especially in the fields of astrophysics, nanoscience, and neuroscience. The Kavli Foundation has a close relationship with UC Santa Barbara, having established two professorships as well as the famed Kavli Institute for Theoretical Physics on the campus.

During Yang's tenure as chancellor, UC Santa Barbara has advanced its standing as a major research university. In 1995, shortly after Yang accepted a position at UC Santa Barbara, it was invited to join the Association of American Universities, an organization of 63 leading research universities in the United States and Canada. Five UC Santa Barbara faculty members have won Nobel Prizes during Yang's chancellorship.

In 2007, Yang was awarded an honorary distinguished teaching award by UC Santa Barbara's Academic Senate. In 2009, he succeeded Princeton University president Shirley Tilghman as the chair of the Association of American Universities.

As chancellor, Yang has advocated for keeping UC Santa Barbara accessible and affordable for all students. In 2010, he supported the University of California's Blue and Gold Plan, which ensures that students with annual family incomes below \$70,000 pay no fees or tuition to the university. During the same year, UC Santa Barbara received a record

number of freshman applicants, as well as an increase of nearly 40 percent over two years in the number of transfer applicants. Yang has also been noted for his commitment to improving the overall health and safety of UC Santa Barbara students through drug and alcohol education.

During his chancellorship, Yang has faced significant cuts to the university's funds as part of statewide budget deficits. In 2009, he was criticized by students for his perceived inaction against diminishing budgets and rising student costs. However, during his tenure, UC Santa Barbara has experienced record sums of donations from private sources. In 2010, the amount of charitable contributions to the university exceeded \$40 million, the highest in its history. The overall campaign, launched by Yang in 2000, surpassed the expected target of \$500 million by nearly 10 percent. In 2009, UC Santa Barbara completed construction on a \$101 million facility funded largely by private donations. The building will house the Gevirtz Graduate School of Education, as well as UC Santa Barbara's communication, film and media studies, global studies, and sociology departments.

Yang and his wife, Diling, are fixtures on UC Santa Barbara's campus and often interact with students both on campus and in Isla Vista, California, the adjacent student community. The two are known to tour Isla Vista on Halloween, traditionally a night of extreme revelry in the community. In 2001, both were named honorary alumni of UC Santa Barbara.

Yang, Qing (Yong Seen Sarng) (1811–1882)

Yang Qing, an early Chinese sojourner in Virginia and the American South in 1846 and 1847, became the first Chinese Baptist evangelist, ministering in Shanghai from 1847 and Guangzhou from 1851. One of the

earliest portraited Asians in America, a participant of the Southern Baptist Convention meeting in Richmond in June 1846, a missionary supported by the First Baptist Church of Richmond, Virginia, and participant in a fund-raising tour of American southern states, Yang is the best documented of the early Asian American sojourners.

Yang was born in 1811 in Shan Country, Guangdong, China. At an early age he relocated to Macau. Virginians Jehu Lewis Shuck (1812–1863) and Henrietta Hall Shuck (1817–1844), the first Baptist missionaries to China, entered Macau September 17, 1836. In 1838 Shuck engaged Yang as his Chinese language teacher in Macau. The Shucks moved to Hong Kong on March 19, 1842. They started two churches and a small school. By the beginning of 1844, Yang was one three Chinese assistants of the mission. Yang was baptized by Shuck on September 1, 1844. Shuck and Yang were engaged in Guangzhou in early April 1845.

In October 1845, Rev. Shuck left Guangzhou to take three of his children back to the United States, accompanied by Yang and a Chinese nursemaid, Mecha (1832–). The Tonquin arrived in New York, February 17, 1846. In March 1846 Shuck and Qing attended the monthly meeting of Moraticco Baptist Church, Kilmarnock, Virginia, where Shuck's father-in-law was copastor. The Female Missionary Society of the First Baptist Church, Richmond, agreed to pay Yang's salary and expenses, and in the same month Yang was appointed an evangelist by the Foreign Mission Board of the Southern Baptist Convention. On April 16, Shuck and Yang began to canvass funds to build a chapel in Guangzhou. They visited Middlesex County, Petersburg and Charlottesville, Virginia; Washington, D.C., and Baltimore, Maryland. In a May 1846 meeting of the Foreign Mission Board along with two others, Yang was appointed as a native missionary at a salary of \$150 per annum. On May 19, 1846, Shuck and Yong attended the meeting of the Boston Foreign Mission Board of the Triennial Baptist Convention, which now represented Northern Baptists only. Both Yang and Shuck then attended the second meeting of the Southern Baptist Convention held in Richmond, Virginia, June 11, 1846. When in Richmond a portrait of Yang in traditional Chinese attire

was executed and still hangs at the Virginia Baptist Historical Society at the University of Richmond.

In June and July 1846 Shuck and Yang then toured Raleigh and Fayetteville, North Carolina; Cheraw, Society Hill, Camden, Columbia and Charleston, South Carolina; Savannah, Georgia; and Marion, Alabama. They then traveled to Columbia, Mississippi and arrived in Nashville, Tennessee on August 21 before visiting Enon and Murfreesboro, Tennessee and St. Louis, Missouri. On October 14, 1846, Shuck was married to Eliza G. Sexton (1824–1851) a teacher at Judson Female Institute, in Marion, Alabama.

Mecha was baptized December 6, 1846 at Indian Creek, Kilmarnock, Virginia. In the December 1846 meeting of the Foreign Mission Board, a decision was made to begin a mission in Shanghai and to reassign Shuck and Yang to this new mission. On December 18, 1846, Yang and four Americans, J. L. Shuck, T. Tobey, M. T. Yates and J. S. James and their wives were designated as missionaries to Shanghai, China at a service held at the First Baptist Church, Richmond. On March 11, 1847 the Rev. and Mrs. Shuck, Shuck's daughter Henrietta, Mecha and Yang, along with the Tobey's and Francis C. Johnson set sail from Boston aboard the *Ashburton*. They arrived in Hong Kong July 25. There they were delayed so that Mrs. Shuck could deliver a son on August 20, and Yang made a brief visit to Guangzhou. The Shucks, Mecha and Yang arrived in Shanghai October 27, 1847. Yang was engaged in preaching and tract translation and distribution.

In March 1851 Yang transferred to Guangzhou, where he served as an agent of the Southern Baptist mission for the remainder of his life. When he was pastor of Dongshijiao Baptist Church, Guangzhou the church grew to a membership of 190 members. He continued to be supported by the Ladies' Missionary Society of First Baptist Church, Richmond, Virginia, until his death, December 26, 1882. His son was executed by the Qing government and became a martyr of the Republican revolutionary cause.

Yao Ming (1980–)

At 7' 6" tall, Yao Ming, who signed to play with the Houston Rockets basketball team as a rookie in 2002, towered over most professional players in the National Basketball Association (NBA) of the United States and played for the Chinese Basketball Association (CBA); he was also an international basketball sensation and a transnational basketball athlete.

Born on September 12, 1980, in Shanghai, China, Yao is the only child of Yao Zhiyuan and Fang Fengdi, both basketball players in Shanghai. Significantly taller than his peers, playing basketball seemed a destiny and a gift for Yao; however, as a child he had other dreams. He was initially coached by his parents when he was nine. At the age of 12, Yao entered Shanghai Sports School to be trained as a professional basketball player. In 1994 when he was 14 years old, Yao emerged as the center of the Shanghai Youth Basketball Team. During the 1997–1998 season of the Chinese Basketball Association (CBA), the 17-years-old Yao played for the Shanghai Sharks, a club team sponsored by private enterprises. His unusual height and popularity in China was quickly noticed by the Nike Company of America.

Invited by Nike to attend a summer basketball camp in Paris in 1997, Yao impressed NBA players and executives. Later he attended the Nike All-American camp in the United States along with 200 other NBA prospects and became one of the camp's top centers. In 1999, Yao was added to the Chinese National Men's Basketball Team. Yao and his

teammates beat other Asian men's basketball teams to qualify for the 2000 Summer Olympics in Sydney, Australia. Yao's outstanding performance in domestic and international championships between 2000 and 2002 gained him tremendous fame in China. His Chinese fans nicknamed Yao "Little Giant."

When Yao reached 22, the legal age to play in NBA, he was immediately considered as a top pro prospect. In the 2002 NBA draft, Yao created an international media sensation as the number one overall draft pick by the Houston Rockets and signed a four-year contract with them for \$17.8 million. During the 2002–2003 season, Yao helped the Rockets to win some significant games against the top NBA teams. His high level of performance won him a large number of fans in both the United States and Asia. He was voted by the fans as the starting center for the NBA All-Star Game. Meanwhile, Yao played for China during the off-season and led the China Men's Basketball Team to the 2004 Summer Olympics in Athens, Greece.

With his global fame, a good sense of humor, and a very likable personality, Yao quickly became a favorite of the media. In 2004 he was the subject of a documentary film, *The Year of the Yao*, and he cowrote an autobiography titled *Yao: A Life in Two Worlds*. He was a global marketing poster man for the NBA and business corporations, and starred in commercials for Nike, Apple Computer, VISA Card, Pepsi, McDonald's, and many other large enterprises. Incomes from the NBA and endorsements made him one of the richest Chinese in the world.

After 2005, because of frequent foot injuries, Yao Ming missed many games during the NBA season, but he remained a favorite athlete among NBA fans. The voters selected him to attend the 2006 All-Star Game. In his six seasons in the NBA, Yao was voted by the fans into the All-Star Team six times and the All-NBA Team four times. With the 2008 Olympics taking place in Beijing, Yao returned to China as expected by Chinese fans to represent the Chinese national basketball team in the event.

Off the basketball court, Yao was involved in many charity activities in both China and the United States. He has been in the NBA's Basketball without Border program since he joined in the NBA. In 2003

he hosted a multinational telethon to raise money for battling SARS. In June 2008 Yao created "The Yao Ming Foundation" to raise funds supporting children's wellness and welfare courses; its initial effort was to raise funds for rebuilding schools destroyed by a massive earthquake that happened on May 12, 2008, in China's Sichuan and Gansu provinces. Yao pledged \$2 million to this fund. When areas of Galveston and Houston, Texas, were hit by Hurricane Ike in the fall of 2008, the foundation supported nonprofit organizations in their reconstruction efforts. Yao and his NBA teammates also launched several charity basketball games in China.

In the summer of 2007, Yao was married to Ye Li, a female basketball player in Shanghai, China. They had a baby girl on May 22, 2010.

In his final six seasons, however, Yao missed 250 regular games due to injuries. On July 20, 2011, Yao announced his retirement from Basketball.

Yasui v. United States (1943)

The appeal of Minoru Yasui, a Nisei attorney convicted after challenging discriminatory race-based government orders against Japanese Americans, was one of the Japanese internment cases heard by the U.S. Supreme Court during World War II.

Minoru Yasui was born in 1916, the eldest son of a prosperous farmer in Hood River, Oregon. Yasui received his law degree at the University of Oregon (where he also underwent military training and received a lieutenant's commission in the Army Reserve). After being accepted to the bar, he was

Japanese American lawyer Minoru Yasui at the detention camp in Topaz, Utah, where he was held during World War II. (Carl Iwasaki/Time Life Pictures/Getty Images)

unable to secure work in Oregon, and instead took a job as an attaché with the Japanese consulate in Chicago. He meanwhile organized a Boy Scout troop among local Nisei. In days following the Pearl Harbor attack, the Japanese consulate closed its doors. Yasui rejoined the Army, but was discharged on racial grounds within a few days. Meanwhile, his father was arrested as a potentially dangerous enemy alien and interned in Missoula, Montana (where he remained until 1945). Yasui was outraged by Executive Order 9066. On March 28, 1942, when a special curfew imposed on all people of Japanese ancestry by West Coast Defense commander General John DeWitt went into effect, Yasui decided to bring a test case to challenge its constitutionality. After arranging with a local attorney, Earl Bernard, to defend him, he ostentatiously walked the streets after curfew to draw an arrest. When nobody stopped him, he went to a police

station and demanded to be charged so that he could bring his test case.

Because Yasui and his attorney sought to challenge the constitutionality of Executive Order 9066 and its enforcing statutes broadly, they were denied assistance by the American Civil Liberties Union, whose national board declared the order constitutional and sanctioned only challenges to its exclusive application to Japanese Americans. Furthermore, once Yasui's case was brought, the plaintiff and his attorney became enmeshed in legal and strategic disputes with the Japanese American Citizens League (JACL). Although Yasui had been associated with the JACL before the war, the organization had resolved on a policy of full cooperation with the government. As a result, the national JACL announced its opposition to test cases to determine the constitutionality of military regulations and refused Yasui its moral or financial support, denouncing him publicly as a "self-styled martyr." (The JACL's policy of nonassistance persisted until early 1943, when the Yasui case, and that of his fellow Nisei Gordon Hirabayashi, went before the Supreme Court.)

Yasui's case was argued before Judge James A. Fee at the federal courthouse in Portland, Oregon on June 12, 1942. Fee had recruited a set of the city's leading lawyers as "friends of the court" to advise whether General DeWitt's curfew against Nisei violated the rights of American citizens, but also if Yasui had forfeited his American citizenship through his employment with the Japanese consulate. The federal government's legal team, led by U.S. Attorney Carl Donaugh, was handicapped by the fact that it could produce no evidence of disloyal conduct by Yasui (or any other Nisei). Instead, the government's brief argued that on the basis of their racial characteristics, all people of Japanese ancestry could be assumed to pose a threat to national security. Donaugh also attempted to introduce witnesses at trial to testify to the allegedly hostile and dangerous nature of ethnic Japanese, but Judge Fee sustained Bernard's objection that such an argument was irrelevant. Conversely, Fee himself interrogated Yasui in court about his supposed attachment to Japan.

Judge Fee did not release his ruling in the case until November 1942. Most of his opinion was

devoted to his finding that the application of a curfew to Nisei violated their citizenship rights as Americans. However, Fee ruled that Yasui had given up his American citizenship through his prewar employment with the Japanese consulate and found that the curfew was thus enforceable against him as an enemy alien. One possible inference for this curious ruling is that it provided Judge Fee a way to express his opposition to the government's arbitrary conduct without actually providing a precedent for interfering with military orders. In any case, Fee sentenced Yasui to a year in prison, a \$5,000 fine, and loss of his U.S. citizenship. (Yasui ultimately spent nine months in prison at the Multnomah County jail.)

The case was quickly brought up for appeal to the 9th Circuit Court of Appeals, alongside those of Gordon Hirabayashi and Fred Korematsu. The Yasui case was argued in February 1943. Earl Bernard argued in support of Judge Fee's position that the curfew violated the citizenship rights of Nisei and only contested the assertion that Yasui had forfeited his citizenship by working for the Japanese consulate. Edward Ennis, representing the government, conceded that Yasui had not renounced his American citizenship, but argued again that the curfew was constitutional under the government's war powers. In view of the importance of the questions involved, the 9th Circuit declined to rule on the cases of Yasui and his fellow defendants and instead certified for the Supreme Court the essential question of whether DeWitt's curfew and registration orders represented a constitutional exercise of the war powers of the president. In late March 1943, the United States Supreme Court agreed to hear the Yasui and Hirabayashi cases.

As the two sides prepared their briefs, government officials engaged in widespread manipulation of evidence, particularly in regard to the justification for Executive Order 9066. Although General DeWitt had ordered mass removal because it was allegedly impossible to determine or trust the loyalty of individuals of Japanese ancestry, in their court arguments Justice Department lawyers adopted the more defensible stance that there was simply not sufficient time to make any such determination in the emergency situation on the West Coast during the spring of 1942. In April 1943, General DeWitt sent Assistant Secretary

of War John J. McCloy, the chief official on mass removal, a copy of the Final Report he had prepared on "Japanese evacuation." There DeWitt repeated that ethnic Japanese were untrustworthy on racial grounds and that lack of time had not been a factor in his decision. McCloy ordered DeWitt to recall and destroy all copies of the Final Report and then to rewrite it to match the new line the government had adopted in court. McCloy concealed both the existence of the Final Report and the information it contained from the Justice Department lawyers arguing the case.

Meanwhile, in addition to Yasui's attorney, two new players joined his defense. The ACLU, represented by attorney A. L. Wirin, presented the case that the discriminatory curfew imposed on citizens of Japanese ancestry alone violated their constitutional right to equal protection. In addition, the JACL issued an *amicus curiae* brief, which, though nominally directed to the Hirabayashi case, in fact covered Yasui as well. The JACL brief (secretly drafted, ironically, by anthropologist Morris Opler, who worked for the government as a "community analyst" at the Manzanar WRA camp) drew attention to the long history of West Coast anti-Japanese American prejudice that preceded and informed the campaign for mass removal, and to the fraudulent nature of the arguments about Japanese "racial characteristics" that underlay the government's defense of its policy.

The Yasui case was argued before the Supreme Court on May 11, 1943. Six weeks later, on June 21, the court issued its decision. As in the *Hirabayashi* case, decided simultaneously, the court unanimously upheld DeWitt's race-based curfew order as an emergency war measure, finding the curfew reasonably related to the purposes for which it was intended—the army's broad and unsubstantiated claim of military necessity. At the same time, the justices overturned Judge Fee's ruling that Yasui had forfeited all his citizenship rights by working for the Japanese consulate. On remand, Judge Fee restored Yasui's citizenship, resented him to time served, and sent him for confinement at the Minidoka WRA camp.

After the war, Minoru Yasui settled in Denver, Colorado, where he became a lawyer, newspaper columnist, and civic leader. In 1983, lawyer/scholar Peter Irons, who had discovered archival evidence of

government manipulation of evidence in the Japanese internment cases, offered to bring a challenge to Yasui and his fellow wartime defendants' convictions by means of a *coram nobis* petition. Yasui consented, and a legal team headed by Oregon attorney Peggy Nagae took up his case. Unlike in the case of Fred Korematsu, however, Yasui's petition failed to bring about a reconsideration of the official malfeasance involved in his prosecution. In 1984, district judge Robert C. Belloni issued an order vacating Yasui's conviction, in accordance with a motion by Justice Department officials anxious to dispose of the case, but declined to either grant Yasui's *coram nobis* petition or to make findings of fact regarding the record of official misconduct. Yasui and his lawyers appealed the ruling, but he died in November 1986, thereby mooting the case before the appeal could be decided.

Yasui v. United States. 320 U.S. 115 (1943)

Yau, Shing-Tong (1949–)

Shing-Tung Yau is a leading mathematician in the world in the late-twentieth and early twenty-first centuries, especially in the area of differential geometry and partial differential equations, and, as a prominent Chinese American scientist, has played an active role in promoting U.S.-China scientific exchange and science and education in mainland China, Hong Kong, and Taiwan.

Shing-tung Yau (Qiu Chengtong in *pinyin*) was born in 1949 in Shantou, Guangdong, China, but grew up in Hong Kong where his father, Qiu Zhenying, was a college philosophy teacher. In the early 1960s, Yau attended the renowned Pei Ching (Peizheng) Middle School in Hong Kong and became intensely interested in plane geometry. His passion for mathematics was further reinforced when he read an autobiographical

article by the eminent Chinese American mathematician Shiing-Shen Chern. In 1966, Yau entered the Chinese University of Hong Kong to study mathematics but moved three years later to the University of California at Berkeley to pursue graduate studies under Chern. At Berkeley, besides working with Chern in differential geometry, Yau also studied differential equations with other professors, believing that cross-fertilization was key to the future of mathematics. In-depth knowledge of both fields indeed proved to be crucial to his success as it helped lay the foundation for Yau's research in integrating the two. Yau received his PhD in 1971, after spending less than two years at Berkeley.

After graduation from Berkeley, Yau went to the Institute for Advanced Study at Princeton where he ventured into yet another new field, topology, and did research on a number of important mathematical problems. A year later, he moved to the State University of New York, Stony Brook, to become an assistant professor of mathematics. There he came to know some of the well-known figures in differential geometry and learned much from them. Nevertheless he decided to leave Stony Brook after one year because he did not want to be influenced too much by their established views. He wanted rather to develop his own ideas, so he moved next to Stanford University, which offered him a professorship in 1973.

At Stanford Yau enjoyed a period of intense thinking and research on mathematical problems, especially on the relationship between differential geometry and differential equations. To Yau, Stanford offered an environment of relative isolation that allowed him to develop his own ideas. He was, however, able to find stimulation from young mathematicians there, such as Leon Simon and Richard Schoen, and keep in touch with his friends at Berkeley. Combining his expertise in both differential equations and differential geometry, Yau in 1976 solved the famous Calabi conjecture, a study that involved Chern classes. It was perhaps the most influential and most important work of Yau's mathematical career and gave rise to the so-called "Calabi-Yau spaces" that lie at the foundation of string theory, the "theory of everything" that physicists are trying to devise. At the same time Yau proved the positive mass conjecture, which was a major contribution

to both mathematics and Einstein's general theory of relativity in physics. He continued his phenomenal mathematical creative work after he moved back to Princeton to take up a professorship in mathematics at the Institute for Advanced Study in 1979.

Honors poured in for Yau following his Calabi work: In 1981 he won the Oswald Veblen prize of the American Mathematical Society as well as the John J. Carty Award for the Advancement of Science from the U.S. National Academy of Sciences. The next year, 1982, brought Yau the highest honor for a mathematician: The Fields Medal, named after Canadian mathematician J. C. Fields and awarded by the International Congress of Mathematicians every four years to as many as four mathematicians less than 40 years of age. It has been regarded by many as the equivalent of the Nobel Prize for Mathematics. The citation reads: "Made contributions in differential equations, also to the Calabi conjecture in algebraic geometry, to the positive mass conjecture of general relativity theory, and to real and complex Monge-Ampère equations." In 1994 Yau won the Crafoord Prize of the Royal Swedish Academy "for his development of non-linear techniques in differential geometry leading to the solution of several outstanding problems." Finally, in 1997, Yau was awarded the U.S. National Medal of Science, the highest honor from the federal government presented by President Bill Clinton.

In 1984 Yau crossed the continent again by coming to the University of California, San Diego, where he became professor and chair of the mathematics department. A year later, he was awarded the MacArthur Grant, popularly known as the "genius award," from the MacArthur Foundation. When at San Diego he also took up visiting positions at University of Texas, Austin; Caltech; and SUNY Stony Brook. During this period he collaborated with another mathematician, Karen Uhlenbeck, and made a major contribution to the study of the Yang-Mills field theory, named after the Chinese American physicist Chen Ning Yang and Robert Mills. Then in 1987, Yau moved yet again, this time to Harvard University as a professor in mathematics while also holding visiting appointments at the National Tsinghua University in Taiwan and the Chinese University of Hong Kong.

Yau was actively involved in U.S.-China political activism for a brief period in his Berkeley days in the early 1970s when he and many other Chinese students in the United States protested the American decision to turn over the Diaoyutai islets near Taiwan to Japan. Since the 1980s, Yau has participated actively in Chinese mathematics, founding three institutions: the Morningside Mathematics Center of the Chinese Academy of Sciences in Beijing, the Center of Mathematical Science at Zhejiang University in Hangzhou, and the Institute of Mathematical Sciences of the Chinese University of Hong Kong. He has trained a number of Chinese students, promoted U.S.-China scientific exchange, served as editor-in-chief of the *Asian Journal of Mathematics*, frequently visited mathematical institutions on mainland China, Taiwan, and Hong Kong, and, never shying from controversy, often spoken out on science and education policy in those places.

Yee Chiang (1903–1977)

When *The Silent Traveller in New York* was released in 1950, it won rave reviews. Readers in postwar America were fascinated with its refreshing style,

entertaining approaches, and fascinating cultural comments on the East and West. Chiang Yee, the author of the book who offered cultural interpretation and attempted to bring about cultural understandings between the East and West, became one of the most successful and productive Chinese American writers in the English language before the late 1970s.

Chiang Yee was born in Jiujiang, China, on May 19, 1903. He studied Chinese art with his father in childhood. After completing high school, he enrolled in the National Southeastern University in Nanjing with a major in chemistry. In 1927, he joined the Northern Expedition to fight warlords and then served as magistrate in three different counties, including his own hometown of Jiujiang. As he became increasingly frustrated and disappointed with the Kuomintang government, he resigned from his post and left for England in 1933 to study political science at the University of London.

In 1935, the Royal Academy of Arts in London hosted an international exhibition of Chinese art. At the request of Methuen & Company, Chiang wrote a book, titled *The Chinese Eye*, to accompany the exhibition. The book, with engaging anecdotes and humorous comments, offered readers in the West a remarkable introduction to the subject of Chinese art and its aesthetic principles. It was an instant success, which, as Chiang stated, launched him on his writing career outside of China.

In the summer of 1936, Chiang visited the Lake District in northern England, an experience that led to his subsequent publication of *The Silent Traveller in Lakeland*. The term “Silent Traveller” was the English version of his pen name *Yaxingzhe*, meaning literally “Dumb-Walking-Man.” In this book, Chiang writes about nature, which is shown to be void of geographical boundaries and very friendly to human beings. Rather than a simple record of his trip to the home of English nature poets, the book is really a collection of myriad observations of seemingly different cultural behavior and values between the East and West to illustrate the commonalities behind them. The 13 plates of monochromic Chinese ink paintings included in the book are both exotic and intriguing to readers in the West. The artistic presentation of the English landscape in Chinese manners helps to eliminate the

boundaries between the East and West and to show the universality of all true modes of human feelings.

In the next 10 years, Chiang published five more Silent Traveller books, all on English scenes: London, the Yorkshire Dales, Oxford, and Edinburgh. His writings were consistently humorous, witty, friendly, and refreshing, and his reputation as a travel writer was firmly established. As always, he brought his readers to a better appreciation of various cultural values in the world. His purpose of writing travel books was to dispel stereotypes and prejudices and to show the common elements and similarities between the legends, habits, beliefs, and values of his own native country and those of other lands. In addition to travel writing, he also published children’s books, fiction, and a memoir.

In 1947, Chiang visited the United States for six months in preparation of a new Silent Traveller book about New York. For him, this project was a new challenge or venture into a previously unexplored territory because the metropolitan New York formed a sharp contrast to the countryside landscape of the English scenes he was familiar with. There were skyscrapers and automobiles rather than mountains and rivers. There were neon lights and steel bridges of the vigorous modern city rather than soft green and natural settings of the countryside. However, Chiang once again succeeded. He wrote about Time Square, Broadway, Wall Street, Harlem, the George Washington Bridge, as well as parks and gardens, and his insightful observations and comments delighted and enlightened readers. Even New Yorkers were surprised, as Van Wyck Brooks noted, to discover some fascinating aspects of the city they had previously overlooked.

In 1955, Chiang came to teach Chinese studies at Columbia University, where he stayed until his retirement in 1971. On June 11, 1956, he was invited to deliver Phi Beta Kappa Oration at Harvard University. His speech, titled “The Chinese Painter,” deliberately evoked Emerson’s 1837 speech “The American Scholar.” Chiang discussed his role as a Chinese painter in bringing about a harmonious world order through dialogues and exchanges in the modern world. He expounded the interdependence of all cultures and emphasized the need for mutual understanding. The goal of the modern man, as he asserted, was different

from that of the nineteenth century. It was civilization, rather than national culture, that needed recognition.

During the next two decades, Chiang published four more travel books on Boston, Paris, San Francisco, and Japan, respectively. It is important to note that all these publications and the New York volume were published during the Cold War era. Circumventing political and ideological discussion, Chiang chose to focus on cultural aspects, a strategy that allowed him to advocate mutual appreciation and understanding. In the San Francisco book, for example, after praising flowers for bringing colors and beauty to people's lives, he quickly pointed out that many of these flowers originated in China. In the same book, he gave a detailed introduction of some major contributions Chinese immigrants had made in the cultural and economic history of the country.

Even though Chiang traveled extensively all over the world, he was not able to return to China until 1975. During the two-month trip, he visited many cities and met with friends and family members. He was impressed with the general prosperity and happiness of the Chinese as compared with the social reality half a century earlier. The socioeconomic and political changes in China were truly overwhelming. After coming back to the United States, he started working on *China Revisited: After Forty-two Years*, which was posthumously published.

During his second trip to China, Chiang died in Beijing on October 17, 1977. As a cultural interpreter, he will be long remembered, not only for his travel writing but also for his contributions to a better understanding between the East and West.

Yellow Brotherhood (YB)

Founded in 1970, Yellow Brotherhood (YB) was a grassroots antidrug abuse organization that emerged in direct response to the drug epidemic affecting third-generation Japanese American, or Sansei, youth. Comprised of former members of the Ministers, a Japanese American street gang in the Crenshaw area of Los Angeles, YB addressed the roots of the drug abuse in their community through direct action and organizing. Neither middle-class nor college-educated, the YB organizers possessed a street savvy and situated knowledge that allowed them to relate to and connect with young males in the community.

Inspired by the Black Panther Party and other movements for self-determination occurring in the United States and abroad, YB adopted Mao Tse-tung's call to "serve the people" as a philosophy of personal, community, and social transformation. YB "served the people" by creating programs that were run for and by local people, thus strengthening relationships and developing concrete skills while building local movement capacity. They encouraged people to see themselves as historical actors engaged in the making of their history rather than as disempowered or passive individuals. They also helped young people see that their struggles not as isolated incidents but as racialized and classed experiences impacted by political, economic, and ideological structures.

YB organizers understood that the disproportionate levels of drug abuse and drug-related deaths stemmed from the legacies of racialized trauma experienced by Japanese American and Asian American communities, especially forced internment, model minority stereotypes, anti-Asian violence, and discrimination. More than a reflection of ordinary teenage

angst, the drug epidemic was symptomatic of youth of color struggles with racial identity, self-worth, state-sanctioned racism, and intercultural and intergenerational communication.

Within six months, YB was able to reduce drug trafficking and gang activity in their neighborhood and establish a YB self-help house near Pico and Crenshaw Boulevards. Several conditions, including a gang-related fatality, contributed to the temporary closing of the house, but it was soon reopened by former drug abusers, ex-gang members, and Vietnam veterans. With permission from the original founders, they created a drug abuse prevention program that actively engaged, and even confronted, the Japanese American community about the drug problem.

Organizers engaged in various forms of community outreach. They visited schools, held informal rap sessions and support groups, offered academic tutoring, met youths' parents and families, and hosted social gatherings and concerts. The YB network also included collaborations with other antidrug community organizations, including Go For Broke in East Los Angeles, Come Together in Gardena, LOVE in Hollywood, and Asian Sisters in Little Tokyo, which specifically addressed the drug overdoses of Sansei women.

In 1971, these organizations, YB, members of *Gidra* newspaper, Amerasia Bookstore, Japanese American Community Services, and Senshin Temple united to form the Community Drug Offensive, a coalition of youth and antidrug groups who addressed the epidemic through educational campaigns and policy reform. Their well-attended teach-ins were held in churches and temples, and their audience consisted mostly of concerned parents and older folks. They addressed topics that included Japanese American internment, ideological racism, the overproduction of barbiturates, government and corporate investments in the Vietnam War, and mental health. These latter critiques were powerfully articulated by veterans active in YB. They also mounted an extensive petition campaign that demanded the regulation of drug production, penalties for corporate violations, and federal and state funding of community-based drug abuse programs.

To the chagrin of those Japanese Americans who preferred to ignore the drug problem, the Community Drug Offensive mounted its first public action in the middle of the 1971 Nisei Week Parade held every August in Little Tokyo. Organizers dressed in traditional Japanese kimonos surprised bystanders by dramatically eating red candies meant to represent red barbiturates, even tossing handfuls to the crowd. They swayed and tumbled their way down the street. Other organizers followed behind with a giant political puppet and passed out educational leaflets.

The following year, the YB and Community Drug Offensive participated in the Nisei Week Brigade by supporting nationwide efforts to withdraw from Vietnam. They organized the Van Troi Anti-Imperialist Youth Brigade and Thai Binh Brigade. The Van Troi Brigade marched, chanted, and burned a huge Japanese flag in opposition to military aggression and imperialism everywhere. The Thai Binh Brigade unfurled an anti-imperialist banner, set off firecrackers, and distributed "Is That Right!" a satirical pamphlet authored by YB, Asian Movement for Military Outreach, and allies from the Community Drug Offensive. The pamphlet connected the Eli Lilly pharmaceutical company and its overproduction of barbiturates to their military presence in Southeast Asia. In doing so, it connected local struggles for community health and self-determination in the United States with struggles for national liberation in Asia.

The YB house closed in 1975 and the group subsequently disbanded. Ten years later, the values and principles of the organization continued through the YB youth basketball and sports teams in Los Angeles that was staffed and supported by former YB members.

Yep, Laurence (1948–)

Laurence Michael Yep is the acclaimed author of more than 70 novels and a winner of the American Library Association's Laura Ingalls Wilder Award. Transforming the young adult literary world for over 40 years, Yep writes historical and realistic fiction, science fiction, and fantasy for children, young adults, and adults. His wide range of novels include the Newberry Honor books "Dragonwings" and "Dragon's Gate"; "The Earth Dragon Awakes: The San Francisco Earthquake of 1906," a Texas Bluebonnet Award nominee; and "The Dragon's Child: A Story of Angel Island," which was named a New York Public Library's "One Hundred Titles for Reading and Sharing" and a Bank Street College of Education Best Children's Book. In addition to a collection of Asian folk stories and editing an anthology of Asian American short stories, Yep has written plays such as "Pay the Chinaman," "Dragonwings," and "Fairy Bones," which have been produced at the Kennedy Center, Lincoln Center, and the Berkeley Repertory Theater. With publications ranging from an adult science fiction *Star Trek* novel featuring Sulu and two books in the popular American Girl franchise, Yep has written several articles reflecting on writing fantasy and science fiction and historical fiction in publications such as "Reading Teacher," the "Horn Book," "CMLE," and the "ALAN Review."

Background

Born June 14, 1948, in San Francisco, California, Yep is the youngest son of Thomas Gim Yep and Franche Lee Yep. Franche Lee was born in Ohio and raised in

West Virginia where her family ran a Chinese laundry. Yep's father, Thomas, was born in Toishan, China and came to San Francisco at the age of 10. After World War II, Yep's parents opened a grocery store in the Fillmore district in San Francisco, a predominantly African American neighborhood where Yep spent most of his childhood. Dr. Yep was part of the first generation in his family to attend college. He attended Marquette University, graduated from the University of California at Santa Cruz, and received his PhD in English from the State University of New York at Buffalo. His dissertation was titled "Self-Communion: The Early Novels of William Faulkner." He has taught writing and Asian American studies at the University of California, Berkeley and Santa Barbara. He lives in Northern California with his wife, the award-winning author Joanne Ryder.

Work

Although known for his young adult novels related to Asian and Asian American history, Yep's writing career as a published author began with science fiction short stories such as "Selchey Kids," published in *World's Best Science Fiction 1969*.

Engaging with themes of diaspora, flexible citizenship, and transnationalism, Yep has written many novels that explore Asian and Chinese American experiences. Aside from *Spring Pearl: The Last Flower*, part of the *Girls of Many Lands* series, and *Lady of Ch'iao Kuo: Warrior of the South, Southern China, A.D. 531*, part of *The Royal Diaries* series, one group of his texts emphasizes Chinese in China during the mid-1800s, such as *Serpent's Children* and *Mountain Light*.

A second group of novels, such as *Dragonwings* and *When The Circus Came to Town*, focuses on how the first wave of Chinese immigrants during the late 1800s navigated institutional, ideological, and individual discrimination. In a third grouping, Yep examines Asian and Chinese Americans in the mid-twentieth century such as *Hiroshima*, which provides a harrowing account of the bombing from the perspective of a 12-year-old girl, a Chinese American basketball team in *Dragon Road*, and Chinese Americans in the Midwest in *Star Fisher* and *Dream Soul*.

His fourth group of novels explores the Chinese American experience after the 1965 Immigration and Nationality Act, which changed the racial landscape of the United States and ended over 80 years of Chinese immigration restrictions. Novels set after the 1960s such as *Child of the Owl* and *Ribbons* examine cultural alienation, multiraciality, and the need for compassion. Although Yep's novels provide insights into different historical periods of Chinese and Chinese American history, he also regularly features strong female characters in his works. Moreover, his novels touch upon universal themes such as being an outsider, the necessity of compassion, and seeing the world from multiple points of view.

Yep also is well known for his mystery and fantasy novels. In some of his mystery novels, Yep uses a young Mark Twain as a detective or a Chinese American female detective. Several of his fantasy series use Chinese legends as the backdrop (Dragon series, Tiger's trilogy) and/or weaves reincarnations of legendary Chinese warriors, Japanese folk creatures, and goddesses in disguise (City series).

Yick Wo v. Hopkins (1886)

Yick Wo v. Hopkins, 118 U.S. 256 (1886), marked the first time that the United States Supreme Court held that racially discriminatory application of a facially neutral statute is an infringement of the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution. It is a landmark constitutional case that has been cited by over 150 United States Supreme Court cases, and is widely understood to stand for the proposition that all legal residents of the United States are entitled to the Fourteenth Amendment's protections.

The San Francisco Chinese America during the nineteenth century served as the historic backdrop to this classic equal protection case. During this period,

legal, cultural, and economic barriers forced many Chinese immigrants in California into the laundry business as a means to earn a livelihood, and most laundry businesses in San Francisco were owned by Chinese persons. Between 1873 and 1884, the San Francisco Board of Supervisors passed 14 laundry ordinances targeting Chinese persons. These 14 anti-Chinese laundry ordinances included ordinance No. 156, passed on May 26, 1880, and ordinance No. 1587, passed on July 28, 1880, which prohibited operation of a laundry business in a wooden building within the city or county of San Francisco without a permit from the Board of Supervisors. Failure to secure such a permit could result in a misdemeanor conviction, a \$1,000 fine, as well as imprisonment for up to six months. The ordinances also vested in the Board of Supervisors the discretion to grant or withhold such permits and offered no standards by which determinations would be made. This new requirement for a permit was in addition to health and fire inspections already required by other law. At the time these new ordinances came into effect, 310 of 320 total laundry businesses were subject to the new permit requirement, and 240 of these businesses were owned and operated by Chinese persons. Because all of the Chinese-owned laundries within San Francisco at the time were housed in wooden buildings, the Chinese community viewed the ordinances as a blatant attempt to destroy their livelihood and discourage Chinese settlements within San Francisco.

Upon application for permits by the laundry business owners affected by the new ordinances, the Board of Supervisors proceeded to deny licenses to all Chinese applicants seeking permits but denied only one of out of 80 total non-Chinese applicants seeking the same permits. The affected Chinese laundry business owners protested this discrimination by refusing to comply with the ordinances and kept their businesses open without permits. As a result, more than 150 Chinese laundry owners were arrested on the charge of carrying on a laundry business without having the requisite permit, whereas non-Chinese persons operating laundry businesses under similar conditions were left free to enjoy their property interest in earning a living.

Yick Wo and Wo Lee were among the many Chinese immigrants who owned a laundry business in

Yick Wo laundry house in San Francisco, ca. 1886. (National Archives and Records Administration, Pacific Region)

San Francisco when ordinances No. 156 and No. 1587 became effective. Yick Wo, a Chinese immigrant who had lived in California since 1861, who had operated a laundry business in the same wooden building for 22 years and held both a valid license from the Board of Fire Wardens as well as a valid certificate from the health officer, continued to operate his laundry business after the Board of Supervisors denied his application for a permit in 1885. As a result of laundering without the requisite permit, he was criminally prosecuted under the ordinances, subsequently convicted, and subjected to a \$10 fine for his violation. He was then imprisoned for refusing to pay the fine. In a separate case arising from facts similar to that of Yick Wo, Wo Lee was also convicted for violation of the ordinances and imprisoned. Yick Wo petitioned for a writ of habeas corpus in the Supreme Court of California and Wo Lee petitioned for a writ of habeas corpus in

the federal circuit court. After both were denied their respective petitions, they appealed to the United States Supreme Court, with Yick Wo naming Hopkins, a sheriff, as defendant to the suit. The United States Supreme Court granted certiorari and heard the two cases as one given their similar facts and issues.

The Supreme Court issued its decision on May 10, 1886, and, per a unanimous opinion written by Justice T. Stanley Matthews, found that the ordinances at issue, although facially neutral, were applied in a racially discriminatory manner. The Court stated that the petitioners had been arbitrarily deprived of their property interest in earning a living. Additionally, the Court asserted that although the Chinese laundry business owners were not necessarily United States citizens, they were still entitled to equal protection under the Fourteenth Amendment. As a result, the court struck down the racially discriminatory ordinances that

intended to exclude Chinese persons from the laundry business in San Francisco and ordered dismissal of all charges against other laundry owners who had been imprisoned.

Although the court's holding was potentially sweeping, *Yick Wo v. Hopkins* saw little application as legal precedent after its decision. A mere 10 years later in 1896, the United States Supreme Court developed the "separate but equal" doctrine in *Plessy v. Ferguson*, which permitted the discriminatory treatment of African Americans.

Today, *Yick Wo v. Hopkins* is a staple case in constitutional law textbooks and is understood to hold that discriminatory application of a facially neutral statute may violate the Equal Protection Clause of the Fourteenth Amendment of the United States Constitution. On the whole, it is celebrated as a classic equal protection case because it established the rule against discriminatory prosecution, but it is also lamented as the first and last case in which the United States Supreme Court invalidated a prosecution as racially motivated.

Yoneda, Karl G. (1906–1999)

Karl G. Yoneda was a labor activist, political activist, longshoreman, and language specialist in the United States Military Intelligence Service (MIS). Yoneda was born in 1906 in Glendale, California. He was the third child of Hideo and Kazu Yoneda, Japanese immigrants from Hiroshima prefecture. His parents had worked on the Makaweli Sugar Plantation in Hawaii but later migrated to California in hopes of earning higher wages as vegetable farmers. At the age of seven in 1913, Yoneda traveled with his father and cousin to Japan to receive a "proper Japanese education."

When living in Japan, Yoneda developed an interest in political and labor activism. As an avid reader, he was influenced by the political writings of European and Japanese anarchists, Communists, and socialists, especially Russian anarchist, folklorist, and linguist Vasil Eroshenko. In 1922, Yoneda traveled to Beijing, China on a six-month journey to find Eroshenko and became his student. After Yoneda returned to Japan, he decided to quit school and participate in labor movements. He was involved in printers' strikes in Osaka and Tokyo and later helped to organize the Hiroshima Printers Union in the mid-1920s. Because Yoneda held dual U.S. and Japanese citizenship, he was called to join the Japanese Imperial Army in 1926. To evade mandatory military service, he boarded the S.S. *Shunyo Maru* to return to California. Upon reentry, he was detained at the Angel Island Immigration Station for two months despite having a copy of his Los Angeles County birth certificate. After his release, Yoneda traveled to Los Angeles where he worked as a domestic worker.

Within a few months, Yoneda continued to participate in political and labor organizations such as the Los Angeles Communist Party (CP), Japanese Workers' Association (JWA), Trade Union Unity League (TUUL), and International Labor Defense (ILD). Yoneda was especially interested in the Los Angeles CP because he believed in the organization's objectives, which supported the working class and opposed United States and Japanese imperialism in Asia and South America. In 1927, Yoneda began to use the name Karl Hama (adopting his first name in honor of Karl Marx) in his political work to protect the identity of his family members. As a member of the CP, JWA, and TUUL, Yoneda helped organize strikes that lobbied for improved working conditions, higher wages, eight-hour working days, and increased compensation for working overtime.

During the Great Depression, Yoneda participated in hunger marches, demonstrations, and petition campaigns that lobbied for aid to the unemployed. At times, these protests led to violent confrontations between protestors and the Los Angeles Police Department. During the National Unemployment Insurance Day demonstration in 1931, Yoneda was badly beaten by the police, arrested for disturbing the peace, and

sent to jail because of his involvement in the march. Police Captain William F. Hynes contacted the ILD to send someone to post Yoneda's bail so he could receive medical attention. The ILD sent their secretary, Elaine Black, who was a Jewish American known for bailing out labor activists from jail to help Yoneda. After this meeting, Black and Yoneda developed a friendship, fell in love, and eventually married in 1935. The two could not marry in California because of the state's anti-miscegenation laws so they traveled to Seattle, Washington to legally wed.

In 1934, Yoneda accepted a position in San Francisco as editor of a Japanese American Communist newspaper called *Rodo Shimbun*. During his editorship, Yoneda published articles against U.S. and Japanese imperialism in Asia, interviewed farm workers, and reported on labor strikes. In 1934, Yoneda also ran on behalf of the CP as a representative for San Francisco's Assembly District seat. Although Yoneda lost the election, 1,017 Fillmore District voters supported his candidacy. He also became involved in organizing the Alaskan salmon cannery unions and was instrumental in organizing the AFL Alaska Cannery Workers Union Local 20195. In 1936, Yoneda decided to join the International Longshoremen's Association and became one of the first Asian American longshoremen.

After Japan declared war on China in 1937, Yoneda participated in antiwar demonstrations protesting Japan's military expansion in Asia and encouraged Americans and Japanese Americans to boycott Japanese goods. Despite Yoneda's anti-Axis stance, he and his family were incarcerated at the Manzanar War Relocation Center following President Franklin D. Roosevelt's issuance of Executive Order 9066. Yoneda along with other Japanese Americans volunteered to clean up and construct the Manzanar internment camp to show their loyalty to the United States. During internment, Yoneda helped form the Manzanar Citizens Federation, which was created to increase camp morale. To further support the war effort, Yoneda joined the U.S. MIS as a translator and was stationed in Burma and South China. After World War II, Yoneda and his family moved to Sonoma County to start a chicken farm. By 1959, Yoneda sold the farm and returned to working as a longshoreman in

San Francisco. From the 1960s to the 1980s, Yoneda actively participated in international antinuclear efforts and protests against the Vietnam War. He was also active in the redress movement to Japanese Americans interned during World War II, joined the Angel Island Immigration Station Historical Advisory Committee, and lectured at various universities on U.S. labor history.

Yoon, Sam (1970–)

Sam Yoon is a former at-large member of the Boston City Council. He was the first Asian American ever to run and hold elected office in Boston and the first person in Boston to win an at-large council seat on the first try. He served on the city council from 2006 to 2010. In 2009, Yoon ran for mayor of Boston. He currently serves as a senior policy advisor for the U.S. Department of Labor, Employment and Training Administration. He is also the cofounder of the Asian Political Leadership Fund, which promotes political leadership and civic engagement among Asian Americans.

Sam (Sang-hyun) Yoon was born on January 10, 1970, in Seoul, South Korea. He and his parents immigrated when he was 10 months old, and he grew up in Lebanon, Pennsylvania. He became a naturalized

citizen at the age of 10 years old. Yoon received a Bachelor of Arts in Philosophy of Science and Logic from Princeton University in 1992. After graduation, he taught math at a high school in urban New Jersey, before returning to school to earn a master of public policy degree in Housing, Urban Development, and Transportation from the Kennedy School of Government at Harvard University in 1995.

After working as an analyst at Abt Associates, a public policy think tank, Yoon worked as a community organizer and focused on issues of affordable housing for seniors and those with disabilities. He was the director of Housing at Cascap, Inc. and the Asian Community Development Corporation, where he oversaw the construction of community housing and mixed-use developments.

In November 2005, Yoon ran and was elected as a Boston City Councilor At-Large. He served as the chairman of the Post Audit and Oversight Committee and the Youth Affairs Committee. Yoon wrote a proposal to establish funding for youth violence prevention programs, which gained support among the community, the “Nickel for Public Safety” legislation ultimately did not pass. He was reelected in November 2007. In 2008, Yoon sponsored legislation to have fully bilingual ballots in Boston elections to protect the voting rights of Chinese and Vietnamese American voters.

In 2009, Yoon ran for mayor of Boston. Emphasizing the need for transparency and accountability, Yoon proposed to eliminate the Boston Redevelopment Authority in favor of a more community-focused agency. He also promised to make improvements to the transportation infrastructure by increasing public transit and bike accessibility in Boston. Only the top two vote-getters moved on from the primaries to the general election, and Yoon finished third. Michael Flaherty, who had received the second-highest amount of votes, made Yoon his unofficial running mate. Though Boston does not have an official deputy mayor position, Flaherty promised that he would appoint Yoon as deputy mayor. The unofficial Flaherty-Yoon ticket lost to incumbent Mayor Thomas Menino.

Citing frustration with difficulty finding employment at community-based organizations that rely on

working relationships with local officials, Sam Yoon left Boston for Washington, D.C. in 2010. He was the executive director of the National Alliance of Community Economic Development Associations before being appointed senior policy advisor for the U.S. Department of Labor by the Obama Administration. Yoon lives in Falls Church, Virginia with his wife, Tina, and two children, Nathan and Naomi.

Yu Lihua (Helen Yu) (1931–)

Yu Lihua came to the United States in 1953 for graduate studies after attending Taiwan University in Taipei. A prolific and popular writer, Yu Lihua is best known as precursor to the literature of “Chinese student immigrants.” (The term refers to those who enter the United States on student or scholar visa but later adjusts to immigrant status.)

Ironically, Yu’s career as a writer of Chinese in America began with the publication of a prize-winning story in English, titled “Sorrow at the End of the Yangtze River” (1957). The story is a romance about a young woman’s journey to find her “lost”

father along the river. Shortly before her mother's death, the daughter sets out to look for her father, who left home years before. When she finally finds her father, however, he does not recognize her until the daughter plays a touching piano tune he taught her in childhood. The familiar and moving music awakens her father's memory and conscience, and he and the daughter reconcile. The Hollywood-style sentimental story helped Yu win the prestigious Samuel Goldwyn Creative Writing Award and raised her confidence about pursuing a career as a professional writer of English in the United States.

Yu Lihua's subsequent writing in English, which included three novels and several short stories written during the late 1950s and early 1960s about the Chinese experience in America, were all rejected by various publishers, however. Convinced that only by conforming to the stereotypes of Chinese would she fit the "ethnic niche" of the mainstream publishing market, Yu decided to engage primarily in Chinese writing. To her, writing in Chinese represents a vindication of artistic integrity. Since then, Yu has published more than 20 volumes, novels as well as collections of short stories and travelogues, in Chinese. In these works, she employs a wide range of narrative strategies and techniques to trace the lives of Chinese students and faculty on campuses across America and offer glimpses into the world of Chinese student immigrants, which is little known to the general public. *Kao Yan* [*The Ordeal* 1974], a popular and critically acclaimed novel by Yu, is an outstanding example.

The novel centers around the agony caused by the tenure review of Zhong Leping, a physics professor at a state university on the East Coast, and his struggle to find the will to challenge the unfair tenure review process. An accomplished scientist and conscientious teacher, Zhong never doubts the fairness of the tenure review process in American academia. Yet despite his strong record in research and teaching, he is denied tenure because of the racial prejudice of his department chair, a mainstream scholar. Outraged and deeply hurt, Zhong decides to take control of his fate. He hires a Jewish American lawyer to appeal his case and finally wins the lawsuit.

By depicting the racial discrimination inflicted on Zhong during his tenure review, Yu Lihua provides

an authentic account of the suffering of Chinese American academics and transforms the novel into an anguished, compassionate statement about the need for racial justice in academia. Zhong's victory also demonstrates Chinese immigrants today are determined to fight for their rights. It is for this reason that the novel is considered an effective and striking social commentary and has resonated with Chinese readers. The bitter fight, however, exacts an enormous price: Zhong's health is ruined, his wife is alienated, and his dream is doomed. In this sense, Zhong's experience of tenure review lives up to the novel's title, *The Ordeal*, and symbolically suggests the painful cost Chinese immigrants may have to pay to gain acceptance by the mainstream society.

Yu Lihua's other works in Chinese, especially *Youjian Zonlu*, *Youjian Zonlu* [*Seeing the Palm Tress Again* 1967] and *Fujia de Ernumen* [*Sons and Daughters of the Fu Family* 1976], also enjoyed enormous popularity among Chinese readers in America and throughout the world. Both novels focus on the struggle of Chinese student immigrants in America. The former won a major literary prize in Taiwan whereas the latter was a hit when it first appeared in serial form in *Singtao Ribao* [*Sing Tao Daily*] in New York in 1976. In addition to writing, Yu taught Chinese at the University of New York, Albany, until her retirement in 1996. She currently lives in San Francisco.

Yung, Judy (1946–)

Judy Yung is best known for her groundbreaking work in documenting the history of the Angel Island Immigration Station and the life stories of Chinese

American women. She has also worked as a librarian, newspaper editor, and university professor in Asian American studies. Her accomplishments in each career are noteworthy and evident in all is her deep commitment to her Chinese heritage and the community in which she was born.

The fifth daughter of a working-class, immigrant couple from Guangdong Province, Yung was born on January 25, 1946, in San Francisco's Chinatown, where she grew up circumscribed by the city's racial segregation and her parents' traditional Chinese values, limited education, and incomes. Attending public school during the day and Chinese school in the evenings, she became biliterate as well as bilingual. Yung graduated from San Francisco State College in 1967 with a BA in English literature and Chinese studies, and she earned an MA in library science from the University of California at Berkeley in 1968.

As a librarian for the San Francisco Public Library, Yung was assigned to the Chinatown Branch. Utilizing her bilingual skills and sensitivity to better serve the community, she organized cultural events at the branch and did outreach to publicize the library's services. Challenged by a patron regarding the paucity of material on Chinese Americans on the shelves, she also began building the collection, which ignited her interest in Chinese American history and her recognition of the dire need for more books on the subject.

Consumed during the 1960s by the demands of working her way through college, Yung had scarcely noticed the nation's social and political ferment. Now she found herself in ferment as, questioning the values she'd been taught, she moved out of her childhood home and began to forge her own identity. Excited by the sea changes in society, Yung resigned her position as head of the Chinatown Branch in 1973 and became associate editor of the bilingual weekly *East West: Chinese American Journal*.

During her two years at the paper, Yung honed her writing skills, developed a deeper understanding of Chinatown, and visited the People's Republic of China for the first time in 1974. She then returned to librarianship in Oakland, California, creating the country's first Asian Branch Library with a grant from the California State Library. The library collection, which included reading materials in six Asian languages and

in English on Asia and Asian Americans, had to be moved three times to larger quarters during the six-year period that Yung headed the library. Yet the inadequate documentation of the Asian American experience remained obvious, and Yung, invited by poet Genny Lim and historian Him Mark Lai, seized the opportunity to collaborate with them on *Island: Poetry and History of Chinese Immigrants on Angel Island, 1910–1940* (1980). The book won the 1982 Before Columbus Foundation American Book Award.

By then, Yung had again left librarianship. With a 1981 grant from the U.S. Department of Education's Women's Educational Equity Act Program, she and Lim embarked on a two-year research project to reclaim the history of Chinese women in America through photographs, written accounts, and oral histories gathered from around the country. The pictorial exhibit, depicting women of different generational and class backgrounds, opened at the Chinese Culture Center in San Francisco in 1983 then traveled to Honolulu, Seattle, Los Angeles, Houston, Chicago, New York, Boston, Philadelphia, and Washington, D.C. Expanding on the scope of the exhibit, Yung wrote *Chinese Women of America: A Pictorial History* (1986).

Eager to delve deeper, Yung had enrolled in 1984 in the new ethnic studies PhD program at the University of California at Berkeley. In addition to her course work, she worked for Asian Women United of California as the project director of *Making Waves: An Anthology of Writings by and about Asian American Women* (1989). She also served on the Board of Directors of the Chinese Historical Society of America, helping to inaugurate its annual journal, *Chinese America: History & Perspectives* in 1987, which she coedited for the next decade. For her doctoral dissertation, Yung researched and wrote about the history of Chinese women in San Francisco, which she subsequently turned into two books: *Unbound Feet: A Social History of Chinese Women in San Francisco* (1995), which won three book awards, and *Unbound Voices: A Documentary History of Chinese Women in San Francisco* (1999).

Yung began her academic career in the American Studies Department at University of California Santa Cruz in 1990. Rapidly rising from assistant professor

to full professor, she served as chair of the department and ad-hoc coordinator of Asian American studies before her retirement in 2004. Her dedication and popularity as a teacher and advocate of affirmative action is reflected in her honors: four times a commencement speaker, an Excellence in Teaching Award, and an Excellence Through Diversity Award. Nor did her commitment to her home community flag: Yung served on the Board of Directors for Kearny Street Workshop and explored the community's evolution in *San Francisco's Chinatown* (2006).

Together with Him Mark Lai and Gordon H. Chang, Yung coedited *Chinese American Voices: From the Gold Rush to the Present* (2006), an anthology of primary source material that illustrates the mosaic of Chinese America. Yung, especially riveted by the voice of Eddie Fung in the volume, interviewed him at length for *The Adventures of Eddie Fung: Chinatown Kid, Texas Cowboy, Prisoner of War* (2007). Then, returning to her seminal work about the Angel Island Immigration Station, Yung collaborated with Erika Lee to tell the history of the diverse groups who passed through it in *Angel Island: Immigrant Gateway to America* (2010).

Clearly Yung's numerous awards—which include the Chinese American Librarians Association President's Recognition Award, Organization of American Historians' Distinguished Lectureship Program, and the Association for Asian American Studies Lifetime Achievement Award—are richly deserved.

Yung Wing (1828–1912)

Yung Wing was a Chinese immigrant who played key roles in both the history of modern China and early Chinese American history. Born in 1828, he attended a series of American missionary schools in Macao and Hong Kong, receiving mainly an American education, primarily in English. In 1846, he and two of his classmates followed their teacher to the United States where they became students at the Monson Academy in Massachusetts. When at the Academy, Yung converted to Christianity. After completing his education there, he enrolled at Yale University. During this time, he became a naturalized American citizen in 1852 and became the first Chinese to graduate from an American university in 1854.

Soon after graduating from Yale, he returned to China. Because of his American education, he gained the attention of government officials who were involved in China's modernization movement. He was summoned for an audience with Zeng Guofan (1811–1872), viceroy of Liangjiang (Jiangsu and Jiangxi provinces). Zeng soon commissioned Yung to travel to the United States to purchase machinery to equip the Jiangnan Arsenal in Shanghai. When Yung returned to China with the machinery in 1865, Zeng recommended that Yung be granted a low-level official rank.

Now that Yung had an official government title, he was eventually invited to submit recommendations for China's modernization. One of his proposals was to send students abroad to be educated in Western schools to aid in China's modernization. Not long after, Yung and another official, Chen Lanbin, were sent to head the Chinese Educational Mission to the United States. The Mission was to send 30 students between the ages of 12 and 16 to the United States each year for four years. These 120 students would study in America for 15 years and would be allowed to travel for another two years before returning to China. They would then return to China to assume positions that would further China's modernization.

Yung established the Mission in Hartford, Connecticut, but the endeavor was never able to fully succeed. Yung Wing, Chen Lanbin, and other officials

clashed over the direction, operation, and goals of the Mission as well as over the behavior of the students. At the core of the official concern over the attitudes and behavior of the students was the fear that the students' experiences in America would undermine the original purpose of the Mission. Those officials who did not share Yung's attraction to American culture worried that the students would become deracinated by adopting Western ideas and practices that contradicted fundamental aspects of Chinese culture. Although some students did go to attend American universities and return to China to aid in the modernization movement, the Chinese government decided to recall the Mission in 1881.

Although still administering the Chinese Educational Mission, Yung Wing and Chen Lanbin were commissioned by the Chinese government to investigate the conditions of the infamous "coolie trade." Chen Lanbin headed the investigating team to Cuba whereas Yung was sent to assess the situation in Peru. Both investigating teams reported that Chinese laborers were being severely mistreated. These conditions and the resulting reports finally led the Chinese government to pay more attention to Chinese living abroad and Chen and Yung were officially appointed ministers to the United States, Spain, and Peru.

In addition to Yung's service to China, he became immersed in American life. He married an American woman, Mary Kellog, with whom he raised two sons, Morrison Brown Yung and Bartlett Golden Yung. Although Yung had his American citizenship taken away because of the enforcement of the clause in the Chinese Exclusion Act that prohibited Chinese immigrants from attaining American citizenship, he

remained devoted to American ideals of democracy and modernization. He passed away in Hartford, CT in 1912, where his remains are buried.

Because Yung Wing's career was primarily in the service of the Chinese government, he is often neglected in the study of Chinese Americans. He was, however, an important figure in the development of late nineteenth- and early twentieth-century Chinese American history, representing the transition from a primarily China-oriented life to an America-oriented life. Yung straddled two worlds, one of a Chinese reformer dedicated to bringing China into the modern family of nations and the other of a Chinese American husband and father, concerned with the affairs of his family. These roles do not appear to have been contradictory for Yung. He saw no contradiction in serving the land of his birth and fully embracing the values of his adopted country.

Zenimura, Kenichi (1900–1968)

During his lifetime, Kenichi Zenimura was known as “The Dean of the Diamond” and with his passing he has come to be recognized as “The Father of Japanese American Baseball.” Many baseball historians believe he earned this title for his remarkable career as a player (excelled at all positions), manager (of Japanese American league teams and Caucasian teams in the Twilight Leagues), and international ambassador of the game.

Born in Hiroshima, Japan, in 1900, Zenimura moved to Hawaii just before his seventh birthday. He was introduced to the game of baseball in the Islands and began competitive play at the age of 12. He attended Mills High School (now Mid-Pacific University) and played with the semi-pro Hawaiian Asahi between 1915 and 1920. He mastered the sport and served as a player and captain of the Mills High team that won back-to-back Island championships in 1918 and 1919. In early 1920, Zenimura moved to Fresno, California where he worked at a small restaurant and as a mechanic. He immediately joined the newly founded Fresno Athletic Club Japanese American baseball team and would eventually establish a 10-team Nisei league. He managed, coached, and played competitively until he was 55 years old.

Zenimura crossed the chalk lines of discrimination and played for the semipro Fresno Twilight Leagues. Later his all-star team, the Fresno Athletic Club, became so dominant that when Ruth and Gehrig arrived in town on a barnstorming tour in 1927, several Nikkei players, including Zenimura, the “Nisei Babe Ruth” Johnny Nakagawa, the “Nisei Rogers Hornsby”

Harvey Iwata, and Fred Yoshikawa, were invited to play.

Zenimura’s teams dominated such college clubs as Stanford, St. Mary’s, the University of Southern California, and Fresno State during exhibition play. Internationally, he organized six-month tours in 1924, 1927, and 1937 to Japan, Korea, and Manchuria. These goodwill all-stars compiled a 40-8-2 record over the “Big Six” universities in Japan.

In addition to organizing barnstorming tours to Japan, Zenimura was instrumental in the negotiations that led to Babe Ruth’s visit to Japan in 1934. Several years earlier (in 1927) Zenimura also helped arrange a barnstorming tour to Japan for the Negro-league All-Star Philadelphia Royal Giants, led by Hall of Famers Biz Mackey and Andy Cooper. Japanese baseball historian Kazuo Sayama argues that it was the Royal Giants tour in 1927 and not Ruth’s visit in 1934 that inspired the formation of the Japanese Professional Baseball League in 1936.

During World War II, the Zenimura family was sent to two internment camps, one in the horse stalls at the Fresno fairgrounds, and later the desert wastelands in Gila River, Arizona. In both locations, baseball stadiums were constructed under the guidance of Kenichi’s baseball vision. He organized a 32-team league and also coached and played on the team that won the camp championship. Zenimura field was much more than a ballpark, it was a sacred location that bonded the thousands of wartime internees and gave Japanese Americans a sense of pride, hope, and normalcy, making life bearable during their unjust incarceration. With the closing of Butte Camp at Gila River, Zenimura field officially closed on November 10, 1945.

Following the war, the Zenimura family returned to Fresno. He organized and coached the Fresno Nisei baseball team that won two state Nisei Championships and climaxed their performance in 1950 by winning the national Nisei championship in Fresno.

Zenimura's sons, Kenshi and Kenso, as well as Fibber Hirayama benefited from the solid fundamentals taught to them by coach Zenimura. The trio starred at Fresno State College and all went on to play professionally in Japan for the Hiroshima Carp.

Kenichi Zenimura was the chief organizer, manager, coach, and captain of one of California's most fierce and competitive ball clubs in the Central Valley. He became the first Japanese American elected to the Fresno Athletic Hall of Fame in 1979. Zenimura continued to scout players and arrange goodwill tours to Hawaii and Japan until his death on November 13, 1968.

During the 18th Annual Cooperstown Symposium on Baseball and American Culture (2006), a campaign was launched to establish a permanent exhibit for Japanese American Baseball in the National Baseball Hall of Fame, as well as the enshrinement of the first Japanese American player.

The campaign proposes that the first Japanese American player enshrined with a plaque in Cooperstown is Kenichi Zenimura, "the Father of Japanese American Baseball." In 2006, Zenimura was honored in the Baseball Reliquary, a nonprofit, educational organization "dedicated to fostering an appreciation of American art and culture through the context of baseball history," funded in part by a grant from the Los Angeles County Arts Commission. The war-time experience of Kenichi Zenimura inspired the character of "Kaz Nomura," the patriarch in the major motion picture "American Pastime" released in 2007.

Zhang, Caroline (1993–)

Caroline (Yuan-Yuan) Zhang was born on May 20, 1993, in Boston, Massachusetts. She is a Chinese American figure skater who trains in Artesia, California. Her parents emigrated from Wuhan, China for her father to complete his doctoral training at Harvard University. Caroline has an older sister, Yang-Yang, who graduated from the Massachusetts Institute of Technology (MIT) and the family currently resides in Brea, California.

Zhang began training in figure skating at five years of age. In the 2002–2003 season, she won silver in the Juvenile level competition, qualifying her for the U.S. Junior Championship later that year where she finished fourth. By 2005, she was elevated to the Novice level, the lowest level that competes at the U.S. Figure Skating Championships. Zhang won silver at the regional championship and placed fourth in the nation at the Novice level.

By 2005–2006, Zhang was competing at the Junior level, winning silver at the regionals, bronze at sectionals, and placing eighth at the U.S. Championships. The next year, at the tender age of 13, she began competing on the international stage. In 2007, Zhang began competing in the Senior division, the highest level, on both the national and international stage. At Skate America, Zhang successfully executed a move she invented; her mother coined it, the "pearl" spin (a hybrid of the catch foot layback and Biellmann spins). She took third at this event and later finished first at the World Junior Figure Skating Championship. This was the first time that Zhang and U.S. teammates Mirai Nagasu and Ashley Wagner swept the podium in this event.

The next season, Zhang placed third at the 2008 Trophée Eric Bompard, Grand Prix, and also the United States Figure Skating Championship. She also

won silver at the Junior World Champions. In the 2009–2010 season, Zhang faced a number of issues. First, she changed coaches four times in one year, firing Li Mingzhu twice in the process. She also grew in height from 4'11" to 5'3". Zhang fell out of medal contention and members of the media questioned whether she would continue to compete.

Zhang committed herself to one year of intensive training under the direction of Peter Oppergard and Karen Wong. She returned to Skate America 2011 finishing sixth overall. At the 2011 Ice Challenge, Zhang won gold and shortly thereafter finished fourth at the 2012 U.S. Nationals. In February 2012, competing at the Four Continents Championship title in Colorado Springs, Colorado, Caroline won the bronze medal and her teammate, Ashley Wagner, took gold. It was the first time Zhang was on the podium for an international event since 2010.

Zhang deferred her plans for higher education to continue competitive skating. She is currently on tour with Skate America and continues to compete in preparation for the 2014 Olympic games in Sochi, Russia.

Zhang, Yitang (1955–)

Yitang Zhang is a Chinese American mathematician who catapulted from obscurity into professional and public prominence in 2013 with the publication of his research related to the famous “twin primes conjecture” in number theory.

Yitang Zhang was born in 1955 in Beijing, China, and went to the prestigious Peking University in 1978 shortly after Chinese universities started admitting students based on entrance examinations, rather than on political connections as had been done during the Cultural Revolution. Following graduation in 1982, he continued graduate studies in number theory at Peking University, earning a Master’s degree in 1985 before moving to the United States to begin PhD work at Purdue University. Under the supervision of Tzuong-Tsieng Moh, a Chinese American mathematician originally from Taiwan, Zhang completed his thesis on the difficult Jacobian conjecture and received his PhD in 1991. However, in part because a theory he relied on in his work turned out to be faulty, Zhang failed to publish his thesis and secure a position in academia for many years. Instead, he took any job he could find, including working at a Subway sandwich store. “It wasn’t bad,” he later told a journalist, “but whenever I was doing it I was thinking about maths.”

In 1999, with the assistance of two fellow mathematics graduates from Peking University—an engineer at Intel and a professor at the University of New Hampshire—Zhang returned to mathematical research and to academia with an adjunct teaching position at the latter institution. As a lecturer, Zhang had no access to many of the resources that a regular tenure-track faculty member would enjoy; however, the position freed him from the pressure to publish and allowed him to focus on important but difficult problem, such as the “twin primes conjecture.” Simply put, the conjecture is that there exists an infinite number of prime numbers (numbers that can be divided only by one and themselves) separated by the number 2 (e.g., 3 and 5, 11 and 13).

When visiting a friend in Colorado in the summer of 2012, Zhang, after working on the “twin primes” problem for several years, suddenly had an insight that

proved key to tackling it. When he submitted his paper to the *Annals of Mathematics* in April 2013, it was immediately recognized by the mathematical community as a major breakthrough that might lead to the eventual proof of the conjecture. Based on the recent advances of several other mathematicians, Zhang has proved that there exist an infinite number of pairs of prime numbers separated by at most 70 million. So Zhang's paper was not quite the final proof of the "twin primes" conjecture, which requires that the pair of prime numbers in question to be separated by only two units, but it is widely believed to be a turning point toward that goal. The significance of Zhang's discovery and his dramatic personal journey helped make him the subject of international media attention in 2013 both within and without the scientific community.

Zhang's story demonstrates the emergence into professional distinction of a new generation of Chinese American scientists and engineers who came to the United States from mainland China at the end of the Cultural Revolution and who often had to overcome numerous obstacles on their way to success.

Zia, Helen (1952–)

Helen Zia is an award-winning American author, journalist, scholar, and activist. Born in Newark, New

Chinese American writer and activist Helen Zia. (AP Photo/Farrar, Straus and Giroux, Paul Kuroda)

Jersey, in 1952, she is the daughter of Chinese immigrants. Her father, Yee Chen Zia, from Suzhou, China, was a poet and scholar. Her mother, Belin Woo, was raised in Shanghai.

Zia graduated with Princeton University's first graduating class of women in 1973, where she studied at the Woodrow Wilson School of Public and International Affairs and was a Woodrow Wilson Scholar. A member of the Asian American Students Association, she was involved in campus political and social movements. From civil rights to Third World liberation and women's liberation, Zia found her voice as a college student. In the summer of 1972, she visited China with a small group of students as a goodwill gesture from the United States.

After college, Zia moved to Boston and enrolled in the Tufts University School of Medicine in 1974. She quit medical school a year later to pursue graduate studies in industrial relations at Wayne State University in Detroit. She worked as a factory worker for

Chrysler Corporation from 1977 to 1979. During this time, she began her career in journalism and became a full-time journalist in 1983. Between 1989 and 1992, Zia lived in New York and served as the executive editor of *Ms.* magazine. Her articles, essays, and reviews have appeared in *Ms.*, *The Nation*, *Essence*, *The New York Times*, *aMagazine*, *The Advocate*, *Bridge Magazine*, *OUT!*, *Curve (Deneuve)*, *Social Policy*, *Sojourner*, *The Washington Post*, *The Detroit News*, *Arizona Republic*, and *The San Francisco Chronicle*.

Zia first garnered media attention for her role as a founding member of American Citizens for Justice, a group formed after the beating death of Vincent Chin in June 1982 and the injustice of the criminal justice system. Her work on this landmark civil rights case of anti-Asian violence is documented in the Academy Award nominated film, *Who Killed Vincent Chin?* (1987) and *Vincent Who?* (2009).

Zia is an outspoken community leader on social justice issues ranging from feminism, gay/lesbian rights, to human rights and civil rights. When she served as the president of the New York Chapter of the Asian American Journalist Association, she helped secure national media attention during the protests of the Broadway musical, *Miss Saigon*, over the casting of Caucasian actors in Asian roles. She is a founding sister of the National Asian Pacific American Women's Forum and has served as a board member of the New York Asian Women's Center. She is a trustee of the Asian-Pacific-American Leadership Institute. She is also on the board of the San Francisco Bay Area chapter of the Asian-American Journalists Association, and the Media Diversity Circle to advocate for diversity issues in the media. She serves on the advisory boards of the API Wellness Center; the Horizons Foundation; and the Media project of the Family Violence Prevention Fund of San Francisco. She was profiled in Bill Moyers's PBS documentary, *Becoming American: The Chinese Experience*.

In 1995, Zia traveled to Beijing to attend the United Nations Fourth World Congress on Women as part of a "journalists of color" delegation. In 1997, she testified before the U.S. Commission on Civil Rights on the impact of inaccurate and biased news coverage of the campaign finance hearings that depicted Asian American political participation as

foreign influence peddling and helped author a complaint to the Commission against U.S. Congress, the Democratic and Republican National Committees, and the news media. In 2008 she was one of two Americans to be an eternal flame torch-bearer in North America prior to the 2008 Summer Olympics in Beijing. In 2010, Zia testified for the plaintiffs on the constitutionality of California Proposition 8—which banned same-sex marriage in the state after the California Supreme Court approved it.

In 1998, the Organization of Chinese Americans recognized Helen as the Chinese American Journalist of the Year. In 1999, *A Magazine* named her one of the most influential Asians in America. Zia received an honorary Doctor of Laws degree from the Law School of the City University of New York. She is the first recipient of the Suzanne Ahn Journalism Award for Civil Rights and Social Justice, which recognizes excellence in the coverage of civil rights and social justice issues facing Asian American and Pacific Islanders. She is an Expert Fellow on Racial Justice with University of Southern California's Institute for Justice and Journalism at the Annenberg School of Journalism, and was a Writer/Scholar-in-Residence at New York University's Asian/Pacific/Institute in 2004–2005. She was the host of the prestigious Gracie Allen Award winning radio pilot, *As I Am: Asians in America*, a joint effort between the Institute for Asian American Studies at the University of Massachusetts, Boston and WUMB Public Radio in Boston. From August 2007—March 2008, she was a Fulbright Scholar in Shanghai, China for a project on mass migration from Shanghai in 1949.

Zia served as executive editor of *Who's Who Among Asian Americans* (1994) and *Notable Asian Americans* (1995). She is the author of *Asian American Dreams: The Emergence of an American People* (2000). She is coauthor, with Wen Ho Lee of, *My Country Versus Me: The First Hand Account by the Los Alamos Scientist Who Was Falsely Accused* (2002). She is currently working on a new book on the mass exodus from Shanghai during the Communist Revolution.

Zia lives in Oakland with her partner, Lia Shigemura. The couple has been married since 2004.

1. Excerpts from Naturalization Laws (1790, 1870)

These two laws established principles for naturalization from the late eighteenth century to mid-twentieth century. The 1790 act defined eligibility for naturalization in terms of both race and class, granting the right to only “free” and “white” persons. The 1870 amendment, enacted shortly after the Civil War, extended such right to individuals of African origins. Although the amendment made both white and black individuals eligible to naturalization, it did not address the issue concerning Asians, as the Asian population in the United States was relatively small at the time.

A. Naturalization Law (1790)

Chap. III—*An Act to establish an uniform Rule of Naturalization.* (a)

Section 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That any alien, being a free white person, who shall have resided within the limits and under the jurisdiction of the United States for the term of two years, may be admitted to become a citizen thereof, on application to any common law court of record, in any one of the states where in he shall have resided for the term of one year at least, and making proof to the satisfaction of such court, that he is a person of good character, and taking the oath or affirmation prescribed by law, to support the constitution of the United States, which oath or affirmation such court shall administer; and the clerk of such court shall record such application, and the proceedings thereon; and thereupon such person shall be considered as a citizen of the United States. And the children of such persons so naturalized, dwelling within the United States, being under the age of twenty-one years at the time of such naturalization, shall also be considered as citizens of the United States. And the children of citizens of the United States, that may be born beyond sea, or out of the limits of the United States, shall be considered as natural born citizens: *Provided,* That the right of citizenship shall not descend to persons whose fathers have never been resident in the United States: *Provided also,* That no person heretofore

proscribed by any state, shall be admitted a citizen as a foresaid, except by an act of the legislature of the state in which such person was proscribed. (a)

B. Naturalization Law (1870)

An Act to amend the Naturalization Laws and to punish Crimes against the same, and for other Purpose.

Sec. 7. *And be it further enacted,* That the naturalization laws are hereby extended to aliens of African nativity and to persons of African descent.

Source: 16 Stat. 254, Act of July 14, 1870.

2. Excerpts from the Foreign Miners Tax (1850)

The California gold rush triggered an emigration around the world. The number of miners from China and Mexico were especially large. The Foreign Miner’s Tax, passed by the California legislature in 1850 and amended in 1852, was to cut into their earnings. The law levied a monthly \$20 tax on each foreign miner. Tax collectors went after the Chinese and Mexican miners aggressively, forcing them to pay more than once in some cases. Enforcement of the law encouraged attacks and robbery of Chinese in the gold fields. As a result many Chinese were driven off good claims.

1850 California Foreign Miners Tax
Passed April 13, 1850

S1. No person who is not a native or natural born citizen of the United States, or who may not have become a citizen under the treaty of Guadalupe Hidalgo (all native California Indians excepted), shall be permitted to mine in any part of this State, without having first obtained a license so to do according to the provisions of this Act . . .

S6. Every person required by the first section of this Act to obtain a license to mine, shall apply to the Collector of Licenses to foreign miners, and take out a licenses to mine, for which he shall pay the sum of twenty dollars per month . . .

Source: Act of Apr. 13, 1850, ch. 97, 1, 5, 1850 Cal. Stat. 221.

3. *An Analysis of the Chinese Question* (1852)

In 1852, anti-Chinese agitation arouse in mining camps. The Chinese were initially welcomed by the state of California. In 1851, Governor John McDougall proclaimed the Chinese as “one of the most worthy classes of our newly adopted citizens.” But in April 1852, new Governor John Bigler sent a special message to the state legislature, proposing discriminatory measures to impose economic hardship on the Chinese and to check the tide of immigration. The following is a response of the Chinese to the Governor.

Sir: The Chinamen have learned with sorrow that you have published a message against them. Although we are Asiatics, some of us have been educated in American schools and have learned your language, which has enabled us to read your message in the newspapers for ourselves, and to explain it to the rest of our countrymen. We have all thought a great deal about, and after consultation with one another, we have determined to write you as decent and respectful a letter as we could, pointing out to your Excellency some of the errors you have fallen into about us.

You speak of the Chinamen as “Coolies,” and, in some sense, the word is applicable . . . but not in that in which you seem to use it. “Cooly” is not a Chinese word: it has been imported into China from foreign parts, as it has been into this country. What its original signification was, we do not know; but with us it means a common laborer, and nothing more. We have never known it used among us as a designation of a class, such as you have in view—persons bound to labor under contracts which they can be forcibly compelled to comply with . . . If you mean by “Coolies,” laborers, many of our countrymen in the mines are “Coolies,” and many again are not. There are among them tradesmen, mechanics, gentry, and school masters . . . None are “Coolies,” if by that you mean bound men or contract slaves.

The Chinamen are indeed remarkable for their love of their country. . . . They honor their parents and age generally with a respect like religion, and have the deepest anxiety to provide for their descendants . . . With such feelings as these, many return home with their

money. . . . But not all; others—full as many as of other nations—invest their gains in merchandise and bring it into the country and sell it at your markets. It is possible, sir, that you may not be aware how great this trade is, and how rapidly it is increasing, and how many are now returning to California as merchants who came over originally as miners.

Every five years there is a curious sort of mule caravan seen meandering up and down the mining streams of California, where Chinamen are to be found. It is a quiet train. . . . In this train or caravan the drivers do not shout or scream. The mules, it always seemed to me, do not even bray. This caravan travels almost always at night, and it is driven and managed almost together by Chinamen. . . . These mules, both in coming in and going out of a camp, are loaded with little beech-wood boxes of about three feet in length and one foot square. . . . This is the caravan of the dead.

4. Excerpt from *People v. Hall* (1854)

Although George Hall was convicted for the murder of a Chinese in 1853, the following court ruling from the California Supreme Court reversed the conviction, arguing that the conviction was based on evidence given by Chinese witnesses. This ruling barred Chinese testimony against white people in criminal court. As a result violence against the Chinese escalated.

Mr. Ch. J. Murray delivered the opinion of the Court. Mr. J. Heydenfeldt concurred.

The appellant, a free white citizen of this State, was convicted of murder upon the testimony of Chinese witnesses.

The point involved in this case is the admissibility of such evidence.

The 394th section of the Act Concerning Civil Cases provides that no Indian or Negro shall be allowed to testify as a witness in any action or proceeding in which a white person is a party.

The 14th section of the Act of April 16th, 1850, regulating Criminal Proceedings, provides that “No black or mulatto person, or Indian, shall be allowed to give evidence in favor of, or against a white man.”

The true point at which we are anxious to arrive is, the legal signification of the words, “black, mulatto, Indian, and white person,” and whether the Legislature adopted them as generic terms, or intended to limit their application to specific types of the human species. . . .

The Act of Congress, in defining that description of aliens may become naturalized citizens, provides that every “free white citizen,” etc. . . .

If the term “white,” as used in the Constitution, was not understood in its generic sense as including the Caucasian race, and necessarily excluding all others, where was the necessary of providing for the admission of Indians to the privilege of voting, by special legislation?

We are of the opinion that the words “white,” “Negro,” “mulatto,” “Indian,” and “black person,” wherever they occur in our Constitution and laws, must be taken in their generic sense, and that, even admitting the Indian of this continent is not of the Mongolian type, that the words “black person,” in the 14th section, must be taken as contradistinguished from white, and necessary excludes all races other than the Caucasian.

We have carefully considered all the consequences resulting from a different rule of construction, and are satisfied that even in a doubtful case, we would be impelled to this decision on ground of public policy.

The same rule which would admit them to testify, would admit them to all the equal rights of citizenship, and we might soon see them at the polls, in the jury box, upon the bench, and in our legislative halls.

This is not a speculation which exists in the excited and overheated imagination of the patriot and statesman, but it is an actual and present danger.

The anomalous spectacle of a distinct people, living in our community, recognizing no laws of this State, except through necessity, bringing with them their prejudices and national feuds, in which they indulge in open violation of law; whose mendacity is proverbial; a race of people whom nature has marked as inferior, and who are incapable of progress or

intellectual development beyond a certain point, as their history has shown; differing in language, opinions, color, and physical conformation; between whom and ourselves nature has placed an impassable difference, is now presented, and for them is claims, not only the right to swear away the life of a citizen, but the further privilege of participating with us in administering the affairs of our Government.

These facts were before the Legislature that framed this Act, and have been known as matters of public history to every subsequent Legislature.

There can be no doubt as to the intention of Legislature, and that if it had ever been anticipated that this class of people were not embraced in the prohibition, then such specific words would have been employed as would have put the matter beyond any possible controversy.

For these reasons, we are of opinion that the testimony was inadmissible.

The judgment is reversed and the cause remanded.

5. Excerpt from Derivative Citizenship and Married Women Law (1855)

This nationality law established the principle of derivative citizenship. Accordingly, a child born abroad of an American father could gain both admission to and citizenship of the United States, but the law prevented children from deriving citizenship from their mothers. The law also granted foreign women the right to naturalization upon marriage to an American citizen. Both provisions had significant impact on the immigration of Asians to the United States.

Chapter LXXI—An Act to secure the Right of Citizenship to Children of Citizens of the United States born out of the Limits thereof.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That persons heretofore born, or hereafter to born, out of the limits and jurisdiction of the United States, whose fathers were or shall be at the time of their birth citizens of the United States,

shall be deemed and considered and are hereby declared to be citizens of the United States: *Provided, however,* That the rights of citizenship shall not descend to persons whose fathers never resided in the United States.

Sec. 2. *And be it further enacted,* That any woman who might lawfully be naturalized under the existing laws, married, or who shall be married to a citizen of the United States, shall be deemed and taken to be a citizen.

Source: 10 Stat. 604, February 10, 1855.

6. Excerpt from the Burlingame Treaty (1868)

In 1868, the United States and China reached a mutual agreement known as the Burlingame Treaty. In addition to many provisions that secured privileges for Americans in China, the treaty established mutual obligations between China and the United States for migration. Both countries were to recognize the inalienable human right to change domiciles and allegiance, as well as the mutual advantage of free migration. It also granted Chinese people residing in the United States the same privileges, immunities, and exemptions enjoyed by the citizens or subjects of the most favored nations. These provisions were renegotiated in 1880, paving the way for Chinese exclusion.

Article V. The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively from the one country to the other, for purposes of curiosity, of trade, or as permanent residents. The high contracting parties, therefore, join in reprobating any other than an entirely voluntary emigration for these purposes. They consequently agree to pass laws making it a penal offence for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or citizen of the United States to take citizens of the United States to

China or to any other foreign country, without their free and voluntary consent respectively.

Article VI. Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. And, reciprocally, Chinese subjects visiting or residing in the United States, shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation. But nothing herein contained shall be held to confer naturalization upon citizens of the United States in China, nor upon the subjects of China in the United States.

Article VII. Citizens of the United States shall enjoy all the privileges of the public education institutions under the control of the government of China, and, reciprocally, Chinese subjects shall enjoy all the privileges of the public education institutions under the control of the government of the United States, which are enjoyed in the respective countries by the citizen or subjects of the most favored nation. The citizens of the United States may freely establish and maintain schools within the Empire of China at those places where foreigners are by treaty permitted to reside, and reciprocally, Chinese subjects may enjoy the same privileges and immunities in the United States.

See also Burlingame Treaty of 1868

7. Excerpt from the Page Law (1875)

Enacted in 1875, the Page Law forbade the entry of Chinese, Japanese, and Mongolian contract laborers, prostitutes, and felons. With the collaboration of American consuls in Hong Kong, the law was strictly enforced. The law not only put end to the traffic of contract laborers and prostitutes, but it also made it extremely difficult for the wives of Chinese immigrants to come to the United States.

Chap. 141. That in determining whether the immigration of any subject of China, Japan, or any Oriental

country, in the United States, is free and voluntary, . . . it shall be the duty of the consolingeneral or consul of the United States . . . to ascertain whether such immigrant has entered into a contract or agreement for a term of service within the United States, for lewd and immoral purposes . . .

Sec. 3. That the importation into the United States of women for the purposes of prostitution is hereby forbidden . . .

Sec. 5. That it shall be unlawful for aliens of the following classes to immigrate into the United States, namely, persons who are undergoing a sentence for conviction in their own country of felonious crimes other than political or growing out of or the result of such political offenses, or whose sentence has been remitted on condition of their emigration, and women “imported for the purposes of prostitution.” . . .

8. Excerpts from the Chinese Exclusion Act (1882) and Amendments (1888, 1892, 1902, 1904)

Enacted on May 6, 1882, the Chinese Exclusion Act suspended the immigration of Chinese laborers for 10 years, signifying the beginning of a 61-year-long exclusion era. For the first time in the history of the United States, the federal government barred the entry of a group of people on the basis of race. The law also officially categorized Chinese as “aliens ineligible to citizenship.” Under the 1880 treaty obligations, Chinese teachers, students, merchants, tourists, and their servants, as well as diplomats were exempted from the restriction. The Chinese Exclusion Act was amended several times to add more restrictions and close loopholes. An 1884 amendment required certificates for Chinese to re-enter; the 1888 amendment voided all such certificates; an 1892 amendment extended the exclusion for another 10 years and required Chinese immigrants to carry certificates of residence; a 1902 amendment extended exclusion for another 10 years; a 1904 amendment made Chinese exclusion permanent. All Chinese exclusion acts will be repealed in 1943.

A. The 1882 Chinese Exclusion Act

Chap. 126.—*An act to execute certain treaty stipulations relating to Chinese*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the expiration of ninety days next after the passage of this act, and until the expiration of ten years next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is hereby, suspended; and during such suspension it shall not be lawful for any Chinese laborer to come, or, having so come after the expiration of said ninety days, to remain within the United States.

Sec. 6. That in order to the faithful execution of articles one and two of the treaty in this act before mentioned, every Chinese person other than a laborer who may be entitled by said treaty and this act to come within the United States, and who shall be about to come to the United States, shall be identified as so entitled by the Chinese Government in each case, such identity to be evidenced by a certificate issued under the authority of said government, which certificate shall be in the English language or (if not in English language) accompanied by a translation into English, stating such right to come, and which certificate shall state the name, title, or official rank, if any, the age, height, and all physical peculiarities, former and present occupation or profession, and place of residence in China of the person to whom the certificate is issued and that such person is entitled conformably to the treaty in this act mentioned to come within the United States. Such certificate shall be prima-facie evidence of the fact set forth therein, and shall be produced to the collector of customs, or his deputy, of the port in the district in the United States at which the person named therein shall arrive.

Sec. 13. That this act shall not apply to diplomatic and other officers of the Chinese Government traveling upon the business of that government, whose credentials shall be taken as equivalent to the certificate in this act mentioned, and shall exempt them and their body and household servants from the provisions of this act as to other Chinese persons.

Sec. 14. That hereafter no State court or court of the United States shall admit Chinese to citizenship; and all laws in conflict with this act are hereby repealed.

Source: 22 Stat. 58, Act of May 6, 1882.

B. The 1888 Amendment (Scott Act)

Chap. 1064—*An act of supplement to an act entitled “An act to execute certain treaty stipulations relating to Chinese,” approved the sixth day of May eighteen hundred and eighty-two.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act, it shall be unlawful for any Chinese laborer who shall at any time heretofore have been, or who may now or hereafter be, a resident within the United States, and shall not have returned before the passage of this act, to return to, or remain in, the United States.

Sec. 2. That no certificates of identity provided for in the fourth and fifth sections of the act to which this is a supplement shall hereafter be issued; and every certificate heretofore issued in pursuance thereof, is hereby declared void and of no effect, and the Chinese laborer claiming admission by virtue thereof shall not be permitted to enter the United States.

Source: 25 Stat. 504, Act of October 1, 1888

C. The 1892 Amendment (Geary Act)

Chap. 60.—*An act to prohibit the coming of Chinese persons into the United States*

Be it enacted by the Senate and House of Representative of the United States of America in Congress assembled, That all laws now in force prohibiting and regulating the coming into this country of Chinese persons and persons of Chinese descent are hereby continued in force for a period of ten years from the passage of this act.

Sec. 6. And it shall be the duty of all Chinese laborers within the limits of the United States, at the time of the passage of this act, and who are entitled to remain in the United States, to apply to the collector

of internal revenue of their respective districts, within one year after the passage of this act, for a certificate of residence, and any Chinese laborer, within the limits of the United States, who shall neglect, fail, or refuse to comply with the provisions of this act, or who, after one year from the passage hereof, shall be found within the jurisdiction of the United States without such certificate of residence, shall be deemed and adjudged to be unlawfully within the United States, and may be arrested, by any United States customs official, collector of internal revenue or his deputies, United States marshal or his deputies, and taken before a United States judge, whose duty it shall be to order that he be deported from the United States as hereinbefore provided, unless he shall establish clearly to the satisfaction of said judge, that by reason of accident, sickness or other unavoidable cause, he has been unable to procure his certificate, and to the satisfaction of said judge, that by reason of accident, sickness or other unavoidable cause, he has been unable to procure his certificate, and to the satisfaction of the court, and by at least one credible white witness, that he was a resident of the United States at the time of the passage of this act; and if upon the hearing it shall appear that he is so entitled to a certificate, it shall be granted upon his paying the cost. Should it appear that said Chinaman had procured a certificate which has been lost or destroyed, he shall be detained and judgment suspended a reasonable time to enable him to produce a duplicate from the officer granting it, and in such cases, the cost of said arrest and trial shall be in the discretion of the court. And any Chinese person other than a Chinese laborer, having a right to be and remain in the United States, desiring such certificate as evidence of such right may apply for and receive the same without charge.

Source: 27 Stat. 25, Act of May 5, 1892.

D. The 1902 Amendment

Chap. 641.—*An Act To prohibit the coming into and to regulate the residence within the United States, its Territories, and all territory under its jurisdiction, and the District of Columbia, of Chinese persons of Chinese descent.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all laws now in force prohibiting and regulating the coming of Chinese persons, and persons of Chinese descent . . . be, and the same are hereby, re-enacted, extended, and continued so far as the same are inconsistent with treaty obligations, until otherwise provided by law, and said laws shall also apply to the island territory under the jurisdiction of the United States, and prohibit the immigration of Chinese laborers, not citizens of the United States, from such island territory to the mainland territory of the United States. . . .

E. The 1904 Amendment

Sec. 5. That section one of the Act of Congress approved April twenty-ninth, nineteen hundred and two, entitled “An Act to prohibit the coming into and to regulate the residence within the United States, its Territories, and all territory under its jurisdiction, and the District of Columbia, of Chinese and persons of Chinese descent” is hereby amended so as to read as follows:

“All laws in force on the twenty-ninth day of April, nineteen hundred and two, regulating, suspending, or prohibiting the coming of Chinese persons or persons of Chinese descent into the United States . . . are hereby, reenacted, extended, and continued, without modification, limitation, or condition: and said laws shall also apply to the island territory under the jurisdiction of the United States, and prohibit the immigration of Chinese laborers, not citizens of the United States, from such island territory to the mainland territory of the United States . . .

9. Excerpt from the Case of the Chinese Wife: *In re Ah Moy* (1884)

This was one of the two early court cases that denied the entry of labor’s wife during the exclusion. Ah Moy’s husband, Too Cheong, visited China in 1883

and married Ah Moy during the trip. When the couple came to the United States, Too Cheong presented his certificate for reentry by the collector of the port and was admitted, but Ah Moy’s entry was denied. The Federal Circuit Court for the District of California decided that a woman should be accorded laborer’s status upon her marriage to a laborer even if she had never worked outside the home.

SAWYER, J. In my judgment, this case presents one of the most important questions that can arise under the Chinese restriction act. It is, whether a Chinese laborer, who was residing in the United States on November 17, 1880, or who subsequently came to the country before August 4, 1882, and who has since returned to China under such conditions as entitle him to re-enter the United States, is entitled to bring into the United States with him, on his return, his wife, who has never before been in the country, and who, therefore, has no other right to enter than that derived from her *status* as wife of a Chinese laborer entitled to enter; that is to say, a right to enter by virtue of a right pertaining to the husband alone, and not as an independent, individual, personal right of her own. If such Chinese laborer has a right to bring into the country with him a wife who has never been here before, he must, upon similar grounds, be entitled to bring with him all his minor children; and, under this right, the number of Chinese laborers who are entitled to come to the United States will be greatly extended beyond the number who can enter by virtue of their own individual rights. The question is also presented whether the wife of a Chinese laborer, who was not herself a Chinese laborer *in fact* before and down to the time of her marriage, by the act of marriage takes the *status* of the husband, and becomes, in contemplation of law, one of the class intended to be excluded, and as such is excluded, unless she can enter by virtue of the right pertaining to her husband. The construction of the statute upon the points stated is more doubtful, to my mind, than that of any other point raised under the act upon which I have been called to pass. As there is no appeal from the decision of this court, and as the question is one of the greatest importance, both to the Chinese laborers entitled to be in the United States and to the people of this country, the case was also

reserved and ordered to be reargued before the circuit justice. Upon the first argument, the conclusion I reached, after considerable reflection, was that the husband is not entitled to bring his wife into the country, she being in fact a Chinese laborer, and never having been here before; and that, upon the marriage of the petitioner in this case with a Chinese laborer, she took upon herself the *status* of the husband as one of the *class* who are not now permitted to enter the United States, without reference to her former *status*. Upon further argument and consideration, the view before taken is confirmed. . . .

10. Excerpt from *Yick Wo v. Hopkins* (1886)

In this landmark case, the U.S. Supreme Court ruled that a law that divided businesses (laundries) into two classes was a denial of equal protection under the law as guaranteed by the Fourteenth Amendment. It held that the Fourteenth Amendment provided protections to not only all citizens, but all aliens. In the court's view, a law that could be applied in a discriminatory manner, even though it might be neutral on its face, was a violation of the equal protection clause in the Fourteenth Amendment.

MR. JUSTICE MATTHEWS delivered the opinion of the court.

In the case of the petitioner, brought here by writ of error to the Supreme Court of California, our jurisdiction is limited to the question, whether the plaintiff in error has been denied a right in violation of the Constitution, laws, or treaties of the United States. The question whether his imprisonment is illegal, under the constitution and laws of the State, is not open to us. And although that question might have been considered in the Circuit Court in the application made to it, and by this court on appeal from its order, yet judicial propriety is best consulted by accepting the judgment of the State court upon the points involved in that inquiry.

That, however, does not preclude this court from putting upon the ordinances of the supervisors of the

county and city of San Francisco an independent construction; for the determination of the question whether the proceedings under these ordinances and in enforcement of them are in conflict with the Constitution and laws of the United States, necessarily involves the meaning of the ordinances, which, for that purpose, we are required to ascertain and adjudge.

The ordinance drawn in question in the present case is of a very different character. It does not prescribe a rule and conditions for the regulation of the use of property for laundry purposes, to which all similarly situated may conform. It allows without restriction the use for such purposes of buildings of brick or stone; but, as to wooden buildings, constituting nearly all those in previous use, it divides the owners or occupiers into two classes, not having respect to their personal character and qualifications for the business, nor the situation and nature and adaptation of the buildings themselves, but merely by an arbitrary line, on one side of which are those who are permitted to pursue their industry by the mere will and consent of the supervisors, and on the other those from whom that consent is withheld, at their mere will and pleasure. And both classes are alike only in this, that they are tenants at will, under the supervisors, of their means of living. The ordinance, therefore, also differs from the not unusual case, where discretion is lodged by law in public officers or bodies to grant or withhold licenses to keep taverns, or places for the sale of spirituous liquors, and the like, when one of the conditions is that the applicant shall be a fit person for the exercise of the privilege, because in such cases the fact of fitness is submitted to the judgment of the officer, and calls for the exercise of a discretion of a judicial nature.

The rights of the petitioners, as affected by the proceedings of which they complain, are not less, because they are aliens and subjects of the Emperor of China. By the third article of the treaty between this Government and that of China, concluded November 17, 1880, 22 Stat. 827, it is stipulated: "If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill treatment at the hands any other persons, the Government of the United States will exert all its powers to devise measures for their protection, and to secure to them the same rights,

privileges, immunities and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.”

The Fourteenth Amendment to the Constitution is not confined to the protection of citizens. It says: “Nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.” These provisions are universal in their application, to all persons within the territorial jurisdiction, without regard to any differences of race, of color, or of nationality; and the equal protection of the laws is a pledge of the protection of equal laws. It is accordingly enacted by 1977 of the Revised Statutes, that “all persons within the jurisdiction of the United States shall have the same right in every State and Territory to make and enforce contracts, to sue, be parties, give evidence, and to the full and equal benefit of all laws and proceedings for the security of persons and property as is enjoyed by white citizens and shall be subject to like punishment, pains, penalties, taxes, licenses, and exactions of every kind, and to no other.” The questions we have to consider and decide in these cases, therefore, are to be treated as involving the rights of every citizen of the United States equally with those of the strangers and aliens who now invoke the jurisdiction of the court.

It is contended on the part of the petitioners, that the ordinances for violations of which they are severally sentenced to imprisonment, are void on their face, as being within the prohibitions of the Fourteenth Amendment; and, in the alternative, if not so, that they are void by reason of their administration, operating unequally, so as to punish in the present petitioners what is permitted to others as lawful, without any distinction of circumstances—an unjust and illegal discrimination, it is claimed, which, though not made expressly by the ordinances is made possible by them.

When we consider the nature and the theory of our institutions of government, the principles upon which they are supposed to rest, and review the history of their development, we are constrained to conclude that they do not mean to leave room for the play and action of purely personal and arbitrary power. Sovereignty itself is, of course, not subject to law, for it is the author and source of law; but in our system, while

sovereign powers are delegated to the agencies of government, sovereignty itself remains with the people, by whom and for whom all government exists and acts. And the law is the definition and limitation of power. It is, indeed, quite true, that there must always be lodged somewhere, and in some person or body, the authority of final decision; and in many cases of mere administration the responsibility is purely political, no appeal lying except to the ultimate tribunal of the public judgment, exercised either in the pressure of opinion or by means of the suffrage. But the fundamental rights to life, liberty, and the pursuit of happiness, considered as individual possessions, are secured by those maxims of constitutional law which are the monuments showing the victorious progress of the race in securing to men the blessings of civilization under the reign of just and equal laws, so that, in the famous language of the Massachusetts Bill of Rights, the government of the commonwealth “may be a government of laws and not of men.” For, the very idea that one man may be compelled to hold his life, or the means of living, or any material right essential to the enjoyment of life, at the mere will of another, seems to be intolerable in any country where freedom prevails, as being the essence of slavery itself.

There are many illustrations that might be given of this truth, which would make manifest that it was self-evident in the light of our system of jurisprudence. The case of the political franchise of voting is one. Though not regarded strictly as a natural right, but as a privilege merely conceded by society according to its will, under certain conditions, nevertheless it is regarded as a fundamental political right, because preservative of all rights.

This conclusion, and the reasoning on which it is based, are deductions from the face of the ordinance, as to its necessary tendency and ultimate actual operation. In the present cases we are not obliged to reason from the probable to the actual, and pass upon the validity of the ordinances complained of, as tried merely by the opportunities which their terms afford, of unequal and unjust discrimination in their administration. For the cases present the ordinances in actual operation, and the facts shown establish an administration directed so exclusively against a particular class of persons as to warrant and require the

conclusion, that, whatever may have been the intent of the ordinances as adopted, they are applied by the public authorities charged with their administration, and thus representing the State itself, with a mind so unequal and oppressive as to amount to a practical denial by the State of that equal protection of the laws which is secured to the petitioners, as to all other persons, by the broad and benign provisions of the Fourteenth Amendment to the Constitution of the United States. Though the law itself be fair on its face and impartial in appearance, yet, if it is applied and administered by public authority with an evil eye and an unequal hand, so as practically to make unjust and illegal discriminations between persons in similar circumstances, material to their rights, the denial of equal justice is still within the prohibition of the Constitution.

The present cases, as shown by the facts disclosed in the record, are within this class. It appears that both petitioners have complied with every requisite, deemed by the law or by the public officers charged with its administration, necessary for the protection of neighboring property from fire, or as a precaution against injury to the public health. No reason whatever, except the will of the supervisors, is assigned why they should not be permitted to carry on, in the accustomed manner, their harmless and useful occupation, on which they depend for a livelihood. And while this consent of the supervisors is withheld from them and from two hundred others who have also petitioned, all of whom happen to be Chinese subjects, eighty others, not Chinese subjects, are permitted to carry on the same business under similar conditions. The fact of this discrimination is admitted. No reason for it is shown, and the conclusion cannot be resisted, that no reason for it exists except hostility to the race and nationality to which the petitioners belong, and which in the eye of the law is not justified. The discrimination is, therefore, illegal, and the public administration which enforces it is a denial of the equal protection of the laws and a violation of the Fourteenth Amendment of the Constitution . . .

11. Excerpt from *United States v. Wong Kim Ark (1898)*

In this landmark case, the Chinese immigrant community won a major victory, gaining entry right for U.S.-born Chinese. After the enactment of the Scott Act in 1888, immigration authorities canceled all re-entry certificates previously issued by the government. Immigrants who had left could no longer return to the United States. Wong was born in San Francisco in 1871. When immigration officials blocked his entry after his trip to China, he took his case to court. The Supreme Court ruled in his favor, holding that the U.S. citizenship, entitled by anyone born in the United States, was protected by the Fourteenth Amendment. This decision established an important principle of the U.S. Constitution. It allowed many Chinese to gain entry as U.S. citizens or children of the citizens during the Chinese exclusion.

Appeal from the District Court of the United States for the Northern District of California.

Mr. Justice Gray, after stating the case, delivered the opinion of the court.

The facts of this case, as agreed by the parties, are as follows: Wong Kim Ark was born in 1873 in the city of San Francisco, in the State of California and United States of America, and was and is a laborer. His father and mother were persons of Chinese descent, and subjects of the Emperor of China; they were at the time of his birth domiciled residents of the United States, having previously established and still enjoying a permanent domicile and residence therein at San Francisco; they continued to reside and remain in the United States until 1890, when they departed for China; and during all the time of their residence in the United States they were engaged in business, and were never employed in any diplomatic or official capacity under the Emperor of China. Wong Kim Ark, ever since his birth, has had but one residence, to wit, in California, within the United States, and has there resided, claiming to be a citizen of the United States, and has never lost or changed that residence, or gained or acquired another residence; and neither he, nor his parents acting for him, ever

renounced his allegiance to the United States, or did or committed any act of thing to exclude him therefrom. In 1890 (when he must have been about seventeen years of age) he departed for China on a temporary visit and with the intention of returning to the United States, and did return thereto by sea in the same year, and was permitted by the collector of customs to enter the United States, upon the sole ground that he was a native-born citizen of the United States. After such return, he remained in the United States, claiming to be a citizen thereof, until 1894, when he (being about twenty-one years of age, but whether a little above or a little under that age does not appear) again departed for China on a temporary visit and with the intention of returning to the United States; and he did return thereto by sea in August, 1895, and applied to the collector of customs for permission to land; and was denied such permission, upon the sole ground that he was not a citizen of the United States.

It is conceded that if he is a citizen of the United States, the acts of Congress, known as the Chinese Exclusion Acts, prohibiting persons of the Chinese race, and especially Chinese laborers, from coming into the United States, do not and cannot apply to him.

The question presented by the record is whether a child born in the United States, of parents of Chinese descent, who, at the time of his birth, are subjects of the Emperor of China, but have a permanent domicile and residence in the United States, and are there carrying on business, and are not employed in any diplomatic or official capacity under the Emperor of China, becomes at the time of his birth a citizen of the United States, by virtue of the first clause of the Fourteenth Amendment of the Constitution, "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."

VI. . . . The fact, therefore, that acts of Congress or treaties have not permitted Chinese persons born out of this country to become citizens by naturalization, cannot exclude Chinese persons born in this country from the operation of the broad and clear words of the Constitution, "All persons born in the United States, and subject to the jurisdiction thereof, are citizens of the United States."

VII. Upon the facts agreed in this case, the American citizenship which Wong Kim Ark acquired by birth within the United States has not been lost or taken away by anything happening since his birth. . . .

12. Excerpt from *Tsoi Sim v. United States* (1902)

In this case, the Circuit Court of Appeals for the Ninth Circuit ruled in favor of the Chinese appellant, holding that an alien Chinese wife of an American citizen was entitled to reside with her husband, because her husband, a citizen of the United States, should be entitled to greater rights and privileges than an alien merchant.

HAWLEY, District Judge delivered the opinion of the court.

Appellant was arrested upon a complaint charging her with being "a Chinese manual laborer now within the limits of the Northern district of California aforesaid, without the certificate of residence required by the act of congress entitled 'An act to prohibit the coming of Chinese persons into the United States,' approved May 5, 1892, and the act amendatory thereof, approved November 3, 1893."

The case was heard before United States Commissioner Heacock, who found "that the said Tsoi Sim is a Chinese manual laborer, and was born in, and is a subject of, the empire of China; that she was found within the limits of the United States, to wit, in the city and county of San Francisco, in the Northern district of California, on the 20th day of April, A.D. 1901; and that when she was so found, as aforesaid, she was without the certificate of residence required by said acts; and she has not clearly established that by reason of accident, sickness, or other unavoidable cause she has been unable to procure such certificate"; and ordered her to be deported from the United States to the country from whence she came, to wit, China. The district court affirmed the judgment of deportation, and from this judgment an appeal is taken to this

court. The case was heard upon a stipulation as to the facts, which, together with the statute under which the order of deportation was made, is set forth in the foregoing statement of facts.

It will, for the purposes of this opinion, be conceded that, if the arrest of appellant had been made and hearing had prior to the time of her marriage to a citizen of the United States, she would not have been entitled to remain in this country. Does the fact that appellant was lawfully married to a citizen of the United States, prior to her arrest, change her status so as to make her residence here, thereafter, lawful? . . .

Appellant did not come to this country fraudulently, or in violation of any law. She did not get married in order to evade deportation. Her marriage was not fraudulent, but lawful, and in accordance with the usages and customs of our law. Whatever effect her error of omission in failing, during a few years of her infancy, to obtain a certificate of registration, if any she was entitled to, it certainly did not deprive her of the right to marry an American citizen lawfully domiciled in this country. This she did. By this act, her status was changed from that of a Chinese laborer to that of a wife of a native born American. Her husband is not before the court, but his rights, as well as hers, are involved. The law is well settled that one born in the United States of Chinese parents who were permanently domiciled here, though an alien, is a citizen of the United States, and cannot be excluded therefrom, or denied the right of entry. It being the law that the wife and children of a Chinese merchant are permitted to remain in this country because the domicile of the wife and children is that of the husband and father, as was expressly held in *Re Chung Toy Ho*, and approved by the supreme court in *U.S. v. Gue Lim*, supra, upon what method of legal reasoning can it be held that the wife of an American citizen is not entitled to the same "rights, privileges, and immunities" under the law? The Chinese merchant does not stand upon a higher plane than the Chinaman who is born of parents, of Chinese descent, having a permanent domicile and residence in the United States. On the contrary, the native born, by virtue of his birth, becomes a citizen of the United States, and is entitled to greater rights and privileges than the alien merchant. The wife has the right to live with her husband; enjoy his society; receive his

support and maintenance and all the comforts and privileges of the marriage relations. These are her, as well as his, natural rights. By virtue of her marriage, her husband's domicile became her domicile, and thereafter she was entitled to live with her husband, and remain in this country . . .

13. Excerpt from the Expatriate Act of 1907

This law stipulates that American women's nationality should accord to that of her husband, which became the basis for the 1922 Cable Act.

An Act In reference to the expatriation of citizens and their protection abroad

Sec. 2. That any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign state in conformity with its laws, or when he has taken an oath of allegiance to any foreign state.

Sec. 3. That any American woman who marries a foreigner shall take the nationality of her husband. At the termination of the marital relation she may resume her American citizenship, if abroad, by registering as an American citizen within one year with a consul of the United States, or by returning to reside in the United States, or, if residing in the United States at the termination of the marital relation, by continuing to reside therein.

14. Excerpt from the Gentlemen's Agreement (1907)

The Gentlemen's Agreement was a series of notes exchanged between the United States and Japan in 1907. It was responding to the anti-Japanese agitation in San Francisco, which demanded to end Japanese immigration. The incident began in 1906, when the San Francisco school board tried to send children of Japanese immigrants to the segregated school for Chinese. Because Japan had emerged as a military

power in Asia and the Pacific, the United States did not exclude Japanese legislatively. Under agreement with the Japanese government, Japanese entry routes from Mexico, Canada, and Hawaii into the U.S. mainland were shut down, and Tokyo limited the issuance of passports to the United States to only specific classes of individuals. President Theodore Roosevelt agreed to urge the city of San Francisco to allow children of Japanese parents to attend regular public schools. The agreement effectively prevented Japanese from migrating to the United States.

Gentleman's Agreement (14 March 1907)

Whereas, by the act entitled "An Act to regulate the immigration of aliens into the United States," approved February 20, 1907, whenever the President is satisfied that passports issued by any foreign government to its citizens to go to any country other than the United States or to any insular possession of the United States or to the Canal Zone, are being used for the purpose of enabling the holders to come to the continental territory of the United States to the detriment of labor conditions therein, it is made the duty of the President to refuse to permit such citizens of the country issuing such passports to enter the continental territory of the United States from such country or from such insular possession or from the Canal Zone;

And Whereas, upon sufficient evidence produced before me by the Department of Commerce and Labor, I am satisfied that passports issued by the Government of Japan to citizens of that country or Korea and who are laborers, skilled or unskilled, to go to Mexico, to Canada and to Hawaii, are being used for the purpose of enabling the holders thereof to come to the continental territory of the United States to the detriment of labor conditions therein;

I hereby order that such citizens of Japan or Korean, to-wit: Japanese or Korean laborers, skilled and unskilled, who have received passports to go to Mexico, Canada or Hawaii, and come therefrom, be refused permission to enter the continental territory of the United States.

It is further ordered that the Secretary of Commerce and Labor be, and he hereby is, directed to take, thru Bureau of Immigration and Naturalization, such

measures and to make and enforce such rules and regulations as may be necessary to carry this order into effect.

15. Poems from Angel Island (1910–1940)

During the Chinese exclusion, the U.S. government established a system of detaining and interrogating Chinese immigration applicants. Between 1910 and 1940, an immigration facility on Angel Island in the San Francisco Bay served as a detention center for immigrants from the other side of the Pacific, most of them came from China. As many as 175,000 Chinese were detained at Angel Island during this time period, where the interrogation and screening process for each individual could take several months or longer. Isolated in prisonlike barracks in a foreign land, the several thousand poems carved on the walls of the detention center, like the three selected ones below, reflected the stress, anguish, and frustrations of the detainees.

1.
I am distressed that we Chinese are detained
in this wooden building.
It is actually racial barriers which cause
difficulties on Yingtai Island.
Even while they are tyrannical, they still
claim to be humanitarian.
I should regret my taking the risks of coming
in the first place.

2.
In the quiet of night, I heard, faintly, the
whistling of wind.
The forms and shadows saddened me; upon
seeing the landscape, I composed a poem.
The floating clouds, the fog, darken the sky.
The moon shines faintly as the insects chirp.

Grief and bitterness entwined are heaven sent.

The sad person sits alone, leaning by a window.

3.

Alas, yellow souls suffer under the brute force of the white race!

Like shouting at a dog which has lost its home, we are forced into jail.

Like a pig chased into a basket, we are sternly locked in.

Our souls languish in a snowy vault; we are really not even the equal of cattle and horses.

16. Excerpt from the Alien Land Law (1913)

First enacted in California in 1913, the Alien Land Law deprived Asians the right to purchase land or lease land for more than three years. The law was amended in 1920, prohibiting Asian aliens to lease land or purchase land through corporations. A 1923 amendment made cropping contracts illegal. Arizona, Washington, Louisiana, New Mexico, Idaho, Montana, Oregon, and Kansas all passed similar laws. These legislations made it difficult for Asian immigrants to make a living in agriculture and had an especially big impact on Japanese Americans.

Chap. 112. Section 1. All aliens eligible to citizenship under the laws of the United States may acquire, possess, enjoy, transmit and inherit real property, or any interest therein, in this state, in the same manner and to the same extent as citizens of the United States, except as otherwise provided by the laws of this state.

Sec. 2. All aliens other than those mentioned in section one of this act may acquire, possess, enjoy and transfer real property, or any interest therein, in this state, in the manner and to the extent and for the purposes prescribed by any treaty now existing

between the government of the United States and the nation or country of which such alien is a citizen or subject, and not otherwise, and may in addition thereto lease lands in this state for agricultural purposes for a term not exceeding three years . . .

17. Excerpt from the Immigration Act (1917)

Also known as the Asiatic Barred Zone Act, this law listed a few dozens of classes of aliens that would be excluded from admission into the United States. The list included “idiots” and “insane” persons, alcoholics, paupers, beggars, persons with contagious disease, prostitutes, and others. Using a geographic criterion, described by degrees of latitude and longitude, this legislation created a so-called barred zone to ban all Asian immigrants. The Chinese were officially excluded after 1882; the Japanese were exempt because of the Gentlemen’s Agreement; the Filipinos were not applicable because they were American nationals. The new law was, therefore, to stop the influx of immigrants from the Indian subcontinent and those from Pacific islands adjacent to Asia.

An Act To regulate the Immigration of aliens to, and the residence of aliens in, the United States.

Sec. 3. That the following classes of aliens shall be excluded from admission into the United States: All idiots, imbeciles, feeble-minded persons, epileptics, insane persons; persons who have had one or more attacks of insanity at any time previously; persons of constitutional psychopathic inferiority; persons with chronic alcoholism; paupers; professional beggars; vagrants; persons afflicted with tuberculosis in any form or with a loathsome or dangerous contagious disease; . . . Prostitutes, or persons coming into the United States for the purpose of protection or for any other immoral purposes . . . persons who are natives of islands not possessed by the United States adjacent to the Continent of Asia, situate south of the twentieth parallel latitude south, or who are natives of any west

of the one hundred and tenth meridian of longitude east from Greenwich and east of the fiftieth meridian of longitude east from Greenwich and south of the fiftieth parallel of latitude north, except that portion of said territory situate between the fiftieth and the sixty-fourth and thirty-eighth parallels of latitude north, and no alien now in any way excluded from, or prevented from entering, the United States shall be admitted to the United States.

18. Excerpt from *Takao Ozawa v. United States* (1922)

In this case, U.S. Supreme Court ruled that Takao Ozawa, a Japanese immigrant, ineligible for naturalization, because he was neither white nor black. The case denied Japanese immigrants the right to naturalization and officially classified them as “alien ineligible to citizenship.”

MR. JUSTICE SUTHERLAND delivered the opinion of the Court.

The appellant is a person of the Japanese race born in Japan. He applied, on October 16, 1914, to the United States District Court for the Territory of Hawaii to be admitted as a citizen of the United States. His petition was opposed by the United States District Attorney for the District of Hawaii. Including the period of his residence in Hawaii, appellant had continuously resided in the United States for twenty years. He was a graduate of the Berkeley, California, High School, had been nearly three years a student in the University of California, had educated his children in American schools, his family had attended American churches and he had maintained the use of the English language in his home. That he was well qualified by character and education for citizenship is conceded.

The District Court of Hawaii, however, held that, having been born in Japan and being of the Japanese race, he was not eligible to naturalization under 2169 of the Revised Statutes, and denied the petition. Thereupon the appellant brought the cause to the Circuit

Court of Appeals for the Ninth Circuit and that court has certified the following questions, upon which it desires to be instructed:

“1. Is the Act of June 29, 1906 (34 Stats. at Large, Part I, Page 596), providing ‘for a uniform rule for the naturalization of aliens’ complete in itself, or is it limited by Section 2169 of the Revised Statutes of the United States?

“2. Is one who is of the Japanese race and born in Japan eligible to citizenship under the Naturalization laws?

“3. If said Act of June 29, 1906, is limited by said Section 2169 and naturalization is limited to aliens being free white persons and to aliens of African nativity and to persons of African descent, is one of the Japanese race, born in Japan, under any circumstances eligible to naturalization?”

These questions for purposes of discussion may be briefly restated:

1. Is the Naturalization Act of June 29, 1906, limited by the provisions of § 2169 of the Revised Statutes of the United States?

2. If so limited, is the appellant eligible to naturalization under that section?

... In 1790 the first Naturalization Act provided that, “Any alien, being a free white person, ... may be admitted to become a citizen, ...” C. 3, 1 Stat. 103. This was subsequently enlarged to include aliens of African nativity and persons of African descent. These provisions were restated in the Revised Statutes, so that 2165 included only the procedural portion, while the substantive parts were carried into a separate section (2169) and the words “An alien” substituted for the words “Any alien.”

In all of the Naturalization Acts from 1790 to 1906 the privilege of naturalization was confined to white persons (with the addition in 1870 of those of African nativity and descent), although the exact wording of the various statutes was not always the same. If Congress in 1906 desired to alter a rule so well and so long established, it may be assumed that its purpose would have been definitely disclosed and its legislation to that end put in unmistakable terms.

... Is appellant, therefore, a “free white person,” within the meaning of that phrase as found in the statute?

On behalf of the appellant it is urged that we should give to this phrase the meaning which it had in the minds of its original framers in 1790 and that it was employed by them for the sole purpose of excluding the black or African race and the Indians then inhabiting this country. It may be true that these two races were alone thought of as being excluded, but to say that they were the only ones within the intent of the statute would be to ignore the affirmative form of the legislation. The provision is not that Negroes and Indians shall be excluded but it is, in effect, that only free white persons shall be included. The intention was to confer the privilege of citizenship upon that class of persons whom the fathers knew as white, and to deny it to all who could not be so classified.

The question then is, Who are comprehended within the phrase “free white persons?” Undoubtedly the word “free” was originally used in recognition of the fact that slavery then existed and that some white persons occupied that status. The word, however, has long since ceased to have any practical significance and may now be disregarded.

We have been furnished with elaborate briefs in which the meaning of the words “white person” is discussed with ability and at length, both from the standpoint of judicial decision and from that of the science of ethnology. It does not seem to us necessary, however, to follow counsel in their extensive researches in these fields. It is sufficient to note the fact that these decisions are, in substance, to the effect that the words import a racial and not an individual test, and with this conclusion, fortified as it is by reason and authority, we entirely agree. Manifestly, the test afforded by the mere color of the skin of each individual is impracticable as that differs greatly among persons of the same race, even among Anglo-Saxons, ranging by imperceptible gradations from the fair blond to the swarthy brunette, the latter being darker than many of the lighter hued persons of the brown or yellow races. Hence to adopt the color test alone would result in a confused overlapping of races and a gradual merging of one into the other, without any practical line of separation. Beginning with the decision of Circuit Judge Sawyer, in *In re Ah Yup*, 5 Sawy. 155 (1878), the federal and state courts, in an almost unbroken line, have held that the words “white person” were meant

to indicate only a person of what is popularly known as the Caucasian race. Among these decisions, see for example: *In re Camille*, 6 Fed. 256; *In re Saito*, 62 Fed. 126; *In re Nian*, 6 Utah, 259; *In re Kumagai*, 163 Fed. 922; *In re Yamashita*, 30 Wash. 234, 237; *In re Ellis*, 179 Fed. 1002; *In re Mozumdar*, 207 Fed. 115, 117; *In re Singh*, 257 Fed. 209, 211–212; and *Petition of Charr*, 273 Fed. 207. With the conclusion reached in these several decisions we see no reason to differ. Moreover, that conclusion has become so well established by judicial and executive concurrence and legislative acquiescence that we should not at this late day feel at liberty to disturb it, in the absence of reasons far more cogent than any that have been suggested.

The determination that the words “white person” are synonymous with the words “a person of the Caucasian race” simplifies the problem, although it does not entirely dispose of it. Controversies have arisen and will no doubt arise again in respect of the proper classification of individuals in border line cases. The effect of the conclusion that the words “white person” mean a Caucasian is not to establish a sharp line of demarcation between those who are entitled and those who are not entitled to naturalization, but rather a zone of more or less debatable ground outside of which, upon the one hand, are those clearly eligible, and outside of which, upon the other hand, are those clearly ineligible for citizenship. Individual cases falling within this zone must be determined as they arise from time to time by what this Court has called, in another connection “the gradual process of judicial inclusion and exclusion.”

The appellant, in the case now under consideration, however, is clearly of a race which is not Caucasian and therefore belongs entirely outside the zone on the negative side. A large number of the federal and state courts have so decided and we find no reported case definitely to the contrary. These decisions are sustained by numerous scientific authorities, which we do not deem it necessary to review. We think these decisions are right and so hold.

The briefs filed on behalf of appellant refer in complimentary terms to the culture and enlightenment of the Japanese people, and with this estimate we have no reason to disagree; but these are matters which

cannot enter into our consideration of the questions here at issue. We have no function in the matter other than to ascertain the will of Congress and declare it. Of course there is not implied—either in the legislation or in our interpretation of it—any suggestion of individual unworthiness or racial inferiority. These considerations are in no manner involved.

19. Excerpt from the Cable Act (1922)

An important reform measure, the Cable Act made American women's nationality right a right of their own regardless of citizenship status of their husbands. This reform measure, however, is limited. Although section 3 of the new law provided that "any woman citizen who married an alien ineligible to citizenship shall cease to be a citizen of the United States," it made women's nationality contingent to the racial status of their husbands. By the time this law was enacted, an "alien ineligible to citizenship" literally meant an alien of Asia origin.

Chap. 411.—*An Act Relative to the naturalization and citizenship of married women.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the right of any woman to become a naturalized citizen of the United States shall not be denied or abridged because of her sex or because she is a married woman.

Sec. 3. That a woman citizen of the United States shall not cease to be a citizen of the United States by reason of her marriage after the passage of this Act, unless she makes a formal renunciation of her citizenship before a court having jurisdiction over naturalization of aliens: *Provided*, That any woman citizen who marries an alien ineligible to citizenship shall cease to be a citizen of the United States. If at the termination of the marital status she is a citizen of the United States she shall retain her citizenship regardless of her residence. If during the continuance of the marital status she resides continuously for two years in a foreign State of which her husband is a citizen or subject,

or for five years continuously outside the United States, she shall thereafter be subject to the same presumption as is a naturalized citizen of the United States under the second paragraph of section 2 of the Act entitled "An Act in reference to the expatriation of citizens and their protection abroad," approved March 2, 1907. Nothing herein shall be construed to repeal or amend the provisions of Revised Statutes 1999 or of section 2 of the Expatriation Act of 1907 with reference to expatriation.

20. Excerpt from the *United States v. Thind* (1923)

In this important case, the U.S. Supreme Court decided that Bhagat Singh Thind, a Sikh immigrant from India, had no right to naturalization. Although as a member of the Aryan family, Thind belonged to the Caucasian race, the court held that he was not white as required in the 1790 naturalization statute. Thind was denaturalized. The ruling thus classified Asian Indians as "alien ineligible to citizenship."

Mr. Justice SUTHERLAND delivered the opinion of the Court.

"1. Is a high caste Hindu of full Indian blood, born at AmritSar, Punjab, India, a white person within the meaning of section 2169, Revised Statutes?" "2. Does the act of February 5, 1917 (39 Stat. L. 875, section 3) disqualify from naturalization as citizens those Hindus, now barred by that act, who had lawfully entered the United States prior to the passage of said act?"

The appellee was granted a certificate of citizenship by the District Court of the United States for the District of Oregon, over the objection of the Naturalization Examiner for the United States. A bill in equity was then filed by the United States, seeking a cancellation of the certificate on the ground that the appellee was not a white person and therefore not lawfully entitled to naturalization. The District Court, on motion, dismissed the bill, and an appeal was taken to the Circuit Court of Appeals. No question is made in respect

of the individual qualifications of the appellee. The sole question is whether he falls within the class designated by Congress as eligible.

Section 2169, Revised Statutes, provides that the provisions of the Naturalization Act 'shall apply to aliens being free white persons and to aliens of African nativity and to persons of African descent.'

If the applicant is a white person, within the meaning of this section, he is entitled to naturalization; otherwise not. In *Ozawa v. United States*, decided November 13, 1922, we had occasion to consider the application of these words to the case of a cultivated Japanese and were constrained to hold that he was not within their meaning. As there pointed out, the provision is not that any particular class of persons shall be excluded, but it is, in effect, that only white persons shall be included within the privilege of the statute. 'The intention was to confer the privilege of citizenship upon that class of persons whom the fathers knew as white, and to deny it to all who could not be so classified. It is not enough to say that the framers did not have in mind the brown or yellow races of Asia. It is necessary to go farther and be able to say that had these particular races been suggested the language of the act would have been so varied as to include them within its privileges.' Following a long line of decisions of the lower Federal courts, we held that the words imported a racial and not an individual test and were meant to indicate only persons of what is popularly known as the Caucasian race. But, as there pointed out, the conclusion that the phrase 'white persons' and the word 'Caucasian' are synonymous does not end the matter. It enabled us to dispose of the problem as it was there presented, since the applicant for citizenship clearly fell outside the zone of debatable ground on the negative side; but the decision still left the question to be dealt with, in doubtful and different cases, by the 'process of judicial inclusion and exclusion.' Mere ability on the part of an applicant for naturalization to establish a line of descent from a Caucasian ancestor will not ipso facto to and necessarily conclude the inquiry. 'Caucasian' is a conventional word of much flexibility, as a study of the literature dealing with racial questions will disclose, and while it and the words 'white persons' are treated

as synonymous for the purposes of that case, they are not of identical meaning—idem per idem.

In the endeavor to ascertain the meaning of the statute we must not fail to keep in mind that it does not employ the word 'Caucasian,' but the words 'white persons,' and these are words of common speech and not of scientific origin . . . When we employ it, we do so as an aid to the ascertainment of the legislative intent and not as an invariable substitute for the statutory words. Indeed, as used in the science of ethnology, the connotation of the word is by no means clear, and the use of it in its scientific sense as an equivalent for the words of the statute, other considerations aside, would simply mean the substitution of one perplexity for another. But in this country, during the last half century especially, the word by common usage has acquired a popular meaning, not clearly defined to be sure, but sufficiently so to enable us to say that its popular as distinguished from its scientific application is of appreciably narrower scope. It is in the popular sense of the word, therefore, that we employ it as an aid to the construction of the statute, for it would be obviously illogical to convert words of common speech used in a statute into words of scientific terminology when neither the latter nor the science for whose purposes they were coined was within the contemplation of the framers of the statute or of the people for whom it was framed. The words of the statute are to be interpreted in accordance with the understanding of the common man from whose vocabulary they were taken.

They imply, as we have said, a racial test; but the term 'race' is one which, for the practical purposes of the statute, must be applied to a group of living persons now possessing in common the requisite characteristics, not to groups of persons who are supposed to be or really are descended from some remote, common ancestor, but who, whether they both resemble him to a greater or less extent, have, at any rate, ceased altogether to resemble one another. It may be true that the blond Scandinavian and the brown Hindu have a common ancestor in the dim reaches of antiquity, but the average man knows perfectly well that there are unmistakable and profound differences between them to-day; and it is not impossible, if that common

ancestor could be materialized in the flesh, we should discover that he was himself sufficiently differentiated from both of his descendants to preclude his racial classification with either. The question for determination is not, therefore, whether by the speculative processes of ethnological reasoning we may present a probability to the scientific mind that they have the same origin, but whether we can satisfy the common understanding that they are now the same or sufficiently the same to justify the interpreters of a statute-written in the words of common speech, for common understanding, by unscientific men-in classifying them together in the statutory category as white persons. In 1790 the Adamite theory of creation-which gave a common ancestor to all mankind-was generally accepted, and it is not at all probable that it was intended by the legislators of that day to submit the question of the application of the words 'white persons' to the mere test of an indefinitely remote common ancestry, without regard to the extent of the subsequent divergence of the various branches from such common ancestry or from one another.

The eligibility of this applicant for citizenship is based on the sole fact that he is of high-caste Hindu stock, born in Punjab, one of the extreme northwestern districts of India, and classified by certain scientific authorities as of the Caucasian or Aryan race. The Aryan theory as a racial basis seems to be discredited by most, if not all, modern writers on the subject of ethnology. A review of their contentions would serve no useful purpose.

The term 'Aryan' has to do with linguistic, and not at all with physical, characteristics, and it would seem reasonably clear that mere resemblance in language, indicating a common linguistic root buried in remotely ancient soil, is altogether inadequate to prove common racial origin. There is, and can be, no assurance that the so-called Aryan language was not spoken by a variety of races living in proximity to one another. Our own history has witnessed the adoption of the English tongue by millions of negroes, whose descendants can never be classified racially with the descendants of white persons, notwithstanding both may speak a common root language.

The word 'Caucasian' is in scarcely better repute. It is at best a conventional term, with an altogether

fortuitous origin, which under scientific manipulation, has come to include far more than the unscientific mind suspects. According to Keane, for example (*The World's Peoples*), it includes not only the Hindu, but some of the Polynesians, the Hamites of Africa, upon the ground of the Caucasian cast of their features, though in color they range from brown to black. We venture to think that the average well informed white American would learn with some degree of astonishment that the race to which he belongs is made up of such heterogeneous elements . . .

It may be, therefore, that a given group cannot be properly assigned to any of the enumerated grand racial divisions. The type may have been so changed by intermixture of blood as to justify an intermediate classification. Something very like this has actually taken place in India. Thus, in Hindustan and Berar there was such an intermixture of the 'Aryan' invader with the dark skinned Dravidian.

It does not seem necessary to pursue the matter of scientific classification further. We are unable to agree with the District Court, or with other lower federal courts, in the conclusion that a native Hindu is eligible for naturalization under section 2169. The words of familiar speech, which were used by the original framers of the law, were intended to include only the type of man whom they knew as white. The immigration of that day was almost exclusively from the British Isles and Northwestern Europe, whence they and their forebears had come. When they extended the privilege of American citizenship to 'any alien being a free white person' it was these immigrants—bone of their bone and flesh of their flesh-and their kind whom they must have had affirmatively in mind. The succeeding years brought immigrants from Eastern, Southern and Middle Europe, among them the Slavs and the dark-eyed, swarthy people of Alpine and Mediterranean stock, and these were received as unquestionably akin to those already here and readily amalgamated with them. It was the descendants of these, and other immigrants of like origin, who constituted the white population of the country when section 2169, re-enacting the naturalization test of 1790, was adopted, and, there is no reason to doubt, with like intent and meaning.

What, if any, people of Primarily Asiatic stock come within the words of the section we do not deem

it necessary now to decide. There is much in the origin and historic development of the statute to suggest that no Asiatic whatever was included. The debates in Congress, during the consideration of the subject in 1870 and 1875, are persuasively of this character. In 1873, for example, the words ‘free white persons’ were unintentionally omitted from the compilation of the Revised Statutes. This omission was supplied in 1875 by the act to correct errors and supply omissions. When this act was under consideration by Congress efforts were made to strike out the words quoted, and it was insisted upon the one hand and conceded upon the other, that the effect of their retention was to exclude Asiatics generally from citizenship. While what was said upon that occasion, to be sure, furnishes no basis for judicial construction of the statute, it is, nevertheless, an important historic incident, which may not be altogether ignored in the search for the true meaning of words which are themselves historic. That question, however, may well be left for final determination until the details have been more completely disclosed by the consideration of particular cases, as they from time to time arise. The words of the statute, it must be conceded, do not readily yield to exact interpretation, and it is probably better to leave them as they are than to risk undue extension or undue limitation of their meaning by any general paraphrase at this time.

What we now hold is that the words ‘free white persons’ are words of common speech, to be interpreted in accordance with the understanding of the common man, synonymous with the word ‘Caucasian’ only as that word is popularly understood. As so understood and used, whatever may be the speculations of the ethnologist, it does not include the body of people to whom the appellee belongs. It is a matter of familiar observation and knowledge that the physical group characteristics of the Hindus render them readily distinguishable from the various groups of persons in this country commonly recognized as white. The children of English, French, German, Italian, Scandinavian, and other European parentage, quickly merge into the mass of our population and lose the distinctive hallmarks of their European origin. On the other hand, it cannot be doubted that the children born in this country of Hindu parents would retain

indefinitely the clear evidence of their ancestry. It is very far from our thought to suggest the slightest question of racial superiority or inferiority. What we suggest is merely racial difference, and it is of such character and extent that the great body of our people instinctively recognize it and reject the thought of assimilation.

It is not without significance in this connection that Congress, by the Act of February 5, 1917, 39 Stat. 874, c. 29, 3 (Comp. St. 1918, Comp. St. Ann. Supp. 1919, 4289 1/4b), has now excluded from admission into this country all natives of Asia within designated limits of latitude and longitude, including the whole of India. This not only constitutes conclusive evidence of the congressional attitude of opposition to Asiatic immigration generally, but is persuasive of a similar attitude toward Asiatic naturalization as well, since it is not likely that Congress would be willing to accept as citizens a class of persons whom it rejects as immigrants. It follows that a negative answer must be given to the first question, which disposes of the case and renders an answer to the second question unnecessary, and it will be so certified.

21. Excerpt from the Immigration Act (1924)

The 1924 Immigration Act was known as a measure to restrict immigration by creating a discriminatory national original quota system. The idea of quota was first introduced in an immigration policy in 1921. The 1924 law established a quota system that limited the influx of immigrants from certain parts of the world. It set the annual number of immigrants and divided that number into national quotas. Each country’s quota was based on the number of persons of that national origin who were in the United States at a certain year. Aiming at restricting the Southern and Eastern European immigrants, the law used the same language as the 1913 Alien Land Law, barring from entry as an immigrant any person who was “ineligible to citizenship.” As a result, this legislation denied entry to virtually all Asians.

An Act To limit the immigration of aliens into the United States, and for other purposes.

Sec. 11. (a) The annual quota of any nationality shall be 2 per centum of the number of foreign-born individuals of such nationality resident in continental United States as determined by the United States census of 1890, but the minimum quota of any nationality shall be 100. . . .

Sec. 13. (c) No alien ineligible to citizenship shall be admitted to the United States unless such alien (1) is admissible as a non-quota immigrant under the provisions of subdivision (b), (d), or (e) of section 4, or (2) is the wife, or the unmarried child under 18 years of age, of an immigrant admissible under such subdivision (d), and is accompanying or following to join him, or (3) is not an immigrant as defined in section 3. . . .

22. Excerpt from *Toyota v. United States* (1925)

In Ozawa v. United States, the Supreme Court denied Japanese immigrants the right to naturalization. But the fact that Congress granted naturalization rights to Filipino American war veterans provided legal grounds for Japanese, as some of them had also served in the military. In Hidemitsu Toyota v. the United States, however, the U.S. Supreme Court once again ruled against the Japanese, using the same line of argument in the Ozawa case. The court ruling, however, turned out to be an unexpected victory for Filipino Americans. Because Filipinos were not aliens, the court argued, they could not be classified as “alien ineligible to citizenship.” By implication, Filipinos in the United States regardless of whether they had served in the U.S. military, were eligible to naturalization.

MR. JUSTICE BUTLER delivered the opinion of the Court.

Hidemitsu Toyota, a person of the Japanese race, born in Japan, entered the United States in 1913. He served substantially all the time between November of that year and May, 1923, in the United States Coast

Guard Service. This was a part of the naval force of the United States nearly all of the time the United States was engaged in the recent war. He received eight or more honorable discharges, and some of them were for service during the war. May 14, 1921, he filed his petition for naturalization in the United States district court for the district of Massachusetts. The petition was granted, and a certificate of naturalization was issued to him. This case arises on a petition to cancel the certificate on the ground that it was illegally procured . . . An appeal was taken to the Circuit Court of Appeals, and that court under § 239, Judicial Code, certified to this court the following questions: (1) Whether a person of the Japanese race, born in Japan, may legally be naturalized under the seventh subdivision of § 4 of the Act of June 29, 1906, as amended by the Act of May 9, 1918, and (2) whether such subject may legally be naturalized under the Act of July 19, 1919.

Until 1870, only aliens being free white persons were eligible to citizenship. In that year, aliens of African nativity and persons of African descent were made eligible. See *Ozawa v. United States*, 260 U.S. 178, 192. The substance of prior legislation is expressed in § 2169, Revised Statutes, which is: “The provisions of this Title [Naturalization] shall apply to aliens being free white persons, and to aliens of African nativity and to persons of African descent.” A person of the Japanese race, born in Japan, is not eligible under that section.

It has long been the rule that in order to be admitted to citizenship, an alien is required, at least two years prior to his admission, to declare his intention to become a citizen, and to show that he has resided continuously in the United States for at least five years immediately preceding his admission. But at different times, as to specially designated aliens serving in the armed forces of the United States, Congress modified and lessened these requirements. § 2166, Revised Statutes (Act of July 17, 1862, § 21, c. 200, 12 Stat. 594, 597); Act of July 26, 1894, c. 165, 28 Stat. 123, 124; Act of June 30, 1914, c. 130, 38 Stat. 392, 395. In each of the first two of these acts, the phrase “any alien” is used as a part of the description of the person for whose benefit the act was passed. In the last, the language is “any alien . . . who may, under existing law,

become a citizen of the United States.” Prior to this act, it had been held that the phrase “any alien,” used in the earlier acts, did not enlarge the classes defined in § 2169, *In re Buntaro Kumagai*, (1908) 163 Fed. 922; *In re Knight*, (1909) 171 Fed. 299; *Bessho v. United States*, (1910) 178 Fed. 245; *In re Alverto*, (1912) 198 Fed. 688. The language used in the Act of 1914 merely expresses what was implied in the earlier provisions.

The seventh subdivision of § 4, of the Act of 1918, permits “any native-born Filipino” or “any alien, or any Porto Rican not a citizen of the United States” belonging respectively to the classes there described, on presentation of the required declaration of intention, to petition for naturalization without proof of five years’ residence within the United States; and the act permits “any alien” serving in the forces of the United States “during the time this country is engaged in the present war” to file his petition for naturalization without making the preliminary declaration of intention and without proof of five years’ residence in the United States. The act of 1919 gave “any person of foreign birth” there mentioned, the benefits of the seventh subdivision of § 4. Evidently, a principal purpose of these acts was to facilitate the naturalization of service men of the classes specified. There is nothing to show an intention to eliminate from the definition of eligibility in § 2169 the distinction based on color or race. Nor is there anything to indicate that, if the seventh subdivision stood alone, the words “any alien” should be taken to mean more than did the same words when used in the acts of 1862 and 1894. But § 2 of the Act of 1918 provides that nothing in the act shall repeal or in any way enlarge § 2169 “except as specified in the seventh subdivision of this Act and under the limitation therein defined.” This implies some enlargement of § 2169 in respect of color and race; but it also indicates a purpose not to eliminate all distinction based on color and race so long continued in the naturalization laws. If it was intended to make such change and to extend the privilege of naturalization to all races, the provision of § 2 so limiting the enlargement of § 2169 would be inappropriate. And if the phrase “any alien” in the seventh subdivision is read literally, the qualifying words “being free white persons” and “of African nativity” in § 2169 are without significance.

See *In re Para*, 269 Fed. 643, 646; *Petition of Charr*, 273 Fed. 207, 213.

When the act of 1918 was passed, it was doubtful whether § 30 of the act of 1906 extended the privilege of naturalization to all citizens of the Philippine Islands. They were held eligible for naturalization in *In re Bautista*, 245 Fed. 765, and in *In re Mallari*, 239 Fed. 416. And see 27 Op. Atty. Gen. 12. They were held not eligible in *In re Alverto*, 198 Fed. 688, in *In re Lampitoe*, 232 Fed. 382, and in *In re Rallos*, 241 Fed. 686. But we hold that until the passage of that act, Filipinos not being “free white persons” or “of African nativity” were not eligible, and that the effect of the act of 1918 was to make eligible, and to authorize the naturalization of, native-born Filipinos of whatever color or race having the qualifications specified in the seventh subdivision of § 4.

Under the treaty of peace between the United States and Spain, December 10, 1898, 30 Stat. 1754, Congress was authorized to determine the civil rights and political status of the native inhabitants of the Philippine Islands. And by the act of July 1, 1902, § 4, c. 1369, 32 Stat. 691, 692, it was declared that all inhabitants continuing to reside therein who were Spanish subjects on April 11, 1899, and then resided in the Islands, and their children born subsequent thereto, “shall be deemed and held to be citizens of the Philippine Islands and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain,” according to the treaty. The citizens of the Philippine Islands are not aliens. See *Gonzales v. Williams*, 192 U.S. 1, 13. They owe no allegiance to any foreign government. They were not eligible for naturalization under § 2169 because not aliens and so not within its terms. By § 30 of the Act of 1906, it is provided: “That all the applicable provisions of the naturalization laws of the United States shall apply to and be held to authorize the admission to citizenship of all persons not citizens who owe permanent allegiance to the United States, and who may become residents of any State or organized Territory of the United States, with the following modifications: The applicant shall not be required to renounce allegiance to any foreign sovereignty; he shall make his declaration of intention to become a citizen of the United States at least two years

prior to his admission; and residence within the jurisdiction of the United States, owing such permanent allegiance, shall be regarded as residence within the United States within the meaning of the five years' residence clause of the existing law." (34 Stat. 606.)

Section 26 of that act repeals certain sections of Title XXX of the Revised Statutes, but leaves § 2169 in force. It is to be applied as if it were included in the act of 1906. Plainly, the element of alienage included in § 2169 did not apply to the class made eligible by § 30 of the act of 1906. The element of color and race included in that section is not specifically dealt with by § 30, and, as it has long been the national policy to maintain the distinction of color and race, radical change is not lightly to be deemed to have been intended. "Persons not citizens who owe permanent allegiance to the United States, and who may become residents of any State" may include Malays, Japanese and Chinese and others not eligible under the distinction as to color and race. As under § 30 all the applicable provisions of the naturalization laws apply, the limitations based on color and race remain; and the class made eligible by § 30 must be limited to those of the color and race included by § 2169. As Filipinos are not aliens and owe allegiance to the United States, there are strong reasons for relaxing as to them the restrictions which do not exist in favor of aliens who are barred because of their color and race. And in view of the policy of Congress to limit the naturalization of aliens to white persons and to those of African nativity or descent the implied enlargement of § 2169 should be taken at the minimum. The legislative history of the act indicates that the intention of Congress was not to enlarge § 2169, except in respect of Filipinos qualified by the specified service. Senate Report No. 388, pp. 2, 3, 8. House Report No. 502, pp. 1, 4, Sixty-fifth Congress, Second Session. See also Congressional Record, vol. 56, part 6, pp. 6000–6003. And we hold that the words "any alien" in the seventh subdivision are limited by § 2169 to aliens of the color and race there specified. We also hold that the phrase "any person of foreign birth" in the act of 1919 is not more comprehensive than the words "any alien" in the act of 1918. It follows that the questions certified must be answered in the negative.

The answer to the first question is: *No*.

The answer to the second question is: *No*.

The CHIEF JUSTICE dissents.

23. A Plea for Relief (1926)

After the enactment of the 1924 Immigration Act, immigration authorities quickly moved to turn down immigrant applicants from China. Wives of merchants and wives of citizens were all denied entry. In Cheung Sum Shee et al. v. Nagle in 1925, the United States Circuit Court of Appeals for the Ninth Circuit ruled that wives of Chinese merchants should be admitted with their husbands under treaty obligations of the United States. The same court, however, turned down appeals by citizens' wives. In Chang Chan et al. v. John Nagle, the court denied the spousal privilege that was granted to the merchants. Under the leadership of Chinese American Citizens Alliance (CACA), an organization of American-born Chinese who had the right to vote, the Chinese American community launched a lobby campaign to repeal the law that last for five years. The following is a pamphlet issued by the CACA during the campaign.

This is a plea for relief from a hardship imposed upon a certain class of citizens of the United States by the immigration act of 1924.

The Supreme Court of the United States has recently decided that section 13 of the act excludes from admission to the United States the alien Chinese wives of American citizens. There are in the United States many American citizens of the Chinese race who are married to alien Chinese women, resident in China. Under the decision of the Supreme Court these American citizens are permanently separated from their wives, unless they abandon the country of their citizenship and take up their residence abroad in a country which will permit their wives to reside with them. The hardship of this situation is so apparent that it is felt that a mere-statement of the case is all that

is required to show the necessity for an amendment to the act which will permit the admission of these women.

Until the passage of the act alien Chinese wives of American citizens of the Chinese race were eligible to admission to the United States. The courts had repeatedly held that they were admissible and the immigration department admitted them upon proof of their status.

It is a well-known fact that the Chinese male population of this country far outnumbers the Chinese female population and that the Chinese male resident here, desiring to marry, must in most cases go to China to seek a wife of his own race, the number of Chinese females resident here being too restricted to supply the demand. Such being the conditions obtaining, under the law as it now stands, most of our Chinese-American citizens must of necessity remain unmarried, or if electing to go to China, there to marry, must either give up their residence and virtually give up their citizenship here or live separate and apart from their wives, who are debarred from admission to the United States under section 13 of the immigration act of 1924.

The only solution of the problem, the immigration act remaining unamended, would be the marriage of the Chinese-American citizen resident here to a woman not of his own race, and this is not only undesirable and inadvisable from the viewpoint of both white and Chinese, but contrary to the laws of persons of the Mongolian race being prohibited in the States of Arizona, California, Idaho, Missouri, Utah, Wyoming, Mississippi, Oregon, Nebraska, Texas, and Virginia.

Marriage is an institution sanctioned, encouraged and fostered by civilized society and by the state. Civilized society has always recognized the right of a man to marry, and when married his right to the society and companionship of his wife. Civilized society recognizes the fact that "it is not good for man to be alone," and that marriage and the association of a man with his wife constitute the greatest safeguard of public morals.

In all probability, when the immigration act of 1924 was being considered by Congress, the fact that section 13 of the act would prohibit the admission of the alien Chinese wives of American citizens was not called to its attention, and it is felt that had it been,

there would have been added to section 13 a proviso allowing their admission.

It is not presumed that the unnatural condition in the respect herein pointed out in which the American citizen of the Chinese race finds himself as a result of section 13 will be allowed to stand. The Supreme Court could only interpret the law as it was written by Congress. It could not disregard the literal and plain language of the law in an effort, by strained construction, to avoid its hardships upon a worthy class of American citizens which has done its duty to its country both in time of peace and in time of war.

Therefore it is from Congress that the relief must come and it is to Congress that the American citizen of the Chinese race confidently looks for an amendment to section 13 which will give him that legal right to the companionship of his wife which is in consonance both with natural law and with the customs and usages of civilized society.

It is not deemed necessary to argue the matter further for as was intimated at the outset of these observations a mere statement of the case is all that is believed necessary in the presentation of this matter.

Alien Chinese Wives of Chinese Merchant Admissible

It might not be out of the way, however, to call attention to the fact that while the immigration act of 1924 prohibits the admission of the alien Chinese wife of an American citizen, the Supreme Court of the United States has recently held that the act permits the admission of the alien Chinese wife of an alien Chinese merchant, who is resident in the United States. In other words, the act gives greater rights to the alien Chinese resident here than it accords to our own citizens of the Chinese race. It is submitted that an American citizen in his own country should certainly be accorded rights at least equal to those given to an alien resident here.

Assimilability

It has been suggested that in allowing these alien wives, ineligible to citizenship, a home with their husbands in this country; we are permitting a

multiplication in this country of Orientals not assimilable with Americans, as are other races. Is this true? This brings us to the question of assimilability. Does the child of the Chinese race, born and reared in this country assimilate American thoughts and customs and ideas? In other words, does he become and is he a real American, speaking our language, following our customs, living as we live, and, thinking as we think, and true to his duty as an American citizen?

The mere answering of these questions abstractly in the affirmative—and the facts of the case not only admit of, but require such an answer—can hardly convey to those who have not come in contact with the American born child of Chinese parentage as true and clear as impression of the situation as a few concrete typical illustrations would afford. Therefore, there are submitted in the pages which follow, a few cuts, showing typical groups of Chinese American families, that is, families whose alien Chinese parents emigrated to this country from China, and have here given birth to and here reared their families. These illustrations could be multiplied indefinitely, but a few typical illustrations it is believed will suffice. These children, born and reared here, speak of English language, were educated or are being educated in our public schools and colleges, were the American dress, follow American customs, live in homes, as typically American as do Caucasian children, and being surrounded by the same environment as Caucasian children, grow up with the same ideas and follow the same pursuits as Caucasians, and are in every respect true Americans, loyal to their country and an asset to the State.

24. Chinese Wives of American Citizens Act (1930)

The Immigration Act of 1924 provided legal grounds for immigration authorities to turn down any immigrant applicants from China, among them were wives of merchants and citizens. In Cheung Sum Shee et al. v. Nagle in 1925, the United States Circuit Court

of Appeals for the Ninth Circuit ruled that wives of Chinese merchants should be admitted with their husbands under treaty obligations of the United States. The same court, however, turned down appeals by citizens' wives. In Chang Chan et al. v. John Nagle, the court ruled denied the spousal privilege that was granted to the merchants. The new law and the court decision closed down an extremely important avenue for the entry of Chinese women. The Chinese American community would not give in, however. Led by the Chinese American Citizens Alliance, an organization of American-born Chinese who had the right to vote, the community launched a lobby campaign to repeal the law that last for five years. The 1930 law amended the 1924 Immigration Act by granting entry to alien Chinese wives for U.S. citizens who had married prior to May 26, 1924.

An Act To admit to the United States Chinese wives of certain American citizens.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subdivision (c) of section 13 of the Immigration Act of 1924, approved May 26, 1924, as amended, is amended by striking out "or" before "(3)," and by inserting after "section 3" the following: "or (4) is the Chinese wife of an American citizen who was married prior to the approval of the Immigration Act of 1924, approved May 26, 1924."

25. Excerpt from Tydings-McDuffie Act (1934)

Officially the Philippine Independence Act, this legislation provided for the independence of the Philippines from the United States after a period of 10 years. The law stipulated the conditions and procedures under which the Philippines would receive its independence. The law also changed the status of Filipinos from nationals to aliens. Although a quota of 50 immigrants per year was established for the islands, the law was often seen as a measure to exclude the Filipinos.

Philippine Independence Act

Sec. 1. The Philippine Legislature is hereby authorized to provide for the election of delegates to a constitutional convention . . . to formulate and draft a constitution for the government of the Commonwealth of the Philippine Islands, subject to the conditions and qualifications prescribed in this Act, which shall exercise jurisdiction over all the territory ceded to the United States by the treaty of peace concluded between the United States and Spain on the 10th day of December, 1898. . . .

Sec. 8. (1) For the purposes of the Immigration Act of 1917, the Immigration Act of 1924 . . . this section, and all other laws of the United States relating to the immigration, exclusion, or expulsion of aliens, citizens of the Philippine Islands who are not citizens of the United States shall be considered as if they were aliens. For such purposes the Philippine Islands shall be considered as a separate country and shall have for each fiscal year a quota of fifty. . . .

(2) Citizens of the Philippine Islands who are not citizens of the United States shall not be admitted to the continental United States from the Territory of Hawaii. . . .

(4) For the purposes of sections 18 and 20 of the Immigration Act of 1917, as amended, the Philippine Islands shall be considered to be a foreign country. . . .

Sec. 10. (a) On the 4th day of July immediately following the expiration of a period of ten years from the date of the inauguration of the new government under the constitution provided for in this Act the President of the United States shall by proclamation withdraw and surrender all right of possession, supervision, jurisdiction, control, or sovereignty then existing and exercised by the United States in and over the territory and people of the Philippine Islands. . . .

Sec. 14. Upon the final and complete withdrawal of American sovereignty over the Philippine Islands the immigration laws of the United States (including all the provisions thereof relating to persons ineligible to citizenship) shall apply to persons who were born in the Philippine Islands to the same extent as in the case of other foreign countries. . . .

26. Executive Order No. 9066 (1942)

This executive order issued by President Franklin D. Roosevelt authorizing the secretary of war to prescribe certain areas as military zones. The order paved the way for the internment of Japanese Americans during World War II.

The President Executive Order

Authorizing the Secretary of War to Prescribe Military Areas

Whereas the successful prosecution of the war requires every possible protection against espionage and against sabotage to national-defense material, national-defense premises, and national-defense utilities as defined in Section 4, Act of April 20, 1918, 40 Stat. 533, as amended by the Act of November 30, 1940, 54 Stat. 1220, and the Act of August 21, 1941, 55 Stat. 655 (U.S.C., Title 50, Sec. 104);

Now, therefore, by virtue of the authority vested in me as President of the United States, and Commander in Chief of the Army and Navy, I hereby authorize and direct the Secretary of War, and the Military Commanders whom he may from time to time designate, whenever he or any designated Commander deems such action necessary or desirable, to prescribe military areas in such places and of such extent as he or the appropriate Military Commander may determine, from which any or all persons may be excluded, and with respect to which, the right of any person to enter, remain in, or leave shall be subject to whatever restrictions the Secretary of War or the appropriate Military Commander may impose in his discretion. The Secretary of War is hereby authorized to provide for residents of any such area who are excluded therefrom, such transportation, food, shelter, and other accommodations as may be necessary, in the judgment of the Secretary of War or the said Military Commander, and until other arrangements are made, to accomplish the purpose of this order. The designation of military areas in any region or locality shall supersede designations of prohibited and restricted areas by the Attorney General under the Proclamations of December 7 and 8, 1941, and shall supersede the responsibility and authority of the Attorney General

under the said Proclamations in respect of such prohibited and restricted areas.

I hereby further authorize and direct the Secretary of War and the said Military Commanders to take such other steps as he or the appropriate Military Commander may deem advisable to enforce compliance with the restrictions applicable to each Military area hereinabove authorized to be designated, including the use of Federal troops and other Federal Agencies, with authority to accept assistance of state and local agencies.

I hereby further authorize and direct all Executive Departments, independent establishments and other Federal Agencies, to assist the Secretary of War or the said Military Commanders in carrying out this Executive Order, including the furnishing of medical aid, hospitalization, food, clothing, transportation, use of land, shelter, and other supplies, equipment, utilities, facilities, and services.

This order shall not be construed as modifying or limiting in any way the authority heretofore granted under Executive Order No. 8972, dated December 12, 1941, nor shall it be construed as limiting or modifying the duty and responsibility of the Federal Bureau of Investigation, with respect to the investigation of alleged acts of sabotage or the duty and responsibility of the Attorney General and the Department of Justice under the Proclamations of December 7 and 8, 1941, prescribing regulations for the conduct and control of alien enemies, except as such duty and responsibility is superseded by the designation of military areas hereunder.

Franklin D. Roosevelt
The White House,
February 19, 1942.

27. Excerpt from *Hirabayashi v. United States* (1943)

In this case, the U.S. Supreme Court held that curfews against Japanese Americans were constitutional when the nation was at war with Japan. The court decided

on a similar case against Japanese Americans in the same day.

MR. CHIEF JUSTICE STONE delivered the opinion of the Court.

Appellant, an American citizen of Japanese ancestry, was convicted in the district court of violating the Act of Congress of March 21, 1942, 56 Stat. 173, which makes it a misdemeanor knowingly to disregard restrictions made applicable by a military commander to persons in a military area prescribed by him as such, all as authorized by an Executive Order of the President.

The questions for our decision are whether the particular restriction violated, namely that all persons of Japanese ancestry residing in such an area be within their place of residence daily between the hours of 8:00 p.m. and 6:00 a.m., was adopted by the military commander in the exercise of an unconstitutional delegation by Congress of its legislative power, and whether the restriction unconstitutionally discriminated between citizens of Japanese ancestry and those of other ancestries in violation of the Fifth Amendment.

The indictment is in two counts. The second charges that appellant, being a person of Japanese ancestry, had on a specified date, contrary to a restriction promulgated by the military commander of the Western Defense Command, Fourth Army, failed to remain in his place of residence 84*84 in the designated military area between the hours of 8:00 o'clock p.m. and 6:00 a.m. The first count charges that appellant, on May 11 and 12, 1942, had, contrary to a Civilian Exclusion Order issued by the military commander, failed to report to the Civil Control Station within the designated area, it appearing that appellant's required presence there was a preliminary step to the exclusion from that area of persons of Japanese ancestry.

By demurrer and plea in abatement, which the court overruled (46 F. Supp. 657), appellant asserted that the indictment should be dismissed because he was an American citizen who had never been a subject of and had never borne allegiance to the Empire of Japan, and also because the Act of March 21, 1942, was an unconstitutional delegation of Congressional

power. On the trial to a jury it appeared that appellant was born in Seattle in 1918, of Japanese parents who had come from Japan to the United States, and who had never afterward returned to Japan; that he was educated in the Washington public schools and at the time of his arrest was a senior in the University of Washington; that he had never been in Japan or had any association with Japanese residing there.

The evidence showed that appellant had failed to report to the Civil Control Station on May 11 or May 12, 1942, as directed, to register for evacuation from the military area. He admitted failure to do so, and stated it had at all times been his belief that he would be waiving his rights as an American citizen by so doing. The evidence also showed that for like reason he was away from his place of residence after 8:00 p.m. on May 9, 1942. The jury returned a verdict of guilty on both counts and appellant was sentenced to imprisonment for a term of three months on each, the sentences to run concurrently.

On appeal the Court of Appeals for the Ninth Circuit certified to us questions of law upon which it desired instructions for the decision of the case. Acting under the authority conferred upon us by that section we ordered that the entire record be certified to this Court so that we might proceed to a decision of the matter in controversy in the same manner as if it had been brought here by appeal. Since the sentences of three months each imposed by the district court on the two counts were ordered to run concurrently, it will be unnecessary to consider questions raised with respect to the first count if we find that the conviction on the second count, for violation of the curfew order, must be sustained.

The curfew order which appellant violated, and to which the sanction prescribed by the Act of Congress has been deemed to attach, purported to be issued pursuant to an Executive Order of the President. In passing upon the authority of the military commander to make and execute the order, it becomes necessary to consider in some detail the official action which preceded or accompanied the order and from which it derives its purported authority.

On December 8, 1941, one day after the bombing of Pearl Harbor by a Japanese air force, Congress declared war against Japan. On February 19, 1942,

the President promulgated Executive Order No. 9066. By virtue of the authority vested in him as President and as Commander in Chief of the Army and Navy, the President purported to “authorize and direct the Secretary of War, and the Military Commanders whom he may from time to time designate, whenever he or any designated Commander deems such action necessary or desirable, to prescribe military areas in such places and of such extent as he or the appropriate Military Commander may determine, from which any or all persons may be excluded, and with respect to which, the right of any person to enter, remain in, or leave shall be subject to whatever restrictions the Secretary of War or the appropriate Military Commander may impose in his discretion.”

On February 20, 1942, the Secretary of War designated Lt. General J. L. DeWitt as Military Commander of the Western Defense Command, comprising the Pacific Coast states and some others, to carry out there the duties prescribed by Executive Order No. 9066. On March 2, 1942, General DeWitt promulgated Public Proclamation No. 1. 7 Federal Register 2320. The proclamation recited that the entire Pacific Coast “by its geographical location is particularly subject to attack, to attempted invasion by the armed forces of nations with which the United States is now at war, and, in connection therewith, is subject to espionage and acts of sabotage, thereby requiring the adoption of military measures necessary to establish safeguards against such enemy operations.” It stated that “the present situation requires as a matter of military necessity the establishment in the territory embraced by the Western Defense Command of Military Areas and Zones thereof”; it specified and designated as military areas certain areas within the Western Defense Command; and it declared that “such persons or classes of persons as the situation may require” would, by subsequent proclamation, be excluded from certain of these areas, but might be permitted to enter or remain in certain others, under regulations and restrictions to be later prescribed. Among the military areas so designated by Public Proclamation No. 1 was Military Area No. 1, which embraced, besides the southern part of Arizona, all the coastal region of the three Pacific Coast states, including the City of Seattle, Washington, where appellant resided. Military Area No. 2,

designated by the same proclamation, included those parts of the coastal states and of Arizona not placed within Military Area No. 1.

Public Proclamation No. 2 of March 16, 1942, issued by General DeWitt, made like recitals and designated further military areas and zones. It contained like provisions concerning the exclusion, by subsequent proclamation, of certain persons or classes of persons from these areas, and the future promulgation of regulations and restrictions applicable to persons remaining within them.

An Executive Order of the President, No. 9102, of March 18, 1942, established the War Relocation Authority, in the Office for Emergency Management of the Executive Office of the President; it authorized the Director of War Relocation Authority to formulate and effectuate a program for the removal, relocation, maintenance and supervision of persons designated under Executive Order No. 9066, already referred to; and it conferred on the Director authority to prescribe regulations necessary or desirable to promote the effective execution of the program.

Congress, by the Act of March 21, 1942, provided: "That whoever shall enter, remain in, leave, or commit any act in any military area or military zone prescribed, under the authority of an Executive order of the President, by the Secretary of War, or by any military commander designated by the Secretary of War, contrary to the restrictions applicable to any such area or zone or contrary to the order of the Secretary of War or any such military commander, shall, if it appears that he knew or should have known of the existence and extent of the restrictions or order and that his act was in violation thereof, be guilty of a misdemeanor and upon conviction shall be liable" to fine or imprisonment, or both.

Three days later, on March 24, 1942, General DeWitt issued Public Proclamation No. 3. 7 Federal Register 2543. After referring to the previous designation of military areas by Public Proclamations Nos. 1 and 2, it recited that ". . . the present situation within these Military Areas and Zones requires as a matter of military necessity the establishment of certain regulations pertaining to all enemy aliens and all persons of Japanese ancestry within said Military Areas and Zones . . ." It accordingly declared and established that from and after March 27, 1942, "all alien Japanese, all

alien Germans, all alien Italians, and all persons of Japanese ancestry residing or being within the geographical limits of Military Area No. 1 . . . shall be within their place of residence between the hours of 8:00 P.M. and 6:00 A.M., which period is hereinafter referred to as the hours of curfew." It also imposed certain other restrictions on persons of Japanese ancestry, and provided that any person violating the regulations would be subject to the criminal penalties provided by the Act of Congress of March 21, 1942.

Beginning on March 24, 1942, the military commander issued a series of Civilian Exclusion Orders pursuant to the provisions of Public Proclamation No. 1. Each such order related to a specified area within the territory of his command. The order applicable to appellant was Civilian Exclusion Order No. 57 of May 10, 1942. It directed that from and after 12:00 noon, May 16, 1942, all persons of Japanese ancestry, both alien and non-alien, be excluded from a specified portion of Military Area No. 1 in Seattle, including appellant's place of residence, and it required a member of each family, and each individual living alone, affected by the order to report on May 11 or May 12 to a designated Civil Control Station in Seattle. Meanwhile the military commander had issued Public Proclamation No. 4 of March 27, 1942, which recited the necessity of providing for the orderly evacuation and resettlement of Japanese within the area, and prohibited all alien Japanese and all persons of Japanese ancestry from leaving the military area until future orders should permit.

Appellant does not deny that he knowingly failed to obey the curfew order as charged in the second count of the indictment, or that the order was authorized by the terms of Executive Order No. 9066, or that the challenged Act of Congress purports to punish with criminal penalties disobedience of such an order. His contentions are only that Congress unconstitutionally delegated its legislative power to the military commander by authorizing him to impose the challenged regulation, and that, even if the regulation were in other respects lawfully authorized, the Fifth Amendment prohibits the discrimination made between citizens of Japanese descent and those of other ancestry.

It will be evident from the legislative history that the Act of March 21, 1942, contemplated and

authorized the curfew order which we have before us. The bill which became the Act of March 21, 1942, was introduced in the Senate on March 9th and in the House on March 10th at the request of the Secretary of War who, in letters to the Chairman of the Senate Committee on Military Affairs and to the Speaker of the House, stated explicitly that its purpose was to provide means for the enforcement of orders issued under Executive Order No. 9066. This appears in the committee reports on the bill, which set out in full the Executive Order and the Secretary's letter. And each of the committee reports expressly mentions curfew orders as one of the types of restrictions which it was deemed desirable to enforce by criminal sanctions.

When the bill was under consideration, General DeWitt had published his Proclamation No. 1 of March 2, 1942, establishing Military Areas Nos. 1 and 2, and that Proclamation was before Congress. A letter of the Secretary to the Chairman of the House Military Affairs Committee, of March 14, 1942, informed Congress that "General DeWitt is strongly of the opinion that the bill, when enacted, should be broad enough to enable the Secretary of War or the appropriate military commander to enforce curfews and other restrictions within military areas and zones"; and that General DeWitt had "indicated that he was prepared to enforce certain restrictions at once for the purpose of protecting certain vital national defense interests but did not desire to proceed until enforcement machinery had been set up."

The Chairman of the Senate Military Affairs Committee explained on the floor of the Senate that the purpose of the proposed legislation was to provide means of enforcement of curfew orders and other military orders made pursuant to Executive Order No. 9066. He read General DeWitt's Public Proclamation No. 1, and statements from newspaper reports that "evacuation of the first Japanese aliens and American-born Japanese" was about to begin. He also stated to the Senate that "reasons for suspected widespread fifth-column activity among Japanese" were to be found in the system of dual citizenship which Japan deemed applicable to American-born Japanese, and in the propaganda disseminated by Japanese consuls, Buddhist priests and other leaders, among American-born children of Japanese. Such was stated to be the

explanation of the contemplated evacuation from the Pacific Coast area of persons of Japanese ancestry, citizens as well as aliens. Congress also had before it the Preliminary Report of a House Committee investigating national defense migration, of March 19, 1942, which approved the provisions of Executive Order No. 9066, and which recommended the evacuation, from military areas established under the Order, of all persons of Japanese ancestry, including citizens. The proposed legislation provided criminal sanctions for violation of orders, in terms broad enough to include the curfew order now before us, and the legislative history demonstrates that Congress was advised that curfew orders were among those intended, and was advised also that regulation of citizen and alien Japanese alike was contemplated.

The conclusion is inescapable that Congress, by the Act of March 21, 1942, ratified and confirmed Executive Order No. 9066. And so far as it lawfully could, Congress authorized and implemented such curfew orders as the commanding officer should promulgate pursuant to the Executive Order of the President. The question then is not one of Congressional power to delegate to the President the promulgation of the Executive Order, but whether, acting in cooperation, Congress and the Executive have constitutional authority to impose the curfew restriction here complained of. We must consider also whether, acting together, Congress and the Executive could leave it to the designated military commander to appraise the relevant conditions and on the basis of that appraisal to say whether, under the circumstances, the time and place were appropriate for the promulgation of the curfew order and whether the order itself was an appropriate means of carrying out the Executive Order for the "protection against espionage and against sabotage" to national defense materials, premises and utilities. For reasons presently to be stated, we conclude that it was within the constitutional power of Congress and the executive arm of the Government to prescribe this curfew order for the period under consideration and that its promulgation by the military commander involved no unlawful delegation of legislative power.

Executive Order No. 9066, promulgated in time of war for the declared purpose of prosecuting the war by protecting national defense resources from sabotage

and espionage, and the Act of March 21, 1942, ratifying and confirming the Executive Order, were each an exercise of the power to wage war conferred on the Congress and on the President, as Commander in Chief of the armed forces, by Articles I and II of the Constitution. We have no occasion to consider whether the President, acting alone, could lawfully have made the curfew order in question, or have authorized others to make it. For the President's action has the support of the Act of Congress, and we are immediately concerned with the question whether it is within the constitutional power of the national government, through the joint action of Congress and the Executive, to impose this restriction as an emergency war measure. The exercise of that power here involves no question of martial law or trial by military tribunal. Appellant has been tried and convicted in the civil courts and has been subjected to penalties prescribed by Congress for the acts committed.

The war power of the national government is "the power to wage war successfully." It extends to every matter and activity so related to war as substantially to affect its conduct and progress. The power is not restricted to the winning of victories in the field and the repulse of enemy forces. It embraces every phase of the national defense, including the protection of war materials and the members of the armed forces from injury and from the dangers which attend the rise, prosecution and progress of war. Since the Constitution commits to the Executive and to Congress the exercise of the war power in all the vicissitudes and conditions of warfare, it has necessarily given them wide scope for the exercise of judgment and discretion in determining the nature and extent of the threatened injury or danger and in the selection of the means for resisting it. Where, as they did here, the conditions call for the exercise of judgment and discretion and for the choice of means by those branches of the Government on which the Constitution has placed the responsibility of war-making, it is not for any court to sit in review of the wisdom of their action or substitute its judgment for theirs.

The actions taken must be appraised in the light of the conditions with which the President and Congress were confronted in the early months of 1942, many of which, since disclosed, were then peculiarly within

the knowledge of the military authorities. On December 7, 1941, the Japanese air forces had attacked the United States Naval Base at Pearl Harbor without warning, at the very hour when Japanese diplomatic representatives were conducting negotiations with our State Department ostensibly for the peaceful settlement of differences between the two countries. Simultaneously or nearly so, the Japanese attacked Malaysia, Hong Kong, the Philippines, and Wake and Midway Islands. On the following day their army invaded Thailand. Shortly afterwards they sank two British battleships. On December 13th, Guam was taken. On December 24th and 25th they captured Wake Island and occupied Hong Kong. On January 2, 1942, Manila fell, and on February 10th Singapore, Britain's great naval base in the East, was taken. On February 27th the battle of the Java Sea resulted in a disastrous naval defeat to the United Nations. By the 9th of March Japanese forces had established control over the Netherlands East Indies; Rangoon and Burma were occupied; Bataan and Corregidor were under attack.

Although the results of the attack on Pearl Harbor were not fully disclosed until much later, it was known that the damage was extensive, and that the Japanese by their successes had gained a naval superiority over our forces in the Pacific which might enable them to seize Pearl Harbor, our largest naval base and the last stronghold of defense lying between Japan and the west coast. That reasonably prudent men charged with the responsibility of our national defense had ample ground for concluding that they must face the danger of invasion, take measures against it, and in making the choice of measures consider our internal situation, cannot be doubted.

The challenged orders were defense measures for the avowed purpose of safeguarding the military area in question, at a time of threatened air raids and invasion by the Japanese forces, from the danger of sabotage and espionage. As the curfew was made applicable to citizens residing in the area only if they were of Japanese ancestry, our inquiry must be whether in the light of all the facts and circumstances there was any substantial basis for the conclusion, in which Congress and the military commander united, that the curfew as applied was a protective measure necessary to meet the threat of sabotage and espionage

which would substantially affect the war effort and which might reasonably be expected to aid a threatened enemy invasion. The alternative which appellant insists must be accepted is for the military authorities to impose the curfew on all citizens within the military area, or on none. In a case of threatened danger requiring prompt action, it is a choice between inflicting obviously needless hardship on the many, or sitting passive and unresisting in the presence of the threat. We think that constitutional government, in time of war, is not so powerless and does not compel so hard a choice if those charged with the responsibility of our national defense have reasonable ground for believing that the threat is real.

When the orders were promulgated there was a vast concentration, within Military Areas Nos. 1 and 2, of installations and facilities for the production of military equipment, especially ships and airplanes. Important Army and Navy bases were located in California and Washington. Approximately one-fourth of the total value of the major aircraft contracts then let by Government procurement officers were to be performed in the State of California. California ranked second, and Washington fifth, of all the states of the Union with respect to the value of shipbuilding contracts to be performed.

In the critical days of March 1942, the danger to our war production by sabotage and espionage in this area seems obvious. The German invasion of the Western European countries had given ample warning to the world of the menace of the "fifth column." Espionage by persons in sympathy with the Japanese Government had been found to have been particularly effective in the surprise attack on Pearl Harbor. At a time of threatened Japanese attack upon this country, the nature of our inhabitants' attachments to the Japanese enemy was consequently a matter of grave concern. Of the 126,000 persons of Japanese descent in the United States, citizens and non-citizens, approximately 112,000 resided in California, Oregon and Washington at the time of the adoption of the military regulations. Of these approximately two-thirds are citizens because born in the United States. Not only did the great majority of such persons reside within the Pacific Coast states but they were concentrated in or

near three of the large cities, Seattle, Portland and Los Angeles, all in Military Area No. 1.

There is support for the view that social, economic and political conditions which have prevailed since the close of the last century, when the Japanese began to come to this country in substantial numbers, have intensified their solidarity and have in large measure prevented their assimilation as an integral part of the white population. In addition, large numbers of children of Japanese parentage are sent to Japanese language schools outside the regular hours of public schools in the locality. Some of these schools are generally believed to be sources of Japanese nationalistic propaganda, cultivating allegiance to Japan. Considerable numbers, estimated to be approximately 10,000, of American-born children of Japanese parentage have been sent to Japan for all or a part of their education.

Congress and the Executive, including the military commander, could have attributed special significance, in its bearing on the loyalties of persons of Japanese descent, to the maintenance by Japan of its system of dual citizenship. Children born in the United States of Japanese alien parents, and especially those children born before December 1, 1924, are under many circumstances deemed, by Japanese law, to be citizens of Japan. No official census of those whom Japan regards as having thus retained Japanese citizenship is available, but there is ground for the belief that the number is large.

The large number of resident alien Japanese, approximately one-third of all Japanese inhabitants of the country, are of mature years and occupy positions of influence in Japanese communities. The association of influential Japanese residents with Japanese Consulates has been deemed a ready means for the dissemination of propaganda and for the maintenance of the influence of the Japanese Government with the Japanese population in this country.

As a result of all these conditions affecting the life of the Japanese, both aliens and citizens, in the Pacific Coast area, there has been relatively little social intercourse between them and the white population. The restrictions, both practical and legal, affecting the privileges and opportunities afforded to persons of Japanese extraction residing in the United States, have

been sources of irritation and may well have tended to increase their isolation, and in many instances their attachments to Japan and its institutions.

Viewing these data in all their aspects, Congress and the Executive could reasonably have concluded that these conditions have encouraged the continued attachment of members of this group to Japan and Japanese institutions. These are only some of the many considerations which those charged with the responsibility for the national defense could take into account in determining the nature and extent of the danger of espionage and sabotage, in the event of invasion or air raid attack. The extent of that danger could be definitely known only after the event and after it was too late to meet it. Whatever views we may entertain regarding the loyalty to this country of the citizens of Japanese ancestry, we cannot reject as unfounded the judgment of the military authorities and of Congress that there were disloyal members of that population, whose number and strength could not be precisely and quickly ascertained. We cannot say that the war-making branches of the Government did not have ground for believing that in a critical hour such persons could not readily be isolated and separately dealt with, and constituted a menace to the national defense and safety, which demanded that prompt and adequate measures be taken to guard against it.

Appellant does not deny that, given the danger, a curfew was an appropriate measure against sabotage. It is an obvious protection against the perpetration of sabotage most readily committed during the hours of darkness. If it was an appropriate exercise of the war power its validity is not impaired because it has restricted the citizen's liberty. Like every military control of the population of a dangerous zone in war time, it necessarily involves some infringement of individual liberty, just as does the police establishment of fire lines during a fire, or the confinement of people to their houses during an air raid alarm—neither of which could be thought to be an infringement of constitutional right. Like them, the validity of the restraints of the curfew order depends on all the conditions which obtain at the time the curfew is imposed and which support the order imposing it.

But appellant insists that the exercise of the power is inappropriate and unconstitutional because it

discriminates against citizens of Japanese ancestry, in violation of the Fifth Amendment. The Fifth Amendment contains no equal protection clause and it restrains only such discriminatory legislation by Congress as amounts to a denial of due process. Congress may hit at a particular danger where it is seen, without providing for others which are not so evident or so urgent.

Distinctions between citizens solely because of their ancestry are by their very nature odious to a free people whose institutions are founded upon the doctrine of equality. For that reason, legislative classification or discrimination based on race alone has often been held to be a denial of equal protection. We may assume that these considerations would be controlling here were it not for the fact that the danger of espionage and sabotage, in time of war and of threatened invasion, calls upon the military authorities to scrutinize every relevant fact bearing on the loyalty of populations in the danger areas. Because racial discriminations are in most circumstances irrelevant and therefore prohibited, it by no means follows that, in dealing with the perils of war, Congress and the Executive are wholly precluded from taking into account those facts and circumstances which are relevant to measures for our national defense and for the successful prosecution of the war, and which may in fact place citizens of one ancestry in a different category from others. "We must never forget, that it is *a constitution* we are expounding," "a constitution intended to endure for ages to come, and, consequently, to be adapted to the various *crises* of human affairs." The adoption by Government, in the crisis of war and of threatened invasion, of measures for the public safety, based upon the recognition of facts and circumstances which indicate that a group of one national extraction may menace that safety more than others, is not wholly beyond the limits of the Constitution and is not to be condemned merely because in other and in most circumstances racial distinctions are irrelevant.

Here the aim of Congress and the Executive was the protection against sabotage of war materials and utilities in areas thought to be in danger of Japanese invasion and air attack. We have stated in detail facts and circumstances with respect to the American citizens of Japanese ancestry residing on the Pacific Coast

which support the judgment of the war-waging branches of the Government that some restrictive measure was urgent. We cannot say that these facts and circumstances, considered in the particular war setting, could afford no ground for differentiating citizens of Japanese ancestry from other groups in the United States. The fact alone that attack on our shores was threatened by Japan rather than another enemy power set these citizens apart from others who have no particular associations with Japan.

Our investigation here does not go beyond the inquiry whether, in the light of all the relevant circumstances preceding and attending their promulgation, the challenged orders and statute afforded a reasonable basis for the action taken in imposing the curfew. We cannot close our eyes to the fact, demonstrated by experience, that in time of war residents having ethnic affiliations with an invading enemy may be a greater source of danger than those of a different ancestry. Nor can we deny that Congress, and the military authorities acting with its authorization, have constitutional power to appraise the danger in the light of facts of public notoriety. We need not now attempt to define the ultimate boundaries of the war power. We decide only the issue as we have defined it—we decide only that the curfew order as applied, and at the time it was applied, was within the boundaries of the war power. In this case it is enough that circumstances within the knowledge of those charged with the responsibility for maintaining the national defense afforded a rational basis for the decision which they made. Whether we would have made it is irrelevant.

What we have said also disposes of the contention that the curfew order involved an unlawful delegation by Congress of its legislative power. The mandate of the Constitution that all legislative power granted “shall be vested in Congress” has never been thought, even in the administration of civil affairs, to preclude Congress from resorting to the aid of executive or administrative officers in determining by findings whether the facts are such as to call for the application of previously adopted legislative standards or definitions of Congressional policy.

The purpose of Executive Order No. 9066, and the standard which the President approved for the orders authorized to be promulgated by the military

commander—as disclosed by the preamble of the Executive Order—was the protection of our war resources against espionage and sabotage. Public Proclamations Nos. 1 and 2 by General DeWitt, contain findings that the military areas created and the measures to be prescribed for them were required to establish safeguards against espionage and sabotage. Both the Executive Order and the Proclamations were before Congress when the Act of March 21, 1942, was under consideration. To the extent that the Executive Order authorized orders to be promulgated by the military commander to accomplish the declared purpose of the Order, and to the extent that the findings in the Proclamations establish that such was their purpose, both have been approved by Congress.

It is true that the Act does not in terms establish a particular standard to which orders of the military commander are to conform, or require findings to be made as a prerequisite to any order. But the Executive Order, the Proclamations and the statute are not to be read in isolation from each other. They were parts of a single program and must be judged as such. The Act of March 21, 1942, was an adoption by Congress of the Executive Order and of the Proclamations. The Proclamations themselves followed a standard authorized by the Executive Order—the necessity of protecting military resources in the designated areas against espionage and sabotage. And by the Act, Congress gave its approval to that standard. We have no need to consider now the validity of action if taken by the military commander without conforming to this standard approved by Congress, or the validity of orders made without the support of findings showing that they do so conform. Here the findings of danger from espionage and sabotage, and of the necessity of the curfew order to protect against them, have been duly made. General DeWitt’s Public Proclamation No. 3, which established the curfew, merely prescribed regulations of the type and in the manner which Public Proclamations Nos. 1 and 2 had announced would be prescribed at a future date, and was thus founded on the findings of Proclamations Nos. 1 and 2.

The military commander’s appraisal of facts in the light of the authorized standard, and the inferences which he drew from those facts, involved the exercise of his informed judgment. But as we have seen, those

facts, and the inferences which could be rationally drawn from them, support the judgment of the military commander, that 104*104 the danger of espionage and sabotage to our military resources was imminent, and that the curfew order was an appropriate measure to meet it.

Where, as in the present case, the standard set up for the guidance of the military commander, and the action taken and the reasons for it, are in fact recorded in the military orders, so that Congress, the courts and the public are assured that the orders, in the judgment of the commander, conform to the standards approved by the President and Congress, there is no failure in the performance of the legislative function. The essentials of that function are the determination by Congress of the legislative policy and its approval of a rule of conduct to carry that policy into execution. The very necessities which attend the conduct of military operations in time of war in this instance as in many others preclude Congress from holding committee meetings to determine whether there is danger, before it enacts legislation to combat the danger.

The Constitution as a continuously operating charter of government does not demand the impossible or the impractical. The essentials of the legislative function are preserved when Congress authorizes a statutory command to become operative, upon ascertainment of a basic conclusion of fact by a designated representative of the Government. The present statute, which authorized curfew orders to be made pursuant to Executive Order No. 9066 for the protection of war resources from espionage and sabotage, satisfies those requirements. Under the Executive Order the basic facts, determined by the military commander in the light of knowledge then available, were whether that danger existed and whether a curfew order was an appropriate means of minimizing the danger. Since his findings to that effect were, as we have said, not without adequate support, the legislative function was performed and the sanction of the statute attached to violations of the curfew order. It is unnecessary to consider whether or to what extent such findings would support orders differing from the curfew order.

The conviction under the second count is without constitutional infirmity. Hence we have no occasion to review the conviction on the first count since, as

already stated, the sentences on the two counts are to run concurrently and conviction on the second is sufficient to sustain the sentence. For this reason also it is unnecessary to consider the Government's argument that compliance with the order to report at the Civilian Control Station did not necessarily entail confinement in a relocation center.

28. Excerpt from the Repeal Act of Chinese Exclusion (1943)

In 1943, in the midst of World War II, the U.S. government repealed all Chinese exclusion laws, ending the exclusion era for the Chinese. The repeal set an annual quota of 105 for Chinese immigration, which would apply to Chinese from all parts of the world. The repeal made Chinese admissible and Chinese immigrants eligible for naturalization.

An Act to repeal the Chinese Exclusion Acts, to establish quotas, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following Acts or parts of Acts relating to the exclusion or deportation of persons of the Chinese race are hereby repealed: May 6, 1882 (22 Stat. L. 58); July 5, 1884 (23 Stat. L. 115); September 13, 1888 (25 Stat. L. 476); October 1, 1888 (25 Stat. L. 504); May 5, 1892 (27 Stat. L. 25); November 3, 1893 (28 Stat. L. 7). . . .

Sec. 2. With the exception of those coming under subsections (b), (d), (e), and (f) of section 4, Immigration Act of 1924 . . . all Chinese persons entering the United States annually as immigrants shall be allocated to the quota for the Chinese computed under the provision of section 11 of the said Act. A preference up to 75 per centum of the quota shall be given to Chinese born and resident in China.

Sec. 3. Section 303 of the Nationality Act of 1940, as amended (54 Stat. 1140; 8 U.S.C. 703), is hereby

amended by striking out the word “and” before the word “descendants”, changing the colon after the word “Hemisphere” to a comma, and adding the following: “and Chinese persons or persons of Chinese descent.”

29. My Silver Wings, the Story of a Chinese American Woman (Margaret “Maggie” Gee)

World War II profoundly changed the lives of Chinese American women. For the first time, the larger American society welcomed the contributions of most ethnic and gender minorities. Chinese American women entered the armed forces and were hired by industries previously dominated by white males; they worked side by side with men and women of different ethnic backgrounds. In this oral history interview conducted by Xiaojian Zhao, Maggie Gee, one of the only two Chinese women who served in the Women’s Airforce Service Pilots, recollected how World War II had forever changed her life.

I was born in 1923 in Berkeley. There were about twenty Chinese families in Berkeley at that time, most of them came from San Francisco after the earthquake in 1906. We were the only Chinese in the neighborhood. On Sundays we would go to the church to play with other Chinese children in town.

My father was a merchant from Hong Kong. My mother was born in the United States. Her parents—my grandparents—came from China in the 1870s. They settled in a fishing community in Monterey Bay, California. My parents had an arranged marriage. Although my mother was an American citizen by birth, her citizenship was taken away when she married my father. They lived in San Francisco for a few years. Later on my father build a house in Berkeley and the family moved to the east bay. My father had a warehouse in San Francisco’s Chinatown. He imported rice and other food products from China and exported things like soap and toothpaste. I was only a seven-year-old when my father passed away. My uncle told me that my father invested heavily in the stock market.

When the market crashed during the Great Depression, he lost all the money and had a heart attack.

My parents had six children, and I was the third from the top. I have one older brother, one older sister, two younger sisters, and one younger brother. We were well off up to the time my father’s death. We had a car, and my mother learned to drive very early. When my father died, my mother was thirty-four. To support her six children, she took in sewing. Sometimes I woke up two o’clock in the morning and could still hear her sewing.

I began to work while I was in high school. I delivered newspaper and did domestic work for other families. I helped take care of the babies and cooked a little bit. I was not very good at doing housework or cooking. At home my mother did everything herself. I learned a lot from working at these families, such as the proper way to set the table in Western style. At that time I didn’t like chopsticks at all; I do now, of course. I just didn’t want to be that way as a kid. I would say, “Let’s eat with forks, do the way other people would do.” We ate Chinese food at home. My mother was an excellent cook. I liked my mother, but I really didn’t appreciate her that much until I was older. I think that’s true with every generation. When you’re young, you think you are smarter than your mother. During the summer when there was no school, I worked in a cannery. I also worked in a dime store for a while. I did pretty much what other children of my age would do at the time. A lot of us high school kids had jobs.

Berkeley High was an integrated school and I associated with both white and black kids. I remember that as a Chinese, I could not go swimming in community pools and could not join clubs organized by white students. But I didn’t care—I am not a sensitive person and I was not good at swimming anyway. Although I joined the Chinese student club, I was too busy to spend time there. After school I had to work and to go to Chinese language school.

When I was in fourth grade, my uncle was going to take my sister and me to China to study. We had a going-away party. Then came the news that the Japanese had invaded Manchuria in China. So my mother decided that we had to cancel the trip. I felt terrible because we had to go back to school after having said goodbye to our friends. My mother was very involved

in the war effort in China, especially after 1937. She took us to many fund-raising activities and rallies in San Francisco. I felt so bad when I heard about the “Rape of Nanjing.” I mentioned it to my American friends, but they didn’t seem to know what had happened. My mother was very unhappy when one of my sisters dated a Japanese boy. We wouldn’t buy anything Japanese. If there was something made in Japan in the house, my mother would be sure to break it. I also didn’t like the Japanese because of the war, but I had Japanese friends, they were different.

After high school, I attended college at the University of California, Berkeley. Going to college was not a big financial burden for my family since we lived in a little town. To my mother, it was just putting a bowl of rice on the table a little longer. The fee was only twenty-eight dollars each quarter, which I could earn myself. My brother was thinking about going to medical school. That’s different and he couldn’t make it financially. So he chose to be an accountant. I had no idea what I would do with a college degree. I went to college because in a college town, everyone went to college after high school. On Sunday, 7 December 1941, I went to Doe Library on campus to study. I was surprised to see that people were talking and no one was studying. That’s how I heard about Pearl Harbor. This incident really changed everything. Suddenly everyone wanted to be involved and everyone wanted to do something. My mother was one of the first women to join defense industrial work. She got a job at one of the Richmond shipyards. She loved that job that she enjoyed meeting people. This was the first time she worked outside the home [her sewing job was mostly done at home]. My older brother joined the Army. I was eager to do something too, and my mother must have suggested I find a job in the shipyard. I took a graveyard-shift job welding in a Richmond shipyard while still a student at Berkeley. Working at night was boring because you had no one to talk to. You worked outdoors in the dark by yourself, and you were sleepy because you were taking classes during the day and didn’t get much sleep. Sometimes when the job was slow I would fall asleep, but it was so cold out there at night you couldn’t sleep for very long. Welding was not very difficult. You basically repeat the

same job again and again—just like my mother sewing the sleeves in those years.

A few months later, I found a new job as a draftsman at Mare Island Naval Shipyard. It was a daytime job, and we had about thirty people working in the department. There I met two friends of my age. Jean is white, and Mary is a Filipino girl. WE worked in the same room. The three of us used to meet every day at ten o’clock at the ladies’ room. The ladies’ room had this nice little sitting area, and we would sit there and have a cup of coffee. Here, we were in a war industry, but we all wanted to do more. We used to say, “We can’t stay here and do this; we must get involved directly in the war effort.” Mary had been flying since she was fifteen, and she said that we could all become pilots. I was so excited about the idea because that was the most glamorous thing to do. Everyone liked to fly. My father used to drive us to Oakland Airport to watch airplanes taking off. I also read about women flying from the magazines, but I didn’t dream to fly myself. I learned that there was this aviation school in Nevada and that all you needed was \$800 to enroll, including room and board. I had saved a little bit of money while working in the Richmond shipyard. As a draftsman, my salary was \$1,444 a year, a little over a \$100 a month. And I saved every penny I could. That day when we finally cashed all of our war bonds, \$800 apiece, the three of us tossed the money in the air and laughed and laughed—we were overjoyed.

We took a temporary leave from our jobs and boarded a bus to Nevada in 1943. There were about fifteen students in the flying class, including quite a few women. It didn’t make any difference if you were a man or a woman in training. I was the only Asian woman learning to fly. A lot of people in town thought I was an American Indian. WE graduated in about two months. Before we went home, someone from the WASP—Women’s Airforce Service Pilots—interviewed us. The men were interviewed separately by the Army recruiting people. While our files were under review, we all went back to our old jobs at Mare Island. I was ready to go to the war, but it was also nice to go back to work. I used up all my savings and I needed the money. A lot of our coworkers came to ask us about what we had done in Nevada. They asked

many questions about flying. Some people I guess were envious of us. We were able to do something different from building and repairing the ships.

Shortly after, I received a call from the WASP. Mary did not make it because of her problems. Jean joined but washed out. I couldn't believe that I made it! Everyone in my family was happy for me. The whole family, except for my older brother who was already in the Army, went to the train station in Berkeley to see me off. My mother was a little concerned about my safety, but she said, "If I were young I would like to fly too." She was very proud of me.

In February 1944, I boarded a train to west Texas. The train was so crowded that I had to sit on my suitcase near a restroom most of the way. I didn't even have a seat. I don't know how I did it. I was only twenty at the time. I arrived at Sweetwater, Texas, and reported to the Blue Bonnet Hotel in town. Next morning, they came to pick up us. There were 107 women in my class. All of us were very young and were very excited. We lived in the barracks, six women to each bay. We each had a cot and a locker. I didn't bring much stuff. One suitcase was all that I had, so that was fine. Located between the bays were two big shower heads, two toilets, and two washbasins to be shared by twelve of us. We had to shower together. Some of us were very shy because we had never been in gym before.

Our class was divided into two flights and the trainees spent half of each day on ground training and another half on cockpit. We would get up early in the morning, get dressed, make the beds, line up, and march to the mess hall for breakfast. We marched to the mess hall, we marched to the gym, we marched to classes. You had to line up and march everywhere you went. We used to sing when we marched, just like in the movies. We had very little free time; every minute was taken. We took a lot of classes: physics, math, aerodynamics, and PE. We also had night flying. On Sundays I would go to town with friends. Pretty girls got dates. I and some friends used to hang around with a bunch of guys. We established good friendships. Each time after you passed a test, you would wait and hope your friends pass too. We really cared about each other. So many people were washed out.

We cried with them and they were sent home. And you always wondered: "Am I going to be the next?"

The WASP was under the Army. We flew army airplanes and we had to follow all the rules and regulations. If you broke the rules, you would be sent home. We had our passes, and we were all considered officers. But there was this big debate on whether women pilots should be given military status, and not until 1979 did we receive our veteran status. Our uniforms were Santiago ground, but our instructors were mostly men. If you put it in the context of today, the male instructors really resented us. They would say, "You ought to go home to have babies. What are you doing here flying?" I just had to ignore them. It was [that way] at that time; things are very different today.

I was the only Chinese American woman in my class. Hazel Ah Ying Lee and I are the only two Chinese American WASPs. She was in one of the earlier classes; I never met her. She was later killed in action. All of my classmates were white. The fact that I was a Chinese didn't make a difference; we were all very nice to each other. The WASP accepted two Chinese American women but not a single black. I heard that eight black women pilots applied for the job, but none of them were accepted. There was a lot of resistance to women flying. Jacqueline Cochran did not want to take in black women pilots because she had enough problems to deal with. This was before the civil rights movement. The South was segregated and our training field was in Texas. We flew over a lot of southern states.

While in training, I got to fly different types of military airplanes and did cross-country flying. Once I got in very late. When I came in I said, "I am going to show these people how good I am." I made a nice landing, but then I lost my concentration. So the airplane ground looped. I did not go straight, as it should, but drifted into a circle. That was a small accident; no one was hurt. I was so ashamed of myself and would not get out. Because of that, I got checked out. The civilians checked you out, and the Army checked you out. But I did complete all the training and pass all the tests. The day when I finally graduated and got my silver wings, but only 1,074 graduated. I had seen so many people washed out, and some lost their lives. I guess I was very lucky indeed.

Before graduation, we were asked where we would like to work and whom we would like to work with. WE had a few choices. My baymate and best friend Elaine Harman, who was from Baltimore, and I decided to come to the West Coast. WE both began our active duty at the Las Vegas Army Air Force Base in September 1944. There were about thirty WASPs working on the base. I was an instrument instructor, giving flying instructions to male pilots. I also did some copiloting. I flew mostly single-engine airplanes. Then one day in October 1944, we were notified that the WASP would be disbanded. By then, there were many men around and women pilots were no longer needed. On 20 December 1944, WASP was officially deactivated and our WASP squadron at the Las Vegas Army Air Force Base was shut down. We were all sent home. I felt terrible because the war was not over yet.

My experience at the WASP definitely had a great impact on my life. It was a very short time in my life but I got to spend time together with the people I worked with. We had such a small, closely knit group. We did something unique and we all liked what we were doing. Since we lived, trained, and worked together, we developed a good friendship. I feel I know these people well regardless of their social background. Many of them were from well-to-do families. People like me, Mary and Jean had to earn money to learn how to fly. I would have been impossible if I didn't have the chance to work in defense industries. Most of the women in the WASP were older than I was, and many of them are now in their eighties. Some had commercial licenses already when they joined the program. They had been flying before the war, and some of them did that for their own pleasure. But that didn't matter, the war brought us together to the military service.

I have attended many of our reunions. A lot of us were there for the big reunion of 1979, when we finally got veteran status. I still see other WASPs. I talk to Elaine Harman often. I feel I can drive across the country with the little book that has our names and addresses in it and when I come to any town, I can call up a WASP and go to her house, even if I have never met her. After all, I am one of them. Some of them have come to see me in Berkeley. I feel very

comfortable with them. Having worked and lived with these women, I had no problem moving into any social circle later on. People of my generation from my background would not find it easy, but my experience as a WASP did make a difference. It gave me a lot of confidence. I felt comfortable and confident about myself.

When I returned home, I felt that there were a lot of things that I could do. After the war I returned to Berkeley to study physics. In those days, Chinese parents taught their children to be quiet and gentle, especially the girls; you were supposed to develop your potential. My mother was not a strict person. Two of my sisters were active in junior high school. They were leaders of Chinese student clubs at that stage. But I was never that way; I was shy. I got to do one more thing to make the change, to take one more step. It was my service at the WASP during the war that made the difference. Returning to Berkeley campus after the war, I saw many young Chinese students, a lot of them came from the Army. I said, "I want to be the president of the Chinese Students Association." So I did that.

When I was in graduate school, my sister and I looked for an apartment. That's how I found out what it was like to be a Chinese. We talked to a landlady on the phone and told us she had an apartment available for rent. So we went to see the apartment. When she realized that we were Chinese, she said the place was taken. My sister said, "We should just say that we are Chinese on the telephone then. Don't bother." It took us a little while before we finally got a place. When I talk to people, I often say that I had an advantage of being a Chinese who grew up in Berkeley. But not in this case, though.

I worked at Berkeley Radiation Laboratory while attending graduate school. Later, I worked in Washington, D.C., at the Bureau of Standards and then lived in Europe for three years. In late 1950s, I came back to California and began working at the Lawrence Livermore Laboratory as a physicist. I was the only woman in my department for many years.

30. Excerpt from *Ex part Mitsuye Endo* (1944)

This U.S. Supreme Court decision ruled that regardless of whether the United States Government had a right to remove certain classes of citizens from the West Coast during the war, it could not subject citizens who are concededly loyal to the United States to detention. The decision was handed down in late 1944, when the government could no longer argue that interning Japanese was a military necessity.

Mr. Justice DOUGLAS delivered the opinion of the Court.

This case comes here on a certificate of the Court of Appeals for the Ninth Circuit, certifying to us questions of law upon which it desires instructions for the decision of the case.

Mitsuye Endo, hereinafter designated as the appellant, is an American citizen of Japanese ancestry. She was evacuated from Sacramento, California, in 1942, pursuant to certain military orders which we will presently discuss, and was removed to the Tule Lake War Relocation Center located at Newell, Modoc County, California. In July, 1942, she filed a petition for a writ of habeas corpus in the District Court of the United States for the Northern District of California, asking that she be discharged and restored to liberty. That petition was denied by the District Court in July, 1943, and an appeal was perfected to the Circuit Court of Appeals in August, 1943. Shortly thereafter appellant was transferred from the Tule Lake Relocation Center to the Central Utah Relocation Center located at Topaz, Utah, where she is presently detained. The certificate of questions of law was filed here on April 22, 1944, and on May 8, 1944, we ordered the entire record to be certified to this Court. It does not appear that any respondent was ever served with process or appeared in the proceedings. But the United States Attorney for the Northern District of California argued before the District Court that the petition should not be granted. And the Solicitor General argued the case here.

The history of the evacuation of Japanese aliens and citizens of Japanese ancestry from the Pacific

coastal regions, following the Japanese attack on our Naval Base at Pearl Harbor on December 7, 1941, and the declaration of war against Japan on December 8, 1941, has been reviewed in *Kiyoshi Hirabayashi v. United States*. It need be only briefly recapitulated here. On February 19, 1942, the President promulgated Executive Order No. 9066. It recited that 'the successful prosecution of the war requires every possible protection against espionage and against sabotage to national defense material, national-defense premises, and national-defense utilities. . . And it authorized and directed 'the Secretary of War, and the Military Commanders whom he may from time to time designate, whenever he or any designated Commander deems such action necessary or desirable, to prescribe military areas in such places and of such extent as he or the appropriate Military Commander may determine, from which any or all persons may be excluded, and with respect to which, the right of any person to enter, remain in, or leave shall be subject to whatever restrictions the Secretary of War or the appropriate Military Commander may impose in his discretion. The Secretary of War is hereby authorized to provide for residents of any such area who are excluded therefrom, such transportation, food, shelter, and other accommodations as may be necessary, in the judgment of the Secretary of War or the said Military Commander, and until other arrangements are made, to accomplish the purpose of this order.'

Lt. General J. L. De Witt, Military Commander of the Western Defense Command, was designated to carry out the duties prescribed by that Executive Order. On March 2, 1942, he promulgated Public Proclamation No. 1. which recited that the entire Pacific Coast of the United States 'by its geographical location is particularly subject to attack, to attempted invasion by the armed forces of nations with which the United States is now at war, and, in connection therewith, is subject to espionage and acts of sabotage, thereby requiring the adoption of military measures necessary to establish safeguards against such enemy operations.' It designated certain Military Areas and Zones in the Western Defense Command and announced that certain persons might subsequently be excluded from these areas. On March 16, 1942,

General De Witt promulgated Public Proclamation No. 2 which contained similar recitals and designated further Military Areas and Zones.

On March 18, 1942, the President promulgated Executive Order No. 9102 which established in the Office for Emergency Management of the Executive Office of the President the War Relocation Authority. It recited that it was made 'in order to provide for the removal from designated areas of persons whose removal is necessary in the interests of national security.' It provided for a Director and authorized and directed him to 'formulate and effectuate a program for the removal, from the areas designated from time to time by the Secretary of War or appropriate military commander under the authority of Executive Order No. 9066 of February 19, 1942, of the persons or classes of persons designated under such Executive Order, and for their relocation, maintenance, and supervision.' The Director was given the authority, among other things, to prescribe regulations necessary or desirable to promote effective execution of the program.

Congress shortly enacted legislation which, as we pointed out in *Kiyoshi Hirabayashi v. United States*, supra, ratified and confirmed Executive Order No. 9066. It did so by the Act of March 21, 1942, which provided: 'That whoever shall enter, remain in, leave, or commit any act in any military area or military zone prescribed, under the authority of an Executive order of the President, by the Secretary of War, or by any military commander designated by the Secretary of War, contrary to the restrictions applicable to any such area or zone or contrary to the order of the Secretary of War or any such military commander, shall, if it appears that he knew or should have known of the existence and extent of the restrictions or order and that his act was in violation thereof, be guilty of a misdemeanor and upon conviction shall be liable to a fine of not to exceed \$5,000 or to imprisonment for not more than one year, or both, for each offense.'

Beginning on March 24, 1942, a series of 108 Civilian Exclusion Orders were issued by General De Witt pursuant to Public Proclamation Nos. 1 and 2. Appellant's exclusion was effected by Civilian Exclusion Order No. 52, dated May 7, 1942. It ordered that 'all persons of Japanese ancestry, both alien and non-

alien' be excluded from Sacramento, California, beginning at noon on May 16, 1942. Appellant was evacuated to the Sacramento Assembly Center on May 15, 1942, and was transferred from there to the Tule Lake Relocation Center on June 19, 1942. On May 19, 1942, General De Witt promulgated Civilian Restrictive Order No. 1 and on June 27, 1942, Public Proclamation No. 8. These prohibited evacuees from leaving Assembly Centers or Relocation Centers except pursuant to an authorization from General De Witt's headquarters. Public Proclamation No. 8 recited that 'the present situation within these military areas requires as a matter of military necessity' that the evacuees be removed to 'Relocation Centers for their relocation, maintenance and supervision', that those Relocation Centers be designated as War Relocation Project Areas, and that restrictions on the rights of the evacuees to enter, remain in, or leave such areas be promulgated. These restrictions were applicable to the Relocation Centers within the Western Defense Command and included both of those in which appellant has been confined-Tule Lake Relocation Center at Newell, California, and Central Utah Relocation Center at Topaz, Utah. And Public Proclamation No. 8 purported to make any person who was subject to its provisions and who failed to conform to it liable to the penalties prescribed by the Act of March 21, 1942. By letter of August 11, 1942, General De Witt authorized the War Relocation Authority to issue permits for persons to leave these areas. By virtue of that delegation⁵ and the authority conferred by Executive Order No. 9102, the War Relocation Authority was given control over the ingress and egress of evacuees from the Relocation Centers where Mitsuye Endo was confined. The program of the War Relocation Authority is said to have three main features: (1) the maintenance of Relocation Centers as interim places of residence for evacuees; (2) the segregation of loyal from disloyal evacuees; (3) the continued detention of the disloyal and so far as possible the relocation of the loyal in selected communities. In connection with the latter phase of its work the War Relocation Authority established a procedure for obtaining leave from Relocation Centers. That procedure, so far as indefinite leave⁸ is concerned, presently provides as follows: Application for leave clearance is required.

An investigation of the applicant is made for the purpose of ascertaining 'the probable effect upon the war program and upon the public peace and security of issuing indefinite leave' to the applicant. The grant of leave clearance does not authorize departure from the Relocation Center. Application for indefinite leave must also be made. Indefinite leave may be granted under specified conditions. For example, it may be granted (1) where the applicant proposes to accept an employment offer or an offer of support that has been investigated and approved by the Authority; or (2) where the applicant does not intend to work but has 'adequate financial resources to take care of himself' and a Relocation Officer has investigated and approved 'public sentiment at his proposed destination', or (3) where the applicant has made arrangements to live at a hotel or in a private home approved by a Relocation Officer while arranging for employment; or (4) where the applicant proposes to accept employment by a federal or local governmental agency; or (5) where the applicant is going to live with designated classes of relatives.

But even if an applicant meets those requirements, no leave will issue when the proposed place of residence or employment is within a locality where it has been ascertained that 'community sentiment is unfavorable' or when the applicant plans to go to an area which has been closed by the Authority to the issuance of indefinite leave. Nor will such leave issue if the area where the applicant plans to reside or work is one which has not been cleared for relocation. Moreover, the applicant agrees to give the Authority prompt notice of any change of employment or residence. And the indefinite leave which is granted does not permit entry into a prohibited military area, including those from which these people were evacuated.

Mitsuye Endo made application for leave clearance on February 19, 1943, after the petition was filed in the District Court. Leave clearance was granted her on August 16, 1943. But she made no application for indefinite leave.

Her petition for a writ of habeas corpus alleges that she is a loyal and law-abiding citizen of the United States, that no charge has been made against her, that she is being unlawfully detained, and that she is

confined in the Relocation Center under armed guard and held there against her will.

It is conceded by the Department of Justice and by the War Relocation Authority that appellant is a loyal and law-abiding citizen. They make no claim that she is detained on any charge or that she is even suspected of disloyalty. Moreover, they do not contend that she may be held any longer in the Relocation Center. They concede that it is beyond the power of the War Relocation Authority to detain citizens against whom no charges of disloyalty or subversiveness have been made for a period longer than that necessary to separate the loyal from the disloyal and to provide the necessary guidance for relocation. But they maintain that detention for an additional period after leave clearance has been granted is an essential step in the evacuation program. Reliance for that conclusion is placed on the following circumstances.

When compulsory evacuation from the West Coast was decided upon, plans for taking care of the evacuees after their detention in the Assembly Centers, to which they were initially removed, remained to be determined. On April 7, 1942, the Director of the Authority held a conference in Salt Lake City with various state and federal officials including the Governors of the inter-mountain states. 'Strong opposition was expressed to any type of unsupervised relocation and some of the Governors refused to be responsible for maintenance of law and order unless evacuees brought into their States were kept under constant military surveillance.' As stated by General De Witt in his report to the Chief of Staff: 'Essentially, military necessity required only that the Japanese population be removed from the coastal area and dispersed in the interior, where the danger of action in concert during any attempted enemy raids along the coast, or in advance thereof as preparation for a full scale attack, would be eliminated. That the evacuation program necessarily and ultimately developed into one of complete Federal supervision, was due primarily to the fact that the interior states would not accept an uncontrolled Japanese migration.' The Authority thereupon abandoned plans for assisting groups of evacuees in private colonization and temporarily put to one side plans for aiding the evacuees in obtaining private

employment. As an alternative the Authority 'concentrated on establishment of Government-operated centers with sufficient capacity and facilities to accommodate the entire evacuee population.' Accordingly, it undertook to care for the basic needs of these people in the Relocation Centers, to promote as rapidly as possible the permanent resettlement of as many as possible in normal communities, and to provide indefinitely for those left at the Relocation Centers. An effort was made to segregate the loyal evacuees from the others. The leave program which we have discussed was put into operation and the resettlement program commenced.

It is argued that such a planned and orderly relocation was essential to the success of the evacuation program; that but for such supervision there might have been a dangerously disorderly migration of unwanted people to unprepared communities; that unsupervised evacuation might have resulted in hardship and disorder; that the success of the evacuation program was thought to require the knowledge that the federal government was maintaining control over the evacuated population except as the release of individuals could be effected consistently with their own peace and well-being and that of the nation; that although community hostility towards the evacuees has diminished, it has not disappeared and the continuing control of the Authority over the relocation process is essential to the success of the evacuation program. It is argued that supervised relocation, as the chosen method of terminating the evacuation, is the final step in the entire process and is a consequence of the first step taken. It is conceded that appellant's detention pending compliance with the leave regulations is not directly connected with the prevention of espionage and sabotage at the present time. But it is argued that Executive Order No. 9102 confers power to make regulations necessary and proper for controlling situations created by the exercise of the powers expressly conferred for protection against espionage and sabotage. The leave regulations are said to fall within that category.

First. We are of the view that Mitsuye Endo should be given her liberty. In reaching that conclusion we do not come to the underlying constitutional issues which have been argued. For we conclude that, whatever power the War Relocation Authority may have to

detain other classes of citizens, it has no authority to subject citizens who are concededly loyal to its leave procedure.

It should be noted at the outset that we do not have here a question such as was presented in *Ex parte Milligan*, or in *Ex parte Quirin*, where the jurisdiction of military tribunals to try persons according to the law of war was challenged in habeas corpus proceedings. Mitsuye Endo is detained by a civilian agency, the War Relocation Authority, not by the military. Moreover, the evacuation program was not left exclusively to the military; the Authority was given a large measure of responsibility for its execution and Congress made its enforcement subject to civil penalties by the Act of March 21, 1942. Accordingly, no questions of military law are involved.

Such power of detention as the Authority has stems from Executive Order No. 9066. That order is the source of the authority delegated by General De Witt in his letter of August 11, 1942. And Executive Order No. 9102 which created the War Relocation Authority purported to do no more than to implement the program authorized by Executive Order No. 9066.

We approach the construction of Executive Order No. 9066 as we would approach the construction of legislation in this field. That Executive Order must indeed be considered along with the Act of March 21, 1942, which ratified and confirmed it as the Order and the statute together laid such basis as there is for participation by civil agencies of the federal government in the evacuation program. Broad powers frequently granted to the President or other executive officers by Congress so that they may deal with the exigencies of war time problems have been sustained. And the Constitution when it committed to the Executive and to Congress the exercise of the war power necessarily gave them wide scope for the exercise of judgment and discretion so that war might be waged effectively and successfully. At the same time, however, the Constitution is as specific in its enumeration of many of the civil rights of the individual as it is in its enumeration of the powers of his government. Thus it has prescribed procedural safeguards surrounding the arrest, detention and conviction of individuals. Some of these are contained in the Sixth Amendment, compliance with which is essential if convictions are

to be sustained. And the Fifth Amendment provides that no person shall be deprived of liberty (as well as life or property) without due process of law. Moreover, as a further safeguard against invasion of the basic civil rights of the individual it is provided in Art. I, Sec. 9 of the Constitution that ‘The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.’

We mention these constitutional provisions not to stir the constitutional issues which have been argued at the bar but to indicate the approach which we think should be made to an Act of Congress or an order of the Chief Executive that touches the sensitive area of rights specifically guaranteed by the Constitution. This Court has quite consistently given a narrower scope for the operation of the presumption of constitutionality when legislation appeared on its face to violate a specific prohibition of the Constitution. We have likewise favored that interpretation of legislation which gives it the greater chance of surviving the test of constitutionality. Those analogies are suggestive here. We must assume that the Chief Executive and members of Congress, as well as the courts, are sensitive to and respectful of the liberties of the citizen. In interpreting a war-time measure we must assume that their purpose was to allow for the greatest possible accommodation between those liberties and the exigencies of war. We must assume, when asked to find implied powers in a grant of legislative or executive authority, that the law makers intended to place no greater restraint on the citizen than was clearly and unmistakably indicated by the language they used.

The Act of March 21, 1942, was a war measure. The House Report (H. Rep. No. 1906, 77th Cong., 2d Sess., p. 2) stated, ‘The necessity for this legislation arose from the fact that the safe conduct of the war requires the fullest possible protection against either espionage or sabotage to national defense material, national defense premises, and national defense utilities.’ That was the precise purpose of Executive Order No. 9066, for, as we have seen, it gave as the reason for the exclusion of persons from prescribed military areas the protection of such property ‘against espionage and against sabotage.’ And Executive Order No. 9102 which established the War Relocation Authority

did so, as we have noted, ‘in order to provide for the removal from designated areas of persons whose removal is necessary in the interests of national security.’ The purpose and objective of the Act and of these orders are plain. Their single aim was the protection of the war effort against espionage and sabotage. It is in light of that one objective that the powers conferred by the orders must be construed.

Neither the Act nor the orders use the language of detention. The Act says that no one shall ‘enter, remain in leave, or commit any act’ in the prescribed military areas contrary to the applicable restrictions. Executive Order No. 9066 subjects the right of any person ‘to enter, remain in, or leave’ those prescribed areas to such restrictions as the military may impose. And apart from those restrictions the Secretary of War is only given authority to afford the evacuees ‘transportation, food, shelter, and other accommodations.’ Executive Order No. 9102 authorizes and directs the War Relocation Authority ‘to formulate and effectuate a program for the removal’ of the persons covered by Executive Order No. 9066 from the prescribed military areas and ‘for their relocation, maintenance, and supervision.’ And power is given the Authority to make regulations ‘necessary or desirable to promote effective execution of such program.’ Moreover, unlike the case of curfew regulations (*Kiyoshi Hirabayashi v. United States*, *supra*), the legislative history of the Act of March 21, 1942, is silent on detention. And that silence may have special significance in view of the fact that detention in Relocation Centers was no part of the original program of evacuation but developed later to meet what seemed to the officials in charge to be mounting hostility to the evacuees on the part of the communities where they sought to go.

We do not mean to imply that detention in connection with no phase of the evacuation program would be lawful. The fact that the Act and the orders are silent on detention does not of course mean that any power to detain is lacking. Some such power might indeed be necessary to the successful operation of the evacuation program. At least we may so assume. Moreover, we may assume for the purposes of this case that initial detention in Relocation Centers was authorized. But we stress the silence of the legislative history and of the Act and the Executive Orders on the power to

detain to emphasize that any such authority which exists must be implied. If there is to be the greatest possible accommodation of the liberties of the citizen with this war measure, any such implied power must be narrowly confined to the precise purpose of the evacuation program.

A citizen who is concededly loyal presents no problem of espionage or sabotage. Loyalty is a matter of the heart and mind not of race, creed, or color. He who is loyal is by definition not a spy or a saboteur. When the power to detain is derived from the power to protect the war effort against espionage and sabotage, detention which has no relationship to that objective is unauthorized.

Nor may the power to detain an admittedly loyal citizen or to grant him a conditional release be implied as a useful or convenient step in the evacuation program, whatever authority might be implied in case of those whose loyalty was not conceded or established. If we assume (as we do) that the original evacuation was justified, its lawful character was derived from the fact that it was an espionage and sabotage measure, not that there was community hostility to this group of American citizens. The evacuation program rested explicitly on the former ground not on the latter as the underlying legislation shows. The authority to detain a citizen or to grant him a conditional release as protection against espionage or sabotage is exhausted at least when his loyalty is conceded. If we held that the authority to detain continued thereafter, we would transform an espionage or sabotage measure into something else. That was not done by Executive Order No. 9066 or by the Act of March 21, 1942, which ratified it. What they did not do we cannot do. Detention which furthered the campaign against espionage and sabotage would be one thing. But detention which has no relationship to that campaign is of a distinct character. Community hostility even to loyal evacuees may have been (and perhaps still is) a serious problem. But if authority for their custody and supervision is to be sought on that ground, the Act of March 21, 1942, Executive Order No. 9066, and Executive Order No. 9102, offer no support. And none other is advanced. To read them that broadly would be to assume that the Congress and the President intended that this discriminatory action should be

taken against these people wholly on account of their ancestry even though the government conceded their loyalty to this country. We cannot make such an assumption. As the President has said of these loyal citizens: 'Americans of Japanese ancestry, like those of many other ancestries, have shown that they can, and want to, accept our institutions and work loyally with the rest of us, making their own valuable contribution to the national wealth and well-being. In vindication of the very ideals for which we are fighting this war it is important to us to maintain a high standard of fair, considerate, and equal treatment for the people of this minority as of all other minorities.'

Mitsuye Endo is entitled to an unconditional release by the War Relocation Authority.

Second. The question remains whether the District Court has jurisdiction to grant the writ of habeas corpus because of the fact that while the case was pending in the Circuit Court of Appeals appellant was moved from the Tule Lake Relocation Center in the Northern District of California where she was originally detained to the Central Utah Relocation Center in a different district and circuit.

That question is not colored by any purpose to effectuate a removal in evasion of the habeas corpus proceedings. It appears that appellant's removal to Utah was part of a general segregation program involving many of these people and was in no way related to this pending case. Moreover, there is no suggestion that there is no one within the jurisdiction of the District Court who is responsible for the detention of appellant and who would be an appropriate respondent. We are indeed advised by the Acting Secretary of the Interior²⁵ that if the writ issues and is directed to the Secretary of the Interior or any official of the War Relocation Authority (including an assistant director whose office is at San Francisco, which is in the jurisdiction of the District Court), the corpus of appellant will be produced and the court's order complied with in all respects. Thus it would seem that the case is not moot.

In *United States ex rel. Innes v. Crystal*, the relator challenged a judgment of court martial by habeas corpus. The District Court denied his petition and the Circuit Court of Appeals affirmed that order. After that decision and before his petition for certiorari was filed

here, he was removed from the custody of the Army to a federal penitentiary in a different district and circuit. The sole respondent was the commanding officer. Only an order directed to the warden of the penitentiary could effectuate his discharge and the warden as well as the prisoner was outside the territorial jurisdiction of the District Court. We therefore held the cause moot. There is no comparable situation here.

The fact that no respondent was ever served with process or appeared in the proceedings is not important. The United States resists the issuance of a writ. A cause exists in that state of the proceedings and an appeal lies from denial of a writ without the appearance of a respondent.

Hence, so far as presently appears, the cause is not moot and the District Court has jurisdiction to act unless the physical presence of appellant in that district is essential.

We need not decide whether the presence of the person detained within the territorial jurisdiction of the District Court is prerequisite to filing a petition for a writ of habeas corpus. We only hold that the District Court acquired jurisdiction in this case and that the removal of Mitsuye Endo did not cause it to lose jurisdiction where a person in whose custody she is remains within the district.

There are expressions in some of the cases which indicate that the place of confinement must be within the court's territorial jurisdiction in order to enable it to issue the writ. But we are of the view that the court may act if there is a respondent within reach of its process who has custody of the petitioner. As Judge Cooley stated in *Matter of Jackson*, 15 Mich. 417, 439, 440: 'The important fact to be observed in regard to the mode of procedure upon this writ is, that it is directed to, and served upon, not the person confined, but his jailer. It does not reach the former except through the latter. The officer or person who serves it does not unbar the prison doors, and set the prisoner free, but the court relieves him by compelling the oppressor to release his constraint. The whole force of the writ is spent upon the respondent.' The statute upon which the jurisdiction of the District Court in habeas corpus proceedings rests gives it power 'to grant writs of habeas corpus for the purpose of an inquiry into the cause of restraint of liberty.' That

objective may be in no way impaired or defeated by the removal of the prisoner from the territorial jurisdiction of the District Court. That end may be served and the decree of the court made effective if a respondent who has custody of the prisoner is within reach of the court's process even though the prisoner has been removed from the district since the suit was begun.

The judgment is reversed and the cause is remanded to the District Court for proceedings in conformity with this opinion.

31. Excerpt from *Korematsu v. United States* (1944)

One of Supreme Court landmark cases regarding the constitutionality of the internment decision against Japanese Americans during the war. In this 6–3 decision, the court ruled that the Executive Order 9066 was constitutional, and that the need to protect against espionage outweighed Fred Korematsu's individual right.

MR. JUSTICE BLACK delivered the opinion of the Court.

The petitioner, an American citizen of Japanese descent, was convicted in a federal district court for remaining in San Leandro, California, a "Military Area," contrary to Civilian Exclusion Order No. 34 of the Commanding General of the Western Command, U.S. Army, which directed that, after May 9, 1942, all persons of Japanese ancestry should be excluded from that area. No question was raised as to petitioner's loyalty to the United States. The Circuit Court of Appeals affirmed, and the importance of the constitutional question involved caused us to grant certiorari.

It should be noted, to begin with, that all legal restrictions which curtail the civil rights of a single racial group are immediately suspect. That is not to say that all such restrictions are unconstitutional. It is to say that courts must subject them to the most rigid scrutiny. Pressing public necessity may sometimes justify the existence of such restrictions; racial antagonism never can.

In the instant case, prosecution of the petitioner was begun by information charging violation of an Act of Congress, of March 21, 1942, 56 Stat. 173, which provides that . . . whoever shall enter, remain in, leave, or commit any act in any military area or military zone prescribed, under the authority of an Executive order of the President, by the Secretary of War, or by any military commander designated by the Secretary of War, contrary to the restrictions applicable to any such area or zone or contrary to the order of the Secretary of War or any such military commander, shall, if it appears that he knew or should have known of the existence and extent of the restrictions or order and that his act was in violation thereof, be guilty of a misdemeanor and upon conviction shall be liable to a fine of not to exceed \$5,000 or to imprisonment for not more than one year, or both, for each offense.

Exclusion Order No. 34, which the petitioner knowingly and admittedly violated, was one of a number of military orders and proclamations, all of which were substantially based upon Executive Order No. 9066. That order, issued after we were at war with Japan, declared that the successful prosecution of the war requires every possible protection against espionage and against sabotage to national defense material, national defense premises, and national defense utilities. . . .

One of the series of orders and proclamations, a curfew order, which, like the exclusion order here, was promulgated pursuant to Executive Order 9066, subjected all persons of Japanese ancestry in prescribed West Coast military areas to remain in their residences from 8 p.m. to 6 a.m. As is the case with the exclusion order here, that prior curfew order was designed as a "protection against espionage and against sabotage." In *Hirabayashi v. United States*, we sustained a conviction obtained for violation of the curfew order. The *Hirabayashi* conviction and this one thus rest on the same 1942 Congressional Act and the same basic executive and military orders, all of which orders were aimed at the twin dangers of espionage and sabotage.

In this case, the petitioner challenges the assumptions upon which we rested our conclusions in the *Hirabayashi* case. He also urges that, by May, 1942, when Order No. 34 was promulgated, all danger of

Japanese invasion of the West Coast had disappeared. After careful consideration of these contentions, we are compelled to reject them.

Like curfew, exclusion of those of Japanese origin was deemed necessary because of the presence of an unascertained number of disloyal members of the group, most of whom we have no doubt were loyal to this country. It was because we could not reject the finding of the military authorities that it was impossible to bring about an immediate segregation of the disloyal from the loyal that we sustained the validity of the curfew order as applying to the whole group. In the instant case, temporary exclusion of the entire group was rested by the military on the same ground. The judgment that exclusion of the whole group was, for the same reason, a military imperative answers the contention that the exclusion was in the nature of group punishment based on antagonism to those of Japanese origin. That there were members of the group who retained loyalties to Japan has been confirmed by investigations made subsequent to the exclusion. Approximately five thousand American citizens of Japanese ancestry refused to swear unqualified allegiance to the United States and to renounce allegiance to the Japanese Emperor, and several thousand evacuees requested repatriation to Japan.

We uphold the exclusion order as of the time it was made and when the petitioner violated it. In doing so, we are not unmindful of the hardships imposed by it upon a large group of American citizens. But hardships are part of war, and war is an aggregation of hardships. All citizens alike, both in and out of uniform, feel the impact of war in greater or lesser measure. Citizenship has its responsibilities, as well as its privileges, and, in time of war, the burden is always heavier. Compulsory exclusion of large groups of citizens from their homes, except under circumstances of direst emergency and peril, is inconsistent with our basic governmental institutions. But when, under conditions of modern warfare, our shores are threatened by hostile forces, the power to protect must be commensurate with the threatened danger.

It is argued that, on May 30, 1942, the date the petitioner was charged with remaining in the prohibited area, there were conflicting orders outstanding, forbidding him both to leave the area and to remain

there. Of course, a person cannot be convicted for doing the very thing which it is a crime to fail to do. But the outstanding orders here contained no such contradictory commands.

There was an order issued March 27, 1942, which prohibited petitioner and others of Japanese ancestry from leaving the area, but its effect was specifically limited in time “until and to the extent that a future proclamation or order should so permit or direct.” That “future order,” the one for violation of which petitioner was convicted, was issued May 3, 1942, and it did “direct” exclusion from the area of all persons of Japanese ancestry before 12 o’clock noon, May 9; furthermore, it contained a warning that all such persons found in the prohibited area would be liable to punishment under the March 21, 1942, Act of Congress. Consequently, the only order in effect touching the petitioner’s being in the area on May 30, 1942, the date specified in the information against him, was the May 3 order which prohibited his remaining there, and it was that same order which he stipulated in his trial that he had violated, knowing of its existence. There is therefore no basis for the argument that, on May 30, 1942, he was subject to punishment, under the March 27 and May 3 orders, whether he remained in or left the area.

It does appear, however, that, on May 9, the effective date of the exclusion order, the military authorities had already determined that the evacuation should be effected by assembling together and placing under guard all those of Japanese ancestry at central points, designated as “assembly centers,” in order to insure the orderly evacuation and resettlement of Japanese voluntarily migrating from Military Area No. 1, to restrict and regulate such migration.

Public Proclamation No. 4, 7 Fed.Reg. 2601. And on May 19, 1942, eleven days before the time petitioner was charged with unlawfully remaining in the area, Civilian Restrictive Order No. 1 provided for detention of those of Japanese ancestry in assembly or relocation centers. It is now argued that the validity of the exclusion order cannot be considered apart from the orders requiring him, after departure from the area, to report and to remain in an assembly or relocation center. The contention is that we must treat these separate orders as one and inseparable; that, for this reason,

if detention in the assembly or relocation center would have illegally deprived the petitioner of his liberty, the exclusion order and his conviction under it cannot stand.

We are thus being asked to pass at this time upon the whole subsequent detention program in both assembly and relocation centers, although the only issues framed at the trial related to petitioner’s remaining in the prohibited area in violation of the exclusion order. Had petitioner here left the prohibited area and gone to an assembly center, we cannot say, either as a matter of fact or law, that his presence in that center would have resulted in his detention in a relocation center. Some who did report to the assembly center were not sent to relocation centers, but were released upon condition that they remain outside the prohibited zone until the military orders were modified or lifted. This illustrates that they pose different problems, and may be governed by different principles. The lawfulness of one does not necessarily determine the lawfulness of the others. This is made clear when we analyze the requirements of the separate provisions of the separate orders. These separate requirements were that those of Japanese ancestry (1) depart from the area; (2) report to and temporarily remain in an assembly center; (3) go under military control to a relocation center, there to remain for an indeterminate period until released conditionally or unconditionally by the military authorities. Each of these requirements, it will be noted, imposed distinct duties in connection with the separate steps in a complete evacuation program. Had Congress directly incorporated into one Act the language of these separate orders, and provided sanctions for their violations, disobedience of any one would have constituted a separate offense. There is no reason why violations of these orders, insofar as they were promulgated pursuant to Congressional enactment, should not be treated as separate offenses.

The *Endo* case, *post*, p. 283, graphically illustrates the difference between the validity of an order to exclude and the validity of a detention order after exclusion has been effected.

Since the petitioner has not been convicted of failing to report or to remain in an assembly or relocation center, we cannot in this case determine the validity

of those separate provisions of the order. It is sufficient here for us to pass upon the order which petitioner violated. To do more would be to go beyond the issues raised, and to decide momentous questions not contained within the framework of the pleadings or the evidence in this case. It will be time enough to decide the serious constitutional issues which petitioner seeks to raise when an assembly or relocation order is applied or is certain to be applied to him, and we have its terms before us.

Some of the members of the Court are of the view that evacuation and detention in an Assembly Center were inseparable. After May 3, 1942, the date of Exclusion Order No. 34, Korematsu was under compulsion to leave the area not as he would choose, but via an Assembly Center. The Assembly Center was conceived as a part of the machinery for group evacuation. The power to exclude includes the power to do it by force if necessary. And any forcible measure must necessarily entail some degree of detention or restraint, whatever method of removal is selected. But whichever view is taken, it results in holding that the order under which petitioner was convicted was valid.

It is said that we are dealing here with the case of imprisonment of a citizen in a concentration camp solely because of his ancestry, without evidence or inquiry concerning his loyalty and good disposition towards the United States. Our task would be simple, our duty clear, were this a case involving the imprisonment of a loyal citizen in a concentration camp because of racial prejudice. Regardless of the true nature of the assembly and relocation centers—and we deem it unjustifiable to call them concentration camps, with all the ugly connotations that term implies—we are dealing specifically with nothing but an exclusion order. To cast this case into outlines of racial prejudice, without reference to the real military dangers which were presented, merely confuses the issue. Korematsu was not excluded from the Military Area because of hostility to him or his race. He was excluded because we are at war with the Japanese Empire, because the properly constituted military authorities feared an invasion of our West Coast and felt constrained to take proper security measures, because they decided that the military urgency of the situation demanded that

all citizens of Japanese ancestry be segregated from the West Coast temporarily, and, finally, because Congress, reposing its confidence in this time of war in our military leaders—as inevitably it must—determined that they should have the power to do just this. There was evidence of disloyalty on the part of some, the military authorities considered that the need for action was great, and time was short. We cannot—by availing ourselves of the calm perspective of hindsight—now say that, at that time, these actions were unjustified.

32. Excerpts from the War Brides Act (1945) and Amendment (1947)

Although this was a gender natural legislation, it was known as the War Brides Act because the vast majority of the individuals who gained the entry under the law were wives of U.S. soldiers. During World War II several million U.S. men and women (mostly men) were engaged in combat around the globe for nearly four years. Heavy casualty aside, the war facilitated romantic relations between American soldiers and citizens of foreign countries. Almost 100,000 Americans married abroad, and the majority of these marriages took place in Europe. The War Brides Act, enacted shortly after the war, was to facilitate these spouses' entry into the United States. Because all Chinese Exclusion Acts were repealed by then, Chinese war veterans became the first Asian group qualified to send for their spouses. Several thousand of Chinese women immigrated to the United States under the law; most of them were married before the war but unable to come during the exclusion. Filipino and Asian Indian American war veterans became eligible after 1946. A 1947 amendment extended the privilege to all war veterans regardless of existing exclusion laws.

A. War Brides Act (1945)

An Act To expedite the admission to the United States of alien spouses and alien minor children of citizen members of the United States armed forces.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any of the several clauses of section 3 of the Act of February 5, 1917, excluding physically and mentally defective aliens, and notwithstanding the documentary requirements of any of the immigration laws and regulations, Executive orders, or Presidential proclamations issued thereunder, alien spouses or alien children of United States citizens serving in, or having an honorable discharge certificate from the armed forces of the United States during the Second World War shall, if otherwise admissible under the immigration laws and if application for admission is made within three years of the effective date of this Act, be admitted to the United States: *Provided,* That every alien of the foregoing description shall be medically examined at the time of arrival in accordance with the provisions of section 16 of the Act of February 5, 1917, and if found suffering from any disability which would be the basis for a ground of exclusion except for the provision of this Act, the Immigration and Naturalization Service shall forthwith notify the appropriate public medical officer of the local community to which the alien is destined: *Provided further,* That the provisions of this Act shall not affect the duties of the United States Public Health Service so far as they relate to quarantinable diseases.

B. 1947 War Brides Act Amendment

To Amend the Act approved December 28, 1945

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act approved December 28, 1945, is amended by adding a new section thereto, to be known as section 6, and to read as follows:

“Sec. 6. The alien spouse of an American citizen by a marriage occurring before thirty days after the enactment of this Act, shall not be considered as

inadmissible because of race, if otherwise admissible under this Act.

33. Excerpts from *America Is in the Heart* by Carlos Bulosan (1946)

In the early decades of the twentieth century, due to legal restrictions against Asian immigrants to own land, most Asian immigrants worked as migratory workers in California and the Pacific Northwest. Carlos Bulosan was a self-taught Filipino immigrant writer. Coming to America in 1930 at age 17, he worked in the fields in California and was active in labor organization. In his highly acclaimed novel, America Is in the Heart, Bulosan described a common entertainment in dance halls for lonely Filipino agriculture workers in America.

I was already in American, and I felt good and safe. I did not understand why. The gamblers, prostitutes and Chinese opium smokers did not excite me, but they aroused in me a feeling of flight. I knew that I must run away from them, but it was not that I was afraid of contamination. I wanted to see other aspects of American life, for surely these destitute and vicious people were merely a small part of it. Where would I begin this pilgrimage, this search for a door into America?

I went outside and walked around looking into the faces of my countrymen, wondering if I would see someone I had known in the Philippines. I came to a building which brightly dressed white women were entering, lifting their diaphanous gowns as they climbed the stairs. I looked up and saw the huge sign:

MANILA DANCE HALL

The orchestra upstairs was playing; Filipinos were entering. I put my hands in my pockets and followed them, beginning to feel lonely for the sound of home.

The dance hall was crowded with Filipino cannery workers and domestic servants. But the girls were very few, and the Filipinos fought over them. When a boy liked a girl he bought a roll of tickets from the hawker on the floor and kept dancing with her. But the other

boys who also liked the same girl shouted at him to stop, cursing him in the dialects and sometimes throwing rolled wet papers at him. At the bar the glasses were tinkling, the bottles popping loudly, and the girls in the back room were smoking marijuana. It was almost impossible to breathe.

Then I saw Marcelo's familiar back. He was dancing with a tall blonde in a green dress, a girl so tall that Marcelo looked like a dwarf climbing a tree. But the girl was pretty and her body was nicely curved and graceful, and she had a way of swaying that arouses confused sensations in me. It was evident that many of the boys wanted to dance with her; they were shouting maliciously at Marcelo. The way the blonde waved to them made me think that she knew most of them. They were nearly all oldtimers and strangers to Marcelo. They were probably gamblers and pimps, because they had fat rolls of money and expensive clothing.

34. Excerpt from the Luce-Celler Act (1946)

Also known as the Filipino and Indian Naturalization Act, this legislation granted naturalization right to immigrants from the Philippines and India. It also ended the exclusion of Asian Indians.

An Act to authorize the admission into the United States of persons of races indigenous to India, and persons of races indigenous to the Philippine Islands, to make them racially eligible for naturalization, and for other purposes.

That section 303 of the Nationality of 1940 . . . be amended to read as follows:

“Sec. 303 (a) The right to become a naturalized citizen under the provisions of this Act shall extend only to—

“(1) white persons, persons of African nativity or descent, and persons who are descendants of races indigenous to the continents of North America or adjacent islands and Filipino persons or persons of Filipino descent. . . .”

“(3) Chinese persons and persons of Chinese descent, and persons of races indigenous to India. . . .”

Sec. 4. With the exception of those covered by subsections (b), (d), (e), and (f) of section 4, Immigration Act of 1924 . . . all persons of races indigenous to India entering the United States annually as immigrants shall be allocated to the quota for India computed under the provisions of section 11 of the said Act. A preference up to 75 per centum of the quota shall be given to Indians and other aliens racially eligible to naturalization, born and resident in India or its dependencies.

35. Excerpt from Alien Fiancées or Fiancés Act (1946)

Enacted after the War Brides Act, this law allowed American veterans of World War II to bring in their fiancée or fiancé to the United States. The temporary visa could be adjusted after their marriage.

An Act To facilitate the admission into the United States of the alien fiancées or fiancés of members of the armed forces of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That on or before July 1, 1947, the alien fiancée or fiancé of a citizen of the United States who is serving in, or who has been honorably discharged from, the armed forces of the United States during World War II may be admitted into the United States with a passport visa as a nonimmigrant temporary visitor for a period of three months. . . .

Source: 60 Stat. 339, Act of June 29, 1946.

See also War Brides Act (1945)

36. Chinese Wives of American Citizens Act (1946)

This amendment, passed after the War Brides Act, removed previous restrictions on the admission of Chinese wives of American citizens. The 1930 amendment

provided admission for only wives married before 1924. That restriction was amended in the new law, granting non-quota status to Chinese wives of American citizens.

An Act to place Chinese wives of American citizens on a nonquota basis.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (c) of section 13 of the Immigration Act of 1924, approved May 26, 1924, as amended by the Act of June 13, 1930 (43 Stat. 162; 46 Stat. 581; 8 U.S.C. 213 (c)), is amended by adding the word “or” at the end of clause (2), substituting a period for the comma at the end of clause (3), and striking out the rest of the subsection, which reads, “or (4) is the Chinese wife of an American citizen who was married prior to the approval of the Immigration Act of 1924, approved May 26, 1924”.

SEC. 2. The first sentence of section 2 of the Act entitled “An Act to repeal the Chinese Exclusion Acts, to establish quotas, and for other purposes”, approved December 17, 1943 (57 Stat. 600; 8 U.S.C. 212 (a)), is amended to read as follows: “With the exception of Chinese alien wives of American citizens and those Chinese aliens coming under subsections (b), (d), (e), and (f) of section 4, Immigration Act of 1924 (43 Stat. 155; 44 Stat. 812; 45 Stat. 1009; 46 Stat. 854; 47 Stat. 656; 8 U.S.C. 204), all Chinese persons entering the United States annually as immigrants shall be allocated to the quota for the Chinese computed under the provisions of section 11 of the said Act.”

Source: 60 Stat. 975, Act of August 9, 1946.

See also War Brides Act (1945)

37. Excerpt from Japanese Evacuation Claims (1948)

Enacted after the Japanese internment after World War II, this legislation authorized the settlement of property loss claims by people of Japanese descent who were removed from the Pacific Coast area during World War II. Congress eventually appropriated \$38 million to settle 23,000 claims.

An Act To authorize the Attorney General to adjudicate certain claims resulting from evacuation of certain persons of Japanese ancestry under military orders.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Attorney General shall have jurisdiction to determine according to law any claim by a person of Japanese ancestry against the United States arising on or after December 17, 1941, when such claim is not compensated for by insurance or otherwise, for damage to or loss of real or personal property (including without limitation as to amount damage to or loss of personal property bailed to or in the custody of the Government or any agent thereof), that is a reasonable and natural consequence of the evacuation or exclusion of such person by the appropriate military commander from a military area in Arizona, California, Oregon, or Washington; or from the Territory of Alaska, or the Territory of Hawaii, under authority of Executive Order Numbered 9066, dated February 19, 1942 (3 CFR, Cum. Supp., 1092), section 67 of the Act of April 20, 1900 (48 U.S.C. 532), or Executive Order Numbered 9489, dated October 18, 1944 (3 CFR, 1944 Supp., 45). As used herein “evacuation” shall include voluntary departure from a military area prior to but in anticipation of an order of exclusion therefrom.

LIMITATIONS; CLAIMS NOT TO BE CONSIDERED

Sec. 2. (a) The Attorney General shall receive claims for a period of eighteen months from the date of enactment of this Act. All claims not presented within that time shall be forever barred.

38. Excerpt from McCarran-Walter Act (1952)

Officially the Immigration and Nationality Act of 1952, the McCarran-Walter Act abolished the Asiatic exclusion. It established a ceiling of 2,000 immigration quota annually from the “Asia Pacific Triangle.” The

law retained the national origins quota system, which allotted annual quotas to countries outside the Western Hemisphere equal to one-sixth of 1 percent of the persons of that national origin in the United States in 1920. New nations were to be allotted annual quotas of 100. The nonquota status would be applied to all persons born in the Western Hemisphere, to the spouses and minor unmarried children of U.S. citizens; to ministers, former foreign employees of the U.S. government; and former citizens. The statutory Anti-Asian discriminatory provisions were removed in this immigration and nationality law, as each Asian nation was granted a token quota. Racially discriminatory principles that denied naturalization to Asians were also removed.

To revise the laws relating to immigration, naturalization, and nationality; and for other purposes.

Sec. 201. (a) The annual quota of any quota area shall be one-sixth of 1 per centum of the number of inhabitants in the continental United States in 1920, which number, except for the purpose of computing quotas for quota areas within the Asia-Pacific triangle, shall be the same number heretofore determined under the provisions of section 11 of the Immigration Act of 1924, attributable by national origin to such quota area: Provided, That the quota existing for Chinese persons prior to the date of enactment of this Act shall be continued, and, except as otherwise provided in section 202 (e), the minimum quota for any quota area shall be one hundred.

Sec. 202. (a) Each independent country, self-governing dominion, mandated territory, and territory under the international trusteeship system of the United Nations, other than the United States and its outlying possessions and the countries specified in section 101(a)(27)(C), shall be treated as a separate quota area such approved by the Secretary of State. . . .

(5) notwithstanding the provisions of paragraphs (2), (3), and (4) of this subsection, any alien who is attributable by as much as one-half of this ancestry to a people or peoples indigenous to the Asia-Pacific triangle defined in subsection (b) of this section, unless such alien is entitled to a nonquota immigrant status . . . shall be chargeable to a quota as specified in subsection (b). . . .

(b) With reference to determination of the quota to which shall be chargeable an immigrant who is attributable by as much as one-half of his ancestry to a people or peoples indigenous to the Asia-Pacific triangle comprising all quota areas and all colonies and other dependent areas situate wholly east of the meridian sixty degrees east of Greenwich, wholly west of the meridian one hundred and sixty-five degrees west, and wholly north of the parallel twenty-five degrees south latitude—

(1) there is hereby established, in addition to quotas for separate quota areas comprising independent countries, self-governing dominions, and territories under the international trusteeship system of the United Nations situate wholly within said Asia-Pacific triangle, an Asian-Pacific quota of one hundred annually, which quota shall be subject to the provisions of subsection (e). . . .

(6) such immigrant born outside the Asia-Pacific triangle who is attributable by as much as one-half of his ancestry to peoples indigenous to two or more separate quota areas situate wholly within the Asia-Pacific triangle, or to a quota area or areas and one or more colonies and other dependent areas situate wholly therein, shall be chargeable to the Asia-Pacific quota. . . .

(e) After the determination of quotas has been made as provided in section 201, revision of the quotas shall be made by the Secretary of State, Secretary of Commerce, and the Attorney General, jointly, whenever necessary, to provide for any change of boundaries resulting in transfer of territory from one sovereignty to another, a change of administrative arrangements of a colony or other dependent areas, or any other political change, requiring a change in the list of quota areas or of the territorial limits thereof, but any increase in the number of minimum quota areas above twenty within the Asia-Pacific triangle shall result in a proportionate decrease in each minimum quota of such area in order that the sum total of all minimum quotas within the Asia-Pacific triangle shall not exceed two thousand. . . .

39. Excerpt from the Drumright Report (1955)

Officially the Report of the Problem of Fraud at Hong Kong, this document was drafted by Everett F. Drumwright, the U.S. consul general in Hong Kong. In the report the consul imagined “a fantastic system of passport and visa fraud,” through which the Chinese Communists infiltrated agents into the United States. Well circulated during the McCarthy era, this report provided some of the basic languages for the INS in an effort to investigate document fraud and destroy the Chinese immigration networks developed during the exclusion.

A criminal conspiracy to evade the laws of the United States has developed into so well organized a system at Hong Kong that:

1. Almost any Chinese with the proper resources may enter the United States even if ineligible under our immigration laws,
2. Adequate security persecutions can hardly be taken to exclude Chinese Communist agents or criminal elements,
3. An alien Chinese can purchase American citizenship for (US) \$3,000. Terms \$50 down, balance after arrival in the U.S., and
4. Thousands of dollars in American pensions have been collected annually by persons not entitled to them.

All of these problems are in turn based upon a single problem: identity.

The major consular problem facing the American Consulate General at Hong Kong has been the ease and frequency with which identities are bought and sold in the area. Most of the identities, moreover, represent “persons” who never actually existed.

How and why would such a situation come into existence?

An answer to this question requires a short look at the history of Chinese immigration to the United States.

This immigration began during the 1850’s when Chinese coolies were first imported to work in the gold mines of California and on the construction of the transcontinental railroads. When the proportions of this immigration became alarming, the inhabitants of the West began to fear that their part of the U.S. would become a predominantly Chinese area. Agitation led to the first of the Exclusion Acts of 1882. The Chinese greatly resented the Exclusion Acts and at first destroyed their effect by crossing the American borders illegally. If later questioned about how they entered the United States, these persons would claim that they had been born there.

If all the Chinese claiming birth in San Francisco prior to the earthquake and fire (which destroyed birth records) had in fact been born there, every Chinese female then in the United States (reliable census figures) would necessarily have given birth to more than 800 children. The government, however, being unable to prove on an individual basis that the persons concerned had not been born in the U.S., eventually had to concede their citizenship.

When border control was tightened, a system for the creation of derivative citizenship claims was substituted. Every Chinese whose American citizenship had been conceded claimed sons after each subsequent visit to China. These non-existent sons were “paper citizens” and their identity could later be sold to still other Chinese desiring to enter the United States. The “immigration families” created by these claims were characterized by large numbers of “sons” and few daughters, by a negligible rate of infant mortality, and by immediate application for entry to the United States as soon as the “son” was old enough to be a productive laborer.

This system has not yet been destroyed . . . When blood testing of the families of Chinese applicants for American passports was begun at Hong Kong in 1951, it could be estimated scientifically from the results that about 80 percent of the applicants then appearing were not related to their alleged parents as claimed.

When the Exclusion Acts were repealed in 1943, and when the wives and minor alien children of American-Chinese later became eligible for

immigration to the U.S. regardless of quota limitations, many of these identities also went on sale between the 1940 census and the 1950 census the Chinese population of the United States increased by over 50 percent, by far its largest increase since the decade just prior to the passage of the Exclusion Acts.

A brisk trade in fraudulent passport and visa identities continues in Hong Kong involving over one hundred shops acting as “citizenship brokers”. These brokerage firms act much as a real estate broker might in the U.S. taking listings of identities that have been created and matching them with persons who wish to gain entry to the U.S. These shops and their clients in Hong Kong and the U.S. have no respect for American immigration, tax, Selective Service, tariff, narcotics, or other laws. For a period of almost three generations these persons have made a profitable business out of buying and selling rights that exist under American law and by flouting all concomitant responsibilities.

The American Consulate General at Hong Kong has done everything in its power to combat this system of fraud. During the last several years a total of 84 percent of all passport cases fully investigated at Hong Kong were proven fraudulent on one ground or another in order to control the system whereby these identities are so commonly assumed the Consulate General has required that applicants for entry into the United States and for American pensions and allotments present some objective evidence that they are the persons they support [sic] to be. It has been the experience of the Consulate General that bona fide applicants seldom have serious trouble in establishing their identities.

The continuance of this system of illegal immigration under the present political situation possesses a serious problem of national security. . .

40. Protest Letter Against Grand Jury Investigation of Alleged Illegal Entry of Chinese (1956)

During the grand jury investigation of document fraud in early 1950s, it soon became clear the entire Chinese American community was the target. In the following letter to Warren Magnuson, the Senate who introduced the bill to repeal Chinese exclusion in 1943, the President of the Chinese Consolidated Benevolent Association in New York registered the protest against INS’s discrimination actions.

9 March 1956

Hon. Warren G. Magnuson
U.S. Senate
Washington, D.C.

Hon Warren G. Magnuson:

The New York Chinese community is deeply concerned over reports that twenty-six Chinese-American civic organizations in San Francisco, including the Chinese Consolidated Benevolent Association there, have been summarily summoned for hearing before a special Federal Grand Jury investigating alleged illegal entry of Chinese nationals into the United States.

Blanket summoning of law-abiding civic organizations is considered both unnecessary and unjust since such organizations are not even remotely related to the purpose of the investigation. Law-abiding Chinese here and in other cities are disturbed over short-noticed, discriminatory and sweeping summonses which are interrupting normal commerce, community well-being and lawful activities of individuals.

We shall greatly appreciate your kind assistance in upholding justice and preventing discrimination. The Chinese Consolidated Benevolent Association has no intention of obstructing proper law enforcement and investigation and will wholeheartedly cooperate with proper authorities in safeguarding the welfare of law-abiding members of our community. We are, however,

opposed to ill-advised, blanket action which is disturbing social order of our community.

Sincerely yours,
Shing-tai Liang
President

National Archives, College Park, Md., files of the Immigration and Naturalization Service, Central Office, 1949–1958, “Document Fraud,” file 56364/51.6.

41. Excerpt of Chinese Confession Program of the Immigration and Naturalization Service (1960)

Launched in 1956 by the Department of Justice through the Immigration and Naturalization Service, the so-called Chinese Confession Program was established to weed out Chinese Americans who were sympathetic to the People’s Republic of Chinese and terminate the immigration networks developed during the exclusion era. Individual Chinese Americans were pushed to confess. Because the program was not legislated, the INS was able to decide arbitrarily who it would deport.

Purpose of Program

When in early 1957 the Immigration and Naturalization Service announced the institution of the so-called “Chinese confession program”, it invited Chinese of the above described categories to appear before the Service to purge themselves of the misstatements made at the time of their entry and to apply for the benefit of the administrative remedy given them under Section 244(a)(1).

The Purpose of the program was twofold. The humanitarian aspect was to free these otherwise law-abiding persons from the constant pressure of living with a lie. At the time, the Service wanted to terminate permanently the machinery which facilitated a steady influx of illegal aliens. To achieve this, it is, of course, necessary not only to have the individual appear before the Service and disclose his true identity, origin and

nationality, but to have him willing to divulge a complete background story of his entry, including the names of persons who facilitated it. Many of these persons could benefit from the program, although, of course, others would become involved by having their names revealed.

While Section 244(a)(1) expired in December 1957, the Chinese confession program is continuing. Presently, lawful entry may be established in accordance with Section 249 of the Immigration and Nationality Act, as amended by P.L.85-616. Thus Chinese who entered the United States illegally prior to June 28, 1940 and who are otherwise eligible will be permitted to benefit from that provision, even though previous documentation had been obtained by fraud. It should be understood that most applicants have committed perjury or some fraud in connection with immigration and passport procedure and that forgiveness for this criminal offense, while not promised by the Service, is a prerequisite for applicability of the discretionary relief.

Families of Chinese Confession Cases: It is evident that some of the Chinese who may benefit from the program, brought to the United States their wives and their children and in many cases small children not their own, but of tender years. Where any of these persons arrived with a visa, administrative procedures are available to help them adjust. Even in those cases where the child arrived as a “paper citizen” ultimate lawful status may be acquired following the adjustment and naturalization of either of their parents. In the interim a compassionate policy is followed and where deportation would create family separation and great hardship to innocent persons, the case will not be pursued.

Unadjustable Cases: A number of cases will remain which cannot be adjusted through any administrative means at the present time. Among them are “paper citizens” who first entered the United States subsequent to June 28, 1940 and who have no close family ties in the United States; “paper citizens” who are excludable from the United States under Section 212(a) of the Immigration and Nationality Act insofar as it relates to criminals, procurers and other immoral persons, subversives, violators of the narcotic laws or smugglers of aliens, unless by reason of their

reformation and relationship to United States citizens or lawful resident aliens, they are eligible for relief under Section 5 of P.L. 85-316.

The aforementioned provisions of law are remedial and Chinese persons illegally in the United States are encouraged to apply for the benefits thereof. Every consideration and assistance will be accorded them, consistent with the spirit of the law. This applies also to individuals, coming within the scope of the "confession program", who left the United States after 1940. Such absences, unless under an order of deportation, are not fatal to creating a record of lawful entry, provided the applicants can clearly establish that they did not abandon their residence in the United States.

The Immigration and Naturalization Service Reports

In his year-end report for 1959 to Attorney General William P. Rogers, J.M. Swing, Commissioner of Immigration and Naturalization, described the procedure utilized in the program as follows:

"Through publicity disseminated in proper quarters, Chinese persons illegally in the United States for many years who had previously feared deportation or prosecution came forward and told the truth. This cut off at the roots 'paper' family trees bearing possible untold numbers of future generations of fraudulent and fictitious United States citizens. The most beneficial aspect of the entire program is the closing of the 'slots' by the Service."

Conclusion

According to Commissioner Swing, 2,433 Chinese have admitted being in the United States unlawfully, as a result of the "Confession Program" resulting in the closing of 2,077 "slots". Commissioner Swing stated that the program will continue to be pressed with full force and vigor, so that this means of illegal entry into the United States will be closed off once and for all.

42. Excerpt from the Immigration Act (1965)

This law abolished the racially biased national origins quota system that had structured American immigration policy since 1924, bringing profound changes to the pattern of Asian immigration. The law created a preference system that favored family unification. Numerical restrictions on visas were set at 170,000 per year, with a maximum of 20,000 per country. Immediate family members of U.S. citizens were granted nonquota admission privileges.

An Act To amend the Immigration and Nationality Act, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 201 of the Immigration and Nationality Act (66 Stat. 175; 8 U.S.C. 1151) be amended to read as follows:

"SEC. 201. (a) Exclusive of special immigrants defined in section 101(a)(27), and of the immediate relatives of United States citizens specified in subsection (b) of this section, the number of aliens who may be issued immigrant visas or who may otherwise acquire the status of an alien lawfully admitted to the United States for permanent residence, or who may, pursuant to section 203(a)(7) enter conditionally, (i) shall not in any of the first three quarters of any fiscal year exceed a total of 45,000 and (ii) shall not in any fiscal year exceed a total of 170,000.

"(b) The 'immediate relatives' referred to in subsection (a) of this section shall mean the children, spouses, and parents of a citizen of the United States: *Provided*, That in the case of parents, such citizen must be at least twenty-one years of age. The immediate relatives specified in this subsection who are otherwise qualified for admission as immigrants shall be admitted as such, without regard to the numerical limitations in this Act.

"(c) During the period from July 1, 1965, through June 30, 1968, the annual quota of any quota area shall be the same as that which existed for that area on June 30, 1965. The Secretary of State shall, not later than on the sixtieth day immediately following date

of enactment of this subsection and again on or before September 1, 1966, and September 1, 1967, determine and proclaim the amount of quota numbers which remain unused at the end of the fiscal year ending on June 30, 1965, June 30, 1966, and June 30, 1967, respectively, and are available for distribution pursuant to subsection (d) of this section.

“(d) Quota numbers not issued or otherwise used during the previous fiscal year, as determined in accordance with subsection (c) hereof, shall be transferred to an immigration pool. Allocation of numbers from the pool and from national quotas shall not together exceed in any fiscal year the numerical limitations in subsection (a) of this section. The immigration pool shall be made available to immigrants otherwise admissible under the provisions of this Act who are unable to obtain prompt issuance of a preference visa due to oversubscription of their quotas, or subquotas as determined by the Secretary of State. Visas and conditional entries shall be allocated from the immigration pool within the percentage limitations and in the order of priority specified in section 203 without regard to the quota to which the alien is chargeable.

“(e) The immigration pool and the quotas of quota areas shall terminate June 30, 1968. Thereafter immigrants admissible under the provisions of this Act who are subject to the numerical limitations of subsection (a) of this section shall be admitted in accordance with the percentage limitations and in the order of priority specified in section 203.”

SEC. 2. Section 202 of the Immigration and Nationality Act (66 Stat. 175; 8 U.S.C. 1152) is amended to read as follows:

“(a) No person shall receive any preference or priority or be discriminated against in the issuance of an immigrant visa because of his race, sex, nationality, place of birth, or place of residence, except as specifically provided in section 101(a)(27), section 201(b), and section 203: *Provided*, That the total number of immigrant visas and the number of conditional entries made available to natives of any single foreign state under paragraphs (1) through (8) of section 203(a) shall not exceed 20,000 in any fiscal year: *Provided further*, That the foregoing proviso shall not operate to reduce the number of immigrants who may be

admitted under the quota of any quota area before June 30, 1968.

“(b) Each independent country, self-governing dominion, mandated territory, and territory under the international trusteeship system of the United Nations, other than the United States and its outlying possessions shall be treated as a separate foreign state for the purposes of the numerical limitation set forth in the proviso to subsection (a) of this section when approved by the Secretary of State. All other inhabited lands shall be attributed to a foreign state specified by the Secretary of State. For the purposes of this Act of the foreign state to which an immigrant is chargeable shall be determined by birth within such foreign state except that (1) an alien child, when accompanied by his alien parent or parents, may be charged to the same foreign state as the accompanying parent or of either accompanying parent if such parent has received or would be qualified for an immigrant visa, if necessary to prevent the separation of the child from the accompanying parent or parents, and if the foreign state to which such parent has been or would be chargeable has not exceeded the numerical limitation set forth in the proviso to subsection (a) of this section for that fiscal year; (2) if an alien is chargeable to a different foreign state from that of his accompanying spouse, the foreign state to which such alien is chargeable may, if necessary to prevent the separation of husband and wife, be determined by the foreign state of the accompanying spouse, if such spouse has received or would be qualified for an immigrant visa and if the foreign state to which such spouse has been or would be chargeable has not exceeded the numerical limitation set forth in the proviso to subsection (a) of this section for that fiscal year; (3) an alien born in the United States shall be considered as having been born in the country of which he is a citizen or subject, or if he is not a citizen or subject of any country then in the last foreign country in which he had his residence as determined by the consular officer; (4) an alien born within any foreign state in which neither of his parents was born and in which neither of his parents had a residence at the time of such alien’s birth may be charged to the foreign state of either parent.

“(c) Any immigrant born in a colony or other component or dependent area of a foreign state unless a special immigrant as provided in section 101(a)(27) or an immediate relative of a United States citizen as specified in section 201(b), shall be chargeable, for the purpose of limitation set forth in section 202(a), to the foreign state, except that the number of persons born in any such colony or other component or dependent area overseas from the foreign state chargeable to the foreign state in any one fiscal year shall not exceed 1 per centum of the maximum number of immigrant visas available to such foreign state.

“(d) In the case of any change in the territorial limits of foreign states, the Secretary of State shall, upon recognition of such change, issue appropriate instructions to all diplomatic and consular offices.”

SEC. 3. Section 203 of the immigration and Nationality Act (66 Stat. 175; 8 U.S.C. 1153) is amended to read as follows:

“SEC. 203. (a) Aliens who are subject to the numerical limitations specified in section 201(a) shall be allotted visas or their conditional entry authorized, as the case may be as follows:

“(1) Visas shall be first made available, in a number not to exceed 20 per centum of the number specified in section 201(a)(ii), to qualified immigrants who are the unmarried sons and daughters of citizens of the United States.

“(2) Visas shall next be made available, in a number not to exceed 20 per centum of the number specified in section 201(a)(ii), plus any visas not required for the classes specified in paragraph (1), to qualified immigrants who are the spouses, unmarried sons or unmarried daughters of an alien lawfully admitted for permanent residence.

“(3) Visas shall next be made available, in a number not to exceed 10 per centum of the number specified in section 201(a)(ii), to qualified immigrants who are members of the professions, or who because of their exceptional ability in the sciences or the arts will substantially benefit prospectively the national economy, cultural interests, or welfare of the United States.

“(4) Visas shall next be made available, in a number not to exceed 10 per centum of the number specified in section 201(a)(ii), plus any visas not required

for the classes specified in paragraphs (1) through (3), to qualified immigrants who are the married sons or the married daughters of citizens of the United States.

“(5) Visas shall next be made available, in a number not to exceed 24 per centum of the number specified in section 201(a)(ii), plus any visas not required for the classes specified in paragraphs (1) through (4), to qualified immigrants who are the brothers or sisters of citizens of the United States.

“(6) Visas shall next be made available, in a number not to exceed 10 per centum of the number specified in section 201(a)(ii), to qualified immigrants who are capable of performing specified skilled or unskilled labor, not of a temporary or seasonal nature, for which a shortage of employable and willing persons exists in the United States.

“(7) Conditional entries shall next be made in available by the Attorney General, pursuant to such regulations as he may prescribe and in a number not to exceed 6 per centum of the number specified in section 201(a)(II), to aliens who satisfy an Immigration and Naturalization Service officer at an examination in any non-Communist or non-Communist-dominated country, (A) that (i) because of persecution or fear of persecution on account of race, religion, or political opinion they have fled (I) from any Communist or Communist-dominated country or area, or (II) from any country within the general area of the Middle East, and (ii) are unable or unwilling to return to such country or area on account of race, religion, or political opinion, and (iii) are not nationals of the countries or areas in which their application for conditional entry is made; or (B) that they are persons uprooted by catastrophic natural calamity as defined by the President who are unable to return to their usual place of abode. For the purpose of the foregoing the term ‘general area of the Middle East’ means the area between and including (1) Libya on the west, (2) Turkey on the north, (3) Pakistan on the east, and (4) Saudi Arabia and Ethiopia on the south: *Provided*, That immigrant visas in a number not exceeding one-half the number specified in this paragraph may be made available, in lieu of conditional entries of a like number, to such aliens who have been continuously physically present in the United States for a period of at least two years prior to application for adjustment of status.

“(8) Visas authorized in any fiscal year, less those required for issuance to the classes specified in paragraph (1) through (6) and less the number of conditional entries and visas made available pursuant to paragraph (7), shall be made available to other qualified immigrants strictly in the chronological order in which they qualify. Waiting lists of applications shall be maintained in accordance with regulations prescribed by the Secretary of State. No immigrant visa shall be issued to a nonpreference immigrant under this paragraph, or to an immigrant with a preference under paragraph (3) or (6) of this subsection, until the consular officer is in receipt of a determination made by the Secretary of Labor pursuant to the provision of section 212(a)(14)

43. Accounts by Yuri Kochiyama (1965)

In 1960, Japanese American Yuri Kochiyama joined the Organization of Afro-American Unity in Harlem, New York, and became acquainted with Malcolm X. In this interview, she talked about the lessons she learned from Malcolm X over the years, and recalled the moment when he was assassinated in 1965.

One of the greatest lessons Malcolm taught people was to learn their own history. Know your history. Know the world. Be proud of who you are. He would say, “If you don’t know who you are and where you came from, how can you know what direction to go in the future?” Through the process of discovering our own histories, many peoples—Africans, Asians, Puerto Ricans living in the United States—learned to throw off our internalized racism and develop pride in our heritage. But don’t stop there. Learn about the histories of other people. And learn about the history of social movements because this is how you learn to create social change.

Now, as I recall that date, February twenty-first, 1965, I was sitting in the same booth as Herman Ferguson, which was, I think about the seventh or eighth row. I was with my sixteen-year-old son, Billy. I was taking notes of Brother Benjamin’s [Karim’s] message. He had just finish saying, just before introducing him, “Malcolm is a kind man who would die for you.” The distraction, a man yelling, “Get your hand out of

my pocket,” took place across from where we were sitting. All eyes were turned to the distraction. Malcolm tried to calm the people, saying, “Cool it, brothers, cool it.” Then shots rang out from the front. Malcolm fell straight backwards, and it was right then, all hell broke loose. Chairs crashing to the floor. People hitting the floor. People chasing the killers. And few more gunshots, and something like a smoke bomb was thrown. It was utter chaos.

44. Excerpt from Refugee Act of 1980

Responding to the refugee crisis that began in the late 1970s, this is the first comprehensive legislative measure that specifically dealt with refugee issues. The law adopted the U.N. definition of “refugees” and provided systematic procedure for the admission and settlement of the refugees. The law also established an annual quota for refugees and made Congress responsible for refugee policy.

An Act

To amend the Immigration and Nationality Act to revise the procedures for the admission of refugees, to amend the Migration and Refugee Assistance Act of 1962 to establish a more uniform basis for the provision of assistance to refugees, and for other purposes.

TITLE I—PURPOSE

SEC. 101. (a) The Congress declares that it is the historic policy of the United States to respond to the urgent needs of persons subject to persecution in their homelands, including, where appropriate, humanitarian assistance for their care and maintenance in asylum areas, efforts to promote opportunities for resettlement or voluntary repatriation, aid for necessary transportation and processing, admission to this country of refugees of special humanitarian concern to the United States, and transitional assistance to refugees in the United States. The Congress further declares that it is the policy of the United States to encourage all nations to provide assistance and resettlement opportunities to refugees to the fullest extent possible.

(b) The objectives of this Act are to provide a permanent and systematic procedure for the admission to this country of refugees of special humanitarian concern to the United States, and to provide comprehensive and uniform provisions for the effective resettlement and absorption of those refugees who are admitted.

TITLE II—ADMISSION OF REFUGEES

SEC. 201. (a) Section 101(a) of the Immigration and Nationality Act (8 U.S.C. 1101(a)) is amended by adding after paragraph (41) the following new paragraph:

“(42) The term ‘refugee’ means (A) any person who is outside any country of such person’s nationality or, in the case of a person having no nationality, is outside any country in which such person last habitually resided, and who is unable or unwilling to return to, and is unable or unwilling to avail himself or herself of the protection of, that country because of persecution or a well-founded fear of persecution on account of race, religion, nationality, membership in a particular social group, or political opinion, or (B) in such special circumstances as the President after appropriate consultation (as defined in section 207(e) of this Act) may specify, any person who is within the country of such person’s nationality or, in the case of a person having no nationality, within the country in which such person is habitually residing, and who is persecuted or who has a well-founded fear of persecution on account of race, religion, nationality, membership in a particular social group, or political opinion. The term ‘refugee’ does not include any person who ordered, incited, assisted, or otherwise participated in the persecution of any person on account of race, religion, nationality, membership in a particular social group, or political opinion.”

(b) Chapter 1 of title II of such Act is amended by adding after section 206 (8 U.S.C. 1156) the following new sections:

“ANNUAL ADMISSION OF REFUGEES AND ADMISSION OF EMERGENCY SITUATION REFUGEES”

“SEC. 207. (a)(1) Except as provided in subsection (b), the number of refugees who may be admitted under this section in fiscal year 1980, 1981, or 1982,

may not exceed fifty thousand unless the President determines, before the beginning of the fiscal year and after appropriate consultation (as defined in subsection (e)), that admission of a specific number of refugees in excess of such number is justified by humanitarian concerns or is otherwise in the national interest.

“(2) Except as provided in subsection (b), the number of refugees who may be admitted under this section in any fiscal year after fiscal year 1982 shall be such number as the President determines, before the beginning of the fiscal year and after appropriate consultation, is justified by humanitarian concerns or is otherwise in the national interest.

“(3) Admissions under this subsection shall be allocated among refugees of special humanitarian concern to the United States in accordance with a determination made by the President after appropriate consultation.

“(b) If the President determines, after appropriate consultation, that (1) an unforeseen emergency refugee situation exists, (2) the admission of certain refugees in response to the emergency refugee situation is justified by grave humanitarian concerns or is otherwise in the national interest, and (3) the admission to the United States of these refugees cannot be accomplished under subsection (a), the President may fix a number of refugees to be admitted to the United States during the succeeding period (not to exceed twelve months) in response to the emergency refugee situation and such admissions shall be allocated among refugees of special humanitarian concern to the United States in accordance with a determination made by the President after the appropriate consultation provided under this subsection.

“(c)(1) Subject to the numerical limitations established pursuant to subsections (a) and (b), the Attorney General may, in the Attorney General’s discretion and pursuant to such regulations as the Attorney General may prescribe, admit any refugee who is not firmly resettled in any foreign country, is determined to be of special humanitarian concern to the United States, and is admissible (except as otherwise provided under paragraph (3)) as an immigrant under this Act.

“(2) A spouse or child (as defined in section 101 (b)(1)(A), (B), (C), (D), or (E)) of any refugee who

qualifies for admission under paragraph (1) shall, if not otherwise entitled to admission under paragraph (1) and if not a person described in the second sentence of section 101(a)(42), be entitled to the same admission status as such refugee if accompanying, or following to join, such refugee and if the spouse or child is admissible (except as otherwise provided under paragraph (3)) as an immigrant under this Act. Upon the spouse's or child's admission to the United States, such admission shall be charged against the numerical limitation established in accordance with the appropriate subsection under which the refugee's admission is charged.

“ASYLUM PROCEDURE

“SEC. 208. (a) The Attorney General shall establish a procedure for an alien physically present in the United States or at a land border or port of entry, irrespective of such alien's status, to apply for asylum, and the alien may be granted asylum in the discretion of the Attorney General if the Attorney General determines that such alien is a refugee within the meaning of section 101(a)(42)(A).

“(b) Asylum granted under the subsection (a) may be terminated if the Attorney General, pursuant to such regulation as the Attorney General may prescribe, determines that the alien is no longer a refugee within the meaning of section 101(a)(42)(A) owing to a change in circumstances in the alien's country of nationality or, in the case of an alien having no nationality, in the country in which the alien last habitually resided.

“(c) A spouse or child (as defined in section 101(b)(1)(A), (B), (C), (D), or (E)) of an alien who is granted asylum under subsection (a) may, if not otherwise eligible for asylum under such subsection, be granted the same status as the alien if accompanying, or following to join, such alien.

“ADJUSTMENT OF STATUS OF REFUGEES

“SEC. 209. (a)(1) Any alien who has been admitted to the United States under section 207—

“(A) whose admission has not been terminated by the Attorney General pursuant to such regulations as the Attorney General may prescribe,

“(B) who has been physically present in the United States for at least one year, and

“(C) who has not acquired permanent resident status, shall at the end of such year period, return or be returned to the custody of the Service for inspection and examination for admission to the United States as an immigrant in accordance with the provisions of sections 235, 236, and 237.

“(2) Any alien who is found upon inspection and examination by an immigration officer pursuant to paragraph (1) or after a hearing before a special inquiry officer to be admissible (except as otherwise provided under subsection (c)) as an immigrant under this Act at the time of the alien's inspection and examination shall, notwithstanding any numerical limitation specified in this Act, be regarded as lawfully admitted to the United States for permanent residence as of the date of such alien's arrival into the United States.

“(b) Not more than five thousand of the refugee admissions authorized under section 207(a) in any fiscal year may be made available by the Attorney General. . . .

SEC. 203. (a) Subsection (a) of section 201 of the Immigration and Nationality Act (8 U.S.C. 1151) is amended to read as follows:

“(a) Exclusive of special immigrants defined in section 101(a)(27), immediate relatives specified in subsection (b) of this section, and aliens who are admitted or granted asylum under section 207 or 208, the number of aliens born in any foreign state or dependent area who may be issued immigrant visas or who may otherwise acquire the status of an alien lawfully admitted to the United States for permanent residence, shall not in any of the first three quarters of any fiscal year exceed a total of seventy-two thousand and shall not in any fiscal year exceed two hundred and seventy thousand.”

“TITLE IV—MISCELLANEOUS AND REFUGEE ASSISTANCE

“CHAPTER 1—MISCELLANEOUS”; and

(2) by adding at the end thereof the following new chapter:

“CHAPTER 2—REFUGEE ASSISTANCE “OFFICE OF REFUGEE RESETTLEMENT

“SEC. 411. (a) There is established, within the Department of Health and Human Services, an office to be known as the Office of Refugee Resettlement

(hereinafter in this chapter referred to as the ‘Office’). The head of the Office shall be a Director (hereinafter in this chapter referred to as the ‘Director’), to be appointed by the Secretary of Health and Human Services (hereinafter in this chapter referred to as the ‘Secretary’).

“(b) The function of the Office and its Director is to fund and administer (directly or through arrangements with other Federal agencies), in consultation with and under the general policy guidance of the United States Coordinator for Refugee Affairs (hereinafter in this chapter referred to as the ‘Coordinator’), programs of the Federal Government under this chapter.

“AUTHORIZATION FOR PROGRAMS FOR
DOMESTIC RESETTLEMENT OF AND
ASSISTANCE TO REFUGEES

“SEC. 412. (a) CONDITIONS AND CONSIDERATIONS.—(1) In providing assistance under this section, the Director shall, to the extent of available appropriations, (A) make available sufficient resources for employment training and placement in order to achieve economic self-sufficiency among refugees as quickly as possible, (B) provide refugees with the opportunity to acquire sufficient English language training to enable them to become effectively resettled as quickly as possible, (C) insure that cash assistance is made available to refugees in such a manner as not to discourage their economic self-sufficiency, in accordance with subsection (e)(2), and (D) insure that women have the same opportunities as men to participate in training and instruction.

“(2) The Director, together with the Coordinator, shall consult regularly with State and local governments and private nonprofit voluntary agencies concerning the sponsorship process and the intended distribution of refugees among the States and localities.

“(3) In the provision of domestic assistance under this section, the Director shall make a periodic assessment, based on refugee population and other relevant factors, of the relative needs of refugees for assistance and services under this chapter and the resources available to meet such needs. In allocating resources, the Director shall avoid duplication of services and provide for maximum coordination between agencies providing related services.

“(4) No grant or contract may be awarded under this section unless an appropriate proposal and application (including a description of the agency’s ability to perform the services specified in the proposal) are submitted to, and approved by, the appropriate administering official. Grants and contracts under this section shall be made to those agencies which the appropriate administering official determines can best perform the services. Payments may be made for activities authorized under this chapter in advance or by way of reimbursement. In carrying out this section, the Director, the Secretary of State, and any such other appropriate administering official are authorized—

“(A) to make loans, and

“(B) to accept and use money, funds, property, and services of any kind made available by gift, devise, bequest, grant, or otherwise for the purpose of carrying out this section.

“(5) Assistance and services funded under this section shall be provided to refugees without regard to race, religion, nationality, sex, or political opinion.

“(10) For purposes of this chapter, the term ‘refugee’ includes any alien described in section 207(c)(2).

“(b) PROGRAM OF INITIAL RESETTLEMENT

“(3) The Secretary is authorized, in consultation with the Coordinator, to make arrangements (including cooperative arrangements with other Federal agencies) for the temporary care of refugees in the United States in emergency circumstances, including the establishment of processing centers, if necessary, without regard to such provisions of law (other than the Renegotiation Act of 1951 and section 414(b) of this chapter) regulating the making, performance, amendment, or modification of contracts and the expenditure of funds of the United States Government as the Secretary may specify.

“(4) The Secretary, in consultation with the Coordinator, shall—

“(A) assure that an adequate number of trained staff are available at the location at which the refugees enter the United States to assure that all necessary medical records are available and in proper order;

“(B) provide for the identification of refugees who have been determined to have medical conditions affecting the public health and requiring treatment;

“(C) assure that State or local health officials at the resettlement destination within the United States of each refugee are promptly notified of the refugee’s arrival and provided with all applicable medical records; and

“(D) provide for such monitoring of refugees identified under subparagraph (B) as will insure that they receive appropriate and timely treatment.

The Secretary shall develop and implement methods of monitoring and assessing the quality of medical screening and related health services provided to refugees awaiting resettlement in the United States.

“(c) PROJECT GRANTS AND CONTRACTS FOR SERVICES FOR REFUGEES.—The Director is authorized to make grants to, and enter into contracts with, public or private nonprofit agencies for projects specifically designed—

“(1) to assist refugees in obtaining the skills which are necessary for economic self-sufficiency, including projects for job training, employment services, day care, professional refresher training, and other recertification services;

“(2) to provide training in English where necessary (regardless of whether the refugees are employed or receiving cash or other assistance); and

“(3) to provide where specific needs have been shown and recognized by the Director, health (including mental health) services, social services, educational and other services.

“(d) ASSISTANCE FOR REFUGEE CHILDREN.—(1) The Director is authorized to make grants, and enter into contracts, for payments for projects to provide special educational services (including English language training) to refugee children in elementary and secondary schools where a demonstrated need has been shown.

“(2)(A) The Director is authorized to provide assistance, in reimbursement to States, and grants to and contracts with public and private nonprofit agencies, for the provision of child welfare services, including foster care maintenance payments and services and health care, furnished to any refugee child (except as provided in subparagraph (B)) during the thirty-six month period beginning with the first month in which such refugee child is in the United States.

“(B)(i) In the case of a refugee child who is unaccompanied by a parent or other close adult relative (as defined by the Director), the services described in subparagraph (A) may be furnished until the month after the child attains eighteen years of age (or such higher age as the State’s child welfare services plan under part B of title IV of the Social Security Act prescribes for the availability of such services to any other child in that State).

“(ii) The Director shall attempt to arrange for the placement under the laws of the States of such unaccompanied refugee children, who have been accepted for admission to the United States, before (or as soon as possible after) their arrival in the United States. During any interim period while such a child is in the United States or in transit to the United States but before the child is so placed, the Director shall assume legal responsibility (including financial responsibility) for the child, if necessary, and is authorized to make necessary decisions to provide for the child’s immediate care.

“(iii) In carrying out the Director’s responsibilities under clause (ii), the Director is authorized to enter into contracts with appropriate public or private nonprofit agencies under such conditions as the Director determines to be appropriate.

“(iv) The Director shall prepare and maintain a list of (I) all such unaccompanied children who have entered the United States after April 1, 1975, (II) the names and last known residences of their parents (if living) at the time of arrival, and (III) the children’s location, status, and progress.

“(e) CASH ASSISTANCE AND MEDICAL ASSISTANCE TO REFUGEES.—(1) The Director is authorized to provide assistance, reimbursement to States, and grants to, and contracts with, public or private nonprofit agencies for up to 100 per centum of the cash assistance and medical assistance provided to any refugee during the thirty-six month period beginning with the first month in which such refugee has entered the United States and for the identifiable and reasonable administrative costs of providing this assistance.

“(2) Cash assistance provided under this subsection to an employable refugee is conditioned, except for good cause shown—

“(A) on the refugee’s registration with an appropriate agency providing employment services described in subsection (c)(1), or, if there is no such agency available, with an appropriate State or local employment service; and

“(B) on the refugee’s acceptance of appropriate offers of employment;

except that subparagraph (A) does not apply during the first sixty days after the date of the refugee’s entry.

“(3) The Director shall develop plans to provide English training and other appropriate services and training to refugees receiving cash assistance.

“(4) If a refugee is eligible for aid or assistance under a State plan approved under part A of title IV or under title XIX of the Social Security Act, or for supplemental security income benefits (including State supplementary payments) under the program established under title XVI of that Act, funds authorized under this subsection shall only be used for the non-Federal share of such aid or assistance, or for such supplementary payments, with respect to cash and medical assistance provided with respect to such refugee under this paragraph.

“(5) The Director is authorized to allow for the provision of medical assistance under paragraph (1) to any refugee, during the one-year period after entry, who does not qualify for assistance under a State plan approved under Title XIX of the Social Security Act on account of any resources or income requirement of such plan, but only if the Director determines that—

“(A) this will (i) encourage economic self-sufficiency, or (ii) avoid a significant burden on State and local governments; and

“(B) the refugee meets such alternative financial resources and income requirements as the Director shall establish.

Approved March 17, 1980

See also Refugee Act of 1980

45. Amerasian Immigration Act (1982)

This immigration law was enacted to permit admission mixed-race children of American military personnel and women in Southeast Asia, especially Vietnam. The law applied to children not only in Vietnam but also in

Korea, Thailand, the Philippines, and elsewhere. Under the legislation Amerasian children under age 18 could enter the United States if they could prove they were fathered by United States citizens.

An Act—To amend the Immigration and Nationality Act to provide preferential treatment in the admission of certain children of United States citizens.

“(2) The Attorney General may approve a petition for an alien under paragraph (1) if—

“(A) he has reason to believe that the alien (i) was born in Korea, Vietnam, Laos, Kampuchea, or Thailand after 1950 and before the date of the enactment of this subsection, and (ii) was fathered by a United States citizen;

“(B) he has received an acceptable guarantee of legal custody and financial responsibility described in paragraph (4); and

“(C) in the case of an alien under eighteen years of age, (i) the alien’s replacement with a sponsor in the United States has been arranged by an appropriate public, private, or State child welfare agency licensed in the United States and actively involved in the inter-country placement of children and (ii) the alien’s mother or guardian has in writing irrevocably released the alien for emigration.

Source: 96 Stat. 1716, Act of October 22, 1982

46. Excerpt from Immigration Reform and Control Act (IRCA) (1986)

Also known as Simpson-Mazzoli Act, this law granted amnesty to illegal immigrants who entered the United States before January 1, 1982 and who had lived in the United States continuously. The law also granted amnesty to certain seasonal agricultural workers who were in the United States without legal documents. The law, however, criminalized the act of knowingly hiring illegal aliens and established punitive measures for those employing illegal immigrants.

Comprehensive immigration legislation:

- a. Authorized legalization (i.e., temporary and then permanent resident status) for aliens who had resided in the United States in an unlawful

status since January 1, 1982 (entering illegally or as temporary visitors with authorized stay expiring before that date or with the Government's knowledge of their unlawful status before that date) and are not excludable.

- b. Created sanctions prohibiting employers from knowingly hiring, recruiting, or referring for a fee aliens not authorized to work in the United States.
- c. Increased enforcement at U.S. borders.
- d. Created a new classification of seasonal agricultural worker and provisions for the legalization of certain such workers.
- e. Extended the registry date (i.e., the date from which an alien has resided illegally and continuously in the United States and thus qualifies for adjustment to permanent resident status) from June 30, 1948 to January 1, 1972.
- f. Authorized adjustment to permanent resident status for Cubans and Haitians who entered the United States without inspection and had continuously resided in country since January 1, 1982.
- g. Increased the numerical limitation for immigrants admitted under the preference system for dependent areas from 600 to 5,000 beginning in fiscal year 1988.
- h. Created a new special immigrant category for certain retired employees of international organizations and their families and a new nonimmigrant status for parents and children of such immigrants.
- i. Created a nonimmigrant Visa Waiver Pilot program allowing certain aliens to visit the United States without applying for a nonimmigrant visa.
- j. Allocated 5,000 nonpreference visas in each of fiscal years 1987 and 1988 for aliens born in countries from which immigration was adversely affected by the 1965 act.

Source: 100 Stat. 3359, Act of November 6, 1986.

47. Amerasian Homecoming Act (1987)

An appropriations law, part of the Indochinese Refugee Resettlement and Protection Act of 1987, provided

for admission of children born in Vietnam by Vietnamese mothers and American fathers. In addition to these children, as provided in Amerasian Immigration Act passed in 1982, this law allowed entry for these children's immediate relatives, including parents, siblings, etc. The individuals were admitted as nonquota immigrants and receive refugee program benefits.

SEC. 804. FINDINGS AND DECLARATIONS.—The Congress makes the following findings and declarations:

- (a) Thousands of children in the Socialist Republic of Vietnam were fathered by American civilians and military personnel.
- (b) It has been reported that many of these Amerasian children are ineligible for ration cards and often beg in the streets, peddle black market wares, or prostitute themselves.
- (c) The mothers of Amerasian children in Vietnam are not eligible for government jobs or employment in government enterprises and many are estranged from their families and are destitute.
- (d) Amerasian children and their families have undisputed ties to the United States and are of particular humanitarian concern to the United States.
- (e) The United States has a longstanding and very strong commitment to receive the Amerasian children in Vietnam, if they desire to come to the United States.

Source: 101 Stat. 1329, Act of December 22, 1987.

48. Indochinese Refugee Resettlement and Protection Act of 1987

As the influx of Southeast Asians expanded in late 1980s, this law stipulated continued commitment of the U.S. government to the international refugee crisis and provided additional measures to facilitate admission and settlement of the refugees.

SEC. 802. (a) FINDINGS.—It is the sense of the Congress that—

- (1) the continued occupation of Cambodia by Vietnam and the oppressive conditions within Vietnam, Cambodia, and Laos have led to a steady flight of persons from those countries, and the likelihood for the safe repatriation of the hundreds of thousands of refugees in the region's camps is negligible for the foreseeable future;
 - (2) the United States has already played a major role in responding to the Indochinese refugee problem by accepting approximately 850,000 Indochinese refugees into the United States since 1975 and has a continued interest in persons who have fled and continue to flee the countries of Cambodia, Laos, and Vietnam;
 - (3) Hong Kong, Indonesia, Malaysia, Singapore, the Philippines, and Thailand have been the front line countries bearing tremendous burdens caused by the flight of these persons;
 - (4) all members of the international community bear a share of the responsibility for the deterioration in the refugee first asylum situation in Southeast Asia because of slow and limited procedures, failure to implement effective policies for the region's "long-stayer" populations, failure to monitor adequately refugee protection and screening programs, particularly along the Thai–Cambodian and Thai–Laotian borders, and the instability of the Orderly Departure Program (ODP) from Vietnam which has served as the only safe, legal means of departure from Vietnam for refugees, including Amerasians and long-held "reeducation camp" prisoners;
 - (5) the Government of Thailand should be complimented for allowing the United States to process ration card holders in Khao I Dang and potentially qualified immigrants in Site 2 and in Khao I Dang;
 - (6) given the serious protection problem in Southeast Asian first asylum countries and the need to preserve first asylum in the region, the United States should continue its commitment to an ongoing, generous admission and protection program for Indochinese refugees, including urgently educational programs for refugees along the Thai–Cambodian and Thai–Laotian borders, until the underlying causes of refugee flight are addressed and resolved;
 - (7) the executive branch should seek adequate funding levels to meet United States policy objectives to ensure the well-being of Indochinese refugees in first asylum, and to process 29,500 Indochinese refugees within the overall refugee admissions level of 68,000 as determined by the President; and
 - (8) the Government of Thailand should be complimented for the progress that has been made in implementing an effective antipiracy program.
- (b) **RECOMMENDATIONS.**—The Congress finds and recommends the following with respect to Indochinese refugees:
- (1) The Secretary of State should urge the Government of Thailand to allow full access by highland refugees to the Lao Screening Program, regardless of the method of their arrival or the circumstances of their apprehension, and should intensify its efforts to persuade the Government of Laos to accept the safe return of persons rejected under the Lao Screening Program.
 - (2) Refugee protection and monitoring activities should be expanded along the Thai–Laotian border in an effort to identify and report on incidents of refugees forcibly repatriated into Laos.
 - (3) The Secretary of State should urge the Government of Thailand to address immediately the problems of protection associated with the Khmer along the Thai–Cambodian border. The Government of Thailand, along with appropriate international relief agencies, should develop and implement a plan to provide for greater security and protection for the Khmer at the Thai border.
 - (4) The international community should increase its efforts to assure that Indochinese refugee camps are protected, that refugees have access to a free market at Site 2, and that international observers and relief personnel are present on a 24-hour-a-day basis at Site 2 and any other camp where it is deemed necessary.

- (5) The Secretary of State should make every effort to identify each person at Site 2 who may qualify for admission to the United States as an immigrant and for humanitarian parole.
- (6) The United Nations High Commissioner for Refugees should be pressed to upgrade staff presence and the level of advocacy to revive the international commitment with regard to the problems facing Indochinese refugees in the region, and to pursue voluntary repatriation possibilities in cases where monitoring is available and the safety of the refugees is assured.

(c) **ALLOCATIONS OF REFUGEE ADMISSIONS.**—Given the existing connection between ongoing resettlement and the preservation of first asylum, the United States and the United Nations High Commissioner for Refugees should redouble efforts to assure a stable and secure environment for refugees while dialog is pursued on other long-range solutions, it is the sense of the Senate that—

- (1) within the worldwide refugee admissions ceiling determined by the President, the President should allocate—
 - (A) at least 28,000 admissions from East Asia, first-asylum camps,
 - (B) at least 8,500 admissions for the Orderly Departure Program, for each of the fiscal years 1988, 1989, and 1990; and
- (2) within the allocation made by the President for the Orderly Departure Program from Vietnam pursuant to paragraph (1)(B), admissions allocated in a fiscal year under priorities II and III of the program (as defined in the Department of State Bureau of Refugee Programs worldwide processing priorities) and the number of admissions allocated for Amerasians and their immediate family members under priority I, should be generous.

(d) **INTERNATIONAL SOLUTIONS TO REFUGEE PROBLEMS.**—It is the sense of the Congress that—

- (1) renewed international efforts must be taken to address the problem of Indochinese refugees

who have lived in camps for 3 years or longer; and

- (2) the Secretary of State should urge the United Nations High Commissioner for Refugees to organize immediately an international conference to address the problems of Indochinese refugees.

SEC. 803. REPORTING REQUIREMENT.—The President shall submit a report to Congress within 180 days after the date of the enactment of this Act on the respective roles of the Immigration and Naturalization Service and the Department of State in the refugee program with recommendations for improving the effectiveness and efficiency of the program.

This Act may be cited as the “Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriation Act, 1988”.

(b) Such amounts as may be necessary for programs, projects or activities provided for in the Department of Defense Appropriations Act, 1988, at a rate of operations and to the extent and in the manner provided for, the provisions of such Act to be effective as if it had been enacted into law as the regular appropriations Act, as follows:

An Act making appropriations for the Department of Defense for the fiscal year ending September 30, 1988, and for other purposes.

Source: 101 Stat. 1329, Act of December 22, 1987.

49. Japanese American Redress (1988)

Beginning in the 1960s and early 1970s, the Japanese American community was mobilized to seek a formal apology and compensation from the government for its discriminatory treatment of Japanese Americans in World War II. The result was the Civil Liberties Act of 1988, signed into law by President Ronald Reagan on August 10, 1988.

A. Remarks by President Ronald Reagan on Signing the Civil Liberties Act (the Redress Bill), August 10, 1988

The Members of Congress and distinguished guests, my fellow Americans, we gather here today to right a grave wrong. More than 40 years ago, shortly after

the bombing of Pearl Harbor, 120,000 persons of Japanese ancestry living in the United States were forcibly removed from their homes and placed in makeshift internment camps. This action was taken without trial, without jury. It was based solely on race, for these 120,000 were Americans of Japanese descent.

Yes, the Nation was then at war, struggling for its survival and it's not for us today to pass judgment upon those who may have made mistakes while engaged in that great struggle. Yet we must recognize that the internment of Japanese-Americans was just that: a mistake. For throughout the war, Japanese-Americans in the tens of thousands remained utterly loyal to the United States. Indeed, scores of Japanese-Americans volunteered for our Armed Forces, many stepping forward in the internment camps themselves. The 442d Regimental Combat Team, made up entirely of Japanese-Americans, served with immense distinction to defend this nation, their nation. Yet back at home, the soldier's families were being denied the very freedom for which so many of the soldiers themselves were laying down their lives.

Congressman Norman Mineta, with us today, was 10 years old when his family was interned. In the Congressman's words:

"My own family was sent first to Santa Anita Racetrack. We showered in the horse paddocks. Some families lived in converted stables, others in hastily thrown together barracks. We were then moved to Heart Mountain, Wyoming, where our entire family lived in one small room of a rude tar paper barrack." Like so many tens of thousands of others, the members of the Mineta family lived in those conditions not for a matter of weeks or months but for 3 long years.

The legislation that I am about to sign provides for a restitution payment to each of the 60,000 surviving Japanese-Americans of the 120,000 who were relocated or detained. Yet no payment can make up for those lost years. So, what is most important in this bill has less to do with property than with honor. For here we admit a wrong; here we reaffirm our commitment as a nation to equal justice under the law.

I'd like to note that the bill I'm about to sign also provides funds for members of the Aleut community who were evacuated from the Aleutian and Pribilof Islands after a Japanese attack in 1942. This action

was taken for the Aleuts' own protection, but property was lost or damaged that has never been replaced.

And now in closing, I wonder whether you'd permit me one personal reminiscence, one prompted by an old newspaper report sent to me by Rose Ochi, a former internee. The clipping comes from the *Pacific Citizen* and is dated December 1945.

"Arriving by plane from Washington," the article begins, "General Joseph W. Stilwell pinned the Distinguished Service Cross on Mary Masuda in a simple ceremony on the porch of her small frame shack near Talbert, Orange County. She was one of the first Americans of Japanese ancestry to return from relocation centers to California's farmlands." "Vinegar Joe" Stilwell was there that day to honor Kazuo Masuda, Mary's brother. You see, while Mary and her parents were in an internment camp, Kazuo served as staff sergeant to the 442d Regimental Combat Team.

In one action, Kazuo ordered his men back and advanced through heavy fire, hauling a mortar. For 12 hours, he engaged in a singlehanded barrage of Nazi positions. Several weeks later at Cassino, Kazuo staged another lone advance. This time it cost him his life.

The newspaper clipping notes that her two surviving brothers were with Mary and her parents on the little porch that morning. These two brothers, like the heroic Kazuo, had served in the United States Army. After General Stilwell made the award, the motion picture actress Louise Allbritton, a Texas girl, told how a Texas battalion had been saved by the 442d. Other show business personalities paid tribute—Robert Young, Will Rogers, Jr. And one young actor said: "Blood that has soaked into the sands of a beach is all of one color. America stands unique in the world: the only country not founded on race but on a way, an ideal. Not in spite of but because of our polyglot background, we have had all the strength in the world. That is the American way." The name of that young actor—I hope I pronounce this right—was Ronald Reagan. And, yes, the ideal of liberty and justice for all—that is still the American way.

Thank you, and God bless you. And now let me sign H.R. 442, so fittingly named in honor of the 442d. Thank you all again, and God bless you all. I think this is a fine day.

White House, August 10, 1988.

B. Excerpt from the Civil Liberties Act (1988)

Through this legislation, Congress for the first time authorized a presidential apology to an entire group of Americans: Japanese Americans who were interned during World War II. Congress also mandated \$1.2 billion as payments to compensate for damages to the former internees, providing \$20,000 to each of them.

“The Congress recognizes that, as described in the Commission on Wartime Relocation and Internment of Civilians, a grave injustice was done to both citizens and permanent residents of Japanese ancestry by the evacuation, relocation, and internment of civilians during World War II.

As the Commission documents, these actions were carried out without adequate security reasons and without any acts of espionage or sabotage documented by the Commission, and were motivated largely by racial prejudice, wartime hysteria, and a failure of political leadership.

The excluded individuals of Japanese ancestry suffered enormous damages, both material and intangible, and there were incalculable losses in education and job training, all of which resulted in significant human suffering for which appropriate compensation has not been made.

For these fundamental violations of the basic civil liberties and constitutional rights of these individuals of Japanese ancestry, the Congress apologizes on behalf of the Nation.”

Based on the findings of the Commission on Wartime Relocation and Internment of Civilians (CWRIC), the purposes of the Civil Liberties Act of 1988 with respect to persons of Japanese ancestry included the following:

- (1) To acknowledge the fundamental injustice of the evacuation, relocation and internment of citizens and permanent resident aliens of Japanese ancestry during World War II;
- (2) To apologize on behalf of the people of the United States for the evacuation, internment,

and relocations of such citizens and permanent residing aliens;

- (3) To provide for a public education fund to finance efforts to inform the public about the internment so as to prevent the recurrence of any similar event;
- (4) To make restitution to those individuals of Japanese ancestry who were interned;
- (5) To make more credible and sincere any declaration of concern by the United States over violations of human rights committed by other nations.

50. The Story of a “Survivor” (1990)

Building new lives in the United States for Southeast Asian refugees meant constant economic struggles. The following is a recollection of a Cambodian American refugee.

“The money that welfare gave us was not enough for all eight of us . . . I remember that every time the supermarket had a sale on items such as chicken all eight of us went together to buy it. Because there were limits on . . . [how many of the sale] items you could purchase in these sales . . . each of us [took] . . . turns going to the cashier . . . For clothes, we bought them from second hand store. I have never had a brand new set of clothes . . . Every time I saw cans and bottles I picked them up and took them home so that where there got to be a lot, I took them to the supermarket [to get a refund] . . . every weekend, my sisters and cousins and I went out walking in the streets looking for cans . . . In the summer, my family and I picked strawberries. Every morning we woke up at 3 o’clock, got ready, and drove our car . . . to the fields . . . It was cold and chilly. With my body shaking, I was knelt down on my knees and . . . was like a turtle which moves at a very slow pace . . . Each pound of strawberries, I received 8 to 10 cents. By the time I went home, around 5 or 6 o’clock, my back was all bent and I couldn’t stand up straight. My back ached and my legs were numb. On a rainy day, my clothes were

all soaked. My feet were clogged with mud . . . After the strawberry season was over, I picked blackberries. Picking blackberries does not require back work but it requires a lot of standing and thorn-touching. My fingers were all cut by scratches. It hurt very much, especially when the juice . . . got into the cuts. It felt like dipping my cut fingers into lemon juice, very painful . . . When the summer was over, I want back to school. Going to school was great. (Duong 1990: 24–27)”

51. Excerpt from the Immigration Act of 1990

This immigration law raised the ceiling for legal immigrants. In addition to continued commitment to family members of U.S. citizens and permanent residents, the new law created 50,000 visas under Diversity Immigrant Program. Provisions to strengthen border patrol were also created.

An Act

To amend the Immigration and Nationality Act to change the level, and preference system for admission, of immigrants to the United States, and to provide for administrative naturalization, and for other purposes.

Subtitle A—Worldwide and Per Country Levels

TITLE I—IMMIGRANTS

SEC. 104. ASYLEE ADJUSTMENTS.

(a) INCREASE IN NUMBERCAL LIMITATION ON ADJUSTMENT OF ASYLEES.—

(1) IN GENERAL.—Section 209(b) (8 U.S.C. 1159(b)) is amended by striking “five thousand” and inserting “10,000”.

(2) EFFECTIVE DATE AND TRANSITION.—The amendment made by paragraph (1) shall apply to fiscal years beginning with fiscal year 1991 and the President is authorized, without the need for appropriate consultation, to increase the refugee determination previously made under section 207 of the Immigration

and Nationality Act for fiscal year 1991 in order to make such amendment effective for such fiscal year.

(b) ANNUAL ASYLEE ENUMERATION.—Section 207(a) (8 U.S.C 1157(a)) is amended by adding at the end of the following new paragraph:

“(4) In the determination made under this subsection for each fiscal year (beginning with fiscal year 1992), the President shall enumerate, with the respective number of refugees so determined, the number of aliens who were granted asylum in the previous year.”

(c) WAIVER OF NUMERICAL LIMITATION FOR CERTAIN CURRENT ASYLEES.—The numerical limitation on the number of aliens whose status may be adjusted under section 209(b) of the Immigration and Nationality Act shall not apply to an alien described in subsection

(d) or to an alien who has applied for adjustment of status under such section on or before June 1, 1990.

Subtitle B—Preference System

PART 1—FAMILY-SPONSORED IMMIGRANTS

SEC. 111. FAMILY-SPONSORED IMMIGRANTS.

Section 203 (8 U.S.C. 1153) is amended—

(1) by redesignating subsections (b) through (e) as subsections (d) through (g), respectively, and

(2) by striking subsection (a) and inserting the following:

“(a) PREFERENCE ALLOCATION FOR FAMILY-SPONSORED IMMIGRANTS.—Aliens subject to the worldwide level specified in section 201(c) for family-sponsored immigrants shall be allotted visas as follows:

“(1) UNMARRIED SONS AND DAUGHTERS OF CITIZENS.—Qualified immigrants who are the unmarried sons or daughters of citizens of the United States shall be allocated visas in a number not to exceed 23,400, plus any visas not required for the class specified in paragraph (4).

“(2) SPOUSES AND UNMARRIED SONS AND UNMARRIED DAUGHTERS OF PERMANENT RESIDENT ALINES.—Qualified immigrants—

“(A) who are the spouses or children of an alien lawfully admitted for permanent residence, or

“(B) who are the unmarried sons or unmarried daughters (but are not the children) of an alien lawfully admitted for permanent residence,

shall be allocated visas in a number not to exceed 114,200, plus the number (if any) by which such worldwide level exceeds 226,000, plus any visas not required for the class specified in paragraph (1); except that not less than 77 percent of such visa numbers shall be allocated to aliens described in subparagraph (A).

“(3) MARRIED SONS AND MARREID DAUGHTERS OF CITIZENS.—Qualified immigrants who are the married sons or married daughters of citizens of the United States shall be allocated visas in a number not to exceed 23,400, plus any visas not required for the classes specified in paragraphs (1) and (2).

“(4) BROTHERS AND SISTERS OF CITIZENS.—Qualified immigrants who are the brothers or sisters of citizens of the United States, if such citizens are at least 21 years of age, shall be allocated visas in a number not to exceed 65,000, plus any visas not required for the classes specified in paragraphs (1) through (3).”.

SEC. 112. TRANSITION FOR SPOURSE AND MINOR CHILDREN OF LEGALIZED ALIENS.

(a) ADDITIONAL VISA NUMBERS.—

(1) IN GENERAL.—In addition to any immigrant visas otherwise available, immigrant visa numbers shall be available in each of fiscal years 1992, 1993, and 1994 for spouses and children of eligible, legalized aliens (as defined in subsection (c)) in a number equal to 55,000 minus the number (if any) computed under paragraph (2) for the fiscal year.

(2) OFFSET.—The number computed under this paragraph for a fiscal year is the number (if any) by which—

(A) the sum of the number of aliens described in subparagraphs (A) and (B) of section 201(b)(2) of the Immigration and Nationality Act (or, for fiscal year 1992, section 201(b) of such Act) who were issued immigrant visas or otherwise acquired the status of aliens lawfully admitted to the Unites for permanent residence in the previous fiscal year, exceeds

(B) 239,000.

(b) ORDER.—Visa numbers under this section shall be made available in the order in which a petition,

in behalf of each such immigrant for classification under section 203(a)(2) of the Immigration and Nationality Act, is filed with the Attorney General under section 204 of such Act.

(c) LEGALIZED ALIEN DEFINED.—In this section, the term “legalized alien” means an alien lawfully admitted for temporary or permanent residence who was provided—

(1) temporary or permanent residence status under section 210 of the Immigration and Nationality Act,

(2) temporary or permanent residence status under section 245A of the Immigration and Nationality Act, or

(3) permanent residence status under section 202 of the Immigration Reform and Control Act of 1986.

See also Immigration Act of 1990

52. Excerpt from the Chinese Student Protection Act of 1992

Enacted in 1992 as a response to the Tiananmen Square incident in China in 1988, this law granted permanent residency to all Chinese nationals who arrived in the United States on or before April 1990. Between 60,000 to 80,000 Chinese were in the country temporarily; most of them were student/scholar visa holders.

An Act To provide for the adjustment of status under the Immigration and Nationality Act of certain nationals of the People’s Republic of China. . .

SECTION 1. SHORT TITLE.

This Act may be cited as the “Chinese Student Protection Act of 1992”.

SEC. 2. ADJUSTMENT TO LAWFUL PERMANENT RESIDENT STATUS OF . . . CERTAIN NATIONALS OF THE PEOPLE’S REPUBLIC OF CHINA.

(a) IN GENERAL.—Subject to subsection (c)(1), whenever an alien described in subsection (b) applies

for adjustment of status under section 245 of the Immigration and Nationality Act during the application period (as defined in subsection (e)) the following

rules shall apply with respect to such adjustment:

(1) The alien shall be deemed to have had a petition approved under section 204(a) of such Act for classification under section 203(b)(3)(A)(i) of such Act.

(2) The application shall be considered without regard to whether an immigrant visa number is immediately available at the time the application is filed.

(3) In determining the alien's admissibility as an immigrant, and the alien's eligibility for an immigrant visa-(A) paragraphs (5) and (7)(A) of section 212(a) and section 212(e) of such Act shall not apply ; and (B) the Attorney General may waive any other provision of section 212(a) other than paragraph (2)(C) and subparagraph (A), (B), (C), or (E) of paragraph (3) of such Act with respect to such adjustment for humanitarian purposes, for purposes of assuring family unity, or if otherwise in the public interest.

(4) The numerical level of section 202(a)(2) of such Act shall not apply.

(5) Section 245(c) of such Act shall not apply.

(b) ALIENS COVERED.—For purposes of this section, an alien described in this subsection is an alien who—(1) is a national of the People's Republic of China described

in section 1 of Executive Order No. 12711 as in effect on April 11, 1990; (2) has resided continuously in the United States since April 11, 1990 (other than brief, casual, and innocent absences); and (3) was not physically present in the People's Republic

of China for longer than 90 days after such date and before the date of the enactment of this Act.

53. An Apology to Native Hawaiians (1993)

The year 1998 marked the 100th anniversary of the annexation of the Hawaiian Islands by the United States. To recognize the impact of the acquisition on the indigenous people of the islands, the U.S. government offered a formal apology.

To acknowledge the 100th anniversary of the January 17, 1893 overthrow of the Kingdom of Hawaii, and to offer an apology to Native Hawaiians on behalf of the United States for the overthrow of the Kingdom of Hawaii.

Whereas, prior to the arrival of the first Europeans in 1778, the Native Hawaiian people lived in a highly organized, self-sufficient, subsistent social system based on communal land tenure with a sophisticated language, culture, and religion;

Whereas, a unified monarchical government of the Hawaiian Islands was established in 1810 under Kamehameha I, the first King of Hawaii;

Whereas, from 1826 until 1893, the United States recognized the independence of the Kingdom of Hawaii, extended full and complete diplomatic recognition to the Hawaiian Government, and entered into treaties and conventions with the Hawaiian monarchs to govern commerce and navigation in 1826, 1842, 1849, 1875, and 1887;

Whereas, the Congregational Church (now known as the United Church of Christ), through its American Board of Commissioners for Foreign Missions, sponsored and sent more than 100 missionaries to the Kingdom of Hawaii between 1820 and 1850;

Whereas, on January 14, 1893, John L. Stevens (hereafter referred to in this Resolution as the "United States Minister"), the United States Minister assigned to the sovereign and independent Kingdom of Hawaii conspired with a small group of non-Hawaiian residents of the Kingdom of Hawaii, including citizens of the United States, to overthrow the indigenous and lawful Government of Hawaii;

Whereas, in pursuance of the conspiracy to overthrow the Government of Hawaii, the United States Minister and the naval representatives of the United States caused armed naval forces of the United States to invade the sovereign Hawaiian nation on January 16, 1893, and to position themselves near the Hawaiian

Government buildings and the Iolani Palace to intimidate Queen Liliuokalani and her Government;

Whereas, on the afternoon of January 17, 1893, a Committee of Safety that represented the American and European sugar planters, descendants of missionaries and financiers deposed the Hawaiian monarchy and proclaimed the establishment of a Provisional Government;

Whereas, the United States Minister thereupon extended diplomatic recognition to the Provisional Government that was formed by the conspirators without the consent of the Native Hawaiian people or the lawful Government of Hawaii and in violation of treaties between the two nations and of international law;

Whereas, soon thereafter, when informed of the risk of bloodshed with resistance, Queen Liliuokalani issued the following statement yielding her authority to the United States Government rather than to the Provisional Government:

“I Liliuokalani, by the Grace of God and under the Constitution of the Hawaiian Kingdom, Queen, do hereby solemnly protest against any and all acts done against myself and the Constitutional Government of the Hawaiian Kingdom by certain persons claiming to have established a Provisional Government of and for this Kingdom.

“That I yield to the superior force of the United States of America whose Minister Plenipotentiary, His Excellency John L. Stevens, has caused United States troops to be landed a Honolulu and declared that he would support the Provisional Government.

“Now to avoid any collision of armed forces, and perhaps the loss of life, I do this under protest and impelled by said force yield my authority until such time as the Government of the United States shall, upon facts being presented to it, undo the action of its representatives and reinstate me in the authority which I claim as the Constitutional Sovereign of the Hawaiian Islands.”

Done at Honolulu this 17th day of January, A.D. 1893;

Whereas, without the active support and intervention by the United States diplomatic and military representatives, the insurrection against the Government of Queen Liliuokalani would have failed for lack of popular support and insufficient arms;

Whereas, on February 1, 1893, the United States Minister raised the American flag and proclaimed Hawaii to be a protectorate of the United States;

Whereas, the report of a Presidentially established investigation conducted by former Congressman James Blount into the events surrounding the insurrection and overthrow of January 17, 1893, concluded that the United States diplomatic and military representatives had abused their authority and were responsible for the change in government;

Whereas, as a result of this investigation, the United States Minister to Hawaii was recalled from his diplomatic post and the military commander of the United States armed forces stationed in Hawaii was disciplined and forced to resign his commission;

Whereas, in a message to Congress on December 18, 1893, President Grover Cleveland reported fully and accurately on the illegal acts of the conspirators, described such acts as an “act of war, committed with the participation of a diplomatic representative of the United States and without authority of Congress”, and acknowledged that by such acts the government of a peaceful and friendly people was overthrown;

Whereas, President Cleveland further concluded that a “substantial wrong has thus been done which a due regard for our national character as well as the rights of the injured people requires we should endeavor to repair” and called for the restoration of the Hawaiian monarchy;

Whereas, the Provisional Government protested President Cleveland’s call for the restoration of the monarchy and continued to hold state power and pursue annexation to the United States;

Whereas, the Provisional Government successfully lobbied the Committee on Foreign Relations of the

Senate (hereafter referred to in this Resolution as the “Committee”) to conduct a new investigation into the events surrounding the overthrow of the monarchy;

Whereas, the Committee and its chairman, Senator John Morgan, conducted hearings in Washington, D.C., from December 27, 1893, through February 26, 1894, in which members of the Provisional Government justified and condoned the actions of the United States Minister and recommended annexation of Hawaii;

Whereas, although the Provisional Government was able to obscure the role of the United States in the illegal overthrow of the Hawaiian monarchy, it was unable to rally the support from two-thirds of the Senate needed to ratify a treaty of annexation;

Whereas, on July 4, 1894, the Provisional Government declared itself to be the Republic of Hawaii;

Whereas, on January 24, 1895, while imprisoned in Iolani Palace, Queen Liliuokalani was forced by representatives of the Republic of Hawaii to officially abdicate her throne;

Whereas, in the 1896 United States Presidential election, William McKinley replaced Grover Cleveland;

Whereas, on July 7, 1898, as a consequence of the Spanish-American War, President McKinley signed the Newlands Joint Resolution that provided for the annexation of Hawaii;

Whereas, through the Newlands Resolution, the self-declared Republic of Hawaii ceded sovereignty over the Hawaiian Islands to the United States;

Whereas, the Republic of Hawaii also ceded 1,800,000 acres of crown, government and public lands of the Kingdom of Hawaii, without the consent of or compensation to the Native Hawaiian people of Hawaii or their sovereign government;

Whereas, the Congress, through the Newlands Resolution, ratified the cession, annexed Hawaii as part of the

United States, and vested title to the lands in Hawaii in the United States;

Whereas, the Newlands Resolution also specified that treaties existing between Hawaii and foreign nations were to immediately cease and be replaced by United States treaties with such nations;

Whereas, the Newlands Resolution effected the transaction between the Republic of Hawaii and the United States Government;

Whereas, the indigenous Hawaiian people never directly relinquished their claims to their inherent sovereignty as a people or over their national lands to the United States, either through their monarchy or through a plebiscite or referendum;

Whereas, on April 30, 1900, President McKinley signed the Organic Act that provided a government for the territory of Hawaii and defined the political structure and powers of the newly established Territorial Government and its relationship to the United States;

Whereas, on August 21, 1959, Hawaii became the 50th State of the United States;

Whereas, the health and well-being of the Native Hawaiian people is intrinsically tied to their deep feelings and attachment to the land;

Whereas, the long-range economic and social changes in Hawaii over the nineteenth and early twentieth centuries have been devastating to the population and to the health and well-being of the Hawaiian people;

Whereas, the Native Hawaiian people are determined to preserve, develop and transmit to future generations their ancestral territory, and their cultural identity in accordance with their own spiritual and traditional beliefs, customs, practices, language, and social institutions;

Whereas, in order to promote racial harmony and cultural understanding, the Legislature of the State of

Hawaii has determined that the year 1993, should serve Hawaii as a year of special reflection on the rights and dignities of the Native Hawaiians in the Hawaiian and the American societies;

Whereas, the Eighteenth General Synod of the United Church of Christ in recognition of the denomination's historical complicity in the illegal overthrow of the Kingdom of Hawaii in 1893 directed the Office of the President of the United Church of Christ to offer a public apology to the Native Hawaiian people and to initiate the process of reconciliation between the United Church of Christ and the Native Hawaiians; and

Whereas, it is proper and timely for the Congress on the occasion of the impending one hundredth anniversary of the event, to acknowledge the historic significance of the illegal overthrow of the Kingdom of Hawaii, to express its deep regret to the Native Hawaiian people, and to support the reconciliation efforts of the State of Hawaii and the United Church of Christ with Native Hawaiians;

Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. ACKNOWLEDGMENT AND APOLOGY.

The Congress—

- (1) on the occasion of the 100th anniversary of the illegal overthrow of the Kingdom of Hawaii on January 17, 1893, acknowledges the historical significance of this event which resulted in the suppression of the inherent sovereignty of the Native Hawaiian people;
- (2) recognizes and commends efforts of reconciliation initiated by the State of Hawaii and the United Church of Christ with Native Hawaiians;
- (3) apologizes to Native Hawaiians on behalf of the people of the United States for the overthrow of the Kingdom of Hawaii on January 17, 1893 with the participation of agents and citizens of the United States, and the deprivation

of the rights of Native Hawaiians to self-determination;

- (4) expresses its commitment to acknowledge the ramifications of the overthrow of the Kingdom of Hawaii, in order to provide a proper foundation for reconciliation between the United States and the Native Hawaiian people; and
- (5) urges the President of the United States to also acknowledge the ramifications of the overthrow of the Kingdom of Hawaii and to support reconciliation efforts between the United States and the Native Hawaiian people.

SEC. 2. DEFINITIONS.

As used in this Joint Resolution, the term "Native Hawaiians" means any individual who is a descendent of the aboriginal people who, prior to 1778, occupied and exercised sovereignty in the area that now constitutes the State of Hawaii.

SEC. 3. DISCLAIMER.

Nothing in this Joint Resolution is intended to serve as a settlement of any claims against the United States.

Approved November 23, 1993

54. President Barack Obama's Executive Order 13515 (2009)

On October 14, 2009, President Barack Obama signed executive order 13515 to reestablish the White House initiative and President's Advisory Commission on Asian Americans and Pacific Islanders (AAPI). First signed in June 1999 by President Bill Clinton (Executive Order 13125) the AAPI White House Initiative was designed to improve the quality of life of Asian Americans and Pacific Islanders through increased participation in federal programs. Formed in 2000 and chaired by former Congressman Norman Mineta, the first President's Advisory Commission on Asian Americans and Pacific Islanders worked to identify underprivileged and marginalized AAPIs as well as inequalities and discriminations experienced by them. The Committee fostered partnerships between the federal government and the Asian American and

Pacific Islander communities to maximize resources and sought greater commitment and investment by the federal government to address issues concerning health, education, housing and economic disparities that experienced by AAPIs. The President's initiative was continued under President George W. Bush (Executive Order 13334, 2004; Executive order 13403, 2006). President Obama's Advisory Committee is housed under the Department of Education, with commitments of a wide range of government agencies.

Increasing Participation of Asian Americans and Pacific Islanders in Federal Programs

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

Section 1. Policy. The more than 16 million Asian Americans and Pacific Islanders (AAPIs) across our country have helped build a strong and vibrant America. The AAPI communities represent many ethnicities and languages that span generations, and their shared achievements are an important part of the American experience. They have started businesses and generated jobs, including founding some of our Nation's most successful and innovative enterprises. The AAPI communities have made important contributions to science and technology, culture and the arts, and the professions, including business, law, medicine, education, and politics.

While we acknowledge the many contributions of the AAPI communities to our Nation, we also recognize the challenges still faced by many AAPIs. Of the more than a million AAPI-owned businesses, many firms are small sole-proprietorships that continue to need assistance to access available resources such as business development counseling and small business loans. The AAPI community also continues to face barriers to employment and workplace advancement. Specific challenges experienced by AAPI subgroups include lower college-enrollment rates by Pacific Islanders than other ethnic groups and high poverty rates among Hmong Americans, Cambodian Americans, Malaysian Americans, and other individual AAPI communities. Additionally, one in five non-elderly AAPIs lacks health insurance.

The purpose of this order is to establish a President's Advisory Commission on Asian Americans and Pacific Islanders and a White House Initiative on Asian Americans and Pacific Islanders. Each will work to improve the quality of life and opportunities for Asian Americans and Pacific Islanders through increased access to, and participation in, Federal programs in which they may be underserved. In addition, each will work to advance relevant evidence-based research, data collection, and analysis for AAPI populations and subpopulations.

Sec. 2. President's Advisory Commission on Asian Americans and Pacific Islanders.

There is established in the Department of Education the President's Advisory Commission on Asian Americans and Pacific Islanders (Commission).

(a) **Mission and Function of the Commission.** The Commission shall provide advice to the President, through the Secretaries of Education and Commerce, as Co-Chairs of the Initiative described in section 3 of this order, on: (i) the development, monitoring, and coordination of executive branch efforts to improve the quality of life of AAPIs through increased participation in Federal programs in which such persons may be underserved; (ii) the compilation of research and data related to AAPI populations and subpopulations; (iii) the development, monitoring, and coordination of Federal efforts to improve the economic and community development of AAPI businesses; and (iv) strategies to increase public and private-sector collaboration, and community involvement in improving the health, education, environment, and well-being of AAPIs.

(b) **Membership of the Commission.** The Commission shall consist of not more than 20 members appointed by the President. The Commission shall include members who: (i) have a history of involvement with the AAPI communities; (ii) are from the fields of education, commerce, business, health, human services, housing, environment, arts, agriculture, labor and employment, transportation, justice, veterans affairs, and economic and community development; (iii) are from civic associations representing one or more of the diverse AAPI communities;

or (iv) have such other experience as the President deems appropriate. The President shall designate one member of the Commission to serve as Chair, who shall convene regular meetings of the Commission, determine its agenda, and direct its work.

(c) Administration of the Commission. The Secretary of Education, in consultation with the Secretary of Commerce, shall designate an Executive Director for the Commission. The Department of Education shall provide funding and administrative support for the Commission to the extent permitted by law and within existing appropriations. Members of the Commission shall serve without compensation, but shall be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law for persons serving intermittently in the Government service (5 U.S.C. 5701-5707). Insofar as the Federal Advisory Committee Act, as amended (5 U.S.C. App.) (the “Act”), may apply to the administration of the Commission, any functions of the President under the Act, except that of reporting to the Congress, shall be performed by the Secretary of Education, in accordance with the guidelines issued by the Administrator of General Services.

(d) Termination Date. The Commission shall terminate 2 years from the date of this order, unless renewed by the President.

Sec. 3. White House Initiative on Asian Americans and Pacific Islanders. There is established the White House Initiative on Asian Americans and Pacific Islanders (Initiative), a Federal interagency working group whose members shall be selected by their respective agencies. The Secretary of Commerce and the Secretary of Education shall serve as the Co-Chairs of the Initiative. The Executive Director of the Commission established in section 2 of this order shall also serve as the Executive Director of the Initiative and shall report to the Secretaries on Initiative matters.

(a) Mission and Function of the Initiative. The Initiative shall work to improve the quality of life of AAPIs through increased participation in Federal programs in which AAPIs may be underserved. The Initiative shall advise the Co-Chairs on the implementation and coordination of Federal programs as they relate to AAPIs across executive departments and agencies.

(b) Membership of the Initiative. In addition to the Co-Chairs, the Initiative shall consist of senior officials from the following executive branch departments, agencies, and offices:

- (i) the Department of State;
- (ii) the Department of the Treasury;
- (iii) the Department of Defense;
- (iv) the Department of Justice;
- (v) the Department of the Interior;
- (vi) the Department of Agriculture;
- (vii) the Department of Labor;
- (viii) the Department of Housing and Urban Development;
- (ix) the Department of Transportation;
- (x) the Department of Energy;
- (xi) the Department of Health and Human Services;
- (xii) the Department of Veterans Affairs;
- (xiii) the Department of Homeland Security;
- (xiv) the Office of Management and Budget;
- (xv) the Environmental Protection Agency;
- (xvi) the Small Business Administration;
- (xvii) the Office of Personnel Management;
- (xviii) the Social Security Administration;
- (xix) the White House Office of Cabinet Affairs;
- (xx) the White House Office of Intergovernmental Affairs and Public Engagement;
- (xxi) the National Economic Council;
- (xxii) the Domestic Policy Council;
- (xxiii) the Office of Science and Technology Policy; and
- (xxiv) other executive branch departments, agencies, and offices as the President may, from time to time, designate.

At the direction of the Co-Chairs, the Initiative may establish subgroups consisting exclusively of Initiative members or their designees under this section, as appropriate.

(c) Administration of the Initiative. The Department of Education shall provide funding and administrative support for the Initiative to the extent permitted by law and within existing appropriations. The Co-Chairs shall convene regular meetings of the Initiative, determine its agenda, and direct its work.

(d) Federal Agency Plans and Interagency Plan.

Each executive department and agency designated by the Initiative shall prepare a plan (agency plan) for, and shall document, its efforts to improve the quality of life of Asian Americans and Pacific Islanders through increased participation in Federal programs in which Asian Americans and Pacific Islanders may be underserved. Where appropriate, this agency plan shall address, among other things, the agency's efforts to:

- (i) identify Federal programs in which AAPIs may be underserved and improve the quality of life for AAPIs through increased participation in these programs;
- (ii) identify ways to foster the recruitment, career development, and advancement of AAPIs in the Federal Government;
- (iii) identify high-priority action items for which measurable progress may be achieved within 2 years to improve the health, environment, opportunity, and well-being of AAPIs, and implement those action items;
- (iv) increase public-sector, private-sector, and community involvement in improving the health, environment, opportunity, and well-being of AAPIs;
- (v) foster evidence-based research, data-collection, and analysis on AAPI populations and subpopulations, including research and data on public health, environment, education, housing, employment, and other economic indicators of AAPI community well-being; and
- (vi) solicit public input from AAPI communities on ways to increase and improve opportunities for public participation in Federal programs considering a number of factors, including language barriers.

Each agency, in its plan, shall provide appropriate measurable objectives and, after the first year, shall provide for the assessment of that agency's performance on the goals set in the previous year's plan. Each agency plan shall be submitted to the Co-Chairs by a date to be established by the Co-Chairs. The Co-Chairs shall review the agency plans and develop for

submission to the President a Federal interagency plan to improve the quality of life of AAPIs through increased participation in Federal programs in which such persons may be underserved. Actions described in the Federal interagency plan shall address improving access by AAPIs to Federal programs and fostering advances in relevant research and data.

Sec. 4. General Provisions.

(a) This order supersedes Executive Order 13125 of June 7, 1999, and Executive Order 13339 of May 13, 2004.

(b) The heads of executive departments and agencies shall assist and provide information to the Commission, consistent with applicable law, as may be necessary to carry out the functions of the Commission. Each executive department and agency shall bear its own expenses of participating in the Commission.

(c) Nothing in this order shall be construed to impair or otherwise affect:

- (i) authority granted by law to an executive department, agency, or the head thereof; or
- (ii) functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(d) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(e) For purposes of this order, the term "Asian American and Pacific Islander" includes persons within the jurisdiction of the United States having ancestry of any of the original peoples of East Asia, Southeast Asia, or South Asia, or any of the aboriginal, indigenous, or native peoples of Hawaii and other Pacific Islands.

(f) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

55. Apologies to Chinese Americans Regarding Exclusion (2011, 2012)

In 2011 and 2012, 130 years after the enactment of the Chinese Exclusion Act, the U.S. government finally offered formal apologies to Chinese Americans.

A. Senate Resolution (October 6, 2011)

Expressing the regret of the Senate for the passage of discriminatory laws against the Chinese in America, including the Chinese Exclusion Act.

Whereas many Chinese came to the United States in the 19th and 20th centuries, as did people from other countries, in search of the opportunity to create a better life for themselves and their families;

Whereas the contributions of persons of Chinese descent in the agriculture, mining, manufacturing, construction, fishing, and canning industries were critical to establishing the foundations for economic growth in the Nation, particularly in the western United States;

Whereas United States industrialists recruited thousands of Chinese workers to assist in the construction of the Nation's first major national transportation infrastructure, the Transcontinental Railroad;

Whereas Chinese laborers, who made up the majority of the western portion of the railroad workforce, faced grueling hours and extremely harsh conditions in order to lay hundreds of miles of track and were paid substandard wages;

Whereas without the tremendous efforts and technical contributions of these Chinese immigrants, the completion of this vital national infrastructure would have been seriously impeded;

Whereas from the middle of the 19th century through the early 20th century, Chinese immigrants faced racial ostracism and violent assaults, including—

(1) the 1887 Snake River Massacre in Oregon, at which 31 Chinese miners were killed; and

(2) numerous other incidents, including attacks on Chinese immigrants in Rock Springs, San Francisco, Tacoma, and Los Angeles;

Whereas the United States instigated the negotiation of the Burlingame Treaty, ratified by the Senate on October 19, 1868, which permitted the free movement of the Chinese people to, from, and within the United States and accorded to China the status of 'most favored nation';

Whereas before consenting to the ratification of the Burlingame Treaty, the Senate required that the Treaty would not permit Chinese immigrants in the United States to be naturalized United States citizens;

Whereas on July 14, 1870, Congress approved An Act to Amend the Naturalization Laws and to Punish Crimes against the Same, and for other Purposes, and during consideration of such Act, the Senate expressly rejected an amendment to allow Chinese immigrants to naturalize;

Whereas Chinese immigrants were subject to the overzealous implementation of the Page Act of 1875 (18 Stat. 477), which—

(1) ostensibly barred the importation of women from 'China, Japan, or any Oriental country' for purposes of prostitution;

(2) was disproportionately enforced against Chinese women, effectively preventing the formation of Chinese families in the United States and limiting the number of native-born Chinese citizens;

Whereas, on February 15, 1879, the Senate passed 'the Fifteen Passenger Bill,' which would have limited the number of Chinese passengers permitted on any ship coming to the United States to 15, with proponents of the bill expressing that the Chinese were 'an indigestible element in our midst . . . without any adaptability to become citizens';

Whereas, on March 1, 1879, President Hayes vetoed the Fifteen Passenger Bill as being incompatible with the Burlingame Treaty, which declared that 'Chinese

subjects visiting or residing in the United States, shall enjoy the same privileges . . . in respect to travel or residence, as may there be enjoyed by the citizens and subjects of the most favored nation’;

Whereas in the aftermath of the veto of the Fifteen Passenger Bill, President Hayes initiated the renegotiation of the Burlingame Treaty, requesting that the Chinese government consent to restrictions on the immigration of Chinese persons to the United States;

Whereas these negotiations culminated in the Angell Treaty, ratified by the Senate on May 9, 1881, which—

- (1) allowed the United States to suspend, but not to prohibit, the immigration of Chinese laborers;
- (2) declared that ‘Chinese laborers who are now in the United States shall be allowed to go and come of their own free will’; and
- (3) reaffirmed that Chinese persons possessed ‘all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation’;

Whereas, on March 9, 1882, the Senate passed the first Chinese Exclusion Act, which purported to implement the Angell Treaty but instead excluded for 20 years both skilled and unskilled Chinese laborers, rejected an amendment that would have permitted the naturalization of Chinese persons, and instead expressly denied Chinese persons the right to be naturalized as American citizens;

Whereas, on April 4, 1882, President Chester A. Arthur vetoed the first Chinese Exclusion Act as being incompatible with the terms and spirit of the Angell Treaty;

Whereas, on May 6, 1882, Congress passed the second Chinese Exclusion Act, which—

- (1) prohibited skilled and unskilled Chinese laborers from entering the United States for 10 years;
- (2) was the first Federal law that excluded a single group of people on the basis of race; and
- (3) required certain Chinese laborers already legally present in the United States who later wished to reenter to obtain ‘certificates of return’, an

unprecedented requirement that applied only to Chinese residents;

Whereas in response to reports that courts were bestowing United States citizenship on persons of Chinese descent, the Chinese Exclusion Act of 1882 explicitly prohibited all State and Federal courts from naturalizing Chinese persons;

Whereas the Chinese Exclusion Act of 1882 underscored the belief of some Senators at that time that—

- (1) the Chinese people were unfit to be naturalized;
- (2) the social characteristics of the Chinese were ‘revolting’;
- (3) Chinese immigrants were ‘like parasites’; and
- (4) the United States ‘is under God a country of Caucasians, a country of white men, a country to be governed by white men’;

Whereas, on July 3, 1884, notwithstanding United States treaty obligations with China and other nations, Congress broadened the scope of the Chinese Exclusion Act—

- (1) to apply to all persons of Chinese descent, ‘whether subjects of China or any other foreign power’; and
- (2) to provide more stringent requirements restricting Chinese immigration;

Whereas, on October 1, 1888, the Scott Act was enacted into law, which—

- (1) prohibited all Chinese laborers who would choose or had chosen to leave the United States from reentering;
- (2) cancelled all previously issued ‘certificates of return’, which prevented approximately 20,000 Chinese laborers abroad, including 600 individuals who were en route to the United States, from returning to their families or their homes; and
- (3) was later determined by the Supreme Court to have abrogated the Angell Treaty;

Whereas, on May 5, 1892, the Geary Act was enacted into law, which—

- (1) extended the Chinese Exclusion Act for 10 years;

(2) required all Chinese persons in the United States, but no other race of people, to register with the Federal Government in order to obtain ‘certificates of residence’; and

(3) denied Chinese immigrants the right to be released on bail upon application for a writ of habeas corpus;

Whereas on an explicitly racial basis, the Geary Act deemed the testimony of Chinese persons, including American citizens of Chinese descent, per se insufficient to establish the residency of a Chinese person subject to deportation, mandating that such residence be established through the testimony of ‘at least one credible white witness’;

Whereas in the 1894 Gresham-Yang Treaty, the Chinese government consented to a prohibition of Chinese immigration and the enforcement of the Geary Act in exchange for the readmission of previous Chinese residents;

Whereas in 1898, the United States—

(1) annexed Hawaii;

(2) took control of the Philippines; and

(3) excluded thousands of racially Chinese residents of Hawaii and of the Philippines from entering the United States mainland;

Whereas on April 29, 1902, Congress—

(1) indefinitely extended all laws regulating and restricting Chinese immigration and residence; and

(2) expressly applied such laws to United States insular territories, including the Philippines;

Whereas in 1904, after the Chinese government exercised its unilateral right to withdraw from the Gresham-Yang Treaty, Congress permanently extended, ‘without modification, limitation, or condition’, all restrictions on Chinese immigration and naturalization, making the Chinese the only racial group explicitly singled out for immigration exclusion and permanently ineligible for American citizenship;

Whereas between 1910 and 1940, the Angel Island Immigration Station implemented the Chinese exclusion laws by—

(1) confining Chinese persons for up to nearly 2 years;

(2) interrogating Chinese persons; and

(3) providing a model for similar immigration stations at other locations on the Pacific coast and in Hawaii;

Whereas each of the congressional debates concerning issues of Chinese civil rights, naturalization, and immigration involved intensely racial rhetoric, with many Members of Congress claiming that all persons of Chinese descent were—

(1) unworthy of American citizenship;

(2) incapable of assimilation into American society; and

(3) dangerous to the political and social integrity of the United States;

Whereas the express discrimination in these Federal statutes politically and racially stigmatized Chinese immigration into the United States, enshrining in law the exclusion of the Chinese from the political process and the promise of American freedom;

Whereas wartime enemy forces used the anti-Chinese legislation passed in Congress as evidence of American racism against the Chinese, attempting to undermine the Chinese-American alliance and allied military efforts;

Whereas, in 1943, at the urging of President Franklin D. Roosevelt, and over 60 years after the enactment of the first discriminatory laws against Chinese immigrants, Congress—

(1) repealed previously enacted anti-Chinese legislation; and

(2) permitted Chinese immigrants to become naturalized United States citizens;

Whereas despite facing decades of systematic, pervasive, and sustained discrimination, Chinese immigrants and Chinese-Americans persevered and have continued to play a significant role in the growth and success of the United States;

Whereas 6 decades of Federal legislation deliberately targeting Chinese by race—

(1) restricted the capacity of generations of individuals and families to openly pursue the American dream without fear; and

(2) fostered an atmosphere of racial discrimination that deeply prejudiced the civil rights of Chinese immigrants;

Whereas diversity is one of our Nation's greatest strengths, and, while this Nation was founded on the principle that all persons are created equal, the laws enacted by Congress in the late 19th and early 20th centuries that restricted the political and civil rights of persons of Chinese descent violated that principle;

Whereas although an acknowledgment of the Senate's actions that contributed to discrimination against persons of Chinese descent will not erase the past, such an expression will acknowledge and illuminate the injustices in our national experience and help to build a better and stronger Nation;

Whereas the Senate recognizes the importance of addressing this unique framework of discriminatory laws in order to educate the public and future generations regarding the impact of these laws on Chinese and other Asian persons and their implications to all Americans; and

Whereas the Senate deeply regrets the enactment of the Chinese Exclusion Act and related discriminatory laws that—

(1) resulted in the persecution and political alienation of persons of Chinese descent;
 (2) unfairly limited their civil rights;
 (3) legitimized racial discrimination; and
 (4) induced trauma that persists within the Chinese community: Now, therefore, be it *Resolved*,

SECTION 1. Acknowledgement and Expression of Regret

The Senate—

(1) acknowledges that this framework of anti-Chinese legislation, including the Chinese Exclusion Act, is incompatible with the basic founding principles recognized in the Declaration of Independence that all persons are created equal;

(2) deeply regrets passing 6 decades of legislation directly targeting the Chinese people for physical and political exclusion and the wrongs committed against Chinese and American citizens of Chinese descent who suffered under these discriminatory laws; and

(3) reaffirms its commitment to preserving the same civil rights and constitutional protections for people of Chinese or other Asian descent in the United States accorded to all others, regardless of their race or ethnicity.

SEC. 2. Disclaimer

Nothing in this resolution may be construed—

(1) to authorize or support any claim against the United States; or

(2) to serve as a settlement of any claim against the United States.

Source: S.RES. 201 ATS, 112 Congress, 1st Session, October 6, 2011.

B. House of Representative Resolutions (June 8, 2012)

Expressing the regret of the House of Representatives for the passage of laws that adversely affected the Chinese in the United States, including the Chinese Exclusion Act.

Whereas many Chinese came to the United States in the 19th and 20th centuries, as did people from other countries, in search of the opportunity to create a better life;

Whereas the United States ratified the Burlingame Treaty on October 19, 1868, which permitted the free movement of the Chinese people to, from, and within the United States and made China a 'most favored nation';

Whereas in 1878, the House of Representatives passed a resolution requesting that President Rutherford B. Hayes renegotiate the Burlingame Treaty so Congress could limit Chinese immigration to the United States;

Whereas, on February 22, 1879, the House of Representatives passed the Fifteen Passenger Bill, which only permitted 15 Chinese passengers on any ship coming to the United States;

Whereas, on March 1, 1879, President Hayes vetoed the Fifteen Passenger Bill as being incompatible with the Burlingame Treaty;

Whereas, on May 9, 1881, the United States ratified the Angell Treaty, which allowed the United States to suspend, but not prohibit, immigration of Chinese laborers, declared that “Chinese laborers who are now in the United States shall be allowed to go and come of their own free will,” and reaffirmed that Chinese persons possessed “all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation”;

Whereas the House of Representatives passed legislation that adversely affected Chinese persons in the United States and limited their civil rights, including—

(1) on March 23, 1882, the first Chinese Exclusion bill, which excluded for 20 years skilled and unskilled Chinese laborers and expressly denied Chinese persons alone the right to be naturalized as American citizens, and which was opposed by President Chester A. Arthur as incompatible with the terms and spirit of the Angell Treaty;

(2) on April 17, 1882, intending to address President Arthur’s concerns, the House passed a new Chinese Exclusion bill, which prohibited Chinese workers from entering the United States for 10 years instead of 20, required certain Chinese laborers already legally present in the United States who later wished to reenter the United States to obtain “certificates of return,” and prohibited courts from naturalizing Chinese individuals;

(3) on May 3, 1884, an expansion of the Chinese Exclusion Act, which applied it to all persons of Chinese descent, “whether subjects of China or any other foreign power”;

(4) on September 3, 1888, the Scott Act, which prohibited legal Chinese laborers from reentering the United States and cancelled all previously issued “certificates of return,” and which was later determined by the Supreme Court to have abrogated the Angell Treaty; and

(5) on April 4, 1892, the Geary Act, which reauthorized the Chinese Exclusion Act for another ten years, denied Chinese immigrants the right to be

released on bail upon application for a writ of habeas corpus, and contrary to customary legal standards regarding the presumption of innocence, authorized the deportation of Chinese persons who could not produce a certificate of residence unless they could establish residence through the testimony of “at least one credible white witness”;

Whereas in the 1894 Gresham-Yang Treaty, the Chinese government consented to a prohibition of Chinese immigration and the enforcement of the Geary Act in exchange for readmission to the United States of Chinese persons who were United States residents;

Whereas in 1898, the United States annexed Hawaii, took control of the Philippines, and excluded only the residents of Chinese ancestry of these territories from entering the United States mainland;

Whereas, on April 29, 1902, as the Geary Act was expiring, Congress indefinitely extended all laws regulating and restricting Chinese immigration and residence, to the extent consistent with Treaty commitments;

Whereas in 1904, after the Chinese government withdrew from the Gresham-Yang Treaty, Congress permanently extended, “without modification, limitation, or condition,” the prohibition on Chinese naturalization and immigration;

Whereas these Federal statutes enshrined in law the exclusion of the Chinese from the democratic process and the promise of American freedom;

Whereas in an attempt to undermine the American-Chinese alliance during World War II, enemy forces used the Chinese exclusion legislation passed in Congress as evidence of anti-Chinese attitudes in the United States;

Whereas in 1943, in furtherance of American war objectives, at the urging of President Franklin D. Roosevelt, Congress repealed previously enacted legislation and permitted

Chinese persons to become United States citizens;

Whereas Chinese-Americans continue to play a significant role in the success of the United States; and

Whereas the United States was founded on the principle that all persons are created equal: Now, therefore, be it resolved,

SEC. 1. Acknowledgement

That the House of Representatives regrets the passage of legislation that adversely affected people of Chinese origin in the United States because of their ethnicity.

SEC. 2. Disclaimer

Nothing in this resolution may be construed or relied on to authorize or support any claim, including

but not limited to constitutionally based claims, claims for monetary compensation or claims for equitable relief against the United States or any other party, or serve as a settlement of any claim against the United States.
