Hiram Fong was a businessman and politician from Hawaii. He was the first Asian American to be elected to the Senate (1959–1977), the only Republican to ever hold a Senatorial seat from the state of Hawaii, and the first Asian American presidential candidate in the United States of America.

Hiram Fong, also known as Hiram Leong Fong, was born on October 15, 1906 in Honolulu, Hawaii to Chinese immigrant parents from Gwangtung Province, China. A graduate of the University of Hawaii, Fong received his BA in 1930 after only three years of study. After college, Fong worked and later went on to study law at Harvard University in Cambridge, Massachusetts. He received his DJ law degree in 1935.

Senator Hiram Fong. (Library of Congress)

Around the time he started his political career, Fong founded his law firm that would eventually transform into what was known as Fong, Miho, Choy, and Robinson. It is a diversified law firm that incorporated four partners with four different ethnic backgrounds (Chinese, Japanese, Korean, and Caucasian-Hawaiian). Also, during this period of Fong's life, aside from becoming involved in politics, he was also a dedicated businessman who took on many projects and sat on boards of various businesses. The businesses he was involved in included Market City Shopping Center, Board of Finance Enterprises, Kalani Holdings, and later in his life he was an honorary consultant for China Airlines. Although Fong would eventually resign from his law practice upon his election to the Senate, he remained a devoted businessman all his life.

Like many in his generation, Fong was a veteran of World War II and served with the U.S. Army Air Corps (1942–1944). By the time he was honorably discharged, Fong was a major with the Judge Advocate of the 7th Fighter Command of the 7th Air Force. However, he would retain his rank and continue to offer his services in the U.S. Air Force Reserves until his retirement with the rank of colonel.

Fong's political career began when he was elected as representative of the 5th District to the Territorial House of Representatives in 1938. He would serve in the Territorial Legislature between 1938 and 1954, and also served as the House speaker between 1948 and 1954. During his 14-year tenure in the Territorial Legislature, Fong was dedicated to serving the Hawaiian people. Particularly, in 1945 he helped the passage of the landmark Little Wagner Act that allowed agricultural workers to unionize.

Aside from his work in the Territorial Legislature, Fong was also a staunch supporter of Hawaiian statehood and served as a member of the Statehood Committee. He testified before the U.S. Senate Committee in support of the statehood movement on multiple occasions (Hawaii became the 50th state in 1959).

A liberal Republican in his early life, Fong drew support from his own party as well as Democrats. However, as Hawaiian politics gravitated toward a Democratic dominant playing field, Fong lost his legislative seat in 1954.

Nonetheless, after Hawaii was recognized as a state, Fong defeated his Democrat competition and was elected as one of Hawaii's first senators in 1959. Moreover, Fong not only became the first American of Asian ancestry to hold a senatorial seat, but he is also to this date, the only Republican senator from the state of Hawaii. Fong would also go on to win two more reelections (1964 and 1970), serving a total of three consecutive terms before his retirement in 1977.

During Fong's 17-year tenure as senator, he would serve on the Post Office and Civil Service Committee, the Appropriations Committee, the Judiciary Committee, the Special Committee on Aging, and various other subcommittees. Also an advocate of civil rights, he cosponsored and was committed to the passage of the Immigration Reform Act of 1965, which guaranteed foreign persons equal access to immigration process regardless of race or country of origin. Fong was also a champion of the Asian American community, which had very little political clout at that time.

Fong also ran twice (1964 and 1968) for the Republican presidential nomination as a favorite son candidate. During the 1964 Republican National Convention, he received votes from the Hawaiian and Alaskan delegations. Asides from being the first Asian American to receive votes at a major party convention, he was also the first Hawaiian-born individual to run for president of the United States of America.

In 1976 Fong opted not to run for reelection and retired from the U.S. Senate after 17 years of service. He was succeeded in his Senate seat by Masayuki "Spark" Matsunaga. After a long and distinguished career as a politician and businessman, Fong was the recipient of 11 honorary degrees from institutions in the United States and abroad. He was also the recipient of various awards and honoraries. In 1997, the Hiram L. Fong Endowment in Arts and Sciences at the University of Hawaii was established.

An exemplary person of hard work, dedication, and service to the nation as well as civil rights, Hiram Fong passed away on August 18, 2004, in his home, just two months short of his 98th birthday. In August 2006, the United States Postal Service dedicated the Kapalama Station to Fong as the Hiram L. Fong Post Office Building.

Fong Yue Ting v. United States (1893)

The landmark case of *Fong Yue Ting v. United States*, 149 U.S. 698 (1893), arose after Congress's passage of the Geary Act in 1892. The Geary Act, a federal law, extended the Chinese Exclusion Act of 1882's restrictions on free Chinese immigration into the United States for another 10 years and, among other things, also imposed a new requirement for registration and certification. This new registration and certification requirement demanded Chinese persons already present in the United States to carry "certificates of residence" to serve as evidence that they entered the United States legally and had the right to remain within the country. These new Geary Act requirements were met with strong resistance from the Chinese immigrant communities across the United States. Eventually, several Chinese persons refused to register for the certificates of residence, and suit, under the name of Fong Yue Ting. The case was brought before the United States Supreme Court to determine the constitutional validity of the Geary Act. Per a five-to-three decision delivered by Justice Horace Gray in 1893, the Supreme Court stated that Congress had the right to provide a system of registration and identification of any class of aliens within the country as well as the power to

take all proper means to carry out that system. The court reasoned that because the United States, as a sovereign nation, held the power to exclude any person or any race it wished, the United States also necessarily held the lesser power to deport any person or race it wished. As a result, in *Fong Yue Ting v. United States*, the Supreme Court upheld the constitutional validity of the Geary Act of 1892.

The seeds for this monumental United States Supreme Court case were planted amid racial hostility against foreigners and various anti-Chinese immigration legislations in late nineteenth-century America. Upon the expiration of the original Chinese Exclusion Act of 1882, whereby Chinese immigration was virtually suspended, California Democratic Senator Thomas Geary introduced a bill extending the Exclusion Act's terms for another 10-year period. His efforts led to the passage of the Geary Act, which, most notably, extended the Chinese Exclusion Act for another decade and established a system for all Chinese persons residing within the United States to apply for and carry a certificate of residence at all times. The Act further spelled out that individuals failing to register for and carry the requisite certificate of residence would be subject to immediate deportation or imprisonment for a year of hard labor. Furthermore, the Geary Act also placed the burden of proof of the right to be in the United States on Chinese persons and deprived Chinese immigrants of various protections in the courts.

Implementation of the Geary Act and its certificate of residence requirements were met with strong resistance among Chinese communities across America, and many Chinese residents refused to comply with the new law's requirements. According to Iris Chang, a Chinese consul urged his countrymen to abstain from compliance, and members of the Chinese community in cities such as San Francisco and Los Angeles destroyed official registration notices. Xiaojian Zhao notes that in San Francisco the Chinese Six Companies, also known as the Chinese Consolidated Benevolent Association (CCBA), registered strong protests with the collector of internal revenue and rallied the Chinese community to legally challenge the Act. Through the posting of fliers in Chinatowns across the country, the Six Companies called for the Chinese

community to unify and resist registration. With confidence that the Geary Act's requirements were unjust, the Six Companies spearheaded a legal fund to challenge the Act and assembled a team of distinguished attorneys to contest the law's requirements. Eventually, three Chinese individuals facing deportation under the Act brought suit and, upon appeal, reached the United States Supreme Court in 1893 as *Fong Yue Ting v. United States*. The suit sought the Court to determine the constitutional validity of the Geary Act's requirements.

Unfortunately, in spite of these efforts on the part of the Chinese community and the conviction of the Six Companies that it would win the case, the Supreme Court held that just as a nation had the right to determine its own immigration policy, it also possessed the right to force all foreign nationals to register under the Geary Act. The court, per Justice Horace Gray's majority opinion, reasoned that the United States' power to forbid and regulate immigration necessarily included the lesser power to regulate the stay, and even the expulsion, of aliens within the United States. The court thus affirmed Congress's right to implement a system of registration and identification of any class of aliens residing within the United States, and stated that Congress also had the power to use all proper means to carry out that system. As a result, the Geary Act was upheld as constitutional and valid. However, it is noteworthy that the Court's decision included three separate dissenting opinions, including one by Chief Justice Melville Weston Fuller. Chief Justice Fuller explained that once Chinese aliens lawfully acquired residence in the United States, the Constitution placed limits on their expulsion. Additionally, he opined that the United States government could not arbitrarily deal with "persons lawfully within the peace of its domain."

The Court's ruling was a significant setback for the Chinese in America given their extensive efforts in resisting and contesting the Geary Act's requirements. According to Zhao, this legal defeat diminished the prestige of the Chinese Six Companies and that, for a period following the Court's decision in *Fong Yue Ting v. United States*, the organization faced an internal power struggle.

Fujita, Scott (1979–)

Scott Fujita, born on April 28, 1979, in Ventura, California, was adopted at six weeks of age by a third-generation Japanese American, Rodney Fujita, who was born at the Gila River Internment camp and his wife Helen. Scott, a two-sport athlete in football and basketball at Rio Mesa High School, was raised in Oxnard, California. Fujita is a 10-year veteran linebacker of the National Football League (NFL) who played for the for the Kansas City Chiefs, Dallas Cowboys, Cleveland Browns, and the 2010 Super Bowl champion New Orleans Saints.

After graduating high school, he attended University of California, Berkeley earning both his bachelor's and master's degree. He was not recruited but earned a spot on the football team through open tryouts. During his senior year, he won accolades including All-Pac 10 honorable mention and All-Pac 10 Academic Team. In 2002, Fujita entered the NFL draft and the Kansas City Chiefs selected him in the fifth round.

Although Scott Fujita is Caucasian, he is proud of his family's Japanese heritage. He is extremely close with his paternal grandparents, Nagao and Lillie Fujita. Scott's grandfather, Nagao, served in the U.S. Army with 442nd all-Japanese Regiment Combat Team in Europe while his parents were imprisoned in the War Relocation Authority (WRA) camp in Arizona. It was in this WRA camp that Lillie gave birth to Rodney in 1943. While incarcerated, Nagao's parents could not pay the mortgage and lost all of their farmland in California. Scott was upset that he had not learned about Japanese incarceration through his

formal education and conducted his own independent research on this subject.

In 2010, the NFL began investigating the New Orleans Saints for placing illegal bounties or money distributed for hard hits and knocking opposing players out of the game. There were rumors that Fujita was the main actor of “Bountygate.” According to documentarian Sean Pamphilon, Fujita never took any money nor placed money into the pool, and it was Fujita who pushed the filmmaker to turn in key evidence of this program to the NFL. Commissioner Roger Goddell suspended Fujita, currently a member of the Cleveland Browns, for three games for his role in Bountygate. Fujita appealed this decision, but on June 8, 2012, arbitrator Stephen Burbank supported Goddell’s power as commissioner to discipline players. In December 2012, a report by former NFL commissioner Paul Tagliabue declared that Fujita did not engage in “conduct detrimental to the league,” and vacated his suspension.

Fung, Edward (1922–)

Edward “Eddie” Fung, a native of San Francisco, has the distinction of being the only Chinese American soldier to be captured by the Japanese during World War II. He was then put to work on the Burma-Siam railroad, made famous by the film *The Bridge on the River Kwai*.

Born June 20, 1922, to immigrant parents from Guangdong Province, Eddie was the fifth of six children. His father was a jeweler and watchmaker; his mother sewed at home. He grew up in San Francisco’s Chinatown during the Great Depression and time of racial segregation. Like many other second-generation Chinese Americans, he was expected him to do well in American school and Chinese school, to be obedient and respectful to his elders, and to never bring shame to the family by misbehaving. Yet at American school, through books and movies, and in his contacts with the outside world, he was encouraged to be a rugged individualist, to speak his mind, and to pursue any line of work or lifestyle he pleased.

Being curious and rambunctious kid, Eddie resented the restrictions of Chinatown life and yearned to explore the wider world. At 13, he ran away from home and found a job as a houseboy in Antioch, across the bay from San Francisco. At 16, he dropped out of high school to pursue the romantic life of a cowboy on horseback. He worked for two years as a ranch hand in Texas, tending cattle and horses and learning to be a jack-of-all trades—part mechanic, part vet, and part carpenter. He also learned how to do his share of hard work despite his small physical stature (4 feet and 10 inches tall and weighing 90 pounds). And he came to appreciate the code of conduct exhibited by Texas cowboys he met along the way—a mixture of rugged individualism, neighborly cooperation, and a strong sense of honor.

At 18, Eddie decided to join the Texas National Guard without realizing that the United States was heading for war. He was assigned to the 1st Battalion of the 131st Field Artillery Regiment and trained to be a machine gunner at Camp Bowie, Texas. In late November 1941, Eddie’s battalion was sent to the

Philippines as reinforcements. En route, Pearl Harbor was attacked and his convoy was diverted to Australia and then sent to Java (Indonesia today) to help the Netherlands defend its colonial outpost. Within a few days, Japan won the battle for Java and Eddie became one of 140,000 Allied soldiers, and the only known Chinese American, to be captured by the Japanese in the Pacific theater. Along with 61,000 American, British, Australian, and Dutch prisoners, Eddie was sent to Burma to undertake the impossible task of building a railroad through 262 miles of tropical jungle.

For the next 42 months of captivity, Eddie suffered through Japanese beatings, tropical diseases, and starvation in the POW camps. Working under brutal slave labor conditions, the men completed the railroad in 16 months, at the cost of 12,500 POW and 70,000 Asian civilian lives. Eddie attributes his survival to his Chinese upbringing, which made it easier for him to adjust to the meager rice-and-vegetable diet, trade with the local Chinese, and scrounge for food and medicine. His work experience as a ranch hand helped him endure the hard labor in prison camp. The military discipline and camaraderie of fellow American soldiers helped to boost morale, maintain sanitary conditions in the camps, and provide mutual assistance whenever needed. Most important, his unit was lucky enough to get Dr. Henri Hekking as their camp doctor because he saved many lives, including Eddie's, with his knowledge of tropical medicine.

Eddie was finally liberated on August 19, 1945, after the Japanese surrendered. He came home to a hero's welcome and finished his formal schooling on the G.I. Bill, earning a BA degree in chemistry from Stanford University. He married Lois Yee, a microbiologist, in 1956 and the couple made their home in San Francisco. Eddie worked as a metallurgist for Livermore Lab until he retired in 1977, at which time he replaced jogging with tai chi chuan as his favorite pastime. He also made several trips to Asia with Lois, visiting his ancestral village for the first time and revisiting the railroad in Thailand. After his wife passed away in 1999, he met and married Judy Yung, professor of American studies at UC Santa Cruz. The two collaborated on his memoirs, *The Adventures of Eddie Fung: Chinatown Kid, Texas Cowboy, Prisoner of War*, based on 75 hours of oral history interviews.

In retrospect, being taken prisoner by the Japanese has been the focal point of Eddie's life. He left home as a Chinatown kid just out for adventure and returned from the war a grown man with a better appreciation for life. He says that the war and the hardships he suffered as a POW taught him to respect other people's feelings and not to treat anyone unkindly as he had been treated. It also gave him the self-confidence and tools to solve any problem that might come up. And it helped him come to terms with his ethnic identity and what it means to be a Chinese American.

Future Prospects of Asian Americans

Asian Americans are one of the racial categories recognized by the U.S. government. The U.S. Office of Budget and Management defines Asian Americans as persons in the United States who originate from the Far East (i.e., East Asia), Southeast Asia, and the Indian Subcontinent (i.e., South Asia). Based on the history and current status, this essay prognosticates the future prospects of Asian Americans in population growth and composition, socioeconomic adaptation, societal acceptance, political representation, position in the U.S. racial hierarchy, and transnationalism.

Population Growth and Structure

Asian Americans had been the fastest-growing racial or ethnic group in the United States from 1970 to 2000. The Asian population (excluding Native Hawaiians and other Pacific Islanders) grew from 980,337 in 1960 to somewhat more than 1.4 million in 1970, 3.3 million in 1980, 6.9 million in 1990, and about 11.9 million (Asian alone and in combination with two or more races) in 2000. The growth rates by decade were 46.8 percent in the 1960s, 129.9 percent in the 1970s, 108.8 percent in the 1980s, and 72.2 percent in the 1990s, which were much greater than the growth rates of other racial or ethnic groups, including Hispanics, in the corresponding periods. According to the latest data from the U.S. Bureau of the Census, in 2008 the Asian population grew to 15.2 million and represented a 27.7 percent increase in the period of 2000 to 2008, which was slightly slower than the growth rate of Hispanics, 28.9 percent, in the same period. This slowdown can be partly attributed the larger population base, which made a very high growth rate much harder to sustain.

According to the latest projections of the U.S. Bureau of the Census (2008), the non-Hispanic Asian population (alone and in combination with two or more races) will increase to 20.8 million in 2020, 26.3 million in 2030, 32.3 million in 2040, and 38.6 million in 2050. Figure 1 shows the dynamics of U.S. racial and ethnic composition in the next four decades. Although Asians (total including alone and two or more races) and Hispanics will increase significantly in percentage shares of the total U.S. population, the non-Hispanic white population will continuously shrink in proportion, and blacks and American Indians will maintain almost constant rates of growth. The percentage of the Asian population in the total U.S. population will grow from 5.1 percent in 2010 to 8.8 percent in 2050. Note that the foregoing middle-range projections were based on the assumption that current rates of fertility, mortality, immigration, and age and sex structure will remain unchanged. Nevertheless, the current or even higher level of Asian immigration is likely to continue in the near future, opening the possibility that the future Asian population and its growth rate could be greater

than these projections. Although immigration will function as the main source of Asian population growth, fertility may play an increasing role as the second and higher generations come of age. The growing number and proportion of Asian Americans point to an increasing weight of Asian Americans in American life. Asian Americans will play a more important role in shaping the U.S. economy, education, medicine, science and technology, norms and values, even politics and entertainment. America is and will be no longer just black and white. Asian Americans can no longer be ignored or sidelined for any important issues in this nation.

The current six largest Asian groups—Chinese, Filipinos, Asian Indians, Vietnamese, Koreans, and Japanese in this order—will retain the top six spots for at least half a century unless some unexpected events take place. Nevertheless, the relative positions of these six groups could change. Chinese, Filipinos, Asian Indians, and Vietnamese are likely to continue their fast growth because of the expected large immigration flows from their homelands. In particular, with a 133 percent population growth rate in the 1990s, Asian Indians are likely to move into second place in one or two decades and even eventually into first place in the future. In addition to the six largest groups, other Asian groups, especially Pakistanis, Cambodians, Laotians, Hmongs, Thais, and Bangladeshis, could gain in size and proportion, although in the aftermath of 9/11, the immigration of some Islamic groups may be negatively affected.

The Asian population is approaching the old age cutoff point (35) with a median age of 32.1 years in 2000, which was about five years younger than non-Hispanic whites but somewhat older than blacks, American Indians, and Hispanics. The projections by the U.S. Bureau of the Census (2008) show that like the total U.S. population and each of the major racial or ethnic groups, the Asian population will be gradually aging in the next four decades. By 2015, the Asian population (alone and in combination) will become an old population with a median age of 35.6, which will be younger than non-Hispanic whites (42.1), but older than blacks (32.8), American Indians (31.1), Native Hawaiians and other Pacific Islanders (32.0), and Hispanics (27.8). By 2050, the Asian population will be

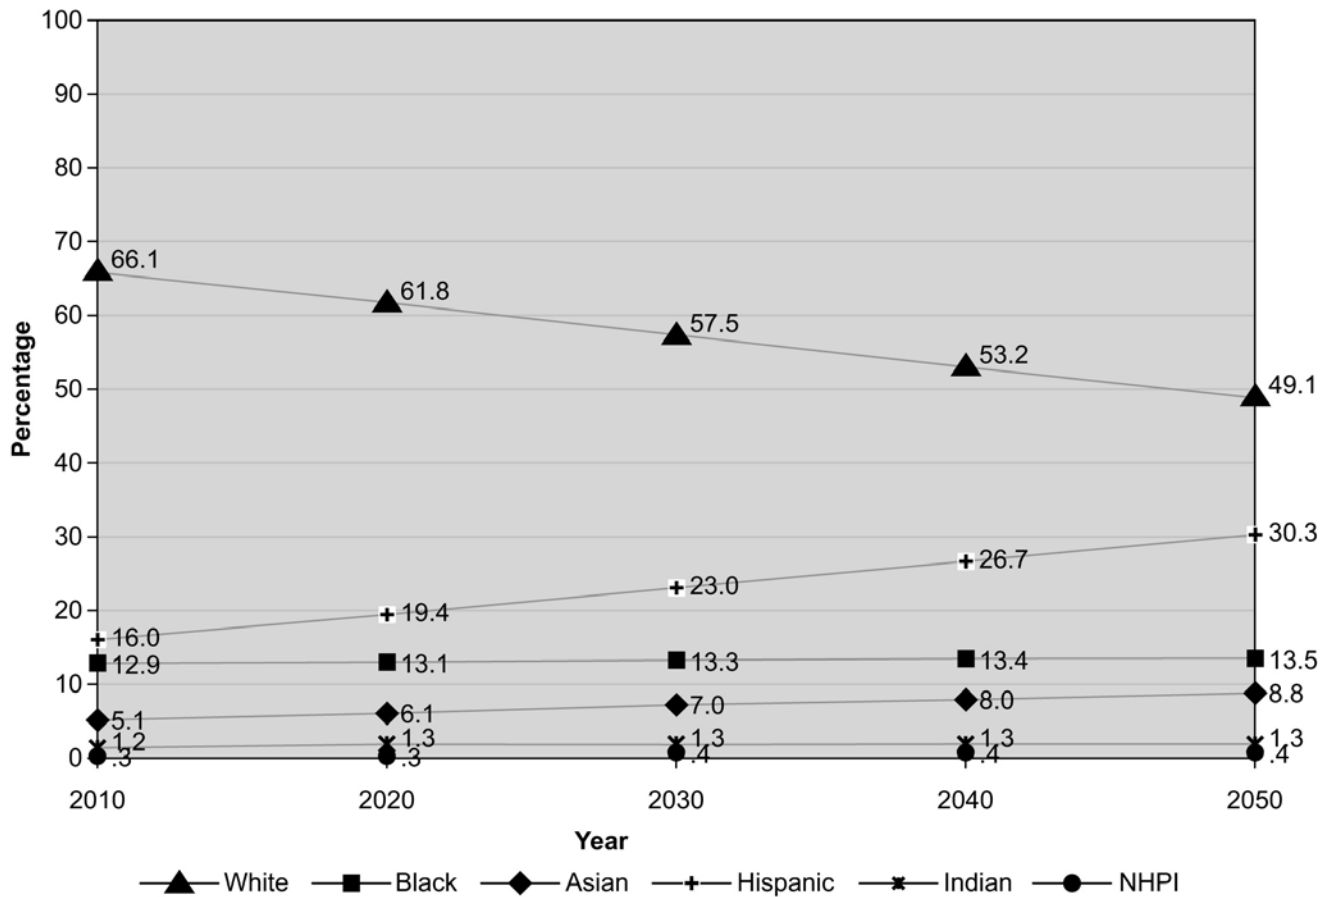

Figure 1. Projected Percentage Distribution of U.S. Population by Race/Ethnicity, 2010–2050.

40.9 years old in median age. Old-age support, nursing homes, and services for elderly Asian Americans will emerge as top issues. Unlike the early history of Asian Americans where a bachelor’s society characterized several major Asian groups such as Chinese, Japanese, Koreans, and Filipinos, sex ratio imbalance is not and will not be a problem for the Asian population presently and in the near future.

The Asian concentration in the West has steadily declined over time whereas the South and Northeast have unceasingly gained more shares. One can anticipate a gradual dispersion of the Asian population to different regions over time as new Asian Americans learn about the newly adopted country and move to places that can maximize their opportunities. It is also very likely that Asian Americans will continue to attach to several states, especially California, New York, Texas, Hawaii, New Jersey, Illinois, Washington, Florida, and Virginia, and several urban centers

such as New York, Los Angeles, San Jose, San Francisco, Honolulu, San Diego, Chicago, and Houston. But they will disperse further to other states and cities in the near future. The continuous concentration of the Asian population in a few states and urban centers suggests a heavy Asian impact on political and social events and outcomes in those places. The dispersion, on the other hand, points to the expansion of Asian influence in other locales.

Currently, the first generation (i.e., the immigrant generation) constitutes approximately two-thirds of the total Asian population. In the near future, we are likely to see a rapid nativization of Asian Americans or a fast growth in second generation and third or higher generations among Asian Americans. These changes could have important implications for the socioeconomic adaptation, societal acceptance, political representation, and identity formation of Asian Americans. The changes also call for more research

not only on second-generation but also on third- or higher-generation Asian Americans.

Socioeconomic Adaptation

For Asian Americans as a whole, two possible future trends concerning their socioeconomic adaptation can be predicted. One is the continuously strong showing of Asian Americans in average socioeconomic performance. The other is the continuous, or in some cases increased, variation in socioeconomic performance among Asian Americans across ethnic, class, generation, and gender lines as the Asian population diversifies.

Since second- and higher-generation Asians are the future of Asian Americans, their socioeconomic adaptation can best manifest the future socioeconomic adjustment of Asian Americans. Compared with Asian immigrants (i.e., the first generation), second- and higher-generation Asian Americans will encounter fewer barriers and no doubt fare much better socioeconomically. Their educational credentials are normally superior to their peers because Asian parents tend to send their children to the best schools possible and to encourage their children to pursue graduate education. A great educational credential is often a stepping-stone for employment opportunities. With superior credentials, second- and higher-generation Asians will not have many troubles finding work in their professions. Professionalization has become a hallmark of the occupational adjustment of second- and higher-generation Asians and will remain so in the future. Although the “glass ceiling” problem will not disappear any time soon, its effects on native-born Asians will be mitigated. With no problems in English and communication skills, training of leadership ability in schools, U.S. educational credentials, and familiarity with American culture (e.g., customs, norms), second- and higher-generation Asian Americans will gradually pierce the glass ceiling to gain executive and managerial positions in the future. Although class polarization will persist among the Asian immigrant generation, class homogeneity will characterize the socioeconomic adaptation of second- and higher-generation Asians. It is expected that this class homogeneity phenomenon will continue among the

U.S.-born Asians and will perhaps be even more so among third- or higher-generation Asian Americans.

Societal Acceptance

Historically, Asian Americans had been cast in a negative light and largely rejected by American society as reflected in such stereotypes as the “yellow peril,” “heathens,” and “unassimilable aliens,” and they have encountered exclusion and discrimination. Despite significant progress over time, currently Asian Americans are still not fully accepted as mirrored in such stereotypes as “perpetual foreigner,” passivity, despotism, cunning, and nerdiness. There is a long way to go before Asian Americans can be fully accepted in American society.

Notwithstanding the existing problems and obstacles, we can expect a gradual process of growing acceptance of Asian Americans by American society in the near future, although this could take some time. This prediction is based on the following considerations. First, as the Asian population increases, Asian Americans will be seen less as strangers to the American public. Second, as the second- and higher-generation Asians come of age and make their imprints in every field and every corner of America, images of Asian Americans will be polished. Third, Asian Americans’ continuing strong socioeconomic performance will enhance their positive images. Fourth, an increasing societal emphasis on multiculturalism will also facilitate the social acceptance of minorities including Asian Americans. Fifth, the continuous and concerted efforts of Asian Americans and their organizations to combat anti-Asian racism through the media and other channels will help reduce prejudice against Asians and increase their social acceptance. It should be emphasized that the social recognition of Asian Americans will not come naturally and that Asian Americans will not be viewed and treated as American as other Americans without fighting with anti-Asian racism. Racism against Sikh and other South Asian Americans and the racialization of them as possible terrorists linked to the Al Qaeda network despite their non-Arab descent after 9/11 remind us of how formidable the task of combating anti-Asian racism is. Finally, the emergence of Asian countries as major economic and

political powers and the increasing interest of white Americans in Asian cultures may also contribute to the growing acceptance of Asian Americans.

Political Representation

One of the pressing priorities on the agenda of Asian America is political empowerment. Historically, Asian Americans have been politically powerless. Hence, they could not shield themselves from all kinds of institutional discrimination and injustice in immigration, citizenship, employment, housing, intermarriage, and incarceration. Currently, Asian Americans are largely underrepresented in the American political system. Nevertheless, Asian Americans are making significant strides in political representation and emerging as an important political force.

We can expect that the political representation of Asian Americans in government will continue to rise. A number of factors contribute to this possible tendency. First, an increasing population base lays a foundation for a growing political representation. Second, an increase in the proportion of Asian Americans who are U.S. citizens will boost the eligible voting population and the chance of electing Asian American politicians. Third, the emergence of Asian-majority cities will increase the chance of electing Asian American representatives. Fourth, Asian voters' registration drives will further increase the likelihood of electing politicians of Asian descent. Fifth, the push of Asian American organizations (e.g., the 80/20 Initiative, the Organization of Chinese Americans, Japanese American Citizens League) at various levels of government to make Asian American appointments will effectively increase Asian political representation. Sixth, a growing interest of second- and higher-generation Asians in politics will change the dynamics of Asian Americans in the political system. Finally, despite diversity of Asian American groups in national origin, class, culture, religion, generation, and political ideology, pan-Asian American organizations recognize the need to form pan-Asian political coalition to promote the economic and political interests of Asian Americans. Pan-Asian coalitions building will spur Asian political participation and therefore impact their political representation.

Position of Asian Americans in the U.S. Racial Hierarchy

What will the position of Asian Americans be in the U.S. racial system in the foreseeable future? There are several conceivable scenarios. One scenario is for Asian Americans to become whites or join the ranks of the majority group, following the experience of Germans, Irish, Italians, Jews, and other European groups. Evidence of Asian Americans' higher socioeconomic status than other minority groups and even than whites in some indicators, their residential integration with whites, and high interracial marriage rate between Asians and whites would put Asians and whites in parity and "qualify" them for the social status of the white majority. However, in my view the prospect of the "becoming whites" scenario is minimal for a number of reasons. First and foremost, the white racial boundary is not likely to stretch to visible nonwhites such as Asians despite their high degree of assimilation. High socioeconomic status and high residential assimilation do not automatically translate into a redefinition of the racial minority status of all Asian Americans as a group or a boundary crossing of Asian Americans into the dominant group. Second, although high Asian-white intermarriage can blur the boundary between the two groups, the interracial marriage rate has yet to reach the point that will melt down the boundary between whites and Asians. In fact, estimates based on the 5 percent PUMS data from the 1980, 1990, and 2000 U.S. Censuses reveal that the Asian-white intermarriage rate declined from 18 percent in 1980 to 15.3 percent in 1990, and 12.7 percent in 2000. On the other hand, from 1980 to 1990, interethnic marriages among Asian groups had increased, despite a slight decline in the next decade. This trend could continue in the near future along with the projected increasing size of Asian population. Third, continuous new Asian immigration flows will also reinforce the Asian ethnic and panethnic boundaries. Fourth, Asian Americans have not been fully accepted as Americans as reflected in the prevalent stereotype of "perpetual foreigners" and discrimination. Lastly, there is no indication that Asian Americans will be inclined to "whiten" themselves.

Another scenario is for Asian Americans to merge into the nonblack ranks, a new category laid out by Gans. Nevertheless, becoming nonblack, which indicates racial boundary shifting, is less likely to happen either because quasi-whites (a category of nonblack) differ significantly from whites in their positions and experiences. Hence, the nonblack label may not be very meaningful in real life.

Joining the nonwhite or Third World coalition is the third scenario for Asian Americans. Although it is necessary for Asian Americans to join a nonwhite coalition, the feasibility of such an alliance remains questionable. A significant segment of the Asian American population is reluctant in or ambivalent about supporting the people of color coalition mainly because of self-interest due to the gap between Asian Americans and other minority groups in socioeconomic status. Quite a few Asians share more economic interest with whites. Although blacks and Latinos (except for Cubans) lean toward the Democratic Party, Asian Americans were more or less evenly divided between the Democratic Party and the Republican Party at least until recently. Furthermore, severe conflicts between minority groups documented in research in the last two or three decades further add to the difficulty of building the Third World coalition.

The most likely scenario for Asian Americans in the twenty-first century is to occupy an intermediate position in the U.S. racial hierarchy. That is, Asian Americans will not be subsumed under the categories of white, nonblack, nonwhite, or black; instead, they are likely to remain in a middle position between whites and other minorities. Asian Americans will not be fully accepted as equal as whites, but they will be perceived and treated differently from whites and from blacks, American Indians, and Latinos. They will be viewed as a more “deserving” race (to use Gans’s language), the so-called “model minority,” than other minority groups. On the other hand, they will not be promoted or assisted by government and social programs as much as what other minorities receive. They will be somewhere in the middle of the racial hierarchy. They will remain a separate minority group not fully fusing into white society.

Asian Americans and Transnationalism

The meanings of “transnationalism” vary widely. I define immigrant transnationalism as the process in which immigrants as well as their social institutions engage in regular and sustained involvement in economic, political, social, cultural, or personal practices across national borders. The most salient feature of immigrant transnationalism is the emergence of a growing class of “transnational migrants” or “transmigrants” who live their lives across international borders. Immigrant transnationalism is a significant phenomenon in the Asian immigrant community.

It can be anticipated that immigrant transnationalism will continue to rise and expand in the Asian immigrant communities in the foreseeable future, given accelerating economic and cultural globalization, continuing dual citizenship proliferation, increasing transnational labor movement, advancement in air transportation and communication technology, and immigrants’ rational choice to maximize their life chances, which give rise to immigrant transnationalism. On the other hand, whether transnationalism will remain significant and tenacious among second or higher generations is a moot issue. There is some evidence that transnational activities such as visits to ancestral lands and remittances, often on an occasional basis, continue into the second generation among Chinese, Filipinos, Koreans, Vietnamese, Cambodians, Laotians, and some other Asians. Nevertheless, second- or higher-generation Asian Americans will be less likely than their first-generation counterparts to engage in transnational practices and especially to become transnationals. This, however, does not preclude the possibility that a small number of native-born Asians may find transnationalism as a path to expand their career opportunities and pursue a transnational lifestyle under certain special circumstances.

Conclusion

Asian Americans have experienced, and will continue to experience, a phenomenal population growth. Second- and higher-generation Asian

Americans will outshine the Asian immigrant generation in socioeconomic adaptation. Although the prospect for them to be fully accepted as Americans in the near future is not rosy in light of their past and present experiences, Asian Americans will meet with growing social acceptance over time. Albeit powerless historically and largely underrepresented presently, Asian Americans will gradually gain political clout. The foregoing anticipated achievements and progress are not very likely to elevate the position of Asian Americans in the U.S. racial stratification system to “white” or “nonblack” any time soon. Most likely, Asian Americans will occupy a middle position in the U.S. racial hierarchy in the foreseeable future. Immigrant transnationalism is growing in the Asian immigrant communities and will continue to rise in the future in the age of globalization. It could persist into the second generation under some special circumstances.

Preface

We are honored and humbled to serve as the editors of *Asian Americans: An Encyclopedia of Social, Cultural, Economic, and Political History*. This three-volume encyclopedia is a collaborative effort of more than two hundred scholars from various fields and disciplines. The project is committed to making research results and records about Asian Americans readily available in one reference source, where the interested reader can locate the facts, events, trends, or policies concerning Asian Americans, Asian American history, and Asian American studies. Conscious efforts were made on a number of fronts to reflect some of the important developments in Asian American studies and to cover underrepresented groups. Most of the entries build upon existing literature, whereas new research was conducted to cover understudied areas and topics. We gave special attention to issues concerning race, class, and gender relations, as well as transpacific and transnational dimensions of Asian Americans.

Given the diversity and complexity of the ethnic group and the rapid pace of growth of Asian Americans in a fast-changing world, we recognize that the completion of such an undertaking is only one step to our ever-expanding knowledge of the Asian American experience. The field of Asian American studies is relatively young. We trust this book will create a foundation for the expansion of academic inquiries. By making these records more readily accessible, we hope to reach out to a wider audience and inspire more future research.

Beginning in 2000, the U.S. Census Bureau has identified Native Hawaiians and Pacific Islanders as an independent race category separate from Asian Americans. Native Hawaiians and Pacific Islanders have unique histories and experiences of their own, and their affiliations with the United States are quite different from those of Asian Americans. To lump Native Hawaiians and Pacific Islanders together with Asian Americans is to marginalize these groups of people. Nevertheless, because they had been grouped together with Asian Americans by government agencies and academic institutions, readers are more likely to look for information about them from Asian American reference books. For this reason we have made an effort to include some entries on Native Hawaiians and Pacific Islanders in this project.

This comprehensive reference project contains approximately 600 entries. Cross-referencing is provided in some entries by the use of *see also* lines. An archive of primary sources in Volume 3 is an important addition to the project, which will enable the student to advance beyond narrative summary of historical research. A detailed chronology in Volume 1 offers a quick glance of historical facts and events. We considered several options of organizing the project but eventually settled on the A–Z

arrangement for easy look-up. In addition to the alphabetical list of entries in the front matter, the index serves as a useful tool for name/subject searching.

Transliteration of Names

The transliteration of personal names in this book is sometimes inconsistent for a number of reasons. In most Asian societies, the family name precedes an individual's given name. Asians living in the United States often invert their family and given names following American and European practice, but some have chosen not to do so. For example, Rhee is the family name of Syngman Rhee, a prominent Korean American community leader and the first president of the Republic of Korea, and Yao is the family name for Yao Ming—the former Houston Rockets NBA star from China who never inverted his family and given name. Different transliteration systems and regional dialects also prevent consistency in translation and conversion. Chinese from Taiwan or pre-1949 China transliterate names according to the Wade-Giles system, whereas those from the People's Republic of China use the pinyin transliteration system, one that has been adopted by most academic institutions and educational programs in the United States and throughout the world.

Acknowledgments

It would not be possible to consolidate such a wealth of scholarship, information, and source materials into one reference book without the contributions of over 200 scholars. To build a diverse and inclusive list of entries, we reached out to accomplished scholars and graduate students in both humanities and social sciences, and we also solicited entries from a large number of writers and independent scholars in law, journalism, political activism, and other fields. Our editorial process is one of community building, through which we enjoyed the luxury of having a productive conversation with a large community of scholars. We sincerely hope this project will help expand such a conversation among scholars and students.

We want to thank everyone who has generously shared their scholarly expertise in their entries as well as their ideas and acts of encouragement. Several colleagues and scholars deserve special acknowledgment for their concrete suggestions in the planning stage of the project, and for their efforts in helping to recruit contributors. Sucheng Chan, who insisted that encyclopedia entries should be comprehensive, definitive, and reliable, not only contributed her own original essays, but also helped secure entries from a number of prominent scholars. Suggestions from Diane Fujino, Pei-te Lien, Ruthanne Lum McCunn, and Zuoyue Wang added invaluable guidance to several subject areas. We also want to thank the University of California, Santa Barbara, and the Dean's Office of the Bellarmine College of Liberal Arts at the Loyola Marymount University for providing a welcoming environment for research and writing. Contributions from our colleagues as well as excellent administrative support from Elizabeth Faulkner, Elizabeth Guerrero, and Arlene Phillips from these two universities are very much appreciated. We also want to thank Katie Do, Fang He, Yanjun Liu, Myung Jin Lee, Andrew Turner, and Tian Wu for their assistance.

Finally, we would like to thank the editors at ABC-Clio, especially James Sherman, Kim Kennedy-White, and John Wagner. PreMediaGlobal, especially project manager Magendrarvarman Nithyanandam, provided superb service in copy-editing, typesetting, proofreading, and indexing of the book. We would also like to thank Ellen Rasmussen for photographic research.

Introduction: Asian Americans in the Twenty-First Century

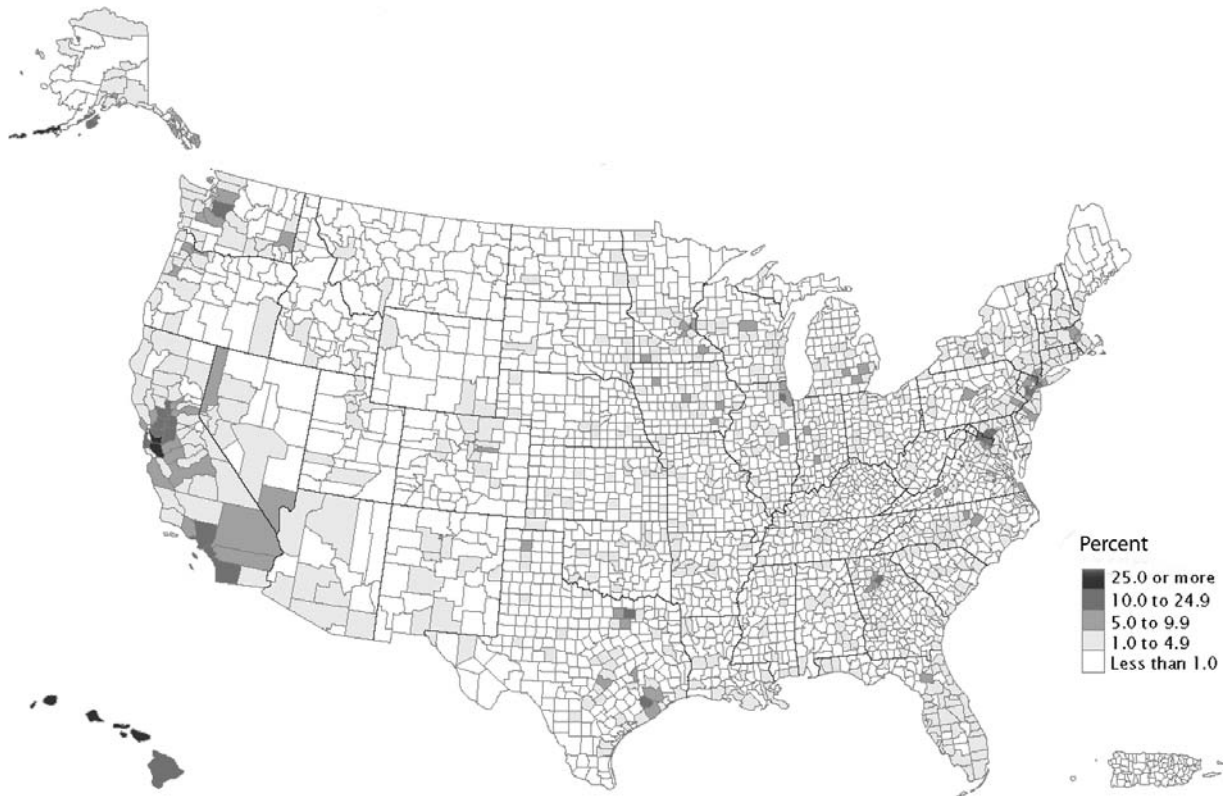

Beginning from the California Gold Rush, Asians have settled in the United States for more than 160 years. The two major groups that arrived first in the late nineteenth century originated from China and Japan. They were joined by immigrants from Korea, the Philippines, and India in the early decades of the twentieth century. Until the late 1960s, however, the Asian population in the United States was small. Between 1951 and 1960, immigrants from Asia accounted for only 6 percent of the total immigrants to the United States. The rate of Asian immigrants began to increase substantially beginning in the 1970s after the Immigration Act of 1965 ended the national origin quota system. Post-1965 Asian immigrants came in large numbers, and they came from many more Asian nations and regions. Most significant changes occurred in the late 1970s and 1980s, when large waves of Southeast Asian immigrants arrived as refugees after the Vietnam War.

Today's Asian America is built by immigrants and their descendants who originated from countries in South Asia, East Asia, and Southeast Asia. In the 1960s, a new generation of Asian Americans, inspired by the Civil Rights Movement, began to organize across ethnic lines in search of a unified front in their struggle for racial equality and social justice. Increasing visibility of Asian Americans as one of the more prominent minority groups in recent decades has had significant impact in political, economic, and social realms; it has also affected race and ethnic relations in the United States in profound and complicated ways.

Population and Distribution

Asian America has become the fastest-growing racial group in the United States, increasing from 3.8 million in 1980 to 6.9 million in 1990, to 10.2 million in 2000, and to 17.3 million in 2010 (including 2.6 million mixed-race individuals). It comprised 5.6 percent of the total U.S. population of 308.7 million. Between 2000 and 2010, the total U.S. population grew by 9.7 percent, from 281.4 million to 308.7 million, whereas the Asian American population increased more than four times faster, with a growth rate of 46 percent. It is worth noting that about 2.6 million people reported to be Asian in combination with other races, which represents 15 percent of the Asian American population. Mixed race Asian Americans is the fastest growing subgroup of the Asian American population.

A high percentage (46 percent) of the Asian American population resided in the West in 2010, constituting 11 percent of the region's total population. Meanwhile,

Asians as a percentage of county population: 2010.

22 percent of the population lived in the South (3 percent of the region's population), 20 percent in the Northeast (6 percent of the region's population), and 13 percent in the Midwest (3 percent of the region's total population). The percentage of the total Asian American population residing in the West had declined recently, however, from 49 percent to 46 percent within a decade. Meanwhile, the proportion of Asian population in the South increased from 19 percent to 22 percent.

Nearly three-fourths of the entire Asian American population resided in ten states in 2010, led by California, home to 5,556,592 Asian Americans. The other states with large populations of Asian Americans were New York, 1,579,494; Texas, 1,110,666; New Jersey, 725,356; Hawaii, 780,968; Illinois, 668,694; Washington, 604,251; Florida, 573,083; Virginia, 522,199; and Pennsylvania, 402,587. All these states have experienced substantial growth of their Asian American population in the past decade. Texas, Florida, and Virginia each enjoyed a growth rate of between 71 to 72 percent, and this pattern continues to show the increasing dispersal of Asian Americans out of their traditional population centers on the West Coast and in Hawaii. Following these states in Asian population growth are Pennsylvania (62 percent), Washington State (53 percent), and New Jersey (52 percent). In comparison, the growth rate is relatively low in Hawaii (11 percent), although the Asian population represents over 50 percent of the entire population. Asians represented 62 percent of Honolulu's population and 51 percent of the population in Kauai. In terms of actual population numbers,

California had the largest gain of Asian American population over the decade, from 4.2 million in 2000 to 5.6 million in 2010. Within California, Asian population constituted more than 25 percent of the total population in four counties, all within the San Francisco-San Jose metropolitan area. Metropolitan areas with the largest population of Asian Americans were Los Angeles (1,884,669), New York (1,878,261), San Francisco Bay Area (1,577,790), Chicago (532,801), Washington, D.C. (517,458) and Honolulu (477,503).

Chinese American, the oldest Asian ethnic group in the United States, was the largest group of Asian America in 2010 (3.8 million). The next two largest groups were Filipinos (3.4 million) and Asian Indians (3.2 million). Given the high rate of immigration in the past decade, these three groups constituted 60 percent of the entire Asian American population. At the same time, since its implementation in 1990, the Diversity Immigrant Visa Program that allows citizens of countries with low rates of immigration to secure permanent residency in the United States have added to the diversity of Asian Americans. In addition to this program, economic and political changes in Asia ranging from rapid development to civil wars have resulted in new immigrant groups from Bhutan to East Timor.

Immigrants constitute a significant majority of adult Asian Americans. According to an analysis of the 2010 census by the Pew Research Center, 59 percent of Asian Americans and 74 percent of its adult population were foreign-born, compared with 13 percent of the total U.S. population. However, there were significant demographic variations within different subgroups. For instance, 75 percent of Korean Americans were foreign born, but only 38 percent of the Japanese American population were immigrants. Among the foreign-born Asian Americans, 54 percent were women. The female-to-male ratio was greater than two-to-one among Japanese immigrants, but males outnumbered females among immigrants from India.

Chinese, next to Spanish, is the most widely spoken non-English language in the United States. In 2010, an estimated 2.8 million people aged five and older spoke Chinese at home. Other Asian languages spoken by a large number of Asian Americans at home are Tagalog, Vietnamese, and Korean. Over half of the foreign-born Asian American population (53 percent) self-reported that they could speak English well, higher than other foreign-born groups in the United States (45 percent).

Socioeconomic Status: Improvement and Gaps

Before World War II, most Asian Americans worked at unskilled and low-paying jobs, often in racially segregated ethnic communities or as migratory agriculture laborers. After World War II, especially since the Civil Rights Movement, Asian Americans have gained access to the mainstream job market; their socioeconomic status has also shown significant improvement. Such improvements have been reported in the Census in every decade since 1970, reinforcing a “model minority” image for Asian Americans.

Asian Americans, however, are not a monolithic population. In the 2010 Census, the estimated median household income for Asian Americans was \$66,286—higher than it was for the overall U.S. population (\$50,831), the non-Hispanic white population (\$56,178), the Hispanic population (\$38,818), and the black population (\$33,137). However, there were wide gaps among different Asian groups. Asian

Indians had a median household income of \$90,711, for example, but the Bangladeshi median household income was only \$48,471.¹ Median household wealth (net worth) for Asian Americans was \$83,500 in 2010, higher than the median household wealth for the overall U.S. population (\$68,529), and higher than it was for Hispanics (\$7,800) and blacks (\$5,730) by large margins. But median household wealth for Asian Americans was significantly lower than it was for non-Hispanic whites (\$112,000). These data on income and wealth should take into account the fact that higher percentages of Asian Americans are urban dwellers concentrated in California, Hawaii, and New York, regions known for their high costs of living. In addition, it is crucial to understand that immigration is a highly selective process. For instance, whereas the median household income of Asian Indians was much higher than that of Hispanics in 2010, the per capita Gross Domestic Product (GDP) of Mexico was over six times that of India (\$10,146 and \$1,514, respectively, in 2011).

Poverty and health insurance rates provide different angles to assess socioeconomic status of Asian Americans. In 2010, about 12.2 percent of Asian Americans were reported by the Census Bureau as living in poverty. In comparison, poverty rates for non-Hispanic whites, Hispanics, and blacks were 9.9 percent, 26.5 percent, and 27.4 percent, respectively. Although poverty rates for Filipino, Japanese, and Indian Americans were relatively low (6, 8, and 8 percent, respectively), 26 percent of Hmong Americans were living below the poverty line. It is worth noting that although 16.5 percent of Asian Americans did not have health insurance in 2009, that rate increased to 18.4 percent in 2010. Nearly a quarter of both Pakistani and Bangladeshi Americans (23 percent) and more than a fifth of Korean (22 percent) and Cambodian (21 percent) Americans were uninsured, whereas the percentage of people without health insurance among non-Hispanic whites, Hispanics, and blacks were 13.5 percent, 30.7 percent, and 20.8 percent, respectively.

Employment patterns for Asian Americans are also complex. Although 48 percent of Asian Americans aged 16 and older were employed in management and professional occupations in 2010, about 17 percent of them worked in service occupations, 22 percent in sales and office occupations, and 10 percent in production, transportation, and moving and shipping occupations. In comparison, only 40 percent of employed Americans held management and professional jobs. Occupational distribution among different Asian groups, however, was diverse. Although two-thirds of Asian Indians held jobs in management and professional occupations, only about a third of Vietnamese Americans did so. Hmong and Cambodian Americans were relatively underrepresented in management and professional positions (20 to 21 percent). Whether Asian Americans with comparable educational levels and professional qualifications are earning the same pay or achieving equal professional advancement opportunities remains to be a serious question. Business ownership rate among Asian Americans continued to grow. In 2007, 1.5 million businesses were owned by Asian Americans, reflecting a 40.4 percent increase from 2002. It must be noted that a large proportion was small businesses, as 44.7 Asian American-owned businesses were in repair and maintenance, personal and laundry services, professional and technical services, and retail trade.

One Asian American group that has usually been overlooked is undocumented immigrants. Undocumented Hispanic immigrants have received most public and

media attention, and they account for approximately three-quarters of the total undocumented population in the United States. The U.S. government officially estimates that about 10–11 percent of the U.S. undocumented immigrants are from Asia, constituting approximately 13–15 percent of the Asian immigrant population. Whether undocumented Asian immigrants have been undercounted remains an open question. If so, their population would have a significant impact on socioeconomic status of the overall Asian American population.

Educational Attainment: Achievement and Gaps

Recognizing both growth and diversity of Asian Americans are especially important in reading statistics of Asian Americans in education. A most remarkable characteristic of the Asian American population is its high level of educational attainment. About 49 percent of Asian Americans aged 25 and older had at least a bachelor's degree in 2010, which was much higher than that of the total U.S. population (28 percent). However, levels of educational attainment for different Asian American groups were uneven. About 70 percent Asian Indian Americans, for example, had at least a bachelor's degree, but only 14 percent of both Cambodian and Laotian Americans held a similar degree.²

The analysis by the Pew Research Center also showed high educational attainment among the new Asian immigrants: 61 percent of the immigrants between the ages of 25 and 64 have at least a bachelor's degree, almost twice as high as non-Asian immigrants. About 81 percent of new immigrants from India held a college degree, but only 17 percent of immigrants from Vietnam had attended college. Further behind immigrants from Vietnam are new immigrants from Cambodia and Laos who have much lower college education attainment.

A higher percentage of Asian Americans 25 and older had graduate or professional degrees than the total U.S. population (20 percent to 10 percent). The Pew Research Center revealed that Asian American students and students from Asia accounted for 25 percent of doctorate degrees granted at U.S. universities in 2010, with considerable numbers in engineering, science, mathematics, computer science, physical science, and life science. Asian or Asian American students also received 20 percent of PhDs granted by U.S. universities in social sciences. These high levels of educational attainment helped Asian Americans find professional jobs. U.S.-trained Asian students from China and India have also been the main beneficiaries of H-1B visa program, which revitalized in 1990, this visa program also provided temporary employment opportunities for foreign-trained Asians in “specialty occupations,” especially in engineering, sciences, and business-related professions. With employer sponsorship, a significant percentage of H-1B visa holders have successfully adjusted into immigrant status. Foreign students from India and China, as well as skilled workers, were the two top-ranked groups to benefit from the program, and they received three-fourths of all H-1B visas granted to Asia in 2011. Indians alone accounted for 56 percent of all the H-1B visas granted by the United States in 2011, whereas those from China received an additional 8 percent. Although considerable numbers of students from Korea, Philippines, Japan, and Taiwan also benefited from this temporary visa program, very few students from other Asian nations were able to do so.

Conclusion

Improved socioeconomic status and increased visibilities of Asian Americans in U.S. politics, educational institutions, and other areas of American life have impacted the development of American society in significant ways. In many parts of the United States, Asian Americans have changed the social landscape of cities and neighborhoods, integrating their customs, values, languages, foods, and institutions. The increasing presence of Asian Americans has enriched the American society, but it has also challenged and strained the nation. Unfortunately, accompanying the drastic demographic changes were also incidents of racial conflict and hate crime, as well as a resurfacing anti-immigrant sentiment. Increasing political participation of Asian Americans has shown impressive results, as more and more of their representatives have been either elected or appointed to political, government, and judiciary posts at local, state, and national levels. In turn, Asian Americans have been able to more effectively pursue political and policy issues that concern them the most: social justice, immigration, health care, public support for education, U.S. foreign relations, and international trade. Their devotion to education and their high enrollment in colleges and universities have had a great impact in educational reform, and many colleges and universities across the United States have established and expanded course offerings in Asian American studies, in Asian history, culture, and languages, and developed educational exchange programs with more and more Asian nations.

At the beginning of the twenty-first century, the Census Bureau projected that the Asian American population will grow to 37.6 million by the year 2050, comprising 9.3 of the total U.S. population. The rapid growth of Asian American population of the late twentieth century was the result of large waves of new immigrants from Asia, which became possible after the Immigration Act of 1965 and a host of legislations that addressed the immigration and refugee issues. There is no doubt that new immigrants will continue to come from Asia in significant numbers in the next few decades. In addition to immigration policies of the United States and changing U.S. diplomatic relations with Asian nations, globalization and the development of global economy will play an increasingly important role in determining sources of Asian immigration and directions of Asian migration. Scholars have already noticed that economic development and high living standard in Japan have made emigration less attractive in the past few decades. Korean immigration peaked in the 1970s and 1980s, but it declined in the late 1990s. Although the number of Chinese immigrants continued to grow, the rate of growth has slowed in the past decade. Developments in other parts of the world may also affect Asian migration, as more and more individuals are also paying attention to different opportunities in Europe, Australia, South and Central Americas, Africa, as well as in their neighboring Asian countries. From an Asian diaspora perspective, it would not be difficult to find that Asian emigration has become increasingly multidirectional, in which the United States is one destination (the most attractive one) among many others. Moreover, an increasingly large number of Asian Americans have resettled to Japan, Korea, China, and other Asian nations and many more are moving between Asia and the United States. All these developments will play important roles in shaping Asian immigration and the contours of twenty-first-century Asian America.

Xiaojian Zhao and Edward J. W. Park

Notes

1. Comparison between median household income of Asian Americans is based on tables released by Census Bureau in September 2010, see United States Census Bureau Newsroom, “Income, Poverty, and Health Insurance Coverage in the United States: 2011” (September 12, 2012); comparison between median household income between Asian Indian Americans and Bangladeshi Americans is based on a report from an earlier release from the Bureau, see United States Census Bureau News Release, “2010 Census Shows Asians are Fastest-Growing Race Group” (March 21, 2012).

2. The Pew Research Center’s analysis of Asian Americans, based on the 2010 U.S. Census, selects only six Asian American groups. Many smaller and less well-to-do groups are left out. See, Pew Research Center, *The Rise of Asian Americans*, July 12, 2012.

G

Gabriel, Roman (1940–)

Roman Ildonzo Gabriel, Jr. was a professional football player who played in the National Football League (NFL) from 1962 to 1977. He starred as the quarterback for the Los Angeles Rams and Philadelphia Eagles. He was the NFL Most Valuable Player in 1969. Gabriel is the son of a Filipino immigrant and the first Asian American to start as an NFL quarterback.

Born on August 5, 1940, in Wilmington, North Carolina, Roman Gabriel was born to a Filipino father, Roman Gabriel Sr., who immigrated to the United States from the Philippines in 1925, and an Irish American mother, Suzanne. Gabriel attended New Hanover High School where he first played organized football. He then went on to star as quarterback for North Carolina State's football team where he was a two-time All-American. He also won the ACC Player for 1960 and 1961. During his college career, Gabriel set 22 school and 9 ACC football records.

In 1962, the Los Angeles Rams selected Gabriel as the second overall pick in the NFL Draft. With Rams head coach George Allen at the helm, Gabriel thrived as starting quarterback. In his second season as starter, the Rams had a record of 11-1-2 and won the Coastal Division. He won the NFL's Most Valuable Player Award in 1969 and was selected to the Pro Bowl four times in his career. He was traded to the Philadelphia Eagles in 1973, where Gabriel was named Comeback Player of the Year.

After Gabriel retired from professional football, he worked as a color commentator for CBS's NFL coverage. He also worked as the head coach of Cal Poly Pomona's college football team and then for the

now-defunct Raleigh-Durham Skyhawks of the World League of American Football during the 1991–1992 inaugural season. He also had a brief acting career, playing a prison guard in the 1968 movie *Skidoo* and a Native American in John Wayne's *The Undeclared* in 1969.

Geary Act (1892)

The Geary Act—named after California Congressman Thomas J. Geary—required Chinese laborers living in the United States to carry registration cards, effective one year from the passage of the Act on May 5, 1892. If the Chinese laborers were caught without a registration card, they would be subjected to arrest and deportation. An exception existed for those who could find one credible white witness willing to testify that the Chinese person was not able to obtain the certificate because of an "accident, sickness, or other unavoidable cause." The Act, in practice, affected only Chinese laborers; however, every Chinese resident was a potential target, as they had to prove that they were legally entitled to reside in the United States.

Section 1 of the Geary Act also extended the Chinese Exclusion Act of 1882 (set to expire in

May 1892) by another 10 years; therefore, it would be another 10 years before Chinese laborers could immigrate to the United States, unless another extension was enacted before the expiration date. In addition, Section 2 of the Act required that a Chinese person convicted of unlawful entry into the United States be deported. Section 3 required any Chinese person arrested to establish by affirmative proof that he has a lawful right to remain in the United States. Because the statute made it a federal crime to be an illegal residence of the United States, the punishment was a year of imprisonment at hard labor followed by deportation (Section 4). The fifth provision specified that no bail amount would be set for any Chinese who was denied entry and thereafter applied for federal habeas corpus, but such application shall be heard and determined promptly (Section 5). Section 6 required all Chinese laborers to obtain registration cards. Sections 7 and 9 focused on the duties of the secretary of the treasury to make rules and regulations for the efficient execution of the Act. It also specified the necessary forms needed for the collectors of internal revenue to issue the certificates. Finally, anyone who engaged in the fraudulent creation of the certificates was guilty of a misdemeanor (Section 8).

The Chinese responded to the registration cards requirement—Section 6 of the Act—by disobeying it. This was the second instance by the Chinese populace in the United States to disobey a law; the first was in response to the 1870 San Francisco Cubic Air Ordinance—regulating the living quarters of tenants, primarily targeting the Chinese. The Chinese Six Companies led the resistance to the registration cards requirement. The Chinese Six Companies (also known as the Chinese Consolidated Benevolent Association) provided various assistance and services to the Chinese predominantly on the West Coast, thereby earning the trust of the Chinese population. To challenge the validity of the Geary Act, the Chinese Six Companies asked every Chinese person to donate \$1 to help pay for the legal expenses. They promised to assist anyone who was arrested for not registering, but would not assist those who ended up in trouble following registration. Their coordinated efforts amounted to 107,000 Chinese people refusing to register. The Chinese Six Companies believed that

protesting against this Act was important, as the Act violated the United States Constitution, as well as the 1880 treaty.

On the East Coast, the Chinese were also protesting the Geary Act. In New York, they formed the Chinese Equal Rights League. The League organized a mass meeting following the passage of the Geary Act to protest the unconstitutionality of the new law and adopted a resolution condemning it.

Back on the West Coast, the Chinese Six Companies hired attorneys to prepare for the approaching registration deadline of May 5, 1893. The attorneys for the Chinese carefully planned out who would be arrested, how they would bring the suit, and when to appeal the challenge to the United States Supreme Court. All of this had to be done before the end of the Supreme Court's term, scheduled to end on May 15, 1893. The attorneys representing the Chinese residents agreed to bring the suit in the courts of New York, as the legal team consisted of New York attorneys. On May 6, 1893, three Chinese laborers were arrested for not carrying registration cards, in violation of Section 6 of the Geary Act. The men were ordered deported by the federal district court judge and petitions for *writs of habeas corpus* were filed. The court dismissed the writs and ordered the men to be detained by the federal marshal. The cases were consolidated and appealed to the United States Supreme Court, in what is known as *Fong Yue Ting v. United States*, 149 U.S. 698 (1893).

In *Fong Yue Ting v. United States*, Justice Gray of the Supreme Court explained, “Chinese laborers . . . like all other aliens residing in the United States . . . are entitled . . . to the safeguards of the constitution, and to the protection of the laws. . . . But they continue to be aliens, having taken no steps toward becoming citizens, and incapable of becoming such under the naturalization laws; and therefore remain subject to the power of congress to expel them, or to order them to be removed and deported from the country, whenever, in its judgment, their removal is necessary or expedient for the public interest.” The Court added that the right to exclude or expel aliens is an inherent right of every nation; Congress's power to expel aliens may be exercised by executive officers. So, Sections 6 and 7 of the Act were constitutional and valid.

This reasoning drew a powerful dissent from Justices Brewer, Field, and Fuller. Justice Brewer wrote, “I rest my dissent on three propositions: First, that the persons against whom the penalties of section 6 of the act of 1892 are directed are persons lawfully residing within the United States; secondly, that as such they are within the protection of the constitution, and secured by its guaranties against oppression and wrong; and, third, that section 6 deprives them of liberty, and imposes punishment, without due process of law, and in disregard of constitutional guaranties, especially those found in the 4th, 5th, 6th, and 8th articles of the amendments.”

The unsuccessful attempt to challenge Sections 6 and 7 of the Geary Act in *Fong Yue Ting v. United States* was a huge setback for the Chinese Six Companies. After losing the legal battle, the Chinese Six Companies also lost the trust of the Chinese people. With no registration card and deportation on the horizon, the Chinese people looked elsewhere for help.

On October 4, 1893, the House Committee on Foreign Affairs recommended that registration per the Geary Act be extended by six months. They noted that the Chinese had relied to their detriment upon the advice of constitutional legal scholars about the validity of the Act. This amendment to the Geary Act was passed on November 3, 1893. The amended Act also contained additional provisions such as a broadened definition of laborer (skilled and unskilled laborers) and added a definition for merchants. It also required witnesses to be persons other than Chinese.

Although the Chinese lost when they challenged Sections 6 and 7 of the Geary Act, they won when they challenged Section 4 (one year imprisonment at hard labor for not registering) in *Wong Wing v. United States*, 163 U.S. 228 (1896).

Wong Wing, along with three other men, was found to be unlawfully residing within the United States. Wong Wing and his companions were sentenced to imprisonment at hard labor and ordered to be deported. *Writs of habeas corpus* were sought but never issued. The defendants appealed to the United States Supreme Court. The court, in addressing the constitutionality of Section 4, stated that the United States can prohibit aliens from coming to the United States and expel those already here on public policy

reasons. However, when Congress seeks to subject aliens to punishment at hard labor, the accused *must* be provided with a judicial trial to establish his guilt, as provided by the Fifth and Sixth Amendments to the United States Constitution.

Gee, Margaret (Maggie) (1923–2013)

Margaret Gee (better known as Maggie Gee) is one of the two Chinese American women who served in the Women Airforce Service Pilots (WASP) during World War II.

Gee was born in Berkeley, California, on August 5, 1923. Her father was an immigrant from China, and her mother, Ah Yoke Gee, was born and raised in Monterey Bay in California. After her father passed away in 1930, Gee's mother supported a family of six children as a sewing woman.

When Gee was in fourth grade, she and her sister planned to visit China with their uncle, but news came that Japan had invaded China, and they canceled the trip. For most of the 1930s and early 1940s, Gee followed her mother to rallies and fundraising drives in San Francisco's Chinatown to support China's war of resistance, but she noticed that her peers knew very little about what was going on in China. Not until Pearl Harbor in December 1941 was Gee's support of the war effort in China also seen as a patriotic response to the United States.

After high school, Gee attended the University of California at Berkeley. Living at home, she worked at odd jobs to pay for tuitions and school supplies. During World War II, opportunities to work in defense industries became available to ethnic minority women. Following in her mother's footsteps, Gee supported

Chinese American Maggie Gee during World War II. (Xiaojian Zhao collection)

herself by working as a welder at night in a shipyard in Richmond, and attended classes during the day. After her college graduation in 1942, Gee got a day job as a draftswoman at the Mare Island Navy Shipyard.

At the navy shipyard Gee became close friends with two of her coworkers. The three girls decided to learn to fly. In late 1943, they traveled to Nevada to attend an aviation school. Shortly after her graduation, Gee was recruited by the Women Airforce Service Pilots (WASP) and became the second Chinese American woman, after Hazel (Ah Ying) Lee, to join the group.

Gee arrived at the WASP training camp in Avenger Field in Texas in February 1944. She was the only Chinese in a class of 107 young women. Very few nonwhite women were able to join the WASP; without the war, it would have been impossible for Gee, a Chinese American woman, to become a member of this elite group of American women pilots. After graduation Gee received her silver wings and went to active duty at the WASP squadron at the Las

Vegas Army Air Force Base. There she ferried military aircraft and gave instruction to male pilots of the base.

In October 1944, the WASP was ordered to disband. As the Allied victory became apparent, the military began to downsize, and its female personnel were the first to go. Gee received a letter from General Hap Arnold confirming the Army's decision. In the letter, the general said that keeping women pilots in service would mean replacing young men, and he said that he knew that members of the WASP wouldn't want that to happen. Most of the women pilots were disappointed and confused about their future. Gee and her classmates went through the same training program as the men. At the Las Vegas Army Air Force Base, Gee was an instrument instructor and taught many male pilots how to fly. Like most of her female classmates, she flew small single-engine aircrafts, which were more dangerous than the larger ones. Even though they all worked for the military, women in the WASP were not given official military status. After the WASP squadron in Las Vegas was shut down at the end of 1944, Gee went home without veteran status, and she could not enjoy any of the benefits specified by the G.I. Bill.

But the war had forever changed Gee's life. Returning to home in Berkeley from the WASP, Gee felt that there was nothing in the world men could do that women could not. When she went to graduate school, she chose physics, which was generally considered a field of study exclusively for men. She also served as the president of the Chinese Students Association at Berkeley. After graduation Gee lived in Europe for four years. When she returned to the United States in 1958, she landed on a job in the theoretical division of the Lawrence Livermore National Laboratory. She was the only female physicist in her group for many years. Gee retired in 1988 but remained as a consultant to the laboratory for many more years.

In 1972, Gee went to Avenger Field in Texas for a 30th anniversary reunion of the WASP. The reunion sparked five years of political lobbying for recognition from the military. On Thanksgiving Day in 1977, President Jimmy Carter signed the WASP amendment into law. On May 21, 1979, 34 years after the war, the United States Air Force officially recognized the status of World War II women pilots.

Gee was active in politics in Berkeley and served on many commissions. A long-time Democrat, she was a member of the 1992 Democratic Party Platform Committee and actively involved in the Berkeley Democratic Club and the Berkeley Community Fund. She was also a California State Democratic Party Executive Board member and served on the Alameda County Democratic Central Committee. On March 10, 2010, Gee and all other surviving women of the WASP were awarded the Congressional Medal of Honor by President Barack Obama. Gee passed away on February 1, 2013, at age 89.

Gender, Race, and Class in Political Participation

Studies of political participation emphasize the importance of basic socioeconomic status, race, and gender in explaining the differences in voting and other participation rates between women and men, nonwhites and whites, and the better-educated, higher-income class from the less-educated, lower-income class among the American public, in general. Although researchers on Asian American political participation generally affirm the utility of these factors, they also find that gender and class factors alone are insufficient to account for differences across racial groups. In fact, as to be shown, blanket application of these two factors in understanding of Asian American political participation may sometimes make the studying of the phenomenon more puzzling to the casual observer.

Because the average education levels and median household incomes of Asian Americans are consistently higher than those of most Americans in recent decades, basic socioeconomic status theory predicts the population to have higher overall rates of participation in voting and other political activities. However,

studies using the U.S. Census and other survey data consistently find that voting-age Asian Americans register and vote at rates lower than their counterparts in other major U.S. racial and ethnic groups; their participation rates in political activities other than voting are also often lower than (non-Latino) whites and blacks. This seeming paradox—high average socioeconomic status and low average rates of political participation—among Asian Americans leads many to suspect that education and family income may have less or a different impact on the participation of Asian Americans than on other groups of Americans.

Indicators of socioeconomic class matter, for they imply greater access to resources such as money, time, knowledge, and civic skills that facilitate political participation. However, for a majority immigrant and relatively affluent nonwhite population such as Asian Americans, educational attainment may not be directly translated into political knowledge and skills if education is received mostly from non-U.S. and non-Anglophone institutions. Neither is family income as reliable an indicator of wealth for Asians as for average Americans because of the multiple sources of household income and expenses that transcend national borders. Interethnic diversity and experiences of racial marginalization may further complicate the translation of socioeconomic achievements into political resources.

Research focusing only on the voting behavior of Asians supports the idea that persons with better education and higher family income are also more likely to register, to report voting in elections, and to participate more frequently in activities other than voting, including writing or phoning a government official, donating money to a campaign, signing a petition for a political cause, taking part in a protest or demonstration, and other types of activities. In general, education matters more for voting than for registration or other types of political activity, whereas family income matters more for activities other than voting than for registration or voting. However, for political activities such as voter registration and voting that require citizenship, residency, and other prerequisites, these legal factors are often more potent than socioeconomic status to explain the gap in participation rates between Asian and other racial and ethnic groups.

Election official Henry Tung helps Kiyoko Nishi drop her vote into the ballot box at a polling station at St. Paul's Lutheran Church in Monterey Park, Los Angeles County, November 6, 2012. (Frederic J. Brown/AFP/Getty Images)

Because as many as three-fourths of voting-age Asian Americans were born outside of the United States, a potential voter must petition for U.S. citizenship through naturalization to become eligible to register to vote, which then qualifies one to cast a ballot in a U.S. election. In the November 2008 elections, for example, 69 percent of Asians as compared to 98 percent of (non-Latino) whites and 94 percent of blacks among voting-age persons were U.S. citizens by birth or by naturalization. As high as 59 percent among Asians, but only three percent among whites and 5 percent among blacks, acquired U.S. citizenship by naturalization. Whereas only one-third among voting-age Asians reported voting in the election, as compared to 65 percent among voting-age whites and 61 percent among voting-age blacks, as high as 86 percent of Asians who were registered to vote reported voting in the election—a rate that is only four

percentage points below the white rate and three percentage points below the national average. By taking into consideration the legal barriers to voting participation, Asian Americans are found to participate in the voting process at nearly as high a rate as other Americans.

The impact of race on voting and other participation goes beyond the subjective group identity of being racially Asian. A defining difference between the meanings of being Asian and other Americans is the former's group image of being perpetual foreigners and hence the perception by some of Asian Americans as illegitimate outsiders in American mainstream politics. Generally, about one in three Asian Americans report having some experience of discrimination based on their race or ethnicity. Whereas this negative experience may alienate individuals and hurt the social and political adaption of immigrants, it may also serve as a source of political mobilization by raising the

group consciousness of U.S.-born Asians. Although experience with discrimination does not exhibit a strong relationship with voting registration among citizens and voting among the registered, both men and women who experienced discrimination are slightly more likely to vote and they are significantly more likely to be more active in activities beyond voting, everything else being equal.

Research done mostly with white American women demonstrates that, despite much improvement in American women's status in employment, education, and family life in the twentieth century, women continue to face different role expectations than men. They were told to focus on their responsibilities to home and family and stay away from politics and public life. As a result, they are found to be less likely to develop an interest in politics and a sense of political efficacy than their male counterparts. They show less knowledge than men about the federal government and national politics. They do not participate as much in political discussions and do not run for office for it is not deemed appropriate for women.

In addition to differences in gender role expectations, another reason limiting women's full participation in politics is the disparity in opportunity structure created by the differential treatment of men and women in the framing and interpretation of laws, the regulations written to carry them out, and in the enforcement of both. Although most overt forms of sex discrimination in employment, access to housing, and educational opportunities were made illegal in the United States under a number of laws enacted since the 1960s, subtle forms of discrimination still exist. Many women face additional constraints on their ability to participate politically because of situational factors, such as the demands of family life, and structural factors, such as lack of education, direct experience or mentoring, organization, and money.

American women of Asian descent are subjected to the biases in socialization and social structure in U.S. society that are similar to those experienced by white American women, but their gendered experiences may be different from white women because of factors related to race, nativity, class, ethnicity and the interlocking nature of these systems of power. Like Asian men in America, Asian American women have

historically been forced to confront a system permeated with pervasive and covert forms of racism, sexism, and colonization that limited their opportunities for social, economic, and political participation. This common experience of racialization, of being treated as neither black nor white, nor woman nor man, but of the foreign "other," may help undermine the gender gaps among Asian Americans. Compared to white immigrant women, Asian immigrant women might have special socialization disadvantages in the United States because they mostly originated from cultures in which the proper roles and opportunities for women were especially restricted. They may also be less likely to be connected to U.S. social networks such as labor unions and church organizations. Like other women of color, Asian American women have often been relegated to lower class status through exploitation, segregation, and subordination because of the interactive effect of racism and patriarchy in a competitive capitalist economy. Nonetheless, their being perceived as intricately connected to an "enemy" homeland in Asia may set apart the experience of Asian American women from other American women because of the loyalty question.

Examining voter registration and voter turnout among those who were eligible in the November 2008 elections, Asian women registered and voted at the same rates as Asian men—56 percent among citizens and 86 percent among registered voters. The lack of a gender gap in voting participation among Asians is unique when compared to black, Latino, and white patterns where women tend to register and vote at higher rates than their male counterparts. However, Asian American women's rates of registration and voting among eligible persons are also the lowest of all groups of women. Results from a post-2000 election survey (PNAAPS) show significant gender gaps in participation beyond voting. Sixty-one percent of the women and 50 percent of the men in the survey do not report engagement in any type of political activity beyond voting in the prior four years. Twenty-four percent of the men and 20 percent of the women are involved in at least one type, and 25 percent of the men and 18 percent of the women in at least two types of political activity beyond voting. Neither are Asian American men and women equally likely to participate

in political activity that supports an Asian American candidate or issue concern. Men more frequently engage in that type of political activity, with 23 percent of the men and 17 percent of the women reporting activity in support of an Asian American candidate or issue during the previous four years.

In sum, although Asian American women now vote in proportions equal to men, they are less likely to become politically active in areas beyond voting than Asian men and they are less likely to register and vote than other groups of American women with comparable backgrounds. Asian American women's low rates of voting participation may be linked to their unique socialization and social network challenges. Their lower levels of political participation beyond voting than their male counterparts may be linked less to women's lower levels of political interest and knowledge than their receiving lower levels of contact by political parties and individuals associated with political mobilization efforts such as requesting to donate money, attend meeting or rallies, or contacting newspaper/TV/radio station editors.

Ghadar

On November 1, 1913, the Ghadar Party issued its first weekly publication of *Ghadar* (Mutiny) from its headquarters in San Francisco. Circulated across the world, the anticolonial tract declared itself from the outset to be the exiled enemy of the British Raj. The paper boldly declared that, "today there begins in foreign lands, but in our country's language, a war against the English Raj . . . What is our name? Ghadar. What is our work? Ghadar. Our name and our work are identical."

By publishing an anticolonial perspective of British rule in India, *Ghadar* sought to produce knowledge that would counter British claims of benevolent rule and Indian loyalty and, perhaps more importantly, to mobilize Indians across the world to participate in a revolutionary movement to overthrow British rule and to build a strong and independent Indian nation. In less than a year, the Ghadar Party was circulating 2,500 copies of *Ghadar* in Gurumukhi, the Punjabi script, and 2,200 in Urdu each week. Within six months the paper had reached China, Japan, Manila, Sumatra, Fiji, Java, Singapore, Egypt, Paris, South Africa, South America, British East Africa, and Panama and was quickly banned in India.

Several themes dominated *Ghadar*. First, the paper urged Indians to cease military service and argued that the willingness of Indians to serve in the British Indian Army contributed to British exploitation and imperial expansion. Related to this, *Ghadar* argued that Britain's taxation policies in India financed its imperial conquest and expansion and that Britain used these taxes, as well as Indian soldiers, to perpetuate and enforce British imperialism and thus to oppress people across the globe. *Ghadar* routinely provided statistics of British exploitation of India including high rates of taxation, the major loss of lives taken by famines and droughts, and the British Indian government's neglect of education and public health to highlight a third major theme, namely, that India's impoverishment was because of imperial economic policy and that the wealth of Britain was built on the labor and exploitation of its colonies. Evoking what Har Dayal, the first editor of *Ghadar*, referred to as the "British Vampire," *Ghadar* insisted that, rather than bring

prosperity and opportunity to India, British economic policies drained India's wealth out of the subcontinent.

Ghadar advocated revolution rather than constitutional reform, and its writers argued that self-rule would not come to India by following the lead of Indian moderates who appealed to constitutional channels but through armed revolution. Rejecting colonial promises that Indians would be given their independence when they were deemed "fit" for self-government, *Ghadar* urged Indians to *take* their freedom immediately, rather than waiting for the British to grant them independence in some unspecified future. Finally, *Ghadar* sought to create a politicized Indian public by connecting geographically dispersed Indian migrants through a shared national identity and a common revolutionary program that transcended caste, religious, and regional difference. According to the writers of *Ghadar*, the formation of a national identity and the realization of a revolutionary armed struggle against British imperialism were critical to self-determination in India, as well as the most effective means to combat racism abroad and advance the Ghadar Party's struggle for racial equality and justice across the globe.

Ghadar Party

The Ghadar Party was the most revolutionary group of Indians to organize against the British Empire outside of India during the early twentieth century. The

emergence of the party can be traced to the spring of 1912, when a group of Indian mill workers near Astoria, Oregon, known as the Pacific Coast Hindi Association, began meeting every Sunday to discuss issues ranging from economic exploitation to racial discrimination in the Pacific Northwest. These meetings were the catalyst for the emergence of the Ghadar Party's revolutionary anticolonial politics, which exhorted Indians to rise up against the British Empire through armed revolution.

A coalition of Punjabi migrant workers and Bengali and Punjabi intellectuals and students, the Ghadar Party theorized racial oppression abroad and colonial subjugation in India as inextricably linked. In less than a year, the party claimed to have thousands of members and dozens of branches along the North American Pacific Coast, including Vancouver, Portland, Astoria, St. John, Sacramento, Stockton, and Berkeley, as well as in Panama, Manila, and Shanghai. The branches of the party were linked by the circulation of its weekly publication, *Ghadar*, from the party's headquarters in San Francisco. Although the party's leaders were Hindu, Sikh, and Muslim—who routinely emphasized secularism and unity despite linguistic, religious, and regional differences—about 90 percent of its membership was comprised of Punjabi Sikh males, nearly half of who were veterans of the British Indian army and whose loyalty and service to the empire was presumed by British officials.

What united these seemingly disparate groups was their common belief that they had been pushed out of India because of colonialism and now experienced a shared sense of humiliation as degraded colonial subjects across the world. The Ghadar Party was an exilic creation that arose out of the crucible of anti-Indian racism in the United States and colonial domination in India. The Ghadar Party's goal of an independent India was inseparable from attaining racial equality abroad. Racial discrimination and violence in North America produced an anticolonial consciousness among the migrant workers and shaped the trajectory of the party's politics in ways fundamentally different from nationalists in India, specifically by exceeding visions of an anticolonial nationalism solely focused on territorial politics *in* India. The Ghadar Party articulated both a nationalist politics, aimed at establishing a

free Indian nation-state, and a transnational politics of antiracism, aimed at attacking racially discriminatory immigration and naturalization laws and land-owning policies in North America and in white settler territories including Canada, Australia, and South Africa.

With the outbreak of World War I, the Ghadar Party launched three major revolutionary missions aimed to overthrow British rule: the February 1915 uprising in India, the *Annie Larsen/Maverick* expeditions, and the Siam-Burma plan. Heeding the call of their leaders, who proclaimed that the need for British troops in Europe presented an opportune moment to organize uprisings in both India and British imperial outposts, between 1914 and 1918, the Ghadar Party mobilized nearly 8,000 Indians from North and South America as well as East Asia to return to India as revolutionaries determined to overthrow British rule.

Anticipating their return, British officials arrested hundreds of returning Ghadarites before they ever disembarked from the ships that carried them home, dealing a severe blow to the party's plans. Those who were not detained quickly made contact with Indian revolutionaries across the country and fixed February 21, 1915, as the day that simultaneous uprisings would erupt across India. The uprisings would center on convincing Indian soldiers to strike against British officials first, thereby inspiring the masses to rise up and overthrow British rule. Arguing that Indian military service perpetuated the status of Indians as slaves to the empire and pawns used to slaughter the world's colonized peoples and reinforce the brutality of British rule, Ghadarites visited military cantonments to recruit soldiers. Additionally, they prepared bombs, gathered arms, produced flags, and collected materials for destroying railways and telegraph wires, looting treasuries, and distributing arms and ammunitions. Their plans, however, never came to fruition because of the workings of British intelligence.

In January 1915, the Ghadar Party joined forces with German officials and, under the auspices of the Berlin India Committee, financed the purchase of two ships in California, the *Annie Larsen* and the *Maverick*, both of which were seized before fulfilling their plan to carry over 8,000 rifles, 4 million cartridges, and hundreds of revolvers to India. During the spring of 1915, the Party focused its efforts on the Siam-

Burma plan, with the goal of converting the Indians in Siam to the cause of freedom, training them in military warfare, and then invading India from Burma. The Siam-Burma plan, however, never materialized.

Although Ghadarites believed their successful efforts in recruiting Indians in the United States would generate the same kind of enthusiasm in India, they discovered that India was not as ripe for revolution as they had hoped. Leaders of the Indian National Congress, priests of several important Sikh *gurdwaras* (temples), and many nationalist leaders in India strongly denounced the party. Although Ghadarites in North America successfully highlighted the interconnectedness of colonialism, racial subjugation, and economic exploitation to mobilize thousands along the Pacific Coast, they were unable to convince their countrymen in India to join them.

The revolutionary aims of the Ghadar Party contributed to the rise of British counterinsurgency across the world. British authorities viewed the party as the most dangerous threat to their rule in India during the World War I and, in response to their anxiety over the return of thousands of Indians from abroad with newfound political ideals and aspirations, passed a series of repressive measures in India between 1914 and 1916 including the Ingress into India Ordinance (September 1914) and the Defense of India Act (March 1915). Thus, British officials used the return of Ghadarites to implement legislation that gave the British Indian government special powers to deal with revolutionary threats during the war and paved the way for a new wave of repressive laws in India. In the United States, the party was severely weakened by the incarceration of much of its leadership after the 1918 Hindu-Conspiracy trial in San Francisco.

The Punjabi workers who comprised the rank-and-file of the party's membership carried the Ghadar ideology beyond World War I and led the party's second incarnation in the 1920s with strong communist affiliations. Following the success of the Bolshevik revolution, Ghadarites turned to Moscow for political training, theoretical guidance, and moral and material support and the party sent batches of trainees to Moscow and India to continue organizing against British rule, only now with a strong communist bent. This turn to communism meant that both the U.S. and British

states continued to keep a close eye on the party, which continued its political work in the United States into the 1940s.

Glass Ceiling Debate

Despite being heralded as the successful “model minority,” many Asian Americans encounter a “glass ceiling” phenomenon in which they find it increasingly difficult to attain promotions or pay associated with the highest ranks in their fields, despite excellent educational credentials and workplace performance. The glass ceiling metaphor originally focused on women and gender discrimination but has expanded to include racial and ethnic minorities, both women and men. When applied specifically to Asian Americans, the

terms “bamboo ceiling” or “sticky floor” have been coined to indicate the particular forms of blocked career mobility and individual, cultural, and organizational barriers confronting Asian Americans and Pacific Islanders. These particular barriers often relate to stereotypical notions that Asian Americans are passive, lack leadership ability, do not speak English well, have technical but not creative skills, and are overly group-oriented.

Official data sources, such as the 2010 United States Census, consistently show that Asian Americans have achieved notable levels of socioeconomic success. For example, among the major racial and ethnic groups, Asian Americans have the highest rates of college degree attainment (over 52 percent are college graduates as opposed to the national average of under 30 percent). Asian American households have the highest median income, and employed Asian Americans have the highest rates of working in a “high skill” occupation (executive, professional, technical, or senior management). Statistics like these form much of the basis for Asian Americans being portrayed as the successful model minority who have not experienced discrimination.

Nonetheless, a deeper look into these statistics reveals that Asian Americans are significantly underrepresented as corporate executives (although overrepresented in professional and technical positions). Studies also show that whereas Asian Americans are the most educated of all racial groups, they frequently earn less income per year of education than do whites. Thus, their high levels of educational attainment do not necessarily translate into high pay. Furthermore, although Asian American households have the highest median income, on a per capita basis, Asian Americans still trail whites in terms of income attainment. Finally, data from a 2005 Gallup Organization poll found that 31 percent of Asian Americans surveyed reported incidents of discrimination at work, the largest percentage of any racial or ethnic group.

Glass Ceiling Mechanisms and Barriers

Glass ceiling barriers can be direct and overt, such as blatant racial and ethnic prejudice on the part of executives, supervisors, or managers, but they can also be

more subtle, indirect, covert and, hence, more difficult to recognize and confront. Scholars describe how glass ceiling barriers can arise from “homosocial reproduction,” or how people instinctively are more comfortable around people who are similar to them in terms of race, gender, social class, and other markers of social difference. In many workplaces, those who make hiring and promotion decisions still tend to be disproportionately upper-middle class white males. Therefore, based on the idea of homosocial reproduction, these managers and supervisors are more comfortable around others who look and act like them or with whom they share similar backgrounds and identities. As a result, when others who are outside of this normative group try to join their ranks, there is an unconscious or even conscious effort to exclude them or to relegate them to second-class status. This type of exclusion can occur through different mechanisms that produce glass ceilings for Asian Americans.

Outreach and Recruitment. Many companies consciously or unconsciously bypass Asian Americans during outreach and recruitment of potential employees. This is frequently based on the implicit assumption that Asian Americans do not fit their image of a dynamic and charismatic executive or corporate leader.

Institutional Tracking. As previously mentioned, Asian Americans are disproportionately overrepresented in professional and technical jobs, such as engineers, scientists, or medical doctors. These jobs tend to pay well up to a certain point, but as studies show, they can also quickly reach dead ends that have no promotion ladders or career tracks leading to supervisory or executive positions. Such jobs have even been called “white collar sweatshop” occupations and are heavily reliant on Asian American labor and expertise but offer little promise for advancement. Many supervisors or managers see Asian American workers in these occupations as serious, focused, and proficient workers but bypass them when considering promotions to managers, supervisors, or executives.

Access to Informal Networks. Asian American workers can also have a hard time penetrating the informal “old boy networks” that exist in many occupational settings. These social networks can exist inside formal work environments (i.e., chatting around

the water cooler or between cubicles) or outside the office (i.e., drinks after work or playing golf). Such informal interactions are important because, as studies show, they are where social bonds and trust between workers and their superiors can develop and where informal mentoring can occur, along with the exchange of important information that can help career advancement. Inclusion in these networks is further hampered by the stereotype that all Asians are foreigners and less likely to participate in informal interactions based on intimate cultural and social knowledge.

Alleged Deficiencies in Skills. Supervisors and managers sometimes think that Asian American workers do not possess the language, communication, or leadership skills required for promotion. Although some Asian Americans are skilled at technical aspects of their jobs, their superiors may judge them not to have the “soft skills” related to personality, attitude, and behavior that would give them the competitive edge and vision associated with supervisors and executives. Within this scenario, Asian Americans are sometimes hurt by cultural traditions that emphasize the importance and success of the group rather than of individuals, as many Asian Americans are raised and socialized to not draw attention to themselves and to work diligently and cooperatively in the background. As such, it can be common for Asian Americans to remain quiet in work meetings, or to undersell themselves and more readily acknowledge the contribution of others. Although such tendencies have value in certain settings, they generally go against the norm in the American corporate environment, where individuals are frequently rewarded for highlighting their individual expertise and successes.

Different Standards of Performance. At times, special or different standards of evaluating employee performance or biased rating and testing systems are applied to Asian American workers. Some of these different standards are based on individual subjectivity, bias, arbitrariness, or preference on the part of managers and supervisors when they evaluate Asian American employees. At other times, the biases are inherent in the standards themselves. As an example, at one time, the San Francisco Police Department required all candidates to be at least 5'8" tall. A group of Asian American candidates brought suit against

the police department alleging this requirement to be discriminatory and won their case, leading the police department to drop that requirement.

Ways to Overcome the Glass Ceiling

In 2009, the Equal Employment Opportunity Commission (EEOC, the federal agency in charge of enforcing employment non-discrimination laws) issued a report on workplace discrimination against Asian Americans in federal government jobs. The report recognized and elaborated on many of the glass ceiling barriers mentioned above. The EEOC also described the following recommendations on how such discrimination can be alleviated within the federal government.

- Develop strong leadership and personal commitment to diversity among agency leadership from the top down to the rank and file.
- Ensure that supervisor/manager assessments of their Asian American employees are fair, objective, and free from cultural biases.
- Ensure that the EEOC agency does its job properly in being accessible to Asian American employees who have a complaint and in properly investigating such complaints.
- Collaborate with Asian American community organizations and leaders to encourage and recruit Asian Americans to work in the federal government.
- Actively support Asian American employee groups that have the potential to foster greater worker loyalty, productivity, and satisfaction.
- Provide Asian American federal employees who have documented skill deficiencies the opportunities and resources to address them and to improve their skills and qualifications.

Although written specifically for the federal government, these recommendations can also be applied in the private sector and in corporate settings to address ongoing glass ceiling barriers that limit Asian American workers from attaining promotion and pay raises.

Golf, Asian and Asian American

The current state of Asian and Asian American golf provides an excellent lens through which to understand an aspect of early twenty-first century Asian America life. Although the game's most popular and visible figures are American born, much of its strength and longevity lies in the migration of golfers to America from various parts of Asia. Some of these recent arrivals have chosen to settle in America, whereas others continue to move back and forth between the United States and various Asian locales.

Tiger Woods's arrival on the world golf stage in the mid-1990s was supposed to usher in a new generation of African American golfers. It did not. But his athletic style of play and his strong cultural presence did influence a generation of young golfers from across the world. Although Woods has been credited with blurring the color line between black and white in golf, his mother's Thai roots and his own openness about his multiethnic background makes him central to a conversation about Asian American golf. His influence can particularly be seen on two young Asian American golfers: Michelle Wie and Anthony Kim.

When the Hawaiian-born Wie turned professional at the age of 16, she seemed poised to follow the Woods model of child prodigy turned successful

Y. E. Yang of South Korea celebrates after winning the 91st PGA Championship at the Hazeltine National Golf Club in Chaska, Minnesota, August 16, 2009. Tiger Woods is in the background. (AP Photo/Charlie Neibergall)

professional golfer. At the age of 10, she qualified for the Women's U.S. Amateur Public Links Championship. At 12, she became the youngest player to qualify for a Ladies Professional Golfers Association (LPGA) event. And at 14, she played in the final group of the Kraft Nabisco Championship, one of the major tournaments on the women's tour.

When Wie turned professional, and signed endorsement contracts with Nike and Sony, many in the golf and corporate worlds assumed that she would transform the women's game in the way Woods had transformed the game in general. However, Wie's ascendance has not nearly been as meteoric, with plenty of starts and stops on and off the course. Although she did deliver on some of her early promise, winning twice on the LPGA tour in the 2009–2010

season, as a point of comparison, Woods won 15 tournaments on the PGA tour in his first four years.

Anthony Kim, who like Wie is a child of Korean immigrants, had success early after turning professional. Kim was born in Los Angeles and attended the University of Oklahoma. In his first start in a PGA event, Kim tied for second. In 2008, Kim won both the Wachovia Championship and the AT&T Championship, two tournaments that are known for their strong fields. In 2010, he won the Shell Houston Open.

Although Wie and Kim have played well and are strong commercial draws, there are a number of Asian-born golfers who, after Woods, have done quite a bit to change the competitive and social landscape of both the men's and women's game, both of which have traditionally been populated by players from Europe and the United States. Golfers from South Korea and India have had a particularly important presence.

South Korea

From Seoul to Los Angeles to Queens, Koreans and Korean Americans have taken to golf in large numbers. Similar to the turn to classical music instruction among Asians and Asian Americans, golf is an aspirational sport in which families can demonstrate their upward mobility by devoting time and money to their children getting better at the game.

The combination of golf's presence in Korean cultural life, along with a few key players, has radically shaped a generation of golfers and allowed them to become a vital force in global golf.

When Y. E. Yang defeated Tiger Woods at the 2009 PGA Championship, his victory was important in more than one regard. Woods is known as the best closer in the game for good reason. In the 14 major championships Woods has won, he was atop the leaderboard going into the final day of play. That streak ended when Yang came from three shots back to defeat Woods.

In this win, Yang did something no one had done before against Woods in a major championship. He also became the first South Korean golfer to win a major in the men's game. But perhaps most important, Yang's victory was symbolic of the maturation of

Korean golf on America shores. It was a process that had started years before.

Before Yang's breakout victory, K. J. Choi had been the most visible male South Korean player. Choi started off in Korea as a competitive power lifter before turning to golf. For much of the 1990s, he played in Asia, and started playing full time on the PGA Tour in 2000. Since then, he has won eight times in the United States.

Although Yang and Choi have greatly increased South Korean visibility in American golf, one has to look at the women's game to understand just how much South Korean golfers have reshaped the golf landscape.

When Se Ri Pak won the Women's U.S. Open in 1998, she inspired an entire generation of Korean and Korean American golfers to follow in her footsteps. Since winning that first major, Pak has won three more major championships. And when she has not been winning, there have been plenty of other Korean and Korean American golfers who have. Inbee Park, Christina Kim, Angela Park, Jiyai Shin, Seon Hwa Lee, and Jane Park, among many others, can now be seen week in and week out in the professional game.

The success and dominance of these women in golf, along with players from other parts of Asia, has made the game exciting but has also led to backlash.

In 2008, the LPGA passed an English-only policy, which would force all players to speak English in their interactions with the press and tournament sponsors. Under the policy, the players would have to pass an English proficiency test to continue playing on the tour. The LPGA argued that the policy decision was a way of achieving linguistic continuity.

The response to the policy was swift. The move was widely interpreted as the LPGA's worry that a certain Asian invasion was diluting the product of women's golf in the United States. In addition, the legality of such a policy was questioned. Under heavy criticism, the policy was soon revoked.

Although the success of Korean and Korean American golf owes something to the economic growth of Korea in the past several decades, the growth of Indian golfers owes something to both India's current economic growth and British colonial presence starting in the eighteenth century.

India

When the British colonized India, they brought tonic to ward off the malaria, and gin, cricket, and golf to pass the time. When it opened in 1829, the Royal Calcutta Golf Club became the first course in the world outside the British Isles. But in the years since, it has been cricket that has stuck and gained widespread popularity throughout South Asia.

Now, nearly 200 years after the Royal first opened, golf is finally having a major spike in popularity in India. The Asian Tour has two-dozen Indians playing on it and now makes two stops in India; private golf clubs from Bangalore to Mumbai have opened their doors for junior programs, and slowly, public courses are beginning to open.

The increased popularity is owed partly to India's massive economic growth in the past two decades, much of it coming in the form of a widening middle class. Golf does, after all, take some money to play. But the popularity can also be traced to a group of golfers, with varying connections to India, who have made their names primarily on the PGA Tour. The stories and careers of Vijay Singh, Jeev Milkha Singh, Daniel Chopra, and Arjun Atwal tell us plenty about the movement of Indians across the globe and the return of golf to India.

Vijay Singh was not born in India, did not grow up there, nor is he a frequent visitor. Starting in 1878, the British imported indentured workers from India to work the sugarcane fields in Fiji. After their terms were over, the Indians had a choice to go back or to stay. Most stayed, including Singh's ancestors.

As a teenager, Singh quickly became the best golfer on the island, and set his sights beyond. His first stop was Australia. In 1982, he played in small tournaments, but soon thereafter was kicked out for running up phone bills at the various courses where he played. He was, it seemed, homesick. He then moved on to the Asian Tour, where in 1984, he won his first professional tournament in Malaysia. His confidence, cockiness, and hard work as a teenager in Fiji had paid off. He was on his way.

But in 1985, an event occurred that has radically shaped his life and legacy. Playing in the second round of the Indonesia Open in Jakarta, Singh was accused of

improving his score by a stroke before signing his scorecard. The Asian Tour judged that he had cheated and suspended him indefinitely from the tour. In the years since, Singh has maintained his innocence, although those who were around him at the tournament contend otherwise. Whatever the truth, the accusation of cheating, which in sport is the cardinal sin, has followed him like a black cloud ever since.

Disqualified from tours in a large chunk of the Eastern Hemisphere, Singh took a job as a club pro in Borneo. After working there for a couple of years, he did his time on a tour in Africa, winning the Nigerian Open, and then migrated north, winning in a Swedish tour event. In 1989, Singh won in Europe; four years later, he started playing in the United States, where he has made his home since.

On the PGA tour, Singh has won over 30 times, including three major championships. His best year was 2004 when Singh won nine tournaments, including a major, and dethroned Tiger Woods atop the World Rankings.

If Vijay's family left India in the nineteenth century, another Singh (no relation) is one of the India's most successful homegrown products. Self-taught athleticism and an independent streak run through Jeev Milkha Singh's family. In a cricket-crazy country, his father Milkha Singh represented India in the 400 meters in running at the 1960 Olympics in Rome.

Jeev concentrated on golf starting in his early teens. After playing in junior tournaments throughout the world, he came to America in 1992. Two years and a Division II title later, Jeev left Abilene Christian University in Texas and started playing on the Asian Tour. Although he won consistently through the 1990s, he made his breakthrough in 2006 and 2008, when he won in both Europe and Asia.

When Jeev Singh was a junior golfer in India, he played often with Daniel Chopra. Chopra was born in Stockholm to a Swedish mother and an Indian father who met as students in London. At the age of seven, after his parents divorced, Chopra moved to India to live with his grandparents. They were members of the Delhi Golf Club and introduced young Daniel to the game. He had a place to practice and play.

After spending many years on the Asian and European Tours, Chopra won the Ginn sur Mer Classic in

2007 for his first PGA victory. And then in early 2008, he won the Mercedes-Benz Championship in Hawaii, the biggest win of his career, in a tough field comprised exclusively of winners on the PGA Tour from the previous year.

Taken together, these three golfers, along with Arjun Atwal, who grew up playing golf at the Royal, and after winning on both the Asian and European tours, had a breakout win in 2010 on the PGA Tour, reflect the diversity of Indian golf. In addition, the four players, particularly Vijay Singh, have contributed to further diversifying the look of the game in the United States.

Japan, Taiwan, and Beyond

Although Asian American, Korean, and Indian golfers have been the most visible in the sport, there are plenty of other players impacting the game.

Japan, which hosts a strong tour where many of these players have played, has two young golfers making themselves known. There is the young phenomenon Ryo Ishikawa, who has been extremely successful at home and is beginning to play more in the United States. Although Ishikawa represents a promise for the future, Ai Mizamoto has cashed in on her skills already. She has won on the LPGA Tour several times and along the way taking over the number one spot in the world rankings.

Since the retirement of Annika Sorenstam and Lorena Ochoa, the two most dominant golfers of the past 20 years, several different golfers have been fighting for the top spot, including the Taiwanese golfer Yani Tseng, who has already won three major championships, all by the very young age of 25.

This has not been an exhaustive list of every Asian and Asian American golfer. Rather, the golfers discussed have been used to sketch out the current state of golf and to consider the larger implications of Asian and Asian American presence in the sport. What are these implications?

First, the combination of Asian American golfers and the recent migration of golfers from Asia is reshaping how we understand Asian American cultural life. Second, with these golfers joining the upper echelons of professional golf, along with Europeans and

Americans, golf has come to represent a top-heavy globalization. The expense of becoming good at the game will probably prevent a genuine democratizing of the game. But that does not mean that the game has not changed in important, exciting ways in light of the success of Asian and Asian American golfers.

Gong, Lue Gim (c. 1860–1925)

Horticulturalist Lue Gim Gong's hardy, frost-resistant orange brought him national fame. Estimates of its contributions to the Florida's citrus industry soared into the millions of dollars, and his achievements were honored in the Florida Pavilion at two World's Fairs: Chicago in 1933, New York in 1940.

Born around 1860 in Lung On village, Toishan District, an area renowned for its oranges, Lue learned how to cross-pollinate and graft from his mother before leaving for America as a boy of 10 or 12. He landed in San Francisco, then crossed the continent to North Adams, Massachusetts, becoming one of 125 Chinese laborers in C.T. Sampson's shoe factory. At the Sunday school organized to "Christianize" and "citizenize" the Chinese, Lue was singled out for special attention by his teacher, Fanny Burlingame, a brilliant mathematician and botanist who was prevented by ill health from pursuing a career.

By the early 1880s, he was baptized and a member of the Burlingame household, sleeping in the bedroom adjoining Fanny's but working without salary as a gardener and stable hand. Then, diagnosed with consumption and given only a year to live in 1886, Lue decided to return to his family. His queue cut, he was taunted as a *mo been yun*, "man without a queue." He alienated villagers by preaching Christian doctrine and Western

hygiene, and when he ran away from a marriage his family had arranged for him, Lue's name was struck from the clan genealogy. Years later he sent a letter of apology and \$500 for his betrothed, but there was no reply, and his name has never been restored to the clan genealogy.

To circumvent the 1882 Chinese Exclusion Act, Fanny sent Lue enough money to buy merchandise so he could enter the country posing as a merchant and join her in DeLand, Florida, where she was wintering. For the next 16 years, the two wintered on property she purchased in DeLand, summered at her family home in North Adams, and Lue is in the official Burlingame genealogy as Fanny's adopted son. His acceptance by Fanny's family died with her in 1903, however. In an agreement worked out by the deacon of the First Baptist Church, Fanny's sisters gave Lue \$12,000 and the DeLand property as compensation for decades of unsalaried service—but on condition that he leave North Adams forever.

Motivated by a severe freeze during his first winter in Florida, Lue had been trying since 1888 to develop an orange that would withstand sudden cold snaps. He'd begun by pollinating Harts Late with pollen from what he believed to be a Mediterranean Sweet tree. "One orange containing fifteen to eighteen seeds resulted from the crossing. From these seeds about twelve trees were raised, no two of which proved alike. [The] fruit seemed to be such an improvement on Harts Late that Mr. Lue budded fifteen trees with this variety in one side and Harts Late [Tardiff] on the other. About thirty other trees were budded with this variety on one side and other varieties on the other."

By 1909 Lue was ready to test the new orange he'd developed. Good sized and full of juice, the fruit was hardy, enduring frosts with no apparent damage. It was also capable of hanging on a tree through the rainy summer, allowing it to be held off the market until oranges were scarce and the highest price could be secured. Growers hailed the Lue Gim Gong orange as the year-round orange Florida needed to become competitive with the California citrus industry. In 1911, the same year the orange won the Pomological Society's Wilder Silver Medal, the prestigious Glen St. Mary Nurseries contracted with Lue for the right to propagate and sell finished trees.

All he ever received from the Nursery was \$200. So when Lue developed a grapefruit that could stand temperatures 10 to 15 degrees lower than ordinary varieties, he refused to sell any rights to it, giving away the budwood instead. He also did not market a unique perfumed grapefruit that he perfected. The crop from his grove, in its prime, should have generated an income of around \$6,000 in a good year. But distributors cheated him. Moreover, as his fame spread, visitors to his grove numbered in the thousands. Welcoming all, Lue proudly showed them his grove, conducted a brief service in a prayer garden he had created, and then gave them his fruit.

When accidents and deteriorating health made it impossible for Lue to work the grove properly, friends from North Adams who wintered in DeLand tried to help him, as did readers of the *Florida Grower* whose editor repeatedly asked growers to send him money. The cash raised saved Lue's property, but his spirit was broken, and his only companions were his animals: a pair of horses and a rooster that he called his children.

When he died on June 3, 1925, hundreds attended his funeral, and the town's leading citizens served as his pallbearers. Newspapers across the country published lengthy obituaries praising his horticultural accomplishments. That citrus authorities now consider the Lue Gim Gong orange indistinguishable from the Valencia in no way diminishes his achievement: At the DeLand Historical Society, Lue is honored with a bust in an outdoor pavilion, and his grove is depicted in a mural at the Volusia County Court House.

Gonzalez, N.V.M. (1915–1999)

Nestor Vicente Madali Gonzalez is a transnational literary figure primarily recognized for his works in English that focus on rural life in the Philippines, though he also produced works in Filipino. His oeuvre is an interesting example of the intersection of Philippine literature in English and Filipino American literature. The history of Philippine literature in English and the hegemony of English language are tied to the colonial relationship between the Philippines and the United States. After the United States acquired the Philippines as a result of the Spanish-American War of 1898, the Philippines remained under U.S. colonial rule, excepting the Japanese occupation during World War II. Some of the awards Gonzalez received throughout his career reflect this interconnected history between the Philippines and the United States. The Philippines was designated a commonwealth of the United States in 1935 and in 1940 Gonzalez was awarded an Honorable Mention in the First Commonwealth Literary Contest for his novel *The Winds of April* (1940).

His early writing career was financially based in the United States through fellowships and teaching positions at American institutions. Gonzalez received three Rockefeller grants, the first in 1949–1950 to study at Stanford University, Kenyon School of English, and Columbia University, the second in 1952 to study and travel to India and the Far East and the third in 1964 to study and travel to Europe. Although he was not a college graduate, he was a life-long academic who wrote, studied, and taught at several institutions in both the Philippines and the United States including the University of the Philippines, University of Santo Tomas, University of Washington, UCLA, and California State University, Hayward (CSUH, now California State University, East Bay). He was designated an emeritus professor of English in 1982 at CSUH, received an honorary doctorate from the University of the Philippines in 1987 and was the University of the Philippine's International Writer-in-Residence in 1988, and was the 1988–1999 Regents Professor at UCLA. Although much of his time and career were spent in the United States, Gonzalez's imaginary was fixed in the Philippines and his works

are part of the Philippine literary canon. He is a recognized national figure of the Philippines as a winner of and the Cultural Center of the Philippines Award for the Arts in 1990, winner of the Philippine Centennial Award for Literature in 1998, and his novel, *The Bamboo Dancers* (1959), won the Republic Cultural Heritage Award and the Jose Rizal Pro-Patria Award in 1960. Most notably, he was conferred into the Order of National Artists of the Philippines in 1997.

N.V.M. Gonzalez is best known for his production of short stories that provide detailed tableaux of daily life in the Philippines and are often incorporated into Asian American literature courses as examples of Filipino American writing. He produced seven short story collections: *Seven Hills Away* (1947), *Children of the Ash-Covered Loam* (1954), *Look, Stranger, on This Island Now* (1963), *Selected Stories* (1964), *Mindoro and Beyond* (1979), *The Bread of Salt and Other Stories* (1993), and *A Grammar of Dreams and Other Stories* (1997). Of his three novels *The Winds of April* (1940), and *A Season of Grace* (1956) continue his focus on the land and those who work it, whereas *The Bamboo Dancers* (1959) departs to an international scene mimicking Gonzalez's own studies and travels abroad.

Gotanda, Philip Kan (1951–)

Philip Kan Gotanda, a third-generation Japanese American, was born in Stockton, California, where his father was a practicing physician. The lure of science was a definite possibility as Gotanda enrolled in UC Santa Barbara and then UC Santa Cruz. However Gotanda's initial interest lay in music. The late 1960s and early 1970s were a time of turmoil and change and Gotanda, guitar in hand, hoped to be a part of the music scene. He was involved with the Asian

American jazz fusion band Hiroshima and even formed a musical group with David Henry Hwang on violin. In the case of these two individuals, music's loss was certainly the theater's gain. Frustrated at not being able to find success in a musical career, Gotanda took a short hiatus to Japan to "find" himself. As Michael Omi explains in his introduction about Gotanda in *Fish Head Soup and Other Plays* (1991), "Like many Sensei who visit Japan, Gotanda came to realize just how much he was not Japanese, a trip to the ancestral homeland only underscored his Americanness." Gotanda decided to enter the Hastings School of Law from where he graduated with a degree in law in 1978. It was when working as a legal aid that he started to turn his attention to writing as a mode of expression. The result was his first play, a musical, *The Avocado Kid or Zen in the Art of Guacamole* (1978). The play with music, lyrics, and text by Gotanda juxtaposed Asian Americana with popular culture and was first staged by the East West Players in Los Angeles in 1978.

The late 1970s was an ideal setting for the exploration of the Asian American experience and the time could not have been better for artistic and creative input. Gotanda had certainly found his niche. He wrote with great enthusiasm: *A Song For a Nisei Fisherman* (1981) was produced by the Asian American Theatre Company, *Dreams of Kitamura* (1983) was soon followed by *The Wash* (1987), which was produced by the Eureka Theatre in San Francisco. The following year saw the Berkeley Repertory Theatre's premier of *Yankee Dawg You Die* (1988). This play offered a humorous yet thought-provoking look at Hollywood and the Asian American actor. It is still very relevant in today's context, as Asian Americans continue to jostle for a rightful place in the "industry."

In 2005, Gotanda published two short plays, *White Male Manifesto* and *Natalie Wood is Dead*, under the heading *Under The Rainbow* (2005). The latter play was an answer to *Yankee Dawg You Die*, wherein the two characters in question, a mother and daughter, were both involved with the entertainment business.

Gotanda has published a prodigious body of theater work. In the 1990s, he published *In the Dominion of Night* (1994), a spoken word performance that Gotanda and his band, The New Orientals, performed

in Royce Hall, UCLA, *Day Standing on Head* (1994), and *Ballad of Yachiyo* (1995), which he based on his aunt whom he never knew and only rarely heard of among his family circle. As the new century dawned, Gotanda turned to reconstruction after World War II in *Sisters Matsumoto* (2000), which premiered at the Seattle Repertory Theatre. This was followed by *The Wind Cries Mary*, loosely based on Henrik Ibsen's *Hedda Gabler* (1890), *Floating Weeds* (2003), *A Fist of Roses* (2003), *Under the Rainbow* (2005), and *Yohen* (2006).

Gotanda like his friend and colleague David Henry Hwang has diversified, using his musical background to good purpose. A symphony by Kent Nagano *Manzanar: An American Story* (2005) with text by Gotanda was performed at Berkeley and UCLA. He is collaborating with the father and son team of John Duykers and Max Gitech Duykers on an opera, *Apricots of Andujar*. In the medium of film, Gotanda wrote the screenplay for *The Wash*, which was based on his play and made into a film by the American Playhouse in 1988 starring Mako, Nobu McCarthy, and Sab Shimono and directed by Michael Toshiyuki Uno. In 1992 Gotanda wrote and directed two short films, *The Kiss* (1992) and *Drinking Tea* (1996). He wrote and directed his first full length feature *Life Tastes Good* (1999) with Sab Shimono, Julia Nickson, and Tamlyn Tomita.

Coming to the more recent present, Gotanda's *After the War* (2007), which focused on the "No, No Boys" after the Japanese internment was produced at the American Conservatory Theater in San Francisco followed two years later by *#5 Angry Red Drum* (2009). Currently, Gotanda is in the process of developing *Hell Screen* adapted from "Jigoku hen" a short story by the acclaimed Japanese short story writer, Ryunosuke Akutagawa. Currently in residence at UC Berkeley, he is working on a play about the original Siamese twins *I Dream of Chang and Eng*.

Goyal, Jay (1980–)

Jay Goyal is an Indian American politician from the state of Ohio. He was first elected into the Ohio House of Representatives when he was merely 26 years old and served as the majority whip during his second term. Goyal represents the Democratic Party and also his hometown of Mansfield, Ohio.

Goyal grew up in Mansfield, Ohio, and later received his BS in industrial engineering from Northwestern University. After college, Goyal went home and became the vice president of his family's business—Goyal Industries, which was founded by his father. For several years, Goyal worked for the family business and was involved in the daily operation of the manufacturing firm. He worked to expand the size and the scope of the company.

In 2006, when Goyal was 26 years old, he was approached by members of the local Democratic Party encouraging him to run for the seat of the retiring state representative Bill Harnett. Goyal spent the election season knocking on doors and talking candidly about his vision and priorities for the state of Ohio. He was elected for the first time in November 2006 to the Ohio House of Representatives from the 73rd district.

Goyal has won two subsequent reelection bids—one in 2008 and the other in 2010. Since becoming a state representative, Goyal has been a member of the Economic Development, Finance, and Appropriations Committee and the Veterans Affairs Committee. He is also the vice chair of the Faith-based Initiatives, as well as a member of the subcommittee on Agriculture and Development. Notably, during his second term, Goyal served as the majority whip in the 128th Ohio General Assembly. He is also very involved and passionate about a variety of political, albeit nonlegislative committees. For example, he is the cofounder of the Ohio Heartland Young Democrats. He is also the chairman of the Richland County Democrat Party's Membership Enhancement Committee.

Although just an up-and-coming young politician, Goyal has already been widely recognized in his community for his hard work and dedication as state representative. In particular, he was one of the two members of the Ohio House selected by a bipartisan panel to receive a fellowship from the Bowhay

Institute for Legislative Leadership Development. Additionally, he has received an award from the Ohio Civil Rights Commission. Furthermore, he was named the 2009 Legislator of the Year by the Ohio Association of Developmental Disabilities.

In a 2006 interview (right after his election), Goyal was asked about his experience running as a candidate with a South Asian background in a mainly rural, white community. Goyal responded that on top of the challenge of convincing voters that he was a serious and viable candidate (since he was a young newcomer), he also had to prove that he is indeed a member of the community. Specifically, he reiterated his family's story of immigrating to the United States and then starting a business—the story of the “American Dream.”

Goyle, Raj (1975–)

Raj Goyle was an Indian American politician from Kansas. He represents the Democratic Party and is a current member of the Kansas House of Representatives. Goyle ran in the 2010 congressional election but lost to Republican Mike Pompeo.

Raj Goyle, or Rajeev Kumar Goyle, was born on June 9, 1975 to parents who immigrated to the United States from India. Goyle grew up in Wichita, Kansas, where his parents run a small clinic. Like many other children, Goyle was a Cub Scout and he participated in many extracurricular activities. Notably, Goyle helped to organize a recycling effort in the local

Wichita community as well as an effort to clean up the Arkansas River in downtown Wichita.

Goyle received a bachelor's degree from Duke University and a JD from Harvard Law School. After the completion of law school, he went to work as a clerk for a federal judge. Goyle's many professional experiences prior to his service in the Kansas House of Representatives include contract attorney, lecturer of American politics at Wichita State University, and one of the founders of a small technology company.

In 2006, Goyle ran for a seat in the Kansas House of Representatives and won. He is currently serving his second term as state representative. A significant piece of legislation that Goyle has helped to pass since the beginning of his terms is the law restricting where Fred Phelps could picket at the funerals of fallen soldiers. He has also supported tax cuts for Kansans, which Goyle believes will create local jobs for all. In the Kansas House of Representatives, Goyle is a member of the judiciary, the taxation, and the Veterans, Military, and Homeland Security Committees.

In the summer of 2010, Raj Goyle won the primary for the Democratic nomination to represent Kansas's 4th district in Congress. His main opponent was the Republican nominee, Mike Pompeo.

During his congressional campaign, Goyle made economic issues his main focus. He is an advocate for keeping “American jobs” at home and he also vowed to protect and create Kansas jobs. In terms of Kansas's troubled aircraft industry, a major difference between Goyle and Pompeo was that although Pompeo had the backing of business, Goyle was backed by the union of aircraft workers. Furthermore, although Goyle's opponent supported tax cuts and deregulation of businesses to create more jobs, Goyle advocated for private/public partnership to protect local Kansas (aircraft) industries. However, even after a hard fought campaign, in which Goyle was able to raise \$1.7 million in terms of campaign funds, he was beaten by Republican Mike Pompeo during November 2010's general elections.

Graphic Novelists

Graphic novels have become popular with Miné Okubo's *Citizen 13660* (1946), Art Spiegelman's *Maus* (1986), and more recently with Marjane Satrapi's *Persepolis* (2000). Graphic novels employ both images and words to narrate a story that has a beginning, a middle, and an end. In this sense, a graphic novel is different from comics, which are printed in sequential arrangements of images and balloons and do not present a full story in a single illustration. Recently, the phrase graphic novel has come under criticism by some as a marketing tactic to sell comic books in bookstores rather than on magazine stands. There is contentious debate whether the word "comics" presents an air of frivolity and the term "graphic novels" signals more serious work. However, in this entry we look specifically at graphic novels that deal with race and ethnicity. One reason for this is that one of the first works to be published as a graphic novel was *Sabre: Slow Fade of an Endangered Species* (1978). The cover of *Sabre* featured a heavily armed African American man and the plot involved several battles to attain freedom. Since then, several graphic novels have been published that deal with issues of race, ethnicity, gender, class, and sexuality.

Several graphic novels are autobiographical or biographical in nature. *Maus* is a biography of Spiegelman's father's experiences as a Polish Jew during the Holocaust. *Citizen 13660* is an autobiographical account of Okubo's experiences at Tanforan and Topaz camps during the Japanese American internment. *Persepolis* depicts Satrapi's coming of age in

Iran during the Islamic Revolution. As is the case with these three influential works, graphic novels can serve as cultural documents that shed light on historical atrocities and unjust power relations. Graphic novels can also enable the reader to inhabit and view a world that is foreign to him and learn from that visual and textual encounter on the page. The space of the graphic novel also functions as a cultural space for critical engagement with ideologies of race, gender, nation, class, and sexuality. The layout of images and words on the page in a graphic novel can help construct the racial subject and serve as a form for ethnoracial expression.

Discourses concerning "otherness" can also be critically reimagined in the space of the graphic novel. Because graphic novels must work within a limited space, they often rely on character stereotypes. However, graphic novels do not merely replicate stereotypes; they often dismantle the ideology present behind the stereotypes. The visual language that is presented in the graphic novel can challenge iconographic images of racial, ethnic, and gendered representations. One way of doing this is to personalize the generalized stereotype. The graphic novel offers a space in which the reader can connect with the image of the "other" on the page because the stereotypical image is familiar, yet open himself up to the character's experiences that is unfamiliar to the reader. Visual strategies such as the spaces between words and images, the spaces of the word balloons, the spacing of the frames of panels, and the gutter spaces between panels also generate a temporal sense that as the panels change and shift as do the identities of the characters. This signals the changing nature of all identities including the reader's. The graphic novel urges the reader to open up to the identities of the characters and reevaluate their own identities as well.

Prominent Asian American Graphic Novelists

Of the several graphic novelists of Asian American background, four of the most prominent are presented here.

Miné Okubo (1912–2001). *Citizen 13660* is not merely another narrative of the Japanese American

internment, but a work of art that performs a theory of citizenship, one that is conceived through the irony and contestation found in the internment. *Citizen 13660* offers us a different way of discussing the internment, one that underscores the tensions among nation, race, and representation. Although *Citizen 13660* does not have the dialogue balloons and sequential imaging as other graphic novels, its account of the Japanese American internment heavily depends on an image-based narrative. Published in 1946 before the term “graphic novel” was coined, Okubo’s work foregrounds and prefigures the modern graphic novel.

Citizen 13660 displays a subversive critique of the internment, not simply in its narrative texts but especially through the gaps, inconsistencies, and contradictions between the texts and the accompanying drawn images. These contradictions in the compositional sequence of *Citizen 13660* brings attention to the inconsistencies between U.S. legal policies toward Japanese Americans and the discourse employed by the government to foster patriotism and jingoism during times of war. Okubo’s text portrays the paradoxes of the U.S. government, which though fighting under the banner of freedom and liberty took those treasured values away from its own citizens and residents. To secure an image of a unified nation, those of Japanese descent were placed in concentration camps that were scattered throughout California, Colorado, Arizona, Arkansas, Idaho, Oregon, Utah, Washington, and Wyoming.

It is through *Citizen 13660* that America first saw and read personal accounts of the camps through the eyes of an internee. Because internees were not allowed to have cameras in the camps, Okubo recorded camp life in her sketches and drawings. Although white Americans like Ansel Adams did come to Manzanar Relocation Center in California to take photographs, Okubo’s work offers the first glimpse of the camps from the vantage point of an internee. Her work, *Citizen 13660*, is a subversive critique of the internment camps and U.S. governmental policies that interned over 120,000 people of Japanese descent, two-thirds of whom were American citizens by birth. Her graphic novel serves as an instrument through which Okubo simultaneously unmask the contradictions inherent in American citizenship

and depicts the resilience of the Japanese American community.

Gene Luen Yang (1973–). Yang is best known for *American Born Chinese* (2006), which was the first graphic novel to be nominated for the National Book Award. *American Born Chinese* was the first graphic novel to win the American Library Association’s Printz Award. It also won the Eisner Award for the Best Graphic Album. In 2009, Yang collaborated with Derek Kirk Kim and won the Eisner Award for *The Eternal Smile*. Yang’s other works include *Gordon Yamamoto and the King of the Geeks* (2004), *Prime Baby* (2010), and *Level Up* (2011).

American Born Chinese has three distinct storylines involving three protagonists: the Monkey King, Jin Wang, and Cousin Chin-Kee. The first story of the Monkey King draws from the popular fourth-century Chinese novel, *The Journey to the West*. Yang employs the character of the Monkey King to reflect on his own experiences as an Asian American. The Monkey King desires respect, faces ridicule and disappointment, tries to be someone he is not, and in the end finally accepts himself. The second story is about the coming of age of Jin Wang, a Chinese American boy who lives in a white suburb. The last story is of Cousin Chin-Kee who embodies all the negative stereotypes of Asian Americans including the villainous Fu Manchu, the servile Charlie Chan, and a sexually devious predator of white women. Cousin Chin-Kee is depicted as a perpetual foreigner who wears his hair in a queue, has slanted eyes, buck teeth, and speaks with a heavy accent. In incorporating the character of Cousin Chin-Kee, Yang addresses the yellow peril that white America has harbored against Asians and Asian Americans since the early nineteenth century. Yang utilizes the stereotypical figure of Cousin Chin-Kee to make yellow peril hypervisible and expose the racist and xenophobic ideologies that lie beneath such stereotypes.

Yang yokes together the celebrated and iconic Chinese literary figure of the Monkey King and the rejected and marginalized typecast of Cousin Chin-Kee to reflect upon the landscapes through which an Asian American man negotiates his identity. Yang lives and teaches in California.

Derek Kirk Kim (1974–). Derek Kirk Kim is author of *Same Differences and Other Stories* (2004), which won the Eisner Award and the Harvey Award. Since its publication, *Same Differences and Other Stories* has been translated into French, German, Korean, Italian, and Spanish. Kim has also worked on several collaborations. He illustrated a story in the graphic novel, *Fables: 1001 Nights of Snowfall* (2006) by Bill Willingham and contributed to *Flight: Volume One* edited by Kazu Kibuishi (2006).

Kim also authored *Good as Lily* (2007), which was illustrated by Jesse Hamm. Kim collaborated with Gene Luen Yang in *The Eternal Smile* (2009), which garnered both Kim and Yang an Eisner Award. Currently, Kim is working on *TUNE*, a science fiction comedy series. It is scheduled to be released in 2012 by First Second Books. In addition, Kim has written and directed a documentary short, *Raina Lee vs. The Infinite Garage* (2011) and the web series *Mythomania* (2011). The character of Andy Go, who is the protagonist of *Mythomania* and *TUNE*, is an Asian American aspiring cartoonist who faces struggles, challenges, disappointments and opportunity. Kim incorporates several Asian American characters in his work and addresses race and gender stereotypes. Kim immigrated to the United States with his family at the age of eight and currently lives in Los Angeles.

Adrian Tomine (1974–). Adrian Tomine is best known for his ongoing series *Optic Nerve* for which Tomine won the Harvey Award for Best New Talent in 1995. Issues 1 to 4 of *Optic Nerve* were collected in *Sleepwalk and Other Stories* (1998), and issues 5 to 8 were collected in *Summer Blonde* (2002). Issues 9 to 11 were compiled into a graphic novel called *Shortcomings* (2007).

Tomine is fourth-generation Japanese American and both of his parents and grandparents spent time in Japanese American internment camps (1942–1946). Much of Tomine's earlier work does not mention his racial background or deal with racial issues such as the internment that has haunted the Japanese American community. As such, Tomine has been criticized by some for masking his Japanese American identity. Although he drew himself in several of his works, he often drew his glasses opaque so that his

eyes could not be seen and his racial identity remained vague. The majority of his characters in *Sleepwalk and Other Stories* and *Summer Blonde* are Caucasian and his earlier works seldom discuss racial issues. However, in his graphic novel, *Shortcomings*, Tomine explores race and racial stereotypes. Ben, the protagonist of *Shortcomings* struggles to find his own identity by working through such stereotypes.

Tomine has also published *Scenes from an Impending Marriage* (2011). In addition to authoring the above-mentioned works, Tomine also works as an illustrator for *The New Yorker*. Tomine grew up in Sacramento and attended UC Berkeley where he received a Bachelor of Arts in English. He lives in Brooklyn, New York with his wife Sarah Brennana and his daughter Nora Emiko Tomine.

Graves, Danny (1973–)

A son of a Vietnamese mother and a European American father, Danny Graves was a dependable Major League relief pitcher for several years. Born in Saigon in 1973, Graves was drafted out of the University of Miami by the Cleveland Indians of the American League in 1994. In 1996, Graves made his Major League debut for the Indians. However, his most productive season was with the Cincinnati Reds as a closer in 2000, when he saved 30 games and recorded an excellent 2.56 Earned Run Average. Graves appeared in his last Major League game in 2006 but pitched two more seasons in the minors.

Guam, U.S. Presence in

Guam is a 212 square mile island located in the western Pacific Ocean. It is the southernmost island of the Mariana Islands chain. The other inhabited islands of this archipelago include Rota, Tinian, Saipan and farther to the north, Pagan, Anatahan, and Alamagan. The Marianas are volcanic islands located north of the equator, 1,550 miles east of the Philippines, and 1,600 miles south of Japan. It is believed Guam’s indigenous inhabitants known as Chamorros migrated to the island from Southeast Asia beginning in 4500 B.C. Others believe Chamorros are the aboriginal inhabitants of the island who trace their lineage to the brother and sister gods named Fu’una and Puntan.

The Spanish-American War of 1898 marked the beginning of a new colonial empire in Guam. The Treaty of Paris was signed on December 10, 1898, and granted the United States ownership of Guam, the Philippines, Puerto Rico, and protectorate rights in Cuba. The United States government viewed Guam as a strategic location to supply their ships and to serve as a cable station to communicate with its other colonies in the Pacific. On August 7, 1899, Captain Richard Leary arrived in Guam to serve as the first U.S. naval governor of Guam. The arrival of the first American governor resulted in the transfer of power from Spain to the United States that included all the land on Guam that was occupied by the Spanish governor. This also marked the ending of Spain’s colonial rule over Guam which had lasted from 1665 to 1898.

From 1899 to 1941, the U.S. government empowered the U.S. naval commander stationed in Guam with absolute authority. This power created a social and political climate that gave full legal and political power to the U.S. naval captain/island governor. The captain of the U.S. naval ship that was stationed in Guam would serve two to three year terms as island

governor. During this period, Chamorros were classified as American nationals. However, most Chamorros did not migrate to the United States because they were not actively recruited as laborers in the case of Filipinos.

The U.S. government implemented a policy of “benevolent assimilation” that attempted to Americanize Chamorros (Rogers, 114). This included implementing an education program that was similar to that of American Indian boarding schools. This curriculum was centered on four primary subjects that included English language use only, health and sanitation, vocational training, and citizenship training (Underwood, 148). If students did not adhere to school policies and curriculum, they were physically punished. In addition, their parents faced punitive fines if their children did not follow school policy. Moreover, the U.S. naval government implemented an island-wide medical and health program that sought to reeducate Chamorros to utilize what they believed were proper health practices, which were based on western ideas of modernity and medicine. These medical practices resulted in school and village-wide treatments for hookworm and other diseases.

The U.S. naval government passed several other laws in an attempt to westernize Chamorro society. In 1919, the naval commander passed Order No. 308, which declared that all married women had to bear the surname of their husbands (Souder, 45). In addition, children were mandated to bear the surname of their fathers. This law was significant because up until this time, Chamorro culture was matrilineal. This meant that Chamorros traced their family heritage through their mothers. Furthermore, the U.S. naval government attempted to restructure Guam’s economy. During the first two decades of American rule, several U.S. governors attempted to develop a cash crop economy on the island. This agricultural economy was centered on the production of copra (dried coconut meat), which was used primarily for cooking and animal feed. American governors also encouraged Chamorros to participate in an agricultural market economy instead of a subsistence economy by promoting open-air markets for the sale of their goods rather than the Chamoru tradition of trading food and supplies.

Throughout the pre-World War II period, Chamorros responded in various ways to American colonial rule. In 1901, several Chamorros submitted a formal petition of dissatisfaction for being under U.S. military rule. These petitioners hoped that the U.S. government would grant Chamorros increased civil liberties and property rights as American nationals. One of the most important issues that Chamorros fought for during this era was political self-determination. The U.S. naval government did not respond until 1917 with the creation of the Guam congress. The congress was appointed by the U.S. naval governor and its members did not have any legislative powers. It was formed primarily to serve as an advisory board to the naval governor. Ultimately, the naval governor had the right to ignore or follow the recommendations of the Guam congress.

On December 8, 1941, the Japanese military attacked the island of Guam. This offensive came hours after the bombing of Pearl Harbor. By December 10th, the Japanese military had taken official control of the island by forcing U.S. naval Captain George McMillin to sign a letter of surrender. The Japanese military quickly took control of the island by occupying all public buildings in the capital village of Hagatna. Moreover, they implemented martial law, which consisted of strict surveillance of all island residents. The Japanese military followed in the footsteps of the U.S. military by implementing a colonial education system that forced all school children to speak Japanese only and to learn Japanese cultural customs. In addition, Chamorros were forced into three primary forms of labor. Some were forced to work as agricultural laborers to produce food for the Japanese military. Others were forced into civilian military labor to assist in the construction of military installations throughout the island. Finally, the smallest percentage of laborers was forced into sex slavery as prostitutes for the Japanese military.

By summer 1944, the U.S. military had made advances throughout the Pacific. The Japanese military responded to the oncoming American invasion by conducting group massacres in several Chamorro villages. As a result, hundreds of Chamorros throughout the island were killed. Furthermore, the Japanese military began to force people from their village homes into

concentration camps as a means to prevent them from supporting the American invasion. On July 21, 1944, the U.S. military invaded Guam and officially reoccupied the island by August 10, 1944. Consequently, the U.S. military reoccupation of Guam led to the reinstatement of U.S. naval autocratic rule. Moreover, the U.S. military continued its mobilization efforts by confiscating land and recruiting labor outside of Guam to help construct military bases and installations to wage war against Japan.

The post-World War II era resulted in several changes for Guam and its people. First, the U.S. military engaged in a massive military buildup that witnessed the construction of Northwest Air Field (later renamed Andersen Air Force Base) and several other installations throughout the island. The U.S. government subcontracted various companies to construct these installations. In turn, these companies recruited people from the Philippines, South Korea, and other Pacific Islands to work on these projects. This major military project transformed Guam into a major base for U.S. military operations during the Korean and Vietnam Wars.

Many Chamorros believed the return of the United States coupled with the hardships that they endured during Japanese occupation would bring positive change to their political status. Specifically, Chamorros sought for the granting of U.S. citizenship and the opportunity of self government. However, the U.S. government reinstated the U.S. naval government system. From 1946–1949, Chamorro frustration with the lack of political self-determination increased. The U.S. government had discussed giving U.S. citizenship and more political power to the Guam Congress but nothing materialized from these conversations. The result was the growth of Chamorro dissatisfaction with the military's unilateral decision making and the U.S. government's ambivalence for Chamorro political status. In March 1949, the Guam Congress staged a walk-out as an act of protest against U.S. naval rule and for the lack of self-government. This walkout was led by several Chamorros including Carlos P. Taitano who utilized his international media contacts to generate publicity for their actions. A few days later, U.S. naval Governor Charles Pownall ordered the Guam Congress to reconvene or face removal from their

positions. This threat did not work and the Guam Congress continued their protest.

By May 1949, the U.S. government was forced to react to the negative media reports of American autocratic rule. President Harry Truman decided that the Department of the Interior would take over the administration of Guam. This transfer eventually led to the Guam Organic Act of 1950. On August 1, 1950, President Truman signed this federal law that had made several important changes such as designating Guam as an unincorporated territory, granting U.S. citizenship to Chamorros, the creation of a limited bill of rights, and establishment of executive, judicial, and legislative branches known as the Government of Guam.

Even with the creation of a bill of rights and a civilian island government, the U.S. government continued to assert its authority upon the people. From the end of World War II to 1962, the U.S. government had created a security travel clearance that required U.S. military approval for travel to and from the island. The result was the opening for the development of tourism in Guam and for the opening of Chamorro migration to the United States mainland. Furthermore, even though the Organic Act of 1950 created a civilian governing body, the island governor was appointed by the U.S. government until 1968. The passing of the "Elective Governor Act," granted Chamorros the power to elect their own governor.

The 1970s and 1980s was an era that saw the establishment of various commissions that examined the possibilities for Guam's political status. Beginning in 1975, the Guam Legislature created several commissions to determine what options were most viable for Guam's status. These political status options included commonwealth, statehood, and continued unincorporated territory. In 1982, an island-wide vote was taken and the majority of voters wanted the establishment of Guam as a commonwealth of the United States. Chamorro leaders went forward and created a draft for commonwealth status that included giving the Government of Guam authority in regards to U.S. military bases on the island and for Guam's congressional representative veto power over federal law pertaining to Guam. This draft was reviewed by U.S. Congressman Udall, who recommended that the

U.S. Congress would not approve these two contingencies. The revision process marked the beginning to the end for the quest of commonwealth. Issues such as political in-fighting, disagreements over a new draft, and the transition of Guam political representatives slowed the revision process and eventually stalled.

Recently, the U.S. government has reasserted its commitment to military building in Guam. The 9/11 attacks resulted in the remilitarization of Guam and the reorganization of the U.S. military in the Asia-Pacific region. The U.S. government has proposed a military reorganization that would result in the transfer of 8,000 U.S. Marines from Okinawa to Guam. This would include an estimated 10,000 dependents and 12,000 temporary guest workers to construct and prepare Guam's infrastructure for this transfer. This transfer is scheduled for 2012 and coupled with increasing migration of Chamorros to the continental United States will have major cultural, demographic, social, political, and environmental implications.

Guthrie, Jeremy (1979–)

Possessing Japanese ancestry on his mother's side, Jeremy Guthrie was a starting pitcher for the Baltimore Orioles of the American League and currently pitches

for the Kansas City Royals. Born and raised in Oregon, Guthrie starred as a pitcher for Stanford and then was drafted by the Cleveland Indians of the American League in the first round in 2002. Guthrie made his Major League Baseball debut with the Indians in 2004. However, he did not start pitching regularly until Baltimore attained his services for the 2007 season, when he became a member of the Orioles' starting rotation. In 2010, Guthrie won 11 games and lost 14 but achieved a respectable 3.83 ERA.

H

H-1B Visa

Since the Chinese Exclusion period, persons arriving in the United States were often sorted into two broad categories: those who were here temporarily, primarily for business, study, or tourism; and those who intended to stay permanently, eventually becoming American citizens. The Chinese Exclusion Act of 1882 made these categories explicit: Chinese laborers were to be excluded and prohibited from further settlement in the United States, but merchants, students, and tourists were still allowed to come. Subsequent congressional legislation in the late nineteenth and early twentieth centuries retained the distinction, and in the Immigration Act of 1952, Congress classified “immigrants” differently than “non-immigrants.” “Immigrants” would be admitted as “permanent residents” who could petition for American citizenship after five years of continuous residency in the United States; “non-immigrants” would be admitted on visas with strict time limitations, after which they either had to renew their visa, or return to their home countries. Those who remained beyond the valid date of their temporary visas fell “out of status.”

Although Congress had provided for the migration of “temporary workers” before in other pieces of legislation, Congress created the H visas explicitly in the Immigration Act of 1952. They were divided into three broad categories: the H-1 was for professionals and persons in “specialty” occupations, people who possessed a college degree or advanced training for their work; the H-2 was for persons “performing services that were unavailable” in the United States; and the H-3 was for industrial trainees. For all of the H visas, an American employer had to petition for this visa on

behalf of a foreign worker; that is, the employer is the formal “petitioner,” and the worker is the “beneficiary.” Workers may not “self-petition” for an H visa. In the legislative debates about the H visa, few ever expected that many people would enter under these categories, and indeed, very few persons were ever admitted under the H-3. Many thousands more, however, came under the H-1 and the H-2.

The H-2 visa had its own unique history: its origin were rooted in the Bracero Programs during World War II, when the federal government organized the temporary migration of thousands of agricultural workers from Mexico to meet a shortage of laborers in that particular sector of the economy during the war. After the war, the H-2 was created primarily for unskilled workers in low-wage industries. Many corporations and growers complained, however, that the statutory requirements for hiring H-2 workers were so onerous, especially within new legislation passed in 1986, that many employers simply hired these workers without petitioning for their lawful status. If anything, the major problem with H-2 visas was that they often went unused.

In recent years, the H-1 has had the opposite problem. There have often not been enough, despite significantly more complicated statutory requirements: in 1990, Congress amended the H visas and created sub-categories for the H-1, including the H-1B for “specialty occupations.” A “specialty occupation” that requires: (a) a theoretical and practical application of a body of highly specialized knowledge, and (b) attainment of a bachelor’s or higher degree in the specific specialty (or its equivalent) as a minimum for entry into the occupation in the United States. All employers petitioning for an H-1B on behalf of a foreign worker

had to show proof of the worker's qualifications. In addition, the employer had to have advertised the same position so that American workers had opportunities to fill the job first. The employer had to pay the same wage and provide the same working conditions to a foreign worker so as to eliminate any economic incentives to hire foreign workers over American ones. Employers could gain permission to hire foreign workers for three years, and then petition for another three years—all persons on an H-1B were expected to return to their home countries after six years in the United States. All of these rules were designed to protect American workers from "unfair" foreign competition in the labor market, a goal that many Republicans and Democrats had shared. Congress allotted 65,000 H-1B visas per year, but by 1997, these were not enough to meet employer demand. Many companies were insisting that Congress increase the cap, or abolish it altogether.

By the mid-1990s, most companies petitioning for H-1B workers were in information technology industries. Vast and powerful changes in communication technologies had been rearranging every facet of American life—personal computers were becoming ubiquitous, as were cell phones and other electronics. Within the industry, competition among firms was intense: innovations in software and in hardware could yield billions of dollars in sales, and so firms and venture capitalists poured billions of dollars in research and development projects that might result in huge profits. All of this activity required highly skilled workers, people trained in computer science, engineering, and other allied fields. In fact, highly skilled workers were probably the most important "input" that this industry had, and many companies complained that there were simply not enough American workers for this sector.

In 1990, in recognition of the growing importance of highly skilled workers, Congress had increased the number of immigrant visas for employment categories from 54,000 per year to 140,000 per year. By 1995, those visas were going fast, too, and although Congress considered raising this number further, many constituents were concerned that too many foreign workers were coming too quickly, without properly measuring the impact of all of this migration on

American workers. Others insisted that unless Congress admitted more highly skilled workers from abroad, American leadership in the high technology industry would disappear, as other firms in other countries would pull ahead of the United States in what was a global, competitive industry. Congress was locked in an acrimonious debate about "foreign workers" for much of the 1990s, and the shortage of H-1Bs in 1997 brought the issue again to the center of attention.

After two long and painful debates, Congress did eventually agree to increase the caps for *nonimmigrant* visas, particularly the H-1Bs, first in 1998, and then again in 2000. The American Competitiveness and Workforce Improvement Act of 1998 increased the number of H-1B visas available over three consecutive years: 115,000 in 1999, 115,000 in 2000, and 107,500 in 2001. The American Competitiveness in the Twenty-First Century Act in 2000 changed the numbers again: 195,000 H-1B visas in 2001, 195,000 in 2002, and 195,000 in 2003. Nonprofit institutions, especially colleges and universities, could apply for H-1B workers who were not counted against these caps. There were other major changes: on the one hand, applying for an H-1B became quite expensive, and part of the money went to a fund whose purpose was to increase the number of American workers in high technology fields, especially through scholarships and other educational incentives; on the other hand, the H-1B visa itself was more attractive for foreign workers, in a number of ways. They were "portable," meaning that if an H-1B worker left one firm for another, his new employer didn't have to petition all over again for another H-1B visa for that same person. An H-1B worker could also declare an intention to stay permanently in the United States—instead of returning to their home countries to apply for another, permanent residency visa, they could do that while they were in the United States on an H-1B. And if they did apply for permanent residency, they could stay in the United States lawfully until their petition was finally settled. In many ways, the statutory requirements for getting an H-1B were now very similar to the ones for an EB-2 or an EB-3, the two visas for permanent residency in the United States based on employment. Indeed, about half of all H-1B visa holders had successfully applied for an EB visa by the late 1990s,

and so they were moving from a nonimmigrant category into permanent residency, with the possibility for American citizenship.

The race and class consequences of this one form of migration have been profound. Ever since 1990, over half of all H-1B beneficiaries have been from Asia, including people from India, the People's Republic of China, Taiwan, South Korea, and the Philippines. In many years, they constituted about 80 percent of H-1B recipients—by the late 1990s, more Asian migrants were entering the United States as temporary skilled workers than as permanent residents on employment-based visas. (A majority of people admitted as permanent residents under the employment preferences were also from Asia.) All this had a cumulative effect: by 2000, every high-technology region in the United States had significant increases in the population of Asian professionals, and a great many were temporary workers. Because these workers often brought their families with them, and because they also started families while they were working here, many Asian professional families now have “mixed immigration status,” where one or both of the parents are “nonimmigrants” and the kids are American citizens. These families are also more likely to have higher incomes and to be better educated than the general population. Although Congress did not reauthorize a higher number of H-1B visas after 2002, the number of people traveling back and forth on this particular visa is staggering: in 2008, about 1.1 million separate entries were made into the United States by persons holding an H-1B visa and their dependents. This was perhaps the most obvious sign that the American economy was truly global, and that the most highly skilled were perhaps the most kinetic of all.

The dominance of Asians in the high technology economy has continued in recent years, and this was part of a set of broader trends whose origins were rooted in Asia many decades ago. Since the end of World War II, Asian states made substantial investments in their educational infrastructure and in certain sectors of their economy. South Korea, for example, made massive investments in education in the 1960s: many of the most prestigious institutions, as well as new colleges and universities, invested heavily in science and technology research, and some of the best

students from South Korea finished their education in the United States. Many returned to teach at the elite South Korean universities. Similarly, after 1979, central planners in Communist China made massive investments in a wide range of infrastructure projects that would position the nation for competition in a capitalist global economy. Demand for advanced training in science and technology grew at an astonishing rate at Chinese universities, and the best Chinese students often traveled abroad for their education. In India, successive governments had supported centralized, state control of markets since national independence after World War II, but by the late 1980s, political momentum had shifted away from India's federal government to allow for a much less regulated and much more competitive economic environment in the Indian states. Under Prime Minister Narasimha Rao in 1991, India liberalized rules governing foreign investments, privatized many of its national industries, and implemented tax reforms designed to stimulate long-term investments in the economy, among other important market-based reforms. These policies led to sustained economic growth in many regions throughout the country. Massive investments in education also followed: although the Indian Institutes of Technology had been established in 1950, shortly after independence, 8 of the 15 campuses were opened after 1991, and 3 more will be opened over the next decade. These policies have had obvious, transnational consequences, as over half of all H-1B visas have gone to beneficiaries from India alone since 1990.

American migration policies have also had transnational consequences as well, and the H-1B is a prime example of this trend. By design, not all H-1B beneficiaries will remain in the United States—though some will adjust to permanent residency and American citizenship, others will return to their home countries, either because their visas expire or because of economic recessions and layoffs. For many highly skilled workers, however, economic and business conditions in their home countries offer many more opportunities than just a generation ago: in many Asian nations, professionals who had worked temporarily in the United States have launched successful business ventures, and they often occupy privileged positions in the labor force. Coming to the United States, returning to their

home countries, producing goods and services that have a worldwide demand—all of these phenomenon suggest what one scholar has called a “brain circulation” of highly skilled persons around the world.

Ha Jin (1956–)

Ha Jin is an acclaimed poet and fiction writer as well as professor of English and creative writing at Boston University. He is one of the most prolific writers in America. Over the course of the past two decades, he has published three compilations of poetry, four collections of short stories, six novels, one collection of lectures, numerous critical essays, and even one libretto.

Ha Jin has won a plethora of awards for his writing, including the National Book Award for Fiction (1999), two PEN/Faulkner Awards for *Waiting* (1996) and *War Trash* (2004), three Pushcart Prizes, and a Kenyon Review Prize. His short story compilation *Under the Red Flag* (1997) won the Flannery O’Connor Award for Short Fiction, *Ocean of Words* (1996) was awarded the PEN/Hemingway Award, and *The Bridegroom* (2000) was awarded the Asian American Literary Award. In addition, he has held several fellowships—including a Guggenheim Fellowship (1999)—and was elected a fellow of the American Academy of the Arts and Sciences (2006).

Ha Jin holds degrees from Heilongjiang University (BA in English), Shandong University (MA in English), and Brandeis University (PhD in English). He also took classes in Boston University’s MFA program in creative writing at the beginning of his career. Besides his current faculty position at Boston University, Ha Jin has also taught at Emory University.

Born Jin Xuefei in Liaoning, China, in 1956, Ha Jin grew up during the Cultural Revolution

(1966–1976), a time when schools were shut down and books were burned. Despite the fact that Ha Jin’s father was an officer in the military, his maternal grandfather’s past as a landowner resulted in the government denouncing his mother and her family, making life difficult for the Jin family for a period of time. At the age of 14 he joined the Red Guard. He also worked at a railroad station as a telegraph operator. In 1976, at age 20, Ha Jin began to teach himself English via an English-learning radio program. By 1977, he learned the language well enough that upon passing the college entrance examinations. Upon completing his BA in English at Heilongjiang University and his MA in English from Shandong University, Ha Jin decided to pursue doctoral studies in the United States at Brandeis University in 1985.

Though Ha Jin originally had planned on returning to China as a professor of literature, in 1988, while he was still working on his doctoral degree on Anglo-American modernist poetry, he decided to become a writer. However, when the Tiananmen Massacre occurred in 1989, Ha Jin made the decision to stay in the United States and become a spokesman for the downtrodden in China. Choosing to write in English because he wanted to separate himself from Chinese state power, he took on “Ha Jin” as his nom de plume and very quickly completed the manuscript for his first published work, *Between Silences: A Voice from China*, a volume of poetry that he published in 1990. In the preface, he states, “I speak for those unfortunate people who suffered, endured or perished at the bottom of life and who created the history and at the same time were fooled or ruined by it.”

Much of Ha Jin’s early work does the work of bearing witness to the struggles of those at the “bottom of life,” as well as average Chinese citizens who must negotiate the many sources of tension and pressure that define Chinese life. His second collection of poetry, *Facing Shadows* (1996), functions as his response to the Tiananmen Massacre, and also illustrates a portrait of his life as an immigrant. Ha Jin’s third collection, *Wreckage* (2001), examines ancient Chinese history’s relationship to modern China. His first three short story collections, *Ocean of Words* (1989), *Under the Red Flag* (1997), and *The Bridegroom* (2000), all focus on everyday life in China—exploring the lives of

soldiers patrolling the border between China and the Soviet Union, rural commoners negotiating sociopolitical and cultural changes, and life in China in the 1980s as the country moves from Maoism to socialism. His fourth collection, *A Good Fall* (2009), delves into the experiences of Chinese immigrants in America.

Though Ha Jin is a critically acclaimed poet and short story writer, he is best known and most celebrated for his work as a novelist. He is considered one of the most prominent and influential nonnative authors who writes in English, following in the tradition of Joseph Conrad and Vladimir Nabokov. His novels, *In the Pond* (1998), *Waiting* (1999), *The Crazy* (2002), *War Trash* (2004), *A Free Life* (2007), and *Nanjing Requiem* (2011) all received overwhelmingly positive receptions. Of his body of work, *War Trash* is most acclaimed—securing a position as a finalist for the Pulitzer Prize. Though Ha Jin’s work is predominantly concerned with documenting the lives and tragic circumstances of the downtrodden in China, *A Free Life* marked a departure from his usual narrative treatment as it not only takes place in America, but is also a politically charged and a highly autobiographical bildungsroman that follows the arduous journey of immigrant self-fashioning and success-making in a country of opportunity. It is dedicated to his wife and son, “who lived this book.”

Despite Ha Jin’s success and the popularity of his books about contemporary China and Chinese culture, his work is blacklisted and banned from publication in China, with the exception of *Waiting*, which was heavily edited prior to publication, and *Nanjing Requiem*, which was published in China with minor editing and released simultaneously with the American release. Most of his work translated into Chinese is published in Hong Kong and Taiwan, where a large body of scholarship on his writing exists.

Ha Jin continues to translate Chinese culture for a non-Chinese audience, creating subtle and nuanced stories that explore the complexity of everyday lives in simple and concise prose. He currently lives in Boston with his wife and son, in self-imposed exile from China. Since his departure from his native country in 1985, he has never returned.

Hagedorn, Jessica (1949–)

Jessica Hagedorn is one of the most celebrated novelists in contemporary Asian American literature. Hagedorn is perhaps best known for her novel *The*

Dogeaters (1990), which was nominated for the National Book Award and won the America Book Award of the Before Columbus Foundation. Ishmael Reed, the poet and writer, described Hagedorn as a “vanguard artist” whose novels “make the typical American novel look very gray.” Hagedorn is a colorful artist not only as a novelist but also as a poet, playwright, short story writer, nonfiction writer, screenwriter, editor, performance artist, multimedia artist, and musician. Hagedorn utilizes her diverse artistic background by blending stylistic elements from poetry, fiction, music, and performance art to portray the vibrant and often gritty urban life in her uniquely edgy, tough, and witty voice.

Jessica Tarahata Hagedorn was born in Manila in the Philippines on May 29, 1949. She grew up during the reign of the Ferdinand Marcos dictatorship. In 1963, Hagedorn immigrated to the United States at the age of 14 with her family. In San Francisco, where her family settled, Hagedorn was exposed to the city’s diverse multicultural scenes, to which she attributes a substantial part of her artistic development. Hagedorn’s career as a writer was especially supported by Kenneth Rexroth, a well-established poet and critic, who upon reading young Hagedorn’s poetry invited her to his dinner party. “From the first time I walked into his apartment, with all the cubist paintings on the walls, I knew that I wanted to live in that world,” Hagedorn recalls. Impressed with Hagedorn’s writing ability, Rexroth introduced her to the world of bookstores, libraries, and familiarized her with the writing community in San Francisco. At 16 Hagedorn gave her first public reading onstage at one of Rexroth’s poetry readings. After graduating from high school, Hagedorn attended the American Conservatory Theater, studying acting, fencing, and martial arts. In 1975, Hagedorn brought two of her passions together—music and poetry—by forming a poet’s performance rock band called the West Coast Gangster Choir, for which she was the lead singer and songwriter. Hagedorn moved to New York City in 1978, renaming her band The Gangster Choir and pursued her career as a writer and performance artist.

Among her multifaceted talents and interests, Hagedorn asserts: “Writing is always my base. Above all, I am a writer first.” In 1973, Hagedorn’s work of

poetry “The Death of Anna May Wong” was published in an anthology, *Four Young Women: Poems*, edited by Kenneth Rexroth. In 1975 her first collection of poetry, *Dangerous Music*, was published, and in 1981 *Pet Food and Tropical Apparitions*, a collection of her poetry and prose, was published. Selections from *Pet Food* and *Dangerous Music* were later reissued under the title *Danger and Beauty* (1993). While in New York, several of her drama pieces were professionally produced, including *Mango Tango* (1978), *Tenement Lover: no palm trees/in new york city* (1981), *A Nun’s Story* (1988), and *Holy Food* (1989). But it was her first novel, *Dogeaters*, published in 1990, that caught national attention and earned her the distinction of being a finalist for the National Book Award and winning the American Book Award from the Before Columbus Foundation. Set in the Philippines under a Marcos-like regime, the novel is a vitriolic exploration of class divisions, rampant commercialism, and structural violence in a country afflicted by centuries of Western colonization and political corruption. The success of *Dogeaters* continued as it was adapted into a theatrical stage play and performed in San Diego at the Mandell Weiss Forum of the La Jolla Playhouse in 1998. The play version, *Dogeaters: A Play about the Philippines*, was published in 2006.

Hagedorn’s second novel, *The Gangster of Love*, appeared in 1996. It is a semiautobiographical work about the protagonist Rocky’s immigrant experience in San Francisco and forming her rock and roll band called Gangster of Love. Hagedorn employs a multi-layered structure with the graphic portrayal of the urban underbelly life infused with violence, sex, and drugs, similar to that of *Dogeaters*. Hagedorn’s third novel, *Dream Jungle*, published in 2003, is set in the Philippines from the Spanish colonial age to the American colonial age, and shows the recurring themes of Hagedorn’s critique of U.S. colonial and neocolonial influence in the Philippines. *Dream Jungle*, like her other novels, also reveals Hagedorn’s own intense love-hate relationship with her homeland. In the short essay titled Homesick, Hagedorn describes her novel writing projects as follows: “It is a journey back I am always taking. . . . I am the other, the exile within, afflicted with permanent nostalgia for the mud . . . Manila again, Manila again, Manila again.”

Hagedorn's major achievement as an editor is the groundbreaking anthology *Charlie Chan Is Dead: An Anthology of Contemporary American Fiction* published in 1993. It was the first anthology of Asian American fiction published by a major press, featuring the works of 48 Asian American writers, both published and then-unpublished. For its wide range of authors of different cultural backgrounds and literary styles, and for Hagedorn's conscious selection of "riskier" work, critics viewed it as a "daring compilation" that was different from other formal standard anthologies. Although Hagedorn's work focuses on Asian American experiences, Hagedorn feels ambivalent about the confining label, Asian American. In 2004, Hagedorn edited the sequel *Charlie Chan is Dead 2: At Home in the World (An Anthology of Contemporary Asian American Fiction)*, in which she broadens the definition of "What is/what makes Asian American literature?" as that which is ever "expanding and evolving."

Just as her works defies all kinds of categorizations, Jessica Hagedorn cannot be described as one type of artist. What she values most in her own writing as well as other works is fearlessness, and with her undaunted passion she continues to unsettle boundaries and provide a new edge in Asian American literature. Her recent works include *Most Wanted* (2006), a musical she wrote with composer Mark Bennett, which was later produced at the La Jolla Playhouse in October 2007.

Haley, Nikki Randhawa (1972–)

Nikki Haley is an Indian American politician from South Carolina. A successful businesswoman, Haley was a member of the South Carolina House of Representatives from 2005 to 2010. In the 2010 election season, Nikki Haley was the Republican gubernatorial candidate for South Carolina. On November 2, 2010, she defeated her Democratic opponent, Vincent Sheheen, and became the first minority governor in the history of South Carolina, as well as the second Indian American governor in the United States (after Governor Bobby Jindal of Louisiana). She assumed office as governor on January 12, 2011.

Haley was born Nimrata Nikki Randhawa in Bamberg, South Carolina on January 20, 1972. Her parents are Sikh immigrants from India. She grew up in her native South Carolina and attended Clemson University, where she graduated with a BS in accounting. After graduation, Haley worked as an Accounting Supervisor for FCR, Inc. and five of its subsidiaries. She eventually went to work for her family's clothing firm and helped to manage the multimillion dollar business.

An astute businesswoman, Haley has strong ties to the business community. In 1998, Haley was selected to the Board of Directors of the Orangeburg County Chamber of Commerce. In 2003, she was named to the Board of Directors of the Lexington Chamber of Commerce. She was also the treasurer of the National Association of Women Business Owners in 2003 and its president in 2004. Overall, Haley has been very involved in her community and has proven herself to be an important local business leader.

In 2004, Haley defeated the incumbent state representative in a Republican primary. She later went on to win the office of state representative from Carolina's 87th district as she ran unopposed. Since then, she has won three subsequent reelection bids. During her time in the state legislature, Haley kept a low profile but has garnered the reputation of a political reformer

and fiscal conservative. Specifically, she introduced legislations that would require lawmakers to reveal more of their votes on key issues. Additionally, in 2009, Haley was named “Friend of the Taxpayer” by the South Carolina Association of Taxpayers for her efforts as a fiscal conservative in the state legislature. She served as the secretary of the Medical, Military, Public and Municipal Affairs Committee and was elected in 2005 (as a freshman), as the majority whip in the South Carolina General Assembly.

In June 2010, Haley emerged from the Republican gubernatorial primaries as the front-runner. Although Haley does not consider herself a “Tea Party candidate,” she has received significant support and endorsement from the Tea Party movement as well as Tea Party politicians such as Sarah Palin. During her campaign, Haley faced allegations of extramarital affairs by two men, which she repeatedly denied. Haley also had to overcome questions about her faith (conversion to Christianity). On November 2, 2010, Haley defeated her Democratic opponent Vincent Sheheen to become the first female minority governor in the state of South Carolina. She is also the second Indian American to be elected as governor in the United States.

Harada, Tsuneo “Cappy” (1921–2010)

Tsuneo “Cappy” Harada was born in Santa Maria, California. A lifelong athlete, he competed in high

school and semipro baseball, ultimately scouting for the San Francisco Giants. In high school, he played in exhibition games against future Hall of Famers Ted Williams, Bob Lemon, and Jackie Robinson.

Harada was scouted by the St. Louis Cardinals before World War II broke out. Harada joined the military intelligence service and was shipped out to help the United States in the Pacific Theater campaigns. Wounded twice, he continued with the U.S. military for 10 years during the Occupation of Japan. Harada was placed in charge by General Douglas MacArthur with reestablishing Japanese athletics to help build morale. Harada focused on baseball and resurrected professional baseball and the national High School Baseball Tournament at Koshien.

In 1949, Harada arranged a baseball goodwill tour of Lefty O’Doul and the San Francisco Seals in Japan. In 1951 and 1953, the Joe DiMaggio All-Stars and the New York Giants also brought Major League Baseball stars to Japanese ballparks. A highlight of Harada’s time spent in Japan was hosting DiMaggio and his wife, actress Marilyn Monroe, on their honeymoon to Japan in January 1954. With Harada’s assistance, the Yankee Clipper squeezed in some batting clinics for Japanese baseball players.

From 1951 to 1954, Harada became a special advisor to the Tokyo Giants of the Japanese Baseball League (JBL). Under Harada, the Giants took four straight JBL championships. He also pioneered a two-league format and adopted a World Series–style playoffs in Japan.

In 1965, Harada was named general manager of the Lodi (California) Crushers, now called the Rancho Cucamonga Quakes, in California League Class A (affiliate of the Los Angeles Angels of Anaheim since 2001). The team was a minor league affiliate of the Chicago Cubs (1966–1968), and Harada was the first Nisei (second-generation Japanese American) to be named a general manager in professional baseball. In 1966, he was named executive of the year by the *Sporting News* and the National Association of Professional Baseball.

For over 20 years, Harada worked for the San Francisco Giants as a special assistant in the scouting and player personnel department. He also worked with player development, basic business operations, and

Trans-Pacific scouting. Harada is credited with signing the first Japanese player to a Major League contract, left-handed pitcher Masanori Murakami. He was acquired by the Giants from Japan's Nankai Hawks in 1964. Murakami played two seasons and had a career record of 5 wins and 1 loss. Between the 1970s to the late 2000s, Harada served as an advisor to Major League Baseball. Harada died of heart failure on June 5, 2010, at the age of 88 in California.

Harada House

The Harada House is a National Historic Landmark located in downtown Riverside, California and reflects the struggle of early Asian immigrants. The California Alien Land of 1913 prohibited immigrants ineligible for citizenship from buying land or property. This law was a sign of the strong anti-Asian sentiment present in California at the time. Jukichi and Ken Harada were pioneers as they worked to make Riverside their home. Jukichi first emigrated from Japan to the United States in 1898. He had worked on a U.S. navy ship as a food service worker, which spurred his migration to the United States and his later work in restaurants. His wife Ken and young son Masa Atsu would arrive a few years later and he would go on to manage and operate the Washington Restaurant in downtown Riverside, which prided itself for serving American food.

Years later, his next three children were born. He was determined to provide housing that was safe and

sanitary following the death of his first American-born son. Knowing that as an immigrant he was unable to purchase a home, Jukichi was able to purchase a home at 3356 Lemon Street under the names of his American born children Mine, Sumi, and Yoshizo. Located in a middle-class neighborhood at the time, the neighbors vehemently opposed their presence. Even in her old age, Sumi would recall the hatred, harassment, and prejudice that their family continually faced. Neighbors had wanted them to leave their neighborhood and even tried to buy them out. Jukichi refused stating that the house was owned by his American-born children. Over 60 neighbors signed a petition calling for the family's eviction. Eventually charges through the Attorney General of California were filed alleging violation of the California Alien Land Law.

On December 14, 1916, the trial of the *The People of the State of California v. Jukichi Harada, et al.* began and the case gained national notoriety because it was the first case to test the constitutionality of the Alien Land Law. The suit claimed that an immigrant, Jukichi Harada, was ineligible for citizenship and therefore was not allowed to possess, acquire, transfer, or enjoy any real property in the state of California. On September 17, 1918, Judge Hugh Craig of the Riverside County Superior Court ruled in favor of the Harada family. Because the three children were American citizens, he ruled that Mine, Sumi, and Yoshizo, who were born in the United States, were entitled to equal protection as any other U.S citizen no matter their parentage. Appeals to the decision were not pursued and that allowed other immigrants that followed to acquire property under their children's name. The Alien Land Law was modified over time to close various loopholes, and it was not officially overturned until after World War II.

Through the 1910s to the 1930s, the Harada family expanded with the births of Harold and Clark and the adoption of Roy Hashimura. In these two decades, they continued to raise their family and operate their family restaurant and boarding house business. By the 1940s, many of the children had grown up and moved out of the home with the exception of Sumi and Harold.

The Harada family experienced their next great challenge with the bombing of Pearl Harbor in 1941.

On February 19, 1942, the family's life was again interrupted. President Franklin D. Roosevelt signed an executive order ordering all people of Japanese descent residing in the designated area of the West Coast to be placed in internment camps. By May 23, 1942, the Harada family was evacuated to Poston, Arizona and later to Topaz, Utah. During the years the family was interned, the Harada family would face the death of father Jukichi and mother Ken.

During the internment, Harold had gone on to serve in the 442nd Regimental Combat Team and after the internment went on to complete his dental education. After the internment, Sumi Harada spent time in Chicago and eventually returned in 1945 to her Riverside home alone. Thanks to their family friend Jess Stebler, who cared for their home during their internment, Sumi was able to return home after the war, which was often not the case for many other Japanese Americans. With the passing of her parents and with the restaurant being closed, Sumi opened the Harada home to others by turning the house into a boarding home for many other Japanese Americans who were returning from internment. When there was no longer a need for a boarding home for Japanese Americans, Sumi found work as a housekeeper and worked for many years.

In honor of her parents' fight against the 1913 California Alien Land Law, she had saved everything including old photographs, letters, documents such as passports and birth certificates, letters, photographs, and newspapers pertaining to their immigration, their legal fight, their incarceration, their restaurant business, and other key moments in the Harada family. She was a keeper of all her family's memories. She kept all of it, which would later be shown after her passing in a curated exhibition at the Riverside Metropolitan Museum in 2009.

Sumi lived to see her parents' efforts recognized nationally and locally. In 1977, the city of Riverside recognized the home as a city landmark. In 1990, President George Bush designated the home as a National Historic Landmark. She also received several awards within the Southern California Japanese American community for her family's fight against the 1913 Alien Land Law.

Until a few years before she passed, Sumi Harada was active in speaking about her experiences to local

college and high school students. She was poignant and direct about the racism that her family suffered during her family's fight to keep their home on Lemon Street and their later subsequent evacuation and incarceration during World War II. She was a long-standing member of the local Riverside Japanese American Citizens League and First Congregational Church in Riverside. She was also continually recognized in the Asian American community as an advocate and fighter for civil rights for all. At the University of California, Riverside, an annual award, the Sumi Harada Award, which reflects the work of the Harada family in their fight against the 1913 Alien Land Law, is given out to this day to a student, staff, or faculty member who has been an advocate of Asian American issues.

Sumi Harada passed away in 2000 at the age of 90. The house was passed on to her brother, Harold Harada, who died in 2003. The family donated their home, artifacts, and archives to the City of Riverside under the stewardship of the Riverside Metropolitan Museum in 2004. The Riverside Metropolitan Museum curated an exhibit "Reading the Walls: The Struggles of the Haradas, A Japanese American Family" in 2009–2010, which focused on 100 years of history of the Harada family. The Museum, in partnership with the Riverside Unified School District, developed a history curriculum for 11th graders focused on Riverside's stories of internment and return. Currently, the house is being restored by the city with future plans for a civil rights museum and education center. The Museum is also cataloging the extensive Harada collections, enhancing the website information, and developing plans for the long-term preservation and interpretation of the National Historic Landmark Harada House.

Hawaiian Cuisine

Hawaiian cuisine can be split into two categories: Native Hawaiian and “local.” Local cuisine is comprised of Native Hawaiian food combined with food brought by the various ethnic immigrants to Hawaii. Hawaiian cuisine gives one a glimpse into the deep

and diverse story of the people of Hawaii and provides a taste of Hawaiian history.

Native Hawaiians brought plants and animals, that is, the taro plant, sweet potatoes, pigs, chickens, and dogs, when they sailed to Hawaii from the Marquesas. The taro root is used to make poi, wherein the taro root is boiled and then mashed into a paste. Kālua pig is cooked in an imu (an underground pit layered with hot rocks), where it is roasted and steamed over several hours. Laulau is fat, pork, or fish, and taro or sweet potatoes wrapped in tī leaves, and roasted with the pig in the imu. In addition to the nonnative foodstuffs, the various fish and birds native to Hawaii where a part of the Native Hawaiian diet.

As early as 1794, Chinese arrived in Hawaii beginning the importation of Asian ethnic laborers. Shortly thereafter sugarcane plantations began to flourish and with it the plantation culture that was a combination of Chinese, Japanese, Korean, Filipino, German, Portuguese, and Native Hawaiian cultures. The Chinese introduced tea, rice, and other foods preserved (dried and salted) from China. Japanese laborers brought *musubi* (rice balls), *daikon* (radish), *miso* (seasoning), *tofu*, *somen* (wheat noodles), *mochi* (rice cakes), and *ume* (pickled red plums). Koreans introduced *kimchee* (pickled vegetables) and other dishes. Filipinos introduced *bagoong* (salted fish). German sausage and potato salad was brought by German laborers. The Portuguese introduced sweetbread, Portuguese sausage, and blood sausage.

Over time, Native Hawaiian cuisine has added various dishes of opihi, raw fish, and ahi poke (raw tuna, kukui nuts, seaweed, and spices). Local cuisine also added new dishes: chicken adobo, chicken long rice, *malasada* (sugar coated fried bread), teriyaki chicken and beef, *manapua* (pork buns), plate lunch, and *bento* boxes. Other dishes adapted, like kālua pig with the addition of cabbage. *Musubi* adapted so that it can be made with SPAM. Loco moco is a local adaptation of *bibimbap*, a Korean mixed dish of rice, vegetables, egg, and meat. The loco moco is an egg over-easy on top of rice, a hamburger patty, and covered in gravy. King’s Hawaiian Bakery specializes in a Hawaiian adaptation of the Portuguese sweetbread.

Nationally known fast food restaurants, such as McDonald’s, have also incorporated local cuisine into

their Hawaiian restaurant menus. For breakfast, one can order pancakes with Portuguese sausage or SPAM. For lunch, one can order *saimin* (noodle soup) with SPAM.

Today, Hawaiian cuisine is not only found in Hawaii, but also on the mainland through chains of Hawaiian cuisine restaurants, both high-end and fast food. With the proliferation of these restaurants, a local from Hawaii is able to get their fix of kālúa pig, Portuguese sausage, SPAM *musubi*, and sweetbread. This is a continuation of Hawaiian history through its food.

Hayakawa, Samuel Ichiyé (1906–1992)

S. I. Hayakawa, a complex and colorful figure who was arguably the most controversial Nisei of the twentieth century, was born in Vancouver, Canada. His father was a labor contractor and operated a struggling import-export business. Samuel Ichiyé, the eldest of four children, grew up in Cranbrook, B.C., Calgary,

and Winnipeg. Between 1926 and 1927, around the time that Hayakawa received his BA from the University of Manitoba, his family moved to Japan. Hayakawa chose to move with a brother to Montreal, where his uncle Saburo was living. There he earned a masters at McGill University, putting himself through school by driving a taxi.

In 1929, Hayakawa left Canada and enrolled at the University of Wisconsin. There Hayakawa met and subsequently married a white woman, Margedant Peters. In 1935, following completion of a thesis on the poet/essayist Oliver Wendell Holmes, he received his PhD. After graduation, Hayakawa intended to return to Canada, but could not find work, and returned to Wisconsin.

In 1939, Hayakawa was named professor of English at the Armour (now Illinois) Institute of Technology and moved to Chicago. Meanwhile, he became attracted by Alfred Korzybski's ideas on General Semantics. Korzybski argued for systems of thinking and language that reflected the fluid nature of reality. Hayakawa sought to popularize Korzybski's theories by writing a textbook titled *Language in Action*. After a preliminary version was released, the book was taken up by a major New York publisher and published in December 1941. Thanks to a selection by the Book-of-the-Month Club, it earned large sales.

The young Hayakawa repeatedly expressed a determination not to be limited or pigeonholed by his Japanese background. He concluded that ethnic particularism and ghettoization invited social division, whereas assimilation and participation in democratic society promoted positive communication and equality. Thus, Hayakawa deplored ethnic-based organizations. He nonetheless participated in struggles for civil rights—in 1936 he visited Ottawa as part of a delegation from the Japanese Canadian Citizens League and lobbied unsuccessfully for voting rights for Nisei in British Columbia. In 1943, Hayakawa joined the African American newspaper *The Chicago Defender* as a weekly columnist. He continued his column until January 1947. Although he strongly supported equal rights for blacks, he favored multigroup action on a nonracial basis, particularly organization of consumers' cooperatives, to achieve it.

Hayakawa's relations with Japanese communities remained uneasy through the wartime and postwar era. Because he lived in Chicago, Hayakawa was spared mass confinement. He quietly assisted the resettlement of Japanese Americans in Chicago; but only sporadically, and uneasily, addressed anti-Asian discrimination in his newspaper column. Although he sympathized with Nisei victimized by official prejudice, his faith in assimilation and resistance to ethnic particularism led to clashes. In 1952, he criticized the Japanese American Citizens League's (JACL's) support for the McCarran-Walter Immigration Act, which granted limited immigration and naturalization rights to Issei. By supporting a "heartless," repressive, and illiberal bill based on Cold War politics, Nisei were putting their own interests ahead of that of the immigrants who would be damaged by the law. Hayakawa's opposition represented an impressive statement of principle, especially because he was himself barred from U.S. citizenship because of his Japanese ancestry. It was only after passage of McCarran-Walter that he was able to become naturalized.

After the dispute over McCarran-Walter, Hayakawa again distanced himself from Japanese communities. By this time, he had become a well-known figure as an educator and semanticist. In 1955 he was appointed professor of English at San Francisco State University. He likewise served as editor of the linguistics journal *Etc.* In 1968–1969, a "Third World" coalition of students at San Francisco State launched a strike, demanding ethnic studies programs and protesting the Vietnam War. When the college's president resigned, Hayakawa accepted the post and became notable for his outspoken opposition to strikers: on one occasion he even ripped out the wires from their sound truck at a demonstration. His efforts drew widespread media attention and support from conservatives.

Upon retiring from San Francisco State University in 1973, Hayakawa became a newspaper columnist; he then parlayed his popularity into a successful campaign for the U.S. Senate on the Republican ticket in 1976. Hayakawa thus became the first senator of Asian ancestry from a mainland state. However, during his single Senate term, Hayakawa aroused the ire of Japanese Americans when he publicly opposed official apologies and redress for wartime confinement in a

speech before the JACL. After leaving the Senate, Hayakawa became a consultant on East Asian relations. He sparked further liberal outrage by cofounding U.S. English, a lobbying group dedicated to making English the official language of the United States.

Hayakawa, Sessue (Kintaro) (1886–1973)

Sessue Hayakawa, whose given name was Kintaro Hayakawa, was a Japan-born actor who achieved fame and widespread recognition in the early decades of the U.S. film industry. His role in the Cecil B. DeMille film *The Cheat* (1915) made him a star, but he is most well known to contemporary audiences for his Academy Award–nominated performance as Colonel Saito in the David Lean epic *The Bridge On the River Kwai* (1957). At the height of his career he was as celebrated as Charlie Chaplin, Douglas Fairbanks, and William S. Hart, and although he often played the villain, American audiences also saw him as a romantic leading man.

Hayakawa was born in Japan in 1886. His earliest ambition was to become a naval officer but an accident that resulted in a ruptured eardrum led to his dismissal from the Naval Academy in Etajima. He immigrated to the United States in 1907 and enrolled at the University of Chicago in 1908 to study political economy. His first work as an actor was in plays for the Japanese American community in Los Angeles produced by Fujita Toyo. Thomas H. Ince of the New York Motion Picture Company saw Hayakawa perform and hired him for a series of Japanese-themed films. Hayakawa first appeared on film in *O Mimi San* (1914). In his next film, *The Wrath of the Gods* (1914), he played a supporting role as an elderly father. The film starred his future wife Tsuru Aoki, the adopted daughter of the well-known Japanese American artist Toshio Aoki,

and the niece of the Kawakamis, a Japanese husband and wife acting duo.

Hayakawa first gained popular recognition for his portrayal of a Japanese spy in Paris in *The Typhoon* (1914). The film introduced themes of identity, assimilation, and interracial romance that would become prominent in Hayakawa's film oeuvre. His character, Dr. Nitobe Tokoramo, is a Japanese diplomat who mingles with Parisian high society and carries on an affair with a French paramour although secretly compiling a report on France for Japan. When his lover, Helene, insults Japan he strangles her in a fit of anger and then allows a young student to be executed for the murder so that he can complete his mission. Tokoramo commits suicide at the film's conclusion over his love for Helene and his guilt over allowing someone else to take the blame for her death.

In 1915, Hayakawa started working at the Jesse L. Lasky Feature Play Company. His portrayal of the wealthy Japanese art dealer Tori in *The Cheat* garnered him acclaim in the United States and abroad, and made him a bona fide movie star. *The Cheat*, directed by industry veteran Cecil B. DeMille, features Fanny Ward as Edith Hardy, a wealthy woman who loses a \$10,000 Red Cross fund in a bad investment. She fears irreparable damage to her reputation should her theft of the funds be discovered, and so she agrees to give herself to Tori in exchange for a check in the amount of the money she has lost. At the appointed hour Edith visits Tori at his home, but with a check from her husband that reimburses him for the loan. Tori accuses her of reneging on their deal and, in one of the most memorable scenes in silent cinema, he brands her shoulder to mark his possession of her. Edith shoots Tori in desperation and then escapes. Edith's husband, Richard, appears on the scene and takes responsibility for the shooting. At the trial, Edith comes forward with the truth of what really happened and the courtroom erupts into chaos. As the film comes to a close the crowd in the courtroom is descending upon Tori.

The Cheat was a hit, lauded nationally and internationally for its innovative aesthetics and sensational subject matter. However, the Los Angeles-based Japanese newspaper *Rafu Shimpo* campaigned against the film, and the Japanese Association of Southern California protested the film to the Los Angeles City

Council. In the film's 1918 re-release, which is the version available today, the nationality of Hayakawa's character is changed from Japanese to Burmese, and the character is named Haka Arakau and described as a "Burmese ivory king."

After the success of *The Cheat*, a number of star vehicles featuring Hayakawa were released beginning with *Alien Souls* (1916). In some of these films Hayakawa portrayed an immigrant eager to assimilate American ways, often willing to sacrifice his happiness and, if necessary, his life for the well-being of the white American couple or family at the center of the films. In others, he reprised the theme of the villainous Japanese with a refined exterior. Hayakawa played non-Japanese roles as well, including Native American, Hawaiian, Mexican, and Chinese characters, and Tsuru Aoki often appeared in supporting roles in his films.

Hayakawa established his own film production company, Haworth Pictures Corporation, in 1918. One motivation was his well-publicized desire to make films that would more accurately represent Japanese people and culture. The first film produced by Haworth was *His Birthright* (1918). *The Dragon Painter* (1919) is the most well known of the Haworth films today. Although some of the early productions offered more authentic representations of Japan and the Japanese, public expectations and industry conventions made it difficult for Hayakawa to transcend established roles, narratives, and backgrounds.

In 1922, amid growing anti-Japanese sentiment and his declining popularity in the United States, Hayakawa traveled to Japan for the first time since he immigrated to the United States. He was celebrated by some as a Japanese who had found success abroad, although others criticized the kinds of characters he portrayed in film and saw him as a product of foreign ideals. Hayakawa spent the next three decades working in France, Britain, the United States and Japan in films and the theater. In 1957 his portrayal of the commander of a Japanese prisoner of war camp in Southeast Asia during World War II in *The Bridge on the River Kwai* made him a celebrity again. He was nominated for the Oscar for Best Supporting Actor, and it is the role that most audiences today know him for. Hayakawa died on November 23, 1973, in Tokyo.

Hayslip, Le Ly (1949–)

Though a Vietnamese immigrant woman with only three years of elementary education in Vietnam, Le Ly Hayslip has not only become an author of two compelling memoirs with the assistance of a Euro-American professional writer and her eldest son but also emerged as a major promoter of reconciliation between Vietnam and the United States and an important advocate for humanitarian aid for postwar Vietnam. Her first memoir, *When Heaven and Earth Changed Places*, offers a unique perspective on why the Viet Cong could effectively mobilize the people in their struggle against the Americans and what limited options Vietnamese civilians, particularly young women, could have in South Vietnam during the war.

Born in Ky La in Central Vietnam on December 19, 1949, Hayslip grew up witnessing the Vietnamese struggle against the French and participating in the Viet Cong fight against the Americans. Because of her arrest and release from a notoriously brutal prison in South Vietnam, Hayslip lost the trust of the Viet Cong and left for Saigon to make a living. She worked as a house maid, a black marketer, and a nurse assistant for several years. After a few exploitative relationships with American servicemen, Hayslip finally married an American subcontractor, Ed Munroe, and came to San Diego, California. She was

24 years old when Munroe died, and was remarried to Dennis Hayslip who died shortly after the marriage. With the funds left by her second husband, Hayslip invested in the stock market and real estate and finally started her own restaurant business as a successful entrepreneur.

Upon its publication in 1989, Hayslip’s first memoir, *When Heaven and Earth Changed Places*, immediately gained public attention and served as an alternative voice to the American popular representation of the Vietnam War in the Reagan era. Structuring the memoir around two contrasting narrative voices that represent her former self as a Vietnamese peasant girl and her new self as a successful Vietnamese American entrepreneur, Hayslip offers an insightful explanation about why the Vietnamese villagers had supported the Viet Cong during the war, what unfortunate options Vietnamese civilians and women particularly had been given during the war, and how she would come back to Vietnam and help her family members and people in need. Although the voice of the Vietnamese peasant girl gives the American readership a glimpse of life and work in South Vietnamese villages and cities before and during the war, the voice of the Vietnamese American entrepreneur reassures the American readership of the values of human rights and critiques the theory and practice of the Vietnamese Communists. In the end, Hayslip calls for reconciliation between the United States and Vietnam and tries to “re-enlist” American veterans in her project of humanitarian aid to Vietnam and the Vietnamese.

If Hayslip’s first memoir is defined by her political message of reconciliation, then her second memoir, *Child of War, Woman of Peace*, is preoccupied with her own private life and love affairs. As if it were a return of the repressed, Hayslip explains how unhappy she was with her first husband, Ed Munroe, who had been twice her age, and why she would be attracted to a young Marine officer for a brief love affair. Hayslip also elaborates on how she dated and married Dennis Hayslip after Munroe’s death. After the death of her second husband, Hayslip invested in the stock market and real estate and finally started her own restaurant business. By publicizing her private life, Hayslip not only challenges the stereotype of Vietnamese women as passive sexual objects catering to Western

men but also demonstrates her talent in business and management.

In a certain way, Hayslip's memoirs have interwoven in the American literary and popular representation of the Vietnam War and the Vietnamese and explained in a convincing way why and how the American military could not win the hearts and minds of the Vietnamese people. Today, she continues to promote reconciliation and understanding between Vietnam and the United States and contributes to the reconstruction of the postwar Vietnam.

Hells Canyon Massacre (1887)

On May 25, 1887, over 30 Chinese gold miners were massacred in Hells Canyon in northeastern Oregon. The brutal crime was not discovered until weeks later when several bodies floated down river and another group of Chinese miners reported what they found at the site. In the following spring, several members of a gang of known rustlers were indicted for the murder including Bruce Evans, J. T. Canfield, Hezekiah (Carl) Hughes, Omar LaRue, Hiram Maynard, and Robert McMillan, a boy of 15. Another youth who was arrested, Frank Vaughan, confessed his role and was later released. Evans, Canfield, and LaRue fled and were never brought to trial. A jury trial found three of the gang (Hughes, Maynard, and McMillan) not guilty. The court journal for the trial contains a blank page for the day that prosecution testimony was heard.

The murderers stole several thousand dollars of gold dust, but racial hostility was also an apparent motive for the massacre. Local authorities covered up details of the massacre, and the trial did not receive press coverage. Additionally, white settlers largely ignored the massacre in historical accounts. Reparation claims by the Chinese government for a series of attacks on Chinese people and property between 1885 and 1887 did not include the Hells Canyon massacre because so few facts were known by the Chinese government. The United States agreed to make an indemnity reparation payment of \$276,619.75 to the Chinese government in October 1888 following the enactment of the Scott Act, which barred tens of thousands of Chinese from returning to the United States from China.

The names of most of the Chinese miners are not known, but records include the names of a dozen including crew leaders Chea Po and Lee She. The miners were all from the Punyu district of Guangzhou (Canton). Chea Po's crew was organized by the Sam Yup Company in San Francisco and included eight with the surname of Chea, probably of the same clan. In this period approximately 60 percent of those mining in the Idaho territory and Oregon were Chinese.

Although the exact number killed is not certain (various accounts recorded the number as 31 or 34), the magnitude of the massacre may have exceeded other more publicized murderous outrages against Chinese residents in the western United States such as the Rock Springs, Wyoming massacre of 1885 in which at least 28 were murdered, and the Los Angeles lynching and attack in 1871, which took 19 lives.

A granite memorial was dedicated at the site in June 2012 with the inscription: "Chinese Massacre Cove, site of the 1887 massacre of as many as 34 Chinese gold miners. No one was held accountable."

Hindus in the United States

Hinduism is the world's oldest continuously practiced religion. With close to a billion followers, it is the third-largest religion after Christianity and Islam. Hinduism does not espouse a single belief system, creed, or scripture; neither does it claim a founder. The term, "Hindu" was originally used by ancient Persians to refer to the people living in the area of the Sindhu River, today known as the Indus River, and beyond. "Hindu," a variant form of "Sindhu," was, therefore,

a geographical designation rather than a religious one. Much later, the British used Hindu as a religious label in an attempt to distinguish certain practices and beliefs from other religions found in India. Some would argue that the term *sanatana dharma*, which means "eternal natural law," describes the religion better than the term Hinduism. During the nineteenth century, Christian missionaries in India chose the word *dharma* as a translation of "religion." *Dharma* refers to a person's social duty based on gender, age, and caste. Thus, *dharma* implies a prescribed way of acting rather than a belief system and indicates a person's place in an interdependent social structure. Prescribed activities include appropriate ways of relating to others, the types of food one eats, and the work in which one engages. In this sense, *dharma* refers broadly to Hindu culture.

Hindu priest sprinkles water on worshipers as he blesses the congregation at the Prem Bhakti Mandir Hindu temple during the "Nine Nights of Navratri" festival in the Jamaica, Queens, neighborhood of New York City, October 17, 2012. (AP Photo/Kathy Willens)

Understanding Hinduism as *dharma* is relevant to understanding Hinduism in America. One should not assume that a person identifies as a Hindu because she holds a certain set of beliefs or because he worships in a particular way. Most immigrant Hindus identify with the designation because, very simply, they were born into a Hindu family. Even an atheist may self-identify as Hindu based on this criterion. The distinguishing line between religion and culture is not easily drawn in Hinduism. Being Hindu often means embracing a set of values, the strongest among these being commitment to family and respect for elders.

The term “American Hindu” applies largely to first-, second-, and third-generation immigrants from India, but it includes others as well. Countries with large Hindu populations include Nepal, Mauritius, Fiji, Guyana, Suriname, Zambia, and Trinidad, as well as European countries, particularly England. People have immigrated to the United States from these countries as well as from India. Since 1965, when an Immigration Act ended a national quota system on Asian immigrants to the United States, Hinduism has increasingly become a part of America’s religious landscape. The Pew Forum on Religion and Public Life reported in its 2007 survey of religion in the United States that about 900,000 Hindus reside in the United States, comprising about 0.4 percent of the population. Immigration continues to expand, demonstrated by the fact that eight out of ten Hindus in the United States are foreign born. The Pew survey found that Hinduism has the most stable identity of any religion in the United States, with 90 percent marrying within their faith. It is likely that these statistics will change, however, as second and third generations of Hindu immigrants embrace American culture. According to the Hinduism scholar Vasudha Narayanan, many assimilated members of second-generation Hindus are marrying into other traditions.

This 900,000 figure does not include the growing number of Americans who believe in karma and reincarnation, practice Hindu-style meditation or chanting, or have a Hindu guru. Even though they do not identify themselves as Hindu in surveys, they represent a distinct influence that Hinduism is having in the United States. Interest in Hinduism was first

sparked in the early part of the twentieth century. In 1893, Vivekananda spoke at the World Parliament of Religions in Chicago, and the Vedanta Society that he established is still active in America. It was this organization that built the first Hindu Temple in the United States in 1906. In 1920, Paramahansa Yogananda spoke in Boston as a delegate to the International Congress of Religious Liberals and later established Self-Realization Fellowship, another Hindu-inspired organization that is still active today. Beginning with the Immigration Act of 1965, Hindu missionary activity increased as many gurus came to teach, and sometimes permanently reside, in the United States. Interest in Hindu practices expanded greatly in the early 1970s. Close to a million people began the practice of Transcendental Meditation as taught under the auspices of Maharishi, renowned for being the guru of the Beatles. In 1975 alone, 292,517 people were initiated into the technique of Transcendental Meditation.

Another type of Hindu influence can be seen as non-Indians become interested in the cultural traditions of India. Diwali, for example, the Indian “Festival of Lights,” is becoming a tradition at college campuses across the United States. Indians and non-Indians work together to create shows that feature various styles of Indian music and dance. Through movies, fashions, and food, Indian culture is infiltrating American society. One might argue that this phenomenon represents Indian culture and not Hinduism per se. Yet if an important identifying characteristic of Hinduism is cultural traditions, and if non-Hindus are establishing new customs of celebrating Diwali, of painting henna designs on brides, or of wearing saris instead of Western-style formal wear to high school proms, it could easily be argued that Hinduism is expanding its sphere to incorporate those who do not hail from a traditionally Hindu society.

Based on these trends, “Hindus in the United States,” is more complex than a simple documentation of immigrant Hinduism can reveal. As cultures and religions increasingly intermingle in the twenty-first century through marriage and cultural globalization, the idea of particular religions being identified only with particular immigrant groups may need to be reexamined. It is still possible at this time, however,

to identify practices and attitudes that correlate with Hindu immigrants. Furthermore, the desire of some immigrant Hindus to remain faithful to the practices and values of their country or state of origin and to pass these on to their children is evident. Because immigrant Hindus are a minority in the United States, a certain amount of homogenization of these practices and values must take place. The languages, cultures, and specific religious practices of immigrants vary depending on the country of origin or even the state of origin within India. These various groups must find common ground when relying on fewer social resources than would be available to them in their home country or state. With an increasing number of immigrants, however, it is sometimes possible to maintain unique Hindu groups, as can be seen with the Swaminarayan *sampradaya* (sect) based in Gujarat, which has its own temples in many cities throughout the United States.

Hinduism in the Home

Hindu identity is maintained primarily through family traditions. The home serves as a center for religious life. Hindu values and traditions of belief and worship are passed from one generation to the next through storytelling, through media such as books, comic books, movies, videos, music, songs, and satellite connection to Indian TV, and through worship at home altars. For example, the incarnation of Vishnu in the form of Ram maintains his popularity in the United States for Hindus as he has for many centuries in India. Children learn his story, related in the epic *Ramayana*, through the 78-episode TV series created in 1987–1988 by director Ramanand Sagar, which is now available on DVD. Children may also learn about Ram through the popular *Amar Chitra Katha* comic book series. The story of Rama's return to Ayodhya may be told on Diwali, the night of the festival of lights. The Hindu god Shiva may be celebrated on the night of *Mahashivaratri* through a gathering of friends and family within the home, where *bhajans* and *kirtans* would be sung and a tray filled with lights offered to a representation of him. Food, after being placed before an altar, would be offered as *prasad*, a grace-filled gift, to family and guests. Many Indian-

American families watch Indian television channels through satellite TV. Some rely on satellite to connect them to the teachings of gurus, which are broadcast daily.

Almost all Hindu homes have an altar. Some altars are simple and may have only one deity represented by a picture or a small statue. Others are quite elaborate, containing many deities as well as representations of gurus, living or deceased. In some homes an entire room is set aside for daily worship. However, it is more common for altars to be set up in the kitchen pantry or the bookcase of a home office. The doors of the pantry or case can be closed when not in use. One shelf may be used to display a deity and other shelves used as storage space for candles and incense. The daily rituals that women (and sometimes men) perform vary. The first step in worship never varies, however, and that is bathing before the worship begins. The simplest form of daily worship involves lighting a candle or turning on an electric light on the altar. More complicated worship involves chanting *shlokas* (hymn verses) to one or more deities. For those who have time, ritual worship may entail a full hour of chanting and offering gifts of light, food, flowers, or water to the deities. The simpler forms of worship are more common with the busy lives that many immigrant Hindus lead. In fact, some create their altar in a place that will naturally be passed on the way to the garage, such as a laundry room. That way they can stop and say a short prayer on their way out the door before they begin work or school. A simple prayer is viewed as enough to create a touchstone to Hindu religion and serve as a reminder to children of their heritage.

Social customs that have helped to define Hinduism such as arranged marriages, specified gender roles, and caste still have a place in the United States, although some of these customs are changing. The practice of not dating before marriage is a feature of Hinduism in the United States that is likely to change in the coming years as more assimilation occurs. Currently, however, dating is not common. This is partly due to the fact that Hindu parents stress academic excellence, and therefore teens and young adults have little time for dating. Arranged marriages are still acceptable to many Hindus of the younger generation. "Arranged" usually means parents or other family

members suggest prospective partners. Even when young adults choose their own relationships, certainly the approval of parents is sought and valued. Gender roles appear to be changing in an American setting. Women often will perform public ritual ceremonies that once were reserved for men. Attitudes toward women during their menstrual cycles are also changing. Women in some households prepare food while menstruating. However, it is still quite common for women not to touch sacred objects or perform worship during their menstrual cycle. The caste system has been an integral feature of Hinduism for millennia. Traditionally, Hindus belong to the caste (*jati*) into which they were born. Some still seek to marry within their caste. Many immigrant Hindus, however, feel that the caste system is no longer important. In fact, many second- and third-generation Hindus do not even know their caste background.

Hinduism in Temples

In India temples are found in every village and in every neighborhood of large cities. People always have a sacred haven where they can worship. If there is no physical structure, a tree, a river, or a rock can represent the holy, and worship occurs at all of these sites. When the first Indian immigrants arrived in the United States, no designated Hindu holy places existed. As more Hindus arrived, they began to gather in people's homes to worship together. Over time the need for a place set apart from the cares of the world became obvious. Immigrants also wanted to associate with others who shared the same language and culture. Culture, ethnicity, and religion are deeply intertwined for Hindus. Attempts to build solidarity through forming secular organizations with others from the same region of India generally proved to be weak. Often the religious affiliations of those in the group who are more highly represented slowly change the nature of the secular organization to a religious one (Kurien 7). Thus, religious organizations in the form of Hindu temples are much stronger than secular organizations, yet these temples serve purposes beyond what many in the West might consider religious. Temples serve not only as places of worship, but also as cultural centers that offer classes in Indian languages, dance, and

music. Political holidays, such as India's Independence Day, are often celebrated in temples.

Hinduism in India can be very generally categorized as those who worship Vishnu as their chosen deity (Vaishnavites) and those who worship Shiva (Shaivites). Followers of a form of the goddess, such as Kali, are also common. Thus, temples are usually dedicated to one of these major deities. One would not enter a temple of Shiva and find a *murti* (statue) of Vishnu. This is not the case in the United States. All of the major deities are housed within a single temple so that people from many *sampradayas* (sects) can worship together. The style of architecture and the style of sculpture also vary, with the most noticeable differences occurring between the North and the South of India. In the United States the style of the *murtis* or architecture may be representative of the greatest population of Hindus in the area where the temple is built. As the number of immigrant Hindus increases, however, several temples may be built in a single city so that the same divisions of people and language groups that occur in India are duplicated in the United States.

One example of regionally based temples is the Swaminarayan *sampradaya* and its related organization, the Bochasanwasi Akshar Purushottam Sanstha, or BAPS. The Swaminarayan Temple stresses its Gujarati heritage, and classes in Gujarati are held on Sundays as part of the Sunday School for children. Swaminarayan temples are associated with a guru, Pramukh Swami, part of a *parampara* (guru lineage) that originated with Sahajanand Swami, also known as Swami Narayan (1781–1830). Swami Narayan and other gurus in his lineage are considered by their followers to be incarnations of the divine. As is the case with most Hindu gurus, several lines of descent result as different people claim to be the successor of a guru. One of these lines of descent led to the founding of BAPS, which has a million followers around the world. It is very popular among Gujaratis who come to America, even though it makes up only about 5 percent of the population of Gujarat, and one-third of the Swaminarayan sect for the state. Scholar of American Hinduism, Raymond Brady Williams, found that one-third of the 224 American BAPS followers whom he surveyed became members after their arrival in the United States and that 80 percent of first-generation

immigrants in BAPS became more interested in religious matters after coming to the United States. This speaks well for the organization's role in helping to maintain a strong Hindu heritage in the United States. BAPS considers itself to be a "socio-spiritual organization" that addresses all the needs of its members. It stresses charity and responds to crises with donations and services.

Hinduism in the United States is continually evolving. Undoubtedly, Hindu temples will proliferate as Hindu immigration increases. The homogenization of sects that marked the early phase of Hinduism, from the 1960s to the turn of the millennium, appears to be changing to accommodate different strains of Hindu religiosity. It is also the case that some Hindu values and customs regarding gender roles and caste are changing. As Hindus marry people of other religions, it remains to be seen how much they will hold to traditional styles of Hindu worship and values in the home and in religious organizations. On the other hand, some Indian immigrants are more religious than they would be if they had remained in their birth country because their ties to Hinduism help to create a sense of identity. As with followers of other religions in the United States, it is likely that some will become more secular whereas others will seek ways to intensify their religious identity.

Hirabayashi v. United States (1943)

The initial trial *Gordon Kiyoshi Hirabayashi v. the United States of America* was held in the United States District Court in Seattle, May 1942. The charges were: violation of Public Law #503, Curfew Act, and violation of Civilian Exclusion Order No. 57. Gordon Hirabayashi was found guilty of each offense charged in the two count indictment.

The District Court decision was appealed in February 1943 and transferred to the Circuit Court of Appeals, which passed the case on to the United States Supreme Court on March 27, 1943. *Gordon K. Hirabayashi v. United States*, United States Supreme Court: Curfew 320 U.S. 81, 638 S.Ct. 1375; Exclusion 105, 63 Supreme Court, 1387. On June 21, 1943, the court upheld the validity of Hirabayashi's conviction on the curfew order alone.

Gordon Hirabayashi v. United States of America: writ of Coram Nobis (regarding United States District Court ruling in Seattle, May 18, 1944). The Court denied the Government motion to dismiss, and set a hearing on the writ of *coram nobis* for June, 1985.

Gordon K. Hirabayashi v. United States of America: United States Court of Appeals for the Ninth Circuit, March 2, 1987. The judgment of the district court as to the exclusion conviction was reexamined. The judgment as to the curfew conviction was reversed and the matter was remanded with instructions to grant Hirabayashi's petition to vacate both convictions.

Gordon K. Hirabayashi

Gordon Hirabayashi, a Nisei, second-generation Japanese American, was born in Seattle in 1918 and raised in the small rural community of Thomas just south of Seattle. It was a closely knit Japanese American community with supportive Euro-American neighbors.

Gordon's youth revolved around relationships not only in the Japanese American community but also with the American society. Gordon's activities included Japanese- and Euro-American networks, Elementary School, religious, Boy Scout, and sports activities. As such, Gordon's childhood entailed the merging of both Japanese American and American experiences. At the University of Washington, Gordon continued his religious affiliations. He became a student leader in the University YMCA and joined the University Quaker meeting. He also joined the Japanese American Students Club.

World War II

On February 19, 1942, President F. D. Roosevelt, acting under his emergency war powers, issued Executive Order 9066. The Order enabled the secretary of war and the military commanders under him to carry out any necessary steps to protect national security, including removal of any suspicious individuals from military areas. A proclamation issued March 24, 1942, that was essentially a curfew order, restricted the movement of certain individuals including persons of Japanese ancestry, whether citizens or not. General John L. DeWitt's order confined all enemy aliens: Germans, Italians, and Japanese—including U.S. citizens of Japanese ancestry—to their homes between 8 p.m. and 6 a.m. The same curfew order also restricted travel to a radius of five miles from a given individual's home.

The government soon posted an official proclamation on telephone poles and Post Office bulletin boards: NOTICE: TO ALL PERSONS OF JAPANESE ANCESTRY, BOTH ALIEN AND NON-ALIEN, ordering all Japanese and Japanese Americans into camps run by the military and then civilian authorities.

American Citizenship

Because of his American citizenship and Christian religious principles, Gordon Hirabayashi believed that both curfew and mass detention were unnecessary, discriminatory, and unjust. He decided to resist both orders, on principle, and retained a lawyer.

Hirabayashi's decision caught the attention of progressive Seattle community leaders, and quickly his stand garnered the status of a test case with support on the part of religious and political sympathizers.

Hirabayashi and his Quaker lawyer, Art Barnet, presented themselves at the Seattle FBI office on May 13, 1942 with Gordon's written statement, "Why I Refuse to Register for Evacuation." In the statement, Gordon wrote:

Over and above any man-made creed or law is the natural law of life—the right of human individuals to live and to creatively express themselves. No man was born with the right to limit that law . . . This order for the mass evacuation of all persons of Japanese descent denies them the right to live . . . Over sixty percent are American citizens, yet they are denied on a wholesale scale without due process of law the civil liberties which are theirs . . . If I were to register and cooperate under those circumstances, I would be giving helpless consent to the denial of practically all of the things which give me incentive to live. I must maintain my Christian principles. I consider it my duty to maintain the democratic standards for which this nation lives. Therefore I must refuse this order for evacuation.

With the support of the Gordon Hirabayashi Defense Committee, made up of progressive supporters in the University District, the initial trial proceeded. Lawyer Frank Walters, argued the 5th Amendment right of due process was violated by the exclusion order, emphasizing that Gordon had never been accused of posing a danger in terms of espionage or sabotage, the two ostensible reasons for the exclusion proclamation. He moved that the Court dismiss the indictment on the grounds that the defendant had been deprived of liberty and property without due process of law. Furthermore Gordon and his lawyer charged that Executive Order 9066, Proclamations 2 and 3, and Civilian Exclusion Order #57 of the Military commander, as well as Public Law #503, were all unconstitutional and void. The judge pronounced Gordon guilty of each offense charged in the two counts of the indictment. His trial lasted just one day.

Hirabayashi and his lawyers pursued judicial review at the United States Supreme Court. In May 1943, his case was given a hearing, and in the following month his convictions were upheld. In an interesting twist of fate, the justices decided to hear only the curfew aspect of Hirabayashi's case, and ultimately upheld the right of the president and Congress to take any necessary measures needed, in times of crisis, to defend national security. Although the case generated judicial debate, all of the Supreme Court justices ended up concurring with the majority ruling in regard to the legality of the imposed curfew.

Implications of the Hirabayashi Case

There are at least three reasons to revisit to *Hirabayashi v. the United States* today. First, it illustrates a situation where the standard principle of checks and balances broke down. Instead, that is, of fully tackling the issue of mass removal and mass incarceration of an entire ethnic/racial group, the Supreme Court Justices dodged a key constitutional issue by focusing only on the wartime need for curfew regulations.

Second, given the partial success of Hirabayashi's *coram nobis* case in 1986, it has now been demonstrated that the war department manipulated evidence and essentially lied to the Supreme Court in making its case. Using the government's own documentary record, that is, Hirabayashi's legal team was able to demonstrate that military leaders and federal officials knew full well that Japanese Americans did not constitute a wholesale threat to national security, and that there were means in place to identify and contain those persons inside of the community who may indeed have constituted a potential threat. This point would have reinforced Hirabayashi's claim that the Fifth Amendment was being violated by the federal government's actions.

Third, as legal historian and scholar Eric Muller has pointed out, in a post-9/11 world, the domestic use of a wholesale curfew against an identifiable segment of the U.S. population—such as Middle Eastern, or Muslim, Americans—is a much more likely scenario should any site on the lower 48 states be subject to a large, violent attack. In this sense, the Supreme Court's Hirabayashi ruling could take on a new

relevance, especially because the mass incarceration of a domestic population would be relatively unlikely, not only because of the expense, but also because the public at large would probably not support such a measure.

Hirahara, Naomi (1962–)

Born on May 12, 1962, in Pasadena, California, Naomi Hirahara is the daughter of Isamu and Mayumi Hirahara. She attended Stanford University and graduated with a degree in international relations and had the opportunity to study at the Inter-University Center for Advanced Japanese Language Studies in Tokyo and volunteer in Ghana, West Africa. For nine years, Hirahara worked as a reporter and editor of the *Rafu Shimpo*, a Japanese American newspaper based in Los Angeles during the redress and reparations movement (a pivotal moment in history for Japanese Americans) and the Los Angeles riots. In 1996, Hirahara left the newspaper to pursue other writing endeavors and attended Newman University in Wichita, Kansas as a Milton Center Fellow in creative writing. After the completion of the program, Hirahara returned to California and began to write and publish her own work, even establishing her own small press, Midori Books. Currently, Hirahara resides in Southern California with her husband, Wes, where she leads a number of writing workshops. She is also an active member of her church and serves on the board of the Southern California chapter of the Mystery Writers of America.

Although Hirahara is best known for her beloved character Mas Arai and his subsequent and often reluctant detective adventures, she began writing nonfiction that focused mostly on marginalized or little-known Japanese American history. Hirahara’s nonfiction is region-specific and illuminates local history that is important to particular community formations in Southern California. For instance, *Green Makers: Japanese American Gardeners in Southern California* (2000) examines the history of this group of Japanese Americans who struggled against discrimination and faced economic limitations as they labored to keep their communities green and beautiful. Hirahara has also authored two biographies for the Japanese American National Museum: *An American Son: The Story of George Aratani, Founder of Mikasa and Kenwood* (2000) and *A Taste for Strawberries: The Independent Journey of Nisei Farmer Manabi Hirasaki* (2003). In addition to her accounts of these two influential Japanese American community members, she compiled the reference book, *Distinguished Asian American Business Leaders* (2003), which highlights the lives of 96 businessmen and -women whose stories are informative as well as inspiring. In 2004, she coauthored *Silent Scars of Healing Hands: Oral Histories of Japanese American Doctors in World War II Detention Camps*, which looks at how these men and women provided medical assistance to fellow internees with limited equipment, technology, and funds. She also released the book, *A Scent of Flowers: The History of the Southern California Flower Market* (2004) that examines the contributions of ethnic families to this particular industry through their personal stories and photographs.

Hirahara’s first mystery, *Summer of the Big Bachi* (2004) took her 15 years to conceptualize, research, and complete. Her novel follows Mas Arai, a Kibei Hibakusha gardener turned sleuth who is forced to remember his traumatic past as a Hiroshima atomic bomb survivor as he searches for a person from that past. Kibei refers to a Japanese American who was born in the United States but grew up in Japan whereas Hibakusha refers to a Hiroshima atomic bomb survivor. Mas is loosely based on Hirahara’s own father who was born in California but taken to Japan as an infant; he was only miles away from the epicenter of

the atomic bomb but survived. At the end of the war, he returned to California and became a gardener and landscaper much like the fictional Mas. Hirahara weaves this particular history into her novel because it was not only an important part of her own family’s personal story but one that has remained silent within the community. Although Hirahara did not expect to continue with Mas’s character, *Summer of the Big Bachi* is the first of the current four in the Mas Arai series—which may be continued. The second of the series, *Gasa-Gasa Girl* (2005) follows Mas who stumbles upon a murder when he visits his daughter who is in need of his help. *Snakeskin Shamisen* (2006) won an Edgar Allan Poe Award in 2007 for the category of Best Paperback Original and highlights the Okinawan community in South Bay, California. The fourth in the series is *Blood Hina* (2010), whose mystery revolves around the disappearance of an ancient Japanese doll display that Mas must solve when the blame is placed upon his friend. Hirahara has also written a young adult novel, *1001 Cranes*, about a young girl who is living through her parents’ divorce but strengthening her own relationships to family and friends through the tradition of origami.

Hirayama, Satoshi “Fibber” (1930–)

Satoshi “Fibber” Hirayama was an all-star Japanese American baseball player who began his serious baseball days as a 12-year-old farm boy in Exeter, California. During World War II, his family was relocated

with thousands of other Japanese Americans to Poston, Arizona, site of Internment Camp Number Two. When there, he played sandlot football and moved on to organized baseball within the camp's 32-team league.

Hirayama refined and developed his baseball skills with the competitive nature of camp ball. After the war, his family returned to California's San Joaquin Valley. He finished high school and received a scholarship to play baseball at Fresno State College. There he lettered in football and baseball. His incredible base path speed led to two records that stood for more than 40 years: 76 stolen bases in a season and 5 stolen bases in one game.

With speed on the base paths and a strong arm in the outfield, his world-class skills earned him a contract from the Stockton Ports, a farm team of the St. Louis Browns. He became one of the first Japanese Americans from Fresno to play professional baseball. But one year later Uncle Sam called; from 1953 to 1955, Hirayama continued his baseball days as a soldier at Fort Ord. Many of his teammates went on to Major League clubs.

After being discharged, Hirayama signed with the Hiroshima Carp in the Japanese Baseball League. Both Hirayama and fellow teammate Kenshi Zenimura were received with incredible fanfare and popularity. They were the first mainlanders to play in Japan. More than 100,000 fans showed up at the Hiroshima train station to greet these two U.S. ballplayers. Hirayama became a two-time All-Star and competed in Japanese-MLB All-Star games against future Hall-of-Famers like Mickey Mantle, Whitey Ford, and Stan Musial.

Hirayama played for Hiroshima for 10 years, and later became a scout for the Carp organization in Japan and in the Dominican Republic. During his career, Hirayama exemplified the competitive spirit of a young Nisei who rose to many of life's challenges. He pioneered baseball in California and abroad in Japan. He truly is one of the game's great ambassadors and a legend in Japanese American baseball history.

Hirono, Mazie K. (1947–)

Mazie Hirono is a Japanese American politician from the state of Hawaii. She has served Hawaii's 2nd Congressional District since 2007 and was lieutenant governor of Hawaii between 1994 and 2002. She is also the first immigrant woman to serve in Congress.

Mazie Keiko Hirono was born on November 3, 1947, in Fukushima, Japan to a Hawaiian-born mother and a Japanese-born father. However, to escape an abusive relationship and provide a better future for her children, Hirono's mother left Japan and brought her children to the United States. Hirono was eight years old at that time. Coming from humble beginnings, Hirono had to work to put herself through school. She graduated from high school and later received a bachelor's degree from the University of Hawaii in 1970. Hirono wanted to help people and had originally intended on becoming a social worker. However, she became interested in politics when she realized that social workers can help only those who are in need at a very basic level whereas changes in politics will be able to generate wide-sweeping effects. After college Hirono worked in the state legislature and gained experience in politics through working on other people's electoral campaigns. After working for five years, Hirono went off to law school and received a doctor of jurisprudence from Georgetown University Law School in 1978.

After law school, Hirono returned to Hawaii to practice law. She served briefly as the deputy attorney general before entering private practice. Hirono entered politics when she was elected into the Hawaiian State

Legislature in 1980. She served with the Hawaiian House of Representatives between 1980 and 1994. She also served as the chairman of the Consumer Protection and Commerce Committee between 1987 and 1992.

In 1994, Hirono decided to move up the political ladder and subsequently won the Democratic nomination for lieutenant governor. She was paired with Ben Cayetano and they would win their first of two terms in 1994. During her time as lieutenant governor, Hirono focused her efforts on cultivating a good relationship with the legislature and pushed for issues such as workers' compensation reform. She also worked to better Hawaii's transportation infrastructure and reshaped the bureaucratic structure of the state elections office by moving it out of the lieutenant governor's office.

At the end of her second term, Hirono intended to run for governor even though she did not have the endorsement of Cayetano, with whom her working relationship had become estranged. She ran against Republican opponent Linda Lingle and eventually lost the race.

Temporarily out of public office, Hirono devoted herself to the Democratic Party. After Patsy Mink passed away in 2002, she approached Mink's husband for permission to use Patsy's name for a political action committee that would support the political campaign of pro-choice women candidates. The Patsy T. Mink Political Action Committee was founded on January 7, 2006.

When Congressman Ed Case announced his intentions to challenge Daniel Akaka for the Senate seat in 2006, Hirono entered the race to fill Case's then vacant 2nd District congressional seat. Hirono was successful and became the first immigrant woman to be elected to Congress.

Since Hirono's election, she has joined the Committee on Education and Labor, and the Committee on Transportation and Infrastructure. The education of young children is one of the many issues that Hirono champions. In the 110th Congress she sponsored the PRE-K Act, which would have provided funding for state-approved pre-k education. However, this piece of legislation never made it out of Congress. Nonetheless, she received recognition from the

national preschool advocacy organization Pre-K Now for her work.

Hirono is also known as a progressive voice in Congress. In June 2009, she delivered a statement on the House floor highlighting the work of Dr. Tiller after the U.S. House of Representatives issued a resolution condemning the murder of the controversial Dr. Tiller, who was one of the only few publicly known physicians that still performed late-term abortions (abortions after the 21st week) in the United States.

Aside from legislative work, Hirono is also involved in multiple caucuses. Some of her most important ones include the House Democratic Caucus, the Congressional Asian Pacific American Caucus, the Congressional Caucus for Women's Issues, and the Congressional Lesbian, Gay, Bisexual, and Transgender (LGBT) Equality Caucus. Hirono was elected to the U.S. Senate in 2013 in a special election to replace Daniel Akaka.

Hmong American Women

Hmong American women have made tremendous strides during the last 35 years in the United States. Although conscious of the barriers women encounter in the face of prevailing male privilege in Hmong society, one must also avoid the temptation to engage in imperialist impulses by crediting their progress to Euro-American influence alone. Hmong women's achievements must be balanced between tradition and new opportunities. Despite occupying an inferior

status in traditional society, women have always had influential cultural, economic, and political roles. Opportunities have increased for Hmong women in the United States, but their progress is also deeply rooted in a tradition that accords a level of autonomy to the female sex. Hmong American women have been especially talented in pushing the boundaries of this autonomy, helping to lift their people to new heights.

Hmong cultural practices give the appearance of a rigidly organized patriarchal society, but historians argue for a matriarchal past that was gradually eroded by Han Chinese patriarchy during thousands of years of subjugation. Today, in America, traces of Hmong matriarchy remain evident. Women are the repositories of cultural wisdom exemplified in the role of the *Maum Phauj* (“Grand Aunt”), the oldest living aunt of the paternal clan who possesses the power to remove curses, forestall calamity, and change traditions. Moreover, women have religious and social roles as shamans, herbalists, midwives, fortune tellers, and spirit mediums with access to the supernatural world. Women shamans and healers are accorded the same respect as males following a ceremony.

By and large, men continue to monopolize the rituals having to do with birth, marriage, and death, but the Hmong have no mandates against women becoming funeral masters or marriage negotiators. Hence, women are beginning to display their mastery of the *qeej* bamboo instrument at the funerals of youths. The funerals of respected elders remain the exclusive preserve of male ritualists, however. Moreover, women have yet to be invited to become marriage negotiators. Nonetheless, changes are occurring in the Hmong American community that contests the discourse of a rigid, patriarchal society dominated by men.

Meanwhile, Hmong women’s economic value has remained a constant over time. Scholars argue that women have had a powerful economic clout since 1975 as their beautiful *padau* (embroidery) commanded incomes of over \$1 million annually—much more than the income generated by family farming. This fact is not a surprise because women have always been essential breadwinners in the family back in the mountains of Laos. Hmong folktales highlight women’s indispensable role in men’s financial, social, and political climb. A far contrast from the Western

Sleeping Beauty who awaits the kiss of a prince, Hmong women are depicted in folktales as diligent, clever wives and “dragon princesses” who fashion their “orphan” husbands into wealthy princes. This important economic distinction is reflected in the collection of a bride price for every woman at the time of marriage. The bride price is paid to the parents for raising a daughter, and also as compensation for the loss of her future economic contributions. The bride price relinquishes a daughter from the worldly and spiritual responsibilities that her brothers must assume for the parents—caring for them in old age and feeding their spirits after death.

Polygyny in traditional society may also have been linked to the economic importance of women. To increase wealth and personal standing, a Hmong man may marry multiple wives who contribute to the family work load. In general, however, the burdensome bride price that could easily exhaust a family’s lifetime savings often worked to prevent polygyny in the past. Only the wealthiest Hmong men like Lo Bliia Yao (five wives), Ly Foung (four wives), and General Vang Pao (seven wives) could afford more than one wife. Today, in America, the bride price is largely symbolic, being set by the Hmong 18 Council at \$5,000 maximum. Ironically, this low rate, which could be saved up in a single year by middle-income Hmong American families, has allowed Hmong men to more easily afford minor wives. The incidence of Hmong men legally divorcing their wives so that they could import a minor wife from Asia seems to be on the increase.

Women’s economic value is reflected in the division of labor in traditional society. Hmong women bore the brunt of the agrarian lifestyle, having double duty outside and inside the home. Robert Cooper argues, however, that “sexual division of labour within the productive process is not unduly weighted against women . . . [despite] . . . a distinction in household routine that does not contradict a ‘master-servant’ interpretation of the marital relationship” (Cooper 1984, 136). In traditional society women worked beside men in the fields while also presiding over the majority of household chores such as cooking, cleaning, child-rearing, and preparing feeds for domestic animals. Women also gathered edible forest products, cultivated small gardens of vegetables and fruits, and collected

firewood and fetched water. Weaving, sewing, and embroidery were the exclusive preserves of women. Men, on the other hand, built houses, hunted, fished, and engaged in silversmith work, forged tools and weapons, and fashioned silver jewelries. Men were forbidden to touch women's *padau* because it was believed that to do so would result in their inability to trap game. Accordingly, hunting and trapping were exclusive preserves of men. Women were also warned not to set traps that would catch only snakes. The war and displacement from Laos have forced some flexibility in labor divisions, however. In the refugee camps of Thailand, for example, men often aided in the sewing of "story cloths" that commanded vital revenues. Hmong men in Laos today also participate in replicating these tapestries that are sold to tourists for hundreds of dollars each. Income from *padau* far surpasses hard labor, which commands an average annual salary of only \$200.

Back in Laos Hmong women have not had much opportunity to assume political roles. They remained mainly as influential wives who connected men to power. Hmong leaders such as General Vang Pao, for example, emerged by virtue of their ability to form marriage alliances by taking wives from dominant clans. In the United States, Hmong women have seized the opportunity to be political pioneers, however. Choua Lee ran a successful campaign as a school board member in St. Paul, Minnesota in 1992, becoming the first elected Hmong American official. Even with more pomp and fanfare, Mee Moua captured a Minnesota state senate seat for her Eastside St. Paul district in February 2002. Other notable political women are Kazoua Kong-Thao and Vally Moua Varro, Mee's younger sister, both of whom currently sit on the St. Paul School Board. Although more Hmong men than women have sought political office in Minnesota, only Cy Thao, a former member of the Minnesota House of Representatives, has claimed success similar to the women. Unlike the women in Minnesota, Hmong women in other states have not been able to make similar inroads into politics. Hmong men in Wisconsin and California lead in political elections.

The educational attainment of Hmong women is quite stunning considering that they were the most

disadvantaged back in Southeast Asia. Hmong men have only begun to obtain education in the second decade of the twentieth century. Women lagged behind until the period of the Secret War in the 1960s, when the Hmong were displaced from the mountains into the lowlands where schools were located. At that time, a handful of girls from influential families began to gain access to education. A few among them were able to advance enough to obtain teachers' training certificates. The only systematic effort made by General Vang Pao toward educating Hmong women of this period, however, was to recruit them as nurses for wounded soldiers. Hmong women were not given the opportunity to study abroad.

Despite multiple barriers, Hmong American women have been able to obtain postgraduate professional degrees and doctorates. Some of these notable women are Drs. Pa Houa Yang and Zoua Pa Yang, the first female graduates of the University of Wisconsin–Madison Medical School; Drs. Phoua Xiong and Yeng Yang, the first female graduates from the University of Minnesota Medical School; Kaoly Lyfoung, who was the first woman to obtain a law degree from the University of Minnesota; and associate professor Dia Cha, formerly of St. Cloud State University. Other highly educated Hmong women who have been recognized for their community work are Maykao Hang, a Brown University and University of Minnesota alumna and the current CEO of the Wilder Foundation in St. Paul, and Kao Ly Ilean Her, the Executive Director of the Council on Asian Pacific Minnesotans. Jiu Lee ranks among the most enterprising Hmong businesswomen in the United States, having founded the Golden Harvest market in St. Paul that is referred to by Hmong as "taj laj Ntsum" (Jiu's market). Mai Neng Moua and Kao Kalia Yang are distinguished for their respective landmark publications, *Bamboo Among the Oaks* and *The Latehomecomer*. Representing the West Coast is Dr. Leena Her, a graduate of Stanford University and assistant professor at Kennesaw State, part of the University of Georgia system. These are just a handful of the many highly educated Hmong American women who are emerging as role models in various fields.

Overall, Hmong women still lag behind men in educational attainment. The 2000 Census reports that

among a population of 186,310, 56.8 percent of Hmong women across the United States have completed no schooling compared to 33.5 percent of men. Hmong men also have higher graduation rates with 34.4 percent holding high school degrees as compared to just 20.1 percent of women. The disparity is similar at postsecondary levels where 16.5 percent of Hmong men held bachelors or associates degrees in contrast to 7 percent of women. Only 2.1 percent of men and 1 percent of women held postgraduate degrees.

Although women lagged behind in degree attainment, the perception in the community is that women are succeeding at a higher rate. This view is perhaps skewed by the fact that women had been largely deprived of educational opportunities in Laos so the achievements today are much more striking to the mind. Another reason might also be that high-achieving Hmong women have commanded more mainstream attention as well, helping to reflect an image of more success to the Hmong community. When Mee Moua and Cy Thao won elections in 2002, for example, Mee got more press attention than Cy. Her educational credentials as an alumna of Brown University and a law school graduate from the University of Minnesota were emphasized.

On the other hand, the perception that women are achieving more has some basis. Hmong professors and counselors at various higher educational institutions note a growing disparity in the number of Hmong men and women enrolling in higher education. The sex ratio of Hmong students, like that in the mainstream white population, is shifting in favor of six women to four men. A former Hmong professor at Concordia University in St. Paul, Minnesota, observed more male Hmong students than female students at Concordia in the early 1990s. But from the mid-1990s forward, the enrollment of female Hmong students increased. Professors and administrators at the University of Minnesota and the University of Wisconsin–Madison, two Big Ten schools with substantial Hmong student populations, noted similar statistical disparities. As men are expected to be the cultural bearers and leaders in the community, the declining enrollment and lower graduation rate of males is arousing concern. If the trend continues, women will surpass men in degree attainment within the next few decades.

Presently, men dominate the educational achievement rate, a fact consistent with the cultural expectations and investments parents placed on males. Although there are Hmong American women like Mee Moua and novelist Kao Kaolia Yang who generate a positive view of Hmong women's progress, the statistics reveal that they are still the exception. Moreover, men often do not get as much mainstream press, but they are the esteemed members of the community. They are rarely addressed without their educational titles and they are regarded with respect and deference whereas high-achieving Hmong American women occupy ambiguous positions. At community events, for example, high-achieving women are dealt with some awkwardness whereas high-achieving men are immediately accorded honor by being invited to join the male elders at the table. Yee Chang, Mee Moua's husband, often delighted in telling me how he had to refuse such overtures to sit as an honored guest at the table of men on Mee's behalf even though she was the senator and not him. Although the mainstream press shows a bias toward Hmong women, the Hmong community definitely elevates men.

Although Hmong American women have made considerable gains in educational attainment, past observations about a lesser investment and encouragement from parents for girls to obtain an education still ring true. Overall, Hmong Americans still value the role of mother and wife for Hmong women more than any other role. Urgings for girls to delay marriage for an education are usually tempered with immediate advice to also avoid becoming spinsters. Not surprisingly, early marriage remains persistent, revealing the latent value esteemed by the community. The impact of early marriage is becoming apparent in the community as evident in the influx of divorces. As early marriages are not legally registered, there is no accurate statistics of their dissolution, but the Hmong American divorce rate is high enough to draw the critical remarks of Mee Moua during her keynote address at the Minneapolis Hmong New Year's Festival in December 2007. The devastating impact of early marriage and divorce is high for Hmong women who are stigmatized and highest for children who can do little besides bearing the results of the breakdown of family social values.

Hmong of Minnesota and California

Origin and Immigration to the United States

The Hmong Americans are a minority indigenous to China where 10 million of their coethnics, referred to as “Miao,” still reside today. They were a nonliterate people, but their funeral dirge, the *qhuab ke* (Instructions of the Way), which is passed down orally, refers to an origin in the Yellow River basin of northeastern China. Hmong Americans still instruct the souls of their deceased to return to this region to convene with their ancestors. Over the millennia, the Hmong were gradually pushed south by the expanding Han empire. They arrived at the Vietnamese frontier in large numbers during the latter Ming and the Qing periods. The first groups of Hmong entered Laos by about 1820. Others made their way from Laos or Burma into Thailand by 1850.

Hmong leaders who played crucial roles during French rule were part of the last massive influx from China in the mid-nineteenth century. They arrived in

Southeast Asia just as the French began conquering Vietnam from the south. The Hmong response to the French was not uniform. They engaged in resistance as well as collaboration. Messianic leaders who maintained the desire to reconsolidate their ancient kingdom entered French colonial history by leading rebellions. Foremost among these leaders was Pa Chay Vue, who led the largest, most expansive movement against the French from 1918 to 1921. Other Hmong leaders—secular political leaders—found a common interest with the colonial masters. The rivalry for control among the secular leaders was a weakness exploited by the French. As French appointment was essential for recognition as the dominant Hmong leader, these men rallied to serve the French.

The Hmong also occupied a region strategic to French rule of Indochina. The Hmong made up 30 percent of the population in Xieng Khouang, Laos, and inhabited the mountains that encircled the Plain of Jars. Bisecting these mountains is Colonial Route 7 (CR7), the road that connected the French administrative centers of Hanoi and Saigon in Vietnam to the Lao royal capital of Luang Prabang and the administrative seat of Vientiane. CR7 was the easiest access to landlocked Laos. Hmong leaders who competed for influence over the population in the early twentieth century sought the favor of the French by conscripting Hmong villagers to construct and later, during the height of the Cold War, to defend CR7 from Communist incursion into the Lao kingdom.

The families of Lo Blia Yao (d. 1935) and Ly Fong (1888–1939) ranked foremost among those who benefitted from French rule. Rivalries between these two families fueled the division of the Hmong during the French and American wars in Indochina. Blia Yao was recognized as the paramount Hmong leader in 1910 when he supervised the construction of CR7. Ly Fong was Blia Yao’s secretary and son-in-law, but literacy in Lao and French allowed his family to eclipse Blia Yao. Ly Fong’s son, Touby Lyfong (1918–1978), was appointed as Blia Yao’s successor in 1939, four years after his death. Lo Faydang, Blia Yao’s son, felt entitled to inherit the position. He joined the Japanese and then the Viet Minh against Touby and the French. Touby, on the other hand, used his prestige to recruit a Hmong army of 9,000 to aid

the French in retaking the strategic Plain of Jars after World War II. When the French lost in 1954, at the height of Cold War paranoia, the Americans intervened in South Vietnam. In Laos, they appointed another Hmong leader.

By 1961, Laos had become stagnantly divided between pro-American rightists, pro-Soviet leftists, and independent neutralists who showed signs of leaning to the left. Deeply concerned, Central Intelligence Operative William (“Bill”) Lair rallied Hmong support. He had heard of Vang Pao, Touby’s protégé who had been fighting the Communists since 1945. Vang Pao was the first Hmong officer with the rank of colonel in the Royal Lao Army. Lair found him on the retreat at Thavieng, a village north of Vientiane. Lair offered weapons, ammunition, and salaries for his soldiers and food for their wives and children. Vang Pao promised Hmong recruits for training in the defense against Communism. This historic meeting laid the grounds for an army of 30,000, trained and financed by the American Central Intelligence Agency (CIA). Until the Paris Peace Accords in 1973, the Hmong army bottled Communist advances along CR7 on the strategic PDJ, standing between Hanoi and Vientiane. After U.S. withdrawal from Vietnam, the Hmong faced Communist reprisals. Vang Pao and 2,500 of his officers and their families were airlifted to Thailand in May 1975. The Hmong population followed them by foot, losing family members to mines, gunshots, starvation, and drowning as they swam across the Mekong River. Decades later, as Hmong Americans began to make socioeconomic strides in the United States, Vang Pao forgot how he had left the Hmong behind in Laos as he sneaked away by helicopter. He claimed credit for “bringing the Hmong to America.” Vang Pao, in effect, urged many Hmong to remain in Laos to fuel his resistance efforts.

Touby Lyfoung, Vang Pao’s predecessor, remained with the Hmong in Laos where he was arrested and detained at a seminar camp. After he endured torture and hard labor for three years, Touby provoked a guard to shoot him while he was bathing in a river in 1978. Touby’s uncle and long-time rival, Faydang, became an influential Hmong leader in the Lao People’s Democratic Republic until his death in 1986. Faydang had won but, as great historical ironies

go, those Hmong who lost the war and moved to the West are now the envy of the victors who triumphed and remained in Laos. Even members of Faydang’s family have defected quietly under the guise of “refugees” and immigrated into the United States.

The Hmong of Minnesota

The Hmong who came to America have endured multiple generations of war trauma from 1945 to 1975. Moreover, several generations of Hmong Americans have suffered confinement behind barbed wired refugee camps like Ban Vinai, Chiang Kham, Nam Phong, and Wat Thamkrabok from 1975 to 2004. Dependent on American rice drops during the Secret War and fed by the United Nations High Commissioner for Refugees (UNHCR) in the Thai camps, multiple generations of Hmong have grown up never knowing the life of autonomous subsistence farmers in the mountains of Laos. The effects of war trauma on the Hmong remain unfathomable, and can perhaps be best captured by literary efforts. Historical analysis alone would be insufficient. Poor mental and physical health is evident from the onset of Hmong arrival on United States soil. During the early 1980s, men began dying mysteriously in their sleep, arousing the concern of the medical community who found no physiological cause. These “sleep deaths” tapered off into the 1990s as the Hmong acculturated to the mainstream. Today, Hmong Americans have a disproportionately high rate of kidney stones and cancer deaths.

The Hmong were the backbone of America’s Secret War in Laos, but they were deemed too primitive to be accepted as refugees to the United States in 1975. This perception existed in spite of the fact that Hmong men had mastered the modern war technologies introduced by the French and the Americans. By 1967, men like Lee Lue had mastered flight as T-28 pilots. Lee holds the Guinness World record for flying the most combat flights—over 5,000 missions. Oblivious about such Hmong heroes, policy makers in Washington D.C. engaged in legalism, using the Hmong’s nonliteracy against them. There was no written contract between Bill Lair and Vang Pao, they argued. The United States was not lawfully obligated to extend aid to displaced Hmong refugees. Vietnamese and

Cambodians were accepted for immediate resettlement, although the Hmong starved in the squalor of the Thai camps. Jerry Daniels, CIA advisor to Vang Pao at Long Cheng, advanced a moral obligation. He and other Americans, he said, had promised to “take care” of the Hmong should the United States lose the war in Vietnam. Embarrassed by the media exposure, U.S. policy makers amended the Indochina Migration and Refugee Assistance Act to include the Hmong. Ironically, the Hmong did not want to come to America. They had the largest no-show cases when called for screening. Immigrant caseworkers were baffled.

Only General Vang Pao and his closest associates were allowed into the country in 1975. When Hmong refugees followed in 1976, American policy makers took efforts to scatter them throughout the country so as not to place too heavy a burden on any one state. Dispersal, it was argued, would also allow rapid assimilation of this archaic group. Unbeknownst to Americans, Hmong socioeconomic and spiritual identity is intricately tied to their clans, not the nuclear family. In the mountains of Laos, the Hmong lived in villages containing a single patrilineal clan. Each clan has its own leader and ritual experts who possessed genealogical knowledge important for ancestor worship. No birth, marriage, or funeral rituals could be performed without the ritual experts or the clan. For this reason, Hmong families relocated to certain regions to reunite with clan members. Within a few years, pockets of Hmong populations appeared in areas like the Twin Cities and Fresno.

Hmong refugees began arriving in Minnesota in early 1976. Why this region with its frozen winter has become their home has puzzled many, but Hmong legends do tell of their migration from the tundra of northern Asia. Moreover, although the Hmong came to the United States from the tropics of Southeast Asia, they had never acclimated to the humid lowlands where mosquito-borne diseases were rampant. They were, after all, aboriginals from the more temperate zone of China. In Southeast Asia they preferred to settle in the cool redoubts of the mountains and seldom ventured to the lowlands. Only the wars of the mid-twentieth century drove them from the heights.

Perhaps credit for the concentrated Twin Cities population is owed to its liberal, progressive attitude. When the United States opened its doors to Indo-chinese refugees, local Christian churches volunteered as sponsors for the Hmong. These sponsors generously provided the crucial necessities such as housing, furniture, basic utensils, food, and clothing. As it also happens, many of the educated Hmong elites with leadership and language skills were among the first to be welcomed by Minnesotans. These elites took the initiative in solidifying the social services targeted to the Hmong, attracting others to migrate to the region. By 1980, Hmong elites had joined forces with General Vang Pao to find their own branch of a Twin Cities Lao Family Community, Inc., a private, non-profit agency that focused on English education and job training. The organization also began hosting the Hmong New Year Festival and the Fourth of July Soccer Tournament, publicizing and attracting more Hmong to the region. Because the Twin Cities area also ranks high among regions with good job prospects, good education, and a high standard of living, many Hmong have found this place ideal for starting a new life.

According to the 2000 Census data, the Hmong American population has grown to 186,310. Fifty-six percent of this population is under 18 years of age. Minnesota contains the second-largest population with 45,443 Hmong. Of this group, 97 percent (44,205) reside in the Minneapolis-St. Paul metropolitan area, the most densely concentrated Hmong population of anywhere in the nation. The remainder live in rural towns such as Winona, Rochester, Tracy, Duluth, and other smaller cities. Overall, Asians make up 3.5 percent of the 5 million inhabitants in Minnesota. The Hmong accounted for a third of this Asian population. They are the second-largest minority in St. Paul with 25,000 individuals, or 78 percent of the Asian population in the city. African Americans are the only minority that outnumbered the Hmong in St. Paul. The concentrated population has made the Hmong politically influential in the Twin Cities area in recent years.

As a nonliterate people, the Hmong were the most educationally disadvantaged Indochinese refugees.

In the 1950s a Hmong messianic figure invented the *Phaj Hauj* script and Western missionaries invented the Romanized Phonetic Alphabet (RPA) for the Hmong language. These scripts, however, were taught primarily to followers of the messianic leader and to Hmong converts in Christian churches. By the 1970s, 90 percent of Hmong villagers in Laos were still non-literate. Hmong began obtaining literacy in Lao in noticeable numbers only during the period of the Secret War (1961 to 1973) when literacy was promoted as part of army induction for men who served as Special Guerrilla Soldiers (SGU). A minuscule number of Hmong women from high-status families also obtained literacy at this time through training as nurses and teachers.

The low literacy rate in Laos is reflected among the refugee population. Obtaining an education remains a major challenge for Hmong American youths who cannot count on parental guidance. Poor performance on standardized tests and high dropout rates characterize the youth population in secondary and postsecondary schools across the United States. According to the Census 2000 data, 27 percent of Hmong Americans have a high school diploma or equivalent degree, 12 percent held associates or bachelor's degrees, and only 1.5 percent held graduate degrees. These figures are far below those of the general U.S. population where 48 percent had high school diplomas, 22 percent held college degrees, and 9 percent had graduate degrees. Some argue, however, that considering the low literacy rate of Hmong coming out of Laos as refugees, the Hmong Americans have made more strides than any other Indochinese group during the last 30 years in exile.

The Hmong in Minnesota have educational accomplishments comparable to the national statistics. By 2000, 53 percent of the Hmong in Minnesota had completed no schooling. Of those who had some form of education, 24 percent had a high school degree or equivalent, 8 percent had associate or bachelors' degrees, and 1 percent had a master's degree or higher. The national exposure of educated Hmong such as former Minnesota State Senator Mee Moua, a graduate of Brown University and the University of Minnesota, generate the perception among Hmong Americans that the Minnesota Hmong are the highest Hmong

achievers in the United States. Moua's landmark election in 2002 gained her a place in American history as the first Hmong and Southeast Asian American to serve at the state level. Hmong-owned newspapers in the Twin Cities like the *Hmong Times* and *Hmong Today*, and a couple of radio stations and a television program also endorse the success of Hmong Minnesotans.

During the last 30 years, the Hmong community has lifted itself economically by its shoestrings. The earliest arrivals in the Twin Cities can be divided into the few elites who had some education and the vast majority of nonliterate, uneducated Hmong who spoke no English. In the early years, the elites became the primary mainstay of the community, serving as teachers, interpreters, and social service workers. In the 1980s, several farming projects were developed in the Twin Cities in the hopes of establishing Hmong self-sufficiency. These projects included a program spearheaded by the University of Minnesota Agricultural Extension Services in collaboration with Lao Family Community. Hmong individuals were introduced to modern farming techniques, including proper usages of fertilizers and pesticides. Although these farming programs ended by 1985, Hmong farmers who completed the training went on to rent or buy their own land and became thriving participants of numerous farmers' markets in St. Paul and Minneapolis today. Younger, more educated Hmong Americans have begun to explore organic and flower farming as well. These younger farmers cater more to large industries.

The Hmong community has come far in their economic development since the agricultural efforts of the 1980s. Unlike the younger generation of American-born Hmong who engaged in the conspicuous consumption of middle-class America, first-generation refugees focused on basic necessities. This frugal moral value has been the foundation for eventual success in home ownership—over 50 percent in the Twin Cities—and in business investments. During the last two decades, the Minnesota Hmong have moved into professional fields. Some have become business owners, stimulating the formation of the Minnesota Hmong Chamber of Commerce in 1996. The Chamber has over 150 members, representing health clinics, law firms, restaurants, car dealerships, grocery stores, tax and consulting services, and other businesses. Hmong

entrepreneurs also own a bank, bars and night clubs, real estate companies, elderly home care businesses, and hotel chains. Hmong business owners thrived in the midst of the recession. In 2009, a group of nine businessmen opened Hmong Village, a building complex that contained over 20 restaurants and 250 merchant stalls. Hmong businesses in the Twin Cities command revenues exceeding over \$100 million.

The wealth in the community is evident since 2000 when Hmong families began moving to Arkansas, Missouri, and Arizona to start chicken farms. These families invest down payments of over \$250,000 to purchase farms that range in price from \$500,000 to several million dollars. Often engaged in unskilled, low-paying jobs, it is mind boggling how frugal Hmong families had to be to come up with such lump sums after only 30 years in America. Although there is no official statistics available, there are reputedly many Hmong millionaires in the Twin Cities.

Organizations geared toward serving the community remains quite prominent today. St. Paul boasts over 10 Hmong nonprofit organizations. Although not without scandals, Lao Family Community ranks as the oldest and most established and continues to monopolize festival events like the New Year's Festival and the Fourth of July Soccer Tournament. Beginning in the 1990s, political differences within Lao Family stimulated younger leaders to branch out. Other prominent organizations in St. Paul include the Hmong American Partnership (HAP), the Hmong Cultural Center, and the Center for Hmong Arts and Talents (CHAT). CHAT is perhaps unique in its focus on developing literature and art to define a space for Hmong in American society. Youth efforts have led to Mai Neng Moua's landmark anthology, *Bamboo Among the Oaks*, and Kao Kalia Yang's *The Latecomer*. These literary breakthroughs further solidify the reputation of the Minnesota Hmong as a dynamic group.

The large Hmong population in St. Paul has made them politically influential. The Minnesota Hmong began seeking elective office in 1991 with the election of Choua Lee to the St. Paul School Board. Neal Thao replaced her in 1995 and served for seven years. Two Hmong women, Kazoua Kong-Thao and Vallay Varro, currently sit on the St. Paul School Board.

Kong-Thao was first elected in 2003, and Varro, the sister of Mee Moua, won her election campaign in November 2009. These recent political successes may be owed to a turning point in Hmong American history in 2000 when Congress passed the Hmong Veteran's Naturalization Act. For decades, Hmong elders had delayed seeking citizenship because of language barriers and because they dreamed of returning to Laos with General Vang Pao. The tenor of Hmong American political thinking changed in 1998 when President Bill Clinton's Welfare Reform policies threatened to cut off financial assistance to noncitizens. A Hmong man in Wisconsin saw the reform as another American betrayal and protested by committing suicide when he received his termination notice. For once, Vang Pao and the veterans' groups were forced to galvanize to address the well-being of Hmong in America. They rallied Minnesota Congressmen Bruce Vento and Senator Paul Wellstone to spearhead the veterans' bill, which waived the English language requirement for Hmong veterans of the Secret War, their spouses, and widows. Elders naturalized under the bill began exercising their voting rights, which shifted the political landscape of Minnesota. In 2002, Mee Moua garnered the votes of newly naturalized Hmong elders in District 67. Concurrently, Cy Thao also won a seat in the Minnesota House of Representative in District 65A.

Moua's victory drew the attention of local politicians who realized the changing demographics of their constituents. Since 2000, Minnesota politicians like Congresswoman Betty McCollum, former Minnesota Governor Tim Pawlenty, current Governor Mark Dayton, Minneapolis Mayor R. T. Rybeck, and St. Paul Mayors Randy Kelley and Chris Coleman have engaged the community by making public appearances at Hmong events. Both Kelley and Coleman have Hmong individuals on their advisory boards. In 2004, Mayor Kelley even made a historic trip to Thailand to address concerns about the grave desecration occurring against relatives of Hmong Americans buried on the grounds of Wat Thamkrabok. Indeed, when the winning margin is minuscule, such as during the last gubernatorial contest between Mark Dayton and Tom Emmer in November 2009, the Hmong vote could be critical. Dayton, who triumphed in the recount, had the endorsements of Dr. Yang Dao and General Vang

Pao, the figureheads who represent opposing Hmong political views.

The Hmong of California

Although it does not make much sense for the Hmong who came from a tropical region to resettle in frozen Minnesota, California seemed the ideal place with its warm climate and fertile farming communities in the Central Valley. In the 1980s and 1990s, many Hmong across the United States relocated to California for the prospect of farming. The presence of General Vang Pao in Southern California was another lure. A few months after being airlifted out of Laos into exile in Thailand in May 1975, Vang Pao found himself in trouble. The Lao Communist government had sentenced him to death in absentia and was demanding his extradition. They feared Vang Pao would stage a retaking of Laos. Anti-American Thai student protestors who wanted U.S. elements out of the country also added pressure. The Thai government demanded that Vang Pao leave. CIA operative Jerry Daniels arranged for Vang Pao and his family to settle on a ranch in his home state of Montana. Vang Pao felt isolated. He relocated to California where he founded the first Lao Family Community, drawing an influx of Hmong to the West Coast.

By 2000, California contained the largest Hmong population with 71,741 individuals. The majority of Hmong in California were dispersed throughout the Central Valley from Chico City down to Fresno. Fresno had the largest concentration of Hmong in California and the second largest in the United States with 24,442. Sacramento ranked third nationally, with 18,121 Hmong. There are smaller pockets in Stockton, Merced, and other cities. The Hmong in California lagged behind Hmong in other states in economic, educational, and political achievements. The unique demographics of the region may be a cause. Minorities account for a majority in the state. The Hmong face stiffer competitions for unskilled jobs and for placements in social services and in higher educational institutions. Complicating this issue is the higher standard of living in California that made it hard to own homes or start businesses. More capital is required for the same standard of living as in the Midwest. Consequently, the Californian Hmong fared the worst, with more than half dependent on public

assistance, living below the poverty line. The Hmong median household income is about \$25,000, twice as low as the median Californian household income. Moreover, Hmong Californians are more likely to be employed in service occupations, sales and offices, and in management jobs with much lower pay and less likely to be in manufacturing jobs like those in other states. Consequently, only 16 percent of the Hmong in California owned their homes.

The Hmong in California also fall behind in academic achievements. According to the 2000 Census, over 50 percent have less than a high school diploma with a mere 7 percent holding a bachelor degree or higher. Living in a region with high concentrations of Asian Americans may unfairly place them under the stereotype of the model minority when in fact the Hmong Californians ranked among the lowest-achieving Asians.

The promise of an agrarian life lured many Hmong to the fertile Central Valley of California in the 1980s. Hmong from Minnesota, Wisconsin, Oregon and other states flocked to the region in the hopes of becoming self-sufficient farmers. The Hmong were subsistence agrarians in Laos, but in America the lack of education became a huge barrier in this endeavor. Many did not possess the language to master the technologies and marketing skills of farming. Others lacked the capital to get started. Half of those who flocked to Fresno, for example, anticipated engaging in agriculture, but less than 20 percent maintained an interest when faced with language and technical challenges. Stuck in a city that had few job prospects and, without the funding to relocate again, many Hmong ended up on public assistance and flooded the public housing projects in the city. Although the majority failed to make their interest in farming into a reality, most Hmong households in Fresno maintained small gardens where they grew some of the vegetables needed to sustain their families. Also, like those in Minnesota, a small number of Hmong families in the Central Valley have struck out on their own, renting plots to grow vegetables that they sell at farmers' markets. During the last few years, the Hmong in California have found new consumers in Minnesota. Their vegetables and fruits supply the Hmong markets in the Twin Cities.

It is quite a paradox that of the Hmong enclaves in California, those living in Fresno, one of the most

poverty-stricken cities in America, are perceived as the most progressive. The Fresno Hmong have the highest rate of poverty compared to those in other places. Perhaps the progressive perception has something to do with Fresno being host to the largest Hmong New Year Festival in America, luring thousands of Hmong from across the United States and around the globe. Unlike in Minnesota where the freezing winter weather forced an indoor celebration in sports stadiums like the River Center in St. Paul and the Metrodome in Minneapolis, the Fresno New Year takes place outside, nurturing the nostalgia for a past long gone. For Hmong Americans, the Fresno New Year Festival is the next best thing to going back to celebrate in Laos. The Hmong in Fresno also boast having two Hmong radio stations that broadcast throughout the Central Valley. Furthermore, there are a number of Hmong-owned businesses: 10 supermarkets, a couple of medical and chiropractic clinics, some video rental stores, a few ranches and farms, and some insurance and financial services agencies.

Fresno also housed prominent Hmong nonprofit organizations. Among them are the Fresno Inter-denominational Refugee Ministries (FIRM), Stone Soup Fresno, Lao Family Community of Fresno, and the Fresno Center for New Americans (FCNA). FCNA is praised as being the most effective in serving the civic and political needs of the Hmong, with more than 40 staff and an annual budget of over \$2 million. FCNA aimed to “foster leadership and civic engagement among individuals of Southeast Asian descent in Fresno County.” The efforts of the organization may be reflected in the historic election of Blong Xiong to the Fresno City Council in 2006. Xiong was the first Hmong in the state of California and the first Asian American in Fresno to occupy a city council seat. Tony Vang preceded Xiong as the first Hmong to hold elective office in the state. Vang was elected to the Fresno City School Board in 2002. The Hmong Californians are thriving amid major challenges.

The Passing of an Era: Facing Challenges in Minnesota and California

In 2007, in a stunning about-face, the U.S. government arrested Vang Pao and 11 others for allegedly

conspiring to retake Laos. Vang Pao was jailed until an outcry of Hmong Americans across the nation forced the presiding judge to grant bail. He was later cleared of all charges. In December 2009, Vang Pao declared his historic return to Laos. As during the last 30 years, this publicity stunt also bore no fruit. Vang Pao died of pneumonia on January 6, 2011, ending an era in Hmong American history. Although the elder generation bemoaned his loss, the vast majority of Hmong Americans have moved on. Over 65 percent of the Hmong American population is under 35 years of age. They are completely disconnected from Vang Pao’s legacy. Vang Pao’s family has made an attempt to launch him into the annals of American history by requesting a burial at Arlington National Cemetery. Washington has yet to reply at the time of this essay. The family planned a funeral “fit for a king.” They want his body exhibited in California and Minnesota prior to internment.

The Hmong Americans have made great strides, but challenges linger. Poverty, unemployment, low educational attainments, and cultural and linguistic barriers remain. Moreover, polygynous marriages outside of the law, high divorce rates, single motherhood, and gang issues plague Hmong Americans. Cultural and linguistic loss that leads to a crisis of identity and, in some cases, violence, have become a serious concerns. The Hmong in Minnesota have been besieged by domestic murder-suicides since 1998. The victims were mostly women and children. Tragedy has also haunted the Hmong in Fresno where eight teenagers committed suicide between 1998 and 2001. Hmong in other regions of the United States were not immune to similar turmoil. The Hmong have taken the initiative to address some of these issues by establishing Eighteen Clan Councils in Minnesota, Wisconsin, and California to mediate marital and other disputes. The Hmong Cultural Center in St. Paul focuses on teaching rituals related to marriage and funerals, elaborating custom law. Hmong political efforts in Fresno led to the passing of the Bill AB78 in 2003, which mandates the teaching of Southeast Asian history in the public schools. This law may open the way to introduce Hmong history to the mainstream and to Hmong youths long disconnected from the elder generation. In the face of challenge, Hmong

Americans have proven resilient and adaptive through community engagements.

Ho, David (1952–)

David Ho is a Taiwanese American scientist whose research on AIDS has broadened our understanding of HIV and has given humanity a chance to fight it. *Time* magazine named David Ho their 1996 Person of the Year for his insights on the underlying mechanisms of HIV as well as his development of an anti-HIV

cocktail to combat the AIDS epidemic. David Ho is currently the head of the Aaron Diamond AIDS Research Center, where he continues his research in collaboration with other scientists to understand the virus and treat HIV-infected patients.

David Ho was born as Ho Da-i in 1952 in Taichung, Taiwan. Two years later, David's younger brother, Phillip, was born. David's father, Paul Ho, served as a translator for U.S. troops in China during World War II. In 1957, Paul left for the United States to pursue a degree at Colorado State University and later, a master's degree in engineering at the University of Southern California, while the rest of the family remained in Taiwan. When he was 12, David, his younger brother, and his mother, Sonia Ho, joined Paul in Southern California when Paul was finishing his degree.

Twelve-year-old David Ho poses with his younger brother Phillip at Disneyland shortly after his family immigrated to the United States in 1965. (Phillip Ho collection)

David was educated in Taiwan up until the sixth grade, and he did not know any English when he entered school in the United States. At the time, American schools did not have a special English class for new immigrant students. Feeling disadvantaged because of his difficulty in school, Ho developed an underdog mentality, motivating him to achieve and giving him the tenacity to pursue his goals. Although classes were difficult for David at first, he quickly learned English and excelled in his schoolwork, graduating with honors from high school.

After high school, Ho attended the California Institute of Technology, at first majoring in physics but later changing to biology, graduating summa cum laude in 1974. Because of his interest in molecular biology, Ho applied for and entered Harvard Medical School, earning his MD in 1978. He performed his clinical training at UCLA Medical School between 1978 and 1982. It was during his residency at Cedars Sinai Hospital in Los Angeles that Ho was exposed to some of the very first AIDS patients, which inspired him to study the disease. In 1982, Ho decided to continue studying HIV at Massachusetts General Hospital in a virology lab led by Martin Hirsch. While working under Hirsch, Ho was able to identify and isolate the HIV virus in the blood and semen and verified that the virus could not be transmitted through saliva.

In 1987, Ho took a position at the UCLA Medical School to continue his AIDS research. While collaborating with Robert Schooley, Ho was able to show that HIV was very active in the late stages of AIDS. Because of his knowledge in the field, in 1990, Ho was hired as the director of the Aaron Diamond AIDS Research Center in New York. This position allowed Ho more resources to conduct his research. In 1991, Ho, in collaboration with George Shaw, demonstrated that HIV was also very active in the early stages of AIDS but entered an apparent dormant state in the intermediate stages. The conventional wisdom had been the apparent dormant state indicated success with early treatments and efforts should be put toward preventing the late stages of AIDS. It was not until 1995, when Ho, Shaw, and Schooley determined that during the intermediate stages of AIDS, the immune system was actually losing its battle against HIV, that

researchers' changed their focus to developing vaccines and treating the early stages of infection.

Ho's approach to defeating HIV in the early stages is known as Highly Active Antiretroviral Therapy, or HAART. His first design proposed the use of a cocktail of three drugs, a new protease-inhibitor and two other viral medications, to treat patients in the early weeks of infection. Clinical results were very successful with the HIV in treated patients nearly eradicated. For his successful demonstration that HIV could be fought that *Time* magazine named David Ho their 1996 Person of the Year. Today, continuous developments by Ho and other researchers have improved the treatments and drugs used in the HAART strategy, which has been adopted by the World Health Organization for its use around the world.

Since Ho's development of a promising HIV treatment, he has been asked to become part of several new groups whose goals include developing treatments for AIDS. Ho is part of the Committee of 100 and leads the China AIDS Initiative to improve China-U.S. relations and coordinate resources to address the spread of HIV in China. Ho is also the principle investigator for the Ho Ibalizumab Development Consortium. In collaboration with TaiMed Biologics, Ho aims to develop the antibody Ibalizumab to disable HIV in a person's body. This technology is seen as one of the most promising new strategies for treating HIV and has received funding from the Gates Foundation.

Ho's achievements have been recognized by research institutions and governments around the world. He has received 12 honorary doctorates from various institutions in the United States and abroad, including Columbia University and Tsinghua University. In addition, Ho is an honorary professor of the Peking Union Medical College and the Chinese Academy of Medical Sciences. In 2001, Ho received the Presidential Citizens Medal. In 2006 Ho was inducted into the California Hall of Fame.

Today, Ho continues his research as the scientific director and chief executive officer of the Aaron Diamond AIDS Research Center, coordinating researchers as they search for treatments and vaccines. To date, Ho has authored over 400 papers on HIV and AIDS and continues to publish his new findings. Ho still gets

excited when he gets a new idea, and disappointed when leads do not pan out. Although Ho has personally discovered much of what we know about HIV and AIDS, he has always believed that science is a collaborative effort, with researchers contributing their knowledge, insights, and findings. But David Ho's incredible tenacity for achieving his goals is part of what has made him the scientist who pioneered humanity's counterattack against AIDS.

Ho, Fred (Fred Wei-han Houn) (1957–)

Born Fred Houn, Fred Ho is a baritone saxophonist, composer, producer, educator, author, activist, and Marxist theoretician. He was born in Palo Alto, California, to Chinese parents who came to the United States in the 1940s. He grew up in Amherst, Massachusetts, where his father was a professor of political science. He joined the Marines in 1973 and after his service enrolled at Harvard University, majoring in sociology and graduating in 1979. He continued his studies in music, composed, founded, and led bands, collaborated with various artists, and taught at a

number of universities. He has won many awards and honors for his compositions, operas, music/theater epics, oratorios, martial arts ballets, and revolutionary multimedia performances.

He became a Marxist and a revolutionary early in life and dedicated himself to revolutionary change through music. As a student his activism led to the formation of the Harvard-Radcliffe Asian-American Association, the East Coast Asian Student Union, the Asian American Resource Workshop, Asianimprov Records, the Asian American Arts Alliance, and the Afro-Asian Arts Dialogue with the poet Kalamu Ya Salaamu.

In the 1970s his political consciousness evolved from that of a "yellow revolutionary nationalist," to one who was profoundly influenced by the Chinese revolution, Chairman Mao, Malcolm X, and the Black Panthers. He joined I Wor Kuen, named after the Boxers, the nationalists who opposed foreign imperialism in China. Composed mainly of Asian American college students, IWK's 10-point program and revolutionary socialism was similar to that of the Panthers. It also supported a breakfast program for school children—again like the Panthers. After merging with the Red Guard Party, from the San Francisco Bay Area, IWK initiated the demand for Asian American Studies programs in universities and colleges. He eventually broke with this organization.

Ho's different works stress the importance of multiculturalism along with anti-imperialism, antiracism, and antipatriarchal values. He draws upon jazz, blues, popular American music, and the folklore and operatic traditions of Asia and the Philippines, and founded a number of multicultural orchestras. In 1982 he founded the Afro-Asian Music Ensemble, recording *Tomorrow Is Now!* (1986). He also led the Asian American Art Ensemble and his Monkey Orchestra.

In the 1980s he founded the Asian Pacific American performance art trilogy, *Bamboo that Snaps Back*. It was presented at the Whitney Museum in New York City and in various other U.S. venues. He also wrote a bilingual Chinese American opera, *A Chinaman's Chance*, employing a combination of Western and traditional Chinese instruments and writing a libretto in Chinese and English.

Monkey: Part One, performed by the Monkey Orchestra, features a famous trickster character,

Monkey, from a sixteenth-century fantasy novel. Ho modified the story, however. The work contains radical allegorical themes, and two of its acts are part of a larger work, an Afro-Asian multimedia musical, *Journey Beyond the West*.

His DVD, *The Black Panther Suite*, is dedicated to this political party, placing it within the historical perspective of slavery and its atrocities, and twentieth-century instances of police brutality. The concept and music were created and composed by Ho, whereas the Afro Asian Music Ensemble played the score. Poets Jayne Cortez and Andrea Lockett read poetry for this suite.

His palette is broad, including boogie-woogie, swing, bebop, avant-garde, and Afro-Latin—from the Pan African heritage, and songs from a Pan Asian collective, including folk as well as operatic traditions. This is evident on *The Underground Railroad to My Heart*. “Joys and Solos,” the first selection is a jam session in which *sona*, the Chinese double reed instrument, plays “free” along with a string bass and drum kit. Ho considered this to be a “first” for jazz and for Chinese music. “The Underground Railroad to My Heart Suite,” “an anti-bourgeoisie boogie-woogie,” is “a call for rededication and commitment to revolutionary socialism despite the corrupting and opportunistic yuppie-decade of the 1980s.” The suite celebrates the slaves’ secret routes from the South to the North and contemporary underground routes for resistance movements. It spotlights the tragic experiences of Native Americans, as in “Trail of Tears”; “Sanctuary” is for the Sanctuary movement of Central American refugees; “An Bayanko” (“For My Country”) is the anthem of the nineteenth-century Philippine nationalist labor movement, Katipunan, and features a traditional instrument, the kulintang. “Kang Ding Love Song” and “Lan Hua Hua” (“Blue Flower”) are Chinese, “Bambaya” employs Ghanaian rhythms to express resistance to neocolonialism, and “Strange Fruit Revisited” and “Caravan” are Ho’s arrangements of traditional jazz standards.

Tomorrow Is Now! also presents his revolutionary perspective with his compositions, including “T.C.B. (Taking Care of Business);” “A Black Woman Speaks,” with poetry from Sonia Sanchez; “Blues to

the Freedom Fighters”; and “Ganbaro!,” which was dedicated to Japanese American workers.

Ho has had a distinguished career and won many honors and awards. He was the recipient of fellowships from the McKnight and American Composers Forum (2000), the National Endowment for the Arts (1993 and 1994) and the New York Foundation for the Arts (1989) and was honored with five Rockefeller Foundation Multi-Arts Projects Awards (2002, 2000, 1999, 1998, and 1991) and the Duke Ellington Distinguished Artist Lifetime Achievement Award (1988).

Hollywood, Asian Americans in

Asians and Asian Americans have been a part of the U.S. cinema since its beginnings. However, the structures of the industry, including the considerable financial capital involved, profit-driven productions, lack of diversity at the decision-making levels, and preconceived notions about the expectations of mass audiences have all constrained the kinds of Asian American characters and narratives seen in Hollywood productions. In particular, specific cinematic

stereotypes as well as practices such as casting European American actors in “yellowface” make-up for Asian roles have emerged as conventions in the film business. Criticisms of these stereotypes and practices have also existed since the beginnings of cinema. In the contemporary era, even as some Asian Americans have found success behind the camera, working as directors for example, Asian American actors continue to find it challenging to succeed in Hollywood given the kinds of roles and stories for which they are typically considered.

In the earliest period of film history, prior to the establishment of the movie industry in Hollywood, there were a handful of representations of Asian Americans in film such as the Edison Manufacturing Company’s documentary-style actualities *Arrest in Chinatown, San Francisco, Cal.* (1897) and *Parade of Chinese* (1898). Images of people and landscapes in Asia and the Pacific were also made, particularly in the context of U.S. military interventions in the region, including the Spanish-American War, the annexation of Hawaii, the Philippine-American War, and the Boxer Uprising in China. Short fictional scenes also existed, for example, the American Mutoscope and Biograph Company’s *The Chinese Rubbernecks* (1900) and *The Heathen Chinese and the Sunday School Teachers* (1904), or Edison’s cinematic version of a popular vaudeville act, *Robetta and Doretto, No. 2* (also known as *Chinese Laundry*). The brief documentary scenes taken in the United States and abroad offer interesting glimpses of Asians and Asian Americans at the turn of the twentieth century. The fictional scenes, with white performers playing the parts of the Chinese characters, reinforced racist discourses of the Chinese as foreign and inassimilable.

By the 1910s, the popular serials of the period such as *The Exploits of Elaine* (1916) and *The Perils of Pauline* (1919), both starring Pearl White, featured Chinese villains. Two films from the silent era are especially remembered today for their representations of Asians: Cecil B. DeMille’s *The Cheat* (1915) and D. W. Griffith’s *Broken Blossoms* (1919). *The Cheat* stars Sessue Hayakawa, a Japanese man who immigrated to the United States in 1907 and was the first movie star of Asian descent in U.S. history. Although the film was a spectacular success, some Japanese Americans protested the film’s negative representation

of the Japanese, and in the film’s 1918 re-release (the version that is available today), Hayakawa’s character was changed to a Burmese ivory king named Haka Arakau.

D. W. Griffith’s film *Broken Blossoms* (1919) was in part a response to the charges of racism leveled against his 1915 film *The Birth of a Nation*, which chronicled the rise of the Ku Klux Klan in a sympathetic fashion. *Broken Blossoms* ostensibly promotes tolerance of racial difference through the contrast between the gentle and sensitive Chinese man Cheng Huan, played by the white actor Richard Barthelmess, with the brutal and abusive boxer Battling Burrows. The distinctions between the two men are most clearly seen in their treatment of Lucy (Lillian Gish), the fragile young daughter of Battling Burrows. Although the film is meant to offer a more positive portrayal, like *The Cheat*, *Broken Blossoms* implies a prohibited desire for white women on the part of Asian men. However, in *The Cheat* Tori is shown as superficially civilized, but essentially brutal and primitive, whereas *Broken Blossoms* attempts to represent the Chinese man as more civilized and gentle than the Westerner by playing on stereotypes of Asian masculinity as effeminate and passive.

Aside from Sessue Hayakawa, the only other major star of Asian descent in the early decades of the Hollywood film industry was Anna May Wong, a Chinese American who was born in Los Angeles in 1905. Wong played her first starring role in *The Toll of the Sea* (1922), a Madame Butterfly narrative. Although Hayakawa was seen as a leading man, and frequently involved in romantic narratives with white women in his films, the relationships were nearly always dissolved at the conclusion of the film, often through the death of Hayakawa’s character. Taboos against miscegenation also severely limited the roles available to Anna May Wong, who was rarely cast as a female lead opposite a white male actor, and whose characters were frequently punished by death at the conclusion of the film for their romantic interest in white men. One notable exception was *The Daughter of Shanghai* (1937), which paired Wong with Korean American actor Philip Ahn and allowed them a happily ever after ending. Both Wong and Hayakawa spoke out against Hollywood’s stereotypical representations

of Asians, and Hayakawa opened his own film production company, Haworth Pictures, in 1918 as part of an effort to gain greater control of the films he appeared in. Both Hayakawa and Wong also looked to Europe for opportunities beyond what Hollywood offered.

As a cinematographer in Hollywood, James Wong Howe, who was born in China in 1899 and immigrated to the United States as a young boy, did not face the same kinds of challenges as actors of Asian ethnicities in the U.S. film industry did, though he did experience the anti-Asian racism of his time in his personal life. Nevertheless, Wong was able to build a storied career for himself beginning in the silent era in the 1920s and extending up until the year before his death in 1976. Over the course of photographing well over 100 films, Howe was nominated for 10 Academy Awards and he won twice, for *The Rose Tattoo* (1955) and *Hud* (1963).

One of the most notorious stereotypical Asian characters, Dr. Fu Manchu, first appeared in a U.S. film in *The Mysterious Dr. Fu Manchu* (1929) with the Swede Warner Oland in the title role. Although Fu Manchu is not an American character—he was created by the British writer Sax Rohmer—he has served as the progenitor of many evil Asians in U.S. popular culture, such as Ming the Merciless from the Flash Gordon series. Ironically, following his depictions of the evil Dr. Fu Manchu, Warner Oland then became famous in the 1930s for playing the good Chinese detective Charlie Chan, created by author Earl Derr Biggers and based on a Chinese American detective on the Honolulu police force named Chang Apana. Interestingly, the first three Charlie Chan films, in which Chan was a relatively minor character, featured Asian actors as Charlie Chan: George Kuwa in *The House Without a Key* (1926), E. L. Park in *Behind That Curtain* (1927), and Kamiyama Sojin in *The Chinese Parrot* (1928). Although Detective Charlie Chan was intended as a positive contrast to the criminal Dr. Fu Manchu, both characters were primarily portrayed by white actors, and represented narrowly conceived stereotypical traits, albeit from opposite ends of the good-evil spectrum. Over time, Charlie Chan's fortune cookie aphorisms and asexual, accommodating demeanor have become as derided as an offensive stereotype of Asian Americans as the more obviously negative Fu Manchu.

In the 1930s, the political instability in China inspired stories with Chinese warlords, including *Shanghai Express* (1932), *The Bitter Tea of General Yen* (1933), and *The General Died at Dawn* (1936). Each of these films led to protests from the Chinese government over their representations of China and the Chinese people. However, there was also a growing sympathy for China in the United States, particularly in light of the Japanese invasion of Manchuria in 1931, which inspired more positive portrayals of China. The most famous of these is Metro-Goldwyn-Mayer's cinematic adaptation of Pearl Buck's novel *The Good Earth* (1937). Although the film was shot primarily in California, and starred two European American actors, Paul Muni and Luise Rainer, the story of a humble Chinese farmer and his family was hugely influential upon American attitudes toward the Chinese. Anna May Wong had hoped to play O-Lan, the role for which Luise Rainer eventually won an Academy Award, but all of the main characters and significant supporting roles were filled by European American actors, though scores of Asian Americans from the West Coast were enlisted as minor supporting characters and extras in the film.

The Japanese attack on Pearl Harbor in 1941 and the subsequent U.S. entry into World War II dramatically shifted the representation of Asians by Hollywood to vituperatively racist images of Japanese enemies. The mass incarceration of Japanese Americans that followed Executive Order 9066 meant that primarily Chinese American and Korean American actors played these roles. Overtly racist representations of the Japanese occurred in a broad range of film genres, from war films such as *The Purple Heart* (1944), about the brutal treatment by the Japanese of a group of captured American airmen, to the cartoon *Bugs Bunny Nips the Nips* (1944), in which the wisecracking rabbit outwits the Japanese in a series of vignettes that dispatch the racist caricatures in scenes of extreme animated violence. As China was an ally in the war, Hollywood offered sympathetic portrayals of the Chinese and their resistance against Japanese aggression in films like *Dragon Seed* (1944), based on a novel by Pearl S. Buck and starring Katharine Hepburn in "yellowface" make-up as a Chinese woman who rallies her fellow villagers to resist

the Japanese. In a rare example of an Asian American playing a lead role in such narratives, Anna May Wong, who was very involved in helping to raise money for China relief efforts, portrayed an anti-Japanese resistance fighter in *Lady from Chungking* (1942); according to studio publicity, she donated her salary for the film to the United China Relief fund.

In the postwar era of Cold War liberalism narratives of cross-cultural understanding, frequently represented in the form of interracial romances between white American men and Asian women, highlighted a purportedly new U.S. attitude toward racial difference. The Communist victory in China in 1949, the Korean War, and the change in status of Japan from wartime enemy to perceived bulwark against the spread of Communism, meant that the Japanese were now portrayed in more favorable terms than the Chinese by Hollywood. An exemplary film from the period is *Sayonara* (1957), based on the James Michener novel of the same name. Marlon Brando stars as Major Gruver, a U.S. pilot in the Korean War who falls in love with Hana Ogi, a Japanese performer played by second-generation Japanese American Miiko Taka in her film debut. Red Buttons won an Oscar for his supporting role as Joe Kelly in the film. One of the other nominees for the Best Supporting Actor award that year was Sessue Hayakawa, for his portrayal of Colonel Saito in *The Bridge on the River Kwai* (1957), which suggests that portrayals of the Japanese as World War II enemies had not entirely gone out of fashion despite the changed political and historical circumstances. Hollywood's narratives of the war and the postwar period involving Asians typically unfolded in foreign rather than domestic settings, therefore offering no acknowledgment of the Japanese American incarceration in concentration camps during World War II. *Japanese War Bride* (1952) is therefore unusual in that its narrative of a white Korean War veteran who brings his Japanese wife home to Salinas, California explicitly acknowledges the Japanese American incarceration. Hollywood would eventually tackle the subject more directly in *Come See the Paradise* (1990), though the Kawamura family's experience of incarceration is mediated by the subjectivity of the white character Jack McGurn (Dennis Quaid).

Hollywood's typically greater interest in Asians in Asia rather than Asian Americans, with the exception of the use of Chinatowns as an atmospheric setting, makes the film *Flower Drum Song* (1961) all the more significant. The film was based on the popular Rodgers and Hammerstein Broadway musical, which was itself based on the novel by Chinese American author C. Y. Lee. The film stars an impressive Asian American cast including Nancy Kwan, Miyoshi Umeki, James Shigeta, and Jack Soo, along with a number of Asian American supporting cast members. Nancy Kwan was known for her role as a Hong Kong prostitute in *The World of Suzie Wong* (1960) whereas James Shigeta's Japanese American detective in *The Crimson Kimono* (1959) was one of the few Asian American male leads of the time. In addition to showing that Asian Americans could indeed sing and dance, the film's San Francisco setting and themes of Asian expectations and American desires, identity, and assimilation, engaged with issues that many Asian Americans could recognize, albeit articulated in the discourses of late 1950s and early 1960s popular entertainment with admittedly stereotypical representations of Asian traditions. The same year also saw one of the most offensive Asian stereotypes of the era in Mickey Rooney's "yellowface" portrayal of Mr. Yunioshi in *Breakfast at Tiffany's* (1961), a character that was purportedly based upon the Japanese American artist Yasuo Kuniyoshi.

One of the most memorable films of the 1970s, Roman Polanski's *Chinatown* (1974), featured Asian Americans only as background despite the title of the film, which comes to stand for the perversity, darkness, and corruption at the heart of the narrative. On the other hand, revisionist Westerns such as Robert Altman's *McCabe and Mrs. Miller* (1971) and the Mel Brooks comedy *Blazing Saddles* (1974) began recognizing the Chinese American presence in the Old West, though in a fairly minimal way. One of the most notable absences from the U.S. film and media industry in this decade was that of the martial arts star Bruce Lee, who was born in San Francisco but made the films that he is famous for in Hong Kong after learning that Hollywood would offer him few opportunities. Although he achieved some measure of recognition for playing the sidekick Kato in the television

Ang Lee, winner of the Academy Award for Best Director in 2005 and 2013. (Carrie Nelson/Dreamstime.com)

series *The Green Hornet*, his Hong Kong martial arts films made him an enduring global icon.

Although the American war in Vietnam was covered extensively in print news media and on television, films of the war did not appear immediately after the U.S. withdrawal. The majority of these films, including the most well known of them—*The Deer Hunter* (1978), *Apocalypse Now* (1979), *Platoon* (1986), and *Full Metal Jacket* (1987)—focused upon the experience of U.S. soldiers in Vietnam, and the featured soldiers were mostly either white or African American. Asian Americans had few roles to play in these films, except perhaps as Vietnamese villagers or soldiers. The war continues to cast a shadow, however, on Mickey Rourke's New York City police officer Stanley White, a Vietnam veteran who vows to clean up Chinatown in *The Year of the Dragon* (1985). The film's return to violent portrayals of Chinatown and stereotypes of Chinese gangsters led to mass protests by Asian Americans against the film's racism, sexism,

and xenophobia, resulting in the unusual act of inserting a disclaimer in the opening of the film. The vehement protests of the depictions in *The Year of the Dragon* must be contextualized in relation to the paucity of Asian American representation in mainstream films of the period. The most familiar among them were Pat Morita's wise martial arts master Mr. Miyagi in the three *Karate Kid* films (1984, 1986, and 1989) and Gedde Watanabe's cringe-worthy Long Duk Dong from *Sixteen Candles* (1984).

The rising economic strength of Japan and its effects upon the U.S. was a prominent source of anxiety beginning in the 1980s, and it served as the underlying theme of the film *Rising Sun* (1993). The Media Action Network for Asian Americans (MANAA), founded in April of 1992, launched a nationwide campaign against the film. Japan, in particular, and East Asia, more generally, were also increasingly associated with advanced technology in the 1980s, which was visible in the *mise-en-scène* of Ridley Scott's 1982 film *Blade Runner*, which imagines a future Los Angeles suffused with Japanese images.

The 1993 release of the film adaptation of Amy Tan's bestselling novel *The Joy Luck Club*, directed by Wayne Wang, based on a screenplay written by Tan and Ronald Bass, and executive produced by Janet Yang and Oliver Stone, marked the first time that an Asian American story written, produced, directed by, and starring Asian Americans was made by Hollywood. The film was well received by critics and was widely seen by audiences, though some Asian Americans criticized the film's representation of Asian American men. Prior to *The Joy Luck Club*, Wang, who was born in Hong Kong, was known for his independent film classic *Chan is Missing* (1982) as well as *Dim Sum: A Little Bit of Heart* (1985) and *Eat a Bowl of Tea* (1989), an adaptation of the Louis Chu novel. Through the 1990s and the 2000s Wang has worked steadily, making big-budget films such as *Maid in Manhattan* (2002) as well as smaller films like *Smoke* (1995) and *The Princess of Nebraska* (2007). In 1993 U.S. audiences were also introduced to Taiwan-born director Ang Lee's work through his film *The Wedding Banquet* (1993). Lee has since been a mainstay of Hollywood, helming features as varied as *Sense and Sensibility* (1995), *The Ice Storm* (1997), *Hulk*

(2003), and *Brokeback Mountain* (2005). His *Crouching Tiger, Hidden Dragon* (2001), an international coproduction, was nominated for both Best Film and Best Foreign Film Oscars; it won for Best Foreign Film. M. Night Shyamalan, who was born in India and raised in a suburb of Philadelphia, first came to notice with his direction of the Bruce Willis film *The Sixth Sense* (1999) and has since written, directed, and produced a number of films, primarily in the genres of science fiction, fantasy, and horror.

The 1990s popularity of Chinese Fifth Generation films and Hong Kong action films, whether of the John Woo gunplay variety or martial arts films, heightened interest in bringing Asian actors to Hollywood. Despite the fact that most of these actors, including Gong Li, Jackie Chan, Michelle Yeoh, Chow Yun-Fat, and Jet Li are international stars, in Hollywood films they have typically been paired with American costars or relegated to supporting roles. The popularity of martial arts films was also visible in the decision to hire the prominent Hong Kong director and fight choreographer Yuen Wo-Ping to train the actors and choreograph the fight sequences for the film *The Matrix* (1999).

The first decade of the twenty-first century has seen both repetitions of familiar stereotypes as well as new developments in the representations of and opportunities for Asian Americans in Hollywood. The 2002 acquisition of Justin Lin's *Better Luck Tomorrow* by MTV Films marked a significant moment in the history of Asian Americans in Hollywood. Lin's story of four Asian American teenagers who become involved in a life of crime received a great deal of support from Asian American communities, with groups organizing to see the film to ensure its continued distribution across the United States. The success of *Better Luck Tomorrow* led to considerable attention for Lin, who has gone on to make several Hollywood films, among them *Annapolis* (2006) and a number of films in the *Fast and the Furious* film franchise including *The Fast and the Furious: Tokyo Drift* (2006), *Fast & Furious* (2009), and *Fast Five* (2011). Karyn Kusama, one of the few Asian American women directors in Hollywood, also established her career in the 2000s. Kusama's directorial credits include *Girlfight* (2000), *Aeon Flux* (2005), and *Jennifer's Body* (2009).

Two years after the release of *Better Luck Tomorrow*, the stoner comedy *Harold & Kumar Go to White Castle* (2004) appeared. The film, which stars John Cho and Kal Penn in the title roles, launched a film franchise with three feature-length films to date: *Harold & Kumar Go to White Castle*, *Harold & Kumar Escape from Guantanamo Bay* (2008), and *A Very Harold & Kumar 3D Christmas* (2011). The Asian ethnic identities of the two main characters are present yet implicit in much of the films, and some critics have seen the success of these films as a sign that U.S. film audiences are willing to accept Asian Americans as lead characters in mainstream films. Nevertheless, controversies over casting in Hollywood continue. Two of the most highly publicized instances were the film *21* (2008), which was based on a book chronicling the real-life exploits of a mostly Asian American group of MIT students. Yet in the film, the main characters are all white. Similarly, the cinematic adaptation of the much beloved Nickelodeon animated series *Avatar: The Last Airbender* was accused of "white-washing" the series, which takes place in an Asian-inspired world. In the film *The Last Airbender* (2010) the film cast white actors in the lead roles and Asians as the villains of the film. Although there are currently more Asian American actors working in the United States than perhaps ever before, very few are seen as stars with the power to carry a big-budget Hollywood film, and it remains difficult for Asian Americans to find success within the mainstream film industry.

Honda, Mike (1941–)

Mike Honda is a currently serving Democratic congressman from California's 15th District. Geographically, Honda's district encompasses western San Jose and the Silicon Valley, which he has represented since 2001. Honda is of Japanese descent.

Michael Makoto Honda was born on June 27, 1941, in California. Like many others of Japanese ancestry, Honda spent considerable time with his family in an internment camp in Colorado during World War II. Honda's family eventually returned to their native California and Honda graduated in 1968 with bachelor's degrees in biological science and Spanish from San Jose State University. During college, Honda took time away from his studies and served in the Peace Corps between 1965 and 1967 in El Salvador. He would later earn a Master of Arts from San Jose State University in 1974. Before Honda's political career, he was a science teacher and later served as a principal in public schools.

In 1981, Honda won his first election and started his political career from the San Jose Unified School Board. He was later elected to the Santa Clara County Board of Supervisors in 1990 and served in the California State Assembly between 1996 and 2000.

In 2000, Honda, a staunch Democrat, was successful in his bid for the House seat after defeating his moderate Republican competitor. Since then, Honda has so far been up for reelection six times without

any serious challenge. He was re-elected in 2010 and 2012 and is currently serving his district in Congress. As a representative for the Silicon Valley, Honda has emphasized his commitment to high-tech industries as well as the infrastructure accommodations of a fast-growing region. Since his election, Honda has served on the Science Committee and the Transportation and Infrastructure Committee and was later appointed to join the influential Appropriations Committee in 2007. Honda also sits on various subcommittees. In terms of his role within the Democratic Party, Honda was selected as House Democratic senior whip in 2007 and works closely with the Democratic Caucus to promote Democrat agendas.

Honda, a champion of civil rights, has served for many years as the chair of the Congressional Asian Pacific American Caucus and is the founder and the chair of the Congressional Ethiopia and Ethiopian American Caucus.

True to his commitment to civil rights, Honda voted for the Local Law Enforcement Hate Crimes Prevention Act of 2009, which will provide assistance to law enforcement agencies in the prevention as well as prosecution of hate crimes.

Honda is also adamant about protecting voting rights for all Americans, especially those serving in the military or residing overseas. It is Honda's belief that unnecessary bureaucratic red tape prohibits or deters those Americans living abroad from exercising their voting rights. Moreover, Honda's personal experience from serving in the Peace Corps as a young man made him sympathetic to the plight of those who try to vote from outside the United States.

In response to the aforementioned problem, Honda cosponsored the Overseas Voting Practical Amendments Act of 2009, which he hopes will help eliminate voting restrictions for Americans overseas based on state residency or other state-enforced requirements (such as having the ballot printed on a certain type of paper). This bill will also provide funding for the dissemination of voting information to those living abroad. As of August 2009, the Overseas Voting Practical Amendments Act of 2009 is still under consideration in the 111th Congress.

On a similar note, Honda maintains that all Americans should have the right to vote regardless of

race, ethnicity, or English proficiency. In response to the growth of language minorities in the United States, Honda supports the renewal and provisions under the Voting Rights Act that states English proficiency cannot become a criterion in determining whether one has the right to vote. For Honda, language minorities should not and cannot be disenfranchised because of their potentially lower levels of English proficiency.

Honda is one of the few Asian Americans who have served in the U.S. Congress since the inception of the United States of America. His commitment to civil rights, particularly fighting inequality in the education system, has earned him the Civil Rights Award from the National Education Association (NEA).

Houston, Velina Hasu (1957–)

Velina Hasu Houston was born to Lemo Houston and Setsuko Takechi and as she herself exclaims "I am a child of war." Her father was part black and part Blackfoot Indian and her mother was from provincial Japan. They married in Japan at the end of World War II.

It is interesting to note that her parents had to undergo psychological testing before they were allowed to marry. Houston grew up around Junction

City, Kansas, which bordered Fort Riley. This was where there was a sizable Japanese Americans military community who had been assigned to live after the end of World War II. Having lost her father at the young age of 11, she was brought up by her Japanese mother in the ethnic subcommunity of Fort Riley, Kansas. This scenario was a confusing collection of "Wide plains and narrow minds" writes Houston. At a relatively young age, Houston developed a love for Haiku and dramatic literature. She went on to study Mass Communications and Theater at Kansas State University in 1979. Her multicultural background provided her the necessary impetus to devise and teach a class entitled "Guess Who Is Coming to Dinner?"

She continued her graduate studies and received an MFA in Theater Arts (playwriting) from the University of California, Los Angeles, 1981.

She completed her PhD in critical studies in cinema and television, from the University of Southern California in 2000.

At the age of 22, Houston developed an interest and tape-recorded stories of her mother and other similarly displaced Japanese women friends in Kansas. Out of her studies came the trilogy of plays, *Asa Ga Kimashita (Morning Has Broken)* (1981), *American Dreams* (1984), and *Tea* (1987). The first of the plays is set in postwar Japan and examines the Japanese side of the war bride experience: How the country, the family, and the people in love adjusted and overcame the struggle to break out of traditional roles. The sequel to this play examined the American side of the story, as the young couple struggled for acceptance and recognition from the American family. *Tea* is the final chapter in the trilogy, where four Japanese international brides search for acceptance in their small Kansas community. This third play has been the most successful of Houston's writings. It has been produced in numerous venues using both naturalistic and Japanese theater techniques.

"My stories are about love, fear, cultural conflict and the struggle to break out of tradition. Those are fairly universal human experiences, aren't they?," says Houston.

She is currently associate dean of Faculty of School of Theatre at University of Southern California.

Velina Hasu Houston has won the following awards:

- Best New Play for *Petals and Thorns*, 1982
- National First Prize, Lorraine Hansberry Playwriting Award, 1982
- Rockefeller Foundation Playwriting Fellow, 1984 and 1987
- Dramalogue Outstanding Achievement Award in Theatre for *Asa Ga Kimashita*, 1985
- Los Angeles Weekly Drama Critics Award for *Asa Ga Kimashita*, 1985
- Best Plays by Women Worldwide: The Susan Smith Blackburn Prize for *Tea*, 1986
- National First Prize, American Multicultural Playwright's Festival for *Tea*, 1986
- San Diego Drama Critics Circle Award for *Tea*, 1987
- Dramalogue Outstanding Achievement in Theatre Award for *Tea*, 1989
- McKnight Foundation Fellow, 1989
- Japanese American Women of Merit Award, 1990

Hsüan Hua (1918–1995)

Hsüan Hua (Pinyin Romanization: Xuanhua) was a Chinese Chan Buddhist monk who established the Sino-American Buddhist Association, now called the Dharma Realm Buddhist Association, in 1968 and

founded the City of Ten Thousand Buddhas in the Ukiah Valley of California in 1976, which remains one of the largest Buddhist monasteries in the United States.

Born Bai Yushun near the city of Harbin in north-east China in 1918, Hsüan Hua became a novice monk after his mother's death when he was 19 years old. After a period of scriptural study and meditation practice, he left for southeastern China in 1946 to meet the celebrated Linji Chan master Xuyun, and upon his arrival two years later Xuyun soon confirmed Hsüan Hua as his teaching heir. In 1949 Hsüan Hua moved to Hong Kong and successfully established two new monasteries and published a short-lived Buddhist magazine. This period also proved influential because it was Hsüan Hua's first direct encounter with Western culture and spurred his interest in spreading Buddhist teachings beyond Asia.

By 1959, a group of Hsüan Hua's disciples made their way to San Francisco and founded the San Francisco Buddhist Lecture Hall. Feeling the time was right after a year's stay in Australia, Hsüan Hua arrived in San Francisco in 1962 and became the first Chinese Chan lineage holder to settle permanently in America. With a growing group of disciples he founded the Sino-American Buddhist Association in 1968 (changed to the Dharma Realm Buddhist Association in 1984) with the explicit mission to promote the growth of Buddhism in the West. The organization continued to expand, establishing a translation institute for Buddhist scriptures in 1970 and publishing a monthly magazine starting the same year. In 1976 Hsüan Hua opened the City of Ten Thousand Buddhas, a sprawling monastic compound covering almost 500 acres. Throughout the next two decades Hsüan Hua held numerous ordination ceremonies in the United States and traveled around the world on lecture tours, continuing his personal commitment to spread the teachings of Buddhism.

Hsüan Hua died in Los Angeles in 1995, leaving behind a sizable Buddhist community with a network of temples and branch temples in the United States and Asia.

Hu, Chin-Lung (1984–)

Chin-Lung Hu is the first Taiwanese infielder who played in Major League Baseball (MLB). Well known for his defensive skills, he made his MLB debut with the Los Angeles Dodgers as a shortstop in 2007. Hu was born in Tainan, a city in the south of Taiwan renowned for cultivating excellent baseball players, such as Chien-Ming Wang and Hong-Chih Kuo. He began to play for the Taiwanese team and to impress scouts in international games since senior high school. Hu signed a Minor League contract with the Dodgers in 2003 for US\$150,000 (the third Taiwanese player for the Dodgers after Chin-Feng Chen and Hong-Chih Kuo). In 2006, Hu had an outstanding year as a member of the Taiwanese team in the World Baseball Cup and Doha Asian Games. The same year he played well in the Minor Leagues Futures Game. Hu was selected to participate in the Futures Game again in 2007 and was selected the game's most valuable player.

Huang, Guangcai (Wong Kong Chai or Chae) (1824–1886)

Huang Guangcai was the earliest recorded Chinese sojourner in South Carolina and the southern United States in 1843 and 1844. He was the first Christian

convert and one of the first Chinese ministers related to an American mission in Shanghai. Serving as an Episcopal minister for 35 years, he was mentor to a younger generation of Chinese ministers in Shanghai and may be considered one of the founders of St. John's University.

A native of Gulangyu, Xiamen, Fujian, China, Huang was born November 17, 1824. He studied at the village school for boys and memorized the "Three Character Classic." His parents became domestic helpers of Episcopal China missionaries William Jones Boone and Sarah Amelia deSaussure Boone when they arrived in Gulangyu in 1842.

After the death of Sarah Boone in 1842, Huang accompanied William Jones Boone to America in 1843 and 1844. He stayed for a period in Boone's home town of Walterboro, South Carolina with Boone's younger brother Phillip. He accompanied Boone in visiting the dioceses of New York, New Jersey, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, and Louisiana. He likely attended the marriage of Boone to Phoebe Elliott, the sister of Bishop Stephen Elliott, at St. John's Church, Savannah, Georgia, on September 5, 1844, and Boone's consecration as missionary bishop to China, at St. Peter's Church, Philadelphia, on October 26, 1844. At times he served as babysitter to Boone's children, as comprador to Americans doing business in China, and as a Chinese teacher to new missionary recruits.

Huang returned to Xiamen in 1845 while Boone and his new missionary recruits went on to Shanghai, but his parents and two brothers soon died, and he decided to rejoin Boone in Shanghai. He was then converted and baptized on Easter Sunday, April 17, 1846. He was ordained deacon on September 7, 1851, and priest November 8, 1863. He married in May 1854. His wife was a graduate of Wenji Girl's School and the first Chinese girl baptized in Shanghai. Throughout his career Huang kept very busy as a preacher, pastor, visitor to the sick, and Bible study teacher. He served faithfully as priest of Christ Church and Church of Our Saviour, Shanghai, as chaplain at St. Luke's Hospital, and at numerous other mission stations. Huang died November 11, 1886. He had two children who survived to adulthood: a daughter Huang Su'e

(Wong Soo-ngoo or Wong Shu-ngo, aka Susan N. Wong, 1855–1918) who served as matron to a girls' school in the elite Sino-Protestant community and in 1888 married Francis Lister Hawks Pott, the principal of St. John's College; and Huang Ding (Theodore T. Wong, 1874–1919), an educationalist.

Hula

Hula is an indigenous Hawaiian form of dance that combines mele (song or chant) with dance moves. Hula is significant because it is a highly visible part of indigenous Hawaiian culture that has simultaneously retained its original foundation in hula kahiko (ancient), and modernized in hula 'auana (modern). A person can experience the complex history of Hawaii through hula.

The history of the Hawaiian Islands is the primary reason that today there are two broadly known forms of hula. Hula kahiko is hula that was danced during ancient times. This hula is done with mele that is chanted called mele hula. The mele is the most important aspect of the hula, with the hula used to accompany or emphasize the words. There is hula pahu (sharkskin-covered drum), which combines chant and pahu with hula. There is hula 'āla'apapa that combines a historical oli (chant) and the ipu (single gourd) with

Dancers from the Lei Hulu Hula School in Moiliili perform before the lei-draped statue of King Kamehameha in Honolulu, during the annual celebration of Kamehameha Day, June 11, 2004. (AP Photo/Carol Cunningham)

hula. There is hula ‘ōlapa, set to a mele inoa (name) that has a structured musical tone, unlike the other hula that are unstructured. Kahiko is performed in a more energetic way with movements that are still and vigorous. Kahiko is performed standing, squatting, or sitting, depending on the kaona (meaning) of the mele. Kahiko was intimately tied to ancient Native Hawaiian religion. In particular the hula pahu and mele pahu originated in the rituals held in the ancient heiau (temples). The drums and the worship of the akua (gods) were more important than the hula. Various indigenous instruments are used in kahiko. The kumu (teacher) will use the ipu heke (double gourd) or the pahu. The ‘ōlapa (dancer) can use the ipu, the ‘ili‘ili (small smooth stones), the papa hehi (treadle board), the kāla‘au (dancing sticks), the ‘ulī‘ulī (gourd rattle with feathers on top), or the pūniu (fish skin-covered coconut shell knee pahu), depending on the mele. The ‘ōlapa would adorn themselves with indigenous

plants and flowers, that is, the maile, the lehua, the hala, the fern, the ‘awa, and the ‘ie‘ie. In addition to the plants and flowers, the ‘ōlapa would dress with indigenous clothing, that is, their pahu (skirts) could be made of tapa-cloth or tī leaves.

With European contact and the arrival of American Congregationalist missionaries, Hawaiian society began to change and with it hula. The missionaries did not approve of hula; its glorification of the body shocked them. Once the missionaries became advisors to the Hawaiian monarchy a series of value laws were passed. One of those laws banned hula from the public sphere. Hula continued to survive and be performed in the rural parts of the islands. In 1883, hula returned to the public sphere with the coronation of King David Kalākaua, nine years after he started his reign. Derided by his detractors as the “Merrie Monarch” for his love of Hawaiian culture, King Kalākaua believed Hawaiian culture was important for Hawaiian sovereignty. In this he encouraged all manner of Hawaiian arts, including being the author of several mele and oli. His sister, Lili‘uokalani, who would be Hawaii’s last monarch, also was a prolific writer of Hawaiian mele and oli. By the time of King Kalākaua’s coronation, there were not many Hawaiians who knew or could perform kahiko, primarily because hula was passed down from the kūpuna (elders) to the next generation orally by means of memorization and practice. Since European contact, many indigenous Hawaiians succumbed to European diseases that they had no resistance to, many of them kūpuna who could pass on their knowledge. Hula began to adapt to this loss.

Hula ‘auana is modern or Westernized hula. This hula is performed with mele that is sung. Unlike kahiko, the mele is not as important as the hula. Mele is done in Hawaiian, as well as, hapa-haole (English songs about Hawaii). There is hula ku‘i that is the modern version of hula ‘ōlapa and is more closely associated with tourism, along with hapa-haole. There is hula noa (hula free of taboo), which is hula that is unrestricted by customs or traditions. ‘Auana is performed slower with more graceful movements. The kumu will use Western electronic instruments. The kumu may sing in falsetto, a favored way of singing the mele. The guitar, steel guitar, slack-key guitar,

bass, and the 'ukulele are the primary instruments used. However, occasionally the piano, flute, or violin are used. The 'ōlapa continues to adorn themselves with indigenous plants and flowers; however, their clothing is more modern, that is, pants, the mu'umu'u, shirts, dresses, and, sometimes, shoes.

Since the Hawaiian renaissance of the 1970s, hula competitions have concentrated on kahiko and 'auana. Kāne (men) performed kahiko during ancient times; however, over time it was not seen as masculine to hula. A more bombastic form of kāne kahiko developed during the renaissance and has made hula more masculine and less effeminate. Hula competitions evolved as an avenue for hālau to compete and gain public performance experience. It is also an avenue to continually maintain and revitalize the culture of hula. However, it is an issue to be assessed critically that most of these events are held at tourist sites.

The kumu hula and the haumana (students) are the two main components of a hālau (school). Most hālau begin with the haumana asking permission to enter the hālau with an oli (chant) that they are ready to learn. If the kumu agrees that the haumana are ready to learn, she or he will oli that the haumana may enter. As the haumana enter, they oli that they have come properly prepared. A haumana becomes an 'ōlapa (dancer) through the performing of hula.

Hula has continued to flourish on the mainland with hula hālau throughout California, Arizona, and Las Vegas. Hula has reached global status, with hālau in Japan, Mexico, and Europe. In Japan, hula has gone even further by being adapted to fit the Japanese *iemoto* (guild system), where there is a Japanese assistant teacher in-between the haumana and the kumu. It is the assistant teacher who will learn from the kumu, and then return to Japan and teach their haumana. Many of the hālau in Japan are extensions of a hālau in Hawaii. Despite its movement farther and farther from Hawaii, hula remains Hawaii-centric with mainland hālau looking to Hawaii colleagues or competition judges for validation.

Although considered controversial by some, hula is continually modernized with hula being performed to opera arias, techno music, or rhythm and blues. Although hula is a distinctly indigenous Hawaiian cultural form of dance, as more non-Hawaiians learn hula

and as more Hawaiians move out into the Hawaiian diaspora, hula will continue to adapt to new environments.

Hwang, David Henry (1957–)

Born in San Gabriel, California, David Henry Hwang graduated from Harvard Boy's School in the Hollywood Hills and entered Stanford University in 1975. It has become common knowledge now that David Henry Hwang's introduction to the world of plays and playwriting came about in 1979, when he first performed and produced *FOB (Fresh off the Boat)* (1980) at the Okada House dormitory at Stanford University. The play premiered in New York in 1980, at the Joseph Papp Public Theatre and won the Obie award for Best Off Broadway Play (1980–1981 season). By this time, it had evolved into something culture specific involving elements of Chinese-style opera versus the ritual embodiment of a Sam Shepard play. Hwang was well qualified to initiate the changes. His initial introduction to music came at home at a very early age. (His mother, a talented pianist studied music at the University of Southern California.) Furthermore, in 1978, Hwang attended the Padua Hills Playwright Festival under the tutelage of Sam Shepard.

FOB was followed by *The Dance and The Railroad* (1981), which also developed a similar theme of the merger of East and West. An autobiographical *Family Devotions* (1981) followed. The second phase of Hwang's theatrical journey started with his "Japanese" phase. *The House of Sleeping Beauties* (1983) and *The Sound of a Voice* (1983) inspired by the writings of Yasunari Kawabata, Yukio Mishima, and Lafcadio Hearn. A period of introspection followed in the late 1980s, which led to a play, *Rich Relations* (1986), where the characters were not Asian specific.

Hwang's best known play is *M. Butterfly* (1988), which was based on an article in the *New York Times* (05/11/1986) titled "France jails two in odd case of Espionage." The play itself is a deconstruction of Giacomo Puccini's opera, *Madama Butterfly*. The play was an unqualified success and went on to win the Drama Desk award for Year's Outstanding New Play, Outer Circle Critics award for Best Broadway Play, the John Gassner award for Best New American Play, and the coveted Tony award for Best Play on Broadway. The play was later made into a film directed by David Cronenberg.

Post-*Butterfly*, David Henry Hwang has been involved in a variety of projects. He went on to complete a set of short plays, *Bondage* (1992), *Trying to Find Chinatown* (1996), *Bang Kok* (1996), *Merchandising* (1999), *Jade Flowerpots and Bound Feet* (2001) and *The Great Helmsman* (2007). Two full length plays, *Face Value* (1993), *Golden Child* (1996) for which he won an Obie award. In 2007 his play *Yellow Face* premiered at the Mark Taper Forum in Los Angeles and also went on to win an Obie award. He went on to adapt *Tibet Through a Red Box* (2004) for the theatre from Peter Sis's book of the same name. And his *Chinglish* opened in 2011. A musical based on the legendary Bruce Lee and an autobiographical play based on a memoir by Tsai Chin are other future projects.

Hwang has also gone on to contribute his literary and musical talents towards the writing of screenplays: *M. Butterfly* (1993), *Golden Gate* (1994), *The Lost*

Empire—NBC TV series (2001), and *Possession* (2002). He wrote and staged a revival of the 1958, Rodgers and Hammerstein Broadway musical *Flower Drum Song*, which earned him a third Tony nomination. Hwang reworked the original to put it in a more current perspective. Not restricted to just writing plays, Hwang has been active as an opera librettist. He has collaborated with musician and composer Philip Glass on *1000 Airplanes on The Roof* (1988), *The Voyage* (1992), and *The Sound of A Voice* (2004). Further collaborations include *The Silent River* (1997) with the Asian American composer Bright Sheng; *Ainadamar* (2003) with the Argentine composer Osvaldo Golijov; and *Alice in Wonderland* (2007) with the Korean composer Unsuk Chin. He cowrote *Aida* (2000) the musical with lyrics by Tim Rice and music by Elton John. The book for the Disney production of *Tarzan* was written by Hwang, with music by Phil Collins and, more recently, the *The Fly* (2008) with Howard Shore. He even cowrote a song for Prince entitled *Solo* for the latter's 1994 album, *Come*.

In 1998, the Asian American Theatre Company based in Little Tokyo, Los Angeles honored David Henry Hwang by naming its main stage, The David Henry Hwang Theatre. Hwang has subsequently gone on to be recognized by various organizations and cultural institutions. From 1994 to 2001, he served on the president's committee on the Arts and Humanities. In Hwang's own words "In the long run, if the ethnic theatres do their jobs properly, they should phase out their own existence. I think the future is not in mono-ethnic theatre, but in multicultural theatres that will do a black play, an Asian play, a white play, whatever."

I Wor Kuen (IWK)

Founded in 1969, the I Wor Kuen (IWK) was a national revolutionary Marxist-Leninist-Maoist collective of Asian Americans dedicated to the self-determination of Asian Americans and other aggrieved groups in the United States. Its name, translated “Righteous Harmonious Fist,” was inspired by disenfranchised Chinese peasants and farmers who led the anti-imperialist Boxer Rebellion. Forming first in New York City, the IWK believed that a revolution of the masses would result in the necessary and inevitable overthrow of capitalism and imperialism in the United States and abroad. In 1971, they merged with the Red Guard Party in San Francisco and formed the first national Asian American revolutionary organization.

The theory and practice of the IWK was strongly influenced by the community-centered praxis that emerged from the liberation movements in black, Puerto Rican, Chicano, and American Indian communities, particularly the Black Panther Party and Young Lords Party. Inspired by the 10-Point Program of the Black Panther Party, the IWK issued a 12-Point Platform that advocated for the self-determination of Asian Americans, Asians, and Third World and oppressed peoples; an end to sexism, racism, national borders, and the military; community-controlled local education, fair and accessible housing, health care, and child care; the release of political prisoners; and the establishment of a socialist society.

The IWK believed that the struggle against capitalism and imperialism required a unified front of workers and activists that was led by a revolutionary vanguard of “oppressed nationalities,” or members of

aggrieved and disenfranchised communities of color. Critical of the external and internal racisms that divided communities, the IWK actively forged interracial and international coalitions with people of color and radical organizations to build a mass movement and socialist alternative to the capitalist and imperialist United States nation-state.

In addition to developing revolutionary theory, the IWK’s objective was to “serve the people” through community-based programs in New York City and San Francisco Chinatowns that complemented their efforts to build the broad-based mass movement needed to end global capitalism and the oppression of Third World peoples. They offered services and workshops that addressed pressing issues faced by Asian Americans and other communities of color on the United States, such as police brutality, fair housing, and health care. Modeled after the Free Breakfast for Children program created by the Black Panther Party, the IWK created a Free Lunch Program that fed elderly community members. They also conducted political education workshops that explored the history of Asians in the United States, discussed Marxist-Leninist-Maoist political theory, introduced participants to political organizing, and explicitly contextualized the struggle of Asian Americans to that of Third World peoples everywhere. The IWK organized a bilingual childcare collective, created Chinatown’s first draft counseling center, made tuberculosis testing accessible to local residents, and worked closely with African Americans, Puerto Ricans, and Chicanos around state repression. They also engaged in local struggles such as the anti-eviction movement at the International Hotel in San Francisco and the struggle for adequate and accessible health care in the Lower

East Side community of New York City. Their efforts were met by intimidation and harassment from politically conservative community leaders, particularly Kuomintang supporters, the police, and their allies; however, the opposition only affirmed the significant impact of the IWK on the community's political consciousness and activist culture.

The organization's praxis was regularly articulated in *Getting Together*, the official political organ of the organization. First published in February 1970, *Getting Together* was a bilingual newspaper that featured articles, editorials, and art in both Chinese and English. Topics included political theory, news about Asian and Asian American struggles, updates about movements occurring in communities of color, polemical critiques of other Marxist organizations, and reports about international revolutionary struggle.

On December 26, 1972, the San Francisco-based IWK founded the Chinese Progressive Association (CPA), a community-based and community-centered mass organization that connected ideological critiques of imperialism, capitalism, and racism to everyday grievances. Although most of the staff were IWK members, the CPA was a distinct community center with no formal organizational affiliation with the IWK. At the same time, its operations and programs complemented and emulated IWK politics. CPA members held open public forums to assess community needs and brainstorm solutions. It immersed itself in local politics, challenged misconduct by police and immigration officials, and supported political prisoners. It also held weekly film nights, community dinners, political education classes, artistic workshops, and encouraged intergenerational dialogue.

The IWK and CPA were both located at the International Hotel, arguably the headquarters for the most radical Asian American revolutionary organizations in the United States. Organizations such as the Wei Min She, Everybody's Bookstore, Asian Cultural Center, and members of the Katipunan ng Demokratikong Pilipinos (Union of Democratic Filipinos) actively organized around antiracist, anti-imperialist, and anticapitalist platforms that espoused community self-determination and national liberation. All of these organizations famously organized around tenants' rights in the landmark International Hotel anti-eviction

movement. Although the organizations notoriously engaged in heated political and ideological debates, their praxis and commitment is foundational to the legacy of Asian American radicalism.

In September 1978, the IWK merged with the Chicano-led August 29th Movement and formed the League of Revolutionary Struggle (LRS). In 1979, the LRS merged with the East Wind Collective and Seize the Time Collective, which were comprised of mostly Japanese Americans, and Chicanos and African Americans, respectively. The following year, the LRS merged with the Revolutionary Community League (formerly the Congress of Afrikan People) to become one of the most important multiethnic, multinational revolutionary Marxist-Leninist-Maoist organizations in United States history. The LRS dissolved in 1990.

Ichioka, Yuji (1936–2002)

Yuji Ichioka was born in San Francisco as a son of Japanese immigrants. Having interned at the Topaz internment camp in Utah during the Pacific War at the age of six, Ichioka returned with his parents and siblings to Berkeley, where he stayed until high school graduation in 1954. Ichioka then served in the United States Army and was stationed in Germany; after his discharge, he attended UCLA and graduated in 1962.

Intending to pursue modern Chinese history with a fellowship, Ichioka moved to New York City to enroll in a Columbia University graduate program, which he quit soon after. It was during this period that he became deeply involved in social justice and civil rights issues in collaboration with African American and other minority activists. After leaving the intellectual Ivory Tower, Ichioka worked as a youth guidance counselor in predominantly minority neighborhoods of New York City. His commitment to minority empowerment soon led to a strong interest in the history of Asian Americans, providing a background for his first trip to Japan in the winter of 1966. As he often discussed later, Ichioka's encounter on a Yokohama-bound ship with aged Japanese immigrants from Brazil peaked his interest in migration history and migrant experience. After returning from Japan, where he established lifelong friendships with progressive-minded Japanese, Ichioka enrolled in the Asian Studies graduate program at the University of California, Berkeley, to write a master's thesis on a Japanese nationalist of the Meiji era, titled "Takayama Chogyu and his Nihonshugi: Its Nature and Significance" (1968).

Ichioka's contribution to the Asian American Movement and Asian American Studies took place during his graduate education at UC Berkeley. Along with his partner Emma Gee, who he had met at Columbia, Ichioka played a central role in forming the Asian American Political Alliance—an organization of mainly college-age radical Asian activists in the area, who participated in the interracial Civil Rights and anti-Vietnam War movement. Ichioka is credited with coining of the term "Asian American" to bring different Asian groups under a panethnic political coalition for the causes of racial equality, anti-imperialism, and social justice. Along with Gee and other activists/students, Ichioka was involved in the development of first Asian American studies courses UC Berkeley. When students at UCLA successfully demanded a course on Asian Americans in 1969, Ichioka was selected as the first instructor, thereby beginning his lifelong affiliation with UCLA. Ichioka and Gee served as founding members of the Asian American Studies Center there. When taking part in curriculum building and other administrative matters, Ichioka promoted research

and archival development relating to Japanese immigration history. His role as an archivist, cataloger, and custodian of the Japanese American Research Project (JARP) Collection was illustrative of his multifaceted contribution to historical scholarship on Japanese Americans.

Committed to producing scholarship for the benefit of social justice and community empowerment, Ichioka made him available for off-campus lectures and other nonacademic speaking engagements. This same activist-scholar impulse, however, also turned Ichioka rather critical of recent Asian American scholarship that tended to overindulge in the use of theoretical jargon and abstraction.

At the same time, Ichioka was ahead of an academic trend in Asian American studies. For example, he was among the first to break new ground in transnational studies as early as the mid-1980s despite his refusal to depart from empirical historical research. Before such studies became popular in the field, Ichioka advocated comparative studies of Japanese in the Western Hemisphere. He pioneered in the critical analysis of immigrant nationalism and transnationalism, albeit without relying on fashionable theoretical formulations. These developments coincided with another notable shift in Ichioka's scholarship from research on leftists, common laborers, and immigrant women to an analysis of the "second generation problem" and other controversial subjects, like Nisei "disloyalty." At the time of his death in September 2002, he was preparing a manuscript for his second book, and he was contemplating a major conference and research on Kibei. When he passed away, Ichioka was research associate and adjunct associate professor of history at UCLA. He was married to Emma Gee, a scholar of Asian American women and history, as well as a writer and labor activist.

During his career as a professional historian, Ichioka traveled numerous times to Japan for research and teaching while publishing two major monographs: *The Issei: The World of the First Generation Japanese Immigrants, 1885–1924* (Free Press, 1989), and *Before Internment: Essays in Japanese-American History*, edited by Gordon H. Change and Eiichiro Azuma (Stanford University Press, 2005). Other publications include: two edited volumes: *Karl G. Yoneda*,

Ganbatte: Sixty-Year Struggle of a Kibei Worker (1983), and *Views from Within: The Japanese American Evacuation and Resettlement Study* (1989); two major annotated bibliographies: *A Buried Past* (1974), and *A Buried Past II* (1999); and dozens of path-breaking journal articles in *Amerasia Journal*, *Pacific Historical Review*, *Agricultural History*, and *California History*, among others. His personal papers and research materials are available at UCLA's Special Collections.

Iijima, Kazu Ikeda (1918–2007)

The youngest of three daughters, Kazu Ikeda Iijima was born in West Oakland's Chinatown. Her father, Kando Ikeda, was an avowed Issei nationalist who published a local Japanese language newspaper, and her mother, Tsukiko, worked as a domestic in neighboring Piedmont County. The Ikeda children were rooted, but not limited, to the Oakland Japanese American community. Ikeda, like many young Bay Area Nisei, participated in ethnic Japanese activities. She visited Buddhist Temple and attended Japanese Language School. She also played on integrated sports teams and wrote several stories for her high school literary journal. However, the onset of the Great Depression, the tragic passing of her mother in 1933, and her decision to enroll at UC Berkeley in 1935 ended this sheltered life and exposed Ikeda to radical ideas for the first time.

The 1930s witnessed a dire economic downturn, entrenched U.S. racism, and rising fascist movements in Europe and Japan. Yet Ikeda remained largely unaware of the severity and interconnectedness of these crises until introduced to Marxist analyses by

her older sister Nori, who was by then a Communist Party (CPUSA) member. It was the Communist Party's antiracist principles and Marxist approach to tackling racism in particular that won Ikeda over to the Party, which she joined in 1938. As she later recalled, "we couldn't understand why everyone hated us [Japanese Americans] so much. So when my sister talked about communism and socialism we responded to that." Furthermore, the multiracial Berkeley chapter of the Young Communist League (YCL), the "only place where we didn't face racism" according to Ikeda, carried out their socialist ideals in their everyday interactions, a stark contrast to the anti-Asian discrimination the Ikeda sisters experienced in Oakland.

Ikeda's activism within the YCL brought her into contact with like-minded Japanese Americans in the East Bay Area, with whom she formed the Oakland Nisei Democratic Club in 1938. Created as a political outlet for working-class Japanese Americans, many of whom were close to the CPUSA, the Oakland Nisei Democrats attempted to recruit Niseis to progressive causes and provide a counterweight to the more conservative JACL. Yet the impact of the Nisei Democrats extended beyond local Japanese American communities. For instance, the Club supported picketing GM workers in Oakland and helped to pass a resolution at the 1938 Young Democrats convention that committed the California Democratic Party to ending racial discrimination.

Shortly after the attack on Pearl Harbor, however, the Communist Party revoked the membership of West Coast Japanese Americans, including Ikeda's, under the pretext of an antifascist alliance with President Roosevelt. This betrayal was compounded by the CPUSA's silence on the unconstitutional internment of Japanese Americans under Executive Order 9066, which Ikeda and the Nisei Democrats protested in defiance of the Party. These setbacks inadvertently set the stage for Ikeda to focus on her personal life and establish herself as an independent radical. In 1942, she married Tak Iijima, a member of the 442nd Army unit in the Topaz, Utah concentration camp. After the war, the couple resettled to New York City, where they had two children, Chris and Lynne. In New York, now Iijima joined the Japanese American Committee for Democracy (JACD), a left-wing, anti-imperialist

organization where she served as editor of their newsletter. Her involvement with the JACD was the exception to an otherwise apolitical period, however, as she put activism on the backburner, until the 1960s, to concentrate on raising her children.

Inspired by the Black Power's penetrating critique of U.S. racism and instillation of cultural pride, Iijima and her friend Minn Matsuda created Asian American for Action, or Triple A, one of the first East Coast pan-Asian organizations, in 1968. Triple A's primary focus was the Vietnam War. According to Triple A, U.S. imperialism in Southeast Asia was facilitated by American dehumanization of the Vietnamese, which mirrored the racism encountered by Asian Americans, and an imperialist drive for the region's natural resources. As an experienced organizer, Iijima helped mobilize weekly Triple A meetings and demonstrations along with her two children, including two large anti-imperialist rallies in Washington D.C., and mentored a new generation of Asian American activists, who appreciated her flexible approach to the changing political environment. Iijima later became recognized as the "Mother of the Movement" and continued to be political active until she passed in 2007. Today, Iijima is remembered not only as a tireless advocate for social justice but also as a caring mother, wife, and community member.

Iko, Momoko (1940–)

When she was but two years old, Momoko Iko was forced to leave her Wapato, Washington, home along with her parents to relocate to the Heart Mountain Internment camp in Wyoming. After their release in

1945, the family had to move to New Jersey to start a living as migrant laborers. It was here that the young Iko was exposed to heartfelt stories from other displaced Japanese who congregated frequently at her home. The family eventually settled in Chicago.

Momoko Iko started writing when at Northern Illinois University and completed her undergraduate degree in English at the University of Illinois at Urbana-Champaign in 1961. She went on to complete her MFA degree from the University of Iowa. Iko's initial attempts at writing were confined to prose and poetry. She initially concentrated on personal essays that included a prose poem entitled *And There Are Stories, There Are Stories*.

Iko happened to see a call for plays in a notice advertising the submission of plays for a playwriting contest sponsored by the East West Players. Out of this inspiration came her first play *Gold Watch* (1972), which premiered at the Inner City Cultural Center, Los Angeles, under the direction of Bernard Jackson. The play is one of the first literary pieces that spoke against the abuse of power and the shame of incarceration. The play deals with the issue of forced relocation and the consequent results of what happened to the Japanese American community after Pearl Harbor. Not only does the play address prewar issues among the Japanese community, but also examines the Kibei, the American-born children of Japanese immigrants who were sent away to Japan to be educated. The varied nature of their allegiances and dilemma did pose a problem for them, given the context that they were living in. The direct and indirect effects of the internment camps pervaded many facets of Japanese American society. *Gold Watch* was shown on PBS in November 1976 with Phillip Baker Hall, Robert Ito, and Mako.

Iko has also written *Flowers and Household Gods* (1975), which centers around the Kagawa family gathering at a funeral. Here Iko examines how the family structure slowly disintegrates as individuals grow, assimilate, and move out. The structural net of the family widens and as generations grow, a crisis of identity develops. What is traditional and encompassing has been severed by the throes of the internment. Old memories are brought up and along with it a reopening of old wounds. *Boutique Living and Disposable Icons*

(1987), the sequel, concentrates on a wedding 20 years later in the Kagawa household. There is a confusion of identity here followed by not only a generational difference but one of values. Her other plays include: *Boutique Living and Disposable Income* (1973) and *When We Were Young* (1974).

Iko has won numerous awards for her writing from the East West Players, The Rockefeller Foundation, The National Endowment for the Arts, and the Zellerbach Foundation.

Immigration Act of 1917 and the “Barred Zone”

On February 5, 1917, the United States Congress overwhelmingly passed the Immigration Act of 1917. The most stringent immigration law to date, the 1917 Act at once established a literacy requirement for immigrants over 16 years of age; a head tax for entry into the country; barred the entry of “idiots,” “feeble-minded persons,” “epileptics,” “insane persons,” alcoholics, “professional beggars,” all persons “mentally or physically defective,” polygamists, and anarchists; and increased the statute of limitations for deportation from three to five years for immigrants deemed to have subversive political beliefs and associations. Additionally, the 1917 Immigration Act excluded from the United States all peoples living within a constructed geographic region referred to as the “Barred Zone.” The “Barred Zone”—defined through longitudes and latitudes—included all immigrants from India, Burma, Siam, the Malay states, Arabia, Afghanistan, part of Russia, and most of the Polynesian Islands. In effect, the “Barred Zone” included almost all of Asia except Japan and the Philippines.

Because Chinese and Japanese laborers were already excluded from the United States through the

Chinese Exclusion Act of 1882 and the Gentleman’s Agreement of 1907, the “Barred Zone” component of the 1917 Immigration Act was intended to target Indians. However, an informal and extralegal system of Indian exclusion in the United States had been established nearly a decade prior to the passage of the 1917 Immigration Act. The restriction of Indian immigration through the “Barred Zone” Act had several precursors: most notably the manipulation of the “likely to become a public charge” clause, in which, beginning in 1909, immigration inspectors began excluding 50 percent of Indians seeking entry to the United States by arguing that, because of racial prejudice against Indians in the Pacific Coast states, Indians would have difficulty obtaining employment and thus were likely to become public charges; the rewriting of immigration policy in the summer of 1913 to prohibit migration from the U.S. imperial territories, most notably Hawaii and the Philippines, thereby closing immigration routes that Indians traveled to circumvent restrictive immigration policies at mainland U.S. ports, particularly in San Francisco and Seattle; and the attempts of U.S. officials in the spring of 1913 to use of the anti-anarchy law of the 1903 Immigration Act to exclude and deport Indians in the United States.

The Immigration Act of 1917, like the Immigration Acts of 1903 and 1924, illustrates how anti-immigrant and antiradical laws were often indistinguishable in the twentieth century. The antiradical clause of the act stated that “any alien who at any time after entry shall be found advocating or teaching the unlawful destruction of property, or advocating or teaching anarchy or the overthrow by force or violence of the Government of the United States or of all forms of law or assassination of public officials shall be taken into custody and deported.” In effect, the Act broadened U.S. antiradical immigration laws by expanding the opportunities for officials to deport someone for post-entry political organizing or association. In doing so, the Act reflected how, in the eyes of federal officials, the “foreign agitator” was undoubtedly an “undesirable alien.”

With the passage of the 1917 Immigration Act, deportation became the quickest and most effective method for U.S. authorities to suppress what were deemed dangerous or subversive political actors and movements. The Act allowed Congress to avoid due

process and thus not feel obliged to determine the rights of political radicals through what was viewed as the long slow process of courts. Originating with the anti-anarchist legislation of the 1903 Immigration Act the Immigration Act of 1917 was part of a continuum of antiradical legislation in twentieth century U.S. history that expanded deportation policy and restricted what constituted permissible belief and action. The newly revised deportation policy of the 1917 Immigration Act and the “Barred Zone” provision were not mutually exclusive but rather illustrative of the inseparability of anti-immigrant and antiradical sentiment at this time.

The “Barred Zone” Act was in effect until 1946, when the Luce-Celler Bill amended the 1917 Immigration Act, but still allowed entry to only 100 Indians per year under the existing quota system. It was not until the Immigration Act of 1965, which ended racially discriminatory policies in immigration law, that South Asians began migrating to the United States in significant numbers.

Immigration Act of 1924

The Immigration Act of 1924 (Sixty-Eighth Congress, Sess. I Chap. 190. 1924) was signed into law May 26, 1924, by President Calvin Coolidge. Its provisions

went into effect July 1, 1924. The law remained on the books until all traces of discriminatory provisions against Asians in immigration law were removed by Congressional action in 1965.

Immigration historians consider this legislation to be concerned primarily with narrowing national origin quotas, especially those assigned immigrants coming from southern Europe and the Mediterranean. By tightening quota-based legislation first approved in 1921, the law represented a further restriction on immigration in general and an attempt to limit newcomers as much as possible to those coming from northern Europe and Great Britain. The law also affected Japan immigration rights, thereby profoundly impacting future relations both between the United States and Japan and between Japanese immigrants and their (primarily Caucasian) neighbors.

Just how the Immigration Act of 1924 reflected prevalent negative attitudes among the American citizenry, not just toward immigration in general, but also toward Japanese immigration in particular, is not immediately apparent. The Act contained no specific mention of the Japanese. Included, however, was a provision prohibiting the immigration to the United States of any “aliens ineligible to citizenship.” This legalist euphemism in reality applied only to Asian emigrants as a result of a series of Supreme Court rulings defining Asians in general as the only racial group not eligible to become naturalized American citizens. Because prior restriction acts had already excluded all other Asians from the right to immigrate to the United States, in 1924 the phrase applied specifically only to the Japanese. Hence, the presence of the phrase ‘aliens ineligible to citizenship’ in the Immigration Act of 1924 clearly and unequivocally was meant to refer solely to the Japanese, the only Asian immigrant community ‘ineligible to citizenship’ still nominally permitted unrestricted immigration access to the United States.

During congressional consideration of the proposed legislation, numerous additional factors influenced the course of the debate over the Immigration Act of 1924 and its implied focus on Japanese exclusion. Nativist sentiment hostile to unfettered immigration was particularly robust at the time: the report accompanying the introduction of the legislations on

February 9, 1924, for example, declared all those seeking immigration to the United States “a great undigested mass of alien thought, alien sympathy, and alien purpose [and] . . . a menace to the social, political, and economic life of the country” (Congressional Record 68: 1, 3–4). The United States was also in the midst of a presidential election campaign; this made objections to the prevailing public mood regarding immigration restriction difficult for members of either major political party to endorse. As a consequence, initial Coolidge administration opposition to the bill gradually faded away. Within the Republican party itself, West Coast exclusionists, aware of the call for party unity in the face of the strength of the Democratic opposition, used the opportunity presented by the bill to push their long-held desire to prohibit Asian immigration altogether in exchange for their continued party loyalty.

Many in the United States also saw Japan in the mid-1920s as an increasingly threatening international presence. The generally perceived failure of Wilsonian principles (introduced in the aftermath of World War I) to ensure world peace and stability fueled growing American unease over Japanese expansionist intentions (which, some believed, included a desire to annex the West Coast of the United States). In their eyes, the Japanese immigrant community already present represented the vanguard in this planned extension of Japan’s overseas empire. Their presence needed to be carefully monitored; moreover, no more of their countrymen should be allowed to join them.

The credence given Social Darwinism at the time likewise impacted the specific debate over Japanese exclusion. Race mixing weakened the gene pool and undercut the American ability to survive the competition with other societies and cultures. There was also the question of potential “assimilability”: Japanese seemed particularly unsuited because of racial differences and the great disparity in customs evident between American and Japanese cultures. Skin color and slanted eyes, small stature together with differences in diet, language and religion were frequently cited as evidence that the Japanese immigrant represented essentially an inassimilable alien community.

In Japan, news of the proposed congressional action regarding exclusion was taken to be a major

diplomatic affront. Japan had long sought to assert her diplomatic equality with the nations of Europe and the United States. Since the late nineteenth century Japan had pursued *bunmei-kaika* (civilization and enlightenment), accelerating the modernization process by adopting and adapting imported Western models, to achieve *fukoku-kyohei* (a strong nation and a powerful army), acquiring in the process a substantial overseas empire. All these accomplishments, it now appeared, seemed incapable of assuring Japan the equal status she craved in the eyes of the world community.

When these issues were brought to their attention, American government officials sought to assuage Japanese concerns over the maintenance of her current unique diplomatic status by downplaying the impact of the congressional debate on the reality of Japanese immigration rights. In this respect, diplomats and State Department officials alike pointed to the Gentlemen’s Agreement of 1908 with the United States that defined an arrangement by which Japan agreed informally not to allow emigrants to leave the Empire if their planned destination was the United States, Mexico, Canada, or Hawaii. This agreement, in the eyes of American government officials, precluded any need to impose the ban proposed in the legislation then before the House and the Senate.

In support of this position, Secretary of State Charles Evans Hughes voiced the administration’s support for an alternative proposal suggesting the current arrangement with Japan concerning emigration be allowed to stand unaltered. This move, however, only served to focus congressional attention for the first time on the Gentlemen’s Agreement itself. Legislators favoring exclusion now proclaimed the Agreement a treaty that had been negotiated in secret and had never been approved by Congress as required by the Constitution. In response, Secretary Hughes asked the Japanese ambassador to the United States, Hanihara Masanao, to clarify the contents of the agreement in writing, thereby hoping to undercut criticism of the arrangement reached in the document some two decades earlier.

Ambassador Hanihara did so in a letter dated April 10, 1924, addressed to the American secretary of state. The impact of the Hanihara letter, however,

proved the opposite of that which was intended. Congressional supporters of exclusion seized on the letter's conclusion in which Hanihara warned of "grave consequences" should the ban on "aliens ineligible to citizenship" be included in the final version of the immigration act. These critics interpreted that phrase as both a "veiled threat" against the United States and interference in the nation's internal affairs by a foreign power. In response an extraordinary session of the Senate was convened almost immediately, leading to abrupt passage of the pending legislation with the exclusion clause still intact on April 16, 1924. The Senate bill was then sent to a joint Senate-House committee for reconciliation with the previously passed House version; final passage of the bill occurred soon after in early May 1924.

In Japan media coverage of the congressional debate had focused almost exclusively on the proposed ban on Japanese immigration rights, so much so that the legislation came to be referred to in press accounts as the Japanese Exclusion Act of 1924. The eventual passage of the Act was interpreted, therefore, as an unjust and discourteous insult directed specifically against Japan and the Japanese. By singling out Japan in its exclusion provision, the Immigration Act of 1924 was seen both to undermine Japan's international position and to malign her national honor and prestige on racial grounds alone. All this despite the facts that Japanese immigration into the United States had been minimal since 1908 and the Japanese government had scrupulously adhered to the provisions of the earlier informal Gentlemen's Agreement.

Japanese public reaction to congressional passage of the Immigration Act of 1924, organized by a wide variety of press, patriotic, religious, educational, labor, fraternal and social associations, led to numerous well-attended rallies and protest meetings throughout the Empire. As part of the protest movement, a *funshi* (indignation suicide), widely reported in the Japanese press, took place as did planning for a national boycott of imported American goods. These efforts at direct action initially were aimed at persuading the American president to veto the bill once it reached his desk.

These public protests, rallies, and boycotts accomplished little in the short run; Coolidge signed the bill with only minimal hesitation. However, the public

outcry in Japan against exclusion did serve to initiate a reassessment of Japanese popular opinion toward the United States. Generally favorable in response to the outpouring of American aid to Japan in the aftermath of the Great Kanto earthquake of 1923 and the successful conclusion of the Washington Naval Disarmament Conference in 1922, Japanese public views now began to question whether Americans would ever accept Japanese as diplomatic equals on the international scene.

This domestic Japanese concern with winning a sense of diplomatic equality had long been a goal of the Japanese government; ever since the imposition of the unequal treaties in the mid-nineteenth century, Japan had sought to assure her survival as an independent nation state through the quest for international acceptance on the basis of "equality" with the imperialistic nations of the West. Recent events had prompted many in Japan to assume that elusive sense of equality had at long last been achieved: the Japanese had successfully renegotiated the last of the unequal treaties; the Anglo-Japanese Alliance had provided Japan with a powerful Western ally; Japanese forces had contributed to the Allied war effort during the Great War; Japanese diplomats had been included in the naval limitation negotiations in London and Washington. The international outpouring of relief following the Great Kanto Earthquake had for many confirmed this newly acquired stature; now, suddenly, actions being taken by the United States Congress appeared to threaten these hard-won gains.

In the end, attention given the exclusion act in Japan served both to focus public opinion on Japan's precarious international position in general and to bring to the fore specific fears of American antagonism directed toward Japan, seen as increasingly vulnerable, both economically and diplomatically, to external dangers due to an engrained racism impossible to overcome. It is not too difficult to perceive in this reassessment taking place among many in Japan in 1924 the seeds of those thought processes leading eventually to Japan's adventurism on the Asian continent and her involvement in World War II.

Internal reaction among the Japanese American population resident in the United States at the time tended toward an increased interest in both assimilation

and in the defense of the immigrant community against external threat. Second-generation Japanese Americans particularly sought to ensure access to the larger culture through education and the enhancement of Japanese cultural traits similar to those found in their American surroundings. In the 1930s this led to the formation of the Japanese American Citizens League. The JACL, which was later to become an important political action committee speaking out on issues of interest and importance to the Japanese American community, was clearly structured in these early years to emphasize the quest for assimilation among Japanese in the immigrant community.

The Immigration Act of 1924 is, therefore, not to be seen merely for the formal end to immigration from Japan it brought about but also for its long-term impact on Japan's relations with the United States and on the resident Japanese immigrant community's commitment to the prudence of self-effacing assimilation rather than self-defeating direct confrontation.

Immigration Act of 1990

Also known as S.358, the Immigration Act of 1990 was first passed by Congress on October 27, 1990, signed by President George H. W. Bush on November 29, 1990, and took effect on October 1 of the following year. As a revision to the Immigration and

Nationality Act of 1965, otherwise known as Hart-Celler, this new immigration reform raised the existing quota of 530,000 visas for immigrants to 700,000, increasing the ceiling cap by 40 percent. For the Asian American community, this allowed for marked increase in immigration from Asia through preferences in family-sponsored immigration and employment-related immigration.

The act organized the structure of immigration policy along three immigrant categories: family-sponsored immigration, employment-based immigration, and diversity immigration. To facilitate for more rapid family reunion, the new outlines changed the annual cap of 54,000 visas to 140,000 visas annually for this particular type of immigration. In keeping with the old law, this act exempted immediate relatives (minor children, spouses, and parents) of U.S. citizens from the quota restrictions.

There exist four preferences for family-based immigration. The first preference is given to the unmarried sons and daughters of U.S. citizens. Below that are spouses and minor children as well as unmarried sons and daughters of noncitizen permanent residents. The next preference is reserved for married sons and daughters of U.S. citizens. Lastly, brothers and sisters of U.S. citizens fall under the fourth preference category. As such, the new law reserves a ceiling of 480,000 visas for family-based immigration and demands the maintenance of at least 226,000 visas. For the newer Asian ethnic groups like the Vietnamese, the number of visas reserved for family reunification allowed for a surge in their absolute and relative numbers of immigration. Similarly, Chinese from the Fujian province were able to take advantage of this category.

As a response to the growing need for qualified professionals from the business sector, employment-based immigration was enacted with the goal of recruiting highly skilled and educated workers, people of talent, and laborers in selected fields. As with the family-sponsored category, professionals from Asia were able to utilize this path toward immigration. In contrast to the existing law, which allotted 54,000 visas for employees and their families, the Immigration Act of 1990 increases the quota to 140,000. Of this number, the visas are divided into five separate

groups. In the first group, special privilege is conferred upon the designated “priority workers”: business executives, researchers, and professors who possess “extraordinary skills.” Individuals who achieved recognition in the fields of science, arts, business, education, and/or athletics also fit into this classification. Asian professionals in the fields of medicine and technology were some of the new immigrants who qualified for this category. Through the employment of workers who can operate at the highest level in any profession, lawmakers and businesses hoped to strengthen the American labor markets and the U.S. economy.

Individuals of “exceptional ability” and professionals who had acquired advanced degrees in their area of specialty make up the second category of work-related immigration. To secure a visa, these individuals must obtain a certificate from the Labor Department as confirmation of the shortage of workers in their field of expertise. The third preference category encompasses bachelor’s degree holders, skilled workers, and “other workers.” The professionals and skilled workers who qualify for visas under this category must demonstrate competency and ability in an area that requires two or more years of training. The inclusion of “other workers” allows for unskilled workers with little to no training experience to fill the empty slots for certain American industries.

Investment visas offer another dimension to the economic component of the immigration law, one that was designed to help bolster the U.S. economy through the creation of jobs. Specifically, it targets entrepreneurs who would be willing to invest US\$1 million or more in a business project. Such endeavors must be able to employ at least 10 citizens or permanent resident workers. Furthermore, these enterprises should be in the process of or established after November 29, 1990, and entrepreneurs must show proof of investment and of continuous business operation to maintain their Legal Permanent Residence status. Lastly, the final category is reserved for special immigrants such as religious ministers or priests, and workers employed in government agencies and qualifying international organizations. Among the 140,000 visas, 10,000 each are assigned for these two categories.

Diversity immigration showcases a new approach taken by lawmakers toward immigration. Under this new category, it is the responsibility of the Attorney General to determine the rates of immigrations in American states or regions. Places that receive 50,000 or more are considered of High Admissions standing. In contrast, regions that experience a dearth of immigration are classified as Low Admissions and granted greater preference as a way to encourage diversity. Moreover, this part of the law denies visas to those from countries that have sent immigrants in significant numbers. For the first time, Congress introduced a lottery system known as the Diversity Visa Lottery Program, which randomly assigns visas to those who are eligible for entry to the United States.

The Immigration Act of 1990 further created new types of employment migrants while making changes to previous ones. Among the existent categories of nonimmigrants, or temporary visa holders, only H-1B visas experienced changes under the new act. Under the old law, H-1B visas were defined as “persons of distinguished merit and ability in the fields of business, sports, and entertainment.” The new law divides the last two into groupings “O” and “P” and allows these individuals to stay in America for only the duration of their event or activity. Business professionals in H-1B category must hold a bachelor’s degree or an equivalent and are required to show confirmation of the need for their skills. In addition to H-1B visas, the categories of “Q” and “R” were created that deals with nonimmigrants engaged in cultural exchange and those working in religious sectors. Lastly, Congress introduced an annual quota of 65,000 for the distribution of H-1B visas.

Other noteworthy changes in the new law included the establishment of a “temporary protected status,” changes in the naturalization process, and removal proceedings. Nonimmigrants who have resided in the United States but who cannot safely return to their home country because of extenuating circumstances such as natural disasters or civil and political conflict qualify for temporary asylum. In matters of naturalization, the immigration act transfers power from the courts and states into the hands of the Attorney General. With a more lenient stance toward the English requirement for older immigrants (over 50 years of

age and residency in the United States for at least 20 years) and the shortening of the state residency requirements from six months to three months, these provisions helped facilitate the process toward citizenship for many who had difficulty acquiring English or moved residence across states.

Under other provisions of the immigration law, Congress sought to hasten the deportation of convicted immigrants by eradicating safeguards that might have protected against unfair removal. As such, it allowed for the immediate deportation of any noncitizen engaged in violent forms of criminal activity and other offenses such as dealing in drugs and laundering money. In a similar vein, exclusionary measures that once guarded against the admittance of HIV positive immigrants were abandoned in the new act. Instead, excluded are those whose physical or mental health can pose a threat the larger public and individuals with a history of drug abuse. It should be noted that people who are affiliated with Communism, have a record of terrorist activity, or whose immigration might negatively affect foreign relations are still barred in the new law from entry.

Immigration and Nationality Act of 1952

See McCarran-Walter Act of 1952

Immigration Reform and Control Act of 1986

President Ronald Reagan signed the Immigration Reform and Control Act (IRCA) into law on November 6, 1986. The legislation was also known as the Simpson-Mazzoli Act and it included penalties against employers who knowingly hire workers without documentation. Another important component revolved around pathways to legalization. The bill granted temporary status to undocumented workers who had been continuously present in the country since January 1, 1982. A pathway to permanent resident status would be provided after 18 months from the granting of temporary residence. A third component of the bill incorporated an agricultural foreign worker program, including the admission of 60,000 to 75,000 H-2 agricultural workers, and the right to replenish foreign workers in the event of a labor shortage. IRCA constituted comprehensive immigration reform, and its provisions generated much controversy.

Though efforts to curb undocumented immigration had been present and only partially successful since the 1950s, the Reagan administration granted priority to the issue of immigration. Attorney General William French Smith led the administration’s comprehensive immigration effort. Senator Alan K. Simpson (D-Wyoming) and Kentucky Congressman Romano L. Mazzoli (D-Kentucky) introduced the first version of this legislation to the 97th Congress in 1982. However, consideration of the bill was delayed and ultimately left unresolved by both the 97th and the 98th Congresses. Senator Simpson introduced the bill again in 1985 in the Senate as S. 1200, and Congressmen Peter W. Rodino (D-New Jersey) and Mazzoli introduced the bill in the House as H.R. 3080. The bill passed in both houses of the 99th Congress on this third attempt.

Short-term changes in migration dynamics followed the passing of IRCA. These include the return of migrants to their home countries in some cases, the delaying of coming in others, and still for others, the acceleration of claims for legal status. In the longue durée, however, evidence suggests that the bill failed to curtail undocumented immigration.

Although the impact of the bill is typically discussed in relation to the experience of Mexican

immigrants, IRCA also had implications for Asian Americans. Notably, the issue of undocumented immigration was entangled with the recent arrival of refugees largely from Cuba and Southeast Asia. Early legislative recommendations to the president addressed immigration and refugee laws, and were submitted by the Select Commission on Immigration and Refugee Policy.

The employment sanctions component of IRCA raised concerns about the eligibility of Latino and Asian immigrants to work. One criticism was that implementation of employer sanctions promoted discrimination against individuals who were perceived as foreign, including Asian immigrants with limited language proficiency. This discrimination based on national origin was reported to be higher in areas with more immigrant concentrations. Discussions of undocumented workers have often been framed around the Mexican immigrant experience. However, IRCA provisions also impacted undocumented Asian Americans. Though the impact of IRCA on Asian Americans has been understudied, backlash against IRCA and anti-immigrant legislation have been attributed to the increasing Latino and Asian composition of immigration.

Inada, Lawson Fusao (1938–)

A third-generation Japanese American (Sansei) born in Fresno, California, on May 26, 1938, Lawson Fusao Inada is a well-known poet, writer, activist, and educator. At the age of four, Inada and his family were forcibly relocated to the Fresno County Fairgrounds and later incarcerated at an internment camp in Jerome, Arkansas before finally arriving at Amache, Colorado. After the war, the Inada family returned to Fresno and luckily enough were able to resume their business, the Fresno Fish Market, because it and their home had been looked after by their neighbors. At the age of 18, Inada met jazz singer Billie Holiday at one of her shows and instantly became inspired to write poetry. Inada took classes at Fresno State University and eventually attended the University of Iowa’s Writers’ Workshop. In Iowa, he met his wife Janet and they have two grown children, Miles and Lowell. Inada also received his MFA from the University of Oregon and began teaching at Southern Oregon University where he remains an emeritus professor of English. Inada has received many awards and honors including the Guggenheim Fellowship in 2004, the American Book Award for *Legends from Camp* (1992), and the Oregon Book Award for another collection of poetry, *Drawing the Line* (1997). Inada has also served as chair of the National Steinbeck Center and a judge for the National Book Award in Poetry. And from 2006 to 2010 Inada was appointed the fifth Oregon poet laureate, whose role is to foster the art of poetry, encourage literacy and learning, address central issues relating to the humanities and heritage, and reflect on public life in Oregon. The Oregon poet laureate must provide public readings and partake in numerous public events to not only share their work but to inspire others to engage in poetry as a creative expression.

Inada articulates poetry as a way to express himself and finds it not only therapeutic to write poetry but to share it with others. Although his poems are very personal and about particular experiences (often internment), Inada believes that poetry can be about finding universality or common ground that allows one to find acceptance of self and others through writing. His idea of poetry transcends the personal and is a type of communication that can even be therapeutic to

the audience. For Inada, poetry is much more than words on a paper—it should be read aloud, celebrated, and shared. Inada’s poetry has been published in many anthologies, but it has also been published in separate volumes including: *Before the War; Poems as They Happened* (1971), *Legends From Camp* (1993), and *Drawing the Line* (1997). In *Legends from Camp*, Inada addresses his internment memories through poetry as a way to take a hold of history and go beyond the facts. He addresses dispossession, loss, confusion, and childhood in verses that are lyrical, light, and performative despite their heavy and serious content. Inada’s work is often written in this way, stemming from his past ambition to be a jazz string bass player, which he says has influenced and inspired his work. But this collection of poems is more than just about internment it also covers a variety of subjects from Inada’s life: his love of jazz, Oregon, and family.

In addition to his poetry, Inada is the coeditor of two major Asian American literature anthologies, *Aiiieeeee! An Anthology of Asian American Writers* (1974) and *The Big Aiiieeeee! An Anthology of Chinese American and Japanese American Literature* (1991) both of which highlights the importance of Asian American writing while being critical of the way the mainstream imagines Asian Americans to be. Although these anthologies focus on Japanese American and Chinese American literature, Inada and his fellow coeditors established a concrete literary history and genealogy that validated the Asian American experience. Inada is also known for reintroducing works that have been forgotten and for writing introductions to John Okada’s *No-No Boy* and Toshio Mori’s collection of short stories. He is also the editor of *Only What We Could Carry: The Japanese American Internment Experience* (2000), a collection that voices the struggles and emotions of internees through a variety of expression ranging from art and poetry to letters and newspaper clippings.

Independent Chinese Language Newspapers during the Cold War

Shortly after their arrival in America in the mid-nineteenth century, the Chinese started to publish their own ethnic newspapers to keep the community informed about events and issues pertinent to their group interests. A strong attachment to the homeland, similar to many other ethnic groups, and a hostile environment in the United States, had combined to sustain a keen interest among the immigrants in the affairs of China, particularly its political development. Most of the early newspapers adopted the Chinese language as the medium of communication and were devoted to mobilizing the Chinese immigrants in various homeland-oriented political causes, the culmination of which was the support of China against Japanese aggression in World War II.

The Cold War profoundly affected the historical trajectory of Chinese Americans and that of their ethnic newspapers. In the late 1940s, the Chinese American press had emerged from World War II as a vibrant and competitive industry, with about 15 dailies and weeklies published in the continental United States and Hawaii (N.W. Ayer & Sons 1950). Although China politics, epitomized by the confrontation between the Communist-led People’s Republic of China (PRC) and the Nationalist regime who had retreated to Taiwan in 1949, continued to dictate many publishing enterprises, a host of independent newspapers were also on the scene to report on American and Chinese news from a relatively neutral ground and to struggle for their freedom of speech against the forces of the Cold War.

One of the most venerated and widely circulated community newspapers was the *Chinese Times (Jinshan shibao)*, which was started by the Chinese American Citizens Alliance (CACA) in San Francisco

in July 1924. True to its claim as the “only Chinese daily owned, edited and published by citizens of the United States,” a line that appeared under its title on the front page, the paper took the community’s livelihood in America, rather than the maintenance of China ties, as its core concern. At a time when many other papers were preoccupied with China’s complex political situation, the *Chinese Times* reported more extensively on international news and America’s domestic policies, especially the U.S. immigration and naturalization policies. Publishing more pages than its peers, the *Chinese Times* was a continuous success and had ranked among the highest circulated Chinese American newspapers until the 1970s.

Closely matching the influence of the *Chinese Times* was the *Chinese World* (*Sai Gai Yat Po*, *Shijie ribao*). The paper traced its origin to *Mon Hing*, a weekly published in San Francisco since 1891. Later it was taken over by members of the Protecting Emperor Society (*Baohuanghui*, later the Chinese Constitutionalist Party), became a daily, and changed its name to *Sai Gai Yat Po* in 1908. Since 1945, the paper resurged from years of oblivion under the able management of Dai-ming Lee (1904–1961), a Hawaiian-born Chinese and leader of the Constitutionalist Party. Simultaneously running two constitutionalist organs—the other being the *New China Daily Press* (*Xin Zhongguo ribao*) in Honolulu—Lee had conscientiously used his papers to propagate support for democratic constitutionalism and the preservation of Chinese cultural traditions in China. With each paper reporting a daily circulation of eight to nine toward the late 1950s, Lee’s editorial columns on both made him one of the most conspicuous Chinese American opinion leaders of the time.

Apart from the well-established daily newspapers, weeklies also grew rapidly and carved out for themselves a stable market share. Compared with the daily papers, the weeklies covered less-current news but included a greater variety of recreational and practical content, such as popular literature, historical anecdotes, legal consultation, advice columns, and so on. In San Francisco, the *Chinese Pacific Weekly* (*Taipinyang zhoubao*) was launched by Gilbert Woo (1911–1979) and several other liberal intellectuals in 1946 for reporting the current affairs from a mild and

nonpartisan standpoint. In 1942, Chin-fu Woo (1910–2003) established the *Chinese American Weekly* (*Zhong Mei zhoubao*) in New York, whose circulation rose to 6,000 within three years. The commercial success of the paper led to the birth of the daily *United Journal* (*Lianhe ribao*) in 1952, which grew to be New York’s most widely circulated Chinese newspaper in the following decades.

Although all of these newspapers were committed to neutral news reporting and politically unattached to either the Chinese Communist Party (CCP) or the Guomindang, they were not without certain inclination with regard to homeland politics. Most often a paper’s political tone was determined by one or two dominant personalities, usually the chief editor or columnist. Under the control of pro-Guomindang editors, the *Chinese Times*, the *Chinese American Weekly*, and the *United Journal* tacitly supported the Nationalist government. The *Chinese Times*, for instance, kept for many years the practice of recording the year with the Republic of China’s calendar system and openly acknowledged Chiang Kai-shek as the legitimate president of China. Notwithstanding some mild criticism of the Guomindang, both the *Chinese American Weekly* and the *United Journal* also sided with Taiwan because of Chin-fu Woo’s deep aversion to CCP’s harsh domestic policies in the 1950s.

Greater Cold War pressures were felt by those who were less willing to rally to the Nationalist leadership. As China became an open enemy of the United States in the Korean War (1950–1953), the anti-Communist hysteria led by Joseph McCarthy picked up momentum and cast a shadow over the lot of Chinese in America. A chief victim in the Chinese American press industry was the *China Daily News* (*Meizhou huaqiao ribao*), the New York-based Chinese Hand Laundry Alliance’s paper well-known for its vocal support of the PRC. After the Korean War broke out, the paper was boycotted by Guomindang supporters. Subscribers to the paper were accused of being Communist and Chinatown businesses were intimidated into withdrawing their advertisements. Because of the advertisements placed by the PRC-controlled Bank of China, the paper was further placed under a 53-count indictment, including violations of the Trading with the Enemy Act. It was found guilty in 1954 and

sentenced to a \$25,000 fine. The chief editor Eugene Moy was sentenced to two years' imprisonment (later reduced to one).

The legal persecution of the *China Daily News* was a somber reminder of the chilling effect of the Cold War on the freedom of the Chinese American press. Despite its neutral standing, the *Chinese Pacific Weekly* was under duress because of its candid reports on the Nationalist misrule and business association with a pro-CCP newspaper, the *China Weekly (Jinmen qiaobao)*. As a result, it was intimidated by the Guomintang forces. With his paper endangered, Gilbert Woo became more cautious with China politics. The paper specifically advised the readers to cut all political ties with China, be they with the Chinese Communists or the Guomintang, so as not to endanger the survival of the whole community.

The *Chinese World* was exposed to similar pressures despite its very different political views. A vocal champion of democratic constitutionalism in China, Dai-ming Lee had explicitly encouraged Chinese Americans to play a greater role in the democratic process of China. His consistent criticism of both the Guomintang and the CCP made him a mutual target for their respective supporters in America. In 1951, because of his refusal to endorse Chiang Kai-shek's leadership, Lee was entangled in a heated pen war with two Guomintang party organs in San Francisco, the *Young China Morning Paper (Shaonian Zhongguo chenbao)* and the *Chinese Nationalist Daily of America (Guomin ribao)*. At one point, he had to call in the police to guard against the harassment of Guomintang hoodlums. Nevertheless, Lee's persistence in the incident convinced non-Chinese observers that he was running a truly free and unbiased press. To commend his "determination to carry on the best traditions of a free press," the Associated Press then accepted the *Chinese World* as its first member from the Chinese American press industry. In the following years, Lee continued to hold a keen interest in initiating political changes in China and was active for a while in fostering an overseas-based "third force." However, his China-bound effort produced few material results.

As the danger and futility of engaging in homeland politics became increasingly apparent, Chinese

American newspapers hastened the shift of focus from China to America. This transition was also dictated by the sociodemographic changes of the community. In 1940, the number of native-born Chinese population surpassed that of the foreign-born for the first time (Fessler 1983, 191). During World War II, the Chinese Exclusion laws were repealed in 1943, and the War Brides Act (1945) and the Alien Fiancées and Fiancés Act (1946) allowed Chinese women to come in large numbers. Chinese immigrants also gained the right to naturalization. All these changes encouraged greater affiliation with the United States.

The Chinese American press consciously adapted themselves to the changing needs of the community. One sign of this was the trend toward bilingualism. To attract readers from native-born generations and increase communication with the larger American society, the *Chinese World* launched an English section in December 1949. The *Chinese Pacific Weekly* started an English pictorial section in mid-1952, but it held out for only three months because of the shortage of manpower and funds.

A truly bilingual press with equal emphasis on both languages did not emerge until much later, when the Immigration and Nationality Act of 1965 (Hart-Celler Act) and the progress of the civil rights movement paved the way for the ever greater role Chinese Americans would play in the social, political, and cultural fields. In January 1967, following the epoch-making election of March Fong Eu (then March K. Fong) to the Californian legislature, the *East/West (Dong xi bao)* started publishing as a 10-day journal in San Francisco. As its name suggested, the journal pledged to bring together the "best of two worlds." For instance, one of its regular features was teaching Chinese characters, phrases, and classical poems in English.

The coming of new waves of immigrants and the gradual spread of Chinese population to different parts of the United States compelled a new drive for unity across the community. Taking advantage of the improved communication and transportation technologies, some large newspapers tested their strength with national expansion. The *Chinese World* again took the lead and launched a New York edition in 1957. But this ambitious move proved ill-planned and took

a heavy toll on the paper's finances. With the death of Dai-ming Lee in 1961, the paper quickly lost momentum and closed down in 1969. The New York-based *China Times* (*Zhongguo shibao*) also tried to expand to San Francisco and Chicago in 1963, but the result was frustrating as well.

After weathering the political strains in the Cold War, the Chinese American ethnic press encountered greater challenges from powerful publishing ventures from Hong Kong, Taiwan, and later the People's Republic of China. Since the 1960s, new forces began to cut into the already packed Chinese press market, the most influential including the successful *Sing Tao Daily* (*Xingdao ribao*) imported from Hong Kong and the *World Journal* (*Shijie ribao*, different from the *Chinese World*) funded by Taiwan. Compared with these well-funded and professionally operated publishing enterprises, the ethnic press, which depended heavily on the devotion of one or two individuals, proved fragile. Although the appearance of numerous new papers and the significant improvement in coverage and content seemed to usher in a booming period in the Chinese American press industry, many historical papers that had survived the war and McCarthyism gave up one by one in the new era of commercialism. By the end of the year 1970, Chin-fu Woo decided to cease the *Chinese American Weekly* to concentrate on the *United Journal*. When he retired in 1998, the *Journal* had to close down as well. When Gilbert Woo died in 1979, the *Chinese Pacific Weekly* merged with the *East/West* and its name disappeared in 1986. The *East/West* itself ceased publication in 1989. Only the *Chinese Times* was taken over by the *Sing Tao* in 2003, allowing it to carry on a venerable history as the longest-running Chinese newspaper in America.

Indian American Community Organizations

Even after an ethnic group has gotten its footing in a new country, members still turn to one another for support. Ethnic organizations are a response to a felt affinity to coethnics, but more so they are popular because they serve individuals' needs. Indian American organizations, as is true for other ethnic groups, span a variety of types, including religious, cultural, educational, professional, social, and political. They are diverse in terms of their infrastructure, level of organization, and size. Some are local whereas others are national and international. And some rely entirely on volunteers whereas others have paid staff and attract major celebrities to their events. Here I explain the various kinds of organizations popular for Indian Americans and

elaborate on their main agendas, accomplishments, and challenges.

Religious and cultural organizations are often the first kind that immigrants start. Community members gradually built temples, mosques, gurdwaras, synagogues, and churches as parents realize that they were not going to move back to India and want their children to be raised within their religion and culture. A common concern of immigrants generally is the too strong influence of mainstream American culture at the expense of (often more conservative) ethnic culture. Religious organizations often communicate to members the superiority of their culture although to outsiders they embrace a multicultural logic that everyone's culture is equally valuable.

Secular cultural organizations, often tied to regions and castes within India, similarly attract large numbers of attendees to their events. These volunteer-run associations have annual conferences that draw in members from across the country. Sessions at the conferences involve cultural programming, panels on business or political trends, youth concerns and cultural shows, and the like. Informally these can provide spaces for parents to pursue marital options for their children.

Cultural and religious organizations provide more than cultural and spiritual guidance. They also serve professional and civic needs. When at a religious or cultural function, individuals network, learn of employment opportunities, share business tips, learn procedures of how to navigate state bureaucracy, and more. In other words cultural organizations help members integrate into their local community and economy whereas simultaneously affirming boundaries between them and other groups.

These organizations also provide youth with a supportive community in the face of public scrutiny of their background. Many Indian Americans experience cultural, religious, and racial discrimination while growing up in the United States. Questions on where they are "really" from, why they "worship cows," if they bathe properly, and the like are commonplace for Indian Americans regardless of generation. But these accusations can be more emotionally damaging for those raised in the United States, for such persons often do not have transnational memories to fall back

on for support. Such treatment creates a distance from most Americans and an increased solidarity with their ethnic and religious groups, and possibly with other Asian Americans as well. Youth who grow up uninterested or even ashamed of their background often become committed to it as they go further into adolescence and start to conceive of marriage and parenting. Cultural and religious organizations become key spaces for persons to affirm group ties and a positive self-identity. For instance, college religious organizations offer youth a space to learn about their faith and rebut common stereotypes. Increasingly, religious organizations have youth groups and opportunities for youth to participate in services.

Nevertheless, second-generation Indian Americans may turn, ironically, to nonreligious organizations to further their commitments to their religion. Religious services typically take place in Sanskrit, Hindi, Punjabi, Gujarati, or other native Indian languages. Those raised in the United States often cannot understand what is being said, which detracts from their comfort in religious spaces. Also, given that most attendees are older and first generation, young adults or teenagers of the second generation often feel isolated, even when attending with their families. Religious services become read as full of rituals and expressions whose meaning they do not understand. In effect, religious services can cause the younger generation to become disaffected from their religion. In response some in the second generation look to their social organizations or to popular culture to learn more about their religion with varying levels of commitment. Religious organizations are slowly adapting to this reality. Some have television screens with English versions of what is being said. And, youth groups are increasingly vibrant.

Beyond cultural and religious organizations, the most common types of organizations for Indian Americans are professional, social, social justice, political, and creative arts. Indian American men participate in the labor market at rates higher than the national average (in 2000, 79.1 percent and 70.7 percent, respectively), whereas women participate a bit less (54 percent and 57.5 percent, respectively). Each major occupational group has its own professional association. These include the Asian American Hotel

Owners' Association (AAHOA), the Association of American Physicians of Indian Origin (AAPI), The Indus Entrepreneurs (TiE), the Asian American Convenience Store Association (AACSA), South Asian Journalists Association (SAJA), South Asian Bar Association (SABA). These associations hold regional and national conferences, offer information sessions, publish magazines, seek political influence, create networking opportunities within their industry, and other types of organized activities.

Members of each association typically are members of other, larger mainstream associations that also serve their profession (e.g., American Medical Association for physicians). Still, the ethnic-based associations are seen as worthwhile because Indian Americans can face issues that their professional peers do not. For instance, Indian American motel owners often are "owner-operators," that is they do not simply run motels but own them as well. AAHOA is the largest hospitality association in the nation assisting owners of motels. Indian American physicians, as predominantly immigrants, care about immigration laws regarding physicians in ways that other medical or immigration organizations do not, which help give AAPI its distinctive role. And Indian Americans across professions face stereotypes or challenges that most others in their professions do not. Indian American or South Asian American professional organizations offer strategies to handle such problems. Most of all, members enjoy networking with persons whom they can feel more connected to.

NYTWA is different than the others in that it represents workers and is an official union within the AFL-CIO. About 60 percent of New York City taxi cab drivers are South Asian American, which makes the drivers' struggles for rights an ethnic struggle as well. NYTWA assists drivers in challenging impositions on them from the city and owners (e.g., the requirement of global positioning systems in cars), in seeking health care given drivers' lack of health insurance, in ameliorating police relations, and other job-related challenges.

Although not a professional organization, the volunteer-run Network of Indian Professionals (Net-IP) targets professionals (i.e., college educated, career-minded) and is the largest national association

for mostly Indian American young adults. Primarily social in nature and appealing to singles, its branches across the nation sponsor networking happy hours, business sessions, charity events, book clubs, and the like.

Other volunteer organizations targeting a similar demographic are centered on the creative arts. These are found in major cities that have a large enough South Asian American population interested in pursuing creative expression. For instance, the South Asian Women's Creative Collective in New York City started in 1997 to encourage South Asian American women to share their work with one another and with outsiders in a culturally appropriate manner. It has moved beyond offering internal guidance to artists and now sponsors festivals that publicly display artwork and other creative expression. Similarly, Subcontinental Drift is a spoken word and creative arts collective for South Asian Americans that started in Washington, D.C., and has spread to New York City and Chicago. Held once a month, these open-mics allow everyday South Asian Americans, mostly in their 20s and 30s and raised in the United States, to perform original or cover others' songs, poems, skits, comedy routines, and the like. The stated purpose is less to nurture professional aspirations, although that likely happens, than to offer an opportunity for a community feeling around creative expression. Other arts associations can be found in other major cities as well.

A common theme to these creative arts organizations is social justice and politicized commitment. Some of the themes taken up include intimate partner violence, race relations, queer persons' interests, and gender roles. It is not a coincidence, for instance, that most such organizations adopt a South Asian rather than singular nationality as their orientation. Much of the topics dealt with pertain to all South Asian Americans, such as cultural or racial dilemmas. Also, there is an interest in breaking down nationalisms that limit the solidarity across groups.

Social justice and political nonprofit organizations are growing in the community as well. One of the earliest and most prolific types is intimate partner violence organizations. In 1985, Manavi started in New Jersey as the first organization dedicated to such needs of women. Similar organizations now serve women in

cities across the country. A year later TriKone started in the Bay Area, the first organization in the nation dedicated to advancing the needs of lesbian/gay/bisexual/transsexual/queer South Asian Americans. Sister TriKone organizations have started in Atlanta and Chicago, and other LGBTQ South Asian American organizations have started elsewhere. Both intimate partner violence and LGBTQ organizations are sometimes criticized by fellow South Asian Americans as promoting an undesirable image of the community. For instance, the South Asian Lesbian and Gay Association in New York City has had trouble on and off being allowed to participate in the New York City India Day Parade, much like a comparable Irish American organization had trouble being allowed to march in New York City's annual Irish Day Parade. Indian American political and social organizations run these parades and see it as their mission to represent the community to elected officials and view the presence of these organizations in the parades as counter-productive to their goals. Political organizations advocate for better U.S.-India relations and the advancement of Indian Americans generally.

A final kind of organization is education focused. Indian Americans are known for their high educational achievements: Almost two-third of Indian Americans have a college degree or more, compared to a quarter of the general population. Educational organizations help Indian Americans take advantage of educational resources in their local areas. One type of educational organization that has become popular among Indian Americans revolves around spelling bees. A few Indian-only or Indian-centered organizations sponsor spelling bee competitions, with regional events and national championships. In fact, some of the Indian Americans who go on to win the Scripps National Spelling Bee previously participated in these Indian American competitions. These popular organizations also sponsor math, science, and other "bees."

Although outlined here as distinct organizations, many overlap. For instance, religious spaces often are venues for the educational competitions or even intimate partner violence counseling. The professional organizations, like AAHOA, sponsor political ambitions for India-U.S. relations as well as cultural programming. What results is a multifaceted community

with strong organizational links. As Indian Americans mature they pursue more and more avenues to affirm their background while connecting to their American environment. The organizations, as common for immigrants generally, serve both to affirm ethnic ties and facilitate the population's comfort and success in the United States.

Indian Americans

The United States is today home to one of the largest overseas Indian communities in the world. Though the early history of Indian Americans can be traced to as far back as the 1890s, their contemporary history extends back to the passage of new legislation in 1965 that lifted restrictions on the entry of Indians into

the United States. From a community then numbering in the few thousands, the Indian population has grown by leaps and bounds to nearly 3.2 million in 2012 according to U.S. Census Bureau. However, for a community that commands the highest per capita income of any racial or ethnic group, as well as the highest rate of college graduates, Indian Americans have so far not played a significant role in American politics. Where before Indians had made known their presence most visibly in the professions, particularly in medicine and engineering, extending in recent years to computer-related industries and investment banking, today the community is far more diversified with large number of Indians entering into the taxi business, fast food franchises, and hospitality industries. But much else marks the growth and visibility of the Indian American population, such as the rapid proliferation of Indian restaurants, the emergence of acclaimed writers, the construction of Hindu temples, the demarcation of Little Indias in major metropolitan areas, and the myriad signs of an emerging familiarity on the part of the wider American population with such diverse aspects of Indian culture as Bharatnatyam, yoga, ayurveda, Indian classical music, and tandoori cooking.

Political History: The Early Phase, Pre-1965

Peasants from the province of Punjab first began appearing on the West Coast around 1898–1999, seeking work in Washington’s lumber mills and California’s vast agricultural fields. Though predominantly Sikhs, they were described as “Hindus” or more commonly “Hindoos.” The trickle of some 20 to 30 emigrants annually over 1898–1902 had risen to 271 emigrants in 1906, but those fleeing inhospitable Canada were in for another brutal reception. Almost from the outset they were seen as inassimilable, possessed of “immodest and filthy habits,” and regarded as the “most undesirable, of all the eastern Asiatic races . . .” In two separate incidents in 1907, both in the state of Washington, Indians were subjected to racial attacks and compelled to seek protective custody, and over the course of the next several years the Asiatic Exclusion League as well as an excitable press continued to sound alarm bells on the hazards of permitting “Hindoos” in the presence of white people.

The first Indian student arrived in 1901, and in less than a decade a small body of Indian students had congregated at UC-Berkeley, the polytechnic at San Luis Obispo, and a few agricultural colleges. The renowned nationalist leader, Lala Lajpat Rai, visited the United States in 1905 and was followed by other political rebels opposed to British rule in India, among them Har Dayal, Ram Chandra, Tarkanath Das, and Bhai Parmanand. Their ambition was to win recognition for India’s aspirations to independence, and to this end the “Hindi Association of the Pacific Coast,” more popularly known as the Ghadar (Revolutionary) Party, was founded in Oregon in 1913. Even as the party newspaper, *Ghadar*, fomented outright rebellion against colonial rule, British authorities impressed upon Americans to mount a successful prosecution of the party’s adherents on charges of collaboration with Germans to deprive the British of their sovereignty over India. Though the Ghadar movement was short-lived, the movement drew into its fold peasants and intellectuals, farmers and students, and Hindus, Sikhs, and Muslims, thereby holding up the example of a concerted struggle, in which all classes of Indians would have an honored place, that might free Mother India from the clutches of a colonial empire.

The period before 1923–1924 can be described as one in which calls for the exclusion or restriction of Indians were pitted against the demand for migrant labor. The Immigration Act of 1917 effectively barred all Asians from entering the United States; although Indians entertained the hope that as “Caucasians” or “Aryans” they might legitimately gain citizenship, in the landmark Bhagat Singh Thind ruling the court declared that “in the understanding of the common man,” which was declared to be consonant with the intentions of the Founding Fathers, “white” clearly denoted a person of European origins. Thus the émigré from Amritsar, Bhagat Singh Thind, though a Caucasian of “high-caste Hindu stock” who had lived in the United States since 1913 and even served in the U.S. Army, was not entitled to naturalization. In the late 1930s, the India Welfare League and the India League of America renewed efforts to obtain citizenship for Indians, and similarly fought to increase the support for Indian demands for independence from British rule. But none of these feeble challenges could arrest

the decline that the Indian community had begun to experience since 1924. The 1940 Census found 1,476 Indians in California, a sharp drop from the 10,000 Indians estimated to be resident in California around 1914. At least 3,000 Indians were to return to their homeland between 1920 and 1940.

Led by the charismatic Sikh merchant J. J. Singh, the continued Indian lobbying finally resulted in congressional approval of the Act of July 2, 1946, which permitted Indians, a mere 1,500 of whom remained in the United States at this time, both the right to naturalization and the right to enter the United States in very small numbers. Among the Indians to acquire American citizenship was Dalip Singh Saund. A mathematician by training, an activist by inclination, and a farmer by profession, Saund made history for Indian Americans by being elected to Congress in 1956 and serving in the House of Representatives for six years.

Demography, Professional Life, and Political Participation

The Immigration and Naturalization Act of 1965, which set a quota of 20,000 for each country in the Eastern Hemisphere but placed immediate family members outside the numeric limits, opened the door to Indians and remains, with some modifications, the legislation that has permitted continued expansion of the Asian Indian population. Within 10 years, the number of Asian Indians had grown to 175,000, and an astonishing 93 percent of the population was listed in a census report as “professional/technical workers”; their numbers and educational levels may have had some part to play in the Census Bureau’s decision to reclassify, with effect from 1980, immigrants from India, in accordance with their wishes, as “Asian Indians.” The educational attainment level of Asian Indians has remained very high, even if the percentage of those who earn their living as professionals has declined. Across all groups, according to the 2000 Census, nearly one out of four Americans 25 years and older had earned at least a bachelor’s degree; however, among all Asian Americans the figure rises to 44.1 percent, and to an astounding 63.9 percent among Asian Indians. By 2012, 28 percent of all Americans

25 years and older had a college degree, but among Taiwanese and Asian Indians the numbers had gone up to 74 percent and 71 percent, respectively. In 1998–1999, one-half of 134,000 H-1B visas issued to highly qualified or skilled individuals were granted to Indians alone, and by 2003 some 400,000 Indians were holders of H-1B visas. Though the H-1B is not an immigrant visa, typically a very large percentage of H-1B visa holders eventually acquire permanent residency.

Census findings and other detailed studies over the last few decades point to some other broad patterns of Indian settlement and well-being. First, Indians incline to settle predominantly in urban areas, with heavy concentrations in the New York-New Jersey area, in Chicago and its western suburbs, the Washington, D.C. area, the Bay Area in Northern California, in Southern California around Los Angeles and Orange County, and in the urban belt of Texas. Second, though immigrants from India generally have done well for themselves, there are considerable pockets of poverty among Indian Americans. California presents stark contrasts: 40 percent of the 2,000 dotcom businesses in Silicon Valley in 1999 were started by Indians, but in the state’s Central Valley, where agricultural work predominates, 14 percent of Asian Indians in 2005 were living below the poverty level, 39 percent had little or no proficiency in English, and 35 percent failed to complete high school.

Though Indian Americans have as a whole done well for themselves, their success has been far from seamless. In the mid-1980s, racist physical attacks against Indians in New Jersey were common enough that their tormentors became known as the “dotbusters” after the *bindi* placed by some Hindu women on their forehead before the eyebrows. In the aftermath of the 9/11 terrorist attacks on the United States, a turbaned Sikh mistaken for a Muslim became the first murdered victim of “American revenge,” and hate crimes against Indians rose substantially. The mass shooting at the Oak Creek Sikh temple in Wisconsin on August 5, 2012 by a white supremacist, which left behind six dead, has made Sikhs feel that they are especially vulnerable to racist attacks and discrimination. However, discrimination is generally much less dramatic, even if the outcomes are always unpleasant.

Teacher Nivedita Shivraj conducts class during the India Heritage Camp in New York, August 17, 2006. Hindus in the United States are beginning to adopt the American practice of summer camp as a way to pass their faith and culture along to their youth. (AP Photo/Mary Altaffer)

Doctors trained in India who made their way to the United States, the largest such ethnic group of physicians in the country, found that the laws governing admission of doctors into the medical profession were being tightened, and the Association of American Physicians from India (AAPI) was formed to represent this constituency. Until very recently, there was a persistent feeling that a glass ceiling prevented the advancement of Indians to the highest positions in the corporate world, Wall Street, and university administrations. Lately, the greater concern appears to be that Indian Americans should take more cues from Jewish Americans and Pakistani Americans, who are viewed as being far more aggressive and suave in lobbying Congress, manipulating public opinion, and influencing American administrations. Broader-based organizations such as the Federation of Indian American Associations (FIA), as well as more community-based organizations, are astute enough to realize that the name of Mohandas Gandhi is India's greatest asset

and earns Indians living abroad goodwill and some cultural capital, and they have sought to place Gandhi's statues in nearly all the major American cities.

Religion and Culture in the Diasporic Setting

Ralph Waldo Emerson and Henry David Thoreau, the most famous among a group of intellectuals known as the American Transcendentalists, took a keen interest in Indian philosophy in the mid-nineteenth century. Sikhs, who accounted for the bulk of the early immigrants, would go on to establish a gurudwara, or house of worship, at Stockton in 1915. Swami Vivekananda's electrifying address to the World Parliament of Religions, held in Chicago in 1893, would earn him many admirers and some followers. In subsequent years, a group of activists and intellectuals became staunch advocates of Gandhi's ideas and they were ardent spokespersons on behalf of Indian independence.

To mark the growth of Hinduism, one could do no better than to begin with Swami A. C. Bhaktivedanta, a Bengali Vaishnava who arrived in the United States in 1965 and established the International Society of Krishna Consciousness (ISKCON). His followers, dubbed the “Hare Krishnas,” were to be seen at airports and university campuses, but their singular achievement may have been to popularize vegetarianism. In the early years, the Hare Krishnas attracted many Hindus to their temples; but as the community put down roots, it gravitated toward more familiar rituals and settings, converting existing unused structures into temples or commissioning new ones. In Chicago, to take one illustration, the Hindu Temple of Greater Chicago was founded as a non-profit organization in December 1977, and its members, many of them doctors and other professionals, had been able to construct two temples at a large complex in Lemont. In the mid-1980s, the Balaji temple, in the western suburb of Aurora, was built at the cost of \$4 million, with the funding deriving largely from Telugu-speaking professionals.

Temple Hinduism displays a number of critical features. First, as the community has grown in size and affluence, temples have become larger. The Balaji temple is featured in tourist guides, but it pales in comparison with the \$30 million Shri Swaminarayan Mandir in Bartlett, some 40 miles from Chicago. Similarly vast Swaminarayan temples—using limestone from Turkey, Italian marble, and teak from Burma, and employing hundreds of Indian craftsmen—are to be found in Atlanta and Houston. Second, the managers, priests, and devotees increasingly tend to insist that temples be constructed according to guidelines specified in the *shilpa sastras*, or manuals of temple architecture. The tendency, more pronounced than in earlier times, is to embrace a textbook view of Hinduism. Third, temples are less likely to be distinctively sectarian or regional: at the relatively new Hindu Temple of Central Florida (Orlando), where a substantial portion of the pan-Indian Hindu pantheon is to be found, one gopuram (gateway) is described as being in the (south Indian) Chola style, the other in the “Naga” or northern Indian style. Fourth, practitioners of Hinduism show a keen awareness of the temporal calendar of American secularism and seek to signify

the manner in which Indian conceptions of Hinduism might be wedded to American notions of liberty. Formal dedications of a number of temples have been performed on July 4, and temple authorities often plan religious events around American secular holidays. Last, more so than in India, the temple often doubles as a community center, and Hinduism truly becomes, as its advocates argue, a “way of life.”

We see parallel processes at work in the attempt among Indian Americans to forge some engagement with American and Indian culture. Some Indians have a highly reified notion of Hindu culture, and one complaint frequently aired by Indian teens and college students is that their parents have a conception of Indian culture, such as its alleged hostility to premarriage dating, that is no longer recognizable in India among people of a similar class and educational background. At the other end, Indians cognizant of American discourses of multiculturalism, identity politics, and artistic autonomy have sought to give shape to distinct forms of literary expression or work as cultural activists. Political participation at one time meant predominantly membership in one of the two political parties, but there is growing awareness that the conception of the political can mean much more, such as the struggle against racism, gender discrimination, homophobia, and neo-imperialism.

There are numerous ways in which South Asians have attempted to carve out a niche for themselves in the cultural sphere, producing, for example, champions in the last 7 out of 10 years in the National Spelling Bee. Some in the community attribute the success of their children to the work habits, discipline, upbringing, and intrinsic cultural values of middle class Indians. Indeed, in private conversations at least, many Indians can be heard adhering to the view that America is sadly deficient in culture. Indian culture thus becomes an anodyne that ameliorates American culture’s corrosive influence on the young. Many Indians shelter behind what they construe as the most authentic representations of traditional culture: daughters are tutored in bharatnatyam, a classical dance form of immense refinement, whereas sons enroll in bhangra, a boisterous dance of the Punjab countryside. At universities, “heritage” students have become increasingly vocal in voicing demands for courses in Indian

history, religion, and culture, whereas the more religious minded gravitate toward the Hindu Students Council, an association dedicated like its parent organization, the Vishwa Hindu Parishad (World Hindu Council), to the idea that a resurgent Hindu India has much to teach the world with its rich spiritual inheritance.

*Politics, Literature, and Intellectuals:
Landscapes of Representation and Resistance*

Over a few decades, as they have learned to negotiate cultural mores and political practices in the United States, Indian Americans have gained more confidence. A largely business organization such as the Asian American Hotel Owners Association (AAHOA), which represents the thousands of Gujaratis with surnames such as Patel, Desai, and Shah who own the bulk of the country's motels, would never had the daring until recently, as it did in 2005, to invite to its annual convention the Chief Minister of Gujarat, Narendra Modi, whose visa for the United States was revoked owing to allegations that he permitted, even instigated, a horrific pogrom against Gujarat's Muslims in 2002. The movement against Modi was spearheaded by another organization of Indian Americans that has only made its presence felt in recent years, the "Campaign Against Genocide," comprised mainly of university professors and activists. The most prominent Indian academics in the humanities and social sciences, such as Gayatri Chakravorty Spivak, Homi Bhabha, and Arjun Appadurai, may not yet have a wide public profile, but they have played a critical role in shaping their own disciplines and wider intellectual practices.

Indian American writers have been able to command significant audiences. It must be said, however, that America figures very marginally, if at all, in the writing of authors of the greatest distinction who settled in the United States, among them Raja Rao, G. V. Desani, Salman Rushdie, and Amitav Ghosh. Vikram Seth, after his magisterial attempt at the great California novel, *The Golden Gate* (1986), written as 690 tetrameter sonnets, quit America—both as an abode and in his writings. One may be justified in arguing that these are essentially Indian writers who

write for transnational audiences and are themselves little beholden to national boundaries. American landscapes figure more prominently in the writings of Abraham Verghese, who has penned a poignant narrative on AIDS in small-town America, or the much-loved poet Agha Shahid Ali. But it is perhaps in the writings of Asian Indian women writers—Bharati Mukherjee, Jhumpa Lahiri, Meena Alexander—that the condition of being an Indian, and often a woman, in the United States is more deeply explored. The novelist and short story writer Chitra Divakaruni has a large following among young Indian women deeply concerned about arranged marriages, the pressures to conform, and the burden placed upon them to act as bearers of Indian traditions.

*Politics, the Homeland, and the Future of
Indians in the United States*

Indian Americans retain strong, occasionally complicated, ties with the "homeland." It is important to underscore the fact that Indian Americans, unlike Indians in older diasporic settings such as Trinidad or Fiji, have been viewed by the Indian government since the early 1980s as constituting a different class of immigrants. The term NRI, or Non-resident Indian, was effectively invented for them. Though NRIs are viewed in India with considerable ambivalence, invoking both envy and some derision for their supposed inability to deal with hardship, they are viewed as having brought pride to India and are distinguished from the descendants of indentured laborers. The NRIs frequented India often, bringing back consumer goods and the latest technological gadgets; indeed, the winter holiday season (December-January) became known as the NRI season, as Indian Americans descended upon the motherland and in a brief spell submerged themselves in the sounds, sights, smells, and experiences of the motherland. For their part, Indian Americans strove to make India more hospitable to foreign investment, and over the years they have successfully prevailed upon the Indian government to rescind regulations that forbid NRIs from owning property in India. In recent years, even the brain drain is beginning to be reversed: a few tens of thousands of Indian Americans have relocated to India, bringing capital,

entrepreneurial skills, technical know-how—and much else, such as gated communities, American-style condominium complexes, mall culture, and so on.

What is even more striking is how the politics of South Asia is echoed in the politics and lives of diasporic communities in the United States. When Indians successfully petitioned the City Council to have one of the thoroughfares in Chicago's Devon Avenue named after Mohandas Gandhi, the Pakistanis persisted in having the cross street named after Jinnah, the founder of Pakistan. Much more dramatic, and rife with consequences, is the support rendered to various political movements in India among their adherents in the United States. Radical Sikhs based in the United States have longed supported the now-defunct Sikh secessionist movement in India, though lately the Sikh community's advocates, among them the members of SMART (Sikh Media Advisory and Research Taskforce), have realized that the greater task at hand is to sensitize all Americans, and in particular state agencies, about Sikh faith and history, the right of Sikhs to wear a turban to work, and the use of the kirpan or ceremonial dagger.

Support for Hindu militancy, and more broadly the vigorous even aggressive affirmation of pride in Hindu culture, has taken many forms. Many Indian Americans were firmly committed to the agitation that eventually led to the destruction of the Babri Masjid, a sixteenth-century mosque in north India that is claimed by nationalist Hindus as the prior site of the birthplace of the deity Lord Rama. There is firm documentary evidence to suggest that Indian Americans contribute generously to the activities of the Hindu nationalist organizations, the Vishwa Hindu Parishad (VHP) and Rashtriya Swayamsevak Sangh (RSS), though often this money is channeled into sister organizations that claim nonprofit status. There was almost no condemnation among the Gujarati Hindus in the United States of the pogrom in the state of Gujarat that left 2,000 Muslims dead, and websites put up by engineering students and Silicon Valley software programmers offer boldly revisionist accounts of Indian history, claiming that the largest genocide in history was perpetrated over 800 years of Muslim rule against Hindus.

Turning to the question of Indian American involvement in American politics, for the first time in

American history, as was mentioned earlier, two Indian Americans—Bobby Jindal (Louisiana) and Nikki Haley (South Carolina)—occupy the office of the governor of an American state, though neither, it should be emphasized, has displayed the remotest interest in South Asian affairs, and both are open advocates of staunchly Christian, conservative, and free market values. More Indians have entered local and statewide races than ever before, but this is a narrow conception of the political life. Indians have, on the whole, been reluctant to enter into coalitions with Hispanics, African Americans, and other working-class minorities: not only is association with such groups seen as a liability, but the supposition that they are truly a “model minority” has informed the conduct of many Indian Americans. However, there is reason to be hopeful as well, considering the gamut of political opinions to which Indians subscribe. The Leased Drivers Coalition (LDC), which represents Bangladeshi, Pakistani, and Indian cabdrivers in New York City, has struck work successfully on several occasions to protest against working conditions and thus offered a visceral demonstration of South Asian working class people's ability to organize across religious and ethnic lines. The Restaurant Opportunities Center of New York, led by the young activist Saru Jayaraman, has been able to mobilize exploited immigrant workers at leading New York restaurants and win compensation for affected workers. The South Asian Network (SAN) in Southern California has similarly done stellar work to secure just wages for South Asian workers in industries where exploitation is rife, open up shelters for battered women, aid immigrants lacking proper documentation, and so on. There is thus reason to believe that the multiple legacies of the Ghadar movement—the struggle for Indian independence, promoting awareness of civil rights, the women's movement, and antiracism—will continue to stir Asian Indians to a greater political awareness.

Indian Cuisine in the United States

India is known as a country full of variety, of language, culture and habits. Quite naturally this interesting mixture also pervades the culinary domains of the country. Generally speaking, when you say Indian food in the United States and pretty much anywhere in the world, one is referring to a standard fare based on Moghulai or Indo-Persian style of food. The chicken tandoori and tikka masala are the most popular dishes. The “naan” roti or bread is a firm favorite with the locals, who love the crisp dry touch to go with the curried meats and vegetables at hand.

Broadly speaking Indian cuisine can be divided into Andhra, Karnataka, Kerala, Tamil Nadu, all of which come under the South Indian umbrella. Gujarat, and Goa form the west with Bengal in the east and Punjab in the north. If one extends oneself to the South

Asian diaspora, we will have Sri Lankan that will be bracketed with the south. Bangla Desh will align with Bengali cuisine and Pakistani with Punjab. In fact, Bangla Deshi and Pakistani cuisine have gained popularity among those seeking to savor Asian food.

However in the West and particularly in the United States, it is only in the recent past that locals have been exposed to regional cuisines of India. They are accessible now in the metropolitan areas of New York, Texas, and California. It is slow in coming, but discerning patrons in these areas are looking for something new and different in Indian cuisine. They are not confined to the kormas, tandooris, channa masalas, and raitas that have become your average standard fare. The Indian buffet has also been transformed in some restaurants, where a judicious mixture of north and south Indian cuisine is provided.

The heaviness of north Indian cuisine is now being tested by the south and western Indian variety. The south has its own regional subdivisions and in the west, the predominantly vegetarian Gujarati cuisine is proving popular in New York and California. A renowned Indian chef and cooking instructor Julie Sahni once remarked in the *San Francisco Chronicle* about 10 years ago, that “Southern Indian cooking is the closest thing to California cuisine, because you can’t hide the ingredients.” By this she meant that the dishes, especially the vegetables, were flash cooked with herbs and ginger and chilies, making it healthier and lighter to the palate. For the vegetarian conscious, south Indian and Gujarati cuisine is par excellence.

The popularity of the north Indian dishes cannot be overlooked. What is important here is the quality of the dishes being served. In India, the dishes are spicier, in some cases oilier and the vegetables have a tastier edge to them. Difference in milk products between India and the United States tend to alter the taste in dairy-based dishes, especially desserts. However, any upscale Indian restaurant offering north Indian moghulai cuisine will usually serve a quality fare with carefully orchestrated dishes to satisfy the palette.

Indian bread or *roti* is the one item that most people look for in a north Indian restaurant. *Roti* is the generic name for bread. The three main types are, *Chappattis*, made from whole *durham* wheat and water, with little or no oil and flattened out and prepared on

a griddle. *Naan* is made from white flour and cooked on an open flame or in a *tandoor* oven. *Parathas* are a thicker, heavier fare prepared with a lot more oil, added before and during cooking. The *paratha* is often stuffed with vegetables, onion, cheese, and spices. (There is a popular Sri Lankan/Tamil Nadu variety that is prepared with egg and/or ground meat, onions, and green chili, which are then and diced to form a spicy dish.)

Latest in the line of Indian culinary varieties is Indian Chinese. Yes, there is a small but significant Chinese community of Haka origins who for over a century have made India their home. They are about 20,000 strong confined mostly to the eastern Indian state of Kolkata (formerly Calcutta). The food that has evolved is similar to the fare served up in Southeast Asian countries, namely Malaysia and Singapore. The dishes are not of traditional Chinese origin and tend to be flavored with coriander, cumin, and turmeric. The embellishment of green and red chili peppers with a sweet, salty soy sauce and a hot red sauce culminate in a “Chinese” curry termed *Manchurian*.

This Indian Chinese creation has gained great popularity and the chicken as the main ingredient has also been substituted in turn by cauliflower, to satisfy the vegetarian clientele. Currently this style of Indian serving is gaining popularity in Indian urban centers. The younger generation seems to greatly favor this new wave. It has also caught the fancy of Indian patrons in major metropolitan areas in the United States.

There is, however, a significant part of the Indian population who are vegetarians. This section will usually turn to south Indian fare. The concept of short eats, *tiffin* and snacks has an unparalleled variety in the south. It has been slowly gaining popularity worldwide. The most popular item being the south Indian crepe, *dosai* (mispronounced in other parts of India and currently replaced and referred to by the name *dosa*). It is usually served with potato curry and coconut chutney. Snacks and sweets are a big part of Indian cuisine. In fact most Indian grocery stores will almost always have a section set aside for sweets and savories. There is no tradition of baking in standard Indian cuisine. Consequently the proliferation of various kinds of sweets rich in milk, ghee, and cheese.

These days there are a number of Indian, Pakistani, Sri Lankan, and Bangladeshi restaurants in most big urban centers. You may also find them in food courts in shopping malls and as an appendage to a grocery store. What are you looking for in Indian food? That is the cardinal question. Variety, quality, or simply a lunch buffet that you can stuff yourself with.

If you are looking for variety and quality, check out the reviews for the restaurants in your area. Read up a bit on a particular type of Indian cuisine. When you finally arrive at the place of your choice, enjoy the variety, but don't expect to return home with styrofoam.

Indian Denaturalization Cases

In 1923, when the Supreme Court rendered its decision in *United States v. Thind*, it was confirming more than just the racial boundaries of whiteness—it was also testing the legal boundaries of citizenship. Bhagat Singh Thind had successfully attained naturalization in Oregon in 1920 and if the Supreme Court was now to determine that he was not white, he would be dispossessed of his citizenship as having been “illegally procured” under Section 15 of the Naturalization Act of June 29, 1906. In effect, *Thind* was not a case about naturalization, but about denaturalization. The answer to the question as to whether Thind was white was legally significant in that not only could it be used to prevent immigrants of Indian origin from naturalizing in the United States in the near future, but also in that it could be used to denaturalize those immigrants of Indian origin who had managed to naturalize in the preceding years despite existing laws restricting naturalization to “free white persons” and those of African nativity or descent. Indeed, following the ruling, the

Department of Justice directed federal attorneys around the United States to begin denaturalization proceedings against more than 69 men of Indian origin who had naturalized in federal and local courts around the United States since 1908.

Protests to the *Thind* decision and the denaturalization proceedings were immediate, both in the United States and in India. Because Indians were then subjects of the British Empire, some argued that Indian immigrants in the United States held all the rights, privileges, and immunities of citizens of the British Empire including the right to apply for U.S. citizenship. The denaturalizations continued, however, as the British consular offices in the United States refused to intervene, quite possibly because they perceived the Asian Indian community in the United States to be a hotbed of anti-British activity. Others caught in the dragnet of the Department of Justice offered a range of innovative arguments in the courts against denaturalization. For example, Qamar-ud-din Alexander and John Mohammad Ali argued that despite being born in South Asia, they were not Hindu, but Persian and Arabic respectively, and thus, white. Sakharam Ganesh Pandit, a resident of the United States since 1906, made a heart-rending case in court about the economic and personal losses that he would have to endure were he to lose his citizenship. Noting his status as a notary public, an attorney, and as a man married to a white woman, Pandit argued that were his naturalization certificate to be set aside, not only would his wife lose her citizenship, but that he would lose his license to practice law and the ability to support his family.

As the denaturalizations continued and relief from courts seemed hard to come by, Taraknath Das took his fight to the U.S. Congress. Das, who was also married to a white woman, convinced Republican Senator David Reed of Pennsylvania to introduce a resolution to confirm the citizenship of those South Asian men who had naturalized and of the women they were married to. Senator Reed's efforts were, however, unsuccessful when some senators protested on the ground that the bill would set an "uncomfortable precedent." Meanwhile, Pandit continued to persevere in the courts and eventually won a victory in 1927 when the Supreme Court agreed with him that the laws could

not be applied retroactively and that the United States, by waiting to commence denaturalization proceedings for years after the initial act of naturalization, had lost its right to bring such proceedings forward. The result of Pandit's case brought relief to the Asian Indian community as the commissioner of naturalization finally recommended that all denaturalization cases that were then pending be discontinued. It was too late, though, for many—by then approximately 65 Indians had already been denaturalized. For some of them, the struggles to regain their lost U.S. citizenship continued for decades. In fact, it was not until 1946 when, amid efforts led by the India Welfare League and the India League of America, that Congress finally passed the Luce-Celler Act, which gave Indians the right to naturalization and also set an annual quota of 100 immigrants from India.

The denaturalization proceedings against Asian Indians, although a short-lived phenomenon, had a lasting impact on the Asian Indian community in the United States. Under the existing Alien Land Laws in many of the states on the U.S. West Coast, Indians who were denaturalized and who owned land in California were subsequently told to immediately dispose of their properties and to terminate all leases. Courts also refused to issue marriage licenses to Indians wanting to marry white women. Furthermore, the denaturalizations curtailed the transnational, particularly anti-British, activities of immigrants who now could no longer leave the United States unless they gave up the right to return. In conjunction with the 1917 Immigration Act, this episode of denaturalizations led to the collapse of the South Asian community in the United States: It is estimated that close to 3,000 South Asians left the United States between 1920 and 1940. The denaturalization proceedings illustrate not only the commitment of the state toward maintaining a white citizenry but also its power to exclude from citizenship anyone it deemed "undesirable." In this, the denaturalizations certainly fulfilled the purpose of maintaining the racial and legal boundaries of nation and citizenship. They also succeeded in continuing the prevalence of seeing Asian immigrants as "alien" others against whom U.S. citizenship and national identity could continue to be defined.

Indian Ethnic Economy

When you purchase breakfast at a Dunkin' Donuts, later grab lunch at a 7-11 convenience store, have dinner at a Subway Sandwich shop, then flag down a taxi, which then takes you to a motel for the night, there is a good chance that you spent your day in Indian-run businesses. Indian Americans own and run a variety of small businesses that cater to the mainstream. This is in addition to the more obviously ethnic-owned enterprises found in predominantly Indian and South Asian districts, such as Devon Street in Chicago, in Artesia (CA), Jackson Heights in Queens (New York City), in Edison and Jersey City (NJ), and smaller but still distinguishable districts in major cities across the country. Ethnic entrepreneurship has been a common means for immigrant groups to get a foothold in the new economy, and Indian Americans are no exception.

As of 2000, the self-employment rate of foreign-born Indian Americans was 12.8 percent, whereas for native-born whites it was 14.1 percent. This is not constant: in 1990 it was 16.4 percent and 13.7 percent for Indians and whites, respectively, and in 1980 it was 12.2 percent and 12.8 percent, respectively.

Indian Americans are associated with a variety of entrepreneurial categories, including taxi driving, motels/hotels, convenience stores, fast food restaurants, gas stations, diamond stores, newspaper stands, restaurants, and farming. And this does not count the other large number of self-employed Indian Americans in medicine and information technology. Different

ethnicities within Indian Americans tend to gravitate to certain kinds of businesses. For instance, Punjabis have been known to farm or own gas stations or drive taxis, whereas Gujaratis are known to own motels and fast food restaurants.

The fact that certain ethnic groups gravitate toward certain kinds of businesses raises the question as to why and how. For Indian Americans those trends cannot be explained simply. They rarely ran similar businesses in India before emigrating, for instance. There are three main causes of an ethnic group tending toward entrepreneurship: (1) an opportunity exists in a particular industry; (2) the group has the resources to take advantage of that opportunity; and (3) it has the motivation to pursue self-employment.

Indian American motel owners provide insights into how these three factors work. Opportunities arise as current owners of a business want to move out and no other group is in place to step in. For instance, during the 1940s, 1950s, and 1960s, inexpensive hotels and motels in San Francisco were increasingly open for purchase as European American and Japanese American owners had left them. Such establishments were considered run down and had been targeted by the city during the Progressive Era as problematic sites of low moral and economic value. Motels, not just older hotels, also were struggling economically. As common for ethnic businesses, these opportunities required little investment of money and no costly equipment. The greatest need was time and manual labor and so they were a viable option for immigrants with limited resources. Other groups did not compete for this opportunity given the limited financial gains. These businesses often fit a middleman minority profile, of serving disenfranchised, frequently minority customers while advancing the capitalist goals of major corporations (e.g., vendors and franchises).

Second, the ethnic group must have the resources necessary to enter into a business. These include human capital, such as education and finances, as well as social and cultural capital. Ethnic entrepreneurs commonly rely on social capital within their community. Gujarati American motel owners often borrowed money from their relatives and friends, at times with no interest, to make the down payment for their property. These same networks provide information on

where to purchase goods, how much to pay, and other information necessary to manage their businesses. Also, family members living in India who can immigrate to the United States are a major source of labor in the motels. After years of saving money and learning the business, they can then go on to purchase their own property. Indian Americans also often have enough American cultural skills, such as command of English, to run a business that caters to the mainstream.

Finally, the motivation to open a business can come from external and internal sources. Some common external sources are an inability to practice one's preferred vocation in the United States because one's educational credentials are not recognized, because language skills are not sufficient to perform their jobs, or because one is not given proper positions due to discrimination. In other words, a sense of blocked mobility can motivate people toward self-employment. For Indian Americans, these problems often were joined with an internal motivation. Many saw self-employment as a desirable means of mobility. For instance, Gujarati American motel owners or their immediate ancestors often were farmers in Gujarat, and they had a preference for self-employment rather than working for someone else. That same motivation encourages business ownership in the United States, even if a motel has little in common with farming. Although small businesses can pay nice dividends, most of the time owners earn a middle-class or lower-middle-class income. During economic downturns or weak tourism, their businesses suffer greatly. They get by reducing costs even at great personal and family sacrifice.

These same three general reasons for entrepreneurship also explain the large number of South Asian Americans in taxi driving in major cities. Approximately 60 percent of New York City cab drivers are South Asian American. Drivers choose this line of work because the opportunity fits their relatively low level of education and English skills, even if they have substantial assets in India. They learn about taxi driving from their networks. Motivation to take on this lower-status, dangerous occupation comes from a sense of lacking other meaningful options to earn enough money to provide for their families. Few

anticipate their children driving cabs and instead expect them to get the education necessary for an advanced career. Although the drivers themselves aspire to professional jobs, they lack the financial resources or the time to acquire the needed education and skills.

Similarly, Indian (mostly Gujarati) and Pakistani Americans dominate the market of Dunkin Donuts franchises in Chicago and surrounding areas (Cambodian Americans dominate Dunkin Donuts in California). Indian Americans who were professionals first purchased them after encountering obstacles in their white collar careers or not finding the work as economically and personally fulfilling as they had anticipated. Like motel owners, they saw small business as a way to increase their revenue and provide opportunities for family members with limited human capital who could emigrate from India. For these family members, the opportunity to learn a small business and eventually purchase their own was enough incentive to leave India. Undocumented immigration from India has further added to the pool of cheap laborers, which increases owners' resources. With limited English skills and education, these employees start at the lowest level in the store and gradually work their way up, over years, to pass the franchise exam (often after more than one try). So, a combination of individual motivated to own or work in a business, the resources to acquire a business and find employees, and opportunities in a locality encouraged this ethnic niche.

Like other immigrant groups, Indian Americans also have opened stores in "ethnic neighborhoods" that appeal to their own customer base. Such areas, whether Jackson Heights or Devon Street, often had vacant stores or weak business life before the entrepreneurs consolidated there. The most common stores in these areas traditionally have been grocery stores, sari and jewelry stores, and electronics stores. In these stores people find products normally not available elsewhere, such as electronics that require 220 volt current, for people to take with them when traveling home. Other stores include restaurants, travel agencies, doctor offices, and bookstores.

Although the story so far is one of immigrant entrepreneurialism based on hard work, resources, opportunities, and other factors, success in small

Zaki Shariff, right, assists a shopper looking for sari fabric at the Taj Sari Palace store in the Indian American community on the far north side of Chicago, Illinois, December 29, 2004. (Tim Boyle/Getty Images)

business is not that simple. Owners face a variety of challenges in running a business. Many immigrant small business owners are middleman minorities, as mentioned previously. Middleman minorities serve disenfranchised customers who have few other commercial options. They frequently encounter resentments and hostilities from their customer base and wider society. Customers can feel that owners charge too much for goods and take advantage of their lack of shopping options. Broader society often sees these businesses as taking advantage of a population with few options and being run by stingy immigrants of questionable morality. For instance, low budget motels in inner cities can be targeted by politicians as places of crime, such as prostitution and drug dealing, even though such acts take place in even upscale hotels.

Even entrepreneurs who are not middleman minorities face racism. Taxi drivers worry about physical attacks, some life threatening, and racist slurs. In

one notable incident, Ahmed Sharif, a cabdriver from Bangladesh, was stabbed in the throat by a passenger after the passenger confirmed that Sharif was Muslim. Taxi cab drivers also complain on occasion of disrespect from police officers because of their weak English skills. Less dramatic but still unnerving, motel owners see potential customers leave their premises once they notice an Indian behind the counter. Non-Indian motel owners may place “American-owned” signs outside their motels to signify that the motel is not owned by Indians. Stereotypes about the Indian American businesses as smelly, poorly run, of low ethics, and the like. Following 9/11, racism facing South Asian Americans only worsened. The first dramatic hate crime, but not isolated, was the murder of Balbir Singh Sodhi three days after 9/11. Sodhi owned a gas station in Mesa, Arizona. Wearing a blue turban, he was gunned down that morning at his gas station by Frank Roque, who wanted revenge for the terrorist

attacks. According to Sodhi's brother, Sodhi was committed to the United States and wanted to purchase an American flag as part of his patriotism the day before, but could not find any. A model citizen in many ways, Sodhi's choice to practice his Sikh religion at his business was his only "crime."

Race and religion are not the only sources of inequality facing entrepreneurs. Women receive less respect than men. Husbands and wives typically work in the business together, although on occasion one will keep his/her day job and the spouse will work full time in the business. Within a family business, women often have less authority than men in making major decisions or dealing with outside vendors. Even if the wife has more experience with the business than the husband, he has ultimate authority on business decisions, such as whether to invest in a new business, what changes should be made to the business, and which contractors to hire. The reasons cited are men's typically higher education level and English skills, along with mistreatment from outside vendors, which in turn makes it easier to have men as the public face.

Generally speaking, most children of immigrant entrepreneurs swear off the family business when they are younger. Nevertheless, children of entrepreneurs often go into occupations that allow significant autonomy, including self-employment. For Indian Americans, this same trend continues. Those who grew up in the family business may often regret the experience, because they must work in the business and lose a "normal childhood," especially if they have to physically live in the business (as common for motel owners). Yet, they encounter similar frustrations in their careers as did their parents. Despite often having white-collar jobs, they see a glass ceiling or feel that their occupation will not lead to the same economic benefits and autonomy as small business ownership promises. Also, Indian immigrants, unlike Korean immigrants for instance, do not see self-employment as a last resort, a factor shown to encourage children to pursue self-employment. The children draw from their parents' resources. For motel owners, for instance, the second generation takes advantage of the social capital and background knowledge of their parents and chooses to stay in motels if opening a business. They often enter

franchises of a higher level than their parents, and so feel that they are moving up from their parents even though they rest within their parents' industry.

Employees of Indian American small business owners are typically of the same background as found at comparable small businesses in their geographic area. Coethnics like working in ethnic-owned businesses because of the cultural similarities and opportunities for self-employment down the road. Employers consider coethnics more trustworthy and hard working. Employers also know if coethnic employees have debts, their immigration status, and responsibilities to their families, whom the owners may know and this creates a more compliant workforce. Explicit tensions between workers and owners are few, partly because employees see their employment as temporary on their way to business ownership.

Given that businesses are practically all-consuming, it is no surprise that owners' personal lives revolve around the business. Who they befriend, what time they cook dinner, how often they can socialize as a family outside the business depend on business calculations. For instance, socializing with a coethnic who owns a competitive business is difficult because of the inherent competition between them. Who children marry can be influenced by the business, for owners look for spouses for their children who they think respects and understands their business, and so tend toward fellow business owners. In pursuit of a good investment, owners and their families will choose a business location possibly far removed from their coethnics. This creates challenges for owners in forming a sense of community, but one that owners deal with by finding spaces to interact that are removed from the business, such as temples, sporting events, and the like.

The remarkable achievements of Indian American small business owners, like their peers of other ethnic groups, depend on many factors. Their progress will continue and will move into other industries as opportunities arise that fit their resources. But, when documenting their achievements, caution should be used in celebrating ethnic entrepreneurship. Being a small business owner is a challenging endeavor with many financial risks and social and familial costs.

Nevertheless, ethnic entrepreneurship will remain a central part of the Indian American community.

Indian Exclusion

Calls for the exclusion of Asian Indians from the United States in the early twentieth century were situated in two broader political contexts of the time: the passage of restrictive immigration policies targeted at Asians and U.S. government's policy of antiradicalism. Though anti-Asian racism was deeply embedded in American politics and culture at this time, calls for Indian exclusion were based not only on charges that Indians were unassimilable and an economic threat to white workers but also that they were dangerous and subversive. Indian anticolonialists, who had organized a movement to overthrow the British Empire from the United States, were accused of using the country as a base for their own radical politics. In their calls for exclusion, congressional representatives and immigration authorities focused both on questions of public health and economic competition, as well as the alleged dangers of Indian anticolonialism, calling for Indian exclusion as a means to restrict political radicalism. As such, the exclusion of Indians from the United States was not simply the latest manifestation of anti-Asian racism, which had already worked to exclude Chinese and Japanese laborers, but also part of a broader campaign to rid the nation of foreign radicals.

In the brief period of substantial Indian migration to the United States—mostly between 1906, when Indians first started arriving in significant numbers, and 1917, when they were excluded through the

“Barred Zone” provision of the 1917 Immigration Act—calls for Indian exclusion were densely intertwined with antiradicalism. U.S. officials, working closely with British authorities, linked Indian anticolonialism to broader imperial concerns about the rise of anticolonial movements across the Pacific world and the threats they posed to Anglo-American hegemony. At the same time, the anticolonial and anticapitalist articulations of many Indian radicals coincided with and helped fuel the assumptions of officials in the Justice and Immigration Departments that the deportation of “alien” agitators would restore harmonious labor relations.

At the same time, anti-Asiatic movements across British white settler colonies shaped the implementation of exclusionary policies and practices directed at Indians in the United States. In the late nineteenth and early twentieth centuries, U.S. immigration authorities, labor leaders, and congressional representatives situated their calls for Asiatic exclusion in transnational contexts, pointing to anti-Asian restrictive immigration laws in Canada, South Africa, and Australia to demand similar legislation in the United States. Whereas these settler colonies were consolidating and enforcing white supremacy across the Pacific by passing a series of exclusionary laws directed against Asians, U.S., British, and Canadian authorities in Vancouver, San Francisco, Washington D.C., Ottawa, London, and across India simultaneously issued warnings about the danger of Indian radicals plotting on the North American Pacific Coast. Bureau of Immigration files, surveillance reports, official correspondence, and congressional hearings attest to both the activism of Indian anticolonialists and the vigilance and scrutiny of the states that monitored them. U.S. officials pointed to the subversive nature of Indian migration to demand exclusionary and politically repressive laws as well as greater border enforcement. Thus, calls for Indian exclusion in the United States were rooted in anti-Asiatic movements across the Pacific and the joint efforts of U.S. and British officials to repress nationalist movements across Asia.

U.S. Immigration authorities—particularly Commissioner-General Anthony Caminetti and San Francisco-based inspectors Samuel Backus and Frank Ainsworth—routinely worried that Indians were

coming to the United States to organize a revolutionary movement in India and were using the country as a base from which to publish and distribute anticolonial periodicals and to incite their countrymen to prepare and train for a revolution to overthrow British rule. Although authorities were particularly alarmed by the emergence of the revolutionary Indian group known as the Ghadar Party in 1913, they insisted that even seemingly nonpolitical Indian organizations like the Pacific Coast Khalsa Diwan Society were actively engaged in assisting with Indian migration to the United States to educate and politicize them and then facilitate their return to India to overthrow British rule.

Unlike other immigrant groups, Indians did not have a strong national government to protect them from discriminatory laws in the United States. The British government did not intervene on their behalf nor did it oppose U.S. efforts to enact exclusionary immigration policies targeted at Indian migration. The British government’s refusal to come to their defense radicalized Indian migrants who came to believe and that they would not be treated with equality and dignity abroad unless they became free as a people. Given the close links between Indian migration and anticolonialism, British officials were not opposed to U.S. exclusionary efforts. U.S. and British officials routinely cast Indian labor camps and student groups as fertile ground for the spread of political radicalism and linked their calls for Indian exclusion to the need for greater measures to restrict political radicalism. As such, Indian exclusion operated hand-in-hand with radical repression.

Although the “Barred Zone” Act of 1917 is generally recognized as the first piece of official legislation that excluded Indians, U.S. immigration authorities had been manipulating and amending existing immigration laws to exclude the majority of Indian migrants through extralegal measures since 1909, when they began exploiting the “likely to become a public charge” clause to prohibit Indians from gaining entry at Pacific Coast ports. In addition to aggressively using medical examinations as grounds for exclusion, inspectors argued that racial prejudice against Indians in the Pacific Coast states, where the vast majority intended to find work, was so great that they would have difficulty finding employment and were therefore

“likely to become public charges.” Immigration officials used the public charge clause to begin excluding 50 percent of Indians by 1909. Commissioner-General of Immigration Daniel Keefe later acknowledged that, prior to the “Barred Zone” Act, it was the general policy of the Immigration Service to exclude as many Indians as possible using the public charge clause. That year, inspectors excluded 331 Indian migrants and allowed entry to only 337. In 1911, 517 migrants gained entry, whereas 862 were excluded, and over the next five years, immigration inspectors admitted fewer than 600 Indians to the United States.

Indian Women in America

Indian women, and South Asian women, more generally, have been portrayed in Indian mythology and culture to be the preserver and holder of Indian culture. Although there is no one defining idea of Indian womanhood because of various regional, class, linguistic, religious, and ethnic differences, the dominant image

is one where the woman is defined in relation to her status (i.e., mother, daughter, or wife) to men and her ability to maintain the home and to bear children. Although a woman’s role may also include being an economic contributor to the family, the primary role for a woman is the maintenance of the home and the family under patriarchal definitions of a woman’s role. Indian immigrant women often struggle with being the symbolic representative of the homeland and also having to negotiate alternative cultural norms and expectations associated with women in the United States.

One area that defines the complex narrative of gender, migration, ethnicity, and feminism is the relationship of Indian women to marriage. South Asians view marriage as an essential institution and the defining marker (regardless of career or profession) of a woman’s social status. Marriage, in South Asia, is seen as a relationship between families that can take into account individual preferences but ultimately the duty to family outweighs individual desires. If an Indian woman challenges the expectations of marriage (through divorce, being unmarried, alternative sexuality, or marrying outside of the Indian community), she is often depicted by some members of the community as too Westernized, betraying the family, or even deviant. This cultural and social pressure applies to first-generation immigrants as well as second- or third-generation Indian American women. For many immigrant Indian women, regardless of class, arranged introductions and arranged marriages are the primary means through which men and women meet and marry. The adherence to Indian family values and cultural norms is often expressed through marriage.

Arranged marriage carries the connotation of marrying an Indian whereas a love marriage is often but not always associated with the individualistic act of marrying out of the racial and ethnic group. Fiction by South Asian writers often focuses on relationships and arranged marriage such as Chitra Bannerjee Divakaruni’s short story collection *Arranged Marriage* and Jhumpa Lahiri’s short story collections and her novel *The Namesake*. Romantic and marriage expectations are at the center of both popular and independent films that feature Indian Americans or Indians in America. Popular films among the Indian diasporic population that have marriage as a central component include

most Hindi films produced in India (Bollywood) as well as English language films such as *Chutney Popcorn* (1999), *Monsoon Wedding* (2001), *Bend It Like Beckham* (2002), and *The Namesake* (2006). Each of these films features a debate about life partners and romance and often includes a vibrant set that showcases Indian culture through marriage.

Gurinder Chandra's Bollywood-influenced film *Bride and Prejudice* (2003) is an updated version of Jane Austen's novel *Pride and Prejudice*. The narrative emphasizes the centrality of marriage in Indian diasporic culture as the film traverses the geographical locations of India, England, and the United States. The film comments on the historical legacy of British imperialism in India and the seduction of American corporatization and consumerism through the budding romance of Lalita Bakshir (Aishwarya Rai), a middle-class Indian woman from Amritsar in the Punjab, and Will Darcy (Martin Henderson), a white American hotel heir and manager from Los Angeles, California. The film offers a contemporary discussion on arranged marriage, Indian immigration to the U.S. and U.K., and the expectations and approaches to marriage of Indian immigrant bachelors. The marriage that first brings Darcy and Balraj to India is an "arranged marriage." When Darcy comments that the idea of arranged marriage seems "backward," Lalita advocates a more tolerant approach and instead says that in contemporary times meetings are more like a global dating service. She points to the wedding they are currently attending and says it works for them. But when Darcy seems to see India only as a country full of people who need to develop a more Westernized sensibility toward marriage, Lalita associates him with a group of men who can only see people and specifically women in India as "simple" and the embodiment of traditional Indian values without seeing the individual. Darcy, however, shows how he values Lalita's culture and family and at the end of the film wins Lalita. However, one of Lalita's alternative Indian suitors is Mr. Kohli who admits that he has returned to India to find a "traditional girl" because he believes the U.S.-born Indian girls have lost their Indian values or "have become the lesbian." The implication is that the United States has changed the normative structure of marriage and family, which values patriarchy and heterosexuality. The

idea of "lost values" reflects a change in the desires of Indian American women who are perhaps also not as enamored with economic and professional status. External stereotypes and depictions of arranged marriage are not only a narrative storyline in Indian dramas but also in American ones where Indian women characters are often faced with a cultural dilemma of having an arranged marriage or marrying for love. In these cases, arranged marriage is seen as a backward and restrictive cultural value that does not allow for individual romantic love.

The development of online Indian match sites and marriage conventions in the United States by first-generation immigrants are influenced by their desire that both first and second generations should marry not only within their own ethnic and racial group but also within a specific regional group. The initial advertisements for the Matri marriage convention for Gujarati matches, for example, occurred in venues such as temples, Indian businesses and associations, and local newspapers and Indian magazines. Most of the participants heard of the convention through word of mouth. Although the convention is currently a national one, most of the promotion for the conference is passed around through the networking of local Indian families and communities. The proliferation of organized dating clubs and activities within the Indian community worldwide as well as online matching sites such as shaadi.com are a response to contemporary concerns on the part of the older and younger generation about traditional ideas of long-term relationships and marriage.

The institution of marriage also opens up a discussion of other social and community issues in ethnic communities such as divorce, domestic abuse, and lesbian, gay, and bisexual populations. Women's shelters for those who have experienced domestic abuse in the South Asian community have become the site for women to resist the confining roles thrust upon them and provide support to South Asian women who are often in abusive relationships because of their adherence to the preservation of marriage and culture. Scholars, however, point out that although the organizations can be helpful, shelters also promote American cultural norms of the individual that do not always appreciate or understand the complex narratives of

the lives of Indian immigrant women. Second-generation women are also aware of the pressure to marry, be a good Indian daughter, and be loyal to their family values. Alternative sexuality and sexual preferences and marriage to non-Indians threaten the notion of Indian cultural identity. For example, the decision of the 1995 India Day Parade Board of Organizers who did not allow South Asian Lesbian and Gay Association (SALGA) to participate in the New York cultural parade because they did not represent “traditional” Indian values highlights how some conservative members of the community wish to preserve an image of Indian culture that relegates women to specific patriarchal roles of wife and mother.

Indians in American TV and Film

Representations of Asian Indians in twentieth-century American film and television are rooted in colonial images of India from early film and television when India was a part of the British Empire and also from immigrant narratives to the United States following the passage of the 1965 Hart-Celler Immigration Act. By the beginning of the twenty-first century representations were also affected by transnational media that

depict Indians as global citizens and by the attacks of 9/11 in the United States that cause complications for Indians and their narratives as American citizens and immigrants.

Unlike other Asian American groups, South Asian Americans do not have a history entwined with war or colonialism in relation to the United States but instead are linked to the United States economically and politically by the ties of capitalism and a British-based democracy; India is represented as an Asian country with Western (if not American) values. Early Hollywood portrayals emphasized Indians in the context of British history rather than as part of U.S. history. Most Hollywood images of South Asians were confined to British tales of adventure or spiritual discovery set in colonial India. Hollywood films focused on three thematic threads that characterized narratives of India and Indians: the spiritual guru and mystical religions, the poor rural villagers, and the treacherous or noble natives rising up against the British.

The first theme in colonial narratives emphasized India as an impoverished mystical place with religious cults. Many of the distinctions between different religions in India, including Hinduism, Islam, Sikhism, and Christianity, are lost or lumped into the idea of power-hungry, blood-sacrificing religious cults that threaten the rule and order of the British. Thomas Edison’s *Hindoo Fakir* (1902), the first film depiction of India, emphasized these traits and Hollywood films, directors, and writers continue to recycle this image in action adventure films about India through the end of the twentieth century. One example is *Indiana Jones and the Temple of Doom* (1984) that was popular at the box office. An updated version of pre-World War II serial adventures for the 1980s, Steven Spielberg’s second Indiana Jones film was primarily set in 1930s British India. The plot featured adventurer and archeologist Dr. Jones as an American hero who rescues a Hindu idol and saves the native villagers (and his friends) from the villainous Indians in power who are members of the blood cult of Kali.

The second thematic thread depicts India as a foreign geographical landscape that emphasizes the differences between the poor and the wealthy. The mud hut villages and starving natives are contrasted with the opulent palaces and forts. In films such as

the *Rains of Ranchipur* (1955) and *The Rains Came* (1939) the drought-stricken fields lie next to vast lush jungles readily available for elephant and tiger hunts and illicit romance. Even in the contemporary setting of 1980s India, the James Bond film *Octopussy* (1983) manages to show Bond in the midst of a tiger hunt in the jungle where he is pursued by a power-hungry South Asian prince, threatened by a henchman with a turban, and has a liaison with one of many white Bond girls dressed in Indian clothing. In this film, India is the exotic background and playground for exiles and white Westerners rather than a thriving and modern democratic nation.

The third and most prolific theme in Hollywood films depicts the primitive hordes and rebels in the northern frontier of India (also known as the Trunk Road that goes from India through Pakistan to Afghanistan) as defying and rising up against the heroic forces of the British Indian Army. Different films repeat stock characters such as the orphaned waif, the loyal native, the religious fanatic or fakir, and the snake charmer. The film *Gunga Din* (1939) was a popular film in which the native water boy (played in brown makeup by white actor Sam Jaffe) is mortally wounded but manages to warn his British soldier friends of an impending attack by sounding a bugle. In this film, the loyal native saves the British. In addition, the act of cross-dressing or performing as the native Indian *other* were the topics of popular narratives ranging from the exploits of Lawrence of Arabia to Rudyard Kipling's *Kim*.

There were few Indian actors playing lead roles in early Hollywood films. Like many ethnic and racial characters in Hollywood, white actors wearing makeup and performing as Indians played most of the characters. During the 1940s, one of the few Indian actors on-screen was Sabu. As a young boy, Sabu was sent from India to England by an English director to learn English and he eventually starred in 23 films including *The Elephant Boy* (1937), *The Thief of Baghdad* (1940), and *Song of India* (1949). His image as the wily and mischievous native youth endures and is a role model for other portrayals of native or Indian youth such as Kipling's famous character Mowgli in *The Jungle Book* (1942).

Academy Award-winning best pictures featuring Indian actors include the films *Gandhi* (1982) and

Slumdog Millionaire (2009). Although these films are critically acclaimed and popular they also feature some of the same colonial themes of earlier times but are updated to show modern India. The biopic *Gandhi* is about one of most important leaders of the Independence Movement, but the film still emphasizes India's British history and the natives who lead the Independence movement. The other film to feature India, *Slumdog Millionaire*, is about a poor orphan, similar to Kim and Mowgli, in contemporary India who uses his street smarts to escape his precarious situation and find true love.

After 1965, representations of Indians in television and film also developed stories of immigration and assimilation for Indians in the United States but most of the roles were white actors performing as Indians. Some of the depictions focused on Indian cultural traits and practices adopted by American youth in the counterculture movement of the 1960s and 1970s. Peter Sellers (in brown face performance) played Indian immigrant Hrundi Bakshi in *The Party* (1968) where he plays the sitar, has a pet monkey, and is deemed "cool" by college students. Hippie culture and spiritual mysticism were associated with popular figures such as the Maharishi Mahesh Yogi who was the spiritual guru to the Beatles.

In the 1980s, the representations of Indians were similar to general representations of Asian Americans as new immigrants with foreign accents and model minority sidekicks. The comedies, *Short Circuit* (1986) and *Short Circuit 2* (1988) starred white actor Fisher Stevens performing in brown face as robotics scientist Ben Jabituya. Television series such as *The Jewel in the Crown* (1984) and *The Far Pavilions* (1984) continued to focus on the British Raj but did not reflect contemporary life for South Asian Americans in the United States. The first film in the Star Trek franchise, *Star Trek: The Motion Picture* (1979), cast Persis Khambatta, former Miss India 1985, as Lt. Ilia, a bald Deltan (humanoid alien) Star Fleet officer of the next generation, but the Indian character most remembered in the Star Trek franchise is Khan Noonien Singh (played by Mexican American actor Ricardo Montalban) first on television in the episode, "Space Seed," and later as Captain Kirk's nemesis in the film *Star Trek 2: The Wrath of Khan* (1982).

One of the most famous Indian Americans in American popular culture is animated character Apu Nahasapeemapetilon, the proprietor of the Springfield Kwik-E-Mart on the longest-running television show, *The Simpsons* (1989–). White actor Hank Azaria performs his signature Indian accent. Before Apu's appearance on *The Simpsons* in 1990 there were small parts on television and in film but unlike other Asian Americans groups such as Chinese, Japanese, Korean, or Filipino or Vietnamese associated with early American history, spiritualism, and American military action and movements, South Asians were not as visible on popular American mainstream media. Recurring roles for South Asians started on a regular basis during the turn of the twenty-first century as their roles in world business and entrepreneurial areas became more prominent. Independent films and documentaries about South Asians in the United States began to appear and were available for distribution via video, DVD, and satellite in American popular culture.

The end of the Cold War ushered in a new era of economic and labor flows, particularly in the communications and technology industries. In the 1990s, satellite television and other images of Indians were available in the United States including the increase in independent films and documentaries that featured stories about contemporary Indians in the United States. Indian and British Indian directors using Indian and British Indian actors made financially successful independent films in Britain, Canada, and the United States about South Asian immigrants in the United States including *Mississippi Masala* (1991) with Denzel Washington and Sarita Choudhury, *Chutney Popcorn* (1999), and *American Desi* (2001) with Kal Penn. Independent films such as the critically acclaimed *Monsoon Wedding* (2001) set in India fostered an interest in Indian stories, and *The Namesake* (2006) and the 2009 Academy Award-winning *Slumdog Millionaire* (2008) were some of the first films in the English language to be widely recognized by an American audience.

In the first 10 years of the twenty-first century, Indians appeared as sidekicks and model minority characters on television. Although independent film created more complex characters, Indians on American television and in film were mostly young men who

played the smart, foreign-looking, out-of-place emasculated geek who is always the sidekick and never the leader. National Lampoon's *Van Wilder* (2002) featured actor Kal Penn as a foreign exchange student named Taj Mahal from India. The smart but socially awkward, fresh-off-the-boat Indian immigrant male character continues to appear in various forms on shows such as *The Big Bang Theory* (2007–) with particle astrophysicist Rajesh Koothrappali (Kunal Nayyar) and as scientists in dramas such as *Heroes* (2006–2010). All the four networks featured television shows with South Asian or Indian American actors in the first part of the century.

The twenty-first century also offers alternative and expanded roles for Indians outside the roles of the model minority. This includes comedic satires of the model minority in the feature film *Harold and Kumar Go to White Castle* (2004) where an Indian American (Kal Penn) and a Korean American (John Cho) are the lead actors in the film. Actor Kal Penn is part of the successful *Harold and Kumar* film franchise (2004, 2008) and played memorable television characters on the FOX series *24* (2007) and *House* (2007–2009). Indian American women are delivering award-winning performances in drama and comedy. British Indian actress Archie Panjabi won a Golden Globe in 2010 for her performance in *The Good Wife* (2009–) and writer/actress Mindy Kaling writes for *The Office* (2005–2013) and plays character Kelly Kapoor. On reality television, Padma Lakshmi is the host of the popular Bravo show, *Top Chef* (2006–) and Sanjaya Malakar (Spring 2007) and Anoop Desai (Spring 2009) were in the top 10 finalist of Fox television's *American Idol* (2002–).

There are an increasing number of Indians appearing in American film and television with more diverse storylines. Although many of the colonial and immigrant images still dominate there are also more complex stories that are being told. In addition, Indian characters are being played by Indian, British Indian, and Indian American actors and actresses and scripts are being written by more Indian writers and filmed by Indian American directors. In 2010, the series *Outsourced* premiered on NBC and the first American television show set in India. The show featured an ensemble cast with five South Asian and South Asian

American actors as well as South Asian and South Asian American writers. The increase of roles for Indian (Irfan Khan and Anil Kapoor) and British Indian (Reshma Shetty, Dev Patel, Frieda Pinto) actors points to the popularity and importance and continued presence of Indians in American film and television.

Indigenous Groups and the Asian American Experience

Race, as a social construct, has typically been bound to U.S.-centric or white-Western-centric ideologies of race and ethnicity. In the United States, ethnicity has become tied to nation-state identities without consideration to the ethnoracial projects that happens outside of its nation-state boundaries. Even in its concept of “Asian,” the racialization of a continent differs not only between federal and state definitions, but also to how academia has placed communities and bodies not bound to nation-state identities into categories that do not always represent them. Complexity of race and ethnicity has always confused not only entities of power such as governments and institutions, but also within the communities that have been racialized and ethnicized. The constructed and imagined borders of “Asia” are not only a project of white, Western Orientalists but are also a project within the field of academia, especially within ethnic studies and cultural studies. “Asia” and what is “Asian” have always been topics of continued construction and debate within academia and within social imagination. If Asia is continually being constructed and (re)defined, often in

most cases, by those who write Asian narratives, then the critique of communities that are bound to those identities must also be analyzed. Ethnic identity in Asian nation-states does not transfer to the academic and social consciousness in the United States. Thus, ethnic and tribal minorities in Asia are not only displaced within the host nation-state that their communities are part of, but also within the academia. In academia, ethnic and tribal minorities of any nation-states have been placed in an anthropological framework, often associated with precolonialism and premodernity. Very few ethnic or tribal minorities who have immigrated to the United States have been formally recognized as a separate ethnicity from that of their host nation-state and many of these minorities are still seen as being connected to their communities back in “Asia.”

Ethnic and tribal minorities outside of the nation-state identities became visible because of U.S. presence in Asia, whether it be through military intervention or colonialism. Others came to the United States because of immigration acts that allowed a broader sphere of refugees who have fled their host nation-state to neighboring nation-states. Yet for others, their host nation-states’ laws determine if they are considered a different ethnicity at all. Many ethnic and tribal minorities under national laws of their host nation-states are seen as dialect or cultural communities, stripping them of their self-determination and ethnic identities. This is especially true in nation-states that wish to create a homogenous national identity at the expense of ethnic and tribal minorities. Immigration of ethnic and tribal minorities, therefore, is difficult to address within ethnic studies and Asian American studies because the researcher must be well versed in the ethnoracial projects and national identity laws that are found in the nation-state that is being studied. Just like the racial project in the United States when addressing Native Americans, federal recognition of these communities must be considered as to whether such analysis of diversity is properly addressed: There is no homogenous nation-state found in “Asia.”

Though Philippines is presented in history books and sometimes even within Asian American studies as a homogenous nation-state, it is actually a fairly diverse nation-state with over 150 ethnic groups. The

Philippine government recognizes that it is a pluralistic nation-state of diverse ethnicities. Even within the Philippine Constitution there is no reference to a homogenous nation-state of one ethnicity and one culture. During President Ferdinand Marcos's rule, the ethnic groups of the Philippines were changed into "dialects" in hopes of creating a nation-state identity that is considered purely Pilipino. The Philippines would only be recognized as diverse by its population's regional origin and/or religion. Yet the portrayal of the Philippines in academia is still homogenous and has created an imagined monolithic identity. Unlike other groups who came to the United States to find job and educational opportunities, indigenous communities or *Katutubos* (derived from the Tagalog word meaning "indigenous" or "of the earth") came as exhibits in the different World Fairs that were scattered throughout the country during the early 1900s. Igorots, Lipis, Aetas, Moros, and Lumads—five groups that claimed nationhood—were put into the "Philippine Village" in World Fairs, sometimes alongside Bisayans (a racialized group composed of about 20 ethnolinguistic communities). President of the United Nations General Assembly, Carlos Romulo, in 1943 stated the following when addressing the issue of Igorots being considered Pilipino.

Even in the Philippines, to cite one recurrent source of annoyance, stories were frequently sent to America concerning our wild tribes, the Igorots, in which they were represented as Filipinos. These primitive Black people are no more Filipino than the American Indian is representative of the United States citizen. They hold exactly the same position—they are our aborigines. The fact remains that the Igorot is not Filipino and we are not related, and it hurts our feelings to see him pictured in American newspapers under such captions as "Typical Filipino Tribesman." (Romulo 1943: 59)

The Igorots, the eight tribes of the Cordillera region, were not the only race that was discriminated against in the Philippines. The Moros, the 13 Islamized tribes and ethnic minorities of the southern Philippines, were not considered to be Pilipino under the

constitution until 1935 along with all the different racialized nations found in the archipelago. Today, Igorots, Moros, and Lipis (a term used to describe Christianized and non-Christianized tribes and ethnic communities found in the island of Luzon, but has now lost its usage by Pilipinos) began to immigrate to the United States in the 1980s. Lipis, groups such as the Hambali/Sambalis and Ibanags, have immigrated to the United States but have no formal concentration or organization specific to the ethnic group. They are concentrated in California, Hawaii, and Nevada, and though not documented in any formal research, village organizations are located in these states that bring the community from a particular village or city together. Unlike the Lipis, Igorots and Moros have formally organized either as whole nation or by particular tribes. BIBAK/BIBMAAK organizations are found in major regions in the United States with California having the most Igorots concentrated in one state. BIBAK/BIBMAAK is the acronym of the provinces found in the Cordilleras where the Igorot community is originally from. Moro associations are still divided along tribal lines, and the three main Moro tribes found in the United States are the Maguindanao/Maguindawan, Maranao/Muranaw, and Tausug/Tau Sug. They are scattered throughout the country with a heavy population found in California. The Moros, unlike the Igorots and Lipis, face discrimination within Philippine-America because of their adherence to the Islamic faith. Many Moros also faced harsh discrimination post-9/11 along with other Muslim communities in the United States.

In the 1970s, Hmongs and Miens immigrated to the United States after the Secret War that happened throughout Laos and Cambodia. The presence of Hmongs and Miens in Asian American studies has always been linked to the United States involvement in the Vietnamese-American War and its involvement throughout Southeast Asia. Separated from being considered Lao or Khmer, Hmongs and Miens have been recognized within Asian American studies as ethnically different from Lao or Khmer, yet they were not the only communities that came out of the U.S. presence in Southeast Asia. Part of the refugee community that appeared during the Vietnamese-American War and the Secret War were the Chams. The Chams are

Islamized ethnic minorities found in Cambodia and Vietnam, and both are protected within the Vietnamese and Cambodian constitutions as national minorities to freely practice their culture and their religion in predominantly Buddhist nations. Though they have rights within their host nation-states, their community is split between two countries and their citizenship is based on the country where their village or community is located. They are transnational people who have to request permission to visit their community, which may be on the other side of the border. Cham in the United States can be found predominantly where Hmong and Mien have been displaced as refugees. Yet even though they are in communities with Lao, Khmer, Viet, Hmong, and Mien, they are considered “others” because of their faith. Navigating through being refugees in the United States as Muslims, they not only experience racism and xenophobia but also Islamophobia. Though little research has been conducted on Cham American experiences, many Cham American youth have resorted to telling their stories through online social media outlets such as blogs and social network sites. Cham American youth address their struggles of coming from refugee communities, racism they face not just from white America but also from other Southeast Asian Americans and the growing Islamophobia in the country.

Since the passage of the Antiterrorism and Effective Death Penalty Act (AEDPA) and the Illegal Immigration Reform and Immigrant Responsibility Act (IIRAIRA), both in 1996, detention and deportations have increased exponentially. These laws replaced a discretionary system with mandatory detention and deportation and expanded the grounds of deportation to include minor offenses. These two acts have drastically affected the South East Asian communities. Although Khmer American and Lao American male youths have been targeted for deportation back to Asia, Cham Americans have also been affected not only by these two acts, but also with laws that have been enacted because of the events of 9/11. Cham Americans, as an identity, have created a particular dynamic in the study of race, ethnicity, and religion within Asian American studies. As a multitransnational community, Cham American experiences are negotiated not only through the lens of the U.S. presence in

Southeast Asia, but also U.S. relations with the Islamic world.

Another group that has been hypervisible in the U.S. social context yet hyperinvisible within Asian American studies is Tibetan Americans. Tibetan American experiences are closely tied to Tibet’s condition under Chinese Communist rule. Though Tibetan, in itself, is a national identity, Tibet as a former nation-state was also comprised of multiple ethnic groups with different religious affiliations. With the United States intervention during the Cold War to stop the advancement of Socialism and Communism, the U.S. government waged war against China with the help of Tibetans. The Secret Tibetan War against China with the help of U.S. Central Intelligence Agency (CIA) ran from the late 1950s to the early 1970s. During this period, Tibetan refugees who left Chinese-controlled Tibet and fled to neighboring India and Nepal were granted immigration rights to the United States and began to establish communities throughout the United States; largest among them are the Tibetan communities in California, Colorado, Minnesota, New York, and Washington D.C. The typical image of Tibetans is one surrounded with visuals of Vajrayana Buddhism, monastics, and resistance to Chinese Communism. Rarely mentioned are Tibetan Muslims a significant religious minority in Tibet. Tibetans, in general, straddle a particular role in the American imagination, often connected to white liberal activism against Chinese colonialism. Yet, in the field of Chinese and Chinese American studies, Tibet and Tibetan American experiences are silenced and, at times, even erased. Whereas the Chinese Han majority comprises the majority of the ethnic groups found in China, non-Han and even non-Mandarin Hans have been homogenized in the Han Chinese framework even in diaspora. In Chinese American studies, Tibetan American experience and Tibet in general is largely invisible. Tibet and Tibetan American experiences are always tied to Buddhism and Buddhism in the United States. Tibetan identity is bound to self-help books, religious manuals, and new age adaptation of Buddhism usually experienced by white Americans. Tibetan American experiences are thus a reflection of white liberal imaginary, suspending Tibetan Americans in a temporal space outside of modernity.

Though this essay seeks to address ethnic and tribal minorities outside of the nation-state identity and within Asia-America, the construction and incorporation of these communities are still deeply rooted in their condition back in their host nation-states. It is difficult to address such communities who have been historically silenced within the fields of ethnic studies and Asian American studies. Within Asian American Studies, ethnicity is deeply tied to the nation-state identity and incorporating ethnic and tribal minorities within the narrative complicates the perceived definition of “ethnicity.” This entry’s three examples of the Igorots and Moros from the Philippines, Cham from Cambodia and Vietnam, and Tibetans show the complexity of addressing ethnic and tribal minorities in diaspora within Asia-America. Three examples of this complexity are articulated by analyzing (1) the nation-state’s political ethno-racial project and its translation in diaspora (Igorots, Lipis, and Moros), (2) the nation-state’s geopolitical structure and its translation in diaspora (Chams), and (3) the visibility of communities within different spheres and its construction within social imaginations (Tibetans). Asian American studies must be more open to ethnic pluralism found in Asian nation-states and examine how it contributes to the creation and maintenance of Asian ethnicities in the United States.

Indochina Migration and Refugee Assistance Act of 1975

The Indochina Migration and Refugee Assistance Act of 1975 was passed on May 23, 1975, signed into law by President Gerald Ford. The Act was passed following failed diplomatic and military efforts to prevent Vietnam from unification under a Communist regime. The Act allocated federal funding for programs that provided structural support and financial assistance to refugees resettling in the United States. Hundreds of thousands of Southeast Asian asylum seekers, mostly from Vietnam, benefited from the program. A Gallup Poll taken in 1975 showed that only 35 percent of Americans supported refugee resettlement in the United States with 54 percent of Americans opposed and 12 percent undecided.

The withdrawal of U.S. troops from Vietnam was performed in coordination with Operation Frequent Wind, a U.S. State Department–led maneuver designed to evacuate all U.S. government personnel in Saigon and thousands of South Vietnamese allies who had diplomatic or military connections to the United States. Families of individuals who had professional or economic ties to the United States or high social standing were also included in the evacuation. Early estimates allowed for the removal of 18,000 Vietnamese allies along with all U.S. forces and personnel. In April 1975, with evacuation needs more apparent, President Ford authorized the removal of nearly 65,000 South Vietnamese refugees by U.S. cargo plane under Operation Frequent Wind. In sum,

approximately 130,000 refugees from Vietnam, Cambodia, and Laos successfully made it to the United States in this period of evacuation, half escaping by their own means in the first two weeks of May after the conclusion of Operation Frequent Wind. The escape of these 130,000 refugees comprised the “first period” of three major periods of migration resulting from the war.

Under the 1975 Indochina Migration and Refugee Assistance Act, which was championed in Congress by Senator Edward Kennedy and Representative Liz Holtzman, refugees from Southeast Asia were admitted with special status, qualifying them for integrative support that included financial assistance (Refugee Cash Assistance—RCA) and medical services (Refugee Medical Assistance—RMA). Four processing centers were established to handle the arrival and documentation of the refugees. Temporary centers were located at Eglin Air Force Base, Florida; Fort Indiantown Gap, Pennsylvania; Camp Pendleton in Oceanside, California; and Fort Chaffee in Arkansas, the last temporary center to close in December 1975. Arrivals were screened, photographed, processed, and assigned alien registration numbers that would be their badge of identity until they chose to apply for naturalization after five years in the United States. After one year of residency, the refugees qualified for Legal Permanent Resident status. Because of the highly organized nature of resettlement, refugees receiving assistance under the 1975 Act are the most extensively documented immigrant population admitted to the United States.

Voluntary Resettlement Agencies (VOLAGs), contracted with the U.S. government, handled the logistics of implementing program benefits locally and aided refugees who had passed initial screening. VOLAGs issued cash coupons, dispersed food allowances, located temporary shelters, and provided other social services such as remedial language classes. The most urgent task of the VOLAGs was to locate sponsors for refugee families. VOLAGs were comprised of charity organizations, nonprofit groups, or volunteer religious congregations, including the International Rescue Committee, the Lutheran Immigration and Refugee Services, the Tolstoy Foundation, the American Fund for Czechoslovak Refugees, the American

Council for Nationalities Service, the United States Catholic Conference, Church World Service, Hebrew Immigration Aid Society, and the Travelers Aid International Social Service of America. Although families were able to choose which VOLAG they wanted to be assigned to (religious preference, for example), they had less control over who their sponsor would be or where they would end up. Sponsorships came from local congregations, corporations, and individual families.

As a matter of policy, and to placate anti-Vietnamese sentiment, VOLAGs carefully dispersed refugee families widely to avoid overtaxing any single community with an influx of foreign nationals. The practice of geographic dispersal, however, undermined the successful integration and socialization of Southeast Asian refugees in a number of ways. Cultural isolation and lack of a socially empathetic community exacerbated the trauma of escape and resettlement. Language barriers made communication almost impossible in many instances, causing frustration for both refugees and their sponsoring communities, and sometimes contributing to latent and not-so-latent anti-Vietnamese hostility. Additionally, extended families were often separated to serve the principles of the dispersal program, intensifying the trauma of war and dislocation. As a result of intense cultural and social isolation, most families eventually opted for a “secondary migration,” a migration pattern highly characteristic of Vietnamese refugees who were initially settled under the dispersal program.

Secondary migration was a voluntary, often long-distance migration undertaken by Vietnamese families toward metropolitan regions that offered more racial and ethnic diversity and economic potential. The patterned migration gradually gained critical mass as Vietnamese enclaves established themselves in California, Texas, Louisiana, Washington, and Florida. These epicenters of Vietnamese cultural and social networks formalized into a patterned movement known as “chain migration,” the preference held by new Southeast Asian immigrants for regions already well established with extended family networks, social and cultural familiarity, economic opportunity, and, perhaps most important, a sense of familiarity. California and Texas remain the two most popular states with

47 percent and 11.3 percent of the total Vietnamese American population, respectively.

Although a number of Vietnamese American communities flourish today, in 1975 many doubted the successful integration of the Vietnamese into U.S. society. Some Americans protested the idea of inviting “the Asian enemy” into their backyards. Many doubted the ability of an assumed “backward” people to acclimate to modern American life. To ensure their success, Vietnamese refugees created alternative networks of support to supplement the aid provided by the 1975 Refugee Assistance Act. In addition to secondary migrations, refugee families devised informal “patchwork” households in which several adult members of an extended family contributed to rent, food, childcare, housework, manual labor, and other needs. Additionally, the trauma of escape sometimes bound unrelated individuals to each other as adopted kinfolk, creating networks of support that extended beyond blood and marriage ties. These adaptive measures have been crucial to the tight-knit character of the Vietnamese community and the successes afforded it under the 1975 Indochina Migration and Refugee Assistance Act.

Indonesian Americans

Indonesian Americans are immigrants and their descendants originated from the Republic of Indonesia in Southeast Asia. In 2000, this group became the fifteenth largest group of Asian Americans.

Indonesian immigrants began to come to the United States in considerable numbers in the 1950s. Some of them first arrived in 1953 through the

International Cooperation Administration (ICA) program, which enabled teachers from the medical school of the University of Indonesia to enroll in advanced programs at the University of California, Berkeley. The ICA also arranged scholarships for faculties at the Bandung Institute of Technology to study at the University of Kentucky in 1956. Some of these students eventually settled in the United States. A few thousand arrived after the enactment of the 1965 Immigration Act, which granted a large quota to each nation, and when the Transition to the New Order in Indonesia became violent and chaotic. Most of these immigrants were Chinese Indonesian. More immigrants arrived in the following decades, and an increasing number of them were sponsored by their family members or relatives who had already gained U.S. citizenship. By 1990, there were 30,085 Indonesians living in the United States. The 2000 Census counted 63,073 individuals as Indonesian. The count was 95,270 in 2010. It should be noted that although Indonesia is the fourth most-populous country in the world, the growth of the Indonesian ethnic community in the United States is relatively slow. This partly has to do with the fact that Indonesia is a multiethnic nation. Ethnic Chinese from Indonesia, for example, are very likely to identify themselves as members of the Chinese American community.

The majority of Indonesian Americans reside in metropolitan areas of Los Angeles, San Francisco, Houston, New York, and Chicago. There are no visible ethnic enclaves, partly because of the diverse cultural, linguistic, and religious background of the community. Most Indonesian immigrants are Muslims with their unique dietary and other traditional customs. Austronesian, the official language in Indonesia, is the most popular language spoken in immigrant households. The immigrants celebrate their traditional holidays as well as Christmas and Easter. Chinese from Indonesia are more likely to affiliate with Chinese American business clusters and celebrate traditional Chinese holidays.

With 65 percent of its population born outside the United States according to the 2010 Census, Indonesian America is an immigrant majority community. A large percentage of the immigrants (35%), however, had become naturalized citizens. Most Indonesian American age 5 and older spoke a language other than

English at home (67%), and 30 percent of the population age 5 and older had limited English proficiency. The census reported 20 percent of Indonesian American households as linguistically isolated.

About 94 percent of Asian Americans had at least a high school diploma, compared to 86 percent of the total Asian American population. Less than 47 percent had obtained a bachelor's or higher degree, compared to 49 percent of the total Asian American population.

Per capita income for Indonesian Americans was \$25,729, compared to \$28,342 of the total Asian American population. Poverty rate of Indonesian Americans was 12 percent, higher than the 11 percent rate reported for all Asian Americans. About 2 percent of the households received cash payments from public assistance. The unemployment rate for Indonesian Americans 16 and older was 6 percent, the same as all Asian Americans. More than half (55%) of Indonesian Americans were homeowners, and 5 percent of the population lived in overcrowded housing. 15 percent of the population had no health insurance.

Inouye, Daniel K. (1924–2012)

Elected in 1959, Daniel Ken Inouye became the first American of Japanese descent to serve in the United States Congress. Inouye began his congressional career in the House of Representatives representing the new state of Hawaii. His career in the House lasted until 1963, at which time Representative Inouye became Senator Inouye. Inouye served in the United States Senate until his death in 2012, when he was a member of the powerful Appropriations Committee.

Born in Honolulu, Hawaii, on September 7, 1924, Daniel Ken Inouye had a typical Nisei childhood growing up in a Japanese ghetto in Honolulu. Inouye's family was poor and he parked cars at the Honolulu stadium to earn money. He also gave his friends haircuts at discounted rates as few families could pay the 20 cents it cost for a cut at the barber. Inouye himself never saw the inside of a barbershop until he went to high school. School was one of Inouye's passions. He attended Honolulu's public schools, graduating from McKinley High School in 1942 with dreams of becoming a surgeon.

The attack on Pearl Harbor on December 7, 1941 gave Inouye his first hands-on experience with emergency medical care as the 17-year-old applied his first-aid training to civilian casualties of the conflict. Despite Inouye's and other Japanese Americans' displays of heroism, Japanese Americans were discharged from Hawaii's National Guard units and rejected from the Selective Service System. Unable to enter the service, Inouye decided to continue his medical training by attending the University of Hawaii and majoring in premedical studies. However, in 1943, when still in his first year at college, the United States Army announced plans to accept a limited number of Japanese Americans to form a combat team. Inouye enlisted in March 1943, a decision that would forever change the course of his life.

Inouye was accepted into the all-Nisei 442nd Regimental Combat Team. Before embarking to Mississippi for training, Inouye's father made his son promise to repay the *on*, or debt he felt his family owed the country, and urged his son not to bring dishonor to the family name. Inouye did not disappoint his father. After training, Inouye and his combat regiment headed for Italy with the U.S. Fifth Army. Sergeant Inouye and the 442nd combat regiment endured three grueling months of the Rome-Arno campaign before his unit was sent to the French Vosges in what would be two of the war's bloodiest weeks. Inouye's unit successfully rescued a Texas battalion encircled by German troops. In addition to becoming a platoon leader and receiving a battlefield commission as a second lieutenant, Inouye's heroism earned him a Bronze Star. Further, the rescue of the so-called "lost battalion" went down in the U.S.

Senator Daniel Inouye greets President John F. Kennedy, 1963. (Donald Uhrbrock/Time Life Pictures/Getty Images)

Army annals as one of the most significant battles of the twentieth century.

Back in Italy during the closing months of the European campaign, Inouye led his platoon in an assault on a heavily defended hill when he took a bullet to the abdomen, which only very narrowly missed his spine as it exited out his back. Despite his injury, Inouye embarked on a solo assault of a machine gun nest that had his men pinned down. By lobbing two grenades, Inouye was able to inflict heavy damage on the enemy but not without great cost to himself. In retaliation, a German rifle grenade destroyed his right arm at close range. Yet even with a shattered arm and wound to the abdomen, Inouye managed to throw his last grenade with his left arm before a bullet from a submachine gun hit him in the leg and knocked him down the hill. By the close of the war, Inouye had

made the rank of captain and been awarded the Distinguished Service Cross. In addition to his Bronze Star and Distinguished Service Cross, Inouye was also awarded 12 other medals, including the Purple Heart with cluster, but Inouye's greatest military honor would not come until June 21, 2000, when he was belatedly awarded the Congressional Medal of Honor for heroism in battle during the World War II.

After the war, Inouye spent 20 months in Army hospitals recovering from his injuries, including the loss of his right arm. Although Inouye had certainly repaid his *on*, he was not yet done. The loss of his arm ruled out the possibility of a surgical career and so Inouye searched for a new profession to pursue, one that would lead to a lifetime of public service. Entering school on the G.I. Bill, Inouye once again attended the University of Hawaii, but rather than

graduating pre-med, he graduated in 1950 with a degree in government and economics. Inouye next traveled to Washington, D.C., where he attended George Washington University Law School, earning his J.D. in 1952. Inouye was admitted to the bar in 1953 and began practicing law; he served as Honolulu's assistant public prosecutor from 1953 to 1954. In 1954, Inouye began his career in politics by serving as the majority leader in Hawaii's Territorial House of Representatives from 1954 to 1958 and as a member of the Territorial Senate from 1958 to 1959.

In 1959, Inouye made history by becoming the first American of Japanese descent to serve in the United States Congress following Hawaii's admission to the Union. On the third anniversary of Hawaii's statehood, Congressman Leo O'Brien stated before Congress of Inouye that the moment when Inouye raised his *left* hand to take the oath of office at his swearing-in ceremony "a ton of prejudice slipped quietly to floor of the House of Representatives" (Inouye 1967, 276). Inouye served as a Democrat in the 86th and 87th sessions of Congress before his election to the United States Senate in 1962.

During his time in the Senate, Inouye had an illustrious career. In his keynote address before the 1968 Democratic National Convention, he urged racial tolerance. He served on the Senate Select Committee on Presidential Campaign Activities, which was charged with the responsibility for investigating the Nixon scandal. He was also involved in the Iran-Contra investigations. Perhaps because of his upbringing in a city as diverse as Honolulu, Senator Inouye had long been a supporter of civil rights, social welfare legislation, and social justice. Inouye was behind the formation of the Commission on Wartime Relocation and Internment of Civilians whose report proved instrumental in granting former Japanese internees with reparations and redress. He was also a long-time advocate of Native American concerns, including issues of gaming and sovereignty. He served as both chair and vice-chair of the Senate Committee on Indian Affairs. Senator Inouye also served as chair of the powerful Senate Appropriations Committee in the 111th Congress. Senator Inouye died in December 2012 at the age of 88.

Itliong, Larry (1913–1977)

Larry Dulay Itliong was a farmworker and union organizer who was instrumental in the founding and development of the United Farm Workers (UFW) in California and was also a significant figure in the struggle for labor and civil rights for Asian Americans, immigrants, and workers.

Itliong was born on October 25, 1913, to Artemio and Francesca Itliong, one of six children, in the San Nicolas municipality of the Pangasinan province in the Philippines. Itliong obtained a sixth-grade education before immigrating to the United States in 1929 at the age of 15. In the United States, harsh and exploitative labor conditions existed for Pilipina/o workers, similar to those historically endured by other workers of color. Racism was blatant in both government policies and social norms, especially as the United States fell deeper into the Great Depression. This sometimes led to riots, arrests, and lynchings. It was this environment that pushed Larry Itliong into the struggle for economic and social justice.

Itliong worked in the railroads, canneries, and fields as he migrated around several states including Alaska, Montana, California, and Washington. In 1930, not long after Itliong arrived in the United States, he joined his first strike in the lettuce fields of

Monroe, Washington. He also helped organize asparagus workers in Stockton, California, and salmon cannery workers with the International Longshore and Warehouse Union (ILWU) Local 37 in Seattle, Washington. There he was made a shop steward, and then vice president in 1953. In 1956 Itliong cofounded the Filipino Farm Labor Union in California. In 1965, he led a strike against grape growers in the Coachella Valley in Southern California that resulted in higher wages but ultimately failed to negotiate a contract with the growers. At that time Itliong was a lead organizer of Agricultural Workers Organizing Committee (AWOC), an AFL-CIO union.

Itliong is perhaps most well-known for his leadership in the 1965 strike against growers in central California where many Pilipina/os lived. In their struggle for just wages and working conditions, on September 5, 1965, Itliong led AWOC to call a strike against 33 grape growers near Delano. Three days later the 2,000 mostly Pilipina/o members of AWOC began the Delano Grape Strike. Soon after, the Cesar Chavez-led National Farm Worker's Association (NFWA) joined the AWOC strike on September 16. Subsequently the strike went on to receive worldwide attention and acclaim as it broke new ground unionizing farmworkers, immigrants, Latinos, and Asian Americans. In 1967, AWOC and NFWA formed the United Farm Workers Union-AFL/CIO (UFW). Cesar Chavez was elected president, Larry Itliong was second in command, Dolores Huerta became first vice president, and Pilipino labor leaders Philip Vera Cruz, Pete Velasco, and Andy Imutan assumed other executive positions.

Despite the success of the Delano Grape Strike and the UFW, issues emerged within the leadership. These included differences in tactics and a growing disparity in the support and recognition afforded to Chavez and the more numerous Mexican workers. A lasting testament to these disparities can be the revisionist history of the Delano Strike and the UFW that attributed the struggles and success to solely Mexican workers under the singular leadership of Cesar Chavez. Itliong

eventually resigned from the UFW and became president of the Filipino American Political Alliance. It was the first national political Pilipino American organization and a key alliance between Pilipino laborers and professionals. By 1970, there were chapters in over 30 cities. In addition to his work with the Alliance, Itliong was instrumental in creating Pablo Agbayani Village, which was named after a worker who had died picketing during the Delano Strike. Agbayani Village was a housing development dedicated to aging Pilipino manong workers who had paved the way for social justice for farmworkers and immigrants. The Village was opened in 1974 by the UFW headquarters in Delano.

Itliong passed away on February 10, 1977, in Delano at the age of 63, and was survived by his wife and seven children. His many honors include "Larry Itliong Day" in Carson, California, dedicated in 2010, and a 2012 resolution passed by the California State Legislature to honor him. There is a collection of his documents, The Larry Itliong Papers, archived at Wayne State University in Michigan.

J

Jaisohn, Philip (1864–1951)

Philip Jaisohn was born Seo Jae-pil on January 7, 1864, in Boseong County, Korea. He played a key leadership role in the modernization, reformation, and liberation efforts of Korea (and later South Korea) as it underwent structural changes from being a monarchical regime, Japanese colony, military government, to eventually becoming a democratic republic. Jaisohn is remembered by a lengthy list of characteristics and achievements that include founder and last surviving member of Korea's first Independence Club (Tongnip Hyophoe), father of the reform movement in Korea, first Korean to be naturalized as a U.S. citizen, the first Korean American to earn a medical degree at an American institution, and chief adviser on Korean Affairs to the Commanding General of the United States Army Forces in Korea. Whether it was in Korea, Japan, or the United States, Jaisohn fought tirelessly for Korea's political freedom wherever his life took him.

Born to Korean aristocracy (yangban class), Jaisohn spent the early years of his life in an environment of social and material privilege. However, his father, who had bigger dreams for his son, sent Jaisohn to Seoul at the age of seven to live with his uncle who was a court minister at the Royal Palace. Under his uncle's guidance, he started a grueling process of acquiring an education as a Confucian scholar. During this time he established an intellectual friendship with Kim Okkyun, who was 10 years his senior and would later go on to be a prominent reformist alongside Jaisohn.

After passing a series of Civil Service Examinations in 1882, Jaisohn spent the following year in Japan as the leader of a pioneering delegation of 60

students. The group, sent by the Korean court, attended the Toyoma Army Academy where they trained in military tactics and drills, and acquired Western knowledge on modern sciences, geography, and history. Jaisohn was deeply inspired by his experiences in Japan, and upon returning to Korea was full of ambition to forge a modern Korean army that would fend off unwelcome intervention from foreign powers.

Unfortunately, Jaisohn's attempts were met with disappointment as a group of conservatives, who seized control of the Korean government when Jaisohn was in Japan, had sided with the Manchu rulers of Imperial China. Consequently Jaisohn became one of the leaders of the Kapsin Coup—a militant effort to seize political power from the Korean monarchy and establish institutional changes that would transform Korea into a modern nation-state. The coup was led by a group of reformers including Kim Okkyun, Pak Yonghyo, Hong Yonsik, and So Kwangbom, who had all spent time being educated abroad and were critical of the Korean state's acquiescent attitude toward political autonomy. The coup began on the night of December 4, 1884, and its leaders were in power for three days before limited military resources led the coup to its failure.

Jaisohn was immediately exiled from Korea with the rest of the coup leaders. The group first landed in Nagasaki, Japan, where they decided among themselves that Jaisohn along with Park Younghyo and Soh Kwang Bum would flee to the United States. Jaisohn arrived in San Francisco in April 1885 where he initially found work at a furniture store. Jaisohn began developing a sense of community as he learned English at the YMCA and attended a local church. He anglicized his name from Seo Jae-pil to Philip

Jaisohn. Two years into his new life in San Francisco, a Christian benefactor introduced Jaisohn to J. W. Hollenback, a wealthy coal mine operator from Pennsylvania. Hollenback took a personal interest in Jaisohn and offered financial support for Jaisohn to attend the Harry Hillman Academy in Wilkes-Barre, Pennsylvania. Jaisohn relocated in September 1887 and received an education at the academy until 1889; he was naturalized as a U.S. citizen the following year.

When in Pennsylvania, Jaisohn learned that his family in Korea had been killed for his involvement in the coup and that Kim Okkyun had been assassinated in Japan. Despite his grief, Jaisohn had no choice but to continue his life in exile and spent time translating Chinese and Japanese medical books into English in Washington D.C. He then attended George Washington University Medical School, where he received his degree in 1892. Two years later, Dr. Philip Jaisohn opened a private medical office and married Muriel Armstrong—the niece of former president James Buchanan and daughter of the U.S. Postmaster General.

In the aftermath of Japan's victory in the first Sino-Japanese War in 1895, Korean government pardoned those involved in the Kapsin Coup. With the pardon, Jaisohn returned to Korea in the same year. Upon his return, Jaisohn mobilized politically by publishing *The Independent (Doknip Shinmun)*, founding the Independence Club (Doknip Hyophoe), and helping build the Independence Hall and Gate (Doknip Mun). *The Independent* was Korea's first civilian newspaper; it was written in Korean and English and strove to promote democracy and enlighten the public on political and economic issues. The Independence Club was a political organization of reformists and activists working toward their vision of an independent Korea governed by its people. Here Jaisohn became a mentor to future leaders of the Korean independence movement including Syngman Rhee and Ahn Chang Ho.

Three short years after returning to Korea, conservatives accused Jaisohn and the Independence Club of conspiring against the monarchy by attempting to institute a Republic, and once again Jaisohn was requested to leave the country.

Jaisohn returned to Pennsylvania where he worked as a researcher for the Wistar Institute of the University of Pennsylvania. He continued ardently organizing

around issues of political and social reform in Korea. He established The League of Friends of Korea, which grew to include a membership of 10,000 and 19 branches throughout the United States. He established the Korean Congress of Philadelphia and the Bureau of Information of the Republic of Korea.

Jaisohn made a final trip to Korea after Japan's defeat in World War II and the division of the peninsula. The U.S. military government appointed him chief advisor to the military governor during its occupation of South Korea. As the Republic of Korea's first presidential elections took place, Jaisohn was petitioned by 3,000 individuals to run as a candidate. However, he eventually rejected the overture in 1948 because he believed himself to be a divisive figure when political unity was desperately needed. Jaisohn then returned to Media, Pennsylvania to resume practicing medicine until his passing on January 5, 1951—2 days before his eighty-seventh birthday.

Jang, Jon (1954–)

Jon Jang is an innovative Chinese American jazz pianist, composer, and leader of ensembles whose works integrate Chinese folk music and American jazz. He was born on March 11, 1954, in Los Angeles and grew up in Palo Alto, California. During his childhood, he learned to play an electric keyboard, the French horn, and trumpet, but he did not learn to play the piano until he was 19 years old. He attended the Oberlin Conservatory of Music, majoring in piano performance and graduating in 1978 with a bachelor of music degree.

When he was a young adult, Jang discovered that his paternal grandfather's last name was Woo (Hu) and not Jang. His grandfather had come to the United States as a paper son. From 1882 to 1943, the Chinese exclusion laws prohibited Chinese from immigrating into the United States. One way that Chinese young men (and in rare cases, young women) used to surmount such a hurdle was to buy papers sold by Chinese in the United States who were U.S. citizens and who were allowed to bring their China-born children to the United States as "derivative" citizens. Individuals paid hefty sums of money to assume the identities of the children of these paper fathers, memorizing the latter's entire family histories and detailed descriptions of their homes and villages so that they could answer tricky questions posed by immigration officials upon their arrival on Angel Island in San Francisco Bay that served as an immigration station between 1910 and 1940. Jon Jang's grandfather was among thousands of paper sons who slipped into California this way. This family history inspired Jang to compose pieces that evoke memories of Angel Island and paper sons. He says his is a musical language that memorializes "paper sons, paper songs."

Jang is truly an Asian American musician, *not* because of his Chinese ancestry, but because he draws upon the tonalities and instruments used in both Chinese folk music and American jazz in his compositions. According to him, his musical notations "look Chinese" on paper but sound "American" when played. He has produced a steady stream of music inspired by the travails of Asian American history as well as events in China. His first album, *Are You Chinese or Charlie Chan?*, came out in 1984.

His major works include *Reparations Now! Concerto for Jazz Ensemble and Taiko* (1988) that references the Japanese American struggle for redress and reparations for their incarceration in concentration camps during World War II; *Tiananmen!* (1992) that alludes to the 1989 Communist Chinese government's crackdown on Chinese students demonstrating for democratic freedoms; the score for a dramatic adaptation of Maxine Hong Kingston's *The Woman Warrior* (1994); *Island: The Immigrant Suite, no. 1* (1995) that signifies Angel Island; *Two Flowers on a Stem* (1995) dedicated to his mother; *Island: The Immigrant Suite,*

no. 2 (1996); the score for filmmaker Renee Tajima-Pena's documentary, *My America . . . or Honk if You Love Buddha* (1997); *Sweet Whisper of a Flower* (1998) that commemorates the 1906 San Francisco earthquake that left Chinatown in rubble and forced the displaced Chinese to build a new Chinatown across the bay in Oakland; an album, *Big Bands Behind Barbed Wire* (1999); *Portrait of Sun Yat-sen* (2001) to mark the centennial of the 1911 Chinese Republican Revolution; *Silk Roads* (2001); *Far East Suite* (2003); *Paper Sons, Paper Songs* (2006); *Unbound Chinatown* (2007); *Chinese American Symphony* (2007) that celebrates the heroic labors of Chinese railroad builders who constructed the Central Pacific Railroad—an orchestral work that uses not only Western instruments but also an anvil, a whistle, and an *erhu* (a Chinese string instrument)—that begins and ends with the slow, rhythmic strikes of an anvil; and *Angel Voices: Rhapsody on Angel Island Poetry* (2008).

Jang has paid tribute to the great African American singer Paul Robeson in *Cantata for Paul Robeson and Mei Lanfang* (1997) that features an African American baritone, a Chinese soprano, a jazz quartet, a chamber music ensemble, and African American and Asian American instrumentations. Mei Lanfang was China's best known and most beloved Beijing Opera singer—a man who played female roles and sang soprano. Jang first heard Chinese traditional melodies, not in Chinatown or in his family, but rather, in a record featuring Paul Robeson singing Chinese folk songs with a choir in 1941. In 2002, he produced a second panegyric to Robeson, *When Sorrow Turns to Joy—A Musical Tribute to Paul Robeson*. Jang has also composed for and performed with numerous Asian American, African American, and Latino American artists and musicians.

Jang is the recipient of many awards, including a Mid-Career Visionary Artist Award from the Ford Foundation, grants and commissions from the Creative Work Fund, the San Francisco Arts Commission, Meet the Composer New Residences, Chanticleer, the Library of Congress, the Rockefeller MAP Fund, Creative Capital, the Kronos Quartet, and a National Endowment for the Arts Jazz Composition Fellowship. He is the cofounder of Asian Improv Records and serves as the musical director of the Jon Jang Sextet and the Pan Asian Arkestra whose members often

perform with him. He has given concerts all over the world and teaches a course on Asian American music in the Asian American Studies Program at the University of California, Berkeley.

Japan Bashing

Japan bashing refers to anti-Japanese sentiment caused by U.S.-Japan trade friction during the 1970s and 1980s. Despite severe damage to its land and infrastructure during World War II, Japan experienced rapid economic growth from the mid-1950s to the early-1970s, a phenomenon called the “Japanese economic miracle.” During the U.S. occupation of Japan and up until the early 1950s, most Americans regarded products made-in-Japan as cheap and low quality. However, vast improvements in manufacturing led to a rapid increase in product quality and, subsequently, an increase in exports, particularly to the United States. By 1968, these economic developments had improved the Japanese economy so much that Japan’s Gross National Product was second only to that of the United States. However, the U.S. economy had been suffering from a deep recession, and its trade balance slipped into deficit in the 1970s. America’s trade deficit with Japan grew from \$1.2 billion in 1970 to \$43.5 billion in 1985.

The massive trade imbalance between the United States and Japan developed into a serious political issue. The United States placed restrictions on the importation of Japanese textiles, consumer electronic goods, and steel in the 1960s to 1970s, and on automobiles in the 1980s. American manufacturers complained that competition with Japan was “unfair”—politicizing the issue and refusing to recognize that American products were becoming less competitive as Japanese imports became increasingly affordable and higher in quality. The U.S.

government demanded that Japan voluntarily limit exports to the United States, and to open its closed domestic market to U.S. agricultural products. It imposed a high tariff on particular Japanese imports, enacted a series of trade sanctions, and accused several Japanese manufacturers of “dumping” products in the U.S. market.

On the other hand, many Americans became curious as to why Japan had been able to achieve such rapid economic success. Several books about Japanese business management systems became popular, including Ezra Vogel’s *Japan as Number One: Lessons for America* (1979) and William Ouchi’s *Theory Z: How American Management Can Meet the Japanese Challenge* (1981). These books disseminated several key concepts and terms of Japanese management such as *kaizen* (continuous improvement), *keiretsu* (a group of closely interconnected companies), and *kanban* (the just-in-time system of efficient production).

Anger and Fears Regarding Japan’s Economic Power

Strong anti-Japanese sentiment quickly spread throughout the United States in the 1980s and the early 1990s. Many blue-collar workers in manufacturing blamed Japan for their unemployment and showed their anger publicly: members of United Automobile Workers destroyed Japanese automobiles with hammers in large demonstrations, and images of such displays were widely circulated by U.S. media outlets. Additionally, several members of the U.S. Congress smashed Toshiba radios in front of Capitol Hill in 1987 to show their anger when Toshiba and a Norwegian company sold submarine technology to the Soviet Union, a violation of an agreement among Western bloc nations. In the early 1990s, many activists, politicians, and labor union representatives led “Buy American” campaigns to boycott Japanese products. To calm anti-Japanese sentiments in the United States, Japanese manufacturing corporations adopted a strategy of “localization”: they moved sites of production to the United States and employed American workers rather than exporting finished products.

Many Americans also felt threatened by Japanese corporations’ substantial investments in the U.S.

market during Japan's bubble economy from the late-1980s to the early-1990s. They were shocked to find that Japanese companies purchased companies or real estate properties considered to be important American cultural icons. For example, Sony purchased CBS Records in 1987 and Columbia Entertainment Pictures in 1989; Mitsubishi Estate Company became the primary owner of Rockefeller Center in 1989. The cover of *Newsweek* on October 9, 1989 carried the headline "Japan Invades Hollywood" and an image of a Japanese *geisha*, mimicking the logo of Columbia; it implied fears that all precious American cultural assets might be bought and remade by Japanese corporations. The *Newsweek* issue also included a poll indicating that Americans feared Japan's economic power more than the Soviet Union's military power. Such views of Japan were also reflected in Hollywood movies in the 1980s and 1990s. One of the most popular movies of this genre was *Rising Sun* (1993), which portrays a conspiracy led by a fictional Japanese company in California with connections to Japanese criminal gangs.

Influence on Asian American Communities

Anti-Japanese sentiment rarely resulted in physical violence against Japanese nationals living in the United States, but it did trigger a brutal hate crime against a non-Japanese man in 1982. Vincent Chin, a Chinese American, was beaten to death in Detroit, Michigan, by two Caucasian autoworkers—Ronald Ebens and Michael Nitz. Nitz had been recently laid off. Mistaking Chin for Japanese, Ebens and Nitz blamed their job losses on "Japanese like him" and killed him with a baseball bat on the streets of Detroit. Despite finding the men guilty of manslaughter, the court sentenced them to just three years' probation and fined them \$3,780 each. This verdict outraged Asian American communities and led them to file a lawsuit against Ebens and Nitz, charging that they violated Chin's civil rights; however, the murderers still served no jail time.

Fear and anger regarding Japan's economic power from the 1980s through the early 1990s rekindled racial hatred of Japan felt during World War II. The U.S. media revived "yellow peril" with imagery of "trade war" and "economic Pearl Harbor." Moreover,

the term "Japan bashing" appeared in major U.S. newspapers most frequently around the fiftieth anniversary of Japan's attack on Pearl Harbor. However, anti-Japanese sentiment dwindled as Japan's bubble economy burst in the mid-1990s and its economic power declined just as China emerged as a new source of America's economic anxiety. Japan bashing serves as a reminder of how economic competition can cause widespread hostility especially when mixed with racialized images.

Japanese American Baseball

Introduction

Similar to the story of Negro Leagues baseball, Japanese Americans were forced to play in their own leagues between the late 1890s and 1940s because of bigotry and discrimination in white America. When Japanese immigrants first arrived in the United States during the late 1800s, they brought their knowledge of and passion for baseball, a game that was first introduced to Japan during the 1870s. For the Issei (first-generation Japanese American), participating in the national pastime provided an opportunity to display their skill and ability as athletes and develop a bond with those who already played the game in their new country. Despite the fact that ballplayers of Japanese ancestry first attempted to join the majors in the late 1890s, Japanese Americans did not break into the big leagues until the 1970s. Since then, only a handful of Nikkei (Americans of Japanese ancestry) players have reached baseball's highest level. Despite the small number of Japanese American players to reach the

majors, the collective impact of their historic legacy can still be felt in the game today.

Japanese American Baseball Origins: Formal Team and League Development

It is commonly believed among historians that American schoolteacher Horace Wilson first introduced baseball to Japan in 1872. However, a recent argument has been made that Leroy Lansing Janes, also a teacher from the United States, arrived a year earlier and introduced the game to his students at Kumamoto. Regardless of the dispute about its origins, it is well documented that the game of baseball became the most popular team sport in Japan by the end of the nineteenth century.

Japanese American Baseball in Hawaii. Alexander Joy Cartwright, the man called “The Father of Modern Baseball,” is credited with establishing the rules of today’s game and organizing the first baseball club in 1845, the New York Knickerbockers. Four years later he settled in Honolulu and spent the rest of his life teaching baseball throughout the Hawaiian Islands. In 1899, the first known Japanese American team—the Excelsiors—was organized in Honolulu by Reverend Takie Okumura. In 1905, pitcher Gikaku Steere Noda organized the Hawaiian Asahi, and within a decade, highly competitive leagues were developed along ethnic lines with Japanese American teams competing against Chinese American, Portuguese, Hawaiian, Caucasian ball clubs and an African American military team, the 25th Infantry Wreckers.

Japanese American Baseball on the Mainland. Japanese immigrants living on the U.S. mainland played on integrated teams as early as the late 1890s. According to the *Sporting News*, in 1897 manager Pasty Tebeau of the major league Cleveland Spiders attempted to sign an unidentified player from the amateur baseball leagues of Chicago only known as the half-brother of Japanese wrestler Sorakichi Matsuda. Another Japanese player, outfielder Shumza Sugimoto who reportedly once played for the Negro League Cuban Giants, was scouted by New York Giants’ manager John McGraw in 1905. As a result of Sugimoto’s presence at the

Giants spring training, the color line was officially and publicly extended to exclude players of Asian ancestry from participating in white professional baseball.

In 1903, the first Japanese American team on the mainland, the Fuji Athletic Club, was founded in San Francisco by artist Chiura Obata. Seven years later, the first official Japanese American Baseball League was organized by Jiu Jitsu professor Tokugoro Ito. Headquartered in Seattle, Washington, the new league was comprised of six teams from West Coast cities throughout Washington and California. The 1920s and 1930s were considered the Golden Era of Japanese American baseball. With the Nisei (second-generation Japanese American) coming of age, the passion for the game grew to new heights. For all Nikkei, the game reflected a renewed sense of optimism in finding a place in America. Each Sunday, Japanese Americans across California, Washington, Oregon, Utah, Wyoming, Denver, and Nebraska went “baseball crazy.” Japanese American baseball teams on the West Coast, in the western U.S. and Midwest also offered a highly competitive and financially successful brand of baseball and entertainment for fans from all ethnic backgrounds during this period.

Games versus High-Caliber Competition. A common belief among early twentieth-century Japanese American baseball players was that to be the best you had to compete against the best. For this reason, the Nikkei baseball pioneers scheduled games against the top talent from the Pacific Coast League, California Winter League, Major League, and Negro League barnstormers, and visiting teams from Japan. In games against each league and level, Japanese American players not only proved they were worthy of being on the same field, on many occasions they were the victors. A study of Japanese American Baseball Leagues box scores and game summaries between 1920 and 1940 reveals that the caliber of play closely resembles the common assessment of the Negro Leagues—in that not every player had enough talent to play in the majors; however, the stars of the league proved time and time again that if given the opportunity, there is little doubt that they could have competed with their white counterparts at the highest level.

Included on the list of high-caliber competitors were Hall of Fame players Babe Ruth and Lou Gehrig from the Major Leagues; Biz Mackey and Andy Cooper of the Negro Leagues; Tony Lazzeri, Joe DiMaggio, and Lefty O'Doul of the Pacific Coast League, and Shinji Hamazaki and Victor Starfin of the Japanese Professional Baseball Leagues. The top teams and all-stars of the Japanese American Baseball Leagues were:

- Alameda Taiku-Kai: Harry Kono, Mike Nakano, Kiyo Nogami, Richard "Cy" Towata
- Arroyo Grande Y.M.B.A.: Kaz Ikeda, Seirin Ikeda
- Cheyene Nisei: Minol Ota
- Clovis Commodores: Fumio Ikeda, Hy Ikeda
- Denver Nisei: George Akimoto, Dick Kitamura
- Florin Athletic Club: Herb "Moon" Kurima
- Fresno Athletic Club: Harvey Iwata, John Nakagawa, Ty Saiki, Fred Yoshikawa, Kenichi Zenimura
- Guadalupe Packers: George Aratani, Charlie Hiramatsu, Moriso Matsuno, Fred Tsuda
- Hanford Y.M.B.A.: Ben Mitsuyoshi, Shig Tokumoto
- Hawaiian Asahi: Joe Takata, Andy Yamashiro (the first Japanese American player to sign a professional baseball contract, 1917)
- Hood River Nisei: Kay Kiyokawa
- L.A. Nippons: Jimmy Horio, Jack Kakuuchi, George Matsuura, Al Sako, Joe Suski
- L.A. Nisei All-Stars: Masao Iriyama, Noboru Iriyama
- Monterey Nisei: Oyster Miyamoto
- Salinas Taiyos: Harry "Tar" Shirachi
- San Fernando Aces: Pete Mitsui
- San Pedro Skippers: Ichi Hashimoto
- San Jose Asahi: George Hinaga, Russ Hinaga, Henry Honda, Harry "Jiggs" Yamada
- Seattle Asahi: Frank Fukuda
- Stockton Yamato: Kenso Nushida (the first Japanese American to play in the Pacific Coast League, 1932), Tadashi Henry "Bozo" Wakabayashi (the first Japanese American player

inducted into the Japanese Baseball Hall of Fame, 1964)

- Vancouver Asahi (Canada): Ty Suga, Roy Yamamura

Prewar Goodwill Ambassadors. For Nikkei ball-players, as Kerry Nakagawa wrote, putting on a baseball uniform was like wearing the American flag. Through their adoption of, and love for, the game of baseball, Japanese Americans believed they were demonstrating their loyalty to the United States. At the same time, they still maintained connections with their culture, family, and friends in Japan. One way to stay connected was through a shared love of baseball. Japanese American teams embarked on numerous goodwill tours to Asia during the first half of the twentieth century. The Seattle Asahi pioneered goodwill efforts with several tours to Japan (1914, 1915, 1918, 1920, and 1921). Between 1922 and 1931 no Major League team toured Japan. During this MLB absence, Japanese Americans and their Negro League counterparts played a key role in exporting the great American game to Japan and welcoming dozens of visiting Japanese teams to the United States. Noteworthy Nikkei teams that participated in goodwill tours to Japan and other parts of Asia included: the Seattle Asahi (1923), the Fresno Athletic Club (1924, 1927), the San Jose Asahi (1925), the Aratani Guadalupe Packers (1927), the Stockton Yamato (1928), the Los Angeles Nippons (1931), and the Alameda-Kono All-Stars (1931, 1937).

The competitive interactions against touring U.S. teams helped the Japanese improve their skill level, elevate the overall level of play, and eventually empower them to start their own professional baseball league in 1936. What's more, when Japanese Americans were not involved directly on the field during tours, they were often involved behind the scenes. Because they knew the language and cultural customs of both countries, Japanese Americans often played a significant role in facilitating the outbound tours of Caucasian and African American teams, and U.S.-inbound tours of Japanese teams. Key figures in pre-war goodwill efforts included Japanese Americans Takizo Matsumoto, Kenichi Zenimura, Harry Kono, and George Irie.

Games during World War II Incarceration. Perhaps one of the most unique, fascinating, and tragic chapters in all of U.S. baseball history is Japanese American Internment Camp baseball during World War II. The national pastime behind barbed wire started shortly after President Franklin Roosevelt wrote his famous “Green Light Letter” to Judge Kennesaw Mountain Landis encouraging the commissioner to continue the 1942 baseball season. Weeks later Roosevelt signed Executive Order 9066 and set the stage for the removal and incarceration of more than 120,000 West Coast Issei and Nisei. In each of the 10 camps scattered across the American West and Arkansas, baseball was key to survival. It helped boost morale for everyone, players and spectators alike. Each camp had at least one baseball field and competitive leagues. In camps like Gila River, Arizona; Heart Mountain, Wyoming; and Jerome, Arkansas, where the skill levels were more advanced, games were scheduled against the top high school, college, and semipro teams from surrounding cities. Ultimately, the scoreboard of these games mattered far less than the relationship-healing that occurred between incarcerated Japanese Americans and the free Americans living beyond the barbed wire of the camps.

Postwar Goodwill Ambassadors. Just as it was important to improve postwar relations on the local level with Caucasians, Japanese Americans knew it would be critical to do the same on an international level with Japan. Unfortunately, participation in the Japanese American Baseball Leagues after 1945 never returned to their prewar levels. For those Nikkei who still loved the game and wanted to compete at the highest level, they had few options. American-born players like Satoshi “Fibber” Hirayama, Kenshi and Kenso Zenimura, and Wally Yonamine were ready for the big leagues, but the big leagues weren’t ready for them. So instead they went to Japan to play in the Nippon Professional Baseball League during the 1950s. Also instrumental in rebuilding U.S.-Japanese baseball relations after the war was Tsuneo “Cappy” Harada, a former ballplayer once scouted by the Cardinals and a decorated member of the Military Intelligence Service. Harada was selected by General Douglas McArthur to arrange goodwill tours of Major League teams in

postwar Japan. He was later named special assistant to the Tokyo Giants (1951–1954), contributing to the team’s four straight Japanese Baseball League championships.

The Japanese American Baseball Legacy

Between the 1920s and 1950s, the pioneers of Japanese American baseball touched the lives of hundreds of young ballplayers who in turn passed their wisdom on to future generations. The beneficiaries of their efforts include pitcher Ryan Yoshitomo Kurosaki, first Japanese American to break into the Major Leagues by joining the St. Louis Cardinals in 1975. Other Nikkei beneficiaries include Lenn Sakata, Atlee Hammaker, Onan Masaoka, Don Wakamatsu, Travis Ishikawa, Shane Komine, and Kurt Suzuki.

The torch of the Japanese American Baseball legacy is arguably best carried forward by the lifelong work of men like Nisei pioneers George “Hats” Omachi, Satoshi “Fibber” Hirayama, and Kenso “Howard” Zenimura. When the war ended in 1945, Omachi became a regular in the lineup for Kenichi Zenimura’s Fresno Japanese ballclub. In 1968, Omachi joined the New York Mets as their central California scout, and later provided services for the San Francisco Giants, Pittsburgh Pirates, Milwaukee Brewers, and Houston Astros. By the early 1970s the number of Japanese Americans participating in baseball declined, so he formed the Omachi All-Stars, a multiethnic team comprised of the best players in the Fresno County area. Players from the Major Leagues to the little league levels benefited from Omachi’s guidance. His list of protégés to reach the majors included Bobby Cox, Tom Seaver, Will Clark, Rex Hudler, and Geoff Jenkins.

During World War II, Satoshi “Fibber” Hirayama and his family were relocated to Poston, Arizona. After the war, his family returned to California’s San Joaquin Valley where he finished high school and received a scholarship to play baseball at Fresno State College. Hirayama signed with the Hiroshima Carp in the Japanese Baseball League, where he joined fellow teammate Kenshi Zenimura in 1955. Hirayama became a two-time All-Star and competed in Japanese MLB All-Star games against Mickey Mantle, Whitey Ford, and Stan Musial. He played for Hiroshima for

10 years and then went on to a successful career as a scout for the Carp organization in Japan and in the Dominican Republic. As a scout for the Hiroshima Carp's Dominican Republic Beisbol Academy, Hirayama's list of signees included Major Leaguers Timon Perez and Alfonso Soriano.

Kenso "Howard" Zenimura followed in his father's footsteps by serving as one of baseball's international ambassadors and as a mentor dedicated to developing young players. In 1978, P. A. Shibata, founder of the Japanese Boys League, recruited Howard Zenimura to manage the international traveling team of 14 to 15-year-old players. In 1982, the organization changed its name to the International Boys League (IBL) and the first IBL tournament was held in Osaka, Japan, with four Japanese teams and four foreign teams participating. When looking for assistant coaches for the team, Zenimura selected Don Wakamatsu, a 19-year-old catcher from Hayward, California, to serve as an assistant coach with the Fresno IBL team. This was Wakamatsu's first trip to Japan, and the experience would later prove to be an invaluable cross-cultural experience that prepared him for his future role as the manager of the Seattle Mariners, a Japanese-owned major league team featuring several players from Japan on the roster.

Few baseball fans know the story of early twentieth-century Japanese American baseball. In an effort to preserve their history, the non-profit Nisei Baseball Research Project (NBRP, www.niseibaseball.com) was founded in 1996 by filmmaker and historian Kerry Yo Nakagawa. The NBRP founder is also the nephew of John Nakagawa, the slugger recognized as the "Nisei Babe Ruth." The NBRP has been instrumental in having Japanese American baseball and its remaining pioneers recognized by professional baseball teams, museums, schools, and students throughout the United States and Japan. The wartime chapter of Japanese American baseball has also been preserved in the children's book *Baseball Saved Us*, the documentary *Diamonds in the Rough*, an ESPN *Behind the Lines* feature, and in the major motion picture *American Pastime*.

Despite the general lack of awareness of Japanese American baseball history, the impact of their leagues is still visible in today's game. It is subtle, though,

and only visible to the educated and informed. Their legacy is not a retired uniform number on the outfield wall of a major league stadium, but the names on the back of the major league uniforms. Players of Japanese ancestry like Ichiro Suzuki, Hideki Matsui, Daisuke Matsuzaka, Kenji Johjima, Hideki Okajima, Kurt Suzuki, and Don Wakamatsu are indebted to the efforts of the Nikkei baseball pioneers. At the turn of the twenty-first century, the national pastime has officially become the "International Pastime," and arguably, this is the enduring legacy of Japanese American baseball.

Japanese American Christianity

In 1885, the Meiji government of Japan began to allow large-scale emigration of laborers to Hawaii and the United States. These immigrants, who were raised with a combination of Buddhist and Shinto teachings from their homeland, encountered a new society where Christianity was the dominant religion. For many of the Isseis that were struggling in their new surroundings, the practical lessons offered by Christian

churches became especially appealing. Within the next decade, several Japanese American Christian churches had been established throughout the West Coast and Hawaii. In fact, it was not until 1899 that the first Japanese American Buddhist temple was built. For this earliest wave of Japanese immigrants, Christian organizations played a pivotal role in their acculturation to the United States.

However, stepping foot on American soil was not necessarily the immigrants' first encounter with Christianity. Christianity in Japan can actually trace its history back to the sixteenth century, when Jesuit and Franciscan missionaries reached Japan and converted up to an estimated 10 percent of the population to Catholicism. However, in the early seventeenth century, the Tokugawa Shogunate expelled all foreign missionaries, and what little Christianity remained was forced underground into what are now referred to as *Kakure Kirishitan*, or "Hidden Christian," communities.

Early Japanese America and the Christian Church

On March 31, 1854, Commodore Matthew C. Perry sailed to Japan and, by 1858, coerced the ruling Tokugawa Shogunate to sign the Treaty of Kanagawa, thus ending Japan's three centuries of seclusion. This moment marked the beginning of trade between Japan and United States and also enabled Christian missionaries to proselytize within Japanese borders. By the start of the Meiji Era in 1868, American and Canadian missionaries from several Protestant denominations had established a number of mission schools throughout Japan. Many of the earliest students at these mission schools were *shizoku*, or members of the former samurai class, which had previously been abolished by the Meiji Emperor.

In the early 1870s, a *shizoku* student from Yamaguchi Prefecture named Kanichi Miyama made his way to Tokyo, where he opened a clothing store. It was in the early years of the Meiji Era, when the Japanese government encouraged wealthy young men to travel abroad to Europe and the United States to learn and bring back skills to help modernize Japan. Miyama was a perfect candidate to heed this call, and would eventually travel to San Francisco in 1875 at

the age of 27. Before departing, he met Rev. George Cochrane, who was one of the earliest Canadian Methodist missionaries in Japan. Rev. Cochrane wrote Miyama a letter of introduction to his Methodist colleague in San Francisco, Rev. Thomas Guard.

Soon after arriving in San Francisco, Miyama and two other young Japanese men visited Rev. Guard at the Powell Street Methodist Episcopal Church. Apparently unsure of what to do with these Japanese immigrants, Guard instead directed them to the nearby Methodist Episcopal Chinese Mission, just about one mile away in Chinatown. Christian missionaries such as Rev. Otis Gibson had been in Chinatown since at least 1852 in response to the over 25,000 Chinese laborers living and working there. Despite the large Chinese population, there were likely only about 200 Japanese in San Francisco at the time.

Rev. Gibson of the Methodist Episcopal Chinese Mission allowed these young Japanese men to study English and have regular Bible study sessions in the basement of his Chinatown church. On February 22, 1877, Kanichi Miyama became the first legal Japanese immigrant to the United States to be baptized, and soon was instrumental in creating the *Fukuinkai* (Gospel Society), which was the first voluntary Japanese organization in the United States. In addition to promoting Christian teachings and values, the *Fukuinkai* also hosted English lessons and several secular workshops to help the Japanese immigrants settle into their new surroundings.

The Initial Growth of Japanese American Christianity

By 1881, the *Fukuinkai* had split into two different factions, with one remaining under the guidance of Rev. Gibson and the Methodist Episcopal Church, whereas the other moved under the influence of the Presbyterian Church. In 1885, this Presbyterian group, known as the Tyler *Fukuinkai*, organized the earliest Japanese American church, the First Japanese Church of San Francisco (present-day Christ United Presbyterian Church). That same year, the Methodist Episcopal Church California Conference officially allocated a budget of \$2,100 for a Japanese mission in San Francisco, which led to the establishment of the

Japanese Methodist Episcopal Church (present-day Pine United Methodist Church) under the leadership of Bishop Merriman Colbert Harris and his now ordained assistant, Rev. Kanichi Miyama. In 1887, the Methodist Episcopal Church California Conference became aware of the large masses of Japanese laborers immigrating to Hawaii (which at the time was still an independent kingdom). Rev. Miyama joined with Congregationalist minister Dr. C. M. Hyde of the Hawaii Evangelical Association and created the Japanese Methodist Church in Hawaii (present-day Harris United Methodist Church) and Nu'uuanu Congregational Church.

By the 1890s, Japanese American communities throughout California, Hawaii, and several other Western and Rocky Mountain states had their own Christian churches. Although the Methodists and Presbyterians were the earliest denominations to specifically reach out to the Japanese immigrant community, several other groups soon followed, such as the Congregationalists, Baptists, and Episcopalians. In fact, some of the different denominations even worked with one another to focus on specific geographic areas for practical reasons. For example, in 1901, Methodist Bishop M. C. Harris and Presbyterian superintendent Dr. Earnest Sturge created an agreement so that the Methodists would focus on Santa Clara County, whereas the Presbyterians would take care of Santa Cruz and Monterey counties. This led to certain churches changing their denominational affiliations, such as Westview Church in Watsonville, California, which switched from Methodist to Presbyterian.

Throughout the early decades of the twentieth century, Japanese American Christianity continued to grow, especially as increasing numbers of Japanese laborers married and started their own families. During this period, it is estimated that 15 to 20 percent of all Isseis were Christians, with even higher numbers for their Nisei children, who greatly contributed to the exploding new church memberships. In 1920, many of the different Japanese American Christian churches began to work together to host a conference for high school and college-aged Niseis. The Young People's Christian Conference (YPCC) became extremely popular and would eventually bring upward of 500 young Japanese Americans together from various

churches to socialize as Japanese American Christians. Although YPCC stopped because of World War II, several subsequent Japanese American Christian youth summer camps such as the Lake Sequoia Retreat, Japanese Evangelical Missionary Society (JEMS), Mt. Hermon Conference, and the United Methodist Asian American Summer Camp trace their roots to these early annual meetings.

Japanese American Churches and World War II

On December 7, 1941, Pearl Harbor was bombed by the Imperial Japanese Navy. Due in part to the combination of war hysteria and a general distrust of Japanese Americans, President Franklin D. Roosevelt signed Executive Order 9066, which led to the forced incarceration of over 110,000 individuals of Japanese descent living on the West Coast into concentration camps scattered throughout the United States. The Japanese American churches in the affected regions, some of which were now over 50 years old, were forced to shut their doors for the duration of the war.

Even though the churches closed, Japanese American Christians continued to actively practice their faith throughout their stay in temporary assembly centers and more permanent concentration camps. The Pacific Japanese Provisional Conference of the Methodist Episcopal Church, which had just been formed in 1940, was forced to hold their annual meeting in 1942 at the Santa Anita Racetrack Assembly Center under armed supervision. All 10 of the concentration camps had regularly scheduled Christian worship services, as well as Sunday Schools for the children. In many cases throughout the different camps, Christians received preferential treatment over Buddhists, who were viewed as "less-American."

In the years immediately following World War II, Japanese Americans resettled throughout the country. Although many would eventually return to their former West Coast hometowns such as San Francisco and Los Angeles, a significant number chose to start over in cities such as Chicago and Minneapolis. As new Japanese American communities sprouted in these cities, Japanese American Christian churches were also formed there during the late 1940s and early 1950s.

For the Japanese American Christians that chose to reopen their churches on the West Coast, a series of new issues began to affect the direction of their respective congregations. During World War II, Japan was clearly the enemy of the United States. In response to constant villainization of Japan by the American media, it is understandable that many of the young Japanese Americans (who were most likely born and raised in the United States) began to distance themselves from culturally Japanese signifiers such as language and customs. Instead, many Japanese Americans chose to adopt a much more patriotic identity, as can be seen in the thousands of Japanese Americans who volunteered for the highly decorated 100th Battalion and 442nd Regimental Combat Team.

By the 1950s, Niseis began to take senior leadership roles within many of the Japanese American Christian churches. For the first time, the ethnically Japanese leaders of these churches were native English speakers who could better serve their increasingly English-speaking congregations. As the Sansei generation was generally born during and immediately following World War II, it is possible that many were raised in households that chose to ignore much of their Japanese heritage. Perhaps not coincidentally, these years line up chronologically with the dissolution of the Methodist Pacific Japanese Provisional Conference in 1964. This dissolution, which sought to create a more “colorblind” church, caused all Japanese American Methodist churches to be removed from an ethnic grouping and instead be placed under the supervision of geographic-based leadership. This is particularly significant because it occurred during the Civil Rights Movement when many ethnic minority groups took the opposite route and instead chose to proudly embrace their heritage.

Recent Developments of Japanese American Christianity

By the 1980s and 1990s, most of the original Issei founders had passed away, and Japanese American Christian churches encountered an entirely new set of issues to face. Some of the churches have disappeared, and many have distanced themselves from their historically Japanese American identity to several different

degrees. Ontario Community United Methodist Church in Eastern Oregon, for example, currently has an aging Nisei and Sansei population, whereas the younger church members are almost exclusively white. Meanwhile, some churches such as Buena Vista United Methodist Church in the San Francisco Bay Area now have an increasingly panethnic congregation that reflects its local neighborhood. In 1990, the Japanese Congregationalist and United Methodist churches in Fresno, California merged to create the United Japanese Christian Church. Evergreen Baptist Church in Los Angeles, which is now one of the largest and most well-known pan-Asian congregations, developed from a specifically Japanese congregation. At the other end of the spectrum, Wesley United Methodist Church in San Jose Japantown is one of the last remaining Japanese American churches to employ a full-time Japanese-speaking minister, specifically to serve the significant shin-Issei community.

A recent survey has estimated that 43 percent of all Japanese Americans claim a Christian identity. Although this number is less than the nearly 80 percent of all Americans that identify as Christian, it is significantly larger than the 1 percent Christian population in Japan. Although it is true that many Japanese American Christians have since joined mainline Christian congregations and are no longer members of Japanese American churches, the historical significance of Japanese American Christian churches remains. In fact, only a couple generations prior, it would have been impossible for Japanese Americans to worship anywhere else. From their humble roots inside a Chinatown basement, Japanese American Christian churches have persevered in the face of injustice and are now well into their second century of ministry. Today, they lead the way for the next generation of church members that are increasingly diverse ethnically, generationally, and geographically.

Japanese American Citizens League (JACL)

The Japanese American Citizens League (JACL), the largest and most established ethnic Japanese political and social organization in the United States, has had a long and sometimes controversial history within Nikkei communities.

The JACL was founded in 1930. It emerged out of a set of fledgling West Coast Nisei groups, notably the American Loyalty League. From the beginning, the JACL established itself as a Nisei organization. It restricted its membership to American citizens, and its leaders adopted an accommodationist strategy of Americanization, including exclusive loyalty to the United States and adoption of American cultural styles. Its leadership was generally composed of young journalists, lawyers, and other professionals (many of them Republicans) such as Clarence Arai, Thomas T. Yatabe, and James Sakamoto. Sakamoto, the editor of

the Seattle Nisei newspaper, *Japanese American Courier*, not only served as JACL president from 1936 to 1938 but made the organization’s newsletter, the *Pacific Citizen*, into a regular monthly publication. The JACL opened numerous local chapters on the West Coast, plus a handful in the Rocky Mountain states.

Although in theory the early JACL set itself up against immigrant-led community organizations and Japanese consulates, in practice its chief lobbying agenda was in support of Issei against legal discrimination that was based on Issei’s inability to become naturalized citizens by U.S. federal law. The JACL won a major victory by blocking passage of race-based legislation in California banning fishing licenses for Issei. In 1931, the JACL funded lobbyist Susu-Mago’s journey to Washington, where she fought successfully to suspend the Cable Act, which stripped Nisei women of citizenship if they married Japanese aliens. Four years later, following a lobbying campaign by Tokutaro “Tokie” Slocum, the Lea-Nye Bill, which

Fred Tayama, chairperson of the Southern District Council of the Japanese American Citizens League (JACL), explaining curfew and travel laws to two fellow Japanese Americans in 1942. (Library of Congress)

permitted Asian immigrants who had fought in World War I to naturalize, was passed. In 1938, Walter Tsukamoto was elected JACL national president. He persuaded the school board in Florin, California to abolish the segregated “oriental” school where Nisei had been forced to attend.

In the months before the onset of World War II in the Pacific in December 1941, the JACL campaigned to demonstrate the loyalty of the Japanese community by pressing Nisei to renounce their Japanese citizenship and extolling Nisei military service. A few insiders, such as Ken Matsumoto, worked with official intelligence agencies as informants. Following the Japanese raid on Pearl Harbor, JACL leaders wired President Franklin Roosevelt to offer their full support. The organization formed an Anti-Axis Committee to root out suspected subversives. The rapid closure of Japanese consulates and the mass arrests and internment of Issei leaders following the outbreak of war left a void in community leadership, which the inexperienced JACL leaders strained to fill. They lacked the tools to combat the strength of anti-Japanese campaigns on the West Coast and the exclusion of Nisei enlistees from the armed forces. In a sign of desperation, JACL secretary Mike Masaoka, a new recruit from Utah, proposed that the army form a Nisei suicide squadron as a guarantee of group patriotism.

The issuing of Executive Order 9066 on February 19, 1942, forced JACL leaders to choose between affirming group loyalty and defending Nisei constitutional rights. When Masaoka and other JACL members testified before the Congressional Tolan Committee, they protested racial bias but agreed to “evacuate” if there was an actual military necessity. In the following days, the group’s leaders made the reluctant decision to support the wartime military removal of West Coast Japanese Americans. JACL leaders argued, with considerable logic, that resistance to mass removal would be suicidal and would serve only to confirm widespread allegations of community disloyalty. Masaoka later alleged that he and Saburo Kido had been summoned to the Presidio, where army officials had threatened military action to round up Nisei if the JACL did not cooperate. It seems highly doubtful that such a meeting, if it ever took place, by itself prompted the JACL’s cooperation. Rather, the

evidence suggests that JACL leaders offered federal authorities their assistance with removal in hopes of displaying patriotism and helping soften official policy. They also may have hoped to solidify the JACL’s place as primary representatives of ethnic Japanese.

For a small and powerless group as Japanese Americans, especially in a time of intense crisis, such a policy of collaboration was surely justifiable. Still, the widespread community opposition that the policy inspired was understandable. Nisei militants denounced the JACL as “the Jackals,” who they claimed sold out the community from misplaced patriotism, vanity, or self-interest. Worse, JACL leaders refused to support the legal challenges of Gordon Hirabayashi and Minoru Yasui to Executive Order 9066, and instead denounced the defendants as self-styled martyrs and misguided—thus further alienating the mass of Nisei. (The JACL later shifted to support the two cases when they were heard before the Supreme Court.)

Ironically, despite its loyalist reputation, the JACL did not fully support official policy. The group helped fund and distribute Socialist Party leader Norman Thomas’s pamphlet “Democracy and the Japanese Americans,” which referred to Executive Order 9066 as “totalitarian justice” and called for its rescission. Mike Masaoka was the guest speaker at a protest meeting that Thomas organized in New York in June 1942. The JACL endorsed the legal cases of Mitsuye Endo and of Ernest and Toki Wakayama, who filed *habeas corpus* suits challenging their confinement, because these cases did not touch on the initial removal. Indeed, former JACL President Walter Tsukamoto joined the legal team for the Wakayamas’ aborted lawsuit, as well as for the 1942–1943 federal court case *Regan v. King*, which challenged Nisei citizenship.

As the West Coast was closed to Japanese Americans, the JACL resolved to move its operations to Salt Lake City. In the process, JACL leaders made a less-covered policy decision that, although little noticed at the time, had important and lasting consequences. In March 1942, President Saburo Kido invited noted journalist Larry Tajiri and his wife Guyo to transform *The Pacific Citizen* into a full-fledged weekly newspaper to replace the shuttered West Coast Nisei press. This was a strikingly audacious move for the JACL,

especially as it had lost most of its financing during removal—it relied chiefly on dues from the few intact chapters outside the excluded area. Equally surprising was the choice of Larry Tajiri for editor, as he had never been close to the JACL and had in fact been a frequent critic of its program. The Tajiris moved to Salt Lake City just before such “voluntary evacuation” was halted and assisted Hito Okada in setting up the JACL office there. The weekly *Pacific Citizen* debuted in June 1942. It remained the JACL’s chief wartime activity.

During the war years, the JACL remained alternately embattled and influential. In mid-1942 Mike Masaoka persuaded the JACL to open a Washington office under his direction, in hopes of influencing policymakers and improving conditions for Japanese Americans. Even such success as he had, however, was turned against him when the House Un-American Activities Committee (Dies Committee) seized his office files and produced them as evidence of subversive tendencies. Meanwhile, the National Board sponsored a special conference in Salt Lake City in November 1942, where the delegates called for reopening of military service to Nisei. This action further envenomed divisions between JACLers and dissidents in camp. JACL activists confined in government camps were subjected to harassment and beatings by gangs of dissident inmates. Conversely, the JACL championed segregation of “disloyal” inmates. Once conscription was reinstated in early 1944, JACL chiefs called on the government to prosecute all draft evaders, and sent a delegation to the Cheyenne jail to try and talk the resisters of the Heart Mountain Fair Play Committee into abandoning their case.

With the surrender of Japan and the end of the war in September 1945, the JACL, which had been the only national Japanese American organization to survive the war, experienced enormous growth—even those who had opposed the organization’s wartime policies recognized that it was now the only established organization. Although its national headquarters (including *The Pacific Citizen*) remained in Salt Lake City, JACL leaders formed or reformed local chapters nationwide to assist resettlers and help organize community institutions in the new population areas. In

addition to political advocacy, JACL chapters organized social events, dinners, and sports leagues.

The JACL perceptibly shifted its platform at this time. Although it remained committed to its Americanization program, JACL leaders redoubled their legal campaign to secure full citizenship rights for Japanese Americans (including Issei, admitted as members for the first time). Under the leadership of counsel A. L. Wirin, a white Los Angeles lawyer, and his law partner, JACL president Saburo Kido, the JACL instituted successful Supreme Court lawsuits challenging California’s Alien Land Act and its discriminatory commercial fishing laws. JACL lobbyists also secured Evacuation Claims legislation, a first tentative step toward redress. Furthermore, in contrast to the pre-World War II era, Japanese Americans became active in interracial organizing. JACL leaders such as Larry Tajiri and Mike Masaoka urged Nisei to recognize that it was in their own self-interest to support civil rights for all. In July 1946, the JACL established a Defense Fund for civil rights litigation, including cases involving other minorities. JACL counsel joined lawyers from the NAACP and other groups in court suits against restrictive covenants and racially segregated schools. In 1950, the JACL became the only Asian American organization in the new umbrella group Leadership Conference on Civil Rights.

In 1952, the JACL secured its greatest objective with the passage of the McCarran-Walter Act. Though a repressive McCarthy-era law targeting “subversives,” it reopened (limited) immigration from Japan and for the first time permitted Japanese aliens to naturalize. That same year, the JACL moved its headquarters to San Francisco, and Larry Tajiri resigned as editor of the *Pacific Citizen*. His successor, Harry Honda, would remain editor for 50 years.

After 1952, the national JACL remained active in lobbying for civil rights bills, especially the repeal of laws forbidding racial intermarriage. (In 1966–1967, counsel William Marutani argued for the JACL in the Supreme Court case of *Loving v. Virginia*, which challenged “anti-miscegenation” laws.) However, local chapters emphasized social activities and became less visible in political activism. Indeed, such was the split between the National JACL and its chapters that in mid-1963, when national leaders accepted an

invitation by Rev. Dr. Martin Luther King, Jr. and the organizers of the March on Washington to send representatives to their rally, the move caused a furor. Several chapter presidents objected that the JACL should not identify itself too closely with the controversial movement, as it was not their fight and would alienate useful white allies. JACL president K. Patrick Okura finally convened an emergency National Board meeting to set policy, and a special committee produced a compromise policy statement. In the end, however, only some 35 JACL representatives attended the event. Similarly, in 1964 the National JACL campaigned against Proposition 14, an electoral initiative in California to permit racial discrimination in housing, but polls suggested that most Nisei statewide supported the proposed law.

In the late twentieth century, the JACL undertook two especially significant initiatives. First, the JACL supported redress for wartime confinement. Following a lobbying campaign by onetime inmate Edison Uno, the JACL voted resolutions in favor of compensation at its national conventions in 1972, 1974, 1976, and 1978 and formed a National Redress Committee. However, aware of divisions among Nisei, the JACL did not make the campaign for reparations a priority (though JACL leaders helped persuade President Gerald Ford to officially revoke Executive Order 9066 in 1976). Instead of immediate reparations payments, JACL leaders favored creation of a historical commission. After the U.S. Commission on Wartime Relocation and Internment of Civilians released its historical report in 1983, JACL lobbyists, led by Mike Masaoka, organized support for redress legislation, and can be credited in part with passage of the Civil Liberties Act of 1988.

Six years later, the JACL became embroiled once more in controversy over civil rights issues. Following a resolution introduced by Vice-President Bill Kaneko of Hawaii, in May 1994 the JACL National Board adopted a resolution supporting “the concept of marriage as a constitutional right” and declaring that legal prohibitions on same-sex marriage violated human rights. The board’s action catalyzed a storm of protest, and numerous members resigned from the organization. A local chapter in Utah launched a movement to repeal the resolution. In summer 1994 the JACL

National Council, made up of representatives from all chapters, narrowly voted to uphold the National board. To a degree, the controversy marked a generational shift within the JACL and a new opening for the group.

Japanese American Communities (Contemporary)

First-generation Japanese immigrants coming to the United States from the late nineteenth to the early twentieth centuries, called Issei, established and developed relatively self-sufficient ethnic communities. These communities—called “Japan Towns” or *nihon-machis*—consisted of residences, businesses, and a variety of community organizations such as temples, churches, and social associations. Such communities, or ethnic enclaves, served as refuges to protect Japanese immigrants and their children from racial discrimination and prejudice of the mainstream society, provided them with cultural commodities and services, and nurtured ties within and between communities across the western United States. Internment at camps in the interior of the country during the World War II resulted in the dispersion of many Issei and their families throughout the United States and damaged the social networks that Japanese communities had built. Although nearly 90 percent of Japanese on the U.S. mainland lived on the West Coast in the prewar period, the concentration had dropped to 55 percent in 1947. Yet, returnees from internment camps devoted themselves to rebuilding their communities, and many of the communities had regained their prewar liveliness by the early 1950s. [For prewar Japanese communities, see “Japanese American Community Organizations (Historical).”]

Decline of Historic Communities and Urban Renewal

The postwar prosperity of Japanese American communities was short-lived because of changes in the social and economic status of the subsequent generations and external forces including urban renewal movements. First, Nisei and Sansei (second- and third-generation Japanese Americans, respectively) achieved upward mobility in the postwar period. In the prewar period, few Japanese Americans could find mainstream white-collar jobs even if they had university degrees. However, as racial discrimination in U.S. society lessened in the postwar period, Nisei and Sansei became increasingly able to find jobs with higher socioeconomic status outside their ethnic communities. Japanese Americans who joined the military had opportunities to receive higher education in universities through the G.I. Bill, which made them more competitive in the mainstream job market. Nisei and Sansei became less interested in taking over small, family-owned businesses, which had constituted the socioeconomic basis of Japanese American communities. In addition, more Nisei and Sansei married non-Japanese, particularly Caucasians. As a result, many Nisei and Sansei moved out of urban ethnic enclaves to suburban areas where there were fewer Japanese Americans. When Japanese Americans, along with Chinese Americans, “attained” model minority status in the eyes of mainstream society by the mid-1960s, their urban ethnic enclaves had already begun to show decline.

Also, urban renewal programs conducted in major cities from the 1950s to the 1970s greatly impacted several Japanese American neighborhoods that were located in or near central business districts. City officials, with the support of the federal government, sought to revitalize deteriorated central business districts and encourage investment in these areas. Although downtown residents and businesses first welcomed redevelopment plans, their optimism faded when urban renewal resulted in mass evictions that were often coercive and rarely provided sufficient compensation for relocation. Japanese Americans often call this forced removal the “second relocation.”

Examples of historic urban Japanese American communities that were strongly affected by urban renewal include San Francisco’s Japantown and Los Angeles’ Little Tokyo. The redevelopment projects in the 1950s and 1960s essentially converted San Francisco’s Japantown from an ethnic residential area to a tourist attraction. The project led to the removal of about 8,000 residents, including many African Americans and Japanese Americans, and the demolition of 6,000 units of low-rent housing. The city offered a section of the project area to Japan-based corporations, which were experiencing rapid growth in Japan and were also eager to establish themselves in the United States. Residents and young Japanese American community activists established the Committee Against Nihonmachi Evictions (CANE) in response. However, in the end, these Japan-based corporations managed to open luxury hotels, a Japanese theater, and shopping malls. The malls not only provided a showcase for both traditional and modern Japanese cultural products such as foods, consumer electronics, and automobiles for domestic and international tourists but also housed overseas branch offices of many Japanese companies. However, CANE activists argued that making Japantown into a tourist destination commodified their community and degraded their culture.

The fate of Los Angeles’s Little Tokyo was similar to that of San Francisco’s Japantown. Expansion of the police administration building, Parker Center, led to evictions of about 1,000 residents in the early 1950s. Ironically, in the following decades, foreign investment in redevelopment from Japan resulted in the removal of a number of local residents and forced many Japanese American family businesses to close. Amid the growing Asian American Movement, younger Japanese Americans established the Little Tokyo People’s Rights Organization (LTPRO) to protest evictions and demolitions of facilities with historic and cultural significance to their community. Nevertheless, the redevelopment greatly changed the physical appearance of Little Tokyo. Although Japanese capital supported the completion of the luxurious New Otani Hotel and the Weller Court shopping mall, it also sponsored the construction of a couple of low-income housing units and the Japanese American Cultural and Community Center, which houses several

community organizations. The latter are considered the fruits of the LTPRO-led community protests.

Preservation of Historic Communities

The success of the redress movement in the 1970s and 1980s, which sought an apology and compensation from the U.S. government for the wartime internment, illustrates the growing political power and strength of Japanese American communities. However, nothing could reverse the exodus of younger Japanese Americans from old urban enclaves to the suburbs. Moreover, despite the large influx of Asian immigrants into the United States after the Immigration and Nationality Act of 1965 that have contributed to rejuvenation of existing communities and established a number of new Asian communities, the number of immigrants from Japan since 1965 remains relatively low. These factors account for the continued decline of Japanese American communities. For example, although Japanese Americans constituted the largest Asian American group until 1970, they fell to sixth largest in 2010, behind Chinese, Filipinos, Asian Indians, Vietnamese, and Koreans.

In the late 1990s, the preservation movement of historic urban Japanese American communities was initiated by community leaders who were worried about the unstable economy and the fading sense of Japanese American ethnicity. Long-time Japanese American residents were aging and Japanese American family-owned shops were closing one after another because they could not find anyone to take over their businesses. Accordingly, these businesses were purchased by others, particularly Korean American and Chinese American merchants, who transformed the properties into businesses reflecting their own ethnicities. The economic recession in Japan in the early 1990s caused the withdrawal of Japan-based companies from San Francisco's Japantown and Los Angeles's Little Tokyo, as well as a decrease in the number of tourists from Japan. Japanese American community leaders in San Francisco, Los Angeles, and San Jose acknowledged preservation and revitalization of historic urban communities as a common issue and began collaborating. They held the first nationwide community conference "Ties That Bind"

in Los Angeles in 1998, and a second one, "Nikkei 2000" in San Francisco in 2000. The coalition of these communities claimed that Los Angeles's Little Tokyo and the Japantowns in San Jose and San Francisco were the only remaining Japantowns in the United States and emphasized their historical significance. Their efforts resulted in California Senate Bill 307, approved in 2001, which provided \$450,000 for the preservation of those historic Japan Towns.

Each community also sought public recognition of the historical value of these communities. Los Angeles's Little Tokyo was designated as a National Historic Landmark District in 1995. The Japanese American National Museum that opened in the heart of Little Tokyo in 1992 has played an important role in educating young Japanese Americans and the general public about the experiences of previous generations of Japanese Americans. San Francisco's Japantown was designated as a Special Use District in 2005, which provided Japanese American communities the power to control land use within the neighborhood to some degree, so that the place retained a sense of Japanese cultural and historic identity.

New Suburban Japanese Communities

Although urban Japanese American enclaves continued to decline, an increase in the number of Japanese companies in the United States has led to the development of new suburban Japanese communities that are primarily composed of postwar Japanese immigrants and nonimmigrants such as business expatriates and their families. These communities developed in suburban cities such as Torrance and Costa Mesa in Southern California and Santa Clara in Northern California, where a number of Japanese companies are concentrated. Unlike prewar Japanese immigrants, who lived in urban ethnic enclaves, contemporary Japanese business expatriate families tend to avoid living close to other Japanese families, preferring instead to live in suburbs that have low crime rates and high quality schools for their children.

New suburban Japanese communities are usually composed of several clusters of commercial facilities close to major Japanese companies rather than having a central location for residences and community

organizations. Each cluster usually includes a supermarket, bookstore, several Japanese restaurants, and other services such as travel agents, real estate agents, law offices, clinics, and cram schools. Most of these businesses are operated by long-term Japanese residents and not by Japanese Americans. They were designed to primarily serve Japanese business expatriates and their families, who stay only temporarily in the United States and return to Japan eventually. Thus, they try to create a very similar environment to contemporary Japan by providing commodities and services of the same type and quality as are available in Japan. In this sense, these new communities provide comfort and cultural continuity to contemporary Japanese transnationals who are not accustomed to English language and American culture in a similar way that prewar Japanese communities did for immigrants. However, as many of those who constitute new communities are transient employees of global corporations who work outside of their residential areas, the sense of community is not very strong.

These new communities have few connections to historic urban communities or Japanese American communities under the leadership of the Sansei and increasingly Yonsei (fourth generation). The old and new Japanese communities have been separate, mainly because most Sansei and subsequent generations lack fluency in Japanese. Even though they share common cultural roots, they have different historical experiences and different perspectives and interpretations of Japanese culture. As long as contemporary Japanese immigrants and nonimmigrants enjoy the comforts and conveniences found in the cultural “bubble” of their suburban communities, they have few opportunities to interact with Japanese Americans even in areas like California, which has a large Japanese American population.

The growth of these new suburban Japanese communities presents a sharp contrast to the recent decline in historic urban Japanese communities. Japanese foreign capital, once directed to redevelopment of old Japanese communities, changed course and has been used to relocate Japanese businesses to suburban communities. Many Japanese companies consider investment in Japanese suburban communities as more lucrative than investments in historic urban communities, despite continuous efforts to revitalize the latter.

Contemporary Japanese American communities lack geographical centers as Japanese Americans disperse to the suburbs and are more residentially and socially integrated into the mainstream. Historic urban Japanese communities are no longer residential neighborhoods with small ethnic businesses like those that existed in the prewar period; rather, the areas in which these prewar communities existed, despite their renovations, have become largely symbols of Japanese American ethnicity today. They are still a hub of many community organizations, home to Japanese American churches and temples, and serve as the stage for traditional community events like summer *bon* festivals and New Year’s celebrations. Japanese Americans living in the suburbs occasionally visit for these events to remind themselves of their ethnic heritage.

Japanese American Community Organizations (Historical)

Organizations have constituted a key aspect of community life in Japanese America. Often dispersed through rural farming regions of the Western states and Hawaiian plantations, Japanese immigrants were connected to each other through their membership in community organizations. Ranging from political to trade, religious to educational, and from regional to generational, a wide variety of organizations developed complex, multilayered networks that tied together different geographic settlements of Japanese America. Fostering a sense of belonging among members, the emergence of organizations thus accounted

for the formation of an ethnic community and group identity that sustained it.

The Making of a Unified Ethnic Community: 1877–1900

Between the late 1870s and the turn of the twentieth century, as diverse types of Japanese immigrants (Issei) entered the Pacific Coast states, the preexisting religious and political divides among them paved the way to the formation of groups and institutions in early Japanese America. The first contingencies of Issei intellectuals and students showed remarkable propensity for organizing themselves according to their religious belief and political persuasion. One group consisted of Christian converts who formed the Fukuinkai, or Gospel Society, in San Francisco. Established in 1877, this first recorded community organization provided members with a spiritual and social shelter from the harsh life of being indigent student-laborers in a foreign land. Although ethnic churches were formed in the subsequent years, some of the important projects that Issei Christian leaders undertook in the early 1890s included an antiprostitution campaign and moral reform efforts among common immigrant laborers from rural Japan. In Hawaii, similar reformist efforts took shape after 1887 when Japanese Christian ministers came from San Francisco and Japan to proselytize plantation workers.

In the meantime, another group of early Issei student-laborers rallied around their political opposition against the Japanese government. Exiled in San Francisco after Tokyo's crackdown on the People's Rights movement of the mid-1880s, these Issei political activists established the Patriotic League in January 1888. Inspired by the rise of nationalist and expansionist ideologies in their homeland, other student-laborers also joined political formation in early Japanese America, setting off the birth of manifold political societies. Offshoots of these groups moved to Hawaii to agitate for Japanese franchise when the local white elite monopolized political control after the overthrow of the native monarchy in 1893. In San Francisco and Honolulu, these political societies published mimeographed and lithographed newspapers.

Although Issei Christians and immigrant political activists generally maintained tense relations, an anti-Japanese movement in California propelled them to form a unified ethnic front against indiscriminate racist assaults. The so-called bubonic plague incident of 1900, where Japanese and Chinese were quarantined together in San Francisco, served as a catalyst to the formation of the Japanese Deliberative Council of America. After protesting discriminatory treatment by the city officials, the council helped set up local affiliates in several Northern California towns, where many working-class Issei of rural origin lived and worked. Because exclusionists accused Japanese laborers as posing a racial peril to white America, the council and its locals subsequently engaged in a moral reform campaign among itinerant farm laborers to make them "assimilable." In Honolulu, too, the epidemic of bubonic plague resulted in the destruction of the Japanese district in 1900, and local Issei leaders and businessmen came together to demand reparations from the city government. In 1903, the ad hoc committee turned into the Central Japanese Association that drew enthusiastic, albeit short-lived, support from all over the islands. Hence, under the rising tide of anti-Japanese racism, the turn of the twentieth century marked the emergence of centralized community leadership under the Japanese Deliberative Council in California and the Central Japanese Association in Hawaii.

Japanese American Community Organizations after 1900

Subsequently, the mode of community formation became increasingly diverse and complex. In addition to political and religious factors, such matters as prefectural origin and occupation influenced the way in which Japanese immigrants configured internal divisions and groupings through the establishment of various community organizations.

Political and Social Organizations. The Gentlemen's Agreement of 1907–1908, a response of the United States and Japanese governments to the anti-Japanese movement in California, compelled Issei leaders to reconfigure and strengthen the regime of

community control and immigrant moral reform to counter the racist cry for racial exclusion. The constant in-fights and loose organizational structure of the Japanese Deliberative Council of America also necessitated the remaking of the key political organization under the mediation of the Japanese consul in San Francisco. In 1908, the Japanese Association of America emerged with a new leadership with greater influence over its affiliates and Issei residents—members or non-members. It originally encompassed all locals in California, Nevada, Utah, Colorado, and Arizona. But in 1915, the Central Japanese Association of Southern California was established in Los Angeles to which locals in Southern California, Arizona, and New Mexico came to belong. Founded in Portland in 1911, the Japanese Association of Oregon brought the Japanese of Oregon, Idaho, and Wyoming under its jurisdiction. Washington and Montana came under the Northwest American Japanese Association in Seattle after 1913. Tied to the respective Japanese consulates, these four central Japanese association bodies formed the Pacific Coast Japanese Association Deliberative Council in cooperation with the Japanese Association of Canada in Vancouver, British Columbia. In 1923, the San Francisco regional headquarters had 40 affiliated locals, Los Angeles 21, Seattle 15, and Oregon 10.

The Japanese associations exerted enormous control over ordinary Issei residents because the Japanese consulates delegated to them a set of administrative functions that were crucial under the Gentlemen's Agreement. Although stopping the coming of new laboring migrants, the bilateral agreement allowed family members of bona fide residents (including "picture brides") to enter the United States. Yet, in order for them to prove that they were indeed family members, new immigrants had to get their sponsors to obtain a certificate of residence from the nearby Japanese consulate. The local Japanese associations took care of this administrative function on behalf of Japanese diplomats, which made it difficult for Issei residents to disobey the Japanese associations and its leaders. Another important certificate was necessary for every male resident to file for annual deferment of military service. Under Japanese law, the failure to do so would make him a criminal.

As the premier political institution in prewar Japanese America, the Japanese associations took the initiative in community-based moral reform and Americanization campaigns during the 1910s when exclusionists all over the Western states touted Japanese unassimilability and Yellow Peril. The Japanese associations also spearheaded a legal battle against the alien land laws and the federal ban on Issei naturalization by sponsoring expensive test cases. In the early 1920s, these legal fights, including the historic case of *Takao Ozawa v. US* in 1922, reached the United States Supreme Court, where most test cases ended in devastating defeat for the Issei.

In Hawaii, no centralized network of the Japanese associations was constructed after the demise of the Central Japanese Association around 1905. Instead, Issei leaders set up institutional mechanism of political control on a regional basis. Often, certain individuals—merchants, labor contractors, professionals, and religious figures—assumed the role of issuing certificates for local residents, as they were directly connected to the Japanese consulate in Honolulu. Because most rural Japanese residents on the islands were concentrated in plantation labor camps under the tight clutches of local Issei elite, the basic mode of political organization in prewar Hawaii went without a centralized structure.

Religious Organizations. In cooperation with white missionary groups, Japanese immigrant Christians had been active in establishing churches and reform-oriented societies since the 1880s in both the American West and Hawaii. With the coming of "picture brides," chapters of the Japanese Young Women Christian Association (YWCA) were established in San Francisco and Los Angeles in 1912. The YWCAs offered newcomers English-language lessons, as well as courses on Western cooking and domestic skills. Meanwhile, Congregational and Presbyterian groups decided to unite forces to set up "union (*Godō*) churches" in some locales; Methodist Episcopal churches were also prevalent in prewar Japanese America. Backed by its nationalistic/ethnocentric characteristics, Japanese Holiness churches also extended their influence. In the continental United States, there

were a total of 65 Japanese Christian churches, and 46 in Hawaii.

It was not until around the turn of the twentieth century that Buddhists made notable efforts to organize themselves. Although the first Buddhist temple was built in Honolulu in 1889, the first contingents of *official* Buddhist “missionaries” came to Honolulu and San Francisco in 1898 from the Kyoto headquarters of the Jodo Shinshu Buddhist sect, marking the beginning of the Honpa Hongwanji Mission of Hawaii and the North American Buddhist Mission (later renamed the Buddhist Churches of America), respectively. These regional headquarters served as the umbrella organizations for local Buddhist “churches” in the islands and the continental United States. In their efforts to deflect the accusations of being “un-American,” Issei Buddhists adopted Christian-style worshipping and religious service by offering Sunday schools, incorporating “hymns,” and, on the mainland, changing the names from “temples” to “churches.” Before the Pacific War, 48 Jodo Shinshu Buddhist churches existed in the continental United States with 70 “missionaries” from Japan and some 80,000 lay members. The Honpa Hongwanji Mission of Hawaii had 39 temples. Although much smaller in number, other Buddhist sects also attempted to proselytize Issei residents by erecting temples in major concentrations of Japanese residents in Hawaii and California.

Kenjinkai (Prefectural Association). Another important community organization in prewar Japanese America was Kenjinkai, or Prefectural Association. Reflective of regional rivalries and differences in custom and dialect, Issei were prone to assemble themselves into Kenjinkai, which also offered the members a comfortable and familiar atmosphere. As working-class immigrants from rural Japan increased in number after the turn of the century, there emerged many associations of immigrant prefectures, including Hiroshima, Yamaguchi, Wakayama, Fukuoka, Kumamoto, and Okinawa. These prefectural associations constructed a horizontally structured network when linking up to their home prefecture. In local immigrant politics, rivalries between major Kenjinkai often caused bitter conflict, fragmenting ethnic

communities. At the same time, regional ties supported by prefectural associations provided a means of creating capital for business and farming through a rotating credit system.

Labor and Trade Associations. Occupation-based organizations constituted a central underpinning of Japanese immigrant community and economy. In Hawaii, most Issei were common plantation workers. A number of ethnic labor associations were established to coordinate community-wide support for striking Japanese workers. During the major strikes of 1909 and 1920, the Higher Wage Association and the Federation of Japanese Labor, respectively, took the lead. The leadership of these organizations consisted of not only labor representatives but also immigrant intellectuals, religious figures, and even merchants who backed the prolonged struggles of plantation workers against Hawaii’s sugar industry. In the American West, Issei labor groups were less organized and generally had only a short span of institutional life, as most workers were migratory farm laborers and excluded from mainstream organized labor. The Japanese-Mexican Labor Association of Oxnard, for example, folded not long after its historic victory over exploitative labor contractors and agribusiness in 1903 without the support of the American Federation of Labor.

Trade associations were equally, if not more, numerous among Japanese immigrants. Although practically Issei in any line of business formed a trade association in prewar Japanese America, the most well organized were farm associations in the Pacific Coast states. In California, the Japanese Agricultural Association brought local farm societies under its dictate, publishing the *Hokubei Noho (North American Agricultural Journal)* through the 1910s. Not only did the association provide news and reports relating to agricultural science and market through the journal, but it also acted as the defender of their collective economic interests and farming rights in the context of the struggle against the alien land law. Other trade organizations, like fishermen’s associations and merchants’ associations, mobilized their members against the attempts to curtail Issei economic activities through discriminatory legislation.

Second-Generation Oriented Organizations. Many community organizations reflected the interests of the second-generation Japanese Americans (Nisei) who rapidly increased in number after the Gentlemen's Agreement. Both religious organizations and Japanese associations sponsored Japanese-language schools in ethnic settlements. Under the exclusionist attacks on these schools, Issei educators of California founded the Japanese Teachers Association of America in 1913, which was later renamed the Association of Japanese Language Institutes. In Hawaii, the territory-wide Japanese Educational Association was formed in 1915. To counter the accusations of making imperial subjects out of Nisei, both central bodies adopted the basic pedagogical principle of teaching U.S. citizens their heritage language as supplemental to American public education. The localized textbooks were compiled in California, Washington, and Hawaii.

Meanwhile, as many Nisei reached adolescence, their own organizations came into being. Ethnic Christian churches sponsored Japanese YMCAs and YWCAs. Buddhist churches followed suit by organizing the Young Men's Buddhist Associations and the Young Women's Buddhist Associations. In Washington and California, the Seattle Progressive Citizens' League and the American Loyalty League made their debut as Nisei-led political organizations in the early 1920s. These groups merged into the Japanese American Citizens League in 1928, and its locals met for the first time at the national convention in 1930. The JACL emphasized loyalty, patriotism, and citizenship while working with the Issei-led Japanese associations. In Hawaii, no elaborate network of Nisei organizations emerged, but the Hawaiian Japanese Civic Association, established in 1927, adopted similar political platforms as the JACL. Its affiliates and partner organizations were founded in many Japanese settlements of the islands in the 1930s. Smaller groups of Nisei radicals had their own entities, including the Japanese section of the American Community Party, but they usually occupied fringes of ethnic community politics.

Wartime and Postwar Community Organizations. The Pacific War brought Japanese American

community organizations under direct control of the United States government. In Hawaii and the continental United States, Issei-centered associations and institutions were put out of commission as their leaders were arrested by the FBI as dangerous enemy aliens. Although community leadership was swiftly transferred to the second generation, two organizations were selected as the representatives of the ethnic community. In wartime Hawaii, the Nisei-led Emergency Service Committee, along with the Japanese division of the multiracial Morale Committee, coordinated the control and participation of local Japanese Americans in the war effort under the dictate of the military government. On the mainland, the JACL became the sole voice of Japanese America with its policy of "constructive cooperation" with the U.S. Army and the War Relocation Authority. Outside the internment camps, the resettlers' committees sprang up once "loyal" Nisei and Issei began to leave the camps for major cities of the Midwest. In New York, the Japanese American Committee for Democracy offered a strain of Nisei radical political activism in support of America's war effort against Totalitarianism.

The postwar years saw the revival of some Issei-based organizations in major settlements, like Los Angeles, San Francisco, and Seattle, as well as Honolulu. Yet, the Nisei-led JACL continued to dominate community politics. As former residents of the West Coast rebuilt their communities and businesses, ethnic churches and temples returned to life, and a variety of trade organizations reemerged. Through the late 1940s and the 1950s, such organizations as Kenjinkai and Japanese-language schools became less significant and relevant to the mainstay of Japanese American community life. On the one hand, the number of Issei diminished rapidly; on the other hand, many Nisei were cautious about the retention and display of ethnic culture because of the bitter experience of the wartime incarceration. Only after the Civil Rights Movement of the late 1960s did Japanese America witness a surge in the establishment of immigrant-centered associations and ethnic cultural organizations. Post-1965 newcomers (Shin Issei) and the third-generation Japanese Americans (Sansei) facilitated these changes.

Japanese American Transnational Families

Compared to immigration rates of other Asian countries, immigration from Japan to the United States has remained relatively low since the Immigration and Nationality Act of 1965 was enacted. However, as Japan's economic power has grown, a large number of Japanese corporate expatriates, called *chuzaiin*, have been migrating to the United States with their families for short-term assignments in U.S. offices of Japanese companies. Most of these Japanese families stay in the United States from two to five years, but some stay for much longer periods of time. They frequently migrate between the United States and Japan, continuously adjusting their lives as they move. Such experiences have made them transnational figures under the increasing globalized economy.

Japanese Nonimmigrants in the Postwar Period

The number of Japanese immigrants to the United States has remained steady, at approximately 4,000 to 5,000 per year, since the 1970s. In contrast, the number of nonimmigrant visitors from Japan is quite large;

moreover, these numbers have continued to rise as U.S.-Japan business relationships become tighter and overseas travel becomes more attractive to Japanese. The increasing value of the Japanese yen over the U.S. dollar, for example, has made travel to the United States very affordable for Japanese tourists. In 2010, there were around 3.8 million Japanese nonimmigrants entries to the United States; over 90 percent were as tourists or for business and stayed in the United States for less than three months. The remainder, however, consisted of "short-term resident nonimmigrant" visa holders who are allowed to stay in the United States for up to several years. This includes temporary workers, students, investors, and intracompany transferees.

North America has been home to the largest number of expatriate Japanese nationals since 1985. In 2010, approximately 40 percent of the 1 million Japanese expatriates around the world resided in the United States. This number includes those with permanent residency, but does not include naturalized Japanese or American-born Japanese. This is nearly three times greater than the number of expatriates living in China, where the second-largest population of overseas Japanese (130,000) resides. Corporate expatriates and their family members accounted for 122,000 of the short-term Japanese residents living in the United States in 2010, and tend to concentrate in metropolises such as New York, Los Angeles, San Francisco, and Chicago. However, as many Japanese companies have recently moved their production facilities to the South and Midwest regions of the United States to minimize labor costs, the number of Japanese expatriates living in cities such as Atlanta and Nashville is growing.

The Growth of Japanese Economy and Kaigai Chuzai

As Japanese companies' direct investments in U.S. markets increased from the 1970s through the 1980s, so did the number of Japanese business expatriates in the United States. For example, the number of such Japanese expatriates and their families more than doubled from 1974 to 1986, from about 20,000 to 47,000. The number of *chuzaiin* and their families from Japan living in the United States reached 100,000 in the 1990s. They entered the United States

with particular nonimmigrant visas. Those in managerial or executive positions obtain E-2 visas, which are for investors or self-employed business owners. They can renew the visas an unlimited number of times as long as the company remains economically stable. Other workers enter the United States on L visas for intracompany transferees. This type of visa usually allows employees to work in the United States for three years. A large number of E-2 and L visas have been issued to Japanese nationals recently. In 2010, for example, 10,239 E visas were issued to Japanese; this constituted 31.3 percent of all visas issued and was the largest number of visas granted to any given nationality. The number of L visas issued to Japanese comprised the third-largest group of L visa recipients and totaled 9,891 visas. Spouses and children of E and L visa holders are also permitted to enter the United States. The influx of a large number of Japanese expatriate families has led to a significant increase in the Japanese population and the development of Japanese communities in many regions of the United States, in urban and rural areas alike.

The characteristics of Japanese companies in the United States and their expatriates have shifted as the U.S.-Japan international economic relationship has changed. In the 1950s and 1960s, there were only a small number of Japanese business expatriates in the United States. They were mostly white-collar workers engaged in sales, marketing, and distribution of made-in-Japan products for American consumers. Only a limited number of promising, elite workers were given overseas assignments, *kaigai chuzai*. They were often promised higher career positions upon returning to Japan after the completion of their assignment. After the mid-1970s, however, Japanese expatriates have become diverse. In the 1970s, the U.S.-Japan trade imbalance emerged as one of the biggest political and economic problems between the two nations. Japanese manufacturing companies, especially in automobile and consumer electronics, opened factories in the United States and began to “localize” their products rather than selling imported products from Japan in the U.S. market. Localization of companies such as Toyota, Honda, and Panasonic accelerated in the 1980s when the value of the Japanese yen increased. Not only did these factors lead to a sharp increase in

the number of Japanese companies in the United States, but they also brought an increasing number of Japanese engineers and technical specialists into the newly established factories. Recently, overseas assignments are not necessarily considered a sure step toward a top position in Japanese companies. More and more, they are considered regular assignments for workers in companies that have international offices or factories.

Kigyo Johka Machi as the New Japanese Community

Japanese companies tend to concentrate in particular areas, which in turn engenders creation of professional networks and business associations, as well as the proliferation of Japanese communities. As Japanese companies assign more Japanese employees with families to U.S. offices and branches, various businesses that cater to these migrants continue to emerge. Such businesses include travel agencies, law firms, insurance agents, real estate agents, medical and beauty clinics, second-hand Japanese bookstores, restaurants, grocery schools, and cram schools. Employees at such businesses are often Japanese from Japan or others who are fluent in Japanese. The presence of businesses catering to Japanese and staffed with Japanese speakers has contributed to the creation of a so-called cultural “bubble.” As long as Japanese expatriates function inside the bubble, they have many of the same comforts and conveniences available in Japan: they can live almost as though they were actually in Japan.

The continued development of Japanese media contributes to the transnational nature of such communities. In the late 1980s, major Japanese newspapers began publishing overseas editions. Free local papers in Japanese were also published. Around the same time, Japanese TV news broadcasts began airing in major U.S. cities as soon as they aired in Japan, and today 24-hour Japanese cable TV broadcasts are available. More recently, the Internet has enabled overseas Japanese to access information about Japanese society as easily and quickly as those living in Japan.

Areas with a high concentration of Japanese companies and businesses are sometimes called *kigyo johka machi*, corporate castle towns. Local economies in these areas become dependent on the revenue from

Japanese companies. They also provide numerous jobs to local people. A noteworthy example is the city of Torrance in Southern California. In the late 1970s and 1980s, Toyota, Honda, and Panasonic replaced heavy industries and farming as major contributors to the local economy. Interestingly, although existing Japanese American populations in Southern California played an important role in helping Japanese corporations enter the U.S. market, contemporary Japanese expatriate families and their Japanese cultural “bubble” have little connection to the established Japanese American community.

Japanese expatriate families do not tend to reside in particular neighborhoods, which is very different from traditional ethnic enclaves that consisted of residences, businesses, and community facilities. Expatriate Japanese prefer to live in affluent and safer neighborhoods, which are often predominantly Caucasian. And although wives of Japanese businessmen tend to regard their extended stay in the United States as a type of “vacation,” they often attempt to reproduce their Japanese home in their foreign residence as much as possible. Such efforts ensure families remain culturally connected to Japan.

Education of Children

Children’s education is one of the major concerns for Japanese expatriate families. Most parents send their children to local public schools, hoping that their children become bilingual. Japanese children face difficulties with English in local schools, but many improve quickly as they learn to communicate with their American classmates. In addition to local schools, children go to *hoshuko*, Japanese supplementary schools, on weekends or after school. *Hoshuko* curriculum is supervised by the Japanese government, and the emphasis is on maintaining Japanese cultural and high-level language proficiency. In *hoshuko*, the children learn the same subjects taught in schools in Japan, using the same textbooks. But more important, they learn manners, discipline, and how to build relationships with teachers and other Japanese students. Because Japanese expatriate families plan to return to Japan, parents want children to remain familiar with Japanese-style education to ensure that their reentry into the school system in Japan is smooth.

Another alternative is full-time Japanese school, called *Nihonjin Gakko*, where only Japanese-speaking children are admitted and the entire curriculum is taught in Japanese. And finally, some children attend satellite schools operated by Japanese private schools. However, relatively few children go to these full-time Japanese schools, including those that have dormitories. In 2010, there were 79 *hoshuko*, 4 full-time Japanese schools, and 3 satellite schools in the United States. Recently, an increasing number of Japanese cram schools have opened branches in areas where there are large numbers of Japanese expatriate families because Japanese parents send their children to such schools in preparation for entrance examinations for high schools or universities in Japan.

The growing number of Japanese expatriates all over the world has resulted in the increase of *kikoku shijo*, which literally means “repatriated children” and refers to children who live and receive education outside of Japan. Some *kikoku shijo* have difficulties adjusting to Japanese schools. Their attitudes and behaviors have been influenced by foreign cultures, and often become an easy target for bullying. Today an increasing number of high schools and universities in Japan have established programs or special admission criteria for them.

Temporary or Permanent?

Although most Japanese business expatriates return to Japan after living in the United States for two to five years, not all of them follow the projected path. These expatriates are often not exactly sure when they will be told to return to Japan. Some employers extend the “temporary” assignments so that employees end up living abroad for more than 10 years. Some employers even request that expatriates apply for permanent residency in the United States. Meanwhile, some expatriates choose to stay longer or to become permanent residents in the United States through *kaigai chuzai* and, as a result, quit the job they came to do. Some change their legal status to self-employed and start their own businesses. Others find another employer to sponsor their visa and become local hires. Some expatriates marry American citizens and with permanent residency opt to remain in the United States.

In addition, family members sometimes greatly influence whether everyone in the family returns to Japan or stays in the United States. When Japanese children receive education in American schools for an extended period of time during overseas assignments, some of them hope to stay in the United States for higher education. Children are sometimes born to employees in the United States when their parents are on assignment. American-born Japanese children have more options regarding residency than their parents. Despite the supposedly temporary nature of contemporary Japanese business expatriate families' experiences in the United States, these people may become "immigrants" or permanent residents of the United States. They exemplify the complexity of distinguishing temporariness and permanence in the contemporary migration in the globalized world.

Japanese American Women in the 1930s

During the 1930s, young Japanese American women played significant roles as workers, ethnic community representatives, and cultural agents. Drawing on the values and customs of their immigrant parents, elements of mainstream American society, and the practices of friends and neighbors from other racial-ethnic groups, Nisei (U.S.-born second-generation) women helped to shape ethnic culture. In the difficult years of the Great Depression, the work of girls as well as boys was important to the family economy, whether tending crops on a farm or sweeping a hardware store. Facing racial barriers to participation in extracurricular activities in some districts, Nisei girls formed their own

network of lively organizations, particularly in urban areas. Through membership in clubs affiliated with churches, the Young Women's Christian Association (YWCA), and the Girl Scouts USA they gained access to recreation and leadership training, provided community service, and socialized with young men. Called upon to wear kimonos and perform traditional Japanese songs and dance at civic events, Nisei girls also served as highly visible representatives of the ethnic community.

Family Formation and the Emergence of the Nisei

Japanese American youth were the largest group of second-generation Asian Americans in the prewar period. In Hawaii, families grew up on the sugarcane plantations where Japanese men and women had been recruited as an early part of the labor force. In the continental United States, Japanese American settlements primarily took shape in the West, where many Issei (first-generation immigrants) engaged in farming or urban small business. The Gentlemen's Agreement of 1908 between the United States and Japan ended the immigration of Japanese laborers, but a loophole permitted the entry of family members of Japanese already residing in the United States. By the time the Immigration Act of 1924 stopped most Asian immigration to the United States, many Japanese women had arrived: some rejoined husbands who had immigrated earlier, some accompanied men who had returned to Japan to marry, and others came as picture brides to meet new spouses. As families formed, the numbers of Nisei grew steadily. They quickly became the majority in the Japanese American population—of the approximately 120,000 Japanese immigrants and their children incarcerated during World War II, two-thirds were U.S. citizens by birth.

The majority of the Nisei were born between 1910 and 1940; because of their wide age range and the diversity of their experiences in different rural and urban areas, it is hard to generalize about them. Prewar interracial relations varied by neighborhood and region. However, Japanese Americans, like many Asian Americans and people of color, faced prejudice and discrimination in the workforce, housing,

recreational facilities, and businesses such as restaurants and theaters.

The Issei valued education and encouraged their children to be disciplined, hard-working students. Besides attending public school, many Nisei were sent to Japanese school to gain grounding in Japanese language and culture. Girls were taught domestic skills such as sewing and knitting, and, when families could afford lessons, were expected to learn Japanese cultural arts such as *odori* (traditional dance) and *ikebana* (flower arranging).

The second generation grew up integrating the values and holidays of their Issei parents with mainstream customs as well as other ethnic cultural practices of friends and neighbors. Indeed, many families—whether Buddhist or Christian—not only celebrate New Year’s with special foods but also now observe Christmas and Thanksgiving. Like their non-Japanese American peers, the Nisei played baseball and basketball, listened to music on the radio, enjoyed movies, and learned to waltz and foxtrot.

Daughters and sons contributed significantly to the family economy, whether living on a farm or in the city. Rural children hoed, irrigated, and picked crops, nailed boxes, and tended farm animals. Their city peers helped clean and run small family businesses such as tofu shops, grocery stores, and restaurants. Girls were responsible for domestic duties from which their brothers were usually exempt, supervising younger siblings and doing household chores such as ironing, cooking, and cleaning. However, urban Nisei were more likely than their rural cousins to have free time and access to leisure pursuits.

Constructing a Nisei Social World

In the early twentieth century, shifting gender dynamics, embodied by the “New Woman,” spurred debate about appropriate roles for women in ethnic enclaves as well as in the larger society. Although remaining dutiful economic contributors to their families, many young Nisei women sought more freedom to socialize with their peers and to choose their own spouse. Urban Japanese American daughters wore flapper fashions, applied makeup, and learned to jitterbug. Like their Chinese American and Chicana sisters, they tried to

negotiate between mainstream ideas of modernity and the values of the immigrant community. Their participation in popular culture was complicated not only by racial barriers and economic limitations during the Great Depression, but also by Issei parents’ expectations regarding proper female behavior. Because daughters’ chaste reputations were markers of families’ standings in the ethnic community, girls were subject to greater surveillance and control than their brothers. In the face of such pressures, many of the second generation formed peer networks for camaraderie and recreation.

Girls’ clubs proliferated throughout the 1920s and 1930s, especially in cities like Seattle, San Francisco, and Los Angeles. Often affiliated with Buddhist and Christian churches, or organizations such as the YWCA and Girl Scouts USA, these groups constituted a parent-approved vehicle for youth activities. Clubs offered girls opportunities to compete in team sports, to hear educational speakers, to develop leadership skills, to learn handcrafts, to organize parties, and to socialize with Nisei boys. They also provided community service through fund-raising and other charitable efforts. Excluded from college fraternities and sororities, Nisei students established their own organizations, including Chi Alpha Delta, the first Asian American sorority, founded at the University of California, Los Angeles in 1929. The wide array of Japanese American youth club activities filled the pages of the English-language sections of newspapers such as the *Shin Sekai* in San Francisco and the *Rafu Shimpo* in Los Angeles.

Through their clubs, city girls both reinforced and pushed gender-role boundaries. For example, in joint activities with Nisei boys’ clubs, girls were often responsible for bringing the refreshments for hikes and socials; this underscored expectations of young women’s domestic role. By organizing club socials and engaging in couples dancing, Japanese American women expanded the sphere of activities their immigrant parents deemed acceptable for young females.

Japanese American women also took active roles in prewar artistic and literary endeavors. Writers such as Chiye Mori, Mary Oyama Mittwer, Toyo Suyemoto, and Hisaye Yamamoto participated in a Nisei

literary movement, submitting poetry, fiction, and essays to the ethnic press. Gyo Fujikawa began a long successful career as a painter and children's book illustrator, including a stint working for the Disney Studios. Despite the obstacles faced by women of color seeking to enter the performing arts and entertainment industry, a few Nisei persevered, such as dancer Dorothy Takahashi Toy.

In the prewar period, young Nisei women often served as representatives of the Japanese American community, dancing in kimono and singing Japanese songs. Girls were called upon to perform at celebrations in the ethnic community, at school festivals, and in parades and other civic events. Issei parents took pride in their daughters' accomplishment in ethnic cultural arts. Some Nisei enjoyed ethnic-cultural performance, but others felt uncomfortable about a role that, in the view of mainstream society, could seem to present them as foreign. By the eve of World War II, this role had grown increasingly complicated.

Courtship and Marriage

Like youth across the nation, second-generation Japanese Americans were influenced by mainstream films, music, magazines, and radio programs. Notions of romantic love, purveyed on the silver screen by stars like Clark Gable and Carole Lombard, colored their dreams. As courtship moved from the private to the public sphere in the United States, the urban Nisei were more likely to participate in peer socializing and dating, with dancing becoming highly popular.

Competing ideals of womanhood became particularly visible in the tensions regarding romance and marriage. Like their mothers, Nisei women expected that their future would revolve around marriage and family, but their notions of marriage differed from those of their parents. The Issei's marital partnerships had been arranged by their families; the Nisei, however, wanted to choose their own spouses and expected a union based on romantic love. Throughout the 1930s, the second generation increasingly moved away from arranged marriages. Mindful of the endogamous preferences of the ethnic community as well as of the antimiscegenation laws applying to people of

Asian descent in California and 13 other states, most expected to marry other Japanese Americans.

Of necessity, most Nisei women also expected their future to include entering the workforce. The older Nisei who came of age during the Great Depression faced limited opportunities and racial discrimination. A tiny minority of women succeeded in becoming professionals, such as doctors and nurses, often serving an ethnic clientele. Others vied for positions as secretaries and clerks within the Japanese American community, or continued working in family businesses. According to sociologist Evelyn Nakano Glenn (1986), agricultural labor and domestic service were the largest arenas of work for Issei and Nisei women during the prewar period. Given the dearth of choices, a small number set their sights on Japan, where they hoped to utilize their language skills to find positions.

During World War II uprooting and incarceration, Issei and Nisei women and men in the U.S. West endured enormous loss and hardship. Young women as well as men left the camps as soon as possible; barred from returning to the Western Defense Zone until after the war, they sought education and jobs in the East and Midwest. Working as domestic servants and factory operatives, they continued to play a role in the family economy as much as their circumstances permitted. Their labor and organizational experience would prove valuable in rebuilding postwar communities, as many Japanese Americans returned to the U.S. West. In the 1970s and 1980s women's organizational skills would also help fuel the Japanese American movement for World War II redress.

Japanese Americans

Japanese immigrants and their descendants have played an integral role in the formation of the United States and Hawaii. The story of Japanese in America is filled with incredible hardship, met with an unrelenting effort to thrive. The story of Japanese Americans begins during the twilight years of the Tokugawa Bafuku. During the two centuries of Tokugawa rule beginning in the 1600s, Japan maintained limited contact with the outside world. This policy changed with the fall of the Tokugawa Bafuku and the start of the “restoration” of Meiji rule in 1868. The first emigrants to leave Japan were recruited by Eugene M. Reed, an American businessman who served as consul general for the Kingdom of Hawaii. On June 19, 1868, 148 individuals arrived in Hawaii onboard the *Scioto*. A majority of the group came from the urban areas of Edo and Yokohama. Because they arrived during the first of the Meiji era of imperial rule, the group came to be known as the *gannenmono*, or “first year people.” This unauthorized recruitment of laborers, all of whom were nonfarmers, marked the beginning of Japanese labor migration overseas.

Once on the sugar plantations the laborers were subjected to virtual slave-like working and living

conditions. Within a month of their arrival in the Hawaiian Islands, the *gannenmono* filed a complaint with the Bureau of Immigration in Hawaii. The Meiji government was alarmed at this situation and quickly sent government officials to investigate the charges of mistreatment. Forty immigrants returned back to Japan. Two other shipwrecked men who had been in Hawaii since 1865 also secured passage home. Three years later, when the term of their contract expired, 13 men returned to Japan. The other 90 individuals remained in the islands and settled there, creating the foundation for the first permanent Japanese American community in Hawaii. Because of the mistreatment of the initial emigrants, there was no organized immigration of Japanese to the Hawaiian Kingdom for the next 13 years.

Mass emigration to the Kingdom of Hawaii did not begin until the early 1880s when a number of factors coalesced to support the movement. Following the Meiji Restoration, the Japanese government began levying heavy land taxes on farmers to build Japan’s industrial infrastructure. Although Japanese went to the cities to find employment, they soon discovered that jobs were scarce and wages low. The bleak economic conditions facing the Japanese population compelled people to seek their fortunes outside of the country. Beginning in 1885, the Meiji government declared large-scale immigration legal for the first time in two centuries. One year later a Labor Convention signed by the Hawaiian Kingdom and Meiji government opened a new era of Japanese labor migration to Hawaii. On Sunday, February 8, 1885, the *City of Tokyo* arrived in Honolulu with the first scheduled shipment of *kanyaku imin*, or immigrants, who came under government contracts. The group consisted of 676 men, 159 women, and 108 children. During the period of government-sponsored migration, which spanned nine years from 1885 to 1894, thousands of Japanese migrants arrived in Hawaii. Most migrants to Hawaii came from agricultural regions located in the southwestern prefectures of Japan, including Hiroshima, Yamaguchi, and Kanagawa. By the end of the contract-labor period in 1894, more than 30,000 Japanese in 26 shiploads migrated to the Hawaiian Kingdom. Beginning in 1894 the Meiji government turned the business of emigration over to private companies

licensed to recruit laborers. This marked the beginning of the *jiyu imin*, or “free migrant” period, which ended in 1908 with the passing of the Gentlemen’s Agreement.

Plantation Life

Under contract in Hawaii, Japanese migrants were required to work on sugar plantations for a period of three years. Although their monthly wages were greater than what they could earn in Japan, life as a plantation worker was harsh. Men and women toiled in the sugarcane fields in gangs of 20 to 30 from sunup to sundown. Constantly watched by a *luna*, or foreman, who was either white or Portuguese, both men and women were pushed to work harder and faster. Men were often charged with the tasks of hauling heavy cane stalks, while women were concentrated in field operations such as hoeing and stripping leaves.

Seeking to avoid the problems of prostitution, gambling, and alcoholism often existent in bachelor communities, the Hawaiian and Japanese governments actively promoted the immigration of *Issei* (first generation) women. They came as wives through the picture-bride system. In addition to working in the cane fields, women also bore the brunt of work in the home and plantation campus. Women were expected to care for their children and in the evenings they took in laundry for pay, as well as cooked, cleaned, and mended for large groups of single men. When the contract-labor system was outlawed in 1900 following the annexation of Hawaii to the United States, thousands of Japanese laborers left the plantations to work in downtown Honolulu. Others went home to Japan or moved to the West Coast until the passing of the 1908 Gentlemen’s Agreement ended this migration.

Issei Arrival in the Continental United States

On May 27, 1869, one year after the *Scioto*’s crossing, followers of feudal lord Matsudaira Katamori of Wakamatsu arrived in San Francisco on board the Pacific Mail Company’s *China*. This first group of Japanese to the continental United States consisted of samurai, farmers, tradesmen, and four women. They settled in Placerville, California, where they established the Wakamatsu Teak and Silk Farm Colony.

Because of unfavorable farming conditions, the attempt to establish a prosperous farm colony ultimately failed and at the end of two years most returned home.

Impoverished students, or *kugaseki*, preceded the arrival of Japanese immigrant laborers in the continental United States and were the first Japanese immigrants to come in large numbers. During the Meiji era there were two broad categories of students that went abroad to study: the elite government-scholarship holders and students who traveled at their own expense. The former group came from the upper class, was granted full stipends by the Meiji government and was concentrated on the East Coast of the United States. The latter came as sojourners at first, set on learning English and acquiring some kind of skill that would lead to a profitable career in Japan. While in the United States, the students had to work for a living and for this reason were also known as *dekasegi-shosei*, or student laborers. Beginning in the mid-1880s, scores of student laborers landed in San Francisco. In the eight-year period between 1882 and 1890 the Japanese government issued 3,475 passports to persons leaving for the United States, of which 1,519 were issued to students.

The large-scale emigration of Japanese laborers to the continental United States did not begin until the early 1890s. The passing of the 1882 Chinese Exclusion Act forced employers in the United States to search for another source of cheap labor. Between 1891 and 1900, roughly 28,000 emigrants traveled to the American West Coast directly from Japan. Up until 1910 the Japanese American community in the continent was mostly comprised of young men who came to work in lumber mills, coalmines, and fish canneries of the Northwest. Social life for this young male population revolved around drinking and gambling. The Japanese women who migrated were few in number. American immigration statistics estimate that roughly 1,000 Japanese females arrived in the United States between 1861 and 1900. A majority of the initial female population was brought over to work as prostitutes, although some women came as independent migrants. By 1898 there were 161 Japanese women working as prostitutes in Japanese settlements along the West Coast. Both *Issei* men and women could be

found dispersed in states throughout the West Coast including California, Washington, Montana, Oregon, and Idaho.

Early Issei Community

By 1900, Issei men and women on the American continent lived in migrant labor camps and followed crops up and down the West Coast. Only a decade later, Japanese were the largest ethnic group among agricultural workers in both California and Hawaii. By the 1920s they eventually moved into settled positions as owners and managers of farms.

As Issei men settled down as farmers, they sent for their wives or arranged for “picture brides” to join them. These arranged marriages set up partnerships between Issei men and women who knew each other only from photographs. A man seeking a wife would send a photograph of himself back to Japan where a go-between would seek a suitable wife based on factors such as health, social class, and family background. The picture marriage was a way for Issei men to marry and raise a family in Hawaii or the continental United States without the expense of returning to Japan. By 1911 women made up half of all Japanese migrants to the continental United States. By 1920 there were 22,193 married Issei women in America. As in the Hawaiian Islands, women had to juggle working besides their husbands in the field, and also managing household duties.

Issei in urban areas initially worked as hired laborers and domestic servants. Just as their Issei counterparts in rural areas moved into positions of management and ownership, those in urban areas slowly moved into small-scale businesses. Ironically, discrimination against Japanese by labor unions and employers forced the Issei into small-business ownership. Los Angeles and Seattle proved to be centers for Issei entrepreneurship, but “Japan Towns” or *nihonmachi*s, could be found in many cities along the West Coast. The Issei worked together to launch their businesses, often relying on their *kenjinkai*, or network of people from the same prefecture (ken), for financial support. For these first-generation immigrants, the *kenjinkai* was the foundation of social organization and shaped business opportunities, marriages, and community.

Japanese Americans also formed and maintained ties around religious institutions. Buddhist temples and Protestant churches brought people together from different prefectures, and served as centers of activity and offered social welfare services. The first Buddhist temples were established in Hawaii during the 1890s and were followed on the continent in 1898. Many Issei were also members of Protestant churches, and membership offered them a connection to the world outside of their ethnic community. Women were often very active in religious organizations as it provided them with opportunities to network and socialize outside of the home.

Anti-Japanese Movement

By 1924, roughly 200,000 Japanese had migrated to the Hawaiian Islands and 180,000 to the continental United States. By this time, anti-Asian legislation had a long history in the United States: since the passage of the 1790 Naturalization Act that limited naturalized citizenship only for whites, court cases and federal laws defined Asian immigrants as, “aliens ineligible to citizenship,” a category from which other forms of discrimination stemmed. One of the first examples of institutionalized anti-Japanese sentiment occurred in October 1906 when the San Francisco School Board issued an order that regulated children of Japanese descent to segregated schools. Although this was largely a symbolic gesture, because there were relatively few Japanese elementary-aged children in school at the time, the order angered the Meiji government. Diplomatic negotiations ensued and as a result, the Gentlemen’s Agreement of 1907–1908 was negotiated between the United States and Japan. According to the Agreement, Japanese children would not be sent to segregated schools in exchange for a limit placed on Japanese immigration, which reduced the pool of eligible migrants to non-laborers or those coming to be reunited with family members. Movement between Hawaii and the continental United States was also banned.

In 1913, in reaction to the growing number of Issei agriculturalists on the West Coast, the California legislature passed a law that barred “aliens ineligible for citizenship” from owning property in the state and

limited the lease of agricultural property to no more than three years. This effectively banned Issei from owning land in the state of California. This law, known as the Alien Land Law, was also passed in several other states including Washington and Arizona. Despite this legal setback, the Issei found ways to work around the law, and placed land under the names of their second-generation (Nisei) American-born children.

In the early decades of the twentieth century anti-Japanese sentiment continued to grow on the West Coast and spread across the United States. The large number of Japanese picture brides that arrived in Hawaii and the West Coast and the resultant increasing numbers of second-generation Japanese American citizens became a major point of contention in the anti-Japanese movement. Exclusionists claimed that the large numbers of Japanese immigrant women allowed into the West Coast violated the spirit of the Gentlemen's Agreement. As a result, the Meiji government ended the "picture bride era" on March 1, 1920, when it officially stopped issuing passports to these women. At the time that picture bride emigration was banned, roughly 24,000 single Issei men remained on the continental United States. For most of these men, the end of the picture bride era sentenced them to a life of bachelorhood.

In 1924, Congress passed an immigration law that severely restricted the number of people who could enter the country. Although the new law set quotas for most nationalities, there were none set for Japan or any other nations whose peoples were "ineligible for citizenship." The 1924 Immigration Act effectively halted Japanese emigration to the United States. The law remained enforced until the passing of the 1952 McCarran-Walter Act, which granted Japanese an immigration quota of 185 persons a year and allowed Issei to be naturalized.

World War II Incarceration

Perhaps the greatest episode of racially motivated legislation against the Japanese American community was the 1942 forced incarceration of over 120,000 Japanese Americans, of which over two-thirds were U.S.-born American citizens. Within hours of the bombing

of Pearl Harbor on December 7, 1941, arresting squads set out throughout Honolulu and other areas of Hawaii, as well as Japanese American communities in the continental United States, and forcibly removed Japanese and Japanese Americans from their families and homes. This group of people, which included Japanese language teachers, consular officials, fishermen, and Buddhist priests, were sent to detention camps where they were held indefinitely. The sudden arrest of the Issei leaders left the Japanese American community in chaos.

On February 19, 1942, President Franklin Roosevelt issued Executive Order 9066 (EO 9066), which provided the initial authority for the mass incarceration of all Japanese immigrants and Japanese American citizens living in designated areas of Arizona, California, Oregon, and Washington. EO 9066 did not affect the few thousand Japanese Americans living on the East Coast. Interestingly, though, EO 9066 did affect Japanese living in other parts of the Americas: roughly 2,000 citizens and residents of Japanese ancestry were arrested from 13 Latin American countries and interned in the camps by the United States. In Hawaii, the Japanese who were arrested in the initial hours following the attack on Pearl Harbor were placed in one of the temporary holding camps across the island chain. On December 9, 1941, Sand Island Detention Center on Honolulu opened and soon became the camp that all Hawaii-based internees passed through. Beginning in February 1942, Sand Island internees began to be transferred to internment camps in the continental United States. Later that same year, dependent family members of the interned men were given the "opportunity" to join their husbands/fathers/brothers in internment camps. Over 1,000 dependent family members entered internment camps through this process. On March 1, 1943, Sand Island Detention Center was closed and the remaining internees were transferred to the Honouliuli Camp located in central Oahu.

Although the forced removal of Japanese and Japanese Americans was carried out by the U.S. Army, a separate wartime agency, the War Relocation Authority (WRA), operated the 16 assembly centers and 10 concentration camps located in sparsely populated parts of California, Arizona, Idaho, Wyoming, Colorado, Utah, and Arkansas. These camps were:

Amache, Colorado; Gila River, Arizona; Heart Mountain, Wyoming; Jerome, Arkansas; Manzanar, California; Minidoka, Idaho; Poston, Arizona; Rohwer, Arkansas; Topaz, Utah; and Tule Lake, California. The last of the internment camps closed in March 1946.

Legal Challenges to Internment: Yasui, Hirabayashi, Korematsu, and Endo Cases

A few Japanese Americans challenged the government over the legality of the internment unsuccessfully in the courts. Four separate cases reached the U.S. Supreme Court between the years 1943 and 1944. In each of these cases, the Supreme Court avoided ruling on the constitutionality of detaining American citizens based on race. The first of the four cases, *Yasui v. United States*, came before the Supreme Court in 1943. Immediately following the attack on Pearl Harbor, Minoru Yasui, an American citizen and attorney, attempted to voluntarily enlist in the U.S. Army. He was rejected on racial grounds. A few months later, after his father was forced into an internment camp, Yasui purposefully sought arrest to challenge the curfew law placed on all Japanese and Japanese Americans. A lower court ruled that the curfew law was unconstitutional when applied to American citizens but deemed that this did not apply to Yasui because he had forfeited his citizenship by working for the Japanese consulate in Chicago. The Supreme Court reversed this ruling and rejected the proposition that Yasui's employment with the Japanese consulate forfeited his citizenship. The court maintained that the curfew was constitutional, however, and sent the case back to a lower court for sentencing. Yasui served nine months in jail for breaking the curfew law.

On May 16, 1942, Gordon Hirabayashi, a 24-year-old University of Washington student, went to the local FBI office to challenge EO 9066. Although he was imprisoned the charges against Hirabayashi were amended to include violation of the curfew order. A lower court found him guilty on both charges and sentenced him to 90 days in prison. Hirabayashi appealed the verdict and appeared before the court of appeals on February 19, 1943, exactly one year after EO 9066. Although the court avoided issuing opinions on the

legality of evacuation, it ruled unanimously that Congress had the right to make and enforce curfew laws.

The legality of the evacuation order was finally addressed by the Supreme Court in the 1944 case, *Korematsu v. United States*. After losing his job as a welder in Oakland, California because the Boiler Makers Union expelled all Japanese American members after the attack on Pearl Harbor, Fred Korematsu decided to marry his Italian American fiancée, Ida Boitano, and move to the Midwest. On March 18, 1942, and March 24, 1942, Korematsu underwent plastic surgery on his eyes and nose to disguise his racial identity and blend in with European Americans. Despite his claim of Spanish-Hawaiian ancestry, authorities arrested him for violating the exclusion order. A lower court found him guilty and passed a sentence of five years probation. Korematsu was then forced at gunpoint to join his family at the Tanforan Assembly Center. The Supreme Court subsequently upheld Korematsu's conviction on the grounds that the evacuation order was made out of "military necessity."

On December 19, 1944, the Supreme Court ruled unanimously that it was unlawful to detain or otherwise limit the freedom of a law-abiding citizen. The case of *Ex Parte Endo*, began in 1942, when the Japanese American Citizens League (JACL) decided to oppose the firing of California's Japanese American state employees. The JACL also decided to challenge the legality of racial detention and toward that end brought suit against Milton Eisenhower, the director of the federal War Relocation Authority. The case was brought in the name of Mitsuye Endo, a second-generation Japanese American and former employee of the California Department of Motor Vehicles. Endo had never been to Japan, did not speak Japanese, and had a brother in the U.S. Army. Eisenhower and the WRA were challenged to show why Endo was being detained, because she was not a threat to national security. A day before the official ruling in the case was to be handed down, federal officials announced that detainees not considered "disloyal," were free to leave the internment camps. Although Endo and the JACL won their case, the Supreme Court once again failed to address the central question of the constitutionality of detainment by race.

Effects of Internment

One of the changes that internment brought to the Japanese American community was a breakdown in family life and organization. Issei patriarchs lost their place as the family provider whereas women, freed from most household chores, became active in camp organizations and worked in a variety of jobs. Meals were served at large communal mess halls and inmates often ate in social groups rather than with family members. Because of their position as American citizens and command of the English language, leadership positions in camp shifted to the Nisei. WRA officials often assigned the Nisei to positions as teachers, nurses, cooks, and firefighters. In 1943, Japanese American male citizens were encouraged to enlist in the U.S. Army, and in 1944 many were actually drafted for military service from behind barbed wire. To facilitate this process, the WRA and War Department launched a program designed to separate the “loyal” internees from the “disloyal.” The War Department created a questionnaire entitled, “Statement of Japanese Ancestry.” Questions 27 and 28 of the survey proved problematic. Question 27 read: “Are you willing to serve in the armed forces of the United States on combat duty wherever ordered?” Question 28 asked: “Will you swear unqualified allegiance to the United States of America and faithfully defend the United States from any or all attack by foreign or domestic forces and forswear any allegiance or obedience to the Japanese Emperor, or any other foreign government, power or organization?” As if asking a group of people incarcerated solely for their racial background to volunteer for the armed forces was not offensive enough, a “yes” to Question 28 implied that the Nisei once had an allegiance to Japan and its emperor.

Although over 1,600 men volunteered to serve in the army from the camps, numerous other male and female Nisei chose to either give “no” answers or refuse to answer the “loyalty questionnaire,” as a means to protest the mass removal and detention. This group was stigmatized as being “disloyal” and labeled “troublemakers” by the WRA. They were segregated and sent to the Tule Lake concentration camp, where reaction against registration through the loyalty

questionnaire resulted in massive resistance. Out of frustration with the way that their human rights were violated, many Nisei renounced their American citizenship and expatriated to Japan.

100th Battalion/442nd RCT

Positive answers to the questions made male Nisei of draft age eligible for service in the army. Besides those culled from the internment camps, more than 20,000 other Nisei served in the racially segregated 100th Battalion and 442nd Regimental Combat Team during World War II. At the time of the Pearl Harbor attack more than 2,000 Nisei in Hawaii were enlisted in the U.S. Army and Hawaii Territorial Guard. Although they were taken off active duty on account of their racial background, upon the recommendation of General Delos Emmons, they were taken to Oakland, California, where they were activated as the 100th Infantry Battalion on June 12, 1942. They would then spend the next six months training at Camp McCoy, Wisconsin.

With the claim that, “Americanism is not, and never was, a matter of race or ancestry,” President Roosevelt announced the formation of the 442nd Regimental Combat Team on February 1, 1943. Immediately upon the announcement of the 442nd, nearly 10,000 Hawaii Nisei volunteered and over 2,600 were accepted for induction. The 442nd arrived at Camp Shelby in March 1943 and began 10 months of segregated training—a period far longer than the 4 to 6 months of training that most troops received at the time. By the time they left Camp Shelby the unit had taken the motto, “Go For Broke!” On June 2, 1944 they arrived in Naples and met up with the 100th Battalion, which became the new 1st Battalion of the 442nd.

Although many of their parents, children, and wives were imprisoned in internment camps, members of the 442nd fought on the front lines of Italy and France. In late October 1944, the 442nd was ordered to rescue members of the 141st Regiment’s 1st Battalion, which was caught behind enemy lines. Although the daring rescue of the “Lost Battalion” has become legendary, the successful rescue resulted in 800 Nisei casualties to save 211 soldiers. In 225 days of combat,

the 442nd Regimental Combat Team/100th Battalion suffered the highest casualty rate and is the most highly decorated unit of its size in American military history. In the years following World War II, the 442nd RCT/100th Battalion's sacrifice and bravery was repeatedly cited in campaigns to overturn the Alien Land Laws still in effect and other discriminatory legislation.

Relocation, Resettlement, and Redress

As early as the summer of 1942, some Nisei were released to do farm work or attend college in the Midwest and East Coast. Other Nisei were released to find work in places such as Minnesota, Denver, and New Jersey. Outside of the camps Issei and Nisei often encountered "No Japs Wanted" signs and with only their labor and \$25 given to them by the WRA, they were forced to start their lives again.

One of the most significant consequences of the war for Japanese Americans living on the continental United States was the government's policy of "relocation" and "resettlement." Both of these terms refer to the WRA's policy of spreading the Issei and Nisei population away from the West Coast so as to avoid their concentration in Japantowns and ethnic enclaves. By July 1942, even as people were still entering the internment camps, the WRA was instituting policies for "leave" and permanent "resettlement" in the Midwest and on the East Coast. Although many Issei and Nisei did not want to leave camp for places they did not know, the most popular destinations for those who did was Denver and Salt Lake City. These two areas were closest to the West Coast and had supported Japanese American communities for some time. When Japanese and Japanese Americans were allowed to return to the West Coast in 1945, many of these resettlers left the Midwest to return to their homes. Although the Issei and Nisei population in areas of resettlement declined following the "reopening" of the West Coast, Japanese American communities can still be found in these areas today.

After the end of the war in 1945, a much different Japanese American community emerged from the internment. In the camps leadership had shifted from the Issei to the Nisei generation, and the task of

community rebuilding fell to the latter. When they returned, Japanese Americans tended to settle in urban and suburban neighborhoods. Although Japanese Americans clustered together in ethnic enclaves in the years prior to World War II, the population became much more geographically dispersed in the postwar years. Second- and third-generation Japanese Americans organized around churches, festivals, sports, and political organizations, and together they worked to rebuild their war-ravaged communities, which now extended beyond Japantowns and into outlying suburban areas. As an ethnic group, Nisei achieved middle-class status and gave way to the *Sansei* (third generation) who would continue this trend of economic mobility, educational attainment, and geographic dispersal.

Several of Japanese American political organizations, including the Japanese American Citizens League (JACL), National Coalition for Redress and Reparations (NCRR), and National Council for Japanese American Redress (NCJAR), spearheaded the massive movement for redress and reparations. This movement, which sought to obtain an apology and compensation from the United States government for its wrongful wartime incarceration, proved to be a force that invigorated the Japanese American community and linked generations together. The 1981 hearings of the Commission on the Wartime Relocation and Internment of Civilians served as a cathartic event for those imprisoned in the camps. Over 700 witnesses testified, many of who spoke in public about internment for the first time. In 1988, President Ronald Regan signed the Civil Liberties Act, which provided redress of \$20,000 for each surviving detainee. Over two years later, on October 9, 1990, the first redress payments were made to the oldest living survivors of internment. The Redress Movement sparked an interest in the history of their community and ancestors in younger Japanese American generations. In the early 1970s Sansei activists began making a yearly memorial pilgrimage to Manzanar. The pilgrimage has since become an annual event, and today many young Yonsei (fourth generation) and Gosei (fifth generation) make the journey.

The history of Japanese Americans is at once harsh and unrelenting, and full of examples of outright

prejudice that may seem unbelievable to today's generations. However, despite the challenges they faced when working on the sugar plantations of Hawaii or imprisoned in the internment camps during World War II, Japanese immigrants and their American offspring have managed to make a life and home here in the United States. Although Japanese American history contains many examples of sorrow and hardship, it also offers themes of resistance, tenacity, and success.

The 2010 census recorded 1.3 million Japanese Americans, including mixed-race individuals.

Japanese Americans in Hawaii

On June 19, 1868, 148 individuals arrived in Hawaii onboard the *Scioto*. These first Japanese immigrants to the Hawaiian Islands were recruited from the urban areas of Yokohama and Edo by Eugene M. Reed, an American businessman who represented sugar interests and also served as consul general for the Kingdom of Hawaii. Because they arrived during the first of the Meiji era of imperial rule, the group came to be known as the *gannenmono*, or “first year people.” The *gannenmono* were recruited to work as field laborers in Hawaii's burgeoning sugar industry.

Once on the sugar plantations, the laborers were subjected to virtual slaveworking and living conditions. Within a month of their arrival in the Hawaiian Islands, the *gannenmono* filed a complaint with the Bureau of Immigration in Hawaii. The Meiji government was alarmed by this situation and quickly sent government officials to investigate the charges of mistreatment. After three years only 90 individuals remained in the islands. This group created the foundation for the first permanent Japanese American community in Hawaii. Because of the mistreatment of the initial emigrants, there was no organized immigration of Japanese to the Hawaiian Kingdom for the next 13 years.

Beginning in 1885, the Meiji government declared large-scale immigration legal for the first time in two centuries. On Sunday, February 8, 1885, the *City of Tokyo* arrived in Honolulu with the first scheduled shipment of *kanyaku imin*, or immigrants, who came under government contracts. The group consisted of 676 men, 159 women, and 108 children. During the period of government-sponsored migration, which spanned nine years from 1885 to 1894, thousands of Japanese migrants arrived in Hawaii. Most migrants to Hawaii came from agricultural regions located in the southwestern prefectures of Japan, including Hiroshima, Yamaguchi, and Kanagawa. By the end of the contract-labor period in 1894, more than 30,000 Japanese in 26 shiploads migrated to the Hawaiian Kingdom. Beginning in 1894 the Meiji government turned the business of emigration over to private companies licensed to recruit laborers. This marked the beginning of the *jiyu imin*, or “free migrant” period, which ended

Japanese workers on a sisal plantation in Hawaii, about 1910. (Library of Congress)

in 1908 with the passing of the Gentleman's Agreement.

Plantation Life

Under contract in Hawaii, Japanese migrants were required to work on sugar plantations for a period of three years. Although their monthly wages were greater than what they could earn in Japan, life as a plantation worker was harsh. Men and women toiled in the sugarcane fields in gangs of 20 to 30 from sunup to sundown. Constantly watched by a *luna*, or foreman, who was either white or Portuguese, both men and women were pushed to work harder and faster. Men were often charged with the tasks of hauling heavy cane stalks, whereas women were concentrated in field operations such as hoeing and stripping leaves.

Seeking to avoid the problems of prostitution, gambling, and alcoholism often existent in bachelor communities, the Hawaiian and Japanese governments

actively promoted the immigration of Issei (first generation) women. They came as wives through the picture-bride system. In addition to working in the cane fields, women also bore the brunt of work in the home and plantation campus. Women were expected to care for their children and in the evenings they took in laundry for pay, as well as cooked, cleaned, and mended for large groups of single men.

In response to low wages and harsh working conditions, 1,500 Japanese laborers working on O'ahu plantations went on strike on May 9, 1909. Monetary and material assistance came from plantation workers on the islands of Kauai, Maui, and Hawaii. The strikers and their families were ejected from the plantations and ultimately returned to work. In January 1920 Japanese and Filipino laborers took part in the first multi-ethnic plantation strike in the islands. They demanded higher wages, better working conditions, and an end to wage discrimination based on race. For six months Oahu's sugar industry was virtually paralyzed and

planters lost an estimated \$11.5 million. Although the strike ended in a near total victory for the planters, it did bring some positive long-term changes for plantation workers and the Japanese American community. Over the next few years wages increased and housing and recreational facilities improved. Some of the most significant changes, however, did not occur on the plantations: following the 1920 strike, suspicions of a Japanese takeover of Hawaii began to develop among U.S. military forces.

Following the strike, Issei and Nisei (second generation) began a mass exodus off of the plantations and into the urban areas of Hawaii. In Honolulu, Japanese in urban areas congregated in the Kalihi, Palama, Kaka'ako, and Mo'ili'ili areas where they started small businesses to serve their community, such as retailing and food processing. Men also went into labor-intensive positions such as construction workers, plumbers, and electricians. Issei and the growing Nisei generation were also hired as domestic servants and women often worked as housemaids and cooks. By 1930, 49 percent of the retail stores in Hawaii were owned by Issei.

For the Nisei generation, emphasis was placed on adapting to a middle-class American way of life, and maintaining the cultural values of their Issei parents. This practice is evident in the education patterns of the Nisei generation. That Issei viewed the public education system as a major conduit to success is demonstrated in the increase in Nisei enrollment: although there were roughly 19,000 Nisei students in 1920, by 1940 that number had more than doubled. A great majority of Nisei students also attended Japanese language school in the afternoons: in 1930 more than 87 percent of those students who attended public schools during the day were also enrolled in Japanese language schools.

World War II: Internment

Nisei life in both the continental United States and Hawaii was dramatically changed by the December 7, 1941, attack on Pearl Harbor. That afternoon the Hawaiian Islands were placed under martial law and remained under command of the military government until October 1944. Within hours of the attack

arresting squads set out throughout Honolulu and other areas of Hawaii and forcibly removed Japanese and Japanese Americans from their families. This group of people, which included Japanese language teachers, consular officials, fishermen, and Buddhist priests, were sent to detention camps where they were held indefinitely.

On February 19, 1942, President Franklin Roosevelt issued Executive Order 9066 (EO 9066), which provided the initial authority for the mass incarceration of all Japanese immigrants and Japanese American citizens living in designated areas of Arizona, California, Oregon, and Washington. In Hawaii the Japanese who were arrested in the initial hours following the attack on Pearl Harbor were placed in one of the temporary holding camps across the island chain. On December 9, 1941, Sand Island Detention Center on Honolulu opened and soon became the camp that all Hawaii-based internees passed through. Beginning in February 1942, Sand Island internees began to be transferred to internment camps in the continental United States. Later that same year, dependent family members of the interned men were given the "opportunity" to join their husbands/fathers/brothers in internment camps. Over 1,000 dependent family members entered internment camps through this process. On March 1, 1943, Sand Island Detention Center was closed and the remaining internees were transferred to the Honouliuli Camp located in central Oahu.

World War II: 100th Battalion/442nd RCT

At the time of the Pearl Harbor attack more than 2,000 Nisei in Hawaii were enlisted in the U.S. Army and Hawaii National and Territorial Guards. Although they were taken off active duty on account of their racial background, these men performed vital duties such as guarding airfields and beaches. Upon the recommendation of General Delos Emmons, the men enlisted in the Hawaii National Guard were taken to Oakland, California, where they were activated as the 100th Infantry Battalion on June 12, 1942. They spent the next six months training at Camp McCoy, Wisconsin.

Despite their record of service, Nisei members of the Hawaii Territorial Guard were kicked out on January 19, 1942. They later formed the Varsity Victory

Volunteers (VVV) and spent most of 1942 working on military construction projects. The VVV disbanded in January 1943 and a majority of the men went on to become members of the 442nd Regimental Combat Team.

With the claim that Americanism is not a matter of race or ancestry, President Roosevelt, who had signed EO 9066 just a year before, announced the formation of the 442nd Regimental Combat Team on February 1, 1943. Immediately upon the announcement of the 442nd, nearly 10,000 Hawaii Nisei volunteered and over 2,600 were accepted for induction. On March 28, 1943 approximately 17,000 Japanese Americans gathered in Honolulu to send off the 2,600 Nisei volunteers. The 442nd arrived at Camp Shelby in March of 1943 and began 10 months of segregated training—a period far longer than the 4–6 months of training that most troops received at the time. By the time they left Camp Shelby the unit had taken the motto, “Go For Broke!” an expression that was originally used by crapshooters in Hawaii.

Alongside Japanese Americans from the continental United States who came from the internment camps where many of their parents, children, and wives were imprisoned in internment camps, Hawaii-born members of the 442nd fought on the front lines of Italy and France. In late October 1944, the 442nd was ordered to rescue members of the 141st Regiment’s 1st Battalion, which was caught behind enemy lines. Although the daring rescue of the “Lost Battalion” has become legendary, the successful rescue resulted in 800 Nisei casualties to save 211 soldiers. In 225 days of combat, the 442nd Regimental Combat Team/100th Battalion suffered the highest casualty rate and is the most highly decorated unit for its size in American military history. In the years following World War II, the 442nd RCT/100th Battalion’s sacrifice and bravery was repeatedly cited in campaigns to overturn discriminatory legislation targeting Japanese and Japanese Americans.

Postwar Revolutions

In Hawaii this mobilization for equality was evident in the 1946 ILWU-backed plantation and dockworkers strike, and the “revolution of 1954.” By the end of

World War II, Hawaii’s voting population had swung in favor of the laborers. Although Japanese laborers had been disenfranchised as “aliens ineligible for citizenship” in the years before World War II, by 1946 the Nisei generation had come of age and comprised a large percentage of the voting population in the islands. As Nisei soldiers returned home from a war that they helped win with much sacrifice, they demanded a Hawaii that offered equality of opportunity and a chance to take part in decision making. Beginning in the 1940s, the ILWU began a twofold strategy in organizing workers against the plantation elite: they would challenge the Republican planter class at the ballot box and the negotiating table. To this end the ILWU conducted voter registration drives on plantations. In 1946 sugar plantation workers won a wage increase after a 79-day strike and dockworkers repeated the feat after a 177-day strike that crippled island shipping.

Despite failed attempts to gain the political majority during the late 1940s and early 1950s, by 1954 the ILWU’s efforts to register voters from the laboring class paid large dividends. In the election of that year Democrats came away with two-thirds of the seats in the territorial house and 9 out of 15 seats in the senate. Although there had been no Nisei in the legislature in 1944, almost half of the 1954 elected legislators were second-generation Japanese Americans. Among those elected was Daniel Inouye, a veteran of the 442nd who adamantly fought against second-class citizenship for Japanese Americans. When the territory of Hawaii became a U.S. state in 1959, Inouye went on to become the first Asian American congressman. Three years later he became the first Nisei senator. In 1973 Hawaii elected George Ariyoshi, the first Japanese American governor in the nation.

The Hawaii in which the Sansei (third) and Yonsei (fourth) generations grew up is vastly different than that which faced their predecessors. No longer faced with outright racial discrimination, a majority of the Sansei generation entered professions such as education, law, and health care. Today Japanese Americans are among the socioeconomic dominant groups in Hawaii, making up the second-largest ethnic group in the islands. Nearly one-third of this population is of mixed ancestry, a product of the Sansei and Yonsei

generations' increasing out-marriage rate. Although Japanese Americans were the largest ethnic group in Hawaii for more than 60 years between 1900 and 1960, for the last half century the population has steadily decreased. This trend will most likely continue because of the low immigration rate from Japan and high out-migration rate of Yonsei and Gosei (fifth generation) to the continental United States.

Japanese Americans in Japan

“Japanese Americans” refers to people of Japanese ancestry who are citizens or residents of the United States. Most Japanese Americans reside in the United States, but they also migrate to other places, including Japan. The broader definition of Japanese Americans used in the United States becomes problematic when talking about Japanese Americans in Japan. “Japanese Americans in Japan” includes U.S. citizens of Japanese ancestry living in Japan whereas Japanese nationals residing in the United States who return to Japan would be considered “Japanese returnees.” As of 2011, I estimate the number of Japanese Americans living in Japan to be about 7,000, which is approximately 13 percent of the 52,149 registered U.S. citizen residents. There are no official demographic data on this population because the United States and Japanese governments do not keep ethnic or racial information regarding U.S. citizens residing outside the United States.

Most Japanese Americans living in Japan were born and raised in the United States and moved to Japan as adults for a variety of reasons and lengths of

time. Younger (in their twenties to early thirties), single Japanese Americans who have not yet established careers tend to go to Japan for shorter periods of time—up to a year or two. These Japanese Americans are more likely to migrate to Japan because of an interest in connecting with their heritage culture and society. Those living in Japan as long-term residents tend to be married with Japanese spouses. These Japanese Americans are usually older (typically in their late 30s, 40s, and 50s) and, although culturally interested in Japan, tend to migrate primarily for work-related reasons. Most Japanese Americans in Japan migrate temporarily, many as college exchange and language students, as members of the Japan Exchange and Teaching (JET) Program, and as white-collar workers on limited contracts. Some Japanese Americans have “permanently” settled in Japan, though many who have the resources still have plans to return to the United States after retiring.

Similar to other U.S. citizens in Japan, most Japanese Americans can be found in urban areas. They are a highly educated population in general, almost all college-educated or in the midst of attaining their college degrees; many have graduate and professional degrees. Japanese Americans in Japan work predominantly in white-collar occupations, in contrast to far more numerous Japanese from Latin America (particularly from Brazil) who are mainly found working in factories doing unskilled work.

Similar to the U.S. Japanese American population, Japanese Americans in Japan include people with diverse backgrounds. They vary in citizenship status, have been raised in a variety of places, are multigenerational and are multiethnic and multiracial. If defined as U.S. citizens of Japanese ancestry, the Japanese American population in Japan includes Japanese emigrants who naturalized in the United States then return migrated back to Japan. Most Japanese Americans in Japan have been raised in Hawaii or the continental United States, with a small portion raised in Japan and internationally. Some were raised on U.S. military bases and few now work or are stationed in them. Japanese Americans have parents from the United States and Japan. Many have parents who are of Japanese ancestry but of differing generations (e.g., one Japanese immigrant parent, one

second-generation Japanese American parent). Others have one parent who claims Japanese ancestry and one who does not. Experiences in Japan are shaped by these characteristics—generations removed from Japan, exposure to Japanese language, and citizenship.

U.S. Japanese American migration to Japan can be organized into various periods, highlighting variations in generations, historical contexts, and motivations.

Nisei Educated and Socialized in Japan (1920s–1940s)

From the 1920s, as soon as there was a Nisei (second generation born in the United States, some of these American-born Japanese migrated to Japan. University of Pennsylvania Historian Eiichiro Azuma estimates between 40,000 and 60,000 Nisei to have been living in Japan in the 1930s. Majority of them eventually returned to the United States, although some of them remained in Japan.

According to Azuma, these Nisei in Japan can be divided into three categories. One group went to Japan as children and assimilated into Japanese society (some eventually returned to the United States). Some had moved to Japan with their parents, whereas others were sent by parents in the United States to live with their relatives in Japan temporarily. The second group consisted of a few hundred highly educated bilingual men and women who took on important positions in media, academia, government, and business in Japan. Ironically, Azuma notes, it was their racial exclusion from the United States that led them to search for opportunities in Japan. The third group was comprised of college and language students who planned to return to the United States after receiving their academic and cultural educations in Japan.

The Nisei who lived in Japan as children and then returned to the United States are referred to as “Kibei Nisei.” In Japanese, “Ki” means “to come” and “bei” refers to the United States. Most, if not all, Nisei in Japan were dual nationals. Some remained in Japan for the duration of World War II and were drafted by the Japanese military. In doing so, they lost their U.S. citizenship. Many Kibei Nisei returned to the United States and were drafted into the U.S. military as Military Intelligence Service (MIS) language specialists.

Anecdotally, there are stories of Kibei Nisei who were in Japan when World War II began and were drafted by the Japanese military, then upon returning to the United States after the war ended, they were again drafted by the U.S. military and, in many cases, sent back to Japan as MIS specialists. This double drafting dramatizes the dual pressures placed on Japanese Americans during the war.

Nisei Linguists and Nurses in Occupied Japan (1945–1952)

Once World War II ended, many Nisei men were stationed in Japan as part of the Allied Forces occupying Japan from August 1945 to April 1952. As language specialists, these members of the Military Intelligence Service (MIS) were in charge of translating and interpreting documents between English and Japanese: One Japanese American in the MIS was responsible for translating for the emperor. Most effective members of the MIS were Kibei Nisei who were born in the United States, sent to Japan for few years as children, then returned to the United States, and were drafted specifically as linguists because of their strong Japanese skills. Other Nisei raised only in the United States ranged greatly in their Japanese skills; the U.S. government provided language training before sending them to Japan and other parts of Asia and the Pacific.

During this period, some Japanese American women and children were also living in Japan. According to Brenda L. Moore, in 1946, 13 members of the Women’s Army Corps graduated from the Military Intelligence Service Language School and went to Japan. The women were told that when they arrived in Tokyo, they would be discharged and would work as civil servants; they were all assigned to the Allied Translator and Interpreter Section (ATIS) of the U.S. Army as clerks, secretaries, and translators. In addition, some Japanese American women were recruited as civilian nurses supporting the Occupation. Some members of the MIS brought their families with them, meaning that Sansei children were stationed in Japan with their Nisei parent(s).

Many Japanese Americans were able to reconnect with family members who had survived the war in Japan. The conditions for Japanese in the postwar

period were harsh, most lived in poverty and struggled to make ends meet. Most stories of their experiences in Japan during this period told by Japanese Americans include giving food and supplies to Japanese relatives and those in need, though research has also shown that some Nisei mistreated Japanese, abusing their power as part of the occupying forces.

Sansei Searching for Cultural Roots and Language Study (1960s–1970s)

During this period, as a result of the Asian American movement in the United States, many later generation Asian Americans, including Japanese Americans, were reclaiming their roots and asserting cultural and ethnic pride. As a way to assert ethnic pride, many Sansei (third-generation Japanese Americans) were interested in learning Japanese, because most Nisei stressed Americanization in the aftermath of internment and did not send their children to Japanese language schools. Many of these Sansei migrated to Tokyo as language and exchange students. International Christian University (ICU) in Mitaka City located in the western part of Tokyo prefecture, was host to many of these students. As a Christian university established by American missionaries in Japan, ICU already had a history of bilingual language education in English and Japanese; to this day it continues to host the University of California Education Abroad Program Center as well as individual exchange students who intend to improve their Japanese language skills and take academic classes on Japanese society and culture.

Attracted by Japan's Economic Bubble and the JET Program (1980s–)

With the development of the Japanese bubble economy (an overinflated economy that eventually “burst” in the 1990s) and the strong Japanese yen, people from all over the world were attracted to seek their fortunes in Japan. Japanese Americans were among these migrants who found jobs teaching English and working for various companies, especially those looking to expand their international employees and clientele.

In the late 1980s, the Japanese government, partly because of its economic strength, established the Japan Exchange and Teaching (JET) Program, bringing in foreign nationals to teach English, with the larger goal of “internationalizing” Japanese society. In addition to English and other foreign language teachers, the program also brings in college-educated foreign nationals to work in Japanese governmental offices, to organize international events, interpret, translate, and to advise on sports education.

Even after the bubble burst at the end of the 1990s, the establishment of Tokyo as a global city has drawn international businesspeople and professionals such as lawyers and doctors who serve this expatriate community. Many college-educated, working Japanese Americans are pulled by a powerful combination of economic opportunity and cultural affinity to Japan.

Japanese Traditional and Popular Culture

Many Japanese Americans have also migrated to Japan to learn about Japanese traditional and popular culture. For decades, Japanese Americans (as well as others outside of Japan) have been interested in Japanese kimonos, tea ceremony, religions, flower arranging, calligraphy, martial arts, and other forms of traditional arts and culture.

Since at least the 1980s, Japanese American interest in taiko has risen in the United States and, as a result, many Japanese Americans have gone to Japan to learn about Japanese styles of training and drumming. Kenny Endo, a Nisei/Sansei from Los Angeles now based in Honolulu, is one of the most famous Japanese American taiko artists. He trained in Japan for over a decade, developing his own style of drumming that he now teaches and for which he is world famous.

In more recent years, younger- and later-generation Japanese Americans have been attracted to live in Japan to study martial arts and to learn more about Japanese society generally because of a growing global interest in manga and anime. This interest in martial arts may actually be traced back to the 1960s and 1970s.

Japanese Exclusion

In American history, the period of Japanese immigrant exclusion is typically associated with the years between 1924 and 1945. The legal exclusion of Japanese immigrants from the United States actually commenced in 1907 and occurred in stages. The key restrictions on Japanese immigration were the Executive Order of March 14, 1907 (Executive Order 589), the Gentlemen's Agreement of 1907–1908, the termination of the picture-bride practice in 1920, and the Japanese exclusion clause to the Johnson-Reed Act (Immigration Act of 1924).

The Executive Order of March 14, 1907, which President Theodore Roosevelt issued, prohibited the migration to the United States of skilled and unskilled laborers who were citizens of Japan and held passports to Hawaii, Canada, or Mexico. The purpose of the order was to stop the flow of Issei (Japanese immigrants; literally, "the first generation") plantation laborers from Hawaii to California. Between 1900, following the enactment of the Hawaiian Organic Act that made Hawaii a territory of the United States, and 1907,

more than 68,000 Issei plantation laborers migrated from Hawaii to the U.S. mainland in search of jobs that paid higher wages.

In the Gentlemen's Agreement of 1907–1908, the Japanese Foreign Ministry agreed in a series of six written notes exchanged with the United States Department of State to cease issuing passports to both Japanese skilled and unskilled laborers for entry into the United States. The agreement exempted former legal residents of the United States, farmers who owned their crops, and wives, children under 20 years old, parents, and siblings of Issei resident laborers. Although the agreement did not bind it to do so, the Japanese Foreign Ministry imposed similar restrictions on Japanese immigration to Hawaii and Mexico.

The Foreign Ministry acceded to the Executive Order of March 14, 1907 and the Gentlemen's Agreement to bring resolution to a crisis that the San Francisco Board of Education had instigated in 1906. In October of that year, the Board of Education ordered ethnic Japanese and Korean students to attend the racially segregated Chinese School. The segregation order affected 93 Issei and Nisei (American-born children of Japanese immigrants; literally, "second generation"). With two exceptions, Issei parents declined to send their children to the Chinese School, which was situated in Chinatown, a district that the 1906 San Francisco earthquake and fire had devastated. Some parents also retained an Issei attorney to file a legal challenge to the segregation order in federal district court.

Desiring to defuse the crisis to maintain cooperative relations with the United States without harming Japan's international standing, the Japanese Foreign Ministry agreed to the immigration and migration restrictions only after the rescission of the segregation order. The Roosevelt Administration had pressured the Board of Education to rescind the segregation order for all ethnic Japanese students who were not overage for their grade levels. The rescission meant that Issei and Nisei students could resume attending racially integrated public schools in San Francisco.

Although excluding the immigration of laborers, the Gentlemen's Agreement also indirectly enabled the immigration of picture brides. The Gentlemen's

Agreement required all Issei residents of the United States to register with the Japanese Foreign Ministry. With the assistance of Japanese consular general officials, Issei community leaders established organizations named Japanese Associations to process registration applications and other forms, including applications to bring Japanese women into the United States as “picture brides” of Issei men whom they knew, in most cases, only through letters and photographs. There were four central bodies on the Pacific Coast—in Los Angeles, San Francisco, Portland, and Seattle—and 86 local associations across America.

Although Issei picture-bride marriages date back to the late nineteenth century, the Japanese Foreign Ministry had imposed various restrictions that prohibited picture brides of most laborers from entering the United States after the Gentlemen’s Agreement. Beginning in the summer of 1915, the Foreign Ministry opened picture-bride marriage eligibility to all Issei males provided that they met financial, age, and health requirements. Picture-bride marriages were crucial to Japanese American society. Until the 1910s, Japanese America had been predominantly a bachelor society. Picture brides altered community demographics, enabling substantive family formation and the growth of the Japanese American population.

Family formation enabled some Issei resident alien farmers to circumvent the California Alien Land Act of 1913 (Webb-Heney Act). The law prohibited the purchase of agricultural land and the leasing of agricultural land for more than three years to “all aliens ineligible to citizenship.” Although the law was unsettled at the time on the question of whether Japanese and Asian Indian aliens were “white persons” and thereby eligible for naturalized citizenship pursuant to the Revised Statutes of 1875, the majority view was that both groups were aliens ineligible for citizenship. The United States Supreme Court finally resolved the questions in *Ozawa v. U.S.*, 260 U.S. 178 (1922), holding that Japanese aliens were not Caucasian and therefore ineligible for American citizenship, and in *U.S. v. Thind*, 261 U.S. 204 (1923), holding likewise that Asian Indians were not “white” and therefore ineligible for citizenship.

To avoid the constraints of the alien land law, Issei farmers purchased or transferred title to agricultural

lands in the names of their Nisei children. Nisei were American citizens by virtue of their birth on American soil (see *U.S. v. Wong Kim Ark*, 169 U.S. 649 [1898]). This maneuver combined with race-based fears about the expanding ethnic Japanese population in California helped revive the Japanese exclusion movement shortly after the end of World War I, a war in which the United States and Japan had been allies.

At the behest of the Japanese Foreign Ministry, which desired to appease the Japanese exclusion movement, the executive board of the Japanese Association of America, a central body that was based in San Francisco, called for the termination of the picture-bride practice in late October 1919. The three other central bodies of the Japanese Association, along with many local associations, denounced the position of the Japanese Association of America. Four weeks later, the entire executive board resigned under pressure from local affiliates. Despite the overwhelming opposition of Issei to the termination of the picture-bride practice, the Japanese Foreign Ministry halted the issuance of passports to picture brides for travel to the United States as of March 1, 1920.

By terminating picture-bride marriages, the Japanese Foreign Ministry delayed Japanese exclusion. The Chinese Exclusion Act of 1882 had made Chinese ineligible to American citizenship and had excluded Chinese immigrants with exceptions for merchants engaged in international trade pursuant to treaty obligations, students, educators, religious ministers, and spouses and children of the excepted categories. With similar exceptions, the Immigration Act of 1917 (Asiatic Barred Zone Act; Dillingham-Burnett Act) contained a latitude and longitude clause that established a barred zone, excluding immigrants from countries in Southeast Asia, South Asia, and parts of Central Asia. By 1923, along with Filipinos, ethnic populations in the Japanese empire—Japanese, Koreans, Ainu, Okinawans, and Taiwanese—were among the few remaining Asian populations whom the United States had not yet excluded en masse.

Japanese exclusion became a national issue in 1924 during debate on an immigration bill in the United States House of Representatives. The primary purpose of the Johnson bill was to restrict immigration from Southern and Eastern Europe. To accomplish this

objective, the bill proposed a national origins quota system, limiting immigration from each foreign nation to an annual quota of 2 percent of the nation's foreign-born population residing in the United States as determined in the 1890 United States Census. Mass immigration from Southern and Eastern Europe to the United States did not begin until the 1890s. By utilizing the 1890 census to determine immigration quotas, the Johnson bill ensured low quotas from nations in Southern and Eastern Europe. In both intent and effect, the bill imposed racial quotas to maintain the Anglo-Saxon, Nordic, Teuton, and Celt racial majorities in the United States and inhibit growth of the "darker" European races.

The ethnic Japanese population in the United States was likewise small in 1890. Based on the 2 percent formula, the 1890 Census, and the existing Gentlemen's Agreement, Japan would receive an annual immigration quota of 146 persons. Despite the paltry number of Japanese immigrants admissible pursuant to these criteria, Japanese exclusionists in the United States House of Representatives sought tighter restrictions. They added a clause to the bill in March 1924 that prohibited the admission to the United States of any "alien ineligible to citizenship" except for aliens admissible as nonquota immigrants. The exceptions included merchants engaged in international trade, students, legal residents returning from visits abroad, religious ministers, college and university educators, and spouses and unmarried minor children under 18 years old of excepted persons.

Charles Evans Hughes, the United States secretary of state, asked United States Representative Albert Johnson (R-WA), the chairman of the House Committee on Immigration and Naturalization and the primary sponsor of the Johnson bill, to remove the Japanese exclusion clause from the bill. After Johnson declined to do so, Secretary Hughes asked Masanao Hanihara, the Japanese ambassador to the United States, to write a note addressed to Hughes that summarized and supported the retention of the Gentlemen's Agreement. In his note of April 10, 1924, Ambassador Hanihara wrote that although the exclusion of an additional 146 Japanese per year was inconsequential, the unilateral method of exclusion was at variance with America's "high principles of justice and fair play in the

intercourse of nations." Hanihara further stated, "I realize, as I believe you do, the grave consequences which the enactment of the measure retaining that particular provision [Japanese exclusion] would inevitably bring upon the otherwise happy and mutually advantageous relations between our two countries." Two days later, the House approved the Johnson bill with the exclusion clause by a vote of 323–71.

After reviewing Ambassador Hanihara's note, Secretary Hughes sent copies of the note to the chairs of the House and Senate immigration committees. In early April, before receipt of Hanihara's note, Hughes had convinced a majority of the members of the Senate Committee on Immigration to support an amendment to the Johnson bill that would continue the Gentlemen's Agreement and subject Japan to the 2 percent immigration quota based on the 1890 Census, and thereby permit Japan to have 146 quota immigrants per year. Hughes believed that Hanihara's letter would help ensure Senate passage of the amendment.

On April 14, Senator Henry Cabot Lodge (R-MA), during debate on the Senate version of the immigration bill, motioned on the Senate floor for a closed executive session to discuss Hanihara's note. After returning from the session, Senator Lodge declared on the Senate floor that the phrase "grave consequences" in the note was a "veiled threat" against the United States. Lodge then stated that he would not support the amendment to remove the Japanese exclusion clause from the bill. Senator David Aiken Reed (R-PA), the chairman of the Senate Committee on Immigration, next took the floor and said that the "veiled threat" had also "compelled" him to vote against the amendment. When in executive session, Senators Reed and Lodge convinced most of their Senate colleagues to reject the amendment. Later that day, the Senate voted 76–2 against the amendment.

The Senate's reaction to Hanihara's note surprised both Secretary Hughes and Ambassador Hanihara. On April 17, in a letter to Hughes, Hanihara explained that the phrase "grave consequences" was not a threat but referred to the damage that an exclusion law would have on "the otherwise happy and mutually advantageous relations" between Japan and the United States. The next day, the Senate approved its version of the immigration bill, which included the Japanese

exclusion clause (“aliens ineligible to citizenship”), by a vote of 62–6. President Calvin Coolidge signed the bill into law on May 26, 1924, attaching a written statement that faulted Congress for the method utilized to achieve exclusion. The resulting Johnson-Reed Act made Japanese exclusion effective as of July 1, 1924.

The immigration restrictions coincided with the peak years of Japanese emigration. As a consequence of the restrictions that became effective between 1907 and 1924, and similar restrictions in Canada, Australia, and New Zealand, hundreds of thousands of Japanese instead immigrated to Brazil between the 1910s and late 1930s and again during the 1950s and early 1960s, Manchuria during the 1930s and early 1940s, and other locales in East Asia and Latin America. Although the United States technically ended Japanese exclusion with the enactment of the War Brides Act of 1945 and the McCarran-Walter Act of 1952, the War Brides Act applied only to Japanese spouses and children of American-citizen military servicemen, whereas the McCarran-Walter Act (Immigration and Nationality Act of 1952) capped other Japanese immigration at 185 per year. By the time the Hart-Celler Act (Immigration and Nationality Act of 1965), which abolished the quota system and relaxed immigration restrictions, became effective in July 1968, increasing affluence and robust economic growth in Japan had curtailed emigration.

Japanese Farm Workers in America

Farming became a major means of transforming early Japanese immigrants to the U.S. mainland from sojourners into permanent settlers. Most of these Japanese immigrants had intended to return to Japan after making a good amount of money in the United States; however, it turned out to be not so easy. A successful harvest requires patience, persistence, and a significant amount of physical labor. Many Japanese immigrant farmers ended up settling in the United States permanently as they waited year after year for a crop abundant enough to ensure a comfortable life in Japan. Becoming a farmer was a lifetime dream for many early Japanese immigrants, who mostly came from farming villages in Japan where agricultural lands were often scarce. For others, farming was not the dream but the only option: Japanese immigrant laborers often had few choices aside from farming, as they were often excluded from other industries—particularly those dominated by Caucasian workers. The U.S. economy dramatically grew through industrialization in the late nineteenth and early twentieth centuries, and Japanese immigrant farm workers made great contributions to the development of agriculture on the West Coast. These Japanese farmers also played a key role in forging strong bonds within Japanese communities, especially when they faced discrimination.

From Migratory Farm Laborers to Farmers

Japanese immigrant laborers on the U.S. mainland first entered the agricultural industry as farm laborers through a labor-contracting system from the 1890s to the 1900s. They worked as harvesters on fruit and vegetable farms and also did other menial jobs such as railroad construction, mining, fishing, and working at canneries. Because they migrated from one farm to another, they were called *buranke katsugi* in Japanese, a term that referred to migrant laborers who carried

Japanese American farmer harvesting cauliflower on a ranch near Centerville, California. Photograph by Dorothea Lange. (Library of Congress)

only blankets with them when they moved. Japanese immigrant workers replaced Chinese laborers, who were banned from immigrating to the United States because of the Chinese Exclusion Act of 1882. The labor-contracting systems were so exploitative that Japanese laborers were always placed in subordinate positions; they received lower wages than their Caucasian counterparts and were excluded from unions.

Japanese agricultural laborers passed through four stages to become independent farmers: (1) contract farmers, (2) share-tenancy, (3) cash-lease, and (4) ownership. First, contract farmers received fixed wages from landowners who provided land and all the necessary implements for raising a particular crop. Such a contract agreement was very popular among Japanese laborers as it required no capital. Some contract farmers became labor contractors, who worked as middlemen between landowners and laborers and supplied Japanese laborers to large-scale farms. After contract farmers saved enough capital, they moved to the second stage, share-tenancy. Under this system,

tenants and landowners shared the profit from the crops, but the shares depended on what resources each partner provided. If tenants had enough capital to supply horses and implements such as tools and seed, they would receive a higher share at harvest. Even though crop failure became a risk under share-tenancy, the better harvest they got, the more profit they could receive. In the third stage, cash-leasing, tenants leased the property from 1 to 10 years and received 100 percent of the profits from their crops. Although this agreement required much more capital than share-tenancy, it was a lucrative step to becoming independent farmers. With the ultimate goal of becoming landowners, Japanese farmers carefully saved money through these three stages. In 1913, out of 281,687 acres of the total agricultural landholdings of Japanese farmers in California, 55 percent was under cash-leasing agreements, 18 percent under share-tenancy agreements, 17 percent under contract agreements, and 9 percent was owned. Although there were several attempts to establish a farming colony for Japanese immigrants led by Japanese community leaders or business people, most Japanese immigrants became farmers by moving through these four stages.

Increased demands for fresh products in cities under the growing industrialization and urbanization helped Japanese immigrants become successful farmers and expand their farms. Although there were only 37 Japanese farms with 4,674 acres on the mainland in 1900, the number grew to 350 farms totaling 17,250 acres after two years and to 1,816 farms totaling 99,254 acres in 1910. Japanese farmers were mostly engaged in intensive agriculture and concentrated on producing short-term crops such as berries. They dominated production of several kinds of crops; for example, in 1929, they grew 94 percent of the berries, 92 percent of the celery, 86 percent of the tomatoes, 51 percent of the melons, and 40 percent of the potatoes in Southern California.

George Shima, "Potato King"

Several Japanese immigrants became successful farmers. Kinji Ushijima (1864–1926), who is also known by his English name, George Shima or his nickname, "Potato King," was one such farmer. Born to a farming

family in Fukuoka in the southern part of Japan, Shima arrived in San Francisco as a *dekasegi shosei* (student laborer) in 1889 and improved his English skills working as a schoolboy. He soon began to work as a migrant farm laborer in the Stockton-Sacramento delta area and then served as an agricultural labor contractor. Although agricultural development of the delta region had begun, significant tracts of inexpensive land had remained undeveloped because of the risk of occasional flooding. Shima saw great potential in these uncultivated lands and purchased them with the help of his Japanese friends. His first successful attempt at producing potatoes in the late 1890s led him to expand his farm to 3,000 acres in combination of ownership and joint tenancy by 1900; his landholdings totaled 28,800 acres by 1913. He became widely known as the millionaire “Potato King” by the end of the 1900s. It was estimated that 85 percent of the potato market in California was under his control in 1920. His great success was owed to his diligent effort to construct drainage systems to protect his farm from flooding. More than just a successful entrepreneur, Shima also played a leading role in Japanese communities. He served as the first president of the Japanese Association that was established in 1909 and fought the anti-Japanese movement head-on.

Keisaburo Koda, “Rice King”

Another successful Japanese farmer was Keisaburo Koda (1882–1964), who is known as “Rice King” of California. Koda was born in Fukushima, a northeastern part of the main island of Japan, as a son of an established rice miller and broker. He received a university education and became a school principal at the age of 20. Koda came to the United States in 1906 to study American education, but ended up becoming a migrant laborer. After working various short-term jobs on the West Coast and saving some money, he became an entrepreneur. His first venture was to open a laundry chain; later he established a tuna canning company near San Pedro with Japanese partners to process the catch made by Japanese American fishermen. He then founded another canning company to process vegetables in Los Angeles, which became very successful during the World War I economic

boom. Having sold this cannery for \$250,000, he sharecropped and leased more than 3,000 acres in Sacramento and began to grow rice in 1919. Although this new venture did not go well at first, he received financial support from a Jewish business partner and made a profit of \$50,000 from 2,000 acres in 1923. In the following three years, his farm profits averaged between \$20,000 and \$30,000 a season. By 1932, he had expanded his farm to over 10,000 acres. Koda also popularized the use of airplanes to seed large-scale farms. This innovation became popular among farmers in California. He established the “Kokuho Rose” brand of rice, which is one of the most popular brands in the United States even today.

Anti-Japanese Movement and Alien Land Laws

Successes of Japanese farmers such as Shima and Koda unfortunately contributed to the anti-Japanese movement, which had been growing in California since the beginning of the twentieth century. One of the results of this movement was the Gentlemen’s Agreement of 1907–1908 between the United States and Japanese governments, which placed restrictions on Japanese immigrant laborers’ entry to the United States. California Governor Hiram Johnson, a leading nativist and critic of Japanese immigration and labor, signed the Alien Land Law in 1913. This law prohibited aliens who were ineligible for citizenship and companies in which the majority of the stocks were owned by such aliens from owning agricultural lands in California. It also limited lease of these lands by noncitizens to three years. Japanese immigrant farmers were clearly the target of this legislation as they were not eligible to become U.S. citizens. However, this law did not have the significant effect on them that proponents of the anti-Japanese movement had expected. In fact, many Japanese farmers managed to keep operating their farms by taking advantage of the many loopholes in this legislation. As World War I increased demands for food production, most Japanese farmers could easily renew the lease for three years. Some founded companies with American citizens and made them the majority owner so that ownership of farmlands under the new company remained legal. Others transferred land ownership to their American-born

children and served as their legal guardians. “Rice King” Koda, for example, maintained his rice farms in this way. As a result, despite the enactment of the law, agricultural landholdings by Japanese farmers actually increased from 300,000 to 458,000 acres between 1914 and 1920.

However, the California state legislature passed the new Alien Land Law in 1920, which was much stricter than the original law from 1913. It was designed to close the loopholes in the preceding law, namely to prohibit a sale or lease of lands to noncitizens or their companies even if they were minority owners. The new law also banned noncitizens from acting as legal guardians of underage citizens for the purpose of maintaining land ownership. The Japanese Associations of America questioned the constitutionality of the amendment, but the U.S. Supreme Court found it constitutional in 1923. As Japanese immigrant farmers were no longer able to remain owners or tenants, their landholdings dramatically decreased after 1920. In addition to California, 14 other states enacted similar land laws targeting Japanese farmers: Arizona (1917), Washington, Texas, Louisiana (1921), New Mexico (1922), Oregon, Idaho, Montana (1923), Kansas (1925), Missouri (1939), Utah, Arkansas, Nebraska (1943), and Minnesota (1945). The law remained in effect in California until its repeal in 1956, when Sei Fujii, an Issei community leader, challenged it before the California Supreme Court.

Influence of the Wartime Internment

Forced relocation of Japanese Americans from the designated military zone on the West Coast during World War II deprived Japanese farmers in these areas of their lands and property and caused severe damage to the economic structure of their farms. Upon release from internment camps, over 55,000 Japanese Americans returned to California by 1946 to find they had lost their property. “Rice King” Koda, who was sent to a camp in Colorado during the war, found that he had lost two-thirds of his farmlands and other assets including a mill upon returning to his property in California. As his son worked to reconstruct the family business, his company made a great economic recovery in the postwar period. However, many Issei

Japanese farmers were discouraged by the loss of property because of the internment and gave up farming or retired. Those who resettled in regions like the Midwest and East Coast rarely went back to farming as they were resettled in urban areas and found industrial and service jobs in the postwar economy. Overall, the number of Japanese farms declined in the postwar period because more Nisei and Sansei sought higher education and pursued careers with higher socioeconomic status as racial discrimination was becoming less severe. However, the Issei farmers’ great contribution to agricultural development and their history of struggles against racial discrimination that laid the foundation of Japanese American experience should be remembered.

Japanese Immigrant Press

Japanese immigrants (Issei) had a remarkable penchant for organizing the ethnic press. Both on the U.S. mainland and in Hawaii, a large number of newspapers and periodicals have been published, and major concentrations of Issei populations such as San Francisco, Los Angeles, Seattle, and Honolulu had at least two major vernacular dailies from the beginning of the twentieth century through December 1941. Despite the wartime incarceration of Japanese Americans, the postwar years saw the revival of the ethnic press whereas the main readership shifted from the immigrant to the American-born generation. Yet, Japanese-language vernaculars have continued to occupy an important place in contemporary Japanese America as the influx of postwar newcomers from Japan still necessitates their presence.

Continental United States

The history of the Japanese ethnic press began as soon as the first group of immigrant intellectuals arrived in San Francisco around 1886. Having escaped the Japanese government's suppression of the People's Rights movement, Issei political exiles used mimeographed newspapers called *Shinonome* ("Dawn") and *Shin Nippon* ("New Japan") as the venue to condemn Tokyo's antidemocratic policy. These political newspapers frequently changed names, but they continued to be published, albeit in very small circulation, in San Francisco from 1886 through 1894. Initially, they carried mostly news items and commentaries on Japanese politics. Yet, as mimeographed weeklies gave way to lithographed dailies around 1892, they began to print more "local" reports relating to Japanese immigrant society and exclusionist agitation. The first immigrant daily was called the *Soko Shimbun* (*San Francisco News*), whose name subsequently changed to the *Soko Shimpo* (*The San Francisco*) in 1893 and *Soko Jiji* (*San Francisco Times*) in 1895. Published from 1893 to 1895, another lithographed daily titled *Kinmon Nippo* (*Golden Gate News*) had four to six pages with a regular subscription of about 70.

Around 1895, Japanese immigrant press transformed from a medium of political advocacy to an important institution of ethnic community. The first typeset daily, *Shin Sekai Shimbun* (*New World Daily*), started its operation in May 1894 with circulation of 80 (increased to 200 by 1897). By 1899, it expanded from a 6-page to an 8-page newspaper with growing subscriptions, for the *Shin Sekai* attracted readership from Buddhists and nationalistic segments of early Japanese America. Opponents of these groups, like Christians, American-educated intellectuals, and entrepreneurs, supported rival newspapers, which subsequently merged into the *Nichibei Shimbun* (*Japanese American News*) in April 1899. Until the mass incarceration of Japanese Americans in the spring of 1942, these two dailies remained the most important vernacular press, whose influence reached through much of California and as far east as the Rocky Mountain states. In 1922, the *Nichibei Shimbun* acquired a bankrupt daily and renamed it as the *Rafu Nichibei* (*Los Angeles*

Japanese American), which continued to publish until 1931.

Southern California saw the publication of the first regional vernacular *Rafu Shimpo* (*Los Angeles Japanese Daily News*) in 1904. Similar to its Northern California counterpart, the local Japanese immigrant community sustained a number of newspapers according to divided political interests and internal factionalism. During the decade following the birth of the *Rafu Shimpo*, a number of vernaculars came and went, and by 1920 there were four major Japanese dailies in the area. The post-World War I recession reconfigured the discursive and business landscape in Southern California, consolidating four-way competition into rivalry between the *Rafu Shimpo* and *Rafu Nichibei*. After the latter was liquidated in 1931, some of its staff writers collaborated with other immigrants who had been critical of a collusion between the *Rafu Shimpo* and local Japanese association leadership to establish the *Kashu Mainichi* (*Japan California Daily News*) in Los Angeles.

Seattle was another home for some of the earliest vernacular newspapers. Starting in 1897, a succession of short-lived mimeographed weeklies came out, but bitter rivalries within the local Japanese community provided a background for the publication of three major dailies known as the *Hokubei Jiji* (*North American Times*), *Asahi Shimbun*, and *Taihoku Nippo* (*Great Northern Daily News*). Although the *Asahi Shimbun* had a short life of 10 years after 1905, the *Hokubei Jiji* and *Taihoku Nippo*, published in 1902 and 1910, respectively, survived as major Japanese dailies of the Pacific Northwest until the early months of 1942.

In the continental United States, there were other regional newspapers. In Pacific Northwest, the *Oshu Nippo* began its operation in Portland, Oregon in 1904, and the *Takoma Shuho* (*Tacoma Japanese Times*) eight years later. In California, around 1907, the *Ofu Nippo* (*Sacramento Daily News*) and *Chuka Jiho* (*Japanese Times of Central California*) were published in Sacramento and Fresno to serve the local populations. The Japanese fishing community of Terminal Island had its own *Minami Engan Jiho* (*Southern Coast Herald*) since 1915. All these regional newspapers survived until Japan's bombing of Pearl Harbor.

The Rocky Mountain region constituted a vibrant site for early Japanese immigrant discursive formation

when thousands of mining and railroad workers lived in Utah, Colorado, Wyoming, and parts of Nebraska. Between 1907 and 1914, three major dailies emerged, but their influence waned as the local laboring population diminished after the immigration exclusion of the mid-1920s. Although the printing of the *Kakushu Jiji* (*Colorado Times*) of Denver decreased from daily to three times a week, the *Utah Nippo* of Salt Lake City absorbed its Ogden rival, *Rakki Jiho*, in 1927. The *Kakushu Jiji* and *Utah Nippo*, however, became important outlets of information during the Pacific War when all major West Coast Japanese American newspapers were shut down.

New York City was an important hub of international merchants, immigrant intellectuals, artists, and political activists, as well as some Issei domestic workers. An elite segment of prewar New York Japanese formed an exclusive society, which had shored up small weeklies since 1897. Published in 1900 and 1911, respectively, the *Nichibei Jiho* (*Japanese American Commercial News*) and *Nyuyoku Shinpo* provided Issei with news reports relating to local Japanese affairs and U.S.-Japan trade.

With the increase of second-generation Japanese Americans (Nisei), the 1920s saw a rise in bilingualism in the Japanese immigrant press. The first vernacular newspaper that included an English-language section was the *Nichibei Shimbun* of San Francisco, which attempted to mold a separate public opinion among American-born citizens. Because existing anti-Japanese legislation used the Issei's legal status as unnaturalizable aliens as the basis of racial discrimination, Abiko Kyutaro, the publisher of the *Nichibei Shimbun*, anticipated that Nisei citizens would overcome institutionalized racism as long as the ethnic community nurtured their leadership and elevate their overall quality. For Abiko, inserting English pages into his daily was as much an educational endeavor for his ethnic posterity as it was a shrewd business decision to tap into a neglected new readership. Other major dailies, like the *Shin Sekai*, *Rafu Shimpo*, *Taihoku Nippo*, and *Kashu Mainichi*, followed suit through the late 1920s and 1930s, employing Nisei editors and writers for the English sections. Reflecting the diverging viewpoints between Issei and Nisei, the Japanese and English pages sometimes revealed different

assertions and varying focuses. To cater to the unique challenge and interests of Nisei youngsters, James Sakamoto of Seattle took it upon himself to start an all-English Nisei weekly titled *the Japanese American Courier* in 1928. Starting from October 1929, the *Pacific Citizen* was also published in English as the weekly organ of the Japanese American Citizens League (JACL).

Other notable developments in the Japanese immigrant press included the publication of trade papers, religious journals, and political organs. In the mid-1910s, the Japanese Agricultural Association of California issued a monthly titled the *Kashu Chuo Nokai Geppo* for the benefit of Issei farmers in the Golden State. In Southern California, the local Japanese farm federation printed a weekly, which later expanded into the *Beikoku Sangyo Nippo* (*Japanese Industrial Daily*). On a religious front, the Buddhist Mission of America issued the monthly *Beikoku Bukkyo* (*American Buddhism*) between 1901 and 1918. Though much smaller in circulation, Issei leftists and radicals of California and Washington put forth newspapers and periodicals under various titles. Between 1926 and 1941, one stream of such a publication transformed itself from the *Kaikyusen* (*Class Struggle*) to the *Zaibei Rodo Shimbun* (*Japanese Worker in America*), and from the *Rodo Shimbun* (*Rodo Shimbun*) to the *Doho* (*Doho*). During the 1930s, these leftist papers were shipped to Japan as well under the auspices of the American Community Party. In Seattle, local Japanese labor activists and leftists published the *Rodo* (*Labor*) semimonthly from 1920.

Hawaii

Despite the longer history of Japanese immigration to the islands, Hawaii lagged behind California in the formation of vernacular press. Combined with the dominance of government-sponsored contract laborers between 1885 and 1892, the dearth of an intellectual class explained the difference between the two population hubs of early Japanese America. In Hawaii, the first mimeographed paper appeared in 1892, and other short-lived weeklies ensued in various names. Many early papers tended to serve the cause of Japanese labor activism, as they offered a forum for expressing

discontent for exploitation by both sugar planters and Japanese emigration companies, as well as mistreatment by immigration officials. Published in 1894, the *Hawai Shimpō*, Hawaii's first Japanese typeset daily, played a major role in ethnic mobilization around these issues, though it flip-flopped on the 1909 Oahu Strike by opposing mass labor action against sugar planters. Often characterized as a "red paper," the *Hawai Nichi Nichi Shinbun* was especially active in the area of labor struggle on the eve of the 1904 plantation strikes.

By 1912, Hawaii's Japanese came to have two major dailies in Honolulu in accordance with political, religious, and temperamental divides within the ethnic community. Initially known as the *Yamato Shimbun* in 1895, the *Nippu Jiji*'s prominence stemmed from its dogged support of the massive Japanese strike of 1909, which resulted in the arrest and detention of its publisher Soga Yasutaro. Subsequently, however, the *Nippu Jiji* tended to take a more "conciliatory" position on the questions of racism and discrimination than its rival, the *Hawai Hochi* that was published by Makino Kinzaburo in 1912. In contrast to *Nippu Jiji*'s penchant for interracial cooperation and its call for assimilation, the *Hawai Hochi* often confronted instances of overt racism head-on. The community-wide test case against Hawaii's foreign language school laws is a case in point. Whereas the *Nippu Jiji* disapproved of such an action out of its desire to work with Hawaii's Haole leaders and Japanese diplomats, the *Hawai Hochi* stood behind Issei parents, teachers, and community leaders, who decided to bring a lawsuit against the territorial government, a suit that ended in a historic victory at the U.S. Supreme Court in 1927. The rivalry between the two papers continued through the prewar years. Just as in California and Washington, the *Nippu Jiji* and the *Hawai Hochi* carried both Japanese and English sections after the 1920s.

Because of the problem of accessibility, Hawaii's Japanese community outside the island of Oahu supported a number of regional newspapers that continued operation until the outbreak of the Pacific War. In Hilo, a town of eastern Hawaii, the *Hawai Shokumin Shimbun* began daily publication in 1909, and from 1914 to 1941 it was known as the *Hawai Mainichi*. The *Kona Hankyo* (*Kona Echo*) served the residents of the western Hawaii since as early as 1897. The islands of

Kauai and Maui had the *Kauai Shimpō* and the *Maui Shimbun* established in 1904 and 1915, respectively.

Wartime and Postwar Years

During the Pacific War, all West Coast newspapers were put out of commission as Japanese Americans were removed from the area to War Relocation Centers. Outside of the military exclusion zone, the *Utah Nippo* of Salt Lake City, the *Colorado Times*, and the newly established *Rocky Shimpō* of Denver rapidly increased circulation because many internees and resettlers subscribed to them. Along with the JACL's *Pacific Citizen*, each relocation center also issued a bilingual newspaper that carried official U.S. government reports and camp affairs. In Hawaii, the *Nippu Jiji* and the *Hawai Hochi* remained in business, though with more Americanized names as the *Hawaii Times* and the *Hawaii Herald*, respectively. Except for the *Rocky Shimpō* and camp newspapers, all of the Rocky Mountain and Hawaiian vernaculars continued their operations after 1945.

The postwar years saw not only the revival of major dailies in the Pacific Coast states but also the emergence of new vernaculars in other parts of the continental United States. In Los Angeles, the *Rafu Shimpō* and the *Kashu Mainichi* resumed publication in 1946 and in 1947, whereas another bilingual daily titled the *Shin Nichibei Shimbun* (*New Japanese American News*) was formed under the partnership of local Issei and Nisei businessmen and community leaders. In San Francisco, former employees and supporters of the *Nichibei Shimbun* organized the *Nichibei Jiji* (*Nichi Bei Times*) in 1946, and a lineal descendant of the prewar *Shin Sekai* appeared in the name of the *Hokubei Mainichi*. Seattle had only one daily called the *Hokubei Hochi* (*North American Post*), which was a successor of the *Hokubei Jiji*. Meanwhile, because many resettlers made the Midwest and the East their new home after release from the internment camps, there emerged the *Chicago Shimpō* and the *Hokubei Shimpō* of New York in 1945.

In contemporary Japanese America, the ethnic press still offers an important site for discursive and identity formation even though generation shift and easy information access have made many newspapers

vulnerable to a shrinkage of readership. Currently, the *Rafu Shimpo*, *Nichi Bei Jiji*, *North American Post*, *Chicago Shimpo*, *Hawaii Herald*, and *Pacific Citizen* are still present, albeit in various formats. There are also a myriad of new regional vernaculars and free papers in many cities with a sizable Japanese population.

Japanese Immigrant Women

Since 1868, women, along with men, have been migrating from Japan to different parts of the world: first to Hawaii and Guam, then to other parts of the Pacific and the Americas, and finally to just about everywhere imaginable. Overall, Japanese women's migration to Hawaii and the continental United States can be divided into five major waves: 1868, 1885/1891 to 1908; 1908 to 1920/1924; 1947 to 1964; and 1965 to the present. Although motivated in part by personal reasons and desires, their migration has been primarily defined by economic factors and by immigration laws and agreements.

Prior to 1868, the only Japanese to make it to Hawaiian shores were small shiploads of Japanese sailors that had drifted into Hawaiian waters. Very few, if any, women were probably among them. During the Tokugawa era (1600–1868) Japanese *shogun* (military

leaders) upheld a policy of self-imposed isolation, and sailors who strayed from Japan could expect to be jailed upon their return and treated with suspicion.

In 1868, the first boatload of Japanese immigrants was brought to the Hawaiian kingdom through the controversial efforts of American consul general Eugene Van Reed. Among the 150 or so Japanese passengers on board were about five or six women, including a Mrs. Nakamura who was the first female prostitute from Japan. Van Reed had initially arranged for the transport of these *Gannen Mono* (First Year People), with the cooperation of the Japanese government and at the urging of the Honolulu Board of Immigration, which sought to regulate the importation of sugar plantation labor. However, Van Reed had these laborers transported during the chaos of the Meiji Restoration, without securing a treaty of commerce and friendship that he had been trying to negotiate. After they arrived, reports circulated back to Japan about how they were being subjected to slave-like working conditions. Upon settling these grievances, the Meiji government (1868–1912) was opposed to sending additional laborers to the islands.

However, over the next decade, as the Meiji government faced mounting population pressure, limited land and natural resources, and rural economic depression, it reconsidered. To alleviate these growing problems, it decided to allow mass labor emigration to Hawaii in 1885, and to the continental United States in 1891. Before sending these laborers to Hawaii, the Meiji government negotiated the terms of their three-year contracts to provide them with basic rights and protections. Women were allowed to enter Hawaii only as the wife of a sugar laborer; in addition, in contrast to men who were welcomed independent of women, women's monthly wages were to be \$6 in contrast to \$9 for men. From 1885 to 1894, the Meiji government oversaw labor emigration. Then from 1894 to 1900, the government transferred this responsibility to private companies. Starting in 1900, when Hawaii became a territory and subject to U.S. law that outlawed contract labor emigration, emigrant laborers arranged and paid for their own passage to Hawaii.

From 1885 to 1900, about 86,000 Japanese arrived in Hawaii. During this time, there was a nearly constant ratio of four males to each female in Hawaii's

Japanese population. Starting in 1891, labor contractors who provided workers to U.S. railroads, sawmills, canneries, fisheries, and farms, arranged for mass labor emigration from Japan to the Pacific Coast. From 1891 to 1900, 27,440 Japanese were admitted to the United States. In 1900, the sex ratio in the Japanese population of the three Pacific Coast states was 21 males to 1 female. From 1885 to 1908, the majority of Japanese arrivals to Hawaii and the Pacific Coast were young able-bodied men in their twenties and thirties who were *dekasegi* (sojourner) immigrants. They, along with the smaller proportion of Japanese female emigrants, hoped that if they labored abroad for a few years, they could afford to return to Japan and settle permanently.

Because of the shortage of women in Japanese immigrant (Issei) communities from 1885 to 1900, Issei women were in high demand as wives and prostitutes. Despite the dangers, some Issei women engaged in prostitution by choice because it paid much more than other jobs available to them; others were tricked or forced into this notorious trade. Issei men were known to smuggle in women for purposes of prostitution, sell their wives or mistresses to each other, act as their wife's pimp, and steal and rape the wives of other Issei men.

In 1900, the Japanese government imposed emigration restrictions, which decreased the number of male laborers going to the continental United States, but similar restrictions would not apply to Hawaii until 1908. In response to agitation against Japanese laborers on the West Coast, the Japanese government prohibited the emigration of male laborers to the continental United States and Canada in August 1900. Then in June 1902, it relaxed this restriction by allowing immigrant laborers who had returned to Japan from the United States to reenter the United States, along with their wives, children, and parents. Between 1901 and 1907, Japan issued almost 37,000 passports to persons destined for the continental United States, but of these, only about 5,000 were issued to laborers who were presumably former resident laborers returning to the United States. The rest were for persons classified as nonlaborers. In contrast, between 1901 and 1907, 71,000 Japanese immigrants entered Hawaii, and the majority were young able-

bodied men, who were still being recruited by the sugar plantations. When Hawaii became a U.S. territory in 1900 and subject to U.S. law that forbade contract labor importation, the Issei were not obliged to complete their labor contracts. Labor contractors on the West Coast who could no longer import labor directly from Japan began recruiting Japanese laborers in Hawaii. From 1901 to 1907, more than 38,000 Japanese left Hawaii for the West Coast.

Soon other restrictions were developed to stop Japanese laborers from entering the continental United States via Hawaii, Mexico, and Canada, and directly from Japan. In an effort to resolve the San Francisco school board's internationally contentious decision of October 11, 1906, to segregate Japanese pupils in the public schools, President Theodore Roosevelt issued an executive order on March 14, 1907, that stemmed the flow of Japanese laborers via insular possessions, the Canal Zone, or other nations. In addition, President Theodore Roosevelt's ambassador to Japan negotiated with Japan's foreign minister for passage of what became known as the Gentlemen's Agreement of 1908. It stipulated that Japan would stop the emigration of new laborers to the United States and its territories. However, returnees and close kin of Japanese already residing in the United States and its territories would be allowed passports from the Japanese government to emigrate. This loophole, which was a critical concession demanded by the Japanese government, made it possible for many Japanese male laborers who had already emigrated to send for their wives, children, and younger relatives and be allowed to reenter if they had left the United States and its territories.

Starting in the summer of 1908, when the Gentlemen's Agreement became effective, many Japanese male laborers who had accumulated just enough savings to send for their kin (*yobiyose*) chose to do so while they still had the opportunity. Many sent for wives, because there were few single Japanese women of marriageable age in Hawaii or the western United States. Most Japanese wives who entered the United States from 1908 to 1924 were young, so-called "picture brides" (*shashin hanayome*); a minority was summoned by husbands who had left them behind or accompanied laborers who had returned to Japan to

find a wife. Okinawan and Korean women also entered with Japanese passports under the Gentlemen's Agreement of 1908, because Okinawa and Korea became part of Japan in 1879 and 1910, respectively.

The term picture bride was an accepted term but a misnomer, because prior to entry, each picture bride had been married under Japanese law to the man she was joining in Hawaii by having her name entered into his family's registry at the village office. The use of photos for matches between Japan and Hawaii or the continental United States helped the newly wedded husband and wife to identify each other when they met at the immigration station.

As a result of the many young wives who came after passage of the Gentlemen's Agreement of 1908, the male to female sex ratio in the Japanese ancestry population became less disparate, a baby boom ensued, and through their children Japanese immigrants were more compelled to settle permanently in America. By 1920 the Japanese population in Hawaii reached 109,274 (42.7 percent of the territory's population), which exceeded the 104,282 Japanese in the western United States. According to the 1910 U.S. Census, there were 79,675 Japanese people in Hawaii and 72,157 on the continent, with women comprising 24,891 or 31.2 percent of Hawaii's total and 9,087 or 12.6 percent of the continental total. The growing second generation (Nisei), and the perceived economic, social, and political threat that they represented to anti-Japanese forces, which were especially virulent in the Western states, induced Japan to stop allowing picture brides to enter the continental United States beginning March 1, 1920. Only wives who accompanied their spouses could emigrate, but it was too costly for most immigrant bachelors to travel to Japan to find a wife. By contrast, Japan continued allowing picture brides to enter Hawaii, where their presence and ensuing elevation of the birthrate was welcomed by the sugar industry.

But neither the Gentlemen's Agreement nor the barring of picture brides to the continental United States proved sufficient to stay anti-Japanese feeling. In 1924, Congress finally ended Japanese immigration through passage of the U.S. Immigration Act that set annual quotas that favored northern and western

European immigration, severely limited southern and eastern European immigration, and completely halted Asian immigration by denying entry to "aliens ineligible for citizenship."

Most Japanese women who entered during the picture bride era (1908–1924) made a living by undertaking arduous wage labor in the same industries—agriculture, service, and trade—that employed Issei men. Once they started having children, most Issei women switched to doing paid domestic labor or running small side businesses out of their home so they could fit their wage earning around their household and childcare responsibilities. During World War II, only incarceration in internment camps, which was ordered for all West Coast Japanese and less than 1 percent of Hawaii Japanese, interrupted most Issei women's lifetime of employment in unskilled, low-paying jobs.

As a result of World War II, a new wave of Asian immigration developed from the late 1940s through the mid-1960s that was predominantly female. Between 1947 and 1965, thousands of women from Japan entered the United States and Hawaii, which became the fiftieth U.S. state in 1959, as wives of U.S. servicemen. The 1945 War Brides Act was amended in 1947 to include veterans of Asian ancestry, which enabled Asian G.I.s to return to the United States with wives they had married in Asia. However, most Japanese wives of G.I.s were married to non-Asian men, and entered as nonquota immigrants under the 1952 McCarran-Walter Act, which included a clause that allowed Japanese immigrants to be naturalized and allotted Japan an immigration quota of 185 persons a year. Japanese wives returned with soldiers as a result of the U.S. occupation of Japan immediately after World War II, and the stationing of troops for rest and recreation in Japan during the Korean and Vietnam Wars. In the 1950s, an average of 2,000 to 5,000 Japanese women immigrated to the United States; in the 1960s about 2,500 arrived annually; and in the 1970s, the average declined to about 1,500 per year. Under the Refugee Act of 1953, Japanese women were among the 2,268 Japanese who entered the United States from May 1955 to 1956, when the act expired, and worked in the two California orchards of their sponsor.

Passage of the 1965 Immigration Act finally ended the discriminatory national quota system of the 1924 Immigration Act. Among Asian countries, only Japan has not sent a significant number of immigrants to the United States since 1965. Instead of being known for its exportation of laborers and “brides,” Japan is now known for exporting technology, cars, cute character merchandise, and entertainment.

Japanese Language in Asian American Studies

The ability of scholars to access Japanese-language materials has enhanced the way we understand native Japanese-speaking populations in the United States. Native Japanese-speaking populations include first-generation immigrants in the United States since the late 1800s (Issei), their children who were born in the United States but sent to Japan for a period during childhood for education (Kibei Nisei), and postwar first-generation migrants from Japan (Shin-Issei). Most work using Japanese has focused on Issei, with a smaller amount of scholarship on Kibei Nisei, whereas very little research has been conducted thus far on Shin-Issei. Overall, this research has primarily been conducted by historians in the United States. In addition, academics in history, sociology, and American Studies based in Japan have also contributed to our knowledge of Japanese (American) migrant experiences documented in Japanese.

Most scholars in Asian American studies rely on English language documents and communication for their research. Increasingly, Asian American studies have been influenced by the growing integration of a transnational framework that acknowledges experiences and identities not only in the United States but also

in Asia and other places. When Asian American studies was established in the 1960s, one of the main goals was to document Asian American histories in the United States to supplement the mainstream U.S. histories that largely excluded them or demeaned their presence in the United States. That is, it was important for Asian Americans to “claim America” and show how their histories and identities in the United States made them American. This meant that the focus of studies on Japanese migrants leaned toward their experiences in the United States and their trajectory in becoming Americans under a narrative of Americanization and assimilation.

Two major trends have contributed to an increase in the use and analysis of Japanese language materials in Asian American studies. One is the theoretical diversification of the field. As Asian American studies programs have developed across the United States and the study of Asian Americans has developed academic recognition and institutionalization, more theories and methods are being utilized. With the establishment of teaching materials and research on Asian Americans, a critical mass of academic work has developed, requiring new scholarship to engage and push it in new directions to create a diversity of views on the subject.

The second major trend is the diversification of academics studying Asian Americans. There are increasingly scholars who speak, read, and write Japanese who are interested in researching Japanese Americans from new angles, accessing different documents and asking different kinds of questions about immigrant identities and transnationalism. Most of these scholars are based in the United States but some are also based in Japan. Some identify as Asian American, whereas others do not. Some use ethnic studies methods (identifying with the population being studied, research conducted with social justice as a larger goal), whereas others do not.

The most well-known Japanese language scholar of Asian American studies is probably University of Pennsylvania historian Eiichiro Azuma. His work has especially contributed to furthering the understanding of Issei as transnational migrants. For example, by analyzing documents that Issei constructed themselves not only in English, but in Japanese as well, Azuma’s

work shows how there were differences in the ways in which Issei imagined and positioned themselves in English versus in Japanese. In Japanese, Issei historians (who tended to be educated transnationally, attending college in the United States, Japan, or both) developed what Azuma calls the “Issei pioneer thesis.” This thesis discursively drew from English in the United States and Japanese in Japan to emphasize Japanese participation in frontier expansionism in the United States, specifically in the settling of the West. Asserting the active role of Japanese in this way challenged white American views that racially excluded and subjugated them. At the same time, Issei asserted their role as part of Japanese development and expansion overseas. Azuma recounts how Issei historians conflated domestic and international race relations by seeing their struggles for racial equality in the domestic context of the United States as similar to Japan’s challenges to ascendancy in the global theater dominated by whites.

Although the Issei pioneer thesis was undoubtedly transnational in its early years (from the late 1920s), by 1941, when this work was translated to English, a significant discursive shift occurred: the thesis became nationally based. On the eve of the Pacific War where Japan and the United States would become enemies, Issei historians clearly made the decision to lose their sense of dualism and highlight their Americanness when publishing in English. Azuma points out how these Issei writings are often omitted from Japanese American history because they do not fit the (English-based) narrative since World War II produced by Nisei that emphasized their loyalty to the United States and the lack of connection to Japan. Indeed, if reading only work published in English for Nisei and white Americans, Issei writings would follow this narrative. But by presenting us with analysis based on Japanese language materials, Azuma provides us with a more comprehensive and critical understanding of Issei histories, experiences, and identities.

Meanwhile, some scholars at academic institutions in Japan are doing research in Japanese on Japanese Americans. The theories, perspectives, and political positionings of these scholars overlap with, yet vary from, scholars based in the United States. Two main groups can be identified in terms of their approaches

to studying Japanese Americans. One group is those who were trained in the United States (in ethnic studies), then returned to Japan and whose work is more politicized because of their background in ethnic studies. They are studying and writing about Japanese Americans as Asian Americans—in terms of histories and contemporary experiences of racial discrimination. Many of these scholars are training a new generation of academics in Japan from this perspective, some of whom choose to use their Japanese language skills to access materials on Japanese Americans that have not been analyzed yet. A few studies have looked at Kibei Nisei experiences. Examples of these scholars include Yasuko Takezawa and Masumi Izumi. Another group is those whose training was entirely in Japan and whose approach to studying Japanese Americans is more from a Japanese perspective, seeing Japanese Americans as part of a larger overseas Japanese or diaspora population. Many of these scholars based at Japanese academic institutions regularly present their work in the United States at national conferences, some publishing their work mostly in Japanese and others publishing bilingually both in Japanese and in English.

Although most work on Japanese language materials in Asian American Studies has focused on Issei experiences, Azuma and other scholars have also conducted research on Kibei Nisei experiences. There still is a need to look at more contemporary, post-war experiences of Japanese migrants in the United States.

Japanese Transnational Identity

Transnationalism refers to the condition of being connected to multiple nation-states at the same time. These connections must be real, lived ties—not simply imagined or historical linkages. Transnational ties can be studied and observed in terms of political, economic, cultural, and social dimensions.

Japanese transnational identities may overlap with, but are analytically distinguishable from Japanese American ethnic identities. Japanese American ethnic identities are the ways in which ethnic Japanese in the United States identify with their Japanese heritage. These identities are rooted in the histories and experiences of Japanese Americans in the United States. Some of these ethnic identities may take on transnational forms, when Japanese Americans identify with contemporary Japanese society and culture. But ethnic identities are not necessarily transnational, as Japanese Americans may identify with the Japanese cultural forms that migrants in the early twentieth century brought with them and these are not necessarily the same as contemporary forms that one would find in Japanese society today.

Japanese transnational identities linked to Japan and the United States can be conceived of in two major ways: Japanese migrating from Japan and Japanese Americans developing ties or migrating to Japan. Alternatively, Japanese transnational identities can be separated into three generational groups: first-generation Japanese who migrate abroad; second-generation Japanese Americans who are born in the United States but grow up connected to Japan; and third-, fourth-, and later-generation Japanese Americans who develop connections to Japan later in life and usually not through familial connections.

Japanese Migrating from Japan and Japanese Americans Developing Ties or Migrating to Japan

Japanese migrants from Japan to the United States have been able to maintain ties to both countries in ways that facilitate transnationalism. These linkages have taken different shapes in different time periods. In the prewar period (1880s to 1940s), Japanese

migrants adapted and integrated into the neighborhoods in the United States where they resided. Although participating in local U.S. communities, they also maintained ties to Japan through reading Japanese newspapers, sending letters to family and friends in Japan, and joining Japanese organizations to keep informed about happenings in Japan. Many sent money back to Japan, and some traveled to Japan for family and business reasons.

In the postwar period (since World War II) technological advancements have made it much easier and less expensive to maintain connections with people in faraway places. In addition to previous forms of communication such as postal letters and telephone calls by land-line, Japanese migrants in the United States can now stay connected to people in Japan via the Internet. Although previous waves of emigrants had to rely on printed forms of newspapers and other documents sharing news from Japan, recent migrants can now access newspapers online, as well as see Japanese television news programs to view news almost instantly as it is reported. Many Japanese television programs and films are also available online, as well as for rent or purchase at video stores in larger urban areas in the United States.

Many U.S.-born Japanese Americans go to Japan and live there as exchange students, to teach English, or for other study or work, including training in martial and other cultural arts, such as Japanese tea ceremony, kimono-wearing, ikebana (flower arranging), and Japanese calligraphy. These Japanese Americans are what social scientists call “ethnic return migrants”—the descendants of emigrants born and raised outside of the homeland who migrate “back” (though this movement is often their first time going to or living in the homeland).

Japanese Migrants in the United States Maintain Ties to Japan

First-generation Japanese migration abroad and the resulting Japanese transnational identities that emerge can be thought of in at least three ways, which often overlap. Although Issei refers to first-generation Japanese migrants generally, in the United States, this term is usually associated more specifically with prewar

Japanese migration that mostly took place from the late 1800s to the early 1900s.

The postwar migration of Japanese to the United States can be separated into two subgroups, based on whether or not they settle in the United States; these are the second and third types of first-generation Japanese transnational identities. One of these groups of Japanese emigrants is the Shin-Issei: the “new” Issei who have migrated since World War II. This group comes from diverse backgrounds; at one end are “war brides” who come from lower socioeconomic backgrounds and married U.S. soldiers then migrated to the United States with them, and at the other end are more highly educated Japanese who migrated with more financial resources as part of the post-1965 wave of more skilled Asian migrants.

The third group of Japanese emigrants can be called “overseas Japanese.” This group includes Japanese businesspeople (and their families) who are temporarily stationed abroad for work, college students from Japan, and “creative” or “lifestyle migrants” who are pursuing work as artists. Shin-Issei implies ultimate Japanese settlement in the United States, whereas “overseas Japanese” does not necessarily imply settlement in the United States.

The terminology used to describe first-generation Japanese migrants reflects differing national perspectives. Issei means first generation and implies the first generation of Japanese to settle outside of Japan; it is commonly used to describe these migrants in the nations in which they settle. Meanwhile, from a Japanese perspective, any Japanese nationals overseas (regardless of eventual settlement) would be considered “overseas Japanese.”

Japanese Return Migrants in Japan

Japanese of various ages have migrated abroad (as overseas Japanese) then returned to Japan. The language and culture that they learn when outside of Japan continues to influence their identity once they return to Japan. Japanese returnees usually lack the “Japanese common sense” that is expected of mainstream Japanese in Japan, even though they are Japanese citizens who typically were raised by two parents who are Japanese citizens. For children, this

is because they grew up in other countries, and for adults this is because they have lived abroad for so long that their way of thinking and acting has changed.

Japanese who have lived abroad and were primarily socialized as children in non-Japanese contexts before returning to Japan are commonly referred to as “Japanese returnees” or *kikokushijo*. These children are often teased upon their return for eating uncommon lunch foods at school in Japan (e.g., peanut butter and jelly sandwiches), and for dressing and speaking in atypical Japanese ways.

Japanese who have been educated or have worked abroad as adults (i.e., from college age on) would not be considered “Japanese returnees” or *kikokushijo*. There is no particular term in Japanese to describe this group but academics would classify them as “return migrants” who are different from “Japanese returnees” because their experience abroad was of their own choosing, thus making for different dynamics of adaptation and acculturation.

Second-Generation Japanese American Transnationalism

Japanese Americans born in the United States may also develop ties to Japan and identify transnationally. Even if brought up and based in the United States, when exposed to contemporary Japanese culture and society on an ongoing basis, second-generation Japanese Americans may learn to identify with Japan.

For prewar Nisei (second-generation Japanese Americans) brought up in the 1900s, it was less common for those raised completely in the United States to identify transnationally; rather, Nisei transnationalism would refer to Kibei Nisei who were born in the United States and raised partly in Japan before returning to the United States.

In the postwar period, Shin-Nisei or the “new” Nisei generation are transnational in new ways. They are the children of postwar Shin-Issei as discussed earlier. With increasing globalization, this newer wave of second-generation transnationalism is shaped by parents (who have the financial resources) regularly taking the children to Japan to visit relatives and friends, speaking Japanese at home, observing Japanese religious practices, celebrating Japanese cultural

holidays (e.g., celebrating Boy's Day or Girl's Day, Japanese New Year), reading Japanese books and newspapers, belonging to Japanese organizations (e.g., organizations based on Japanese prefectures), watching Japanese television shows and films (e.g., NHK news from Japan broadcast on local networks, renting videos of Japanese TV dramas), and actively participating in Japanese community events.

Later-Generation Transnationalism

Japanese Americans born and raised in the United States, with parents from the United States, are also developing transnational ties and identifications with Japan. Sansei (third-generation) and later generations may not grow up with much of a connection to contemporary Japanese society through their parents, but with increasing transnational flows of people and information, they are exposed to contemporary Japanese people and culture through Japanese/Japanese American community events, anime, martial and other cultural arts, and through working and living in Japan. Japanese Americans in Hawaii, even more than those from the U.S. mainland, may interact with Japanese tourists and students, increasing their knowledge of contemporary Japan. Through their families, later generation Japanese Americans are exposed to bits of Japanese society and culture; these cultural forms, however, are older, from the Meiji period of the late 1800s and early 1900s when the prewar Issei left Japan (not the contemporary period), and lower class, as this first migrant wave was predominantly comprised of peasants and farmers. For this group, developing a Japanese transnational identity is different from (yet sometimes overlaps with) a Japanese American ethnic identity. A Japanese American ethnic identity could be transnational or not, depending on whether or not it entails the creation of new ties to contemporary Japan.

Japanese War Brides

Japanese war brides (soldier brides) are Japanese women who immigrated to the United States from 1947 through the 1960s as spouses of American military personnel. Approximately 40,000 to 50,000 Japanese war brides entered the United States from 1947 to 1959. Although the exact numbers vary depending on the sources cited by scholars, these women comprised a sizable Asian immigrant group to the United States in the postwar period. The 1947 War Brides Act amendment enabled American servicemen to bring their Japanese wives to the United States. This was the first legislation to permit immigration from Japan since 1924, when the Immigration Act prohibited immigration from Asia. The McCarran-Walter Act (the Immigration and Nationality Act of 1952) repealed restrictions on naturalization for Japanese and permitted a quota of only 100 Japanese per year. However, Japanese war brides, as spouses of American citizens, were exempt from the quota.

Postwar occupations by the Allied Powers in Europe and Asia led to a large number of marriages between American servicemen and women from countries such as Italy, Germany, China, Korea, the Philippines, and Japan. In war-devastated Japan, many Japanese women of marriageable age had difficulty finding partners, as a large proportion of young Japanese men had lost their lives or were severely injured

in the battlefields. To support their families, many Japanese women had to find jobs rather than spouses and were often the family breadwinners. Many were drawn to opportunities to work in the service industry for the Occupation Forces and later the U.S. military. Such jobs included employment as housemaids, office clerks, typists, and waitpersons in facilities for military personnel. Many couples met and were married through contact at such jobs. Such marriages, however, often aroused strong opposition from family members because marriage was considered a family matter rather than an individual decision in Japanese society at the time.

Stereotypes and Representations

Japanese war brides had long been marginalized within Japanese American communities because of the negative stereotypes that have been rampant in both Japan and the United States. Japanese women who married American servicemen were falsely associated with images of prostitutes called *panpan*, who mainly served the foreign soldiers. The Japanese media often criticized Japanese women who had affairs with American soldiers, characterizing them as shameless women who lost not only their individual pride but also faith in their country. Some Japanese men saw romantic relationships between Japanese women and American soldiers as insults to Japanese masculinity: they could do nothing to stop “their” women from being attracted to their former enemies, who embodied wealth, democracy, and freedom as “the liberators.” From the American point of view, on the other hand, Japanese women needed to be rescued and liberated from male-dominated and impoverished postwar Japanese society.

Many Japanese people have assumed that Japanese war brides lived unhappy lives in the United States that were characterized by loneliness and isolation that often culminated in divorce. It is true that those women faced difficulties adjusting to American culture as participants in not only international, but also often interracial, marriages. Some were shocked to find that their American husbands were from very poor families in rural areas, far from the glittering images of the United States promoted in Japan. Others

encountered blatant prejudice because hatred of Japanese as wartime enemies was still intense in the United States. However, in fact, many Japanese war brides had happy married lives with their American husbands.

Japanese war brides were also objects of attention in the American media. Their entry into the United States and subsequent acculturation was regarded as a type of test as to the assimilability of a foreign, but unthreatening, Japanese figure at the same time that interned Japanese Americans were being resettled. Romance between Japanese women and American soldiers gained popularity in novels and movies: the most notable is James Michener’s novel *Sayonara* (1954) and the movie by the same title (1957), which reemphasized exotic, geisha-like images of Japanese women through a love story between a Japanese actress and an American serviceman in postwar Japan.

A substantial number of Japanese war brides married Japanese American servicemen. Compared to those who married non-Japanese Americans, such war brides suffered less from isolation and loneliness because spouses and their families had a shared sense of culture and couples could be part of Japanese American communities. However, they were not necessarily free from the negative stereotypes that were imported from Japan within the community.

Japanese War Brides Today

As memories of World War II fade, few use the term war brides today; rather, these marriages fall under the term *kokusai kekkon*, or international marriages. However, Japanese war brides’ distinctive role as “grassroots cultural ambassadors” in postwar U.S.-Japan relations has recently begun to receive positive attention from Japanese American communities and academics. Their descendants, who often have interracial heritages, have emerged as leading Japanese American figures. Velina Hasu Houston, whose mother married an African American serviceman, produced *Tea* (1985), a play depicting the lives of Japanese war brides in the Midwest. More recently, Jero has gained popularity as an *enka* (a traditional Japanese music genre) singer in Japan. Born and raised in Pittsburgh, and the grandson of a Japanese war bride

and an African American serviceman, Jero represents inheritance of an ethnically blended traditional culture to the contemporary interracial generation. Additionally, the first national convention of Japanese war brides was held in 1988 and drew more than 300 participants from around the country. Rejecting the past negative stereotypes, many Japanese war brides have started to tell their unique stories with pride.

Jen, Gish (1955–)

Gish Jen is a contemporary American fiction writer. She was born Lillian Jen in 1955 in Long Island, New York. Gish, her chosen pen name, was inspired by the silent-screen actress Lillian Gish. She is a second-generation Chinese American. Her parents emigrated in the 1940s. Her mother was from Shanghai and her father, a hydraulics engineer, was from Yixing of Jiangsu province. Her childhood was spent in Queens and Yonkers before moving to Scarsdale, New York. She graduated in 1977 from Harvard University with a BA in English. She then attended the Graduate School of Business at Stanford University for one year before dropping out and enrolling in the University of Iowa Writer’s Workshop, where she received her MFA in fiction in 1983. She has subsequently served as a lecturer and visiting writer at Tufts University and the University of Massachusetts.

Though many of her works deal with the experience of being an ethnic minority in the United States, ethnicity in and of itself is rarely the primary focus of her writing. Much of Jen’s writing examines, rather, the complexities of assuming a hyphenated identity and how “American” identities are shaped and changed by society. Her writings move beyond essentialized cultural constructions of ethnic American identities popularized in early Asian American literature. They have included Chinese American, Jewish American, and African American characters who tackle issues of immigration, assimilation, pursuit of the “American dream,” and self-identity.

Jen has written three novels: *Typical American* (1991), *Mona in the Promised Land* (1996), and *The Love Wife* (2004). In *Typical American* Jen describes the experiences of a Chinese immigrant who attempts to resist becoming “Americanized.” Wary of the excessiveness and moral turpitude that the protagonist believes is stereotypical of Americans, he vows to adhere to a list of behavioral standards he has created; unlike the “typical American,” he will eat in moderation, refrain from lascivious activities, and live the Chinese way. Together with his sister and her friend, he frequently mocks others as “typical Americans,” which provides the novel with its title. Ironically, the remainder of the novel traces his own pursuit of the American dream; despite his success, his desire for wealth drives him to fall victim to the allure of becoming a “self-made” man, which ultimately ruins him financially and fractures his family. The tragedy of the novel rests in the ironic transformation of its characters into the typical Americans they so despised at the story’s opening. *Typical American* was short-listed for the National Book Critics’ Circle Award and was also spotlighted in PBS’s *The American Novel*.

Mona in the Promised Land explores how ethnic identities, real and imagined, are created by adolescents. The storyline carries over characters from *Typical American*. Set in an affluent Jewish suburb of New York City, the story examines the clashes and complements of ethnic identities and cultures. Speaking and acting like her Jewish schoolmates, the teenage protagonist describes herself as a voluntary Jew—to her parents’ horror, she has “picked” being Jewish.

Her successive relationships with a Japanese student and then an African American student lay bare the inevitable conflicts between her sense of a created ethnic identity, burgeoning social idealism, and parents’ conservatism.

In her most recent novel, *The Love Wife*, Jen examines the politics and everyday dynamics of multiracial and adoptive families. The Wong family is comprised of Carnegie, the father, Janie/“Blondie” the mother, two adopted Asian daughters and a biological son. The stability of the family is threatened when Lan, a distant, female, unmarried relative, arrives from mainland China. The complex relationships that emerge between the beautiful Lan, adopted Asian daughters, a fascinated Carnegie, and frustrated Blondie lay bare the intersections of ethnic identity, Americanness, and assimilation. A fourth novel, *World and Town*, was published in October 2010. In addition to these novels, Jen’s short stories and articles have also appeared in *The New Yorker*, *The Atlantic Monthly*, *The New Republic*, and *The New York Times*. One of her pieces, “Birthmates,” was selected for *The Best American Short Stories of the Century*.

Jen and her works have garnered critical praise and a number of awards, including the: 1983 Transatlantic Review award (Henfield Foundation); 1987 Katherine Anne Porter Contest prize; 1988 Urban Arts Project prize (Boston MBTA); 1991 National Book Critics’ Circle Award Finalist; 1999 Lannan Literary Award; 2003 Mildred and Harold Strauss Living Award from the American Academy of Arts and Letters.

She is also the recipient of the 1986 Radcliffe College Bunting Institute Fellowship; 1988 National Endowment for the Arts Fellowship; 1992 Guggenheim Foundation Fellowship; 2001 Radcliffe Institute for Advanced Study Fellowship; and 2003 Fulbright Fellowship to the People’s Republic of China.

Jindal, Piyush “Bobby” (1971–)

After becoming only the second Indian American to serve in the United States Congress, Piyush “Bobby” Jindal went on to become the nation’s first Indian American governor and the first governor of color to head the state of Louisiana since P.B.S. Pinchback’s tenure during Reconstruction. Elected governor in 2008, Jindal’s rising political star and commitment to conservative principles has led to talk in Republican Party circles of a possible 2016 presidential bid.

Born June 10, 1971, in Baton Rouge, Louisiana, Bobby Jindal was raised by immigrant parents who had seen extreme poverty in their native India. Jindal’s father would marvel at the packed shelves in the groceries stores of Baton Rouge and tell his young son about the ability of Americans to do anything they set their minds too. Thus, Jindal’s upbringing instilled in him a belief in hard work and meritocracy. A conversion from Hinduism to Catholicism during his high school years may have facilitated Jindal’s moral conservatism and he continues to maintain solidarity with other Christian denominations.

Jindal graduated from Baton Rouge High School in 1988 and went on to attend Brown University. Jindal excelled at Brown and graduated with honors in the fields of biology and public policy. Despite having been accepted to medical and law schools at both Harvard and Yale, Jindal decided to attend Oxford University in England as a Rhodes Scholar. Jindal received his masters of letters in political science from Oxford University in 1994.

After graduation, Jindal did not immediately enter the political fray and instead took a job with McKinsey & Company as a consultant for Fortune 500 companies. However, Jindal would not stay in the position for long. In 1996, Jindal was appointed secretary of Louisiana’s Department of Health and Hospitals. Facing huge budget shortfalls, Jindal had the difficult task of slashing Medicaid payments; it was a job he pursued with relish and during his tenure Medicaid went from major deficits and bankruptcy to substantial surpluses. Despite criticisms that Jindal impinged on services in his reform of Medicaid, he was appointed executive director of the National Bipartisan Commission on the Future of Medicare in 1998. Jindal went on

Louisiana governor Bobby Jindal. (Nicholas Kamm/AFP/Getty Images)

to become the youngest president of the University of Louisiana system following the completion of the Commissions work. Jindal served as president of the university system until his 2001 appointment as assistant secretary to the U.S. Department of Health and Human Services.

In 2003, Jindal resigned his position as assistant secretary to make his first attempt at elected office. Although he lost his first bid for governor of the state of Louisiana in 2003, Jindal nevertheless scored some impressive electoral returns and went on to win a 2004 congressional race for Louisiana's First District. Jindal's election to the House of Representatives signaled only the second time in the nation's history that an American of Indian descent would serve in that venerable body. Jindal ran successfully for a second

term but resigned in 2008 having been elected governor of the state of Louisiana. Jindal became the first Indian American to become a state's chief executive, and the first governor of color in Louisiana since Reconstruction.

As governor, Jindal has been catapulted into the limelight as the GOP's possible answer to Barack Obama, especially as the party seeks to appeal to a more diverse electorate. However, there are debates within the Indian American community about Jindal's success. Some feel excited and proud to see a member of their community rise through the political ranks whereas others recoil at his socially conservative views and his decision to go by the name Bobby, rather than Piyush. It is Jindal's staunch social and fiscal conservatism, however, that has garnered him so much appeal in Republican circles. Jindal's appeal made him the logical choice to deliver the Republican Party's first official response to a speech delivered by Barack Obama.

Jindal's rebuttal to Barack Obama was generally considered a resounding failure among Democrats and Republicans alike and many thought his message was a disaster for the Republican Party. Jindal remains committed to his conservative values of fiscal and moral responsibility and continues to serve the state of Louisiana as governor.

Judo in America

Judo is a Japanese martial art that is practiced in the United States and throughout the world. Judo means the “gentle way,” and students are instructed in the complementary philosophies of maximum efficiency and minimum effort and mutual welfare and benefit. Judo is an empty-handed combat sport with a focus on throws, takedowns, grappling, pins, and chokes. Judo techniques involve either disrupting an attacker’s *kuzushi* (balance) and making him or her susceptible to being thrown or, when on the ground, causing an attacker to submit to a pin or choke. Judo is not only a martial art but is a competitive sport and is one of only two martial arts included in the Olympic Games. Currently, there are 6 million practitioners in 30 countries around the world.

The founder of judo is Dr. Jigoro Kano (1860–1938). Kano began his early training in the Japanese martial art of Jujitsu but because that art was quickly declining in popularity in Japan, Kano was forced to seek out other arts and eventually merged what he studied into his own practice of judo. In 1880, Kano opened his first judo school and in 1882 it was named the Kodokan. Kano meant for judo to be a competitive sport though he also believed it to be much more than a sport or even a martial art. Like many other devout practitioners, Kano saw judo as a way of life.

Judo as self-defense and exercise is applicable and available to people of all genders, ages, and sizes. In competition, weight, gender, age, and rank are factors that determine eligible opponents. In class, students often rotate partners and the practice can be adjusted to be complementary with a focus on learning rather than competition. However, regardless of the structure, rank is always observed and lower-ranked students must respect and defer to senior students. Similar to most Asian martial arts, students wear belts around their training uniforms (*gi*) to designate their rank. Belt color rankings for middle-ranked students may differ among schools and for children and adults. However, a white belt is always the first belt and black signifies the beginning of the higher levels. Currently, tenth degree is the highest black belt awarded.

Judo classes are often comprised of many elements that culminate in a type of sparring called *randori* (free

practice). Students often begin training by practicing rolls, falls, and escape techniques that they will need in competition or *randori*. Judo has both standing and ground components. Much of judo is also comprised of partner exercises. Standing practice includes not only actual throws but also body-fitting techniques that emphasize the correct positioning for getting one’s partner off balance and susceptible to being thrown. Ground practice includes techniques that focus on pinning or choking a partner until he or she must tap or risk serious injury.

Judo’s inclusion as a demonstration sport for men in the 1932 Olympic Games was the beginning of its introduction to the world. In 1964, judo became an official Olympic medal event for men. Women’s Olympic judo followed much later. It was a demonstration event in the 1988 games and finally a medal event in 1992. However, before being an official Olympic medal event, judo made its first worldwide appearance in 1956 at the World Judo Championships. Currently, the World Judo Championships are still held in every year when an Olympics is not occurring.

Though practiced worldwide, judo’s highest-ranking students and teachers are primarily from Japan and all but one are men. Only one woman in the history of judo has achieved a tenth degree black belt. On July 28, 2011, at the age of 98, Sensei Keiko Fukuda of San Francisco, California was awarded the tenth degree rank and the title of *Shihan* (Grandmaster). Fukuda Sensei began judo in her teens and continued her training and teaching into her adult years. Instead of a traditional life of marriage and family, Fukuda gave her life to judo and eventually left Japan to pursue teaching opportunities in California. She eventually traded her Japanese citizenship for American citizenship.

Fukuda Sensei’s advancement in judo was challenging both on the mat and within judo governing organizations. Though judo was welcoming of a few high-ranking females, there were rules against women advancing past fifth degree black belt. Though she was a former teacher at Dr. Kano’s school, the Kodokan, and was one of the top women in the world in the art, she was forced to wait almost two decades to be promoted from fifth to sixth degree black belt.

It was not until 1972 when the sexist rules outlining women's promotions in the art were revised.

A moving documentary about Fukuda Sensei's life in judo premiered in March 2012 at the San Francisco International Asian American Film Festival. The film, *Mrs. Judo: Be Strong, Be Gentle, Be Beautiful*, focuses on Fukuda's life as a woman who both sacrificed for her love of judo and challenged sexism and adversity to recognize her full potential. The city of San Francisco where Fukuda Sensei lived for over 40 years recognizes August 19 as Keiko Fukuda Day. Mayor Willie Brown named the day for Fukuda Sensei in 2001 after she was promoted to ninth degree black belt. Fukuda Sensei died February 9, 2013.

K

Kahanamoku, Duke (1890–1968)

Duke Kahanamoku is one of Hawaii's most famous and memorialized athletes and celebrities. Kahanamoku was legendary in surfing and was a competitive Olympic swimmer who brought home multiple gold and silver medals. In addition to his love of ocean sports, Kahanamoku was an actor and appeared several Hollywood films. In the Hawaiian Islands, he has become a folk legend and his name and image are common household names. Sculptures of the famous surfer and swimmer can be seen near the surf breaks in Waikiki on the island of Oahu. Restaurants, bars, and shops lining Honolulu's beaches bear his name and photographs and memorabilia from his surfing days. The University of Hawaii at Manoa is home to the Duke Kahanamoku Aquatic Complex.

Duke Kahanamoku's given name is Duke Paoa Kahinu Moke Hulikohola Kahanamoku. He was born on August 24, 1890, but reputable sources are split on his place of birth. Many state he was born in the city of Honolulu on the island of Oahu, which seems likely because he was raised there. Yet, several sources list his place of birth as Haleakala, Maui. Duke Kahanamoku was born to a large well-known and well-established Hawaiian family. Kahanamoku's family had ties to members of Hawaiian royalty including Princess Bernice Pauahi Bishop and the Kamehamea family. However, Kahanamoku's first name is not a title nor was it meant to be a reference to any royal connections. Kahanamoku spent his childhood near Waikiki Beach. It was there that Kahanamoku began and refined his long-board surfing and ocean swimming skills.

When Kahanamoku was 20 years old, he began to perfect his swimming ability and speed. Within a year,

he became fast enough to qualify for the U.S. Olympic trials. In March 1912, Duke Kahanamoku left the islands and traveled to Pennsylvania. There, he scored high enough in the Olympic trials to earn a spot on the 1912 U.S. swim team that would compete later that year in Stockholm, Sweden.

Kahanamoku's first Olympic appearance was monumental. His competitive swim time in the 100-meter freestyle at the 1912 Olympic Games broke the world record. He won both a gold medal and a silver medal that year. The outcome of Kahanamoku's first year swimming in front of the United States and international audiences made him a Hawaiian celebrity. After his 1912 successes, Kahanamoku competed and medaled in swimming in two more Olympic games. In 1920, he won two gold medals and in 1924 he won a silver medal. In the 1932 Olympic Games, Kahanamoku made another appearance, this time as part of the U.S. water polo team.

Though Kahanamoku was best known outside of the islands for competitive swimming, he was a surfer at heart. As he gained popularity for his world record and Olympic achievements he was able to help both modernize and popularize his beloved sport of surfing. Kahanamoku brought surfing to beaches on the continental United States as well as to international locations including Australia.

Being of Hawaiian descent, even as an Olympic gold medalist, world-record holder, and the ambassador of surfing, Kahanamoku experienced racism and discrimination when he traveled throughout the United States in the early decades of the twentieth century. Racial segregation was both the norm and the law in the American South and Kahanamoku's Hawaiian ancestry barred him from enjoying the same

accommodations as his Caucasian swimming teammates. Though he had been raised and spent his young adult years in the islands where he was connected to Hawaiian royalty, in parts of the continental United States, he was a second-class citizen. Kahanamoku's teammate, Fred van Dyke, remembers Duke's disappointment and sadness at not being able to celebrate with them because his race and skin color barred him from sharing a table in a restaurant or a room in a hotel. Yet, even then Kahanamoku was regarded as being gracious and respectful to everyone including his competitors.

Toward the end of his Olympic career, Kahanamoku made his home in Southern California. There, he spent time in Hollywood and appeared in small rolls in over a dozen films. He also established himself nationally as a true hero as his surfing and swimming abilities in the rough waters allowed him to rescue several people after a fishing boat capsized.

Duke Kahanamoku returned to the islands in his 40s and continued his goodwill gestures, but he also took on other occupations. For over two decades, Kahanamoku was a sheriff in his hometown of Honolulu. He also ventured into surf wear clothing line bearing his name. Kahanamoku's likeness can be found on memorabilia that is in any way related to surfing and Hawaii. On the 112th anniversary of Kahanamoku's birth, August 24, 2002, the United States Postal Service released a Duke Kahanamoku postage stamp allowing his image to continue to travel all over the world. However, litigation has recently taken place over who owns the rights to Kahanamoku's name and who can sell products using his image. The legal battles are exactly the opposite of how Kahanamoku would have wanted people to conduct themselves when remembering him.

Duke Kahanamoku passed away on January 22, 1968, at the age of 77. Yet, today in Waikiki, Kahanamoku is there in spirit. One famous statue resides at a popular destination on Kalakaua Boulevard with Kahanamoku posed in front of his beloved ocean. As a tribute to one of the islands' most loved and revered citizens, fresh lei are continually put on the statue.

Kao, Charles K. (1933–)

Charles K. Kao (Gao Kun in *pinyin*) is a distinguished physicist who shared the 2009 Nobel Prize in Physics for his breakthrough research involving the transmission of light in fiber optics. This work revolutionized communication and marked a new era of the development of telecommunication. In the award announcement, Gunnar Öquist of the Royal Swedish Academy of Sciences said that the decision to give Kao the Nobel Prize recognized the "work that has built the foundation of our modern information society." Kao has been known as the "Father of Fiber Optics" or the "Godfather of Broadband."

Kao is a dual citizen of the United States and Britain. Born in Shanghai in 1933, Kao's ancestral home is in the Jinshan district near Shanghai. His grandfather, Kao Hsieh, was a Confucius scholar. His father, Kao Chun Hsin, a graduate from the Law School of the University of Michigan, was a professor of Suzhou University and later a judge in Shanghai, in the Court for International Law.

Before the age of 10, Kao studied Chinese classics and English at home under a private tutor. Later, he studied English and French at an international school in Shanghai, founded by a number of scholars who received education in France. In 1948, because of the turmoil of the Chinese Civil War, Kao's family moved to Hong Kong, where he completed his secondary education at St. Joseph's College in 1952. He went to college in London, receiving his bachelor of science degree in electrical engineering at Woolwich Polytechnic (now the University of Greenwich) in 1957. To reduce his father's financial burden, he worked at Standard Telephones & Cables (STC), a British subsidiary of International Telephone & Telegraph Co. (ITT). There he met his future wife, Gwen, a fellow engineer in the coil section.

In 1965, Kao graduated from University College London with a PhD in electrical engineering. In the following years (from about 1965 through 1969), he did his most significant work when doing research at Standard Telecommunications Laboratories (STL, now known as Nortel Networks). In 1966, coauthoring with George Hockman, he published the famous groundbreaking paper on the theory and practice of optical fiber for communication applications, “Dielectric-fibre Surface Waveguides for Optical Frequencies.” In the past, the high losses of the available glasses disabled long distance communications of light. Kao used a single mode dielectric (glass) optical fiber waveguide to bring to reality the long-distance transmission of light through glass. The low cost and high performance of the optical fiber made itself the ideal transmission medium. This heralded the beginning of a new era in telecommunications.

Kao joined the Chinese University of Hong Kong (CUHK) in 1970 where he set up and became the chair of the new Department of Electronics. He was later appointed as the first professor of electronics.

In 1974, Kao moved to the United States, where he took a position as the chief scientist at ITT in Roanoke, Virginia. He later became vice-president and director of engineering in charge of the electrooptical products division. In 1982, he worked at the Advanced Technology Center in Connecticut, being appointed the first ITT executive scientist, in charge of all the research and development. He also served as an adjunct professor and fellow of Trumbull College at Yale University. In 1985, he became the director of corporate research at ITT. During that time, the application of the increased capacity for sending information over the system enabled the birth of the Internet.

From 1987 to 1996, Kao was vice chancellor of CUHK. For nine years until his retirement, he was dedicated to “create space for people to grow.” He strived to enhance the research level of the faculty and promote academic exchanges with leading research institutions, and he was instrumental in making the CUHK a world-class university.

Katipunan ng mga Demokratikong Pilipinos (KDP)

The Union of Democratic Filipinos also known as the Katipunan ng mga Demokratikong Pilipinos (KDP) was a national organization in the United States that was founded on two platforms: (1) fighting for issues of social justice and promoting socialism in the Filipino American community, and (2) supporting the anti-imperialist National Democratic Movement in the Philippines, including the overthrow of the Ferdinand Marcos dictatorship. Established during a mountain retreat in July 1973 in Santa Cruz, California, and following the 1972 declaration of martial law in the Philippines, the KDP drew together leftist activists from throughout the United States and established chapters in major cities with large Filipino populations, including San Francisco, Los Angeles, Seattle, New York, Philadelphia, Honolulu, and San Diego. As part of the New Left movement of that period, KDP activists studied the political works of Marx, Lenin, and Mao Tse-Tung. It took its organizational model from the Philippines movement and considered itself to be a mass-based revolutionary organization. With its national headquarters in Oakland, California, and most of its membership comprised of college students and young adults, the KDP organized many national and local campaigns within the Filipino American community. There was constant activity that included community meetings, demonstrations,

cultural productions, distribution of educational materials, conferences, and political study. It took its political legacy from an earlier generation from the 1920s and 1930s of Filipino American pioneer activists that organized Hawaiian sugar plantations, West Coast farm laborers, and Alaskan cannery workers. The KDP formally disbanded in 1986 as the political movement shifted following the fall of the Marcos dictatorship in the Philippines and the focus among many of the New Left groups in the United States splintered into various factions.

One of the main movement-building vehicles of the KDP was their community newspaper, the *Ang Katipunan* (AK). Activists could be seen wearing Ang Katipinan aprons selling the newspapers for a quarter at most community events and on Sundays in front of church parking lots. The AK brought alternative news reporting distinct from the many freely distributed Filipino American newspapers that mainly reported about Filipino entertainers, beauty contests, and immigration lawyer referrals. Many national campaigns that the KDP championed were headlined in the AK, including the defense of Narciso and Perez, two Filipina nurses falsely accused and convicted of poisoning patients at the Veterans Administration hospital in Ann Arbor, Michigan in July 1977. As the principal organizers of their national defense movement, the KDP with many other Filipino American associations and individuals were not only able to raise funds for their defense, but also pushed for an appeal and eventually won their freedom the following year. Another important KDP community involvement were the series of Filipino People's Far West Conventions (FWC) held annually in different West Coast cities from 1971 to 1985. In subsequent years following the formation of the KDP, activists played central roles in organizing the annual FWC gathering of hundreds of community activists. Unlike some other organizations in the New Left, LGBT and women activists were not only accepted but held prominent leadership positions in KDP.

Drawing on the model of the Chicano movement's Teatro Campesino and the San Francisco Mime Troup, the KDP created Sining Bayan, a cultural arm that engaged audiences with street theater as well as fully staged plays, musical productions, and songs of the movement dealing with concerns and issues from

the Philippines. One of Sining Bayan's achievements was the creation of an album of Philippine movement songs, *Bangon! (Arise!)*, which was produced through Paredon Records in 1976.

On June 1, 1981, two Seattle KDP labor activists, Selmi Domingo and Gene Viernes, were shot and murdered in their Cannery Workers, International Longshoremen's and Warehousemen's Union (ILWU) Local 37 Union Hall by agents of the Marcos government. Viernes, dispatcher for the cannery workers' union, was killed immediately. Secretary-Treasurer Domingo was hit four times but lived long enough to whisper the killers' names to an ambulance attendant. They were both 29 years old and had just returned from the ILWU International Convention in Hawaii where they had successfully passed a resolution after a bitter floor fight to send a labor delegation to the Philippines to investigate labor conditions under the Marcos dictatorship. In a Justice for Domingo and Viernes campaign organized by the KDP, the Filipino American community and the general public was exposed to the repressive and violent tactics used by the Marcos government during its decade of Philippine dictatorship. Using the monetary awards won from both the Marcos family and the four convicted gunmen, the Domingo/Viernes Justice Fund was created through Seattle's Northwest Labor and Employment Law Office (now known as LELO) in memory of Domingo and Viernes.

A reunion of KDP activists was held during the July 4th weekend 2011 in Seattle to commemorate the 30th anniversary of the deaths of Domingo and Viernes. Organizers held seminars addressing the current political situation in the Philippines with Congressman Walden Bello and Congresswoman Risa Hontiveros-Baraquel, two prominent politicians from the Philippines, focusing on the plight of overseas Filipino workers.

Kawamoto, Evelyn Tokue (1933–)

Evelyn Kawamoto is a former Olympian and champion swimmer. She was born in Honolulu, Hawaii, as one of six children. Her mother, Sadako Kawamoto, was a Nisei who was born on the island of Kauai. In 1952, Evelyn competed in the Summer Olympics in Helsinki, Finland. She won two bronzes and became the first Japanese American woman to win an Olympic medal.

Kawamoto began swimming recreationally when she was nine. Later, she was introduced to the legendary coach Soichi Sakamoto, who in the mid-1930s had begun to build a dynasty of extraordinary Hawaii swimmers. Kawamoto attended President William McKinley High School in Honolulu and was a member of Sakamoto's Hawaii Swim Club. As a high schooler she was a swimming sensation, setting numerous Hawaiian and American records in the breaststroke, freestyle, and individual medley events. Between 1949 and 1951 she also won eight national titles at the Amateur Athletics Union (AAU) Championships and was named AAU All-American.

Just after finishing her first year at the University of Hawaii, the 18-year-old Kawamoto qualified for the 1952 U.S. Olympic Swimming Team. At the U.S. tryouts held in Indianapolis, she beat her own American record in the 400-meter freestyle. Her time, 5:14.6, was more than three seconds faster than the gold medal win at the 1948 Olympics. In Helsinki, Kawamoto would go on to claim the bronze medal in that event (incredibly, she clocked the same time of

5:14.6). She won a second bronze in the 4 x 100 meter freestyle relay, and was the only U.S. female swimmer to return from the 1952 games with an individual medal.

Following her retirement from swimming, Kawamoto worked in the field of education. She married Ford Konno, a fellow 1952 Olympian and McKinley High School alumnus. Regarded as one of Hawaii's greatest female swimmers, Kawamoto was inducted into the Hawaii Sports Hall of Fame in 2000. In 2002, she was an inaugural inductee of the newly established Hawaii Swimming Hall of Fame.

Keller, Nora Okja (1965–)

Nora Okja Keller was born on December 22, 1965, in Seoul, South Korea, the daughter of German computer engineer Robert Cobb and Korean entrepreneur Tae Im Beane, who later immigrated to Hawaii in 1969. As a child she always loved to write stories in notebooks and illustrate them but never really considered writing as a career. Keller attended the University of Hawaii and graduated with degrees in both psychology and English. It is here, as an undergraduate, where she took her first Asian American literature course discovering a whole literary history she had not known existed. She then began yearning and searching for Korean American authors and now reflects on this process as finding a literary genealogy that she could relate to and partake in. She then went on to get her PhD in American literature from the University of

California, Santa Cruz but never completed her degree. Instead, Keller returned to Hawaii where she began writing about a silenced past.

Keller stumbled upon the topic of her novels when in 1993 she attended a human rights symposium at the University of Hawaii, where she heard a Korean woman speak about her life as a “comfort woman” during World War II. Comfort woman, a euphemistic term for the Japanese military’s use of young women as sexual slaves who systemically recruited and abducted Korean women for military sex work. Keller became passionate about the comfort women’s story and wanted to increase awareness about the issue but was hesitant to write about it and even tried to get one of her writer friends to take on the task. However, the story haunted her and plagued her at night until she eventually wrote a short story, “Mother’s Tongue,” which later became a part of *Comfort Woman* and was awarded the Pushcart Prize in 1995. Published in 1998, *Comfort Woman* received critical acclaim and eventually won an American Book Award. Keller’s first novel switches between the narrations of Akiko, a former comfort woman and her daughter Beccah, a dialogue between the two as they come to terms with the legacies of a silenced past. Keller’s second novel, *Fox Girl* (2002), is not necessarily the sequel to *Comfort Woman* but a natural progression historically that links the two together. Keller transports her readers to the post-Korean war era where the continued presence of the American military has given way to the development and maintenance of camp towns where militarized prostitution is set up for U.S. soldiers. In this setting, Keller tells the story of two teenagers, Hyun Jin and Sookie, who are drawn into the camptown life of desolation and prostitution. Keller plans to continue with a third novel focusing on Sookie’s unwanted child Myu Myu. She sees this future book, *Fox Girl*, and *Comfort Woman* as part of a trilogy whose stories are all intimately intertwined. In this way, Keller’s novels simultaneously bring visibility and awareness to silenced histories while tracing the historical linkages and generational transmission of traumas from the comfort women to the camptown prostitutes. In both *Fox Girl* and *Comfort Woman*, Keller is able to take a difficult subject matter and share an untold story

with hauntingly beautiful prose that utilizes dreams, folktales, and spirits.

Because Keller was originally hesitant to write a novel she had to trick herself into the writing process by beginning with a short story. With *Comfort Woman* she began writing all of Akiko’s (the mother’s) chapters and then wrote the daughter’s chapters in response and in dialogue with her mother. In addition to the shifting voices, *Comfort Woman*’s narrative is nonlinear and moves back and forth between the past and present because of Akiko’s memories and the way she narrates in a dreamlike fashion where time is never clearly marked. With *Fox Girl*, Keller was more conscious of her writing’s eventual outcome as a novel and this is the reason why the second novel is more linear in structure.

Today, Keller still resides in Hawaii with her husband, James Keller, and two daughters, Tae Kathleen and Sunhi Willa. Keller’s daughter Tae is already being recognized for her writing, and her work has been published in a variety of magazines.

Khorana, Har Gobind (1922–2011)

H. Gobind Khorana was a pioneer in biochemistry and molecular biology whose work in cracking the genetic code earned him the Nobel Prize for Physiology

Har Gobind Khorana, Nobel Laureate in Physiology or Medicine, 1968. (AP Photo)

or medicine in 1968. At the time of his death in 2011, he was the Alfred P. Sloan (emeritus) professor of biology and chemistry at the Massachusetts Institute of Technology.

Khorana was born in 1922 into the Hindu family of Ganpat Rai Khorana, an agricultural taxation clerk, or *patwari*, and Krishna (Devi) Khorana. The family lived in Raipur, a small village of about 100 people in South Asia's Punjab region. The youngest of five children, Khorana remembered that his father was dedicated to education and that they might have been the only literate family in the village. He received his first four years of education under the tree that served, in those early years, as the village schoolhouse.

Khorana went on to attend DAV High School in Multan, also in West Punjab. After high school he matriculated at the University of the Punjab. At Punjab University, as the school is colloquially known,

Khorana applied to two departments, English literature and chemistry, demonstrating the breadth of his interests and aptitudes, but eventually chose the latter, earning first a bachelor's degree in 1943 and then a master's degree in 1945.

In 1945 Khorana traveled to England on a government of India scholarship to study insecticides and fungicides—a useful topic for his agriculturally based country—but upon arrival, as he recounted in an autobiographical sketch he wrote for the journal *Science* in 2000, “the Indian High Commissioner’s office in London could only get me admitted into the Chemistry Department at Liverpool University, and I began to study organic chemistry.” Khorana studied under Roger J. S. Beer, who, in addition to supervising his dissertation, also “looked after him diligently,” as Khorana recounted in his Nobel autobiography.

Eager to spend some time in a German-speaking part of Europe and to study the German chemical literature, Khorana traveled to Zurich for a postdoctoral year at the Swiss Federal Institute of Technology (Eidgenössische Technische Hochschule), after earning his PhD in 1948. During that year in Switzerland Khorana worked with Vladimir Prelog. Also during that year, Khorana met Esther Elizabeth Sibler. The two married in 1952. “Esther brought a consistent sense of purpose into my life,” Khorana later wrote, “at a time when, after six years absence from the country of my birth, I felt out of place everywhere and at home nowhere.”

By the time of his return in the fall of 1949, Khorana's home was in many ways a very different place from the one he'd left in 1945. The partition of India in 1947 prompted one of the largest mass exchanges of population in history between the newly created states of Pakistan and India. The partition also divided Khorana's home province of the Punjab. Raipur, which at the time of his birth was part of India, was now part of Pakistan. “I could not find a job,” Khorana remembered in 2000. “In fact, many of my old friends and colleagues were now refugees in Delhi without jobs.”

Unable to find a job, Khorana headed back to England once again, this time to conduct research with organic chemists G. W. Kenner and A. R. Todd at Cambridge University. “Cambridge was a uniquely

exciting place at that time,” Khorana remembered. Todd was engaged in the research that would one day earn him a Nobel Prize. The work that would eventually lead to the Watson-Crick model of DNA was even then being conducted at Cambridge’s Cavendish Laboratory.

After two heady years in Cambridge that fixed his interest in proteins and nucleic acids, Khorana accepted a nonacademic research job in Vancouver, at the British Columbia Research Council, working in the Organic Chemistry Section. Although somewhat lacking in facilities, the offer provided Khorana with the opportunity to direct his own laboratory with, as he put it, “all the freedom in the world.” “Gobind was so excited that he was going to start a lab of his own,” Khorana’s long-time colleague Uttam Rajbhandary remembered. “He looked at the map of Canada, saw where Vancouver was for the first time, and off he went.”

Working in Vancouver, Khorana and his colleagues developed processes for synthesizing nucleotides, the basic structural units of nucleic acids like DNA. His success in this area attracted the attention of biochemists who began visiting his laboratory and exposing Khorana to biochemical thinking. Khorana, in turn, spent time learning biochemistry in the laboratory of Arthur Kornberg. All of this exposure to biochemistry moved his research in new directions: “In subsequent years,” he remembered, “work in my laboratory became increasingly interdisciplinary,” both reflecting and representing the ferment in the interdisciplinary life sciences of biochemistry, molecular biology, and genetics.

In 1960 Khorana was called to the codirectorship of the Institute for Enzyme Research at the University of Wisconsin at Madison. He became a U.S. naturalized citizen in 1966. At the Institute, Khorana began focusing on genetics, in general, and in deciphering the genetic code, in particular. Gregor Mendel’s research, first published in 1866 but not accepted until the early twentieth century, had shown that heritable traits were communicated from parents to offspring via discrete packages that came to be called “genes.” In 1944, Oswald Avery proved that genes were made up of nucleic acids. Nucleic acids direct the synthesis of proteins. Within cells, proteins do all the work, via the chemical reactions that they produce, that are required for the development and functioning of an

organism, including, for example, the synthesis of the pigments that determine eye or hair color. However, which nucleic acids directed the synthesis of which proteins was a mystery. Cracking this code, between what one commentator called “the language of nucleic acids” and “the language of proteins,” became the first order of business.

In 1961, Marshall Nirenberg, in what Khorana later called “an electrifying experiment” developed an *in vitro* system for translating a simple nucleic acid (polyuridylylate) into a simple protein (polyphenylalanine). Khorana, whose work in the synthesis of nucleic acids had progressed to larger and larger molecules, built upon Nirenberg’s research to complete the cracking of the genetic code. Along with Robert W. Holley, whose research team discovered and then elucidated both the primary and secondary structures of transfer RNA (which reads the genetic code and translates it into the protein “alphabet”), Nirenberg and Khorana were awarded the 1968 Nobel Prize in Physiology or Medicine.

Two years later, in 1970, Khorana and his research team recorded another major triumph, when they were able to synthesize an artificial gene for the first time. Unfortunately the gene they synthesized, which codes for the production of alanine transfer RNA in yeast, did not function inside living cells. That accomplishment would take a few more years, until 1976, by which time Khorana had moved with his research team to the Massachusetts Institute of Technology. Speaking as an experienced intellectual migrant to the *Boston Globe*, Khorana said, “You may last longer intellectually if you occasionally change your environment.”

Also in the mid-1970s, Khorana made what he later called a “radical switch,” when he began studying, at the molecular level, how vision worked. Specifically, he began investigating the process of light transduction in the photoreceptor cells of mammalian retina, or how photons were converted into chemical energy and then into electricity, the language of the brain. Writing of this undertaking in 2000, Khorana acknowledged that it was “very different from [his] earlier projects,” but that very differentness may have been what drew him to these questions. This was a totally open field, he wrote, with “understanding . . . far in the future.”

In addition to his 1968 Nobel Prize, over the course of his career Khorana accumulated many other

accolades and awards, including the Willard Gibbs Medal of the Chicago section of the American Chemical Society, the Lasker Foundation Award for Basic Medical Research, and the Paul Kayser International Award of Merit in Retina Research. He was a member of the National Academy of Sciences as well as a fellow of the American Academy of Arts and Sciences. In 2007 Khorana retired from the MIT faculty. In November 2011, at 89 years old, Khorana died of natural causes in Concord, Massachusetts.

Kibei

Kibei are second-generation Japanese Americans born in the United States who lived for some time in Japan, either for education or economic reasons, and then

returned to the United States. "Kibei" translates literally to mean a person who "returned to America." As these generational labels tend to be rooted in a historical time period, Kibei generally refers to those who came of age in the 1930s and 1940s. Set apart from their fellow second-generation Nisei peers because of their time in Japan, Kibei often felt alienated from the Japanese American community as well as from the white American majority. During World War II, differences between Kibei and other Nisei heightened tensions around issues of Americanization, loyalty, and Japanese culture. As members of the second generation who went to live in Japan, but then returned to the United States, Kibei do not fit neatly into a more unidirectional and linear model of American immigration. Their increased familiarity with Japan complicates the Japanese American Citizens League's (JACL's) early postwar ethnic success story of the melting pot and narrative of Japanese acculturation and assimilation to Anglo-white normative U.S. society.

Having lived in Japan, Kibei were more likely to speak Japanese as their primary language, more familiar with Japanese culture, and less likely to be acculturated to American customs than other Nisei. Because of their racial difference, Kibei often struggled to find employment outside of the Japanese American community, but also faced marginalization from their Nisei peers for being "too Japanese" and community leaders stereotyped the entire group of Kibei as ruining the second generation's exemplary record by engaging in criminal activities.

Kibei were internally varied based on their age, length of time spent in Japan, and whether they were educated in Japan during a more politically progressive or during a more militaristic and authoritarian periods. To establish a sense of community, Kibei established their own organizations, such as the literary Kibei Club in Los Angeles, and the Kibei Citizens Council of San Francisco, which had a counterpart in Los Angeles.

As they were more sympathetic to Japanese culture and language, Kibei were also politically distinct from other Nisei. They were less likely to favor the "100% Americanization" promoted by the explicitly patriotic JACL in the lead-up to World War II. Kibei

also tended to be more sympathetic, or at least less openly opposed to, Japanese militarism in the Pacific.

The outbreak of war between the United States and Japan in 1941 highlighted these differences within the second generation. U.S. government officials, who already viewed Japanese Americans as a whole with suspicion of disloyalty to the United States, viewed Kibei with particular suspicion. Commander Kenneth D. Ringle, assistant district intelligence officer for the Eleventh Naval District in Los Angeles in 1940, viewed the Kibei as extremely dangerous, loyal to Japan, and possibly planted in the United States for the purpose of espionage by the Japanese government. Likewise, Colonel Cross of the U.S. Army viewed the Kibei and their Issei parents with suspicion, questioning why they had sent their children to be educated in Japan if not for reasons of cultural and political indoctrination.

During internment in the War Relocation Authority (WRA) camps, Kibei earned a reputation as “troublemakers.” The Kibei were less likely to support the JACL’s strategy of cooperating with government authorities to prove their loyalty, with the notable exception of Karl Yoneda, a Kibei who was active with the Communist Party. According to the Western Defense Command officials, the Kibei were responsible for stirring up trouble and violently threatening others who otherwise would have been more acquiescent.

The WRA also described the protest and unrest at Manzanar on December 6, 1942, as an aberration in the otherwise peaceful context of the camps, and their corrective action after the uprising mostly targeted Kibei. On the previous day, Fred Tayama, JACL leader, was beaten by a group of unidentified men and was recovering in the hospital. Though he was unable to make a positive identification, several Kibei labeled as “malcontents” were arrested. In particular, Harry Ueno seemed to have been targeted for arrest because of his efforts at organizing a Kitchen Workers’ Union and having recently accused WRA officials of stealing sugar and meat from camp rations. In response, Joe Kurihara, a Nisei from Hawaii, spoke before a large crowd of demonstrators, some of whom demanded the release of Ueno. Others stormed the hospital to attack Tayama again. In the chaos that

followed, troops threw teargas grenades and fired into the unarmed crowd. Two internees were killed and at least 10 others were injured. Joe Kurihara, Harry Ueno, and 14 others, all Kibei except for Kurihara, were sent to an isolation camp for “troublemakers.” Whereas camp authorities attribute most of the unrest to a group of Kibei provocateurs, other accounts by historians detail a broader context of strife, mistrust, internal tensions, and dissatisfaction felt by Japanese Americans toward being held in WRA camps.

To rehabilitate the public image of Japanese Americans and facilitate their ultimate resettlement outside of the camps, government officials and JACL leaders drew upon negative stereotypes of the Kibei to blame them as the cause of tension and unrest. In addition to the isolation camps, WRA officials launched an effort to sort the “loyal” from the “disloyal” and issued a loyalty questionnaire in January 1943. Dillon Myer, director of the War Relocation Authority, referred to the Kibei as “bad” and “social outcasts” when justifying the removal of “troublemakers” from the mainstream camp population and their segregation in the Tule Lake camp. In some cases, WRA officials noted that they had misclassified some who had never been to Japan as Kibei solely because they had been involved in the attacks and that Kibei status was conflated with being a “troublemaker.”

Overall, Kibei were more likely to have been classified as “disloyals” and segregated in Tule Lake, especially those from agricultural, Buddhist, and non-college educated background. They were also more likely to have responded negatively to Questions 27 and 28 on the questionnaire, which asked if they would serve in the military and if they would forswear allegiance to the emperor of Japan. Paradoxically, Kibei were overrepresented both in the Tule Lake Segregation Center for those deemed “disloyal” and in the Military Intelligence Service (MIS), for the same Japanese language skills that made them seem potentially subversive were also useful for U.S. military intelligence purposes.

Kim, Elaine H.

Elaine H. Kim is a professor of Comparative Ethnic Studies at the University of California, Berkeley. Her areas of expertise include Asian American literature and culture, Asian and Asian American feminism, Asian American media studies and Korean American studies. She has won multiple teaching and community service awards, authored and edited dozens of publications, and produced, directed, and advised numerous documentaries and film projects.

Kim received her BA in English and American literature from the University of Pennsylvania in 1963, her MA in English and comparative literature from Columbia University in 1965, and her PhD in social foundations of education from UC Berkeley in 1976.

In the 1970s, Kim was involved in both media and community organizing; she was producer and host of a Korean bilingual program, "Asians Now," on KTVU-2 in Oakland, California from 1975 to 1981. During this time, she also consulted in the Berkeley, Oakland, and San Francisco school districts and served on the

board at the Korean Community Center of the East Bay (KCCEB), the Asian Media Center, the Asian Manpower Services, KQED-9 in San Francisco, and the Asian Women United of California, among others. She was cofounder and president of the Board at KCCEB. She also founded the Asian Immigrant Women's Advocates in 1984, when she began coordinating the Asian American Studies Department at UC Berkeley. She was appointed assistant dean in the College of Letters & Science in 1988.

In the 1980s, Kim wrote extensively about Asian American literature, in particular, Asian American women writers and the social context of Asian Americans in literature and culture. Her first book, *Asian American Literature: An Introduction to the Writings and Their Social Context*, was written in 1982, and published by Temple University Press. The following year, she wrote *With Silk Wings: Asian American Women at Work*, and then, in 1989, she coedited *Making Waves: Writing By and About Asian American Women* with Lilia V. Villanueva.

In the 1980s and early 1990s, Kim also began to expand her media role, both as a consultant and producer. In 1993, she produced *Sa-I-Gu: From Korean Women's Perspective*, a documentary on Korean American women affected by the 1992 Los Angeles Riots. During this time, she dissected multiracial relations in communities of color and the Western hegemony in higher education. In 1996, her book, *East to America: Korean American Life Stories*, with Eui-Young Yu was a Kiriya Prize Finalist; in 2001, she wrote *Dangerous Women: Gender and Korean Nationalism* with Chungmoo Choi. In this period, she also began to explore Asian American visual art and wrote *Fresh Talk/Daring Gazes: Issues in Asian American Visual Art* in 2003.

Kim is a leading figure in ethnic studies in America, having served multiple academic posts, including chair of the department at UC Berkeley from 1995 to 1997. She has received honorary doctorates from the University of Massachusetts, Boston, and the University of Notre Dame. In 2011, she was head of the Asian American Studies program at UC Berkeley; she won the Association of Asian American Studies Lifetime Achievement Award; and she released her directorial debut *Slaying the Dragon Reloaded: Asian*

Women in Hollywood and Beyond, which she also wrote and produced.

Kim, Jay (1939–)

Jay Kim is a Korean American politician from California. He served as representative from California's 41st Congressional District between 1993 and 1999. He was succeeded by fellow Republican Gary Miller in the 1998 election.

Jay Kim was born as Chang-Jun Kim on March 27, 1939, in Seoul, South Korea. In 1956, he graduated from Po Sung High School in Seoul, South Korea and left his war-torn country to immigrate to the United States after graduation. At one point, Kim also served as a civil engineer in the South Korean Army. Kim later attended college in the United States and graduated in 1967 with a BS in civil engineering from the University of Southern California. He received an MS from the University of Southern California in 1969 and also a second MS from the University of Southern California in 1980. Kim later received a PhD from Han Yang University in Seoul, South Korea in 1993. He also had his own civil engineering company.

Kim started his political career in Diamond Bar, California. He served on the Diamond Bar city council between 1990 and 1991. He was also elected as mayor of Diamond Bar and served between 1991 and 1992. Kim then moved on to national politics when he won the U.S. House election in the newly created California 41st Congressional District. His district covered parts of Los Angeles, Orange County, and San Bernadino County. He was sworn into office in January 1993

and became the first person of Korean descent to be elected as a member of the House. He was also the first Korean to be elected as a public official outside of South Korea.

As a conservative Republican, Kim was known as a staunch supporter of conservative issues. He voted against abortion, gun control, and favored tax cuts as well as a small federal government. Kim also received high approval ratings from the Christian Coalition, the American Conservative Union, and the National Rifle Association for his work and voting record in Congress.

Despite being reelected twice, Kim was constantly the focus of federal investigation for suspected illegal campaign contributions during his campaigns. The investigators suspected that Kim had received contributions that came from illegal sources.

In August 1997, after years of investigations, Kim, his wife, and his campaign pleaded guilty to concealing more than \$23,000 in foreign contributions. The sources of those contributions included foreign nationals as well as foreign corporations. Investigators believed that Kim had concealed contributions and received funds from foreign nationals—both of which are illegal under campaign finance laws. Although Kim could have faced fines of up to \$635,000 and up to six months in jail time, he avoided a felony conviction by pleading guilty but was forced to give up his congressional seat. In the end, Kim was sentenced to a year of probation, two months of electronic monitoring (house arrest) in Washington, D.C., and a fine of \$5,000. Kim pleaded to 10 counts of misdemeanor.

The story of Kim's guilty plea shocked many, especially those in the Asian American community. Also, because of the publicity of the case, many activists that worked for Asian American civil rights groups were concerned that the negativity of Kim's misconduct would promote anti-Asian sentiments.

In 1998, Kim sought reelection to his congressional seat. Although Republican leaders strongly urged him not to seek reelection, Kim ran again, even without the help of the Republican National Committee that usually supports Republican candidates for reelections. It was a difficult campaign for Kim because he was under house arrest in Washington, D.C. The court had ordered him to house confinement

except to work on Capitol Hill. He was unable to return to his district and had to rely on phone calls and emails as a means of campaigning. Ultimately, Kim lost in the primary to fellow Republican Gary Miller, who later went on to represent California's 41st Congressional District.

Since his departure from Congress, Kim has not occupied any public office. Although in 2000, he did mount an unsuccessful campaign for the Republican nomination in California's 43rd Congressional District. Even though Kim was embroiled in federal investigations in the later years of his political career, his image as a self-made hardworking immigrant had nonetheless inspired many in the Asian American community to become involved in electoral politics during his time in Congress.

Kim, Richard Eun Kook (1932–2009)

Richard Eun Kook Kim was a Korean American novelist, essayist, and professor of literature. His first novel, *The Martyred*, was published in 1964 and was

a National Book Award and Nobel Prize for Literature nominee. His second novel, *The Innocent*, came out in 1968; his third novel, *Lost Names: Scenes from a Korean Boyhood*, for which he is best known, was published in 1970. He was a professor of English at many distinguished universities in the United States and Korea, a journalist, and translator. He died June 23, 2009, at the age of 77 in Shutesbury, Massachusetts.

Kim was born in 1932 in Hamheung, North Korea, and raised in Korea and Manchukuo. During the Korean War, he served in the South Korean military from 1950 to 1954, when he was honorably discharged as a first lieutenant. He immigrated to the United States in 1955 to attend Middlebury College, studying political science and history until 1959. He received his MA in writing in 1960 from Johns Hopkins University, his MFA from the University of Iowa's Writers Workshop and another MA in Far Eastern languages and literature from Harvard University in 1963.

In 1964, he became a naturalized American citizen, the same year his first novel, *The Martyred*, was released. *The Martyred* is the story of 12 Christian ministers who were murdered, and the novel addresses Korean Christianity during the Korean War and the suffering and faith of the Korean people. *The Martyred* was an acclaimed bestseller and went on to become a play, opera, and film.

Kim's second novel, *The Innocent*, centers on a coup d'état in South Korea and questions morality during wartime. His third book, a short story collection, *Lost Names*, is a fictionalization of his childhood in Korea during the Japanese occupation.

He taught English at California State University, Long Beach (1963–1964), the University of Massachusetts, Amherst (1964–1970), Syracuse University (1970–1971), San Diego State University (1975–1977), and Seoul National University as a Fulbright Fellow (1981–1983).

He won a prize from the Modern Korean Literature Translation Awards in 1974. Among his translations were the Korean children's stories *Picture World 100* from Korean to English, and Ernest Hemingway's *The Garden of Eden* from English to Korean. In 1985 he founded and served as president of TransLit Agency, which dealt with international copyright issues for Korean publications, until 2002.

In the early 1980s, Kim began his journalistic career in Korea reporting and narrating *200 Years of Christianity* for KBS-TV in Seoul. He was a columnist for both the *Chosun Ilbo* and *The Korea Herald* in Seoul and continued his documentary work for television and in photo essay books, which explored his familiar themes of war, Christianity, and the Korean diaspora.

His career brought a number of notable awards, including a Ford Foundation Foreign Area Fellowship, the Guggenheim Fellowship, the Fulbright Fellowship, and the National Endowment of the Arts Literary Fellowship.

In March 2011, University of California Press published a 40th anniversary edition of *Lost Names*. The same spring, Penguin Classics published *The Martyred*; Kim was the first Korean American to be included in the series.

Kim, Ronyoung (1926–1987)

Ronyoung Kim, also known as Gloria Hahn, is the author of the Pulitzer Prize nominated novel, *Clay Walls* (1987). Kim was raised in Southern California and attended San Francisco State University. She later married Dr. Richard Hahn. After her death in 1987, her husband established a memorial scholarship in her name. The Gloria Hahn Memorial Scholarship

supports American students to study at Ewha Womans University International Summer School in South Korea.

Kim’s *Clay Walls* is the first novel written by a Korean American about the experiences of Korean immigrants during the early twentieth century. Set amid the Japanese colonization of Korea, American imperialism in Korea, and the first wave of immigration from Korea to the United States, *Clay Walls* boldly chronicles the trajectory of Korean and Korean American history, which includes the Japanese occupation of Korea (1910–1945), World War II (1941–1945), and the Korean War (1950–1953). This complex history is channeled through the lives of Haesu and Chun, a Korean immigrant couple who struggle with national, class, racial, and gendered forms of identification.

Clay Walls is semiautobiographical in that the two main characters, Haesu and Chun, parallel Kim’s own parents. Like Haesu and Chun, Kim’s mother was from an aristocratic or *yangban* family and Kim’s father was a peasant. Kim’s mother was also an ardent supporter of Korea’s fight for independence much like the character of Haesu. Both Haesu and Chun are born during the last years of Korea’s Joseon Dynasty, which was marked with change and numerous foreign interventions by China, Russia, and Japan. The unconventional marriage of Haesu and Chun, who are from disparate social classes, is made possible by an American missionary. This change in conventional marriage custom signals the growing influence of foreign powers over Korea and the ensuing changes in Korean culture and politics.

With its forced annexation by Japan in 1910, Korea had to subscribe to strict Japanese governmental policies that worked to eradicate Korea’s national and cultural identity. All Koreans were required to abandon their traditional family names and adopt Japanese names. Because employment and admission into schools were virtually impossible without Japanese names, most Koreans changed their family names. For the 35 years that Koreans were under Japanese rule, they were not allowed to learn their own language or their history. Such attempts to obliterate Korean identity fueled the movement for Korean independence. The Declaration of Korean Independence was

proclaimed in Seoul during an independence demonstration on March 1, 1919. During the peaceful demonstration, the Japanese army massacred more than 7,000 protestors and wounded several thousand more. It is in this historic moment of political and cultural instability that Haesu and Chun marry and immigrate to the United States. Haesu and Chun find themselves among a very small minority in the United States. They represent the majority of Korean immigrants in the early twentieth century who were political exiles and very passionate about aiding Korea's independence.

Clay Walls, the title of Kim's novel, alludes to the traditional custom of building clay walls around homes in Korea. This practice is rooted in the *yangban* class custom that decrees the personal remain hidden from the outside. This type of ideology was also wedded to Confucian culture that influenced Korea's isolation policies. Kim also shows the effects of Confucian social order on Korean women. Like the clay walls of isolation that Korea built around itself during the Joseon Dynasty, a Korean woman was supposed to confine herself to the walls of the house as a submissive wife and sacrificial mother. Even after her husband's death, Haesu strives to be the mother and breadwinner within the boundaries of the domestic sphere by taking up sewing. Throughout the novel, the characters negotiate complying with traditional conventions and reimagining their national, gendered, and class identities in the United States.

Kim, Young Oak (1919–2005)

Yong Oak Kim was born in Los Angeles, California on January 29, 1919 to Korean immigrant parents Soon Kwon Kim and Nora Koh. He grew up in Bunker Hill section of Los Angeles and graduated from Belmont High School. He died on December 29,

2005 in Los Angeles. In honor of his great service to the nation and to the Korean American community, a middle school in Los Angeles and the Korean American Studies Center at University of California, Riverside is named after him.

The life of Young Oak Kim can be painted in two broad strokes: a legendary war hero of both World War II and the Korean War and a pioneering humanitarian activist. In May 2011, Colonel Kim was chosen as one of the top 16 American War Heroes by msn.com. The list included many historical figures such as George Washington, Robert E. Lee, Douglas MacArthur, and Dwight D. Eisenhower. The news site praised Young Oak Kim for becoming the first Asian American to command a combat battalion in the U.S. military and proving himself repeatedly on the battlefield. War hero only partially describes who he is and what he stood for because he was a champion of human rights and believed that helping others was the best way to prevent strife and ultimately war.

Colonel Kim was a highly decorated U.S. Army combat veteran of World War II and the Korean War. Racial minorities were assigned to segregated units during World War II. The 100th Battalion and 442nd Regimental Combat Team—made up of second generation, Nisei, Japanese Americans—were such segregated units. He was a combat leader of the U.S. 100th Infantry Battalion and 442 Regimental Combat Team in Italy and France during World War II. At the time Japanese Americans were sent to concentration camps and labeled as enemy aliens. Kim, the son of a Korean immigrant who dedicated his life to expelling the Japanese from his homeland, was assigned to a Japanese American unit. A Korean American, he forsook a safe assignment to fight with the all Nisei 100th Battalion and 442nd Regimental Combat Team. When Lieutenant Colonel Farrant Turner, the 100th battalion commander, gave Kim the option to decline leading the Japanese American unit (citing of historical conflict between Japan and Korea), Kim famously embraced the unit and underscored their common fate as Americans.

Largely because of Young Oak Kim's brilliant leadership in field operations and his undying dedication to his charge, this group of Japanese American soldiers quickly came to respect and trust its Korean

American leader. With astonishing heroism and courage, the combat unit led by Kim won battle after battle and emerged from the war as one of the most decorated units in American history and a symbol of Asian American unity.

After multiple battle injuries, Young Oak Kim was honorably discharged in 1946. Five years later Kim decided to rejoin the Army after war had broken out in Korea. He remained on the Korean frontline for 18 months, twice the length required by the U.S. Army combat personnel.

On the Korean frontline, Kim led the 1st Battalion, 31st Infantry Regimental Combat Team, as the first minority officer ever to command a U.S. battalion in combat. Kim served with distinction in the Korean conflict and was again severely wounded. Kim led the battalion both on and off the battlefield. The battalion's financial support of a large orphanage, Kyoung Chun Ae In Sa of Seoul, during and after the war remains a legendary humanitarian tale in Korea. Kim retired as a colonel in 1972. Both political and business communities tried to lure the war hero to champion their causes. However, Kim refused all offers and spent the rest of his life helping others and serving communities in need.

Kim was instrumental in starting Asian American community organizations in newly settled immigrant neighborhoods. This task was undertaken at a time when immigrant community activism was still uncommon. He was actively involved in youth guidance and education, welfare of elders and women, family and healthcare-related agendas, and cultural, ethnic, and artistic awareness programs.

Kim served as the Chairman of the 100th/442nd/MIS World War II Veterans Association, which successfully funded the Go For Broke Monument in downtown Los Angeles. His central role as the founding and former chairman of the Go for Broke Education Foundation and his service as a board member of the Japanese American National Museum are but a few examples of his ambassadorial role in enhancing Korean-Japanese relationship.

Many are not aware of Young Oak Kim's role in building the many nonprofit Korean American organizations in Los Angeles, including Korean Health Education and Information Center (KHEIR), Koreatown

Youth and Community Center (KYCC), Korean American Coalition (KAC), and the Korean American Museum (KAM).

Kim is one of the most decorated soldiers in U.S. military history. He received a Distinguished Service Cross, two Silver Stars, two Legion of Merits, two Bronze Stars, and three Purple Hearts. He also was awarded military honor from Italy (Bronze Honor of Military Valor), France (the Legion d'honneur, Croix de guerre), and Korea (Taeguk Cordon of the Order of Military Merit). He was officially recognized by the California State Legislature (1987), by Los Angeles County (1988), by the California State Assembly (2003), and by the American Red Cross Southern California Region (2004).

Kingston, Maxine Hong (1940–)

Maxine Hong Kingston is a popular and critically acclaimed Chinese American author who has found acceptance within both the mainstream American and Chinese American literary canon. She emerged into the national consciousness with the publication of her first book, *The Woman Warrior: Memoirs of a Girlhood Among Ghosts*. The book gained immediate success with both critics and mainstream readers in the United States. Kingston's popularity created a wider market for other Asian American authors to emerge as publishers and readers alike became more receptive toward Asian American writing. *The Woman Warrior* initiated, or at the very least coincided with, a period of immense development and scholarly interest in Asian American women's writing.

Kingston was born October 27, 1940, in Stockton, California. Her parents were both Chinese immigrants from well-educated backgrounds. In China,

Author Maxine Hong Kingston sits in her meditation room at home in Oakland, California, 2001. (AP Photo/Eric Risberg)

Kingston's father had received formal training as a scholar. Her mother attended To Keung School of Midwifery in Canton and practiced medicine. In the United States, however, as there was not much professional demand for Chinese immigrants with their training, Kingston's parents worked hard to build a laundry business. Kingston grew up in Stockton's intimate Chinese American community and finished her high school education there. It was during high school that Kingston published her first essay, "I Am an American," in *American Girl* magazine (1955). After high school, Kingston attended the University of California, Berkeley on a full scholarship and ultimately graduated with a BA in English in 1962. Shortly thereafter, she married Earll Kingston, an actor and fellow Berkeley graduate. During her undergraduate years and for some time afterward at Berkeley, Kingston participated in the Free Speech movement, engaging in protests against the Vietnam War, and experimented with drugs like most Berkeley students at that time. These experiences later influenced and shaped her

third book, *Tripmaster Monkey*. In 1967, the Kingstons and their only son, Joseph Lawrence Chung Mei, moved to Hawaii to remove themselves from the increasingly prolific drug culture and the violent turn the antiwar movement had taken. This move was initially intended to end in the Far East, but the Kingstons made Hawaii their home for many years thereafter. Although working as an English teacher in Hawaii, Kingston began and completed the manuscript that would become her first published book, *The Woman Warrior*.

The Woman Warrior launched Kingston into instant literary success. The book was published by Knopf in 1976 and was well received both popularly and critically. This success has been long enduring. Some scholars estimate that of all contemporary writers, Kingston's work has been the most anthologized and widely read in America. *Woman Warrior* has been translated into multiple languages and has been the subject of countless academic papers and dissertations. The book won the National Book Critics Circle Award for nonfiction (1976), the National Education Association Award (1977), and the *Mademoiselle* Magazine Award (1977).

Although Knopf published *The Woman Warrior* as nonfiction, and the title itself alludes to an autobiographical framework, the work does not fall within any clearly delineated categories. Kingston's editors had felt that most first books do not do as well in the fiction category. Some parts of the book are indeed autobiographical as Kingston did not conduct any research. Instead, she relied completely on her memories of the oral-stories passed down through the family. Kingston herself initially conceived of the work as a novel because of the fictional techniques she employed.

Critical analysis of Kingston's work has primarily focused on *The Woman Warrior* with some inclusion of *China Men*. These two early works have several strong themes, including feminism. Kingston herself identifies as a feminist, and she attributes this identification to the strong patriarchal culture that surrounded her childhood. The initial critical studies of her work during the first decade of *The Woman Warrior* and *China Men*'s release heavily focus on several controversies surrounding these works.

These early critics, led by Frank Chin, argued that Kingston's work is not representative of the Chinese American community. They also questioned her recreation of Chinese mythology in her books, as Kingston's versions seemed to diverge from the original "authentic" legends. Furthermore, Kingston's work has been seen as negatively portraying the Chinese American male in an emasculating light. And finally, her most vitriolic critics contend that *Tripmaster Monkey* was written as an instrument of revenge against Frank Chin.

The challenges to Kingston's representation of Chinese culture are necessarily linked to understanding Kingston as a writer of diaspora. Kingston is a second-generation Chinese American. When she wrote *The Woman Warrior* and *China Men*, Kingston had yet to visit China. She did not undertake that trip until 1984. Kingston's representation of Chinese culture, then, is necessarily limited within a narrow personal context. Her works are based on her own experiences as a girl growing up in a particular Chinese American community. Kingston herself emphasizes that the close-knit Stockton Chinese American community, her family's rural peasant Chinese background, her mother's oral storytelling, and her father's poetry training all mark her "memoir" as unique. Therefore, Kingston emphasizes that her body of work captures just one facet of the different experiences of Chinese Americans.

More recently, studies of her work have moved away from the Frank Chin controversies and focused on other themes in her work. Much scholarship has explored the ambiguities in the mother/daughter relationship in *The Woman Warrior*. Critical works have also analyzed Kingston's use of mixed literary genres such as the autobiography, biography, memoir, and fiction. More recently, with the publication of *The Fifth Book of Peace*, scholars have begun to look more closely at Kingston's political views on pacifism, and its running theme in many of her works.

Beyond the United States, Chinese scholars have also included Kingston as part of their literary community. They view Kingston as someone who has helped preserve the cultural heritage that was almost decimated by the Chinese Cultural Revolution. This literary community considers her work a part of the Chinese literary canon.

After the immense success of her first book, Kingston has continued on to write and edit other works of note. *China Men* was published in 1980 also to wide acclaim. The book was included in the American Library Association Notable Books List. *China Men* also won the National Book Award for nonfiction, the American Book Award, was nominated for the National Book Critics Circle Award, and was named runner-up for the Pulitzer Prize as well.

In 1987, Kingston published *Hawaii One Summer, 1978*, and *Through the Black Curtain*, both limited-edition books. In 1989, *Tripmaster Monkey: His Fake Book* was released. This novel deviated from Kingston's previous use of the mixed-genre memoir. *Tripmaster Monkey* is considered a postmodern American novel. The novel won the P.E.N. USA West Award for fiction (1989) and the John Dos Passos Prize for Literature (1998). In 2002, Kingston published *To Be the Poet*, a work based upon the 2000 William E. Massey Sr. Lectures in the History of American Civilization that she gave at Harvard University. That following year, she published *The Fifth Book of Peace*. Kingston began *The Fifth Book of Peace* after her house burned down in 1991. At the time of the fire, she lost a manuscript of another book she had been working on. Instead of recreating that work, however, Kingston decided after the loss that her next book needed to be about peace. She also wanted to include the voices of veterans. To that end, she wrote *The Fifth Book of Peace* and worked with veterans and their families through writing and mediation workshops. Kingston helped edit the writings produced from those workshops in *Veterans of War, Veterans of Peace* (2006).

Kingston has received numerous personal distinctions for her contribution to the immigrant and literary community. Several well-known universities have conferred honorary doctorates upon her. Kingston was named Chancellor's Distinguished Professor at the University of California, Berkeley in 1990 where she taught for some years. Furthermore, she has received the Guggenheim and National Endowment for the Arts fellowships, and the National Humanities Medal, which was awarded by President Bill Clinton (1997). Perhaps one of the more unusual, yet significant awards she has received was the designation as

“living Treasure of Hawaii” by a Honolulu Buddhist sect in 1980. This title is inspired by the “Living Treasure of Japan,” and is a ritual that the Hawaiian immigrant community has incorporated into American culture. The sect sought to honor Kingston for the recognition she has brought to the immigrant experience.

Kochiyama, Yuri (1921–)

Yuri Kochiyama is a renowned political activist, best known for her relationship with Malcolm X and for her contributions to Afro-Asian solidarities. She is widely respected for her indefatigable dedication to Asian American, black, and Puerto Rican liberation.

She was born Mary Yuri Nakahara to Japanese immigrant parents in 1921 in San Pedro, California. Her youth was a whirlwind of community service activities: the first female student body officer at her high school, a sports writer for the local newspaper, a Sunday school teacher, and a counselor to numerous preteen girls groups. Her ability to escape housework through extracurricular involvement represented a challenge to conventional gendered norms, even as she lacked any feminist consciousness.

Kochiyama’s blissful, all-American childhood was disrupted during World War II. Her father, who sold fish products to American and Japanese ships docked in the harbor, was among the 2,000 Japanese immigrants detained by the FBI immediately following the bombing of Pearl Harbor. Like the other community leaders, he was charged with no crime. Her father died after six weeks in prison. Three months later,

Kochiyama and her family were moved to the Santa Anita assembly center and then to the Jerome, Arkansas concentration camp. Within these all-Japanese environments, her ideology changed from colorblindness to racial awareness. But it would take another two decades before awareness turned into an activist practice.

During the war, Kochiyama met her future husband, Bill Kochiyama, a Japanese American soldier. When they married in 1946, Yuri moved from her father’s middle-class house to a tiny one-room sleeping unit in New York City, where Bill had grown up. Oblivious to economic status, except to shun her parents’ high-tone lifestyle, she found exciting opportunities to learn about the lives of her working-class black and Puerto Rican neighbors. Yuri and Bill’s life was filled with their six children’s activities and hosting large social gatherings every weekend, particularly supporting Asian American soldiers.

Her family’s move to Harlem in 1960, to obtain a larger housing project unit, changed her life beyond her imagination. That Yuri and Bill became involved in local civil rights struggles, including quality inner-city education, was predictable enough. Her Christian background taught her about helping the poor and serving others. She had followed the media coverage of the evolving civil rights movement and invited local civil rights speakers to her weekend gatherings. But becoming radical through Malcolm X was surprising. Young urban militants gravitated toward Malcolm, whereas Kochiyama was a middle-aged mother who had grown up well integrated into white America. She herself was surprised by the persuasiveness of Malcolm’s words and boldness. But living and waitressing in Harlem connected her with the daily experiences of poverty and anti-black racism and to Harlem’s history of black cultural and political resistance. After her introduction to Malcolm X in 1963 and subsequent attendance at his Organization of Afro-American Unity Liberation School, she quickly adopted eclectic black radicalism. When gunshots fatally wounded Malcolm, Kochiyama rushed to the stage to offer help and a *Life* magazine photo memorialized her connection with Malcolm.

By the late 1960s, Kochiyama was working with the most militant black organizations, namely the

Republic of New Africa (RNA), whose desire for a black nation in the U.S. South symbolized the ultimate nationalist goal. With her journalist training, she wrote numerous articles using antiracist and anti-imperialist frameworks and stressing self-determination and Third World solidarity.

When her comrades became victims of FBI and police repression, Kochiyama began what would become her most relentless area of struggle—defending political prisoners. She stayed up until the wee hours of the night writing letters to political prisoners, based in part on her own experiences of confinement during World War II when she eagerly awaited the mail and launched an extensive letter-writing campaign to Japanese American soldiers. By the 1970s, Kochiyama became a hub of political prisoner support.

Kochiyama was among the foremost leaders of the Asian American Movement, as it emerged in the late 1960s. Viewed as a dynamic and knowledgeable speaker, she represented Asian Americans for Action (AAA) at Hiroshima Day events to protest nuclear proliferation and U.S. military and imperialist expansion into Okinawa, Vietnam, the Philippines, and Hawaii. She worked with AAA to support the development of local Asian American Studies programs. When Asian American youth, viewing her as a role model, traveled from California and elsewhere, she invited them into her home, as she had so many others, served food, and told engaging stories of struggle, mostly focused on others.

In the 1980s, Kochiyama worked for Japanese American redress, connecting it to black reparations. Since 1990, she has organized Asian American support for political prisoners, particularly former Black Panthers Mumia Abu-Jamal and the San Francisco 8 and Japanese national Yu Kikumura. Her leadership on behalf of prisoner David Wong led to the overturning of his wrongful conviction and his release from prison.

The *Life* magazine photo of Kochiyama cradling the dying Malcolm X is symbolic of her activism. First, her nurturing posture models an alternative leadership style, one that emphasizes humanizing ways and the importance of social networks, even as she supports armed struggle and radical social transformation. Second, she is a symbol of Afro-Asian and Third

World solidarities, contesting the notion of a racially exclusive black nationalist movement. Third, she visualizes Asian American activism, in contrast to the model minority logic that renders transgressive political resistance nonessential and invisible.

Two biographical books (one in English and one in Japanese), her own memoirs, and a documentary project focus on this prominent Asian American activist. She was nominated for a Nobel Peace Prize, among countless awards. She is constantly sought after as a speaker and resource person. Her move to Oakland, California in 1999 to be closer to her children enables her work with West Coast activists. Remarkably, on a daily basis for close to five decades, Kochiyama has steadfastly struggled for social justice.

Kogawa, Joy (1935–)

An accomplished novelist and poet, Joy Kogawa is best known for the novel *Obasan*. Scholars agree that Joy Kogawa's novel about the internment of Japanese

Canadians, *Obasan* (1981), is a seminal book for its treatment of the unlawful incarceration of 21,000 Japanese Canadians in labor and detention camps in British Columbia during World War II. *Obasan* tells the story of one family and their wartime experiences from the viewpoint of Naomi Nakane, a third-generation Japanese Canadian school teacher raised by her fraternal uncle and aunt (obasan). The death of the uncle who raised her sparks Naomi's mental journey through her memories as she comes to terms with her childhood experience of the war and her mother and father's absence. Naomi's memories are combined with excerpts from Naomi's activist aunt Emily Kato's diaries, newspaper clippings, and government documents Kogawa again follows the family and the Japanese Canadian struggle for redress in the novel, *Itsuka* (1992).

Although Shizue Takashima's memoir was the first book published about the Canadian internment, Kogawa's *Obasan* has a significant readership in Canada and America and is a favorite among scholars. *Obasan* earned the Books in Canada First Novel Award, the Canadian Authors Association Book of the Year Award, the Before Columbus Foundation Book Award, and the American Library Association's Notable Book Award. It was also included in the *Literary Review of Canada's* 2006 list of top 100 books.

Joy Nozomi Nakagawa was born in Vancouver, British Columbia on June 6, 1935, to Gordon and Lois Nakayama, an Anglican clergyman and kindergarten teacher respectively. During World War II, the Nakayama family was forced to move to Slocan detention camp in the southeastern interior of British Columbia and their property, except for personal items, was confiscated by the Canadian government. A 1986 study estimated that Japanese Canadians lost \$443 million in property and wages. Conditions in the camps were poor—the Red Cross facilitated supplemental food shipments from Japan to the camps during the war and the Canadian government spent one-third the per capita amount spent by the American government on its internees. Following the war, Japanese Canadians were given the option of going to Japan or moving east of British Columbia. Joy Nakagawa and her family moved to Coledale, Alberta. When in Alberta, Joy Nakagawa studied at the

University of Toronto and began teaching elementary school in Coledale. She then enrolled in the Anglican Women's Training College and Conservatory of Music in Toronto transferring the next year to another music school in Vancouver. She married David Kogawa in 1957. After having two children together, Gordon and Diedre, and living in British Columbia, Saskatchewan, and Ottawa, the couple divorced in 1968, the same year Kogawa published her first book of poetry, *Splintered Moon*. She worked for the Office of the Prime Minister in Ottawa while writing poetry. Joy Kogawa was active in the Canadian movement for redress, so much so that she stopped writing *Itsuka* during that time and instead took notes. Excerpts from *Obasan* were read aloud in the House of Commons in 1988 when the redress settlement was announced. The government of Brian Mulroney offered a formal apology, a payment of \$21,000 to the survivors, and the reinstatement of citizenship for those who were deported to Japan.

Kogawa is a prolific author and poet who published numerous books of poetry and prose including: *The Splintered Moon* (1968), *A Choice of Dreams* (1974), *Jericho Road* (1977), *Six Poems* (1978), *Obasan* (1981, republished as *Naomi's Road* 1986), *Woman in the Woods* (1985), *Itsuka* (1992 republished as *Emily Kato* 2005), *The Rain Ascends* (1995), *A Song of Lilith* (2000), *A Garden of Anchors: Selected Poems* (2003), and the illustrated children's book *Naomi's Tree* (2008). She is the recipient of a number of honorary degrees and awards: Member of the Order of Canada (1986), a Ryerson Polytechnical Institute Fellowship, an LL.D. from the University of Lethbridge (1991), a Litt.D. from the University of Guelph (1992), an LL.D. from Simon Fraser University (1993), an Urban Alliance Race Relations Award (1994), a Grace MacInnis Visiting Scholar Award (1995), a Lifetime Achievement award from the Association of American Studies (2001), a Litt.D. from the University of British Columbia (2001), Member of the Order of British Columbia (2006), a George Woodcock Lifetime Achievement award (2008), and the Order of the Rising Star from Japan (2010).

Konno, Ford Hiroshi (1933–)

Ford Konno is a former two-time Olympic swimmer. He was born in Honolulu, Hawaii, the son of immigrants from Japan. At the age of 19, Konno competed at the 1952 Summer Olympics in Helsinki, Finland, and was among the first Japanese Americans ever to win an Olympic gold medal. Over the course of his career, Konno set United States and world records in seven distances, ranging from 200 meters to 1,500 meters. He was hailed during his peak in the 1950s as one of the greatest swimmers in the world.

Konno trained at the Nuuanu YMCA, which he had joined when he was nine after spotting a bulletin notice for swimming classes. Under the guidance of Yoshita Sagawa, coach of the Nuuanu YMCA's swim club, the young Konno began to transform into a phenom, setting a world record in the 440-yard freestyle as a high schooler. Konno attended President William McKinley High School in Honolulu, where he found himself in the company of swimming stars Evelyn Kawamoto and William Woolsey. All three would win medals in Helsinki.

After graduating from McKinley in 1951, the 5-foot-6½ Konno enrolled at Ohio State University, one of the dominant schools in men's swimming at the time. During his college years he would win 6 NCAA

and 10 Big 10 Championship titles. He would also claim 18 national Amateur Athletics Union (AAU) crowns and earn NCAA and AAU All-American honors. In 1952, the spring term of his freshman year, Konno briefly left Ohio State to prepare for the U.S. Olympic swimming trials. A severe sinus infection, however, curtailed much of that training and Konno only narrowly qualified for the Olympic team. He was still unable to train at full capacity when he left for Helsinki later that summer.

Despite his lingering sinus problems, Konno gave a spectacular performance at the 1952 Games, medaling in each of his three events. In the 1,500-meter freestyle, Konno took gold with a time of 18:30.3, a crushing 42 seconds faster than the existing Olympic record. He also won a gold medal in the 4 x 200 freestyle relay, setting with his teammates (including William Woolsey) another Olympic record. In the 400-meter freestyle, Konno fell just shy of first, clocking in at 0.6 seconds behind Jean Boiteux of France, and winning silver with a personal best time. The 1952 Olympics were significant to Konno in another way. Previously, no Japanese American had won a gold medal in an Olympic event. At Helsinki, there would be three: Ford Konno, Yoshinobu Oyakawa (also a swimmer from Hawaii), and Tommy Kono (weightlifting).

Four years later Konno competed at the 1956 Olympics in Melbourne, Australia, as a co-captain of the U.S. men's swimming team (Yoshinobu Oyakawa was the other captain). Konno won silver in the 4 x 200 meter freestyle relay, adding a fourth medal to his Olympic total. Not long afterward, he retired from swimming and settled in Hawaii, where he worked as a coach and teacher. He married fellow Olympian Evelyn Kawamoto and is an inductee of the International Swimming Hall of Fame, Hawaii Sports Hall of Fame, and Hawaii Swimming Hall of Fame.

Kono, Tommy (1930–)

Tamio "Tommy" Kono was the dominant U.S. weightlifter of the Cold War Era (1947–1991), and one of the most successful Asian American athletes of all time. He won gold medals in weightlifting in the 1952 and 1956 Olympics, and a silver medal in the 1960 Olympics. Between 1953 and 1959, he won eight consecutive world weightlifting championships, and at one point, he held world records in four different weight classes. During the same years, he also won the physique titles of Mr. Universe three times and Mr. World once.

After retiring from competitive lifting in 1964, Kono coached the Mexican weightlifting team in preparation for the 1968 Mexico City Olympics and the West German weightlifting team in preparation for the 1972 Munich Olympics. From 1972 to 1976, he served as head coach for the U.S. men's Olympic team, and finally, he served as head coach for the U.S. women's Olympic team from 1987 to 1990.

Kono's philosophy can be summarized as follows: (1) Things could be worse, so be grateful for what you have. (2) Take care of your equipment. (3) Success is the result of good technique, carefully done. (4) Approach the bar (and life) as a challenge rather than as something to be beaten.

Kooskia Internment Camp

The Kooskia (pronounced KOOS-key) Internment Camp is an obscure and virtually forgotten World War II detention facility that was located in a remote

area of north central Idaho, 30 miles from the town of Kooskia, and six miles east of the hamlet of Lowell, at Canyon Creek. The U.S. Immigration and Naturalization Service (INS) administered the Kooskia Internment Camp for the U.S. Department of Justice. Over time, the camp held some 265 men of Japanese ancestry who were termed "enemy aliens," even though most of them were long-time U.S. residents denied naturalization by racist U.S. laws.

Immediately following Japan's bombing of Pearl Harbor, Hawaii, on December 7, 1941, numerous Japanese, German, and Italian aliens were arrested and detained on no specific grounds, without the due process guaranteed to them by the U.S. Constitution. They were sent to INS detention camps at Fort Missoula, Montana; Bismarck, North Dakota; and elsewhere. The INS camps were separate and distinct from the 10 major War Relocation Authority (WRA) camps, including Minidoka, at Hunt, in southern Idaho. The WRA camps are often called "internment camps" also, but that term for them is misleading; they should actually be called incarceration camps.

Although there were a number of INS-run Justice Department internment camps throughout the United States during World War II, the Kooskia Internment Camp was unique because it was the only camp of its kind in the United States. Its internees had volunteered to go there from other camps, and received wages for their work. Besides the Japanese aliens, 24 male and 3 female Caucasian civilian employees; 2 male internee doctors, 1 Italian and 1 German; and 1 male Japanese American interpreter occupied the Kooskia Internment Camp at various times between May 1943, when the camp opened, and May 1945, when it closed. Whereas some of the internees held camp jobs, most of the men were construction workers for a portion of the Lewis-Clark Highway, the present Highway 12, between Lewiston, Idaho, and Missoula, Montana, parallel to the wild and scenic Lochsa River.

The Japanese internees at the Kooskia camp came from Alaska, California, Colorado, Connecticut, Florida, Hawaii, Idaho, Illinois, Louisiana, Maryland, Massachusetts, Minnesota, Montana, Nevada, New Jersey, New Mexico, New York, Ohio, Oregon, Pennsylvania, Texas, Utah, and Washington. Well-known

internees at the Kooskia camp included Reverend Hozen Seki, founder of the New York Buddhist Church, and Toraichi Kono, former employee of Charlie Chaplin. The Kooskia Internment Camp also housed Japanese from Mexico, as well as other Japanese Latin Americans whom U.S. government agencies had kidnapped from Panama and Peru in collusion with the governments of those countries. "Digging in the documents" has produced INS, Forest Service, Border Patrol, and University of Idaho photographs and other material. These records, combined with internee and employee oral and written interviews, shed light on the internees' experiences, emphasizing the perspectives of the men detained at the Kooskia Internment Camp.

According to the terms of the Geneva Convention, a 1929 document specifying how prisoners of war should be treated, later extended to cover detainees, internees could not be forced to do this kind of work; therefore, they were all volunteers. Road workers were paid \$55 or \$65 per month, with a \$10 deduction for special clothing, whereas camp workers, in the kitchen, laundry, and so on, received only 80¢ per day. Consequently, there were few volunteers for camp work. By early May 1943, 104 men from the Santa Fe Internment Camp had definitely committed to Kooskia and had solved the camp operation problem. After the men decided to distribute all the income equally, 25 of them agreed to perform the required kitchen, laundry, and other support tasks.

At first, the men appreciated their scenic surroundings and the lack of the usual barbed-wire fence. Soon, however, they realized that conditions were not as had been promised. The Kooskia camp superintendent was a former prison administrator, and the Kooskia internees especially resented his treatment of them as prisoners rather than internees. The disgruntled internees prepared a lengthy petition detailing their complaints. They requested eyeglasses, adequate clothing, wage adjustments, better dental care, and better emergency medical and first aid facilities, and they asked that they be treated as internees, not prisoners.

Because the volunteer internees were crucial to the success of the road-building project, the next few months saw many changes and improvements at the Kooskia camp in response to their petition. In mid-

November 1943, morale was helped considerably when the superintendent resigned and was replaced with a career INS officer, who treated the internees with respect and compassion. Only one other group of internees, at the Lordsburg, New Mexico, Internment Camp, had earlier used their knowledge of the Geneva Convention to such great advantage. Following a successful strike, the Lordsburg camp superintendent was ultimately replaced. Some of the Kooskia internees had previously been at the Lordsburg camp so were doubtless aware of their rights under the Geneva Convention. Their successful petition allowed them to regain some control over their lives.

Because of the Geneva Convention requirements, the men at the Kooskia Internment Camp were better fed and housed than the Japanese Americans who were in the WRA incarceration camps. The Kooskia internees could even get beer. This especially made for some hard feelings with local Caucasian American residents, who, because of shortages, could not get beer themselves.

The Kooskia Internment Camp was a successful experiment in using Japanese alien internees as volunteers for building a portion of the Lewis-Clark Highway between Idaho and Montana. Besides helping a much-needed road progress toward completion, the project enabled the unconstitutionally incarcerated internees to again become productive members of society. Once their early grievances were resolved, they became exemplary workers, earning praise and respect from their Caucasian supervisors and from INS personnel. Although the work was tiring, difficult, and sometimes even dangerous, the men appreciated the opportunity to receive fair wages in exchange for performing useful work, thus allowing them to regain much of the self-respect that many of them must have lost through the humiliation of having been so unjustly interned.

Korea, U.S. Punitive Action in (1871)

The U.S. Punitive Action of 1871 was the first U.S. military campaign in Korea. The campaign was ordered by the U.S. government to investigate the destruction of the American merchant ship *General Sherman* in 1866 on Taedong River near the present-day North Korean capital city of Pyongyang. The month-long campaign resulted in the loss of 300 Korean and 3 American lives.

In the aftermath of the Kanagawa Convention in 1854 that opened up Japanese ports to Western trade, the U.S. and European powers were eager to develop trade relations with Korea. However, Korea was at the height of its anti-Western sentiments as the Joseon Dynasty was in the midst of an anti-Catholic crackdown that resulted in the execution of French missionaries and Korean converts: in the same year that *General Sherman* was destroyed, French soldiers invaded Ganghwa Island in Korea as punishment.

An armed merchant ship, *General Sherman* was commissioned by the trading company Meadows and Company and sailed out of Tianjian, China. Escorted by Chinese junk boats across the Yellow Sea, the ship entered Taedong River alone on August 16, 1866, and made its way toward Pyongyang. When *General Sherman* failed to stop at the Keupsa Gate, fighting ensued and all of the officers, passengers, and crewmen were killed. Among them was W. B. Preston, an American trader and the owner of the vessel.

In response to the *General Sherman* incident, the U.S. government ordered a naval expedition into Korean waters to investigate the incident and to secure a treaty from the Korean government that would guarantee the safety of American sailors shipwrecked on Korean shores. The expedition consisted of significant force and included five warships (USS *Colorado*, USS *Alaska*, USS *Palos*, USS *Monocacy*, and USS *Benicia*) that were manned by 500 sailors and 100 marines. Reflecting the importance United States placed on this effort, the expedition was led by Rear Admiral John Rodgers and Frederick F. Low: Admiral Rodgers led the Navy's Japan Office in Washington, D.C. and had commanded the Marines in the Seminole Wars in Florida; Low was the U.S. ambassador to China at the time of the expedition and was a former governor of California. As the ships entered the Han River, Korean soldiers—following a standing order that no foreign ship should enter the river that connected the capital city of Seoul with the Yellow Sea—fired on two of the ships. In response, Admiral Rodgers and Ambassador Low sought an official apology within 10 days. With no official response, U.S. forces attacked a series of Korean installations near the present-day port city of Incheon.

From June 10, 1871, U.S. forces attacked, beginning with Choji Garrison on Ganghwa Island and then moved on to Deokjin Garrison, Deokjin Fort, and Gwangseong Garrison. Armed with stationary cannons and matchlock rifles, the Koreans were no match for the U.S. ships and marines armed with howitzers and Remington rifles. The Korean forces were quickly routed and in the only significant battle at Gwangseong, on June 12, 1871, 243 Koreans were killed with only three American deaths. The United States took 20 prisoners to be used as bargaining chips to negotiate a treaty with the Korean government but without any positive response from the Korean side. Faced with this recalcitrance, the last U.S. ship left Korea on July 3 and returned to China, which brought the incident to a close.

Korea's isolation would not last very long. Four years after the U.S. punitive action, in 1875, a Japanese warship *Unyo* would sail into the same waters near Ganghwa Island and would likewise

be fired upon. One year later, the Japanese would come back to Korea, this time with gunboats and a demand for a treaty that would result in the Japan-Korea Treaty of 1876 and a protracted and relentless movement toward full annexation by 1910. Korean historians find it hard not to speculate about what would have happened if the Korean government had negotiated with Admiral Rodgers and Ambassador Low in 1871. Korean historians view the U.S. Punitive Action in 1871 as one of many clear examples of the Joseon Dynasty's inability to grasp the new political complexities of East Asia in the age of imperialism.

The Korea Times

The Korea Times is the oldest and largest Korean-language newspaper published in the United States. It was founded in 1969 in Studio City, California, in the San Fernando Valley, before moving to Los Angeles's Koreatown at 3418 West First Street in 1971. Currently, *The Korea Times* office is located at 4525 Wilshire Boulevard in Los Angeles.

There are 10 bureaus in the United States: Los Angeles, New York, Washington, D.C., San Francisco, Chicago, Seattle, Atlanta, Texas, Philadelphia, and Hawaii. There are also two bureaus in Canada: Vancouver and Toronto; and two in South America: Argentina and Brazil.

The Korea Times's parent company, *Hankook Ilbo*, was founded in Seoul in 1954 by Key-Young Chang, who was the former president of the Korean vernacular *Chosun Ilbo*, vice governor of the Bank of Korea, and deputy premier-economic planning minister of South Korea. His son Jae Ku Chang ran *The Korea Times* Los Angeles from 1969 to 1981, and is currently the chairman of the *Hankook Ilbo-Korea Times* Media Group in Korea. Another son, Jae Min

Chang, is the chairman, chief executive officer, and publisher of *The Korea Times* Los Angeles and head of the *Korea Times* U.S.A. operations. Both sons are officers of the *Hankook Ilbo* in Korea; Jae Ku Chang is the chairman and Jae Min Chang is the director.

The Hankook Ilbo also publishes *The Korea Times*, an English-language daily in Seoul, Korea. *The Korea Times* in Korea published its first issue on November 1, 1950—five months after the start of the Korean War. Dr. Helen Kim, a journalist and educator, who was the first president of Ewha Womans University, was the first publisher. Key-Young Chang took over on April 23, 1954; it is the longest-running independent daily in South Korea.

In the United States, *The Korea Times* publishes Monday through Saturday, as well as printing weekly and monthly magazines. It owns two radio stations: Radio Seoul in Los Angeles (KFOX AM 1650) and Honolulu (KREA AM 1540), which broadcast in the Korean language. *The Korea Times* also runs KTN-TV, a Korean-language television network for the Los Angeles area.

The Korea Times is an active corporate sponsor to community events, such as The Los Angeles Korean Festival; *The Korea Times* Music Festival at the Hollywood Bowl; the Korean Festival and Parade, New York; and the Korean Festival, Honolulu. In 1992, *The Korea Times* was one of the main organizers for the relief effort following the Los Angeles riots.

In 2000, *The Korea Times* Los Angeles, Inc. and Leonard Green & Partners, L.P. formed AsianMedia Group and acquired International Media Group to create a diversified media company in the United States for the Asian community. AsianMedia Group owns television stations KSCI (LA 18) in Los Angeles and KIKU (Channel 20) in Honolulu. In 2007, *The Korea Times* U.S.A./*Hankook Ilbo* announced an arrangement with *The New York Times* to publish *The International Weekly*, a *NYT*-distributed edition, for the first time in the United States.

In 2010, Jae Min Chang was the lead donor for *The Korea Times-Hankook Ilbo* Chair in Korean American Studies at the University of California, Los Angeles. *The Korea Times* in the United States has an unaudited circulation of 254,000.

Koreagate

Koreagate was a 1970s political scandal involving members of the Korean American community. It began in the fall of 1976, when the press reported that agents of the South Korean government had illicitly funneled millions of dollars in cash and gifts to over 100 U.S. congressmen. Occurring shortly after the 1974 Watergate scandal, the allegations of further government impropriety became a major news story, which the press dubbed “Koreagate.”

The origins of Koreagate began in the spring of 1970, when the Nixon administration proposed the withdrawal of 20,000 U.S. troops from South Korea. South Korean leaders were alarmed not only because they viewed the presence of U.S. troops as a bulwark against North Korea and domestic unrest, but they also feared that the Americans would further reduce economic and military aid. The Nixon administration nevertheless began withdrawals to appease public and congressional calls to downsize U.S. military commitments abroad.

Following the first round of troop reductions, South Korean officials decided regular diplomatic channels would not be enough to overturn U.S. policy. Before this time, the South Korean government had not engaged in substantive lobbying efforts in the United States. With the approval of President Park

Chung-hee, a large-scale lobbying campaign was initiated in the fall of 1970. Its aim was to curtail further troop withdrawals and increase U.S. military aid to South Korea.

The Korean Central Intelligence Agency (KCIA) was charged with coordinating a three-pronged campaign to influence U.S. policy. The first component of the campaign was to lobby U.S. congressmen. Tong-sun Park, a South Korean businessman educated in the United States, was the central figure in establishing contact with members of Congress, to whom he funneled cash and other gifts from the South Korean government. The second component of the campaign was to generate pro-South Korean public opinion through various cultural organizations and educational institutions. Among the recipients of funds from the South Korean government were the Unification Church of Sun Myung Moon and several prominent universities including Harvard University and the University of Washington. The third and final component of the campaign was to deploy KCIA agents in opposition to members of the Korean American community who publicly opposed the South Korean government. The latter activity became increasingly prominent in 1972 following the passage of the *Yushin* Constitution in South Korea, which greatly curtailed the rights of Korean citizens and extended Park’s tenure indefinitely. The KCIA-directed campaign initially appeared effective. Congress halted further troop reductions and approved a five-year \$1.5 billion military aid program to South Korea.

Following the passage of the *Yushin* Constitution, the increasingly authoritarian measures taken by the South Korean government came to the attention of human rights advocates within Congress. Led by Congressman Donald Fraser (D-MN), the House Subcommittee on International Movements and Organizations began a series of investigations into the human rights abuses around the world in 1973. One such investigation revealed that the South Korean government had been using the KCIA to harass Korean Americans. To the Fraser subcommittee, Lee Jai-hyon (a former South Korean diplomat) confirmed KCIA agents intimidated and harassed Korean Americans. Spurred by Lee’s testimony, Fraser launched a full-scale investigation into the KCIA’s activities in

the United States. Although the investigation initially focused on the harassment of Korean Americans, it eventually expanded to cover all three components of the KCIA-directed campaign. The results of the investigation were revealed during a series of public hearings that began in the spring of 1976.

By the fall of 1976, the details of KCIA-led activities made headlines across the United States. Using the details provided by the Fraser investigation, news outlets produced a barrage of stories about the KCIA's activities. They paid particular attention to Tongsun Park's role in bribing members of Congress. One news story identified the event as the most serious case of congressional corruption ever uncovered. Over the course of the next two years, media scrutiny persisted and the scandal came to be known as "Koreagate." The Fraser investigation led to a series of follow-up investigations by the House and Senate Ethics Committees as well as the Department of Justice.

Shortly after the Koreagate scandal broke, Tongsun Park fled the country. It was only after the U.S. government agreed to give Park immunity from prosecution that he agreed to return and testify about his involvement. In the spring of 1978, he testified before the House and Senate Ethnic Committees. Although denying he was a South Korean agent, he admitted to giving nearly \$1 million to various congressmen and to conspiring with Congressman Otto Passman (D-LA) to buy influence in Congress. Following Park's testimony, public interest in the affair declined. In 1979, the U.S. government dropped all charges against Park and closed the Koreagate investigation.

In the end, only two congressmen were charged with crimes stemming from Koreagate (Hanna and Passman); three others were given reprimands by the House Ethics Committee. This fell far short of allegations in the press that over 100 congressmen accepted bribes from South Korean agents. The lack of substantial convictions has led some observers to conclude that Koreagate was product of exaggerated press reports and political partisanship.

The publicity generated by Koreagate did have a negative impact on the perception of Koreans and Korean Americans in the United States. In addition to Tongsun Park, several other Korean Americans were

implicated, including businessman Hancho Kim, congressional aide Suzi Park Thomson, and Unification Church employee Park Bo-hui. The negative publicity also reinforced stereotypes that Asian Americans were not completely loyal Americans and generated public doubts about the activities of the South Korean and other Asian lobbies.

Korean American Churches

In 2010, there were nearly 4,000 Korean American churches that played a significant role in shaping the experiences of Korean immigrants, their families, and communities in the United States. From its early years, the Korean American church has been remarkably successful in attracting a significant number of Korean immigrants to its ministry and in establishing itself as the center of the immigrant community, compared to other Asian immigrant churches. The effectiveness of the church's ministry to second- and third-generation Korean Americans, on the other hand, has been less clear. The aging of the post-1965 first-generation immigrants and the continuing decline of immigration from Korea are, however, increasingly linking the institutional

survival of the church to its ability to serve not only Korean immigrants but also their American-born descendants.

History of Korean American Churches

Since the first group of Korean immigrants arrived in the United States in 1903, a striking pattern has been that a high percentage of these immigrants were already Christians. Although the majority of those who lived in early twentieth-century Korea practiced Confucianism, Buddhism, Shamanism, or other indigenous religions, Christianity was beginning to grow rapidly throughout the peninsula of Korea, especially after a wave of Christian spiritual revivals (1903–1910). Furthermore, as Korea began to experience the increasing oppression of Japanese colonial rule, many American missionaries actively recruited and urged Korean Christians to immigrate to the United States and start a new life in a “Christian nation.” Between 1903 and 1920, up to 40 percent of the 8,000 Koreans who immigrated to the United States were confessing Christians.

Partly because of this phenomenon of selective migration, early Korean American churches quickly and successfully established themselves as the center of Korean immigrant communities in Hawaii and in the U.S. mainland. Between 1910 and 1945, these congregations functioned as the political and sociocultural hub of the immigrant community, playing a prominent role in resisting and fighting Japanese occupation of the homeland. Thousands of Korean immigrants, deeply yearning for the liberation of their homeland, actively participated in church-sponsored activities. Being a church attendant and being a patriot were essentially synonymous. By 1918, there were a total of 39 Korean immigrant churches in Hawaii alone.

Although these churches were very much appreciated by lonely and exiled first-generation immigrants, they seem to have failed to win the loyalty of the second-generation young people. Although their parents’ churches offered various programs that aimed to teach American-born youth the Korean language and culture, to encourage them to embrace their parents’ patriotism and their ethnicity with pride, these efforts largely failed. In Hawaii, as the American-born

entered adulthood, they abandoned their parents’ churches, causing many Korean immigrant churches to close their doors as the pioneering immigrants passed away. The future outlook of the Korean American church seemed quite pessimistic until new immigrants from Korea began to arrive in large numbers again after 1965.

Post-1965 Korean American Churches

After the passage of the Immigration and Nationality Act of 1965, the fresh infusion of new immigrant families from Korea brought remarkable growth and vitality to the Korean American church once again. Today, there are nearly 4,000 Korean immigrant churches located not only in large metropolitan areas where Korean immigrants are concentrated but also in remote areas where only a handful of Korean immigrant families are clustered. Given that there are approximately 1.1 million Korean Americans, there is one immigrant church per 300 Korean immigrants.

In addition to the ubiquitous presence of Korean American churches in the United States, recent studies also indicate that a very high percentage of Korean immigrants regularly attend their immigrant congregations. It is estimated that over 80 percent of the sampled Korean immigrants attend their Korean American church weekly. Given that only about 25 percent of the populations in South Korea are Christians, this significant increase in church participation among Korean American immigrants points partly to the effectiveness and vitality of immigrant church ministries.

As religious institutions, one of the major functions Korean American churches perform is to provide spiritual support and guidance to their immigrant members as they seek to find meaning in and a source of strength for their experiences of “dislocation.” In addition to Sunday morning worship services, most Korean American churches also offer weekly or even daily early dawn prayer meetings, mid-week worship services, as well as weekly “district group” Bible study meetings. Both the frequency and intensity of these spiritual gatherings are designed to help congregation members to overcome the various challenges of their

immigrant lives by equipping them with the necessary spiritual and moral resources.

As is the case in Korea, Korean American churches are predominantly Protestant, with less than 15 percent being Catholic. The largest denominational affiliation is with various Presbyterian churches (about 40 percent of Korean American Christians attend Presbyterian churches). Also, recent studies indicate that whether they belong to mainstream or evangelical denominations, most Korean American churches are characterized by conservative theology and practices. Another notable spiritual characteristic of Korean American churches is their commitment to world missions. Most congregations actively support many Korean American missionaries that are sent out to different parts of the world while also annually sending out their own short-term mission teams to provide various humanitarian services as well as to participate in different evangelistic activities.

In addition to their spiritual function, Korean American churches also perform a number of critical “nonreligious” functions to meet the particular needs of its members. First, they provide their lonely immigrant members a deep sense of belonging and psychological comfort. As they gather regularly for both official and informal gatherings, immigrant members and their children are able to deepen their relationships with other Korean Americans and to enjoy shared cultural practices and artifacts. Because they are the only Korean American institutions that meet regularly and frequently, for many Korean immigrant families, their Korean American churches serve as their most important, if not only, Korean American community.

In addition, Korean immigrant churches also function as social service agencies, providing a wide range of services, ranging from providing information about employment and housing opportunities to classes that help members prepare for the U.S. citizenship examination. Particularly, most churches are intentional about meeting the multigenerational needs of immigrant families, recognizing many significant pressure points these families encounter. Many congregations provide services for the elder members of their church, programs that aim to provide a sense of connectedness and of being honored, which is important for these members who can particularly feel isolated

and often neglected in this foreign land. At the same time, these churches also offer programs for the second-generation children, seeking to introduce them to various aspects of their ethnic culture and to help them develop a positive view of their ethnic heritage and identity. For many second-generation adolescents, the Korean American church and its youth ministry play a particularly seminal role in their ethnic identity formation, helping them to grow as bicultural individuals. Given that the Korean American church is the only organization that regularly provides a wide range of services to most Korean American immigrants and their families, they continue to play a central role in shaping the lives of their members and of Korean immigrant communities.

Although these congregations, on the whole, are making many positive contributions to the lives of Korean immigrants and their families, they can also be a source of stress and conflict for their members as they continually struggle with painful schisms and perpetuate practices such as excluding women from key leadership roles. Furthermore, as a growing number of American-born individuals enter young adulthood and advocate new models of ministry, these efforts are often met by the first-generation leaders’ strong opposition, thus creating intergenerational conflicts in many Korean American churches. Discouraged by their church experiences and bleak future prospects, many frustrated second-generation Korean American church leaders and members began deserting their immigrant churches in large numbers in the 1990s, initiating what many concerned Korean American church leaders call “the Silent Exodus” of second-generation young people.

Korean American Churches and Second-Generation Participation

Recent studies indicate that although the “silent exodus” of second-generation young people is continuing, these young people are not permanently disassociating from Korean American churches. Although some are joining pan-Asian American churches or predominantly white megachurches, a significant number of them are intentionally affiliating with a growing number of English-speaking Korean American congregations that are independent from Korean immigrant

churches. These autonomous second-generation Korean congregations are growing in many metropolitan areas in the United States as they attract a growing number of second-generation young people who seek to find a community in which they can continue their spiritual journey in their own way whereas continuing to work on their bicultural ethnic identity. Corporately, these emerging congregations also seek to develop their own distinctive congregational identity and mission, selectively appropriating certain theological and cultural resources from Korean immigrant churches as well as from the broader ecclesial communities. Although holding on to their unique second-generation Korean American congregational identities, these autonomous English-speaking congregations also strive to welcome those who come from other ethnic backgrounds, thus gradually expanding the group boundary and inevitably their group identity.

Surprisingly, there are also indications that a growing number of second-generation adults who have previously attended predominantly white congregations or panracial Asian American churches for many years are returning to Korean American congregations, including to those English-speaking congregations that are a part of a larger Korean immigrant church. One significant reason why second-generation Korean Americans have an evolving relationship with the Korean American church is because as they go through different life stages, their view toward their own ethnic identity and thus toward their own ethnic community of faith continuously changes. As second-generation Korean Americans parent children entering adolescence, a period in which the constructing identities—including ethnic identity—become significant, many are returning to Korean immigrant churches to offer their children a community in which they can explore and develop their own ethnic identities. Furthermore, as they play an increasing role in caring for their aging first-generation parents, these second-generation adults look for churches that can meet the needs of the multiple generations in their families.

For the moment, many second-generation Korean American congregations, whether they are independent of or are connected to Korean immigrant churches, are experiencing steady growth. Based

largely on the past experiences of European immigrant churches, many had assumed that Korean American churches would either gradually disappear as the number of first-generation immigrants declined or they would become “deethnicized.” However, unexpected growth and signs of the reversal of the “Silent Exodus” cause one to pause and think more reflectively about the complex intersection between religion and ethnicity in the United States and the future of Korean American churches.

Korean American Community Foundation (KACF)

The Korean American Community Foundation (KACF) is a philanthropic nonprofit organization

founded in New York in 2002 to serve the Korean and Asian American communities. Since its inception, KACF has awarded nearly \$2 million in grants to community organizations that serve individuals and families in need. Part of their mission is to raise awareness toward a culture of giving within the Korean American community.

The need for KACF rose in the wake of the 1992 Los Angeles riots to preempt interethnic conflicts and to community build in the neighborhoods in which Korean Americans had settled and established businesses. With the financial success of some in the community, KACF was established to introduce philanthropy outside of church and business associations, which were traditionally charity recipients.

Wonil Cho, then-Korean Consul General in New York City, held a meeting with 30 Korean American professionals from New York at his residence in the fall of 2002 to propose the A Dollar A Day For Our Neighbors program, which he had successfully launched during his ambassadorial stints in New Zealand and Vietnam. This led to the formation of KACF. Board members were selected; part of their service was to secure funding from three to five patrons.

Many of the donors include large corporations, such as Citi, Tiger Asia, Samsung, Lexis-Nexis, Reed Elsevier, Verizon, AmorePacific USA, US Bank, Remy Martin, and Korean Airlines. SungChul “Sonny” Whang, associate general counsel of Olayan America Corporation, is a founding member and four-year president of KACF and is highly regarded as an outstanding leader who contributed to the nonprofit’s success.

The Steering Committee, part of KACF’s organizational structure, is comprised of young, upwardly mobile, high-achieving 20-something professionals. Their work ethic and enthusiasm have also contributed to the efficiency of KACF; their coveted role gives them the ability to interact with the more established board members, who mentor the younger generation.

KACF has five priority areas: economic security, health, safety, senior empowerment, and youth empowerment. Its tenets include: raising and disseminating funds to social service organizations; providing financial aid to grantees; creating an awareness of Korean American social service needs; building a

culture of giving; and building bridges with other ethnic communities.

In 2005, KACF received a Ford Foundation grant for interethnic cross-racial community and relationship building and hosted the Inter-Community Collaborative Forum Series and awarded four Inter-Community Development Fund grants.

As part of the Ford grant, the foundation commissioned a case study of KACF as an example of a “fledgling and ethnic-centric” nonprofit. The article was written in 2008 by Michelle Greenwald, Professor of Marketing at the Stern Graduate School of Business at New York University and the Graduate School of Business at Columbia University. An addendum was added in 2009.

There are two large annual KACF fundraisers: a gala held every year since 2006, and a golf tournament held since 2010. Attendees at the gala have included UN Secretary Ban Ki Moon, Dartmouth College President Jim Yong Kim, and the Mayor of New York City Michael Bloomberg. In 2011, KACF was chosen as a Bronze-Level charity of the 2011 ING New York City Marathon.

Korean American Ethnic Economy

Koreatown in Los Angeles is an example of an “ethnic enclave,” an example of an “ethnic economy,” and lastly, it is also an example of an “ethnic enclave economy.” These three terms, and their relative distinctions and definitions, encompass the main theoretical debates and concepts as discussed in the literature. Ethnic enclave literature is primarily focused on the enclave as a part of the “ethnic economy,” meaning a distinct secondary economy that coexists with the “primary economy.” The duality posited by this literature has often suggested that secondary economies such as

represented by the ethnic enclave have two main trajectories; one being that the ethnic enclave is a temporary place-based economic structure that allows for immigrant labor and immigrant entrepreneurs a space in which to transition into American society.

It was once theorized that the ethnic economy is not only secondary, it is temporary, allowing for the gradual assimilation of ethnic minorities into the broader primary, or white, economy wherein ethnic ties, kinship ties, and social networks gradually become less important as language and culture become less of a barrier to economic mobility. This has been widely contested by the work of other scholars, who argue that although the ethnic economy may be “secondary” or bounded, the move of immigrants away from the initial enclave does not necessitate a cutoff from the social and economic ties to ethnic spaces or networks.

The most important theories and concepts from Asian American studies that inform scholarly understandings of ethnic enclaves and ethnic enclave economies include those put forth by Alejandro Portes, Min Zhou, Victor Nee and Jimmy Sanders, Timothy Fong, Wei Li, and Ivan Light and Edna Bonacich, among others. But the debate and interaction between scholars has led to contemporary definitions and mutations on how the ethnic economy has come to be seen: something that is beyond pure economics and is more than a physical neighborhood.

Light and Bonacich, as early scholars of the “ethnic economy,” were originally interested in the emergence of a dominant group of co-ethnic or single-ethnic entrepreneurs. They first looked at Korean ethnic entrepreneurship in Los Angeles as a unique example of a recent immigrant group that appeared to arrive with start-up capital, and had a proclivity for self-employment. Their definition of the ethnic economy had no spatial relationship—and was in fact, not bounded by any particular geographic neighborhood but rather motivated by availability of land and low rents. Hence, their early study looked at any entrepreneur of Korean ethnicity (regardless of location) as being included in the “ethnic economy.”

Asian American scholars have challenged limited notions of the enclave as a preassimilated place solely for new immigrants. Peter Kwong, for example, writes

that there is a “new” Chinatown, a post-1965 Chinatown that changed with the modification of immigration laws. The new Chinatown is not just a place for foreign-born immigrants to acclimate to U.S. social and economic frameworks, but that in fact, Chinatown persists: both in the American imagination and reality. He argues that Chinatown kept growing with post-1965 overseas investment and the arrival of a broader spectrum of class groups among these immigrants. The work of Min Zhou has reaffirmed this argument about the paradoxes of the ethnic enclave. Along with Logan and Portes, Zhou concentrates on the ethnic enclave economy as “outside” the dominant framework of segmented labor market theory. For Zhou, the ethnic enclave economy is not an extension of the secondary economy but rather an alternative that has developed on its own principles. These principles include the ability to “protect” the various sectors of the ethnic economy using ethnic capital and labor. Thus, the enclave economy is not an example of “failed assimilation” but a form of “assimilation without acculturation.” Zhou and Logan were also among the first to argue that the enclave economy reflected a labor market that was distinct from the primary economy but not relegated to the secondary economy.

The literature on ethnic enclaves and ethnic economies are traditionally seen as separate literatures, albeit related. As Ivan Light discusses in “Beyond the Ethnic Enclave,” enclave literature derives from labor-segmentation literature whereas ethnic economy literature derives from the concept of the middleman minority and his/her role as an economic buffer. Light’s primary argument is to say that although the enclave is representative of the ethnic economy, it does not encapsulate the ethnic economy in its entirety, as the flow of capital, resources, and people are not bound in quite the same sense that the enclave is. To this, other scholars have added that although the ethnic economy does spread beyond the enclave, it is not reasonable to assume that people are any less tied to the ethnic enclave as a social, symbolic, and political place of being and belonging.

Initially the difference between the enclave economy and the ethnic enclave economy was that the enclave required clustering of firms. In contrast to the model described by Light and Bonacich, Alejandro

Portes developed the concept of the “ethnic enclave economy”—where there must be a coethnic cluster of business firms in a particular location, and where the clientele are coethnic consumers. For Light and Bonachich it was only the self-employment decision of the “ethnic” person that mattered in this definition of the ethnic economy. No coethnic employees were necessary, nor was the ethnicity of the clientele an important part of the definition of an ethnic economy.

Just as the study of ghetto formation now looks beyond the “inner-city” in its analysis and at pockets of extremely poor, highly segregated neighborhoods in suburban areas, the study of ethnic enclaves has also begun to incorporate the reality of “pocket” entrepreneurial networks in the suburbs, and the formation of satellite Chinatowns and Koreatowns. The emergence of ethnic enclaves outside of the central city provide further support for Zhou’s argument for looking at the social underpinnings of the ethnic enclave. Although the enclave is certainly part of the “ethnic economy,” the physical place is as much about social processes and networks as it is about internal economic sustainability. Even though different ethnic communities continue to grow and establish areas of consumption and production outside of the city-proper, the urban ethnic enclave continues to provide a symbolic center for culture, as well as a place that is still most convenient (in terms of transportation, jobs, and housing) for newer immigrants, and an economic center or central business district.

Had this important antiassimilationist intervention not been made, it would have been difficult to understand how suburban ethnic enclaves and their central city counterparts related to one another—or, in fact, coexist at all. Despite Koreatown’s visible presence in New York’s Manhattan, as Kyeyoung Park portrayed in her book, *The Korean American Dream*, the majority of Korean Americans resided (both initially as well as currently) in the borough of Queens. Park and Zhou were able to bring to the forefront something other than the perceived “survival” functions or purely economic function of the ethnic enclave. In her 2004 article, “Revisiting the Ethnic Enclave,” Zhou discussed continued social, cultural, and symbolic importance of the enclave. The presence of satellite Koreatowns in suburban Los Angeles (Garden Grove)

and in Flushing, Queens (New York City) has not diminished the importance of the central city Koreatowns as financial, political, and social centers.

These scholars paved the way for an analysis of ethnic enclaves’ transformation in the latter part of the 1990s and 2000s. Under previous formations in the literature, the ethnic enclave (and its economic functions) was projected to disappear as immigrants assimilated and moved away from inner-city residential areas. Contrary to this belief, the emergence of “ethno-burbs” did not result in the disappearance of Koreatowns or Chinatowns and reaffirmed that the ethnic economy could span multiple physical locations. It is precisely this analysis that also allows the ethnic enclave, despite its “coethnic” or perceived secondary status to develop as a “central business district”—and not merely a ghettoized neighborhood with new immigrant economic functions. The ethnic enclave as a business district is important in current debates especially as more research points to the success of ethnic banking in both Canada and the United States.

The traditional role of the Korean ethnic enclave as the “middleman,” the racial and economic buffer between black and white Los Angeles, has been challenged by the expansion of ethnic enclaves and thus begins to raise new questions in the minds of many—including politicians and economists. Economic sustainability of the enclave (i.e., as nonintegrated with the “primary” economy) is also because of the ongoing arrival of Asian immigrants to the enclave as well as the strong pulse of transnational capital between the United States and sending countries. Zhou has argued that the economic conditions in sending nations strongly shape the type and the quality of transnational activities engaged by immigrant groups. The reality of globalization, and the emergence of global cities, has further created a sense of transnational, or dual nationality, identity among new and old immigrants alike that may also explain the continued growth of ethnic enclave economies.

This growth is perhaps attributable to the distinction that Zhou, for example, makes between “middleman” minorities and “ethnic enclave entrepreneurs”—meaning the ability of certain ethnic entrepreneurs to play dual roles by providing services for and by coethnic groups within the enclave or ethnoburbs. The

economic value of culture, or social capital as a tool for building community, can be seen in some ways as a double-edged sword. Contemporary analyses of enclaves like Los Angeles's Koreatown in particular have redefined Koreatowns beyond residential spaces but as "ethnic enclave economies" for Koreans of multiple class background to live, work, produce, and consume. At the same time, Korean businesses also continue somewhat to operate as "middleman" minorities, as the provision of goods and services has expanded to the highly Latino residential population in the neighborhood, indicating that more multiethnic definitions of Asian enclaves is more appropriate. In the original research regarding ethnic enclaves, only their economic significance was examined as important. This has left room in more recent years to continue to interrogate how spatial ties and social networks are keys to the development of enclave economies. Also, because even the more broadly defined "ethnic economy" usually centers single-ethnic or coethnic forms of economic and social relationships, there is an important next step to be made: the examination of an ethnic enclave economy as multiethnic spaces of production and consumption.

Korean American Farmers in the United States

If one defines farmers broadly to include those farming the land as well as ones working at farm jobs, a farm is the quintessence of the Korean U.S. immigrant history. This is because the very first thing that spawned Koreans' emigration to America was an opportunity for them to work as farmhands on Hawaii sugar plantations. Between 1902 and 1905, under contract with the Hawaii Sugar Planters Association, some 7,000 Koreans came to Hawaii to work Hawaii sugar plantations. Making a living as farmhands continued from Hawaii to the mainland as 2,000 of the 7,000 Korean Hawaii immigrants transmigrated to the West Coast, settling mostly in California.

The Koreans' farm life in California began with picking oranges in Riverside County orchards in

Southern California from 1903. About the same time Central California's growing raisin industry drew Koreans to San Joaquin Valley vineyards to pick grapes. They worked a wide swath of Central San Joaquin Valley, Stockton, Fresno, Visalia, Dinuba, Delano, and Reedley. A bit later, from 1913 on, rice farming by Koreans flourished in California's rice country, in Northern California. Until the fatal 1920 flood, Koreans were growing rice in Colusa, Glenn, and Yuba counties.

How about the modern day Korean farmers? In Southern California alone, we have three date farms, three bee growers, one ranch, one bean sprout grower, one radish farmer, one acorn grower, one nonprofit church retreat/farm, four organic lettuce growers, six organic and nonorganic tree fruit farmers. In Central California, we have another nonprofit church retreat/farm growing a variety of tree fruits. We have Yu Farm in Earlimart, California, specializing in growing organic brown rice. Jason Lee, a third generation Lee Jai Soo rice farm family, operates 15,000 acre rice fields in Maxwell, California, north of Sacramento. Several Koreans operate organic farms in New Jersey and Florida.

In Hawaii sugar plantations, the Koreans lived a life that approximated slave master driven indentured life. Nonetheless, most of Hawaii Koreans were Christians, as many Hawaii immigrant recruits were drawn from Korean Christian community. In every single Hawaiian island where the Koreans worked, they built churches. Churches gave them solace and relief from their hard life. Also, a passion to free their homeland from Japanese colonialism (1910–1945) helped them endure their hardship. The Riverside Koreans had a strong patriotic leader, Ahn Chang Ho, with them. Ahn Chang Ho organized his fellow Koreans to negotiate terms of their contract with employers, learn English, go to church and self-govern their community.

Often disrupting Korean farm laborers were natural disasters that inflicted damages to the California citrus industry. For example, in 1914, a severe frost wiped out almost all of Riverside orchards. This had driven many Koreans to leave Riverside and take up nonfarm jobs in cities. Central San Joaquin Valley Koreans evidently led a poor but stable life because,

in Reedley and Dinuba cemeteries, we have 237 Korean graves. This many Koreans lived and died in California Central Valley. Their church built in Reedley in 1938 is still standing. So are house remnants they lived in and labor camp/boarding houses that functioned as Korean singles' dorm as well as their employment agency.

There were also itinerant Korean farm laborers who never stayed put at one place too long and moved on to next places where harvest seasons began. They called themselves "flying geese" traversing as a work gang up and down the West Coast.

One is mistaken, however, if he/she thinks that they must have lived an idyllic country life enjoying the fresh air and having lots of food on table. Fresh air was mostly a sizzling 100-plus degree heat. Wages were meager, 10 or 15 cents an hour. Rice and pickles were their staple diet. A study of Central California Korean farm laborers of 1929s and 1930s cites some tragic statistics. Of approximately 300 Koreans, there were four cases of suicide, three cases of homicide, and one case of death from malnutrition. It speaks volumes about what their lives must have been like.

The Central California Korean farm story is not all bleak, however. There are success stories. Harry Kim and Charles H. Kim ran a successful nursery and pioneered in growing "fuzzless" nectarines in Reedley, California. They ran their business under the trade name, Kim Brothers, Inc. (not related). They made millions from their fruit tree farming, the first sustaining Korean millionaires, and contributed much to the Korean independence movement.

Han Si Dae of Delano, California, is another success story. Penniless, Han walked into the Delano local Bank of America branch and asked the bank manager to loan him some money to farm. The manager asked if he had any collateral—house, car, or land. Han said none of that. He showed him his bare two hands and said, "this is my guarantee." Eventually, his audacity got the bank manager to loan him \$1,000 in 1923. With it, he leased 90 acres of land. Some 20 years later, it turned into 250-acre farmland worth half a million dollars.

We also have Leo Song and Kim Yong Jeung who founded the first Korean-run jobber, K & S Jobbers in 1925. They brokered fruit wholesale in downtown Los

Angeles. Kim Yong Jeung was intimately involved with Reedley's Kim Brothers, Inc. and Leo Song ran Song Orchard and Packing House in Sultana, Dinuba's next door, in Central California. K & S Jobbers exemplified a fine Korean agribusiness partnership, as did Reedley's Kim Brothers, Inc.

Korean rice farming has a success story too. What made rice farming by Koreans possible was a so-called 10 percent deal. A landowner provided a capital-poor farmer with land, seed, and equipment. The farmer or essentially a sharecropper kept 10 percent of the crop and the rest went to the landowner. The sharecropper was able to use his 10 percent share as his surety to borrow money from the bank. With borrowed money, he leased more land and equipment. This way Kim Chong Lim grew rice and barley on 10,000 acres. He made a fortune. This earned him the appellation of "Rice King." The fatal flood of 1920 decimated just about every Korean's rice field including Kim Chong Lim's.

Another story that needs to be told is a humanitarian deed by Yu Farm in Earlimart, California. In 1990, Yu Farm's owners and founders, Howard and Soo Yu, invited five Chinese Koreans from Chinese Jilin Province to their farm to live on their farmland, work, and learn about modern agricultural technology. In 2000, they invited six Koreans from North Korea to do the same and arranged for them to hold a seminar with agronomists at the University of California, Davis. Yu Farm donated potato, cotton, almond, soybean, and barley seeds to North Koreans. So, they may take them home and plant them to augment their hard-pressed food production.

Modern-day Korean farms are virtually all family owned and operated. They are up against corporate farms but they find their niche in specialty products. For example, vegetables and fruits catering to the taste of Asians and fresh organic produce one sells at local farmer's market. Unlike Japanese, for Koreans succeeding forebears' farm is rare. The modern-day Koreans' agricultural ventures may yield a sustaining Korean farm tradition. For now, at least, much of Korean American farm stories is historical.

Korean American LGBT Movements in Los Angeles and New York

Korean American LGBTIQ (Lesbian Gay Bi Transgender Intersex Queer) social movements have always run parallel with the LGBTIQ activism in South Korea. The first efforts of Queer Korean Americans to form an organized voice against discrimination, as well as provide a support for Queer Koreans date to the early 1990s. What is known of the earliest groups in the United States precede the founding of the first Queer organization in South Korea. The first Korean American LGBTIQ group was Korean Lesbian and Gay Organization (KGLO), founded in New York City in December of 1990. In New York City, this group

was followed by other organizations with more specifically social justice-oriented missions, such as IBAN—the predecessor of the current New York City-based Dari Project. “IBAN” meaning “difference” and “Dari” meaning “bridge,” both signify two elements that seem prevalent in Queer Korean organizing today: first, a need to define justice as an interrelated process that encompasses sexual and gender identity as well as racial and class discrimination of Korean Americans; and second, the importance of transnational relationships and movement building between South Korea and the United States.

The Korean community in the United States is considered to be relatively conservative in their attitudes toward same-sex couples. Scholars often attribute this to Neo-Confucian traditions present in South Korean culture as well as the predominantly Christian affiliation of many South Koreans. Postimmigration to the United States, some of these cultural attitudes among first- and sometimes second-generation Korean Americans remain intact. Although Asian Americans overall disapprove of same-sex marriage, according to a voter survey by Field Poll, Korean Americans disapproved the most among all Asian ethnic groups. Korean American Churches have mobilized large numbers of Korean American voters and financial resources against LGBTIQ marriage, especially. As Judy Han has described, “Korean American religious and civic leaders in Southern California organized a large-scale petition drive to place the California Defense of Sexual Responsibility Act on the November 2000 ballot,” and registered approximately 15,000 *new* voters in the Korean American community to vote in its favor. In response Han and others created a coalition called Korean Americans for Civil Rights (KACR) as a “direct and grassroots response to the first explicitly anti-gay organizing efforts in the history of the Korean American community in California, and possibly in the United States” (Han 2000: 4). This perhaps marked a shift where more socially focused Queer Korean American organizations were utilized to form coalitions with other Asian American and Korean American nonprofit and political organizations.

Queer Korean Americans in Los Angeles and New York are currently organizing in the Korean American LGBTIQ communities, both locally and

transnationally, against discrimination in South Korea and the United States. In New York City, the Dari Project was launched in 2006 after an LGBT town hall meeting hosted at the CUNY Graduate Center. In Los Angeles, Koreans United for Equality (KUE) formed in 2008 in response to an overwhelming number of voting Korean Americans who supported California’s Proposition 8, which was an attempt to eliminate the rights of same-sex couples to be legally married. Although initially catalyzed by the fight for marriage equality, KUE now focuses on empowering queer Koreans in and around Los Angeles, as well as educating and outreaching to the larger Korean American community. Both Queer Korean American groups share common goals in reaching out to increase awareness of Korean LGBTIQ individuals and provide resources that are culturally and linguistically accessible to the broader Korean American community. Alliances with community-based organizations have been very successful, and an indication of growing support among Korean American groups. The Koreatown Immigrant Workers Alliance in Los Angeles (KIWA) hosts “coming out days” in their office, participates in annual pride marches and conducted a survey of Korean American youth’s attitude toward LGBTIQ issues.

The leadership of both groups, Un Jung Lim at Dari Project, and several members of KUE, expressed the importance of navigating linguistic barriers. The bulk of information available about Queer identity, history, and presence was simply not available in the Korean language. Through collaborations with Gay Asian Pacific Islander Men of New York (GAPIMNY) and the Korean Resource Center (KRC, Los Angeles), leaders on both sides of the country have worked to develop educational materials and resources in the Korean language. These efforts to produce materials have been multipronged: emphasizing a need not only for materials to be accessible for the friends and family members of Queer Koreans but also for Queer Koreans themselves, who struggle with feelings of isolation in both the LGBTIQ communities and in the Korean American community.

Some mechanisms by which LGBTIQ issues are shared across national borders include activism as well as promotion through arts and culture. Groups in South

Korea have made the effort to translate statements into English, and groups in the United States also translate statements into Korean. One specific issue that Queer Koreans are globally working on is on challenging transphobia as well as homophobia. Harisu, the first transgender woman celebrity to “come out” publicly has remained a controversial figure, despite other South Korean celebrities who have come out as queer. The visibility of Queer and Transgender Koreans make an impact in the Korean American community as well, given the cultural tie to South Korean media and popular culture. In recent years South Korea has seen several historic victories against homophobia and transphobia, including passage of the Seoul Student Rights Ordinance in 2011 (prohibiting sexual orientation and gender identity discrimination) as well as the airing of South Korea’s first lesbian drama “Daughters of Club Bilitis” on public television channel Korean Broadcasting System (KBS). Both of these events also struck major discord with the South Korean public and prompted mass organizing by conservative Korean mothers through local and national church groups. Activism by South Korean and Korean American activists may dovetail, but so does the organizing by South Korean and Korean Americans who oppose LGBTIQ rights.

Multinational cultural connections are used to build the movement for LGBTIQ human rights, and activists in the United States and South Korea spread awareness of issues and events through social media networks. An important acknowledgment should be made here to groups like Chingusai (Between Friends) in South Korea. Just as cultural attitudes carried by Korean immigrants to the United States may reflect Neo-Confucian values, progressive cultural attitudes in South Korea that embrace LGBTIQ activism are also very much a part of the organizing efforts by Korean Americans in Los Angeles and New York. There are also more tangible connections made by Korean-U.S. and U.S.-Korean migrations. The history of Chingusai, a Korean gay men’s organization, and KiriKiri, a Korean gay women’s organization, reflects these transnational connections. Both groups originated from the first LGBTIQ group in South Korea, called Choidonghoi, which was founded in 1993 by three South Korean citizens and two Korean

Americans. Many Korean Americans travel to South Korea and support events internationally, including annual pride marches as well as the Korean Queer Culture Festival. As the Korean American community has grown, so has the visibility of queer Korean Americans—including the following activists, artists, and filmmakers: Andy Marra, Pauline Park, Erica Cho, and Andrew Ahn. In this way, the movement building for Korean American LGBTIQ rights takes on a global and diasporic identity, just as the larger community has done via immigration, social networking, and cultural institutions.

Korean Americans

Early Korean migration to Hawaii and the United States was an outgrowth of Japanese and U.S. imperialism as well as the spread of Christianity in Korea. Until the 1870s, the country had been relatively isolated from the West. From the 1860s on, Western ships increasingly appeared in Korean waters but were kept

at bay; the French were driven off in 1866 and the United States in 1871. In 1876, Korea's long isolation ended when Japan forced it to sign an unequal treaty giving the outside power substantial control over Korea's foreign and domestic economic affairs as well as the right of extraterritoriality. In 1882, the United States secured a treaty with Korea, and Britain, Germany, Russia, Italy, and France followed suit.

Increased contact with Japan and Western powers set in motion a domestic crisis in Korea that eventually prompted emigration to other parts of the world. The entry of foreigners and concessions led to factional struggles in the Korean court and the ruling yangban class. Additionally, out of the instability caused by outsiders' presence emerged a religious movement known as Tonghak (Eastern learning), which blended Confucianism, Buddhism, and Taoism and called for Koreans to ward off the evils of Western learning and religions. The movement, which crested in the 1880s and 1890s and drew from different groups in Korean society that had experienced displacement, also had political dimensions; its slogan was, "Drive out the Japanese dwarves and the Western barbarians, and praise righteousness." In the early 1890s as rebellion swept the countryside, King Kojong asked China for help to quell the unrest. Feeling threatened by the presence of Chinese troops in Korea, Japan sent its own forces, and a confrontation between the countries escalated into the Sino-Japanese War. China's defeat marked not just the end of the Tonghaks, but also, as David Yoo notes, the end of Korea's long-standing Sino-centric orientation. After its victory in the Russo-Japanese War in 1905, Japan further consolidated its power in Korea by declaring it a protectorate, and five years later it annexed Korea and enacted measures to exploit its colony's people and resources.

Internal crises in Korea from the late nineteenth century on opened opportunities for American Protestant missionaries to spread their influence among converts in need of national and spiritual salvation and eventually shaped patterns of migration to Hawaii and the United States. The U.S.-Korea treaty of 1882 facilitated missionaries' entry, and timing and circumstances proved keys to Protestantism's appeal among Koreans. In addition to some similarities between Christianity and Koreans' religious foundations (e.g.,

notion of a monotheistic supreme being), missionaries also offered educational, medical, and other services that brought newcomers into the fold. Koreans, moreover, made Protestantism their own relatively quickly, translating and circulating Bibles in hangul, constructing native church buildings, and appointing their own leaders, so it was not always thought of as an outsider religion.

A close relationship between the American medical missionary Horace Allen and the Korean court was pivotal for the start of Korean migration to Hawaii. Allen had arrived in Korea in 1884 and won the confidence of King Kojong after saving the life of a relative of the queen. His relationship with the royal couple enabled American Protestants to work in Korea with relative freedom and also led to his own appointment as the secretary of the American legation in Seoul, a post he held from 1890 to 1897; he was then made American minister to Korea from 1897 to 1905. American businessmen with interests in Korea sought Allen's help; in 1902, representatives of the Hawaiian Sugar Planters Association (HSPA) requested a meeting with Allen to discuss the recruitment of Korean laborers. The HSPA believed that Korean laborers could be an especially effective counterforce to Japanese labor militancy on the islands and asked Allen to use his influence to encourage Korean migration to Hawaii. He persuaded King Kojong to allow emigration, reasoning that it would provide relief from the effects of famine and other catastrophes besetting the country as well as enhance Korea's economy and international prestige via monetary remittances and its relationship with the United States.

By this time, the United States had annexed Hawaii and the Organic Act of 1900 applied U.S. laws against contract labor to the islands, which meant that Koreans could not go under contracts with prepaid fares and had to demonstrate they would not become public charges. In 1902, King Kojong established a department of immigration to enforce these and other policies. American businessman David Deshler, a friend of Allen's who had several business enterprises in Japan and Korea, served as the main recruiting agent in Korea through his Korean Development Company. Recruiting mainly out of Seoul, Inchon, Pusan, and Wonson, the company advertised a wage of \$16 per

month plus medical care, housing, fuel, and water for working six days per week on Hawaiian plantations. As further enticement, Deshler set up a bank—for which the HSPA was the sole depositor—that offered to pay emigrants' passport fees, loan fare money, and provide them with “show money” needed to gain entry.

As Koreans were being recruited to go to Hawaii, others were seeking better fortunes elsewhere, as the economic and political dislocations of the late 1800s had triggered a significant exodus. By 1900, thousands of Koreans were living abroad, mainly in the Russian Maritime Provinces, Manchuria, China, and Japan. A small number of students and political exiles, among them Philip Jaisohn, Ahn Chang Ho, and Pak Young-man and Syngman Rhee, had landed in the United States and later became leaders of the Korean independence movement. Regarding labor immigration to Hawaii, American missionaries in Korea aided the efforts of Allen and Deshler, telling parishioners that Hawaii was a Christian land where they could freely practice their religion. Most of the passengers of the first ship of Korean laborers arriving in Hawaii in early 1903 were in fact parishioners from George Heber Jones's Methodist church. Pleased with this group of workers, the HSPA eventually arranged 65 crossings with Korean laborers.

The early wave of Korean immigrants shared similarities with other Asian groups but was distinct in a number of respects. Like other Asians who immigrated around this time, most Korean arrivals were men between the ages of 20 and 30. Although laborers represented the vast majority of Korean immigrants, this early wave also included a smattering of students and merchants. Regarding differences, about 40 percent of the approximately 7,000 Koreans who left for Hawaii between 1902 and 1905 were converted Christians. During years of open migration from 1903 to 1905, 7,226 Koreans left for Hawaii. Of this total were 6,048 men, 637 women, 541 children. Furthermore, although the labor migrants came to work on plantations, most did not come from rural regions or have agricultural backgrounds, instead they tended to be nonagricultural laborers from seaport towns. Additionally a significant number of former soldiers and artisans were also part of the first wave).

The shortness of the early period of Korean migration, from 1903 to 1905, was because of several factors. In 1905, officials in Korea received reports about abuse of its emigrant laborers in Vera Cruz, Mexico, souring the king on the idea of permitting further emigration. As Japan looked to exert greater influence over Korean affairs after its victory in the Russo-Japanese War in 1905, it sought to limit Korean emigration to Hawaii to curb competition for Japanese laborers there. In response to these considerations and other pressures, the Korean government ended emigration, and then after annexation Japan shut down its Department of Immigration. Meanwhile, after Japan's annexation of Korea, U.S. officials tended to lump the two countries in matters of immigration policy. A 1907 executive order from President Theodore Roosevelt excluded Japanese and Korean laborers who tried to enter the United States by way of Canada, Hawaii, or Mexico; the same year, Secretary of State Elihu Root ordered that new Korean immigrants must hold passports from the Japanese Foreign Office.

These actions shut down the main flow of Koreans to Hawaii, although “picture brides” and student-laborer-exiles continued to enter after 1905. From 1910 to 1924 about 900 political exiles, students, and intellectuals and about 1,000 Korean picture brides entered Hawaii or the West Coast. By 1920, the Korean population on the U.S. mainland was 1,677 and 20 years later it stood at just 1,711. Hawaii's Korean population was always greater during this period; in 1920, 4,950 Koreans were counted in the islands and by 1940 that number increased to 6,851, most of the growth from natural increase. Outside California and Hawaii was a smattering of Korean students. Between 1921 and 1940 about 300 trickled in, because of Japan's tightening of requirements on student migration for fear that they would become independence activists. Although isolated from the main centers of the Korean American population, organizations such as the Korean Student Federation formed in 1919 to bring together Korean student organizations from New York to Nebraska to Hawaii to help them to stay connected to their peers across the country.

Most Korean immigrants from the first wave entered Hawaii plantation society as laborers on

sugarcane and pineapple plantations. In 1905, the peak year of their involvement, Koreans represented about 11 percent of the workforce. They outnumbered Chinese, but were far less numerous than Japanese, who in the first decade of the 1900s made up a majority of island plantation workers. Work and living conditions they and other laborers faced were harsh. Plantation laborers toiled six days a week, for up to 12 hours per day with only short breaks. Women worked in the fields and tended to domestic duties. Typically the homes provided by plantation owners were crowded, unsanitary shacks. Although most laborers left the plantations after their contracts ended, they tended to stay in Hawaii, moving to Honolulu or other cities. In 1910, there were 4,533 Koreans living in Hawaii.

Others left Hawaii altogether, drawn to the better educational opportunities and wages on the mainland. By 1910, about 1,500 Koreans lived on the U.S. mainland. The majority was in California and concentrated in places such as Los Angeles, the San Francisco Bay Area, and the Central Valley. As in Hawaii, however, they continued to be predominantly working class and worked such jobs as agricultural laborers, truck farmers, domestics, and laundry workers. With an approximately 3 to 2 male-female gender ratio in 1930, this small population also gradually transitioned to family-based communities.

Reflecting the large percentage of Christians—chiefly Methodists and Presbyterians—among Korean immigrants (two-thirds by one estimate), church was the single most important community institution for Korean Americans. In 1903, the first known Korean church in Hawaii was organized on the Wailua sugar plantation; within two years, a network of churches supported by at least 10 evangelists and dozens of mission stations appeared throughout the islands. In Hawaii and on the mainland, Korean churches were usually established with the help of white Americans and they remained within a larger mission structure, but congregational life was usually the purview of Koreans. In many cases, Korean ministers were sent to Hawaii to help start new churches and oversee congregations of newly arrived laborers. For instance, Methodists in Korea sent Hong Sung-ha and Min Chan-ho to minister to immigrants in Hawaii, and in

1905 their church was formally recognized by the Methodist Episcopal denomination. Churches also served as the social centers of the Korean American community, as their buildings were sites for community events and celebrations in addition to worship. Some coordinated English classes for adults and Korean language schools for children. In 1906, for instance, Koreans in the Hawaiian Mission of the Methodist Episcopal Church raised money to build the Korean Compound School for boys and girls in Honolulu, which offered Korean language instruction and prepared students for secondary school. Between 1907 and 1940 there were 18 Korean language schools throughout the islands, and most were church-affiliated.

For the most part, Korean churches and ministers worked peacefully within their denominational structures, but occasionally tensions arose. In 1913 nationalist immigrant leader Syngman Rhee became principal of the Korean Compound School in Honolulu. Under his leadership the school emphasized teaching students about Korea and the importance of independence from Japan, to the chagrin of white church leaders who wished to keep religion and politics separate. During the course of the controversy, both the superintendent John Wadman and Rhee resigned from their positions. Rhee furthermore left the church and took about 30 followers with him to form an independent church called the Korean Christian Church of Hawaii, as well as a coeducational boarding school in Honolulu in 1918.

Churches and language schools were likewise common and important institutions among mainland Koreans in Los Angeles, Sacramento, San Francisco, Oakland, the San Joaquin Valley, Seattle, Chicago, and New York. Unlike in Hawaii, which had a larger and more stable population, the small size and transiency of the Korean population in California also caused institutional instability. The first Korean church on the West Coast was a Presbyterian church established in Los Angeles in 1906. Mainland churches, like their counterparts in Hawaii, often sponsored language schools, which facilitated cultural continuity from the first to second generations. By the 1930s in Los Angeles, about half of the Korean community's school-age children attended language school.

Another prominent feature of early Korean American history was politics, specifically supporting Korea's independence from Japan. Between 1903 and 1907, Koreans in America organized several anti-Japan and proindependence political groups whereas others conducted independence activities in churches. Despite their small numbers, they were very active in forming organizations. In 1907 representatives from 24 groups met in Honolulu and formed the Korean Consolidated Association with headquarters on Liliha Street and within a year it had 47 affiliates on the islands. Koreans in San Francisco organized the Korean Mutual Assistance Association with offices on Pacific Street near Chinatown. The Korean Restorative Association was founded in 1905 in Pasadena and moved to San Francisco in 1907.

Anti-Japanese sentiment among Korean immigrants was galvanized in a 1908 incident in which Durham Stevens, a pro-Japan American diplomat, was killed by two Koreans in San Francisco. Myeng-woon Jen, a member of the Korean Mutual Assistance Association, confronted Stevens, and Jang In-Whang, a member of the Korean Restorative Association fired the fatal shots. Jang was found guilty of murder and sentenced to 20 years in 1909 but was paroled in 1919. When he died in 1930, Koreans in America hailed him as a great patriot.

The Stevens assassination and ensuing trial galvanized and united sectors of the Korean American population and gave rise to a flurry of organizing. In October 1908, representatives from various mutual aid organizations in Hawaii and the mainland met in San Francisco to plan a new group called the Korean National Association, or KNA. Launched in February 1909, the KNA consolidated smaller organizations under its umbrella with the goal of supporting freedom for Korea and helping overseas Koreans. It was headquartered in San Francisco—until it moved to Los Angeles in 1938—and had four regional headquarters in Honolulu, San Francisco, Manchuria, and Siberia. The Hawaii branch published a paper, the *United Korean Weekly*.

Anti-Japanese sentiment had been a cohesive force among Korean immigrants before, but the effect of annexation was especially powerful, giving rise to new activities. After Japan annexed Korea in

August 1910, the KNA held a protest meeting in Honolulu and passed the resolution of opposition. Also in the wake of annexation, independence leader Pak Young-man established the Korean Youth Military Association on a farm in Hastings, Nebraska, whose goal was to train an army that would help overthrow Japan from Korea. Others followed his lead in setting up military training centers in Kansas City; Superior, Wyoming; and Claremont and Lompoc, California, and the KNA supported these enterprises with funds. Pak left Nebraska for Hawaii in 1912, and there, he supervised the training of a Korean National Brigade at a pineapple plantation on Oahu, which 300 men joined and performed drills before and after work.

After annexation, the next major event that shaped both the independence struggle in Korea as well as Korean American politics was the March First movement of 1919. On March 1, a day of national mourning for King Kojong, the last Yi dynasty ruler, 33 independence leaders signed a Declaration of Independence modeled on the U.S. document, an action that thousands of Koreans across the country lauded by waving flags and shouting “Man Sei!” (“Long Live”). As Japanese forces brutally suppressed the movement, leaders fled and formed a provisional government in Shanghai, called the Korean Provisional Government (KPG). Reflecting the importance of diasporic immigrants as the leading figures of the independence movement, Syngman Rhee was named president and Pak Young-man and Ahn Chang Ho were made cabinet members. In the meantime, the March First movement galvanized the KNA, which organized a Korean Information Office under the direction of Philip Jaisohn and began publishing a magazine called the *Korea Review*, which publicized Korea's plight and sought to unite Koreans in the United States.

Although Christianity and independence were strong bases of solidarity among Koreans in America, this population was beset by almost constant factionalism, largely because of the interpersonal rivalries of Syngman Rhee, Pak Young-man, and Ahn Chang-ho. Rhee, the best known of the three, was a Christian who had converted when in jail in Korea for his political activities, and he came to the United States in 1904 as a student. He immigrated as a student and eventually earned bachelor's, master's, and

doctoral degrees at American universities. Earning his PhD at Princeton in 1901, he was the first Korean to obtain a doctorate at an American university. After returning to Korea for a few years to work for the YMCA, he went to Hawaii on the invitation of Methodist leaders to direct the Korean Compound school, where he would later fall out with the church. In Hawaii, Rhee also had conflicts with Pak Young-man about approaches and logistics (diplomacy versus military training) rather than objectives. By the mid-1910s, the rivalry between the men divided Korean Americans and cast a shadow over the community even after both left Hawaii. Ahn Chang Ho, an immigrant leader based in California, also became a foe of Rhee. Arriving in San Francisco in 1903, he focused much of his activism on organizing Korean students and developing elite leadership through a group he formed in 1913 called the Corps for the Advancement of Individuals (Heung-Sa-Dan). Interpersonal rivalries also undermined the stability of the KNA, especially in the early 1920s, when Rhee attempted to lead his followers out of the organization and supplant it with rival organizations.

Despite their passion and activism, Korean independence leaders in America had a mixed record in winning over U.S. authorities to their concerns. After Japan's annexation of Korea, Koreans in America were often lumped with Japanese, a source of much irritation. One well-known incident in which Koreans asserted their separate identity occurred in 1913 in the town of Hemet, California. The Japanese consulate in Los Angeles had tried to mediate on behalf of a group of Korean fruit pickers who had been assaulted and driven out of town by white locals. The Koreans refused the consulate's representation and KNA officials in San Francisco tried to step in to represent their countrymen. In a telegraph to Secretary of State William Jennings Bryan, President David Lee appealed, "Please regard us not as Japanese in time of peace and war. We Koreans came to America before Japan's annexation of Korea and will never submit to her so long as the sun remains in heaven." Bryan's response, in which he agreed that any matter dealing with Koreans in the United States should be addressed to the KNA, was seen as vindication for

the organization and Koreans in America seeking to assert their separate identities and interests from Japan.

In other matters, however, Korean Americans fell short in persuading American officials. After World War I, the KNA planned to send delegates to the Paris Peace Conference and to New York City to work with the League of Nations advocates. For this occasion, Rhee and Ahn called a truce in their rivalry and wrote to the State Department and requested a passport for Rhee to travel to Paris. To their dismay, the Department denied the request, saying that Koreans were subjects of Japan and only Japan could issue Rhee a passport.

Because of the ending of Korean emigration in 1905 as well as U.S. legislative restriction in 1917 and 1924, immigration came to a virtual halt from 1924 to 1950 and the Korean American population was fairly static in the 1920s and 1930s. The World War II years saw little new migration, but this was nonetheless a momentous time for Koreans throughout the diaspora who hoped the war would finally bring the liberation of their country from Japan. The Sino-Korean People's League, formed by Kilsoo Haan in the mid-1930s as an opposition group to Syngman Rhee's faction, aimed to unite Koreans in China, Hawaii, and the mainland in the fight against Japan, and it even argued in favor of removing Japanese from the West Coast. The war years also brought new opportunities to young Korean Americans, such as students who became government translators and others who joined the U.S. Army.

With Japan's defeat to the Allied powers in 1945, Korea was finally liberated, but celebration soon gave way when the country was divided in 1948 at the 38 parallel. The North became a Communist regime and the South a democracy and junior partner of the United States. The initial division prompted a new wave of internal population dispersal, with some 3.5 million people fleeing to the South between 1945 and 1950. After 1945 the United States maintained a troop presence in the South to protect it from the North, and this presence would be a conduit for American influence in Korea for several decades.

The arrival of American troops and then the Korean War of 1950–1952, as well as legislative

reform in the United States, created conditions for a revival of Korean immigration. The McCarran-Walter Act of 1952 removed the racial barriers to immigration and naturalization established by the 1924 Immigration Act but maintained a racially discriminatory quota. With the window opening slightly and international events generating new push factors, the “second wave” of Korean immigration got underway. Called “interim” immigrants, the immigrants of the 1950s and early 1960s included students, military spouses, war orphans, and professional workers, totaling about 14,000.

Military brides comprised the single largest group to immigrate during the second wave and they continued to enter the United States in large numbers well into the late 1900s. Between 1951 and 1964 about 6,400 came to the United States, and by 1977, there were over 28,000. According to Ji Yeon Yuh by 1989, nearly 100,000 had entered. Many of these women met their husbands while working as waitresses or entertainers in “camptowns” where U.S. soldiers were stationed, and they saw their marriages and migration as a way out of poverty and the abusive conditions of camptown life. Their entry was permitted after a 1952 revision to the War Brides Act of 1945 allowed the migration of Asian “war brides.” A migration borne from a quasi-colonial relationship between the two nations, Korean military brides reversed the skewed gender ratio of earlier eras; among Koreans entering between 1951 and 1964 women outnumbered men 3.5 to 1, and in 1965, about 82 percent of entering Koreans were female.

Because of the circumstances of their marriages, military brides did not move to traditional centers of the Korean American population; instead, settled in their husbands’ hometowns where they were likely the only Korean people. Thus, they often faced intense loneliness and isolation, not just in the surrounding community but also in their own households. Because of the cultural divide separating the wives from their non-Korean husbands, many had difficulty communicating with their own family members and faced strong pressure to Americanize quickly. Even if they lived near other Korean immigrants, military brides were often discriminated against because of their

backgrounds as former entertainers, waitresses, or prostitutes on military bases.

The growth of the Korean American population in the interim period was at the modest rate of about 1,000 to 2,000 per year. The late 1960s, however, brought dramatic change because of extensive U.S. immigration policy reform as well as developments in Korea. In 1968 just over 6,000 Koreans were admitted to the United States; five years later that number reached 23,000. In 1975, Korea was the second-largest sending country of immigrants, behind the Philippines, and in 1976, for the first time, annual Korean immigration exceeded 30,000. The peak years of South Korean migration were 1985 to 1987 when over 35,000 arrived annually. In 1970, the U.S. Census counted 70,598 persons of Korean ancestry in United States and 20 years later that number rocketed to 798,849. Because new immigration only increased in volume over time—in 1990, more than half of Koreans in the United States arrived after 1980—Korean America remains by and large a foreign-born population. Nonetheless, it is a firmly rooted population, as nearly half were naturalized U.S. citizens in 1990.

Developments in Korea from the early 1960s, including the start of Park Chung-Hee’s military dictatorship, dislocations associated with rapid industrialization, and government programs encouraging overseas migration were among some of the key push factors. Among South Koreans, income inequality grew as the labor force shifted from agricultural to industrial over the 1970s and 1980s. Although South Korea enjoyed phenomenal GNP growth in this transition to an export-oriented industrial economy, this came at the expense of the working class, which was subject to long hours, enjoyed little power, and earned low wages. As the industrial laboring class grew and opportunities for socioeconomic mobility diminished, more Koreans considered overseas emigration. Labor contracts with foreign countries also facilitated new outmigration; from 1963 to 1974, for instance, about 17,000 nurses and miners went to West Germany. Additionally, the Korean government organized programs to send doctors and nurses abroad to earn foreign experience, and between 1953 and 1983 many graduates of Yonsei medical school were practicing in the United States.

The United States seemed to offer the opportunity and room for mobility found to be lacking in Korea. In addition to greater economic possibilities, the decades-long relationship between the United States and South Korea influenced a perception among many Koreans that America was a land of modernity and greater social freedom. For many married women, for example, migration to the United States represented escaping the burdens of traditional gender expectations in Korea, such as being subordinate to an overbearing mother-in-law. For others, especially families with children, educational opportunities—a key to social mobility in Korea—were more abundant and accessible in the United States. Because the American education system was prestigious yet less rigorous and traumatic than Korea's, migration offered the flexibility to obtain a U.S. degree and then go back to Korea for a good job.

Meanwhile, in the United States, the 1965 Immigration Act opened the doors to the post-1965 wave of immigration from Korea (“third wave”) and elsewhere. The law abolished the national-origins quota system of the 1924 Immigration Act and set an annual limit of 170,000 immigrants from the Eastern Hemisphere and 120,000 from the Western Hemisphere, with each individual country being granted a quota of 20,000 per year. It also established a preference system that favored relatives of U.S. citizens as well as people with skills or in professions in short supply in the United States, such as physicians, nurses, and engineers. Although unintended, the law resulted in a dramatically increased share of immigration from Asia, which for the first time equaled European immigration.

The post-1965 Korean wave grew more diverse over time, and included students, former soldiers who had served in the Vietnam War, professionals, and family members of citizens and permanent residents. Because professionals and students made up the bulk of the initial stream and owing to the costs of trans-Pacific relocation, the earliest post-1965 Korean immigrants did not represent the spectrum of the South Korean population. Between 1966 and 1979, about 13,000 doctors, nurses, and pharmacists entered the United States. By 1990, Korea was the fifth-largest sending nation of student migrants; between 1953 and 1980, of the approximately 15,000 students who

entered the United States, some 90 percent stayed permanently. As late as the early 1990s, there were nearly 26,000 Korean students in the United States. After these students and professionals gained entry and settled, many utilized the family preference and nonquota categories of the 1965 Immigration Act to sponsor family members. As a result of this family migration—or what scholars have referred to as the immigration of “poor cousins”—since the 1970s, Korean America has both continued to grow and become more reflective of a cross-section of Korean society.

Most of the post-1965 immigrants came from urban middle class backgrounds, and once in the United States they tended to settle in metropolitan areas. These included the old centers of the Korean population, such as Los Angeles, San Francisco, and Honolulu, as well as newer locations like New York, Chicago, Seattle, Houston, Atlanta, Boston, and Miami. Compared to early twentieth-century immigrants, post-1965 Koreans had more education, professional experience, and capital, although as mentioned, the population grew more socioeconomically diverse through the late twentieth century with heightened family-based migration. They also tended to be older and married at the time of emigration. A notable continuity across Korean immigrants in the early and late 1900s has been the preponderance of Christians. By 1989, nearly one-fourth of South Korea's population of 40 million identified as Protestant, and they remain a majority in the Korean American population to this day. In the 1980s, Los Angeles alone had about 500 Korean churches and by 1900 there were about 2,000 Korean churches throughout the United States, with one church for every 300 to 350 Korean immigrants. Methodism and Presbyterianism continued to be two of the most common denominations, reflecting immigrants' affiliations from Korea, and in the United States they tended to form separate Korean-speaking associations within larger denominational bodies. Also, as they had in earlier periods, immigrant churches in the United States often imported pastors from Korea to lead congregations.

The church continues to be the heart of Korean American life, serving both spiritual and social functions. For those who lost status in the migration process, holding church positions can be an importance

source of respect and social status, which has been especially important for men. Churches also provide a social center, education, and help with finding jobs. Moreover, involvement tends to cross generations. Although the second generation is often seen as being less devoted to religious life, according to Elaine Ecklund, this is largely a misperception, as American-born Koreans often attend second-generation, multi-ethnic, or pan-Asian churches.

With regard to socioeconomic status, a common aspect of the Korean immigrant experience in the post-1965 years was downward mobility. Although Koreans' educational attainment in 1990 was significantly higher than that of the general U.S. population, their median family income, at about \$33,000, was lower than the national average. Furthermore, nearly 15 percent lived below the poverty line. Many who had once held managerial or professional jobs encountered difficulty transferring their skills to the United States because of discrimination, language barriers, and other obstacles. Such disappointments contributed to return migration, which peaked in 1987 when about 36,000 went back.

Because it was one of the few avenues open to them and its capital requirements were within grasp, operating small businesses emerged as a common vocation for a large number of Korean immigrants. In 1990 about 17 percent of Koreans in the United States were self-employed, more than any other major ethnic group. Thirty-one percent worked in retail trade and as many as 45 percent drew their income from small businesses, which often catered to coethnics or other minorities such as blacks and Latinos, specializing in everything from wigs to groceries. The reliance of many businesses on black and Latino customers was a consequence of Koreans entering neighborhoods suffering from shortages of services because of white and capital flight in the 1960s and 1970s. This created opportunities for retailers and other service providers in so-called "ethnically sheltered" markets, eventually allowed for the rise of Korean business enclaves in Los Angeles, New York, Chicago, and elsewhere. In 1990 in Chicago, for example, over 25 percent of the customers of Korean-owned businesses were African American and Latino.

Although operating or working in a small business afforded autonomy and a measure of prosperity for

some, the experiences of Korean immigrant business owners largely belie the model minority stereotype of socioeconomic success. Running a liquor store or wig shop, for example, rarely led to a life of great material wealth, and small business owners and employees often reported feeling overworked, demoralized, and subject to dangerous conditions.

Contemporary Koreatowns emerged from distinctly late twentieth-century economic and social forces and as such are markedly different from the Asian enclaves of the late nineteenth and early twentieth centuries. In Los Angeles, for instance, deindustrialization and capital flight impoverished old industrial centers whereas wealth and new industries moved to outlying areas such as Orange County. In the city, low-tech and service industries replaced heavy manufacturing and relied heavily on immigrant and nonunionized labor—Latin American immigrants, in fact, made up the majority of Koreatown's residents in 1990. The rise of Asian economies, moreover, has led to an increase of transnational capital investment in Korean American enclaves, as they were seen as speculative opportunities and ways to secure economic footholds in North America. In short, the service gaps in places beset by deindustrialization and capital flight combined with the inflow of Asian investment over the 1970s and 1980s created the conditions for the rise of present-day Koreatowns in Los Angeles, the Bronx, Chicago, and elsewhere.

The rise of Korean-owned businesses and Koreatowns did not necessarily signal solidarity and cohesion among Korean Americans. One of the striking features of Los Angeles's Koreatown in the 1980s was its lack of a center. There was also a widespread perception of a leadership gap in the population. Local newspapers, moreover, provided little coverage of local events and although there were many voluntary associations, they were small and not well coordinated. Major organizations, such as the Korea Federation, were racked by bitter personal feuds and many Korean Americans saw them as too tied to the Korean government. Relatively affluent Korean Americans from the suburbs, furthermore, sometimes shunned Koreatown because they considered it a dangerous and undesirable neighborhood. But despite such views and other problems, Koreatowns remain important, in

terms of what they symbolize and the services they provide, especially for new immigrants.

As mentioned, outside the Korean business districts, merchants could be found in areas where they catered to non-Koreans, such as in South Central Los Angeles where most customers were black. The effects of deindustrialization, neglect, and racial uprisings in the 1960s led white ethnic merchants to leave, creating a gap for services that Koreans eventually filled. As one Korean interviewee said regarding the wake of the Watts riot of 1965, “After Watts, desperate [Korean] immigrants went into those stores” (Abelmann and Lie 1997, 139).

The effects of blight and neglect in South Central Los Angeles might have opened economic opportunities for Korean merchants, but these developments also exploded in the 1992 Los Angeles riots, an event that brought national attention to the continued struggles of urban blacks and the widespread presence of Korean merchants in Los Angeles. These discussions, however, were largely overshadowed by the so-called “black-Korean conflict,” a perception that grew out of earlier altercations between Korean merchants and black customers in Los Angeles, New York, and elsewhere. Called *Sa-i-gu p’oktong* (4-2-9 riot) by many Koreans, the Los Angeles riots are known as the worst urban upheaval since the Los Angeles Watts riots of 1965. In 1992, however, Korean Americans withstood most of the damage; one Korean American was killed, 11 were seriously injured, over 2,000 businesses were damaged, looted, or burned down, and total monetary losses were estimated at \$347 million. The riots highlighted that economic inequality remained a persistent problem even in the wake of the Civil Rights victories of the 1950s and 1960s and showed that racial problems in America could not be understood merely in black and white terms.

For many Korean Americans the riots were a wake-up call for political and community engagement. Also since the 1990s, Korean America has seen a demographic shift as the second generation has grown more visible and vocal and become a distinct contingent of the population. According to the Census of the United States, there were about 1.7 million Korean Americans in 2010.

Korean Americans and Transnationalism

The increasing transnational connections between Korea and Korean Americans have reshaped their relations. The growing number of transnational migrants

who frequently cross borders has affected various aspects of Korean Americans' lives such as migrant patterns, demographics, legal status, political involvement, cultural consumption, economic relations, and identity, creating new dynamics within the group.

Changing Characteristics of Korean/Korean American (Im)migration

With the increasing number of transnational migrants, the migration and immigration patterns of Koreans and Korean Americans have been significantly transformed. Although a unidirectional move from Korea to the United States used to be the norm, contemporary transnational Korean migration consists of multiple directions and continuous border-crossing. Nowadays, a growing number of Korean (im)migrants to the United States may have lived (including a short-term stay) outside of Korea prior to their migration to the country. The countries of their earlier migration literally encompass the entire globe. By the same token, the United States may not necessarily be their final destination. These footloose transnational migrants tend to move around depending on their needs and available opportunities (which are usually associated with work, study, or marriage). Their multiple affiliations and border-crossing intensify transnational connections between the Korean American community and the world, especially Korean communities in global cities with large Korean economic presence.

Korean *yuhaksaengs* (students who study abroad) are among the most typical transnational migrants. The number of Korean *yuhaksaengs* has been multiplying over the years and the United States has been their most preferred destination. Between 2006 and 2008, Koreans made up the largest foreign student body enrolled in U.S. colleges. Since 2009, they have been the third-largest group. Besides college and graduate students, the number of young (pre-teen and teenage) *yuhaksaengs* has been increasing. Because of their age, they are often accompanied by their family members (mostly mothers) during their school years when they need a guardian. Additionally, the number of Korean exchange students who study in the United States for a limited time period has been growing. Although many of them may not be Korean

Americans in a strict sense until they change their legal status, they and their family members are, by and large, an integral part of the Korean American community. Besides the *yuhaksaeng* group, other types of transnationals including those who work in the United States through various venues (as employees of U.S. branches of Korean companies, interns, and trainees) have become increasingly visible. Through their mobility, multiple reference points, and affiliations, they are often at the forefront of linking Korea and the United States.

The trans-Pacific migration toward Korea has also increased. Return migration (both temporary and permanent) among first-generation Korean Americans is not uncommon. With recent legal changes in South Korea, which accommodate the needs of Korean American returnees, return migration among the elderly population may increase in the future. Some younger-generation Korean Americans have also joined the path of temporary migration to Korea. South Korea's economic growth together with globalization has generated strong demands for workers who are fluent in English and well-versed in Western-style business practices. Furthermore, there has been a sweeping zeal to learn English in Korea, resulting in a skyrocketing demand for native English teachers. Such job availability, perhaps backed up by their intention to experience life in the "homeland," has attracted young Korean Americans to move to Korea.

Citizenship and Political Participation in a Transnational World

Korean Americans' legal connections with Korea have undergone crucial transformations since the late 1990s. In 1999, the South Korean government passed a law called *jaeoidongpoui böpjökjwie kwanhan tukbyolböp* (Special Laws for Overseas Koreans' Legal Status), which allowed overseas Koreans free entry into and departure from Korea and granted quasi-citizenship rights to selected groups of overseas Koreans including Korean Americans. The law was amended in 2003 because it arbitrarily excluded some overseas Korean groups such as Korean Chinese. Despite the huge controversy surrounding the law, the South Korean government went one step further by passing

a new law concerning “multiple citizenship” in April 2010. Although dual citizenship is not allowed in Korea, the new law acknowledges multiple citizenship of selected groups of foreign nationals with Korean heritage who “recovered” their Korean nationality. Individuals such as Korean adoptees, ethnic Korean elderly over 65 who wish to return to Korea, and ethnic Koreans with extraordinary merits are granted full Korean citizenship rights if they pledge not to exercise their foreign citizenship rights when living in Korea. Korean Americans are one of the main beneficiaries (and perhaps the main target population) of this law. Behind the creation of such laws is the Korean government’s intention to recruit workers who are competent in globalized work settings, to elicit investment from overseas Koreans as well as to integrate diverse groups of overseas Koreans into Korean society. In a way, these changes in legal Korean membership are interrelated with South Korea’s new nation-building efforts in a transnational world and pose a critical question about national and ethnic belonging in such a world.

What further complicates the relations between Korean Americans and Korea is the newly available opportunity to participate in Korean politics through suffrage rights. Beginning in 2012, Korean Americans with Korean nationality (including permanent residents and temporary visa holders) can cast their votes for Korean elections in the United States. Considering the number of Korean nationals in the United States, and their interest in Korean politics, Korean Americans can play an influential role in Korean politics despite the physical distance (some Korean media claimed that they could be a swing vote group). This may strengthen Korean Americans’ political position vis-à-vis Korea, yet it may exacerbate political tension and conflicts within the Korean American community and complicate the community’s relations with the larger U.S. society by reviving the stereotype of Korean Americans as perpetual foreigners.

Not only has Korean Americans’ legal and political involvement in Korea been expanded, but their political position in the United States also seems to have changed. The appointment of a 1.5-generation Korean American, Sung Kim, as U.S. ambassador to South Korea in 2011 may signify a new political

stance of Korean Americans in U.S. society. This is the first time that a Korean American has been appointed to the position in the more than 120-year history between the two countries. The fact that Ambassador Kim is a Korea-born, 1.5-generation transnational who is familiar with Korean culture and language and had lived multiple countries before his family settled in the U.S. could imply the changing perception of individuals with heterogeneous backgrounds.

The widening transnational connections in the political field may be a double-edged sword. They could strengthen Korean Americans’ political power as effective bridge-builders and an influential political voice. At the same time, they could weaken Korean Americans’ political position in the United States by eliciting questions about their loyalty and belonging.

Transnational Cultural Consumption

With the increasing development of technology and global capitalism, consumption of cultural products across borders has become very easy and common. Korean Americans’ consumption of South Korean culture, especially popular culture, has tremendously increased over the years. Since the late 1990s, South Korean popular culture has gained noticeable popularity in Asia and beyond. The phenomenon is referred to as *hallyu* (the Korean Wave). Stimulated by *hallyu*, not only first-generation but also subsequent-generation Korean Americans have become drawn to Korean pop culture, consuming it in everyday life. Hence, the imageries of Korea and Korean pop cultural products have become integral parts of many Korean American families’ lives, reconnecting Korean Americans to their country of origin. Besides being consumers of Korean pop culture, Korean Americans, especially those transnational migrants, have played a significant role in disseminating cultural products and information to both sides of the Pacific through their frequent moves. Korean American youths have also become creators of the Korean Wave as a growing number of young Korean Americans are recruited to be entertainers in Korea.

Through the Internet and various means of communication, not only popular culture but everyday lifestyles including food and fashion are shared by

Korean coethnics across borders. Korean Americans and Koreans share their interests and information together through blogs, Internet communities, phone calls, Skype, and various SNS devices. The Internet communities, in particular, are sometimes used as a vehicle for transnational mobilization or collective movements. When South Koreans had mass demonstrations against the current government over the import of U.S. beef, U.S.-based Korean American Internet communities participated through public endorsement and support. With the development of communication technology, one can indeed make transnational connections wherever and whenever. Hence, the gamut of Korean Americans' transnational connections is wide enough that it could encompass all Korean diasporic communities as long as there is a common communication method.

Transnational Economic Connections

Economically, transnationalism has connected the Korean American community and Korea in a new way. In the past, economic resources usually flowed from the United States to Korea in the form of remittances or capital investments. Although such trends continue, new directions of capital flows have emerged as well. Major Korean companies' establishment of their branch offices or local subsidiaries has been common and they readily hire Korean Americans. Interestingly, even small-scale businesses such as famous restaurants, bakeries, or coffee shops in Korea have opened their branches in metropolitan U.S. cities as their brand power succeeds in Korean American communities. As mentioned earlier, an increasing number of Korean Americans have sought employment opportunities in Korea in such areas as transnational companies, education, or entertainment businesses. The recent passage of Free Trade Agreement (FTA) between the United States and South Korea will have significant ramifications for Korean Americans' economic ties with Korea.

Questions of Identity and Sense of Belonging

Transnational connections complicate the sense of identity and community among Korean Americans.

For transnational migrants who have multiple affiliations and reference points, their identity is likely to be multilayered and in constant flux. Likewise, their sense of community may be multiple and possibly temporary. For example, through increased contacts, shared information, and cultural tastes, Korean Americans can have diverse types of transnational imagination, which in turn can form, at least temporarily, imagined communities and a sense of belonging. However, such imagined communities may not be built on firm, long-lasting grounds. Even legal membership, which is relatively straightforward, may not become a concrete identity marker because transnationals, as illustrated earlier, can have multiple citizenship and may use it more instrumentally than with emotional commitment. Transnational migrants may utilize their citizenship as a way to get around nation-states' governmental power when necessary, as Aihwa Ong has pointed out. Thus, Korean transnationals' sense of identity and community are heterogeneous and subject to ongoing negotiation.

The increasing heterogeneity of Korean American communities also challenges the construction of a coherent and unified sense of community. Besides the diverse groups of transnationals mentioned earlier, new types of transnational Koreans such as North Korean defectors and Korean Chinese (*chosŏnjok*) have joined the Korean American community. Often, North Korean defectors are itinerant migrants who frequently cross borders in search of a safe haven. They and Korean Chinese are usually marginalized in the Korean American community (as well as in Korea) in terms of their economic status and sociocultural integration. The relative lack of common denominators linking them with other Korean Americans exacerbates the situation.

Transnational connections have added new dimensions to Korean American lives by providing new benefits and challenges. The ways in which Korean Americans deal with such benefits and challenges will shape the future directions of the Korean American community.

Korean Americans in Hawaii

There have been several waves of Korean immigrants to Hawaii. The first consisted of plantation workers who arrived in Hawaii in 1903. Because of the political situation of the time and the backdoor manner in which various U.S. immigration officers handled Korean laborers, some Korean immigrants registered themselves as Chinese. Approximately 7,900 Koreans, with 90 percent being men, arrived in Hawaii from 1903 to 1905. The presence of Korean laborers created greater racial diversity among workers. Although the majority of Koreans had the sojourner mentality of returning to Korea after the Japanese occupation and/or when they had earned enough savings, most found that the socio-political conditions in Korea had not improved enough for them to want to return home. The Methodist missionaries also contributed to Korean emigration during this first wave. American missionaries offered new hope to famine-stricken and economically poor families of northern Korea a better life in Hawaii.

The second wave (1905–1940) experienced a decline of Korean laborers but an increased number of students and “picture brides” immigrating to the United States. The third wave was framed by the onset of the Korean War, where immigration reports show that between 1952 and 1982 over 40,000 Korean brides came to the United States as spouses of American citizens with an overwhelming percentage of these women married to servicemen stationed in South Korea. The fourth wave was the largest because of the Immigration Act of 1965, which led to a drastic increase of Korean immigrants in the United States. Social and political insecurities in South Korea pushed many Koreans to immigrate to Hawaii and the United States in hopes of better lives.

Post-1965 Korean immigrants are predominantly middle- and upper-middle class professionals; however, the number of Korean immigrants has been declining since 1988. There are several reasons for this reduction. First, there was much publicity in South Korea about Korean immigrants’ adjustment difficulties in the United States. Second, Koreans have experienced better economic, social, and political conditions since the Seoul Olympics in 1988 and, therefore, saw little reason to leave their homeland. By the early 1990s, the improved political economy in Korea and the media’s portrayal of black-Korean conflict during the 1992 Los Angeles riots affected how Koreans and Korean Americans perceived the social and political climate in the United States, yet the riots had a limited impact in Hawaii. Instead, the increased capital of Koreans as well as some Korean Americans leaving Los Angeles increased the number of businesses and people living in Hawaii. In 1997, Asian Financial crisis quickly slowed the growth of Korean investment in Hawaii.

What was known as “Koreamoku,” the Korean district in Honolulu, began to switch to one that appeared more pan-Asian as Korean 1.5- and second-generation children opted to enter professional sectors versus family business. As Korea pulled itself out of the IMF crisis, the call for “change and reform” and “seggyehwa,” or globalization, became more apparent in South Korea. For Hawaii, this meant potential increases in tourism but also a need for businesses that catered to Korean clientele. Seggyehwa also changed policy in Korea, and filmmakers and music producers were given more freedom to export their art into the diaspora. The “Korean Wave,” or *hallyu*, has culturally heightened Korean cultural capital in the diaspora. Korean dramas and Korean pop (Kpop) groups have dominated the airwaves of Korean channels and YouTube around the world. Hawaii was one of the first to jump on the *hallyu* where Costco in Honolulu had large selections of Korean drama box sets for sale. In addition, Kpop music became mainstream as iTunes and YouTube videos of Kpop artists dominated the music landscape. *Hallyu* had both economic and cultural influence on local Koreans as it heightened and made Korean culture hypervisible and desirable

among many local Asians in Hawaii. Korean Americans in Hawaii span several generations and, depending on the wave of immigration, their experiences vary. What is significant to note, however, is that the sociocultural experiences of Koreans in Hawaii is distinct because of the history and culture of Hawaii.

Korean Americans living in the continental United States experience race relations based on the legacy of white supremacy. Immigrants and even second- and third-generation Asian Americans are seen as foreigners, regardless of their occupational status, language abilities, and education. If you are not white, then you're a foreigner. However, Yen Le Espiritu's book, *Asian American Panethnicity*, explores the construction of large-scale affiliations in which diverse ethnic groups of Asian descent submerge their differences and assume a common pan-Asian identity. Although people of Asian descent pushed forward to create an Asian American and Pan-Asian identity, Jon Okamura argues that there are no Asian Americans in Hawaii.

In "Why There are No Asian Americans in Hawaii: The Continuing Significance of Local Identity," Jonathan Okamura discusses the fusion of local identity owing to a series economic, political, and social struggles that took place in Hawaii-Japanese investment, the increasing population of tourists, and the Native Hawaiian sovereignty movement. "These and other factors reveal a sense of local identity that is not solely premised on a common ethnic or racial background, but on the tensions between insiders and outsiders." Wayne Wooden's book, *What Price Paradise and Return to Paradise*, examines the notion of in-group/out-group status as a mean of achieving local status. However, it is important to look at the history as how the term *local* emerged into mainstream discussion.

Hawaii inherited a different oligarchy system as a result of colonization; however, the presence and influence of the indigenous people of Hawaii on colonized Hawaii remained. Although white Americans took the land away from the indigenous people, the racial composition of the islands ensured that the ruling group did not dominate the ethnic workers in number. In fact, some argue that Hawaii is one state where no racial group dominates.

During the plantation era, plantation owners recruited Japanese, Chinese, Korean, and Filipinos

respectively to work on the plantations to keep up with the demand for sugar from Hawaii. (Portuguese and other Western Europeans were also recruited, but in small numbers.) These groups constructed a pidgin language so that they could communicate and in the process created a new community. The plantation life became symbolic of the heart and sweat that many immigrants put toward creating a life in Hawaii. Some argue that one must have roots to the plantation period to be considered local. The term local, however, was not used in popular Hawaii culture until the infamous Massie trial. John Rosa writes of how the term local was used in the press to distinguish between the Massies, a white military couple, and the alleged perpetrators of the attack on Mrs. Massie, a group of Japanese and Hawaiian boys. Subsequently, local was used to refer to any non-white resident, born and raised in Hawaii, and because most of the non-white residents of Hawaii were plantation workers and their children, its class implications were obvious. The concept of local is very similar to the concept of American in the continental United States. Indigenous groups would argue that the true Americans are Native Americans, as some argue that true locals are Native Hawaiians.

Although people may refer to Koreans who have lived in the United States for prolonged periods of time as Americans, people in Hawaii will refer to Koreans who have been raised there and can pass as Hawaii born as local. For those living on the islands, the idea of local distinguished them from outside groups impinging on their society and also created a sense of cohesion among the ethnic groups living on the islands.

Local culture offers an ethnic option for Asian immigrants that is not readily available to them in the continental United States. For 1.5-generation Korean Americans in particular, they can switch between Korean, Korean American, and local identities depending on the situation. Being local provides them with an opportunity to fit in and at times blend in with a group that has a social and political history on the islands.

Koreans in Hawaii continue to make significant contribution to Hawaii local culture. With kimchi, chapche, and kalbi as regular staples of local plate lunch, the culinary influence of Koreans in Hawaii is felt in the mainstream Hawaii local culture. In addition, the annual Korean festivals foster the diasporic

ties Hawaii has with its Korean neighbors across the Pacific, but more glaring is the familial connections that flourish as communication become easier because of inexpensive and sometimes free phone calls (Skype), e-mail, and various social network mediums. In addition, the lower costs to fly to Korea has encouraged not only Korean tourists to visit Hawaii but local Koreans to return and visit Korea—sometimes even working and residing in their “homeland.” The socio-cultural-economic experiences of Koreans in Hawaii have changed drastically since 1903, yet what remains is the community’s ability to navigate both local and Korean culture in an increasingly global world.

Korean Americans in the Cold War

The Cold War had indelible effects upon Korean Americans. Although the Cold War is often considered a binary conflict between the Soviet Union and the

United States, Asia played a central role in the decades-long saga. Between 1945 and 1948, two superpowers split Korea along the 38th parallel—the Soviet Union controlled the North and the United States the South. The U.S. government viewed the Korean peninsula as geopolitically critical to its global Cold War strategy. Believing that other Asian countries would “fall” to Communism if Korea did, the U.S. government held fast to South Korea as a democratic stronghold in East Asia. Thus, when fighting escalated along the 38th parallel on June 25, 1950, the United States led the UN-sanctioned war. The Korean War (1950–1953) was the first “hot war” of the Cold War era. The war claimed an estimated 3.5 million Korean and over 54,000 U.S. lives only to end right where it began—divided along the 38th parallel. A ceasefire agreement signed on July 27, 1953, brought an end to the fighting. The country was left devastated with hundreds of thousands of refugees in need of food, shelter, and medical care. Given the continuing Cold War stakes in the region, the U.S. government and military stayed on in South Korea to maintain democratic stability.

The Korean War established long-term military, economic, political, cultural, and migratory connections between the United States and South Korea. Most notably, the war spurred a wave of Korean immigration to the United States. Between 1951 and 1964, approximately 6,500 Korean military brides, 6,300 adoptees, and 6,000 students and professionals came to the United States. As the 1924 immigration law barred Koreans and other Asians from coming to the United States, those who made up this second wave of Korean immigration entered under special circumstances. For example, Korean military brides married U.S. servicemen stationed in Korea during and after the war. With more than 28,000 U.S. troops still in South Korea, military marriages have continued unabated. Since 1950, more than 100,000 Korean military brides have immigrated to America. At its peak in the 1970s and 1980s, more than 4,000 women entered the United States annually. Today, Korean women marry U.S. servicemen at a rate of about 2,000 per year.

During the Cold War, Korean adoptees made up another significant Korean American immigrant population. The Korean War left an estimated

100,000 children without homes. With both U.S. and South Korean governments focused on military stability and infrastructural rebuilding, U.S. private citizens—primarily missionaries—entered South Korea to shore up social welfare needs. Korean and mixed-race children, the latter referred to as “GI babies,” took center stage in U.S. recovery efforts. An Oregonian businessman and evangelical Christian, Harry Holt, brought Korean children into view through his numerous “baby-lifts.” Holt personally adopted six mixed-race Korean children in 1955 through a special act of Congress. He later launched a transnational adoption agency that alone placed 3,500 predominantly mixed-race Korean children in U.S. homes by 1965. Though Holt’s operations were criticized by social workers for not meeting minimum adoption standards, his organization continued to place children in American homes. The increasing demand for Korean children in the United States spurred other agencies to begin administering transnational adoptions. To date, over 200,000 Korean adoptees have been sent to the United States and 50,000 to European countries. Although an estimated 70 percent of adoptees from Korea were of mixed-race parentage in the 1950s, by the 1960s and to the present, the majority of adoptions are of Korean children whose parents faced the pressures of rapid industrialization, including poverty and unwed pregnancies. Despite an increase in domestic adoptions, an estimated 2,000 Korean children are still sent abroad for adoptions today.

The Cold War also affected post-1965 immigration from South Korea. Cold War politics in concert with the Civil Rights Movement influenced the Immigration and Nationality Act of 1965. In an effort to demonstrate democracy and freedom at home and abroad, the revised immigration act abolished the national origins quota system based on race that was in place since 1924. The revised act allowed Koreans to immigrate to the United States for the first time on a large scale. Under this act, students-turned-professionals who came to the United States during the 1950s could apply for permanent resident visas. As well, a family reunification clause allowed Korean military brides to petition for the entry of siblings, parents, and other close relatives. It is estimated that 40 to 50 percent of all Korean immigration since

1965 can be traced back to a Korean military bride, the first link in a chain migration.

Despite the thousands of Korean immigrants who came to the United States as a direct result of the Cold War, many of them remain in the shadows. To begin, the Korean War itself was a costly conflict that lacked U.S. public support, which in part explains why it has been dubbed “the Forgotten War.” Of course, for the millions of Korean War survivors, a significant number of whom now live in the United States, the war remains a palpable site of haunting and trauma. As for Korean military brides, they remain on the fringes of Korean American communities because of the stigma of militarized prostitution often associated with such marriages. Korean adoptees also exist in the margins of Korean American communities because most were adopted into predominantly white families and scattered across the United States rather than near or within Korean enclaves. Indeed, both Korean military brides and adoptees remain outside of U.S. consciousness—forgotten individuals along with the forgotten war.

More broadly, the Cold War is rarely connected to the formulation of Korean American communities. Yet the Cold War was the primary reason for the Korean War and its subsequent migrations. It is also the reason why the peninsula remains divided along the 38th parallel. In these ways, the legacies of the Cold War remain ever present with Koreans and Korean Americans.

Korean and Korean American Golf

In the twenty-first century, golf has become a highly visible and commonly played sport in South Korean (hereafter Korean) and Korean American communities. The game exploded in popularity in Korean American communities in 1998 with the breakout rookie year of Se Ri Pak in the U.S.-based Ladies Professional Golf Association (LPGA). Since Pak's debut, players of Korean heritage have had extraordinary success in international golf on both a professional and commercial level. The widespread media exposure of professional golfers has contributed to the growth of the game in South Korea, and there has been an associated rise in the popularity of the game in Korean communities throughout North America. As golf has increased in visibility, growing numbers of Korean American children are training to play competition-level golf. Korean Americans are also investing in the golf industry by purchasing golf courses and driving ranges throughout the United States. Although there are many cultural explanations for Korean American interest in golf, associations of the sport with notions of wealth, status, and competition certainly contribute to its popularity.

The primary catalyst for the growth of golf in Korean American communities has been the media coverage of professional golfers on U.S.-based professional tours, especially the LPGA. The number of players with Korean heritage in the LPGA went from two individuals, Se Ri Pak and Pearl Sinn-Bonanni in 1998 to over 50 in 2011. In 2011, a third of the 80 top moneymakers on the LPGA tour were of Korean heritage. This extraordinary rise in the number of Korean players is attributed to Se Ri Pak who won two of four major tournaments in her rookie year of 1998. She became a Korean national hero and was hailed as a player who brought hope to a country struggling in the midst of the Asian financial crisis. She was

soon followed by other Korean American players on the LPGA Tour as well as increasing numbers of Korean American men on the Professional Golf Association (PGA) Tour.

The dominance of Korean players is largely explained by their training regimes. Korean players are expected to practice every day for hours on end hitting thousands of balls and repeating the same motions under the constant tutelage of a coach. The golf education system in Korea expects players to dedicate themselves exclusively to the game. Much like the Korean education system in general, there is fierce competition to be the best. Furthermore, parents and family are expected to guide and support the golfer by dedicating their lives to their success.

Players of Korean heritage have transformed the international professional game. The entry of players from South Korea coincided with increased attempts by U.S.-based professional golf to internationalize, especially in Asia. Even though Korean players have helped advance that goal, the rapid increase in Korean professionals has been received with a great deal of ambivalence. In the LPGA, the major shift in the player population has been marked by cultural conflicts and attempts to institutionalize cultural expectations for all players. The proposed English-only rule announced in August of 2007 was met with much controversy as the policy was introduced at a mandatory Korean player meeting prior to being made public. It was clear that the rule targeted Korean players by increasing pressure on them to assimilate into (or leave) a league that they helped advance in profitability and popularity.

Golf as a sport has boomed in Korea. Although there were less than 100 courses at the beginning of the 1990s, by 2011, approximately 358 courses covered the national landscape with another 150 in development. There are more than 3 million golfers in Korea in a country with a population of 50 million. The construction of golf courses has been accompanied by significant changes to the Korean landscape and some controversies have arisen around the environmental, economic, and social impacts of golf courses. In general, a round of golf continues to be very expensive, although the costs have dropped with the increasing number of courses. The activity of

screen golf, which takes place in a rented room furnished with a golf simulator, has become a cheaper way to play a virtual version of the game.

The popularity of golf in Korea is a significant reason that the game has become popular in Korean America. Golf receives front-page coverage in Korean-language newspapers and Korean-language golf channels are available via satellite access. The association of golf with elite status is part of the appeal of the game for aspirational Korean Americans. Yet despite its cultural mystique as an elite sport, a round of golf in the United States can be as cheap as the cost of a movie and concessions at the cinema. Even working-class Korean Americans can play golf in the United States, and many do. For some, golf has become associated with the Korean community and has become an important way to engage with other Koreans.

Some public courses located in areas of Los Angeles, Queens in New York, and Bergen County in New Jersey have a majority Korean American clientele and often have Korean-speaking staff. Many Korean Americans are now pursuing formal training in the sport on a number of levels. Elite golf academies as well as golf management schools have increasing numbers of Korean American enrollees. Korean Americans are also becoming interested in investing in the golf industry. Between the years 2002 and 2008, Koreans purchased over half the golf courses for sale in Southern California. In a short period of time, golf has become a part of mainstream Korean American consumer culture.

Although the emergence of Korean and Korean American golfers is certainly a transnational phenomenon, Korean American golfers are also Asian American, and golf is now the professional sport featuring the largest numbers of Asian Americans. Asian American players have achieved the highest levels of media exposure within the sport. Two high-profile Korean American players, Michelle Wie and Anthony Kim, became golf celebrities even prior to winning major tournaments in their professional careers. Their stories reflect the growing impact of the game in Asian American communities.

Michelle Wie was born in Honolulu, Hawaii, on October 11, 1989, and began golf at the age of four.

She has been widely regarded as a golf prodigy. At the age of 10, she became the youngest winner on the U.S. Women's Amateur Public Links and a year later she became the youngest to qualify for an LPGA tour event. Wie gained much notoriety for her ability to drive the golf ball and through highly publicized appearances on the men's tour. To much fanfare, she turned professional just before her sixteenth birthday in 2005. Wie became one of the highest-paid athletes under 25 with her lucrative endorsement contracts with high-profile advertisers including Nike and Sony. After graduating from the Punahou School in Honolulu in June 2007, Wie enrolled at Stanford University where she graduated in June 2012. When Wie was in college, she became a member of the LPGA in 2009.

Wie's entire career has been closely monitored by her parents, B. J. and Bo Wie, who travel with her and accompany her to all tournaments. They have been a source of controversy as domineering parents who have controlled her every move and have even been blamed for her lack of success as a professional. Although she has failed to earn a significant amount in winnings, she continues to make large sums from a variety of sponsorships. Aided by her height and her looks, Wie is becoming better known as a sports personality than as an accomplished athlete.

Anthony Kim was born in Los Angeles on June 19, 1985. Kim rose quickly to fame once he turned professional but was unable to maintain his initial level of success after three years on the PGA tour. His first few years were met with a number of high profile successes. He qualified for the PGA tour in 2007 and made four top 10 finishes during his rookie season. Kim won two tournaments in 2008 and after winning another tournament in 2010, he became only the fifth player to win three times on the PGA Tour before the age of 25.

In 2009, Kim signed an endorsement deal with Nike Golf. He was highly regarded as a golf phenomenon who had the potential to follow in the footsteps of Tiger Woods. Although Anthony Kim's initial fame emerged from his successes on the course, his personal life also became a subject of media scrutiny. He had a highly publicized break from his controlling father and developed a reputation for a hard-partying lifestyle. Kim's standing in professional golf fell after a series of injuries beginning in 2010.

The media attention and sponsorships garnered by both Wie and Kim demonstrate that, in golf, Asian Americans can become celebrity athletes based on their potential rather than on proven performance. They also show that Asian Americans are a highly sought-after market in the golf industry as they are thought to offer potential for marketing in both the United States and Asia. Although both Wie and Kim have yet to live up to their marketed potential, they have become figures who are now associated with a sporting parable of the rise and fall of the young athlete with the early talent fostered by controlling parents, the fast money that comes with fame, and the early burnout that comes with an industry that demands perfect performance both on and off the course.

Korean Aviation School in America (1920–1921)

With the annexation of Korea by Japan in 1910, Korea was gone from the map. Koreans' resistance notwithstanding, Japanese ambition to dominate Asia brought about the end of the 5,000-year-old Kingdom. No

sooner had Koreans lost their country than they launched a movement to take it back. Korean immigrants in America also took on this movement. They formed the Korean National Association to rouse Korean Americans to help achieve their homeland's independence. They raised money to support the Korean Provisional Government in Shanghai, China. They held anti-Japanese meetings and demonstrations.

The U.S. Korean independence movement had three dominant leaders, with each representing their respective approach to securing the Korean independence. Syngman Rhee (1875–1965), South Korea's founding president, believed that the wedges created between Korea's powerful neighbors of China, Japan, and Russia over the rivalry to control Korea could be used to take back the country. Hence, Rhee argued that the leaders should be watchful for an opportunity to see what diplomacy and international politics might yield.

Ahn Chang Ho (1878–1938) believed that it was largely the fault of the Koreans for losing their country. Their leaders lacked public spiritedness and sought their own selfish ends. Lacking accountability was one thing, but they were also corrupt. The Korean masses had to fend for themselves to survive. Korea as a nation lacked national spirit, a moral and ethical fiber. Under this circumstance, Ahn argued that it should have been expected that Koreans would fall prey to Japanese ambition. To Ahn Chang Ho, therefore, for Koreans to achieve their independence, they must first cultivate their moral and ethical virtues.

Park Yong Man (1881–1928) represented a military approach to Korean independence. Park believed that Koreans should be armed and secure their independence by fighting the Japanese on battlefields. True to his word, Park established the Korean Youth Military Corps in Kearney, Nebraska in 1909, drilling them in military arts and science. Park organized another Korean military corps in Hawaii with the support of Hawaii Korean community. He never succeeded, however, in getting his trainees to engage in combat with the Japanese.

In philosophy, the Korean Aviation School was an outgrowth of the military approach to the Korean independence. How the aviation school came about, however, had little to do with Park Yong Man. The idea

of building a Korean aviation school came from General Ro Baek Lin, who was serving as the defense minister of the Korean Provisional Government in Shanghai, China. Ro knew the Japanese military well because in his youth he was sent by the government of the Korean Kingdom to study Japan's military.

Ro understood that the Japanese military excelled in land and sea warfare but was weak in air combat capability. Ro decided that for the Korean Provisional Government to beat the Japanese, it had to be with air warfare. With this vision in mind, Ro traveled to Hawaii and North America in 1919 with the idea of building an air force for the exile government.

When seeking support for his idea from the Korean American community, Ro met with the successful Korean rice farmer millionaire, Kim Chong Lim. Convinced of the merit of Ro's idea, Kim Chong Lim agreed to finance the construction of a Korean Aviation School and build it in Willows, California. Kim spent \$20,000 to rent a former school building at Quint. There he housed his administrative staff and instructors and purchased 40 acres to build runways. He purchased three airplanes, each costing \$3,000. He budgeted \$3,000 each month to cover staff salaries and operating costs.

With Kim Chong Lim as the president and General Ro Baek Lin as superintendent, the Korean Aviation School opened its doors on February 20, 1920 in Willows, California, 70 miles north of Sacramento. It started with 15 Korean youths, who were taught English, flying lessons, military science, and drill. It produced the first graduating class of four on July 7, 1920. By this time the school enrollment had doubled.

The idea that Koreans, a people without a nation, were operating a flight school to train flyers to fight the Japanese empire was so newsworthy that the American Screen News Company of San Francisco videotaped the school operation on September 20, 1920. *The Willows Daily Journal* followed up on the Korean Aviation School's progress with frequent reports on it from April 1920 to July 1921.

Of the graduates, two served in the Korean Provisional Government's army air corps and one taught at an air college in China. The school was operating at full steam until Kim Chong Lim lost his fortune. A

heavy rain in December 1920 in Northern California destroyed Kim's rice fields. With his fortune gone, he could no longer support the school, and it closed its doors in April 1921.

Korean Central Intelligence Agency (KCIA) and the Korean American Community

The Korean Central Intelligence Agency (KCIA) was the primary intelligence agency of the South Korean government during the Park Chung-hee era (1961–1979). It received notoriety in the United States during the 1970s Koreagate scandal for the illegal intimidation and harassment of Korean Americans. The KCIA's activities are an example of foreign governments' attempts to exert influence over their emigrant communities in the United States.

The KCIA was founded in the summer of 1961, shortly after Park took control of South Korea. It was originally charged with coordinating the government's national security and counterespionage activities in South Korea. In addition, it was also used to suppress anti-Park activities among Koreans, both domestically and abroad. Through the 1960s, Korean emigrants reported instances of KCIA harassment in Japan, Europe, and the United States. In one case, KCIA

agents were accused of kidnapping Korean students suspected of espionage from Germany and forcibly returning them to Korea, where they were tortured.

In the United States, KCIA activities intensified following the U.S. government's decision to withdraw troops from South Korea in the spring of 1970. Following the decision, the South Korean government charged the KCIA with coordinating an influence campaign to ensure continued U.S. support. The campaign was composed of three separate initiatives: the lobbying of congressmen, the creation of pro-South Korean sentiment through various cultural organizations, and the suppression of anti-Park activities among Korean Americans. Although overseeing all of these activities, the KCIA was most directly involved with the latter activity.

To silence dissent among Korean Americans, the KCIA used a mixture of enticement and coercion. Financial support was the primary means of ensuring support from the Korean American community. In conjunction with various Korean embassies, it funded pro-Park ethnic newspapers and community organizations throughout the country. At the same time, dissident Korean Americans were the victims of harassment and intimidation. Kim Woon-ha, the editor of the *New Korea* (an anti-Park ethnic newspaper in Los Angeles), alleged that KCIA agents harassed and threatened him for printing articles critical of Park. Numerous other Korean Americans reported that KCIA agents threatened retribution against family and friends in Korea for speaking out against the South Korean government.

In summer of 1974, KCIA harassment of Korean Americans came to the attention of human rights advocates within Congress. During a hearing about the South Korean government's human rights abuses, Lee Jai-hyon, a former South Korean official, confirmed that the KCIA had been involved in illegal surveillance and intimidation operations. As a result of Lee's testimony, a full-scale investigation led by Congressman Donald Fraser (D-MN) was launched to scrutinize the KCIA's activities. During these hearings, the full extent of the KCIA-directed campaign emerged, including details about illegal lobbying activities. By the fall of 1976, allegations of illegal lobbying caught the attention of the press and resulted in a major political scandal, which the press dubbed "Koreagate."

Following Koreagate, the South Korean government sharply curtailed the activities of the KCIA in the United States. The majority of KCIA personnel were recalled from the United States in 1977 and Korean Americans' complaints against the KCIA largely subsided thereafter.

In 1981, Park's successor Chun Doo-hwan restructured the KCIA and renamed it the Agency for National Security Planning (ANSP). Although notorious for its human rights abuses in South Korea, the ANSP has not been accused of the same level of activity in the United States as its predecessor.

Korean Cuisine in the United States

As long as Koreans have resided in North America, Korean cuisine has been a central part of family, church, and community gatherings. Korean food remains an important mode of ethnic and national identification for Korean individuals and communities. Cultural notions regarding individual well-being and family health for many Korean Americans are connected to eating Korean food on a regular, if not daily, basis. Although studies have shown that Korean Americans consume less Korean food the longer they reside in North America, the constant flow of food, media, and people between South Korea and North America means that Korean cuisine will continue to remain a vibrant site of cultural interaction across the Pacific.

With the growth of the Korean population in the United States after 1965, Korean groceries and restaurants began to emerge in largely urban Korean communities. Korean groceries enabled home cooks to create dishes that were closer to the food served and eaten on the Korean peninsula. Korean cuisine in restaurants has been generally associated with barbecued beef, or *kalbi* (marinated rib meat), although many serve a variety of soups, stews, noodles, meats, and fish. Although most Korean restaurants are run by immigrant entrepreneurs who have been largely responsible for promoting the cuisine, by the end of the century, a number of South Korean franchise chains began to emerge. Since 2008, a division of the Korean government Ministry of Food, Agriculture, Forestry and Fisheries announced the “Global Promotion of Korean Cuisine Campaign,” which sponsored food festivals, cooking competitions, and informational campaigns to popularize “Hansik” or Korean cuisine around the world. Furthermore, several high-profile Korean American celebrity chefs and television

personalities emerged in mainstream food media bringing further interest to Korean cuisine.

Many Korean Americans associate Korean food with family and community gatherings. A Korean family meal generally consists of a bowl of rice, a *kug* (soup) or *jjigye* (stew), a number of sides called *panch’an* and *kimch’i* (pickled vegetables). There are also foods that mark celebrations, including *chabch’ae* (cold noodles), *chŏn* (pancakes), and *ttŏk* (rice cakes). In a restaurant setting, a meal is generally centered around one main dish, usually a meat or fish dish, a large brothy *kug* or *jjigye*, *pibimbap* (a mixed rice and vegetable dish), or noodles. Most dishes are accompanied with rice and *panch’an* and virtually all meals are served with *kimch’i*. Korean processed and snack foods also constitute a significant part of the Korean diet with the spicy Shin Ramen being the best selling ramen in the world.

Koreans who immigrated earlier in the twentieth century rarely had access to distinctively Korean foods, including Korean produce, and often settled

for Japanese or Chinese equivalents. Many Korean Americans kept home gardens to grow their own foods and some also foraged foods like acorns, chestnuts, and ferns. After 1965 and the growth of Korean American communities, Korean grocery stores specializing in Korean foods began to emerge in the urban areas of Los Angeles and New York City. As farmers began to produce Korean versions of produce and grocers started to sell distinctively Korean food items, a closer approximation of food from the Korean peninsula began to emerge. As the Korean American population increased and the market for Korean groceries grew, Korean American grocers began to stock more foods manufactured and produced in South Korea, including perishables like produce and *kimch'i*. Large-scale Korean markets, such as H Mart, promote one-stop shopping by carrying many of the items one could find in a South Korean supermarket as well as many American staples. Korean food in North America has also been fused with foods from other cultures representing the diverse migration histories of Koreans who come to North America from Mexico, the former Soviet Union, Japan, and Brazil.

Although Korean food has been a central part of community gatherings and ethnic identification, food has also worked to distinguish Korean Americans as different and foreign. The pungent smell of *kimch'i*, for example, has been a point of debate within the community as a matter of assimilability: Does the insistence on eating *kimch'i* represent an unwillingness to adapt to American cultural norms? Issues of eating dog meat have also been a sensitive topic as dog has been a part of the diet on the Korean peninsula, albeit as a minor and rare food. Although there are no recorded cases of Koreans eating dog meat in the United States, the issue of dog eating continues to be raised as a source of ridicule about Koreans that functions to distinguish them as foreign and unassimilable.

Korean restaurant cuisine in North America has been largely defined by popular establishments in Los Angeles and New York City. Restaurants in the Koreatowns of Los Angeles and Manhattan often parlay various food trends that arrive directly from Seoul. Although catering primarily to a Korean clientele, the Koreatown area in Los Angeles is well-known as the primary destination for eating Korean food in Southern

California. Los Angeles was the site of Woo Lae Oak, the first high-end restaurant featuring Korean cuisine marketed to mainstream American consumers, which opened in 1976. Korean food is now a significant part of the ethnic cuisine traditions in Los Angeles with *pibimbap* and *sundubu jjigye* (soft tofu stew) having various moments as iconic Korean foods.

In New York, Korean cuisine has become associated with the Koreatown located around Thirty-Second Street or “Korea Way” in Manhattan. A number of popular restaurants, Kum Gang San, HanGawi, and Cho Dang Gol, prepare a wide variety of Korean foods. Korean food experienced mainstream attention around the turn of the century with a series of articles by Ruth Reichl, the former *New York Times* food critic, whose reviews functioned as primers for those unfamiliar with Korean food. In 2011, the first high-end Korean restaurant incorporating the techniques of molecular gastronomy called Jung Sik opened in Manhattan.

In the 2000s, a number of Korean American celebrity chefs emerged on the mainstream food media circuit. Although none of them were chefs of traditional Korean cuisine, they often incorporated Korean elements into their foods and thereby brought more mainstream exposure and interest to Korean cuisine. The most famous Korean American celebrity chef, David Chang, runs the Momofuku chain of restaurants and is counted as a member of the culinary elite. Sang Yoon developed his reputation by focusing on gourmet hamburgers and craft beers at his Los Angeles gastro pub, Father’s Office. Roy Choi ignited a nationwide gourmet food truck trend in 2007 with his Kogi BBQ Taco trucks that fuse Korean and Mexican cuisine and use social messaging to appeal to mobile and tech-friendly consumers.

With funding from the Korean government Ministry of Food, Agriculture, Forestry and Fisheries, a campaign was launched in 2008 to increase the visibility, popularity, and availability of Korean food around the world. For example, at the 2011 Luckyrice food festival in New York, the Korean government ministry sponsored a booth by Hooni Kim, the chef-owner of Danji, the first Korean restaurant to receive a Michelin star.

All of the aforementioned chefs have been featured in food-oriented media, including magazines,

newspapers, blogs, and television. Korean Americans have also made appearances on popular television cooking competitions. Food television personality Kelly Choi was the host of the first *Top Chef Masters*, and in the ninth season of the cooking competition *Top Chef*, contestants Beverly Kim (fourth place) and Edward Lee (fifth place) incorporated elements of Korean cuisine into their foods. In 2011, some public television stations in the United States offered a syndicated series called *The Kimchi Chronicles* hosted by Marja Vongerichten, wife of famed chef Jean-Georges Vongerichten. As a half-black, half-Korean adoptee, Marja Vongerichten narrates a return journey to Korea as a way to get in touch with her Korean past and to introduce its foods to a non-Korean audience. This television program was largely underwritten by the Korean government.

Although there have been studies showing that Korean Americans are consuming less Korean food over time, movement and migration between South Korea and the United States ensures that Korean food is part of a dialogue between both sites. The popularity of certain foods with different cohorts of Korean Americans is sometimes understood as indicating their age and immigration history. Nevertheless, Korean food in the United States has always been a fusion of cultural influences reflecting the ever-changing nature of the Korean American community and its food cultures.

Korean Immigrant Women in America

Korean immigrant women in the United States may be traced back to the 1882 U.S.-Korea Treaty that would soon after lead some Koreans to migrate to the United States in small numbers—students, merchants, and laborers. The first ship of Koreans arrived in Hawaii in 1903 with 102 passengers on board. Between 1905 and 1910 only 45 of the migrants were female. General trends suggest there was a gender difference of 10 males for every 1 female migrating during the early 1900s. In 1910, Japan annexed Korea, leading approximately 7,000 Koreans to flee to Hawaii. During the Japanese occupation of Korea, there was an increase in Korean women migrating to the United States and its territories as "picture brides." Picture brides are a practice of arranged marriage (*joong-mae kyulhon*) in which a go-between (*Joong-mae jaeng-i*) investigates and negotiates arrangements between two families. It is documented that 1,100 picture brides arrived (1910–1924) as young Korean women looking for a "Golden World" that would offer new opportunities. Scholars have found that Korean migrants who arrived in the Pacific Northwest in the early 1900s were all picture brides. Those arriving in Hawaii had similar experiences to Japanese and Okinawan brides in being surprised by the conditions they would endure there. Korean picture brides often experienced challenging marriages because cultural differences. Often, Korean women in an arranged marriage were from the south

and their husbands were from north or central Korea and found it difficult to adjust to their marriage. Korean women were not only shocked by the culture within their home, but they also experienced racism by the dominant society and, in particular, by Japanese migrants in the United States and its territories. In spite of these challenges, Korean women were active in Christian churches, joined women's groups, created opportunities for their offspring, and found they were able to work to support the Korean Independence Movement within the diaspora by sending remittances home to Korea. Picture brides are perceived by Asian Americans as pioneer migrants, not only as the first to migrate, but also making possible the arrival of the U.S.-born second generation.

A major gender shift in Korean migration occurred after the Korean War that would for the first time lead to more females migrating than males—for every male that migrated, three-and-a-half females migrated. Japan's defeat in World War II in 1945 signified liberation for Korea, however, the Allied powers established the 38th parallel that divided Korea into North and South. War broke out when North Korea entered South Korea, a conflict that has been referred to as the Forgotten War or the Unknown War—the Korean War (1950–1953). In 1953 the United States and North Korea signed an armistice agreement that led to a ceasefire—this permanent state of war persists into today. In 1955 the U.S. military presence in Korea became a permanent feature. The trend of women migrating during this time period has been defined by two extremes—a pejorative as a camptown prostitute or as someone rescued as an orphan, the Korean adoptee.

The hypersexual Asian woman that is meant to be pleasing for the Westerner may be traced to the U.S. military presence in the Asia-Pacific. This Korean woman is referred to as *yanggongju*, or “Western Princess,” a woman who had sexual relations with Americans. The Western Princesses carry with them a stigma, especially those who migrated prior to 1965. In 1950 the first military bride entered the United States. The experience of the Korean wives of U.S. military personnel in the United States included the perpetuation of stereotypes about how they met their husbands working in a hostess bar or as a prostitute

in a camptown. Being a prostitute carries a stigma in Korean culture—she is marginalized within and outside the Korean community and treated as trash and the lowest of the low. These stereotypes, although embedded in partial truth for some Korean military brides who were part of the estimated 36,924 prostitutes in Korea (1950s–1970s) who entertained the approximate 62,000 U.S. soldiers, is not a reality for all. More than 100,000 Korean women married American military personnel. The experience for many Korean immigrant women who arrived in the United States as military brides, regardless of how they met their husbands, found life in America to be incredibly challenging. They were isolated because of their inability to speak English, faced racism because of American assumptions of language access and intelligence, and their family lives were strained leading to divorce in some cases. In general, military brides were strangers in a different place where the reality of the America they had hoped for was not the America they experienced. But although their experiences, like the picture brides that came before them, would mean facing a challenging environment, the positive aspects that Korean military wives also have is that they are seen as ambassadors for the Korean community—sharing Korean culture to Americans and a tie to the United States for family and friends in Korea.

Another image of Korea that manifested during and after the Korean War is the global view that it's a nation of baby export. War images of orphaned children led to an estimated 220,000 infant and children being adopted mainly in the United States, but also in Europe. A study of Korean adoptees in 2000 found that of the Koreans adopted from 1956 to 1985, 75 percent were adopted at the age of three years old or younger, and that the majority of the adoptees were female. By 2000, the average age of the adoptees was 30 years old. Many were not raised by Korean Americans, but they found ways to connect with their Korean heritage, in which a majority participated in a Korean adoptee organization and/or its events when growing up. And although many adoptees maintained such activities, as adults they began to study or read books about their culture, traveled to Korea, and maintained friendships with other Korean Americans. Like most immigrants, they experienced racism but were

unable to talk about it with parents whose racial difference as white parents in most cases made the discussions difficult or impossible. The negative experiences of discrimination made some adoptees attempt to deny their Korean history or attempt to fit in by hiding any differences. Such disconnection from the past was normal for adoptees in their adoptive family where birth families are not a part of the lives of the Korean adoptees. This is delineated in a PBS feature documentary of Dean Borshay Liem's film, *First Person Plural*. Korean adoptees are defined by two contrasting images of being "family" (*uri minjok*) and "foreigners" (*oegukin*) at the same time. Adoptees have formed organizations that unite themselves and take on leadership roles in such initiatives including, but not limited to, Asian Adult Adoptees of Washington, Adopted Korean Connection in Minnesota, Also Known As in New York, and Korean Adoptees of Hawaii. The initiatives are not only U.S. based but also transnational, as delineated in the Global Overseas Adoptees' Link (GOA'L) that was formed by adoptees in the United States and Europe. Although Korea developed a stereotype of being a major baby exporter, it shifted its image in 2007 when Koreans adopted more children than those sent abroad. Adoptee Solidarity Korea and Korean Unwed Mothers and Families Associations, among many others, have worked to reform current Korean laws to increase the standards within which adoptions occur.

In 1965, the United States passed the Immigration and Nationality Act, also known as the Hart-Celler Act, which abolished the National Origins Act of 1924 that denied Asians legal entry into the United States and unintentionally led to the increase in Asian migration into the United States. After 1965 the number of Korean women immigrants outnumbered Korean men. Koreans continue to grow in numbers and between 1990 and 2000 the Korean community doubled in number from 800,000 to 1.6 million. The 1965 Immigration Act enabled family reunification. Most of the Korean immigrants typically came as adults and brought their elderly parents and children with them. These radical shifts also led to class diversity and an increase in Korean professionals. Owing to elements in the 1965 Immigration Act, there was preference given to professionals, workers in

occupations with labor shortages, scientists, and artists of exceptional ability. This has facilitated the stereotype of Koreans as "model minorities." Although many have become successful, Korean American families have had to adjust drastically to their new lives in the United States. Korean families are increasingly seeing more women in the workforce. In spite of their increasing role in the workforce, Korean wives have a double role of working and also performing the overall household tasks. Immigrant women are vulnerable to being overlooked for domestic violence because of model minority stereotypes. In Los Angeles County it was reported that immigrant Korean families have the highest rate of spousal abuse among various Asian immigrant groups.

Korean immigrant women are not only mothers and daughters that have enabled transnational families to exist in the United States, but are also redefining American culture as artists, writers, journalists, and actresses.

Cecilia Hae-Jin Lee, who immigrated with her family in the 1970s, has made impacts on American arts and food—her work may be found as public art in cities in Washington State and California. Dohee Lee is trained in Korean traditional dance and drumming music, has made waves in the Asian American art scene as a dancer, musician and vocalist. But, most known to Generation X and Y, is the biracial Korean-Polish lead singer for the Yeah Yeah Yeahs, Karen Lee Orzolek, also known as Karen O. In 2010, she composed all the songs for the soundtrack of the film *Where the Wild Things Are*, in which the song she cowrote "All is Love" was nominated for the Grammy Award for Best Song Written for a Motion Picture, Television, or Other Visual Media in 2010.

Korean women have impacted the literary scene in the United States with fiction and memoirs. Mary Paik Lee and her memoir *Quiet Odyssey* that begins in 1905 when her family fled Korea as political refugees when she was five years old, and Elizabeth Kim's memoir *Ten Thousand Sorrows: The Extraordinary Journey of a Korean War Orphan* are exemplary Korean American immigrant memoirs. Theresa Hak Kyung Cha is a notable fiction writer who migrated to the United States in the 1960s with her family. Born during the Korean War, her work spoke to the

dislocation that war creates and investigates identity in the context of history, ethnicity and gender. She is best known for her 1982 publication, *Dictee*. A week after its publication she died at the young age of 31 years old. Her work not only speaks to the Korean immigrant experience, but her death is reflective of the violence that Asian Americans experience that goes unnoticed; she was brutally raped and murdered by serial rapist Joey Sanza.

As hosts on *Top Chef Masters* (Kelly Choi), actresses in television series such as *Lost* (Yunjin Kim), or an Emmy award-winning television journalist for ABC News (Juju Chang), or sports (Corinna Knoll), Korean American women are changing the face of Asian American women on screen. Although there is much work to be done in shaping the presence of Korean immigrant women as leaders in American politics, in which Michelle Eunjoo Park Steel, vice chair of the California Board of Equalization, currently is a pioneer as the highest-ranking Korean American officeholder in the United States. Whether it is politics, arts, or the sciences, Korean immigrant women are acknowledged leaders for both the Asian American community at large and the Korean American community in particular.

Korean Independence Movement in the United States

The Korean independence movement in the United States was a part of an international political struggle organized by Koreans to overthrow Japanese colonial rule on the Korean peninsula from 1910 to 1945. Within the Korean diaspora, the Korean independence movement was an existential struggle to maintain Korean identity, culture, and language in the face of Japan’s imperial policy and to raise financial and

political resources to win back the nation's independence. Koreans in the United States carried a special burden as residents of one of the most politically powerful and economically wealthy countries. Korean Americans intensely lobbied the U.S. government to support Korea's independence and raised enormous sums of money to support various efforts for the cause. As the United States and Japan braced for the impending war in the Pacific, Korean Americans organized military training programs in hopes of joining the fight to liberate their homeland. Key Korean American community leaders, including Ahn Chang Ho and Syngman Rhee, played key roles in establishing and leading the Provisional Government of the Republic of Korea in Shanghai. The movement ended on August 15, 1945, when Japan unconditionally surrendered to the United States and Korea gained its liberation from Japan.

After winning two wars (the Sino-Japanese War of 1894–1895 and the Russo-Japanese War of 1904–1905), Japan forced Korea to sign two successive treaties (the Japan-Korea Protectorate Treaty of 1905 and the Japan-Korea Annexation Treaty of 1910) to place Korea under the full control of the Japanese government. Under annexation, a governor-general appointed by Tokyo had absolute power in Korea and all Koreans became the “Emperor’s people”—a term that designated Koreans as colonial subjects but deprived them of full Japanese citizenship. With annexation, Japan organized massive campaigns to remake Korea to meet the economic and military needs of the Japanese empire. In addition, the Japanese government and businesses organized large numbers of Japanese settlers to live, work, and invest in Korea. Added to these policies were cultural and educational policies such as name-change ordinances and the imposition of Japanese language in educational institutions that fuelled bitter resentment. Met with widespread and organized resistance, the Japanese government imposed increasingly harsher policies that resulted in mass protest movements and armed struggle.

For Korean immigrants in the United States, the effort to maintain Korea's independence began immediately after the first Korean plantation workers arrived in Hawaii. On August 7, 1903, Korean

plantation workers established Sinmin-hoe (New People's Association), and on September 22, 1903, Ch'in-mok-hoe (Friendship Association) was established by Ahn Chang Ho in San Francisco. Both organizations emphasized uniting all Korean Americans to defend Korea against the imperial encroachment of Japan. The Japan-Korea Protectorate Treaty of 1905 further galvanized Korean Americans to make Korean independence one of the central priorities of their community life. Korean National Association (KNA) was established on February 1, 1909 in California to serve as a quasi-governing body for all Korean Americans and to provide leadership to the independence movement.

During the crucial time between the end of Sino-Japanese War in 1895 to the Annexation Treaty of 1910, Koreans and many sympathetic American missionaries in Korea and Korean Americans in the United States had little success in influencing the U.S. government to check Japan's ambitions and to intervene on Korea's behalf. Unbeknownst to these activists, there was an agreement reached by an exchange of messages between U.S. Secretary of War William H. Taft and Japan's Prime Minister Taro Katsura that the United States would support Japanese imperial ambition in Korea if Japan did the same for American ambition in the Philippines.

After the Treaty of Annexation was signed on August 22, 1910 that literally erased Korea from the world map, anger and frustration led more Korean Americans to support and participate in military efforts that were already present in the independence movement. Led by Park Yong-man who held a degree in military science from the University of Nebraska, military camps sprang up in Nebraska, California, Kansas, Wyoming, and Hawaii; Korean cadets came from far away as Mexico. Park Yong-man himself headed the Korean Youth Military Academy in Hastings, Nebraska, and then moved to the Korean National Brigade Center on Ahumanu Plantation on Oahu that trained more than 200 cadets. Weary of factionalism in the Korean American community that pitted Park Yong-man's military with Syngman Rhee's diplomatic factions, Park Yong-man eventually left Hawaii for China to be close to the Korean Provisional Government. The military training program declined

with Park's departure, but military training would persist in larger Korean American communities in Los Angeles and Central Valley in California and in Hawaii. In Willows, California, Kim Jong-lim, one of the wealthiest Korean Americans who made his fortune farming rice, funded the Korean Aviation School and trained pilots.

KNA continued to press diplomatic efforts in the United States by appointing So Chae-pil (Philip Jaisohn) to serve as the head of the Korean Information Office in Philadelphia and dispatched Ahn Chang Ho to the Korean Provisional Government in Shanghai as an official representative. On April 14, 1919, the first Korean Liberty Congress was convened in Philadelphia under the leadership of Philip Jaisohn and Syngman Rhee; the congress issued a 10-point resolution that affirmed Korean independence, rule of law, democratic ideals, human freedom, and civil rights. Independence Hall in Philadelphia provided an ideal setting for a culminating march where Syngman Rhee read the Proclamation of Independence of Korea.

The lofty ideals of the Korean Liberty Congress could not hide the increasing factionalism and personality conflicts within the Korean American independence movement. The mercurial Syngman Rhee would often be at the center of controversy at KNA and then at the Korean Provisional Government in Shanghai, where he was impeached for misuse of authority. The movement was also riven with ideological and tactical differences that ranged from Nationalists to Communists and diplomatic to military factions. In the end, it would be the United States and the Soviet Union that would end Japan's colonial domination over Korea. However, the Korean American dream of an independent Korea would be replaced with the reality of a divided Korea and the nightmare of the Korean War (1950–1953). Nevertheless, Korean independence movement gave hope and mission of a liberated Korea to thousands of Korean Americans who braved and endured harsh life in the United States.

Korean National Association (KNA)

The Korean National Association (*Kungminhoe*) (KNA) was a leading governing body for Koreans in America and for the Korean independence movement during the Japanese colonial period in Korea from 1905 to 1945. The KNA was founded in California on February 1, 1909, and came about as the merger of two other Korean American organizations, the United Korean Society (*Hanin Hapsong Hyophoe*) based in Hawaii and the Mutual Assistance Association (*Kongip Hyophoe*) in San Francisco.

The KNA was initially created to help collect money for the legal defense of Jang In-hwan and Jeon Myeong-un, two Korean students who assassinated Durham White Stevens, an American missionary who worked for the Japanese government and was an advocate for Japanese colonial rule in Korea. Stevens was shot by Jang on March 23, 1908, at the Ferry Building in San Francisco and died two days later from his wounds.

In 1910, the KNA built a branch in Vladivostok. There, Dosan Ahn Chang Ho, a Korean patriot, leader of the independence movement and representative of the Mutual Assistance Society, officially met with KNA envoys. In 1912, several KNA branches converged as the Central Congress of the Korean National Association.

In June 1913, a group of young Korean laborers, who were mistaken for Japanese, were attacked in Hemet, California. Dosan persuaded the Secretary of State William Jennings Bryant that the KNA, as opposed to the Japanese consulate, would represent Koreans in America as the first national Korean

organization in the United States. The KNA went on to establish branches in Hawaii, San Francisco, Siberia, Russia, Manchuria, Cuba, Mexico, and China.

Around this time, there were several disputes within the Hawaii KNA between supporters of then-Hawaii KNA President Kim Chong-hak and Syngman Rhee, who would later become the first president of South Korea from 1948 to 1960. After Rhee gained control of the Hawaii KNA around 1915, Kim started the Kalihi Alliance (*Kalihi Yonhaphoe*) and the Korean National Independence League (*Tae Chosun Tongnipdan*). The disputes between these factions spread to affect the churchgoing community and created a division between the Koreans in Hawaii at the time.

In 1915, Dosan became the first President of the Central Congress of the KNA; Park Yong-man, a Korean patriot and independence movement leader who formed the Korean Military Corps, was its first vice president. After the March 1, 1919 uprising, there were several pleas made to the Hawaii KNA to resolve its internal strife, and the KNIL and KNA unified for a short time. However, in May 1919, Park left to promote the independence movement from China, and by September 1919, the two organizations once again split.

On January 8, 1920, the Hawaii KNA broke their agreement with the Central KNA of North America and chose to send their funds directly to Rhee, who had moved to Washington, D.C. The KNIL supporters moved to form the Joint Convention of Koreans (*Han'in Kongdonghoe*) on January 22, 1920, to oppose the secession of the Hawaii KNA from the Central KNA. For several months, there was bitter infighting and costly litigation until April 1920, when the KNA of North America intervened with a compromise. Although both sides withdrew their lawsuits, in essence, the KNA leadership, with its support for Rhee, remained in power. These disputes continued with a series of lawsuits into the 1930s, which weakened the power of the Hawaii KNA and affected the Korean Provisional Government as a whole.

In 1936, the headquarters of the KNA was moved from San Francisco to Los Angeles. In 1938, a new building at 1368 West Jefferson Boulevard was built and served as a community center for Koreans in Los Angeles, in an area referred to as "Old Koreatown." At this point, the role of the KNA was to promote the

welfare of Koreans in America; to educate Koreans to be faithful citizens of America; to introduce Korean culture to this country; and to promote close friendships with other ethnic people. The KNA Building was also headquarters for other Korean organizations in America, including the United Korean Committee in America, the Korean Chamber of Commerce in America, the Korea Relief Society and the *New Korea* (*Sinhan Minbo*) newspaper.

During the 1940s, the Japanese internment in America led the KNA to provide certificates of national origin to distinguish Korean Americans. In the 1970s, the neighboring Korean United Presbyterian Church purchased the KNA building, which was named a historical site by the City of Los Angeles in 1991. In 2002, the site was officially named the Korean National Association Memorial Hall by the KNA Heritage Preservation Committee and was dedicated on December 9, 2003.

The current president of the KNA Memorial Hall is philanthropist and Korean community activist Dr. Myung Ki "Mike" Hong. However, there is some controversy surrounding his involvement in the KNA, as his father, Chan Hong, ran a movie theater in Korea that supposedly screened pro-Japanese films during the colonial period. The hall now includes a permanent exhibit of KNA photos and documents to inform the community about its role in Korean American history.

Korean-Black Relations

Korean-black relations primarily stem from Korean immigrants' business entries into retail trade with

mostly black customers in the U.S. metropolitan areas. Thus, these Korean immigrants' business entries must be analyzed within at least two contexts: Korean immigration and the multiracial character of the American economic system.

Korean immigrants' business entries into African American retail areas began with the 1965 revisions of the U.S. immigration law. With it, the number of immigrants from South Korea started to increase in the United States. For example, the annual number of Korean immigrants reached the level of 10,000 in 1970; 20,000 in 1972; then 30,000 in 1976 and that number was maintained until 1990. The peak of Korean immigration was reached the second half of the 1980s with more than 34,000 new annual immigrants. In the 1990s and 2000s, however, the new Korean immigration decreased drastically.

Since the 1970s, as significant numbers of Korean immigrants opened their businesses in the inner-city black communities of major U.S. cities, the tension between Korean merchants and local black residents started to develop. From the second half of 1980s to the first half of the 1990s, their relationship continued to explode. From the second half of the 1990s, however, the racial tension started to decline as the number of Korean merchants in the inner-city black communities rapidly decreased. However, since 2010, there has hardly been any racial tension between Korean merchants and local black residents in the major cities.

The post-1965 Korean immigrants generally immigrated with pre-immigration urban middle-class backgrounds. As middle-class immigrants who immigrated with their own families, their utmost concern was the quality of life of their families in the United States. Thus, their business entry into African American retail areas was one vehicle to achieve a somewhat stable family life, their middle-class dream.

The middle-class dream has three components: supporting a family comfortably in the United States; settling a family in a clean, safe, and peaceful community; and sending children to a good quality elementary and high school and eventually to a good college and professional school. Korean immigrants realized that making sufficient income was the necessary basis of their pursuit of the middle-class dream in the United States.

Such a dream forced a large number of Korean immigrants to enter the field of the self-employed small business owners in the 1970s and 1980s. When their businesses stabilized, Korean immigrant merchants on average earned more than most Korean immigrant wage or salary earners. This explains why so many Korean immigrants were engaged in self-employed small businesses in the 1970s and the 1980s. In 1990 U.S. Census, proportionally more Korean immigrants were engaged in self-employed small businesses than any other racial or immigrant groups in the United States.

Added to this entrepreneurial motivation of Korean immigrants was an extraordinary cross-current of events: simultaneous opening in business opportunity and supplier advantage. In the latter half of the 1960s, there had been numerous urban riots in the major cities. In those riots, large numbers of businesses of Jewish and Italian merchants were burnt down. An exodus of Jewish and Italian merchants took place and business vacuum was created. Taking advantage of such vacuum, newly arrived Korean immigrants actively rebuilt these consumer markets in inner-city minority communities with the highly demanded consumer goods manufactured in their native country, South Korea.

In the second half of the 1960s, the South Korean government was actively building the export-oriented economy with simple consumer goods. Luckily for Korean immigrants, such consumer goods as wigs and other beauty items from Korea were highly demanded in those areas. This demand further encouraged a large number of Korean immigrants to open their own retail businesses in the inner-city black communities. As the Korean economy gradually produced more diversified consumer goods during the 1970s and 1980s, Korean immigrant merchants in the inner-city African American communities also expanded merchandise to apparel, shoes, electronic goods, personal accessories, and others. They were also able to secure merchandise produced by outside Korea, including merchandise produced in the United States. Their diversification in merchandise and in supply sources opened further business opportunities to a large number of Korean immigrants. In major cities such as Los Angeles, New York City, Chicago,

Washington, D.C., and so on, Korean small businesses in inner-city minority areas became a somewhat familiar occurrence.

Korean immigrant small businesses in the inner-city minority areas became *middleman minority merchants* in the 1970s and 1980s. Korean merchants were in the middle between the producers and wholesalers, and consumers. Korean immigrant merchants sold the merchandise they obtained from Korean and American suppliers to consumers at retail prices. Eventually, black and other consumer groups in those areas felt that they were unfairly exploited by both retailers and their suppliers. Being visibly in the middle, Korean immigrant merchants had to bear the brunt of consumers' grievances, though.

Specific complaints against Korean merchants were too high prices and low quality goods at Korean stores, not hiring enough black workers, Koreans' attitude of offending black pride, and draining community (black) money to outside sources such as depositing funds at outside banks not at local black banks.

Consumers' complaining was prevalent but only one aspect of the Korean-black conflict. Another aspect of their conflict reflected life experience and interests of local black residents. As an exploited minority in the United States, local black residents were highly resentful of white Americans. However, at least part of their resentment now shifted to Korean merchants. In other words, Korean merchants emerged as an easy target. With such feeling of resentment, black consumers tried to steal goods from Korean stores. As Korean store owners tightly watched over black customers, they became further resentful—Korean store owners treated all black customers as potential thieves. Unfortunately, some black community leaders took advantage of such tense situations by mobilizing local black residents against Korean store owners for their short-term local political interests.

When the Korean-black conflict came to be shaped by these accused economic activities of Korean store owners and the exploited life history and interests of many black local residents, the Korean-black conflict took two specific forms during the three decades of the 1970s, 1980s, and 1990s: (1) daily interpersonal disputes at the store level and (2) collective activities of local black residents against Korean merchants.

Daily interpersonal disputes at store level occurred with black customers' feelings of being watched suspiciously and Korean store owners' perceived need to monitor customers closely. In this kind of tense atmosphere, disputes such as verbal or physical confrontations and occasionally some violent actions such as murder or injury of store owners, employees, or customers often developed. The confrontation at store-fronts occurred frequently, yet, such store-level disputes did not receive much attention from the American public or media attention, even cases of murder or injury usually got a fleeting attention.

Sometimes, collective activities of black residents took place. One such activity was boycott movements against Korean store owners. Proceeding from boycotts often were demands of some remedial actions by black residents to store owners such as lowering merchandise prices, providing better quality goods, and hiring more black workers. When demands were not met, local black leaders sometimes organized boycott movements. In the past, we observed such boycott activities in the major cities such as New York City, Los Angeles, Chicago, and other cities. The most serious and conspicuous black boycott activity took place in Brooklyn New York in 1987 and lasted for more than a year. Ed Koch, the mayor of New York City, and mass media were heavily involved in this incident.

Another type of collective activity was the violence that led to the burning of Korean stores and even the injury or murder of Korean storeowners or employees. The most conspicuous case of burning Korean stores took place in 1992 in the South Central area of Los Angeles. In this violent racial riot, more than 2,000 Korean stores were burned down. This event shocked Korean immigrants and the American public as well. This South Central LA violence is considered as the most conspicuous and violent form of Korean-black conflict in the United States so far.

The Los Angeles racial riot clearly demonstrated that Korean-black conflict in the major cities could not be treated just as a case of a biracial conflict between Korean immigrants and African Americans. In general, Korean-black conflict in any major city should be framed in the events of multiracial conflict. As one racial minority, Korean immigrants were

encouraged to enter the inner-city black communities in the major cities. Then, Korean merchants had to deal with local residents who had been exploited throughout American history. Although black local residents were resentful of whites, the local residents could not hit back at whites because of the residential or other structural segregation. Then, black local residents found Korean merchants an easy target for their structurally accumulated resentment. In addition, Korean immigrant merchants were economically active in inner-city black communities, but they were politically extremely weak in the communities.

A case in point is the 1992 Los Angeles racial riot. Local black residents were mobilized by the verdict of the Rodney King case and were highly resentful of the not guilty verdict of white policemen. But the white population was well protected by the Los Angeles police force and/or geographically too far away to make an impact. Thus, black residents turned against unprotected Korean merchants in the area of Los Angeles South Central. The intensity of attack of local black residents against Korean stores exposed their accumulated resentment—resentment against both whites and Korean merchants.

After the Los Angeles racial riot, Korean-black conflict started to deescalate and remains minimal to the present. Several factors may explain why Korean-black conflict hardly exists today in the major cities. The primary reason is that the number of Korean stores in the inner-city black communities has been drastically reduced. There are several reasons that this reduction reinforces the contention that Korean-black relations need to be considered in a multiethnic framework.

The first reason of the reduction in Korean stores in inner-city communities is the deterioration in retail market conditions in those areas. As a result, many Korean immigrant merchants were not able to continue their businesses. One example of such a case is South Central Los Angeles where most of the destroyed Korean stores were just abandoned—partly because of store owners' emotional and financial hardships, but also partly because of governmental regulation. Korean liquor stores were good examples of this burden. Simply put, many Korean liquor stores were not allowed to open again.

Second, from the 1990s, other immigrant groups such as Asian Indian, Pakistani, and Arab merchants have opened retail stores in the inner-city black communities of the major cities. Korean store owners cannot compete with these immigrant merchants. Third, in recent years even large-scale white retail chains have returned back to inner-city black communities. Korean merchants also cannot compete with such large-scale retail store chains. Fourth, a drastic decrease in the number of new immigrants from South Korea contributes significantly to a drastic decline in the number of potential Korean immigrants who desire to open their businesses in inner-city black communities.

In conclusion, Korean-black relations in the United States must not be examined in a biracial framework of Korean and lack. It must be investigated with a multiracial context of American society, and with a global context of immigration. There are many possible venues for two racial groups to interact with each other in a multiracial society. Of these possible venues, Korean-black relations are almost solely economic in nature. Koreans as storeowners in inner-city black communities relate with black residents in the areas as customers. With a limited number of Korean stores in inner-city black communities, Korean-black relations in the foreseeable future are likely to remain quiet.

Koreatown

Background

Koreatown is a term that describes an ethnic concentration of Korean residents and businesses. The term is used interchangeably with Little Seoul, Korean district, Korean enclave, and Korean community. Such concentrations create a critical mass for an ethnic population to form businesses and social institutions and publicly recognizable spatial clusters. Historically, ethnic spatial concentrations emerged as a result of the discriminatory practices of restrictive covenants in housing until their elimination in 1948, and Koreatown has been an indispensable element of immigrant experiences throughout the history of Korean immigration. Korean immigration to the United States traces back to 1882, when diplomatic relations were established between the two countries (United States-Korea Treaty of 1882). Around the turn of the twentieth century, the first wave of Korean immigrants consisted of laborers recruited for work on Hawaiian sugar plantations, picture brides of said laborers, and students in the New York area. Some of these early immigrants relocated to Los Angeles and created the Korean community. A few small Korean American communities existed in Hawaii, California, and New York but went largely unnoticed because of the paucity of residents. The majority of them Christians, they centered their lives on ethnic churches, lacking the critical mass for a visible spatial cluster of ethnic business establishments.

The establishment of modern Koreatowns in major metropolitan areas postdates the Immigration and Nationality Act of 1965 (also known as the Hart-Celler Act), which allowed large numbers of Asian immigrants who had previously been barred by the displaced quota system. Post-1965 Korean Americans acquired reputations as active ethnic enclave builders seeking "institutional completeness." Korean Americans' high self-employment rate (21 percent of employed civilian workers age 16–64 in 2010) operates as an important factor in the evolution of Koreatown. Most self-employed Korean Americans are concentrated in a few labor-intensive retail and service industries including wholesale and retail of Korean and Asian imported manufacturing goods, produce stores, grocery stores, dry cleaning, nail salons, and garment subcontracting. Although Korean Americans participate in entrepreneurial activities that serve general consumer markets, the prevailing tendency of Koreatown economy is to cater toward primarily coethnic clientele through ethnic groceries, banks, restaurants, bars, bookstores, and professional services such as travel agencies, doctor's offices, acupuncture/oriental medicine, attorney services, or accounting services. Because of increasing globalization of labor and capital, the ethnic enclave has been revalorized as a place providing tourists and the creative class with diversity of entertainment, culture, and taste.

Table 1 shows the number of Koreans as a single race in 10 consolidated metropolitan statistical areas (CMSA) with the largest Korean populations. According to Census data of 2000 and 2010, these areas have remained relatively steady. Southern California, which includes Los Angeles, Riverside, and Orange Counties, is the largest Korean American settlement, with approximately 320,000 Koreans as of 2010. The second-largest Korean settlement in the United States is the New York-New Jersey-Long Island CMSA, with more than 200,000 Koreans. The Chicago metropolitan area is the third-largest Korean concentration with the Seattle, the Atlanta, and the San Francisco metropolitan areas are close behind.

One important aspect of contemporary Koreatowns is their high suburban representation. Koreatowns have emerged and flourished in Annandale,

Source: Census Summary File 1, 1990–2010.

Virginia, in the D.C. suburb, Duluth in the Atlanta suburb, and in various suburban cities of Orange County, California (Garden Grove and Irvine). Traditionally, it was held that immigrants initially settle in segregated urban ethnic enclaves and subsequently disperse into suburban areas through the process of economic, social, and cultural integration. According to this notion, immigrant spatial dispersion is inevitably linked to assimilation. The growth of suburban immigrant communities over the last couple of decades, however, has challenged this notion. Suburban residency is no longer the final stage of assimilation. Rather, many new immigrants settle directly in the domain of traditionally white middle- and upper-class neighborhoods.

The high rate of immigrant suburbanization reflects broader socioeconomic and geographical changes: increasing economic mobility of the new wave of immigrants, decentralization of industries and businesses, advanced communication and transportation systems, and an overall change in public attitude toward immigrant assimilation. In addition to these external circumstances, the development of ethnic suburban infrastructures has eased the suburban entry of new immigrants. The 2000 Census data show that almost half (48 percent) of immigrants who

arrived in metropolitan areas in the 1990s chose to live outside the central city. Korean Americans are one of the most highly suburbanized immigrant groups, with approximately 59 percent of the population residing in the suburbs.

Koreatown, like other ethnic enclaves, can be viewed either as a barrier to assimilation or as a channel for socioeconomic advancement. It simultaneously allows for prolonged retention of ethnic identity and solidarity and offers economic opportunities for newly arrived Koreans who lack socioeconomic resources and English proficiency. Major Koreatowns in the United States, the two largest located in Los Angeles and New York, respectively, illustrate the significant contribution of these enclaves to economic and population growth, fostered through the establishment of numerous small businesses with a reliable Korean consumer base supplemented by a wider non-coethnic consumers. The various Koreatowns, although reflecting different metropolitan contexts and distinct historical legacies, are indicative of the shared desire of Korean residents to extend their sphere of influence in the United States, whether it be through Korean representation in political office or expansion into socioeconomically desirable suburbs. The marked propensity of Korean immigrants to build institutionally complete

enclaves in metropolitan American has created ethnic tensions and hindrances to integration; however, they arose out of a genuine necessity for newly arrived Koreans to achieve a semblance of stability. Shifting trends in the process of immigration and assimilation also suggest that the shape and makeup of Koreatown may continue to evolve in the near future.

Koreatown in Los Angeles

Koreatown in Los Angeles was the largest and only officially recognized Korean enclave in the United States in 1978, complete with Korean signs on freeway exits. Three miles west of downtown L.A., Koreatown is entirely within the City of Los Angeles. The first Koreans arrived in Los Angeles in 1904 as farm and railroad workers. By 1930, several hundred Korean students, merchants, and political exiles had made Los Angeles their home. By 1970, Koreatown was firmly established as a first-stop neighborhood for Korean newcomers and small commercial enterprises with Korean clientele. In the 1980s and 1990s, an influx of affluent immigrants and corporation branches from South Korea began an economic boom in Koreatown, securing its place as the center of activity for Koreans in the region.

Today, Koreatown is the commercial and cultural hub of the greater Korean community in Southern California. Its territory expands into the Wilshire district, where a host of high-rise office buildings have cropped up. Upwardly mobile Koreans are spreading out in small residential clusters throughout Los Angeles, Orange County, and San Fernando Valley, including Glendale, Northridge, Torrance, Cerritos, Garden Grove, Fullerton, Buena Park, and Irvine, owing to their safer neighborhoods and better school systems. Since 2000, Fullerton and Buena Park in Orange County have been the largest suburban Koreatowns preferred by the affluent and well-educated. In Fullerton, in particular, Koreans constitute near half of the population, and Korean businesses and companies have taken root in its Amerige Heights Town Center and the nearby industrial district.

According to the 2010 Census, Koreatown is home to almost 240,000 residents. Koreans are the second-largest ethnic group (17 percent) after Latinos

(55 percent), whereas non-Hispanic whites constitute 11 percent. Ethnic composition has remained relatively stable over the last decade, although the number of Filipinos, Asian Indians, and Bangladeshis, and other Asian minorities has grown. Koreatown is characterized by a high percentage of rentals (approximately 89 percent) and low percentage of married couples (34 percent), indicating residential instability. The median household income in Koreatown is low relative to the city as a whole (\$33,448 compared to \$49,138, as of 2010), although it has increased since 2000, mainly because of the influx of young Korean professionals.

Because of the residential instability and demographically marginal position of Koreatown within greater Los Angeles, Koreans are placed at a disadvantage with regard to electoral politics in the city. Despite efforts by Korean American political activists to bring Koreatown under one city council district, Koreatown is divided among four separate city council districts. Despite the lack of the official political representation, Korean business elites maintain political solidarity through donations to candidates and organizing political activities in Koreatown. In addition to business interests, Korean American community-based organizations, professional associations, and political advocacy groups have become more active in Los Angeles politics.

The evolution of Koreatown has faced setbacks, however, notably in the form of intergroup friction. During the Los Angeles riots of 1992, Korean stores became a target for ethnic hostility, which ended in the destruction of some 2,300 Korean stores and upward of \$350 million worth of assets. Koreatown merchants and leaders reacted by joining forces with 1.5- and second-generation Koreans, to enhance political strength and improve relations with African American and Latino communities.

Following the 1992 riots, Koreatown entered a new phase of redevelopment, erecting upscale shopping malls, multipurpose sports facilities, and luxury condominiums, particularly in the Wilshire district, which had experienced a severe decline in the late 1980s. South Korean investment in the California real-estate market also rose, triggered by the 1997 Asian financial crisis. According to data collected by the L.A.

New York's Koreatown. (Daria Wilczynska/Dreamstime.com)

Community Redevelopment Agency in 2011, 2,252 properties in the Koreatown-Wilshire District are Korean-owned, indicating Korean purchasing power in real estate and commercial development. Of these, Jamison Properties, an institutional real estate investment and management firm run by a 1.5-generation Korean American, owns and manages more than 100 commercial buildings in Mid-Wilshire, contributing to the resurgence of the property market in the district.

Effects of redevelopment can be seen in Koreatown's recent gentrification and concurrent increase in rent and living costs. Moreover, globalization and intercultural penetration have reshaped the character of Koreatown, which now attracts new non-Korean patrons with cultural and culinary diversity and the most dynamic nightlife entertainment in Los Angeles. Koreatown is portrayed in the media as a 24-hour entertainment district with high-end spas, shops, and night clubs.

Koreatown in New York

The first wave of Koreans in the New York area was mostly comprised of political refugees seeking asylum

from the Japanese colonization of the Korean peninsula during the first half of the twentieth century. Many of these refugees had intellectual background and decided to attend universities in New York and other East Coast cities. Of these, a large portion returned to Korea upon completion of their graduate education when Japanese annexation ended in 1945. The second wave of immigration to New York (1946–1968) comprised of much needed medical professionals who benefitted from special visas for doctors and nurses. Most stayed permanently, and some became naturalized, allowing them to sponsor family members from Korea. The mass migration of Korean immigrants into New York and New Jersey—the third wave—began once Immigration and Nationality Act of 1965 went into effect in 1968 to shape what is now the New York Koreatown. Throughout the post-World War II period, New York has been a magnet for many Korean international students from universities along the East Coast seeking to secure professional and managerial jobs or to start small businesses.

The largest Koreatown in the New York metropolitan area, home to more than 30 percent of the New York metropolitan Korean population, can be found in Flushing and Bayside, in the borough of Queens. It has become a cosmopolitan settlement site for a large number of Asian populations, chiefly Chinese and Asian Indians but also Koreans. Korean settlement of the region dates back to the 1964–1965 New York World's Fair held in Flushing Meadow-Corona Park. Of the 364 Korean participants, 200 remained permanently, setting up residence in the area and commuting to Manhattan where they started small businesses. In the main business district of Flushing, Korean-language signs are displayed on more than 450 Korean restaurants, bakeries, nail salons, clothing shops, travel agencies, doctor's offices, accountant's offices, insurance agencies, and after-school centers, cater to their Korean customer base, which extends as far as the Long Island suburbs.

Of the Korean Americans in the New York metropolitan area, nearly 10 percent reside in Manhattan. Because of its advantageous location on 32nd Street between Broadway and Fifth Avenue, the "Korean Way," attracts a fair share of non-Korean and second-generation Korean American patrons to its 100-plus

Korean restaurants, bakeries, bookstores, groceries, noraebangs (karaoke), and bars. The Manhattan Koreatown is also a commercial center for Korean import and wholesale companies, outfitted with Korean-language signs, as well as numerous Korean law firms, accounting firms, travel agencies, and sundry professional services.

Recently, a rapidly growing suburban Koreatown has emerged across the Hudson River in southeast Bergen County, New Jersey. The number of Korean residents in Palisades Park, Fort Lee, and four other adjacent townships quintupled between 1980 and 1990 and now accounts for roughly 27 percent of the entire metropolitan Korean population. Palisades Park, in particular, is the heart of the suburban enclave in Bergen County. Up through the 1980s, Palisades Park was still a predominantly white township with a mix of blue-collar workers and professionals of Italian and German descent. Now, more than 50 percent of Palisades Park residents are Korean—the highest proportion of the Korean population in any municipality in the United States. Proximity to Manhattan also makes the Palisades Park and Fort Lee area an attractive suburban area not only for local merchants but also for those owning businesses and holding jobs in New York City. Furthermore, since the mid-1980s, many branches of Korean multinational corporations, Samsung Company (Ridgefield Park) and LG Company (Englewood Cliffs) among others, have moved into the Palisades and Fort Lee area. Many corporate managers have temporarily relocated to the area along with their families, attracted by generous rent-subsidies from their corporate headquarters, accounting for the high rents that might otherwise discourage them from residing in such affluent communities. In the main commercial strip of Fort Lee and Palisades Park, there are more than 250 Korean stores with Korean-language signs. These stores serve both Koreans in the neighboring townships and those dispersed throughout northern and central New Jersey.

The growth of the suburban Korean community has altered the surrounding suburban landscape and lent it a new cultural character. On the one hand, Korean immigrants have played a key role in revitalizing many neighborhoods that had fallen prey to financial trouble. However, the rapid increase in the

number of Korean residents and businesses has also more clearly defined the ethnic fault line between Koreans and the members of the host community. Discussion concerning regulation of small businesses and their operation and the new construction of large Korean churches in residential areas has created tension between the Korean population and the city officials and council members. Longtime local residents have begun to display anti-Korean sentiments, leading to a rally in 1999, where about 1,000 Koreans gathered to protest the enactment of local ordinances and discriminatory incidents (e.g., anti-Korean graffiti) against Korean merchants and students. This kind of ethnic tension poses a challenge to the integration of the rapidly growing immigrant groups with host communities. Nevertheless, the demographical dominance of Koreans in Palisades Park, now numbering 19,622 residents, has helped Koreans gain political strength, ultimately electing two Koreans as members of the council.

Koreatown Immigrant Workers Alliance (KIWA)

The Koreatown Immigrant Workers Alliance (formerly known as the Korean Immigrant Workers Advocates) is a nonprofit organization created in March 1992, in Los Angeles to address the exploitation of Korean and Latino workers in the Koreatown community. In later years, KIWA united low-income workers, students, and community advocates to work toward a broader social justice mission with their established worker center, leadership development, and grassroots organizing.

KIWA’s first successful mission was to include displaced workers as recipients of a community relief fund after the 1992 Los Angeles riots. In 1996, KIWA launched a four-year crusade against the Koreatown restaurant industry with their Koreatown Restaurant Workers Justice Campaign, which involved picketing and vocal demonstrations, accusing Koreatown businesses of violating labor laws. At the time, a federal probe determined that 97 percent of Koreatown restaurants underpaid and overworked their employees, and flaunted federal safety laws. In 1997, KIWA gained additional publicity for their participation—along with Thai Community Development Center and the Asian Pacific American Legal Center—in the landmark El Monte campaign, which won over \$2 million for 55 workers and exposed sweatshop practices in the Los Angeles area.

From 2001 to 2009, KIWA began advocacy for Koreatown supermarket workers, and in 2007 received a lawsuit settlement from Assi Market after a five-year boycott addressing wage and discrimination issues. During this time, KIWA published a 2005 report “Koreatown on the Edge” that cast a light on the 70 percent of Koreatown citizens who were living in poverty, despite the affluent exterior and construction boom at the time. In 2007, KIWA published another report with Data Center called “Towards a Community Agenda: A Survey of Workers and Residents in Koreatown, Los Angeles,” which underscored a perpetuation of low wages, poor housing conditions, insufficient health care and racial injustice in Koreatown.

In 2010, KIWA launched an affordable housing campaign. In 2011, the organization obtained a commitment from a developer for 96 units of affordable housing and another promise from the Los Angeles City Council for \$10.5 million toward a future “Koreatown Central Park” in an area that is among the densest and least-green neighborhoods in the nation.

KIWA’s role in empowering workers has been a divisive subject in the Korean community in Los Angeles—regarded as a generational, cultural and political divide—as KIWA has sometimes targeted first-generation Korean business owners for their unlawful practices. KIWA has been regarded by the older generation as a 1.5- or second-generation radical leftist organization for their tactics.

The organization began with a mostly Korean American staff, but as the mission emphasized advocating for Latino workers in Koreatown, the nonprofit grew to include a multiethnic staff with other Asian Pacific American and Latino employees. In 2006, reflecting this change, KIWA’s name was altered to its more all-encompassing Koreatown Immigrant Workers Alliance.

KIWA has had three Korean American executive directors, cofounders Roy Hong and Danny Park, and Alexandra Suh, since its 1992 inception. In that time, KIWA and its Worker Empowerment Clinic has won back nearly \$15 million in wages.

KIWA is a member organization of MIWON (Multi-ethnic Immigrant Workers Alliance) and ENLACE, an alliance of low-wage worker centers,

unions, and community organizations in the United States and Mexico.

Korematsu, Hirabayashi, and Yasui Coram Nobis Cases

In 1983, Fred Korematsu, Gordon Hirabayashi, and Minoru Yasui filed suit to reopen their infamous World War II Supreme Court cases. In those wartime cases, the Supreme Court had upheld the constitutionality of the military orders that ultimately led to the wartime incarceration of Japanese Americans. In *Hirabayashi v. United States* and the companion case of *Yasui v. United States*, the court upheld orders subjecting Japanese Americans to curfew; in *Korematsu v. United States*, the court upheld orders forcibly removing Japanese Americans from the West Coast. In all three cases, the court held that the orders were justified by military necessity.

In 1981, Professor Peter Irons and archival researcher Aiko Herzig-Yoshinaga discovered proof that the government had suppressed, altered, and destroyed material evidence when it was arguing those cases before the wartime Supreme Court. Based on this proof, legal teams in California, Oregon, and Washington filed Petitions for Writs of Error *Coram Nobis* on behalf of the three men, seeking to vacate their convictions. A petition for a writ of error *coram nobis* ("before us") is filed after a sentence has been served to seek relief from a conviction to achieve justice.

The petitions set forth irrefutable evidence that the government, to gain court approval of its wartime actions against Japanese Americans, had withheld and manipulated evidence.

First, the documents showed that the government knowingly suppressed intelligence reports that contradicted the government's claim of military necessity. At the time it was preparing its case before the Supreme Court, the government had within its possession reports from the FBI, the Office of Naval Intelligence (ONI), and the Federal Communications Commission (FCC), all undermining the necessity of the mass removal and incarceration. For example, in 1942, even before Roosevelt had signed Executive Order 9066, Lt. Commander Kenneth D. Ringle of the ONI concluded that the vast majority of Japanese Americans were loyal to the United States and that no necessity existed for any action that would treat them on a group basis. Justice Department lawyer Edward Ennis became aware of Ringle's report when preparing the *Hirabayashi* case in 1943 and wrote Solicitor General Charles Fahy: "I think we should consider very carefully whether we not have a duty to advise the court of the existence of the Ringle memorandum. . . . It occurs to me that any other course of action might approximate the suppression of evidence" (Yamamoto 2001: 306–309). Ringle's report, however, was never given to the court.

In addition, the government in the *Korematsu* case relied heavily on the Final Report of General John L. DeWitt, which set forth the basis for the removal of Japanese Americans from the West Coast, including his claim that Japanese Americans had been engaged in illegal shore-to-ship signaling. However, reports from the FCC and FBI directly refuted DeWitt's claims, and the court was similarly not advised of them.

Second, rebuffed by Fahy, Ennis and fellow Justice Department attorney John L. Burling sought to advise the court that DeWitt's claims of illegal signaling were false. Burling inserted a footnote in the government's brief in the *Korematsu* case to disclaim reliance on DeWitt's allegations. When Burling's footnote was discovered, the printing of the government's brief was stopped; the footnote was revised; and the court never knew of the falsity of DeWitt's claims.

Finally, further documents showed that DeWitt's *Final Report* had been altered to support the government's argument before the Supreme Court. In the *Korematsu* case, the government argued that the exclusion orders were justified because there was insufficient time to separate loyal Japanese Americans from those who might have been disloyal (although no Japanese American was ever charged with espionage or sabotage during the war). In fact, DeWitt's original report had said that shortness of time was not a factor in his decision to order the mass exclusion: "Because of the ties of race, . . . [Japanese Americans] presented a tightly-knit racial group . . . It was impossible to establish the identity of the loyal and disloyal with any degree of safety. It was not that there was insufficient time in which to make such a determination; it was simply a matter of facing the realities that a positive determination could not be made, that an exact separation of the 'sheep from the goats' was unfeasible" (Yamamoto 2001: 294–298). When the War Department discovered that DeWitt's report contradicted the government's argument in court, the report was revised. Copies of the original report were recalled and burned, and the court was given the revised version.

The government's deception was successful. In the *Korematsu* case, the court, relying on the altered DeWitt Final Report, upheld the exclusion orders as based on imminent military necessity: "Here, as in the *Hirabayashi* case, we cannot reject as unfounded the judgment of the military authorities and of Congress that there were disloyal members of that population whose number and strength could not be precisely and quickly ascertained" (*Korematsu v. United States* 1944).

Korematsu, Yasui, and Hirabayashi filed petitions to vacate their convictions based on governmental fraud in early 1983. The government made a motion to vacate the convictions, and, because it agreed that the convictions should be vacated, it asked that that petitions be dismissed and that the courts not consider the allegations of misconduct. Judge Marilyn Hall Patel, in Fred Korematsu's case, declined the government's invitation. In November 1983, before a courtroom filled with Japanese American former internees and their children, she found that the allegations of

misconduct had been proven and vacated Korematsu's conviction.

Minoru Yasui's case took a different course. Judge Robert Belloni granted the government's motion, vacating Yasui's conviction, but dismissed his petition, refusing to consider the claims of misconduct. Yasui appealed, asking that the court address his claims of misconduct, but he passed away while his appeal was pending.

Gordon Hirabayashi's case was the last to be heard. After a full evidentiary hearing, in which wartime Department of Justice attorney Edward Ennis testified on behalf of Hirabayashi, Judge Donald Voorhees held that there was sufficient proof to grant *coram nobis* relief. He vacated Hirabayashi's conviction for violating the exclusion orders, but did not vacate his curfew conviction. On appeal, the Ninth Circuit, in an opinion by Judge Mary Schroeder, held that sufficient evidence existed to vacate both convictions.

Korematsu v. United States (1945)

In *Korematsu v. United States* (323 U.S. 214), the United States Supreme Court, in one of its most infamous decisions in its history, upheld the constitutionality of the forced removal of Japanese Americans during World War II.

In 1942, Fred Toyosaburo Korematsu was a 22-year-old welder living in Oakland, California. He was the son of immigrants from Japan and an American citizen by birth. He grew up in an era during which anti-Asian racism was prevalent, and, after the bombing of Pearl Harbor on December 7, 1941, he saw anti-Japanese hostility grow to a fevered pitch as the general public, the popular press, and government officials called for the removal of Japanese Americans from the West Coast.

On February 19, 1942, in response to these calls, President Franklin Delano Roosevelt issued Executive Order (EO) 9066, the source of authority that ultimately led to the incarceration of over 110,000 persons of Japanese ancestry living on the West Coast. In March 1942, Congress passed Public Law 503, which made violation of any military order issued pursuant to EO 9066 a federal crime.

With the authority vested in him by EO 9066, General John L. DeWitt, Commander of the Western Defense Command, began to issue a series of orders to control, and ultimately expel and incarcerate, the West Coast Japanese American population. On March 24, 1942, DeWitt imposed a curfew on all persons of Japanese ancestry. Three days later, he issued an order, prohibiting persons of Japanese ancestry from leaving the designated military area to ensure an orderly and controlled evacuation.

With the stage set for mass removal, DeWitt began issuing a series of “Civilian Exclusion Orders,” which required all persons of Japanese ancestry to report for transport to so-called temporary “assembly centers” for detention until more permanent camps could be built. Korematsu chose to defy the exclusion order. He had a white girlfriend he could not leave, and he believed that he should be able to live free, like any other citizen. He changed his name on his draft card and had minor plastic surgery so that he could continue to work and in hopes that changing his identity would help keep him and his fiancé from harm when they later left the prohibited zone to marry. On May 30, 1942, he was recognized and arrested for violating the exclusion order.

While jailed, Korematsu was visited by Ernest Besig, Executive Director of the San Francisco office of the ACLU and agreed to bring a test case to

challenge the constitutionality of the exclusion orders. Korematsu was transferred to the temporary detention center at Tanforan racetrack to join his family and await his trial, and, at trial on September 8, 1942, Judge Adolphus St. Sure convicted Korematsu of violating the exclusion order. When his case was being appealed, Korematsu spent a year and a half in the more permanent Topaz Internment Camp in central Utah before obtaining permission to leave for Salt Lake City and then Detroit, Michigan, to work.

On December 18, 1944, over two-and-a-half years after the first Japanese Americans had been removed from their West Coast homes, the Supreme Court finally issued its decision in *Toyosaburo Korematsu v. United States*, ruling that the forced removal of Japanese Americans was constitutional. Six justices upheld the exclusion orders and affirmed Korematsu’s conviction; three justices dissented. Justice Hugo L. Black delivered the majority opinion of the court. The opinion began promisingly. The court explained that Korematsu’s loyalty to the United States was not contested. And, in ringing tones, the court cautioned that “[A]ll legal restrictions which curtail the civil rights of a single racial group are immediately suspect [and] subject them to the most rigid scrutiny” (*Korematsu v. United States* 1944). Despite this caution, the court failed to subject the removal orders to hardly any scrutiny at all and essentially deferred to the military judgment that the mass removal was necessary.

The court explained that the same reasons that had supported its unanimous opinion upholding the curfew orders a year and a half earlier in *Hirabayashi and Yasui v. United States*, justified the exclusion orders challenged by Korematsu. The court explained, as it had in the *Hirabayashi* case, “we cannot reject as unfounded the judgment of the military authorities and of Congress that there were disloyal members of that population, whose number and strength could not be precisely and quickly ascertained” (*Korematsu v. United States* 1944).

The court’s reliance on its decision in *Hirabayashi* was troubling, for several reasons. First, the order requiring Japanese Americans to leave their West Coast homes was, as the court acknowledged, “a far greater deprivation” than confinement to the home during curfew hours. However, the court explained

the exclusion orders, like the curfew orders, had “a definite and close relationship to the prevention of espionage and sabotage” (*Korematsu v. United States* 1944).

Second, the court’s decision in *Hirabayashi* rested on tenuous ground. In *Hirabayashi*, the court purported to review the facts and circumstances to determine whether there was any basis for the military judgment that the curfew was necessary. However, what the court deemed facts and circumstances could hardly be termed “facts” at all. Without proof that any Japanese Americans had, in fact, committed or threatened to commit any act of espionage or sabotage, the court instead agreed with the government’s argument that the proximity of Japanese Americans to strategic installations and their “racial characteristics” justified the military’s actions against them. The court’s “racial characteristics” discussion contained little more than race-based stereotypes. It observed, for example, that many children of Japanese parentage attended Japanese language schools outside the regular hours of public schools and, without citation to any evidence, stated that “[s]ome of these schools [were] generally believed to be sources of Japanese nationalistic propaganda, cultivating allegiance to Japan.” The court explained, “Viewing these data in all their aspects, Congress and the Executive could reasonably have concluded that these conditions have encouraged the continued attachment of members of this group to Japan” (*Hirabayashi v. United States* 1943).

After explaining its reliance on its reasoning in *Hirabayashi*, the court further upheld the validity of the exclusion orders by citing the results of a loyalty oath, given to Japanese Americans *after* they were incarcerated: “That there were members of the group who retained loyalty to Japan has been confirmed by [the fact that] [a]pproximately five thousand American citizens of Japanese ancestry refused to swear unqualified allegiance to the United States and to renounce allegiance to the Japanese emperor” (*Korematsu v. United States* 1944). It strains reason to justify the exclusion orders with the results of a questionnaire given Japanese Americans a year after the orders were issued and after they had been betrayed by their government.

Most notably, the court avoided entirely the critical question of the validity of the incarceration. In deciding *Korematsu*’s case, the court addressed solely the constitutionality of the orders removing Japanese Americans from the West Coast; it did not address the constitutionality of confining them in desolate camps in the interior of the country. The court avoided addressing the validity of the incarceration by artificially separating into parts what really was a single program of incarceration. At the time of the exclusion orders, Japanese Americans were both prohibited from leaving, and prohibited from remaining, on the West Coast; the only way they could leave the area lawfully was to report for confinement. The court, however, treated each phase of the program of incarceration—the freeze orders, the removal orders, and incarceration—as separate, concluding that, in *Korematsu*’s case, the court was only required to address the constitutionality of the removal orders.

In conclusion, the court explained that the exclusion orders were not the result of unlawful racial discrimination: “*Korematsu* was not excluded from the Military Area because of hostility to him or his race” (*Korematsu v. United States* 1944). Despite the court’s conclusion that the exclusion orders were not based on race, examination of the events leading up to the Japanese American incarceration, the government’s arguments, and the court’s opinion itself leave little doubt that the orders were, in fact, racially motivated.

Three justices dissented. Justice Owen Roberts criticized the majority for failing to see the exclusion orders for what they were—an inextricable part of an overall program of indefinite incarceration based solely on race and devoid of any lawful justification. Justice Frank Murphy, in dissent, similarly viewed the government’s orders as abhorrent: “This exclusion of ‘all persons of Japanese ancestry, both alien and non-alien,’ from the Pacific Coast area on a plea of military necessity . . . ought not to be approved. Such exclusion goes over ‘the very brink of constitutional power’ and falls into the ugly abyss of racism” (*Korematsu v. United States* 1944). There was, Murphy asserted, no reason that Japanese Americans could not be individually screened, as was done for persons of German and Italian ancestry.

In his dissent, Justice Robert H. Jackson similarly condemned the exclusion orders as racially based. He further warned that the court's validation of the exclusion orders provided a precedent for similar deprivations of rights in the future: "[O]nce a judicial opinion rationalizes such an order to show that it conforms to the Constitution, or rather rationalizes the Constitution to show that the Constitution sanctions such an order, the court for all time has validated the principle of racial discrimination in criminal procedure and of transplanting American citizens. The principle then lies about like a loaded weapon ready for the hand of any authority that can bring forward a plausible claim of an urgent need" (*Korematsu v. United States* 1944).

Criticism of the court's decision in *Korematsu's* case began soon after its release, and has continued ever since. Four days after the decision was announced, *The Washington Post* printed its editorial opinion. Even if exclusion of suspicious persons was necessary, *The Post* (1944: 8) explained, "the indiscriminate manner of its application, we think, was not. For no attempt was made to distinguish the loyal and the disloyal, although eight months elapsed after Pearl Harbor before the final exclusion order was issued. . . . It is on this ground that we are inclined to take our stand with Mr. Justice Murphy's characterization of the majority opinion as a 'legalization of racism.'" Legal commentators have been unanimous in condemning the Supreme Court's decisions in *Hirabayashi* and *Korematsu*, and the critiques have continued to the present, especially as the nation struggles with whether civil rights must be sacrificed in the name of national security in the aftermath of 9/11.

In 1982, documents were discovered by Professor Peter Irons and archival researcher Aiko Herzig-Yoshinaga that proved the government had suppressed, altered, and destroyed material evidence when it was arguing *Korematsu's* case before the Supreme Court and provided *Korematsu* an opportunity to reopen and challenge the court's infamous decision in his case. On November 10, 1983, *Korematsu* appeared before Judge Marilyn Hall Patel of the Federal District Court for the Northern District of California in a courtroom packed with former internees. Judge Patel granted *Korematsu's* petition and vacated his conviction, concluding that the evidence showed that "the

government knowingly withheld information from the courts when they were considering the critical question of military necessity in this case" (*Korematsu v. United States* 1984).

In 1998, *Korematsu* was awarded the Presidential Medal of Freedom, the nation's highest civilian honor, for his role in challenging the internment. In his remarks, President Clinton commented, "In the long history of our country's constant search for justice, some names of ordinary citizens stand for millions of souls—Plessy, Brown, Parks. To that distinguished list today we add the name of Fred *Korematsu*" (Clinton 1999). *Korematsu* passed away on March 30, 2005, at the age of 86.

Kuo, Hong-Chih (1981–)

Hong-Chih Kuo is the first Taiwanese baseball player to hit a home run in Major League Baseball, although he is a pitcher. His baseball career was plagued by injuries, and he spent more time recovering from surgeries than pitching. Kuo was born in Tainan, Taiwan. When he was 18 years old, the Dodgers signed him to a contract in 1999 for a bonus of \$1.25 million. In his first minor league game, he struck out seven batters in three innings. Unfortunately, after this promising start, he had to undergo his first Tommy John surgery, a reconstruction of the ulnar collateral ligament in the elbow. In 2003, he underwent his second Tommy John surgery. Kuo's injuries partly resulted from a stringent practice regimen of student baseball in Taiwan. To win major games, the coach usually asks the best player to pitch quite a lot of innings in a few days. Kuo is one of the many victims of this practice.

The Dodgers were patient enough to wait for Kuo's recovery. Finally, he made his Major League debut in 2005, the fourth Taiwanese player to do so after Chin-Feng Chen, Chin-hui Tsao, and Chien-Ming Wang. After he hit a home run in a game of June 2007, he endured another elbow surgery in July. In 2008, considering his record of injuries, the Dodgers changed his role from starting pitcher to relief pitcher. He began to make significant contributions to the Dodgers, although he suffered from minor arm injuries again in 2008 and 2009. In 2010, he became the first Taiwanese player selected to play for the

National League All-Star team. He was one of the most reliable relief pitchers for the Dodgers in 2010, earning 21 holds and 12 saves with an ERA of 1.20 in 56 games.

Kwan, Michelle (1980–)

Michelle Kwan is an American female figure skater who won eight consecutive U.S. Championships from 1998 to 2005. She was born on July 7, 1980, in Torrance, California. Her parents, Danny Kwan and Estella Kwan, are immigrants from Hong Kong. They raised three children: Ron, Karen, and Michelle. Karen was a figure skater as well and won third place at the 1996 Nebelhorn Trophy. Both Karen and Michelle went to the rink and began to skate because their brother, Ron, played ice hockey. Michelle first had the idea of competing in the Olympics when she watched Brian Boitano win the gold medal in men's figure skating at the 1988 Winter Olympics.

When Kwan was eight, her father hired a coach, Derek James, for her and her sister. They took skating lessons five days a week. After their 5:30 morning training sessions, they went to school and then returned to the rink after school. Skating was an arduous task not only for the girls but also for their parents. When Kwan's parents could no longer afford the skating lessons, they sold their house in Rancho Palos Verdes and moved in with Kwan's grandparents in Torrance. Kwan even had to practice without a coach for nine months during that time.

Fortunately, Kwan's friends offered her financial assistance and all kinds of support to deal with these difficulties. One of these supportive friends George was Steinbrenner, the owner of the New York Yankees. Another important source of help came from

Virginia Fratianne, whose daughter, Linda Fratianne, is a great figure skater as well. Virginia Fratianne introduced Michelle and Karen to her daughter's coach, Frank Carroll, and Carroll agreed to be their coach. With help from Virginia Fratianne and Frank Carroll, Michelle and Karen began to practice at the private rink of the Ice Castle International Training Center in Lake Arrowhead, California. Carroll was Michelle's coach until 2001 when they decided to terminate their relationship.

Kwan achieved great success in skating. She placed first at the U.S. Championships nine times (in 1996 and consecutively from 1998 to 2005). She won the gold medal in women's figure skating at the 1996, 1998, 2000, 2001, and 2003 World Championships. Nonetheless, her competitions in the Olympics were not as smooth as those in the U.S. and World Championships. She finished second at the 1998 Winter Olympics and third at the 2002 Winter Olympics.

Because of her outstanding achievements in skating, Kwan received numerous awards, including the James E. Sullivan Award in 2001. In addition, the U.S. Olympic Committee (USOC) has named her "Athlete of the Month" 14 times since 1996. She was also elected as the USOC "SportsWoman of the Year" in 2003. In the same year, the United States Figure Skating Association renamed "the Readers' Choice Figure Skater of the Year," an award that she won seven times, as the "Michelle Kwan Trophy." In 2009, Kwan obtained her BA in international studies from the University of Denver.

Labor Movement

As of 2011, the American Census Bureau reports that 12.5 percent of Asian workers belong to labor unions. Nearly half are women, and 50.5 percent have four-year college degrees or more. On average, two-thirds are immigrants. Unlike its xenophobic and nationalistic past, the contemporary labor movement has organized Asian workers into unions in hotel, restaurant, garment, health care, meatpacking, and communication industries. It's important to note that despite the fact that some unions like Union of Needletrades, Industrial, and Textile Employees (UNITE), and Service Employees International Union (SEIU) and the Hotel Employees and Restaurant Employees Union (HERE) which have a much longer history of organizing immigrants, the majority of the U.S. labor movement maintained an anti-immigration stance until very recently. The American Federation of Labor–Congress of Industrial Organizations (AFL-CIO) did not reverse its position on immigration until February 2000, when they passed a historic resolution that called for reforms that protected the rights and freedoms of immigrants in the workplace, and that employers be held accountable when they exploit immigrants. In addition, the resolution called for an amnesty program and a repeal of employer sanctions. This move strengthened the union's ability to organize immigrant workers.

This move was particularly important for the labor movement because of both demographic and economic shifts in the United States. The Immigration and Nationality Act of 1965 reshaped the demographics of the United States by spurring massive immigration from Asia. In the four decades since the

passage of that act, the Asian immigrant population grew exponentially mostly through chain migration of family sponsorship and immigrant economic niche. Some industries drew large numbers of Asian immigrant workers, especially nursing and biotechnology. However, it was the large-scale shift in the economy that created the greatest amount of opportunity for Asian migrants, particularly in the service sector.

Although unions grew in absolute numbers through the 1970s, union researchers have shown that they were unable to keep up with the rapidly expanding workforce. At its peak in 1946, a little over 1 in 3 (37 percent) workers was a member of a labor union, by 1995 that number was down to 3 in 20 (15 percent). The initial decline can be attributed, in part, to passage of the Taft-Hartley amendments to the Wagner Act, which placed strict limits on union organizing and mutual aid tactics whereas simultaneously giving employers more latitude in opposing unionization efforts. However, organized labor's decision to service current membership rather than developing more aggressive worker organizing efforts and the strength of the economy during the 1950s and 1960s delayed the ultimate political impact of these amendments.

In the 1970s and 1980s, however, the political and economic climate changed for organized labor. The antiunion, pro-business policies became deeply entrenched—fueled in large part by the decline in the economy. Jobs, even union jobs that were considered safe, were now sent overseas and workers found themselves deskilled and unable to compete in increasingly technologically driven society.

The rise of global business and production practices led to a restructuring of the U.S. economy. Most

notably for Asian immigrants was the growth of the service sector. Numerous industries, including health care, restaurants, and janitorial service, became entry points for Asian workers in the U.S. economy. Unions working in these areas—particularly SEIU and UNITE-HERE, were extremely successful in bolstering their once falling membership numbers by actively recruiting immigrant workers into their ranks. Unions needed help in organizing Asian workers because their infrastructure was not designed to adequately address the needs of this worker population. In 1992, the Asian Pacific American Labor Alliance (APALA), AFL-CIO was formalized and worked to train new organizers and to assist labor unions in Asian worker outreach. Kent Wong, Director of the UCLA labor center notes that through training, research, education, and successful recruitment of dynamic Asian organizers, APALA was instrumental in recruiting 20,000 Asian American labor union members between 2002 and 2007.

There are numerous examples of how APALA helped develop a union's infrastructure so that it successfully addressed the needs of Asian workers. One of the most notable examples occurred with the change of federal regulations for airport screeners after 9/11. Prior to the 9/11 terrorist attacks, airport screeners could be legal permanent residents; however, the new federal regulations made it mandatory that all screeners be U.S. citizens. The new regulations made no accommodations for those who had applied for citizenship but whose applications were delayed because of the INS backlog, neither did it account for years of experience and service. In places like San Francisco, where 90 percent of the airport screeners were Filipino, APALA was successful in mobilizing the Filipino community to support the Filipino workers' unionization campaign. Although the mobilization was ultimately unsuccessful, what APALA showed in this case was the ability to mobilize Asian communities and workers.

APALA was instrumental in partnering with health care unions, helping them with their largely successful organizing campaigns that improved union density in the health industry from 6 percent to 65 percent. Asian organizers were critical on campaigns to organize nurses that included large numbers of Filipinos, and in long-term care, which had workers

from all Asian ethnicities. Asian Americans represented a significant proportion of the growth of the SEIU 434b (now SEIU ULTCW) the long-term care workers unions that saw a 74,000 member increase in Los Angeles during 1999. Since that time, they have reorganized into a statewide union that represents 180,000 members in Monterey, Santa Cruz, San Benito, Solano, Napa, Mendocino, Los Angeles, San Bernardino, Ventura, and Alameda Counties. The workers represent a diverse cross section of California health care workers.

APALA and its organizers pointed out that to incorporate Asian workers into their ranks, unions needed to change their fundamental practices. For example, unions needed to have organizers that were multilingual and culturally competent. It was important for organizers to appreciate how culture played a significant role in the lives of workers and, more important, to understand the transnational connections between workers. Just because a worker was based in the United States did not mean they did not maintain connections to home and homeland. APALA worked with unions to develop strategies, similar to those used earlier by the United Farm Workers that developed greater cohesion across immigrant groups. This included having union materials in multiple languages, organizers from Asian communities, and multilingual worker summits that provided multiple forms of translation (i.e., Spanish to English, English to Chinese, Chinese to Spanish, etc.). Simultaneously with helping organizers develop the skills necessary for working in Asian communities and improving unions' strategic capacities, APALA also worked to mobilize voters and increase Asian American participation in the political process. In Los Angeles, APALA was instrumental in helping politicians such as Congresswoman Judy Chu, Assembly Member Michael Eng, and Assembly Member Warren Furutani get elected. On the national stage, APALA has convened Asian Pacific American worker hearings across the country and compiled a report that highlights exploitation and abuses that Asian American workers face.

The most significant part of APALA's work was showing the national labor movement that despite the stereotype that Asians were docile and "unorganizable"—Asian workers, like their predecessors, would

join unions and stand up to workplace injustices. The work of APALA highlighted the ways that the national labor movement had excluded Asian workers from its ranks due in large part to misinformation, racialized stereotypes, and ignorance. Their work has led to changes in union practices as well as the development of a legislative agenda that promotes rights of Asian and Pacific Islander workers.

Although the contemporary labor movement has proved more open to Asians and Asian immigrants, it would be false to presume that all unions have accepted change or developed practices that are conducive to working with Asian workers. Furthermore, although some unions may acknowledge the importance of organizing Asian workers, they have failed to develop culturally competent strategies. One campaign that clearly demonstrates a lack of cultural competence is the Communication Workers of America's campaign at the *Chinese Daily News*.

The *Chinese Daily News* is the largest Chinese language paper in the United States. It is owned by a Taiwanese media company, the United Daily News, and has its U.S. branches in New York, San Francisco, and Monterey Park. The majority of workers for this company are Taiwanese immigrants who speak little or no English. Despite working long hours, workers make an average salary of \$24,000 per year and were denied workers compensation, overtime, and fair working conditions. The workers conducted a "wall to wall" campaign—in which all workers at the Monterey Park office sought union membership with CWA. What organizers did not count on was the aggressive union-busting campaign put forth by the company.

The *CDN* argued that because it was an international corporation it was not subject to U.S.-based labor laws that allowed collective bargaining. In addition, the consultant hired by the *CDN* used numerous cultural mores as weapons against workers. For example, workers were singled out and shamed for speaking out against the benefactors who sponsored them to come to the United States. Workers noted that the consultant said that the workers were not only shaming themselves but also their families back home. In addition, workers were threatened with loss of jobs and the possibility that their work visas would be pulled.

This union-busting campaign was compounded by the fact that the CWA opted to run a contract-based campaign that focused on organizing the site and failed to engage with the culture or historic experiences of the workers themselves. As a result, worker intimidation tactics were successful, key organizers lost their jobs, and the company was successfully able to fend off the NLRB for five years. Six years after their unionization campaign began workers won a class action lawsuit and a new election. Although CWA ultimately declared this campaign a win, it's questionable whether or not workers really prevailed in this case. The company still continues with its antiunion campaign and the organization never fully assessed how it could better serve Asian workers within their organization.

According to recent reports by the Center for Economic and Policy Research, union members have a large wage and benefit advantage compared to their nonunion counterparts. Collective bargaining for Asian American and Pacific Islander workers has led to an average wage differential of \$2.50 per hour and has the greatest advantage for workers in low-paying industries. The most significant benefits gained by union members are retirement coverage and health insurance. These benefits provide tangible evidence as to why collective bargaining is important for Asian American communities.

Over the past 10 years, Asian Americans have made significant inroads into the labor movement. The advocacy and organizing of groups like APALA have worked to significantly reshape understanding of Asian American workers. By employing practices initially developed during the formative years of multiracial organizing and creating new infrastructure within labor unions, the number of Asian American and Pacific Islander union members has doubled in a matter of 10 years. That said, the contemporary labor movement still faces significant challenges.

The national labor movement has yet to resolve how it will increase its connection to international worker campaigns. Although the AFL-CIO leadership has had international solidarity as part of its platform since 1995, little to no work has been done to increase the AFL-CIO's presence globally. Over the past four years, there has been increased scrutiny of labor

practices in countries such as China. Although the AFL-CIO and the press have been quick to criticize China on its labor practices, little to no work has been done to develop transnational connections between workers. In fact, APALA sent delegations to China to learn more about worker organizing campaigns despite strong opposition from the national AFL-CIO. Furthermore, labor movement scholars have fallen into the nationalistic discourse that depicts Chinese workers as powerless cheap labor. Lost within the discourse are discussions of agency and resistance on the part of Chinese workers.

In an era of global capital, it's important to investigate the connections between workers in different countries. Recent research by scholars like Jennifer Chun highlights the importance of empirically examining the different trajectories of labor movements in different countries. Her work comparing South Korea and the United States provides important insight into the need for new strategies and frameworks that call on workers, their communities, and the general public to stand up for workers rights. By creating moral outrage over the mistreatment of workers, organizers tried to harness public sentiment and push companies (in this case universities) to do right by their workers. Although most studies examining work in the global context tend to focus on macrolevel changes, unions benefit from global connections between workers in similar industries facing similar local dynamics that impact organizing.

Labor researchers and organizers have also promoted the importance of developing transnational campaigns that work simultaneously. By putting pressure on multinational corporations at multiple sites, it brings heightened attention to the exploitation of workers. A number of campaigns have used this strategy—for example, UNITE and the AFL-CIO did considerable work in the borderlands to address exploitation in the maquiladora industry. The work led to the unionization of some shops and successful organizing campaigns. However, as Edna Bonacich and others have noted, any cross-national organizing must be cognizant of the history of protectionism and paternalism. Organizing without regard to historic context can further exacerbate inequalities.

For Asian workers, the contemporary labor movement holds promise of increased visibility and possibility. Growth of union membership in Asian communities demonstrates that preconceived notions held by unions and the public are incorrect. Unions represent one avenue through which Asian American workers can leverage considerable political power by influencing political campaigns, working on legislation like the Affordable Care Act or the Living Wage, and continue to increase union density in the industries in which they're present.

Lahiri, Jhumpa (1967–)

Jhumpa Lahiri is a South Asian American author. She was born on July 11, 1967, in London to Bengali parents, moved to the United States when she was three, and grew up in Kingston, Rhode Island. Lahiri graduated from South Kingston High School, and earned her BA in English literature from Barnard College in 1989. She then went on to earn an MFA from Boston University, an MA in English literature, an MA in comparative studies in literature and the arts, and a PhD in Renaissance studies from Boston University in 1997.

Author Jhumpa Lahiri poses outside her Park Slope home in New York's Brooklyn borough, October 17, 2003. (AP Photo/Gino Domenico)

Her debut collection of short stories, *The Interpreter of Maladies* (1999) won the PEN/Hemingway Award, the *New Yorker* Debut of the Year, and the Pulitzer Prize in 2000. Her second work, the novel *The Namesake* (2003), was a *Los Angeles Times* Book Prize finalist, a *New York Times* Notable Book, and chosen as one of the best books of the year by *Entertainment Weekly* and *USA Today*, as well as many other publications. Her latest short story collection, *Unaccustomed Earth* (2008), debuted as #1 on the *New York Times* Best Seller list, won the Frank O'Connor International Story Award, and won the national Asian American Literary Award in 2009. *The Namesake* was adapted into a full-length feature film in 2007; directed by Mira Nair, it was Kal Penn as Gogol, and Bollywood actors Tabu and Irrfan Khan

as Ashima and Ashoke. Lahiri has been interviewed by a multitude of national magazines and newspapers, and her work is taught in high schools and universities across the United States. She has taught creative writing at the Rhode Island School of Design and Boston University, won a two-year fellowship at Provincetown's Fine Arts Works Center, and was the recipient of a Guggenheim Fellowship. In 2001, Lahiri married Alberto Vourvoulis-Bush, a journalist who was then the deputy editor of *Time* magazine Latin America, and they currently reside in Brooklyn, New York with their two children. She publishes regularly in *The New Yorker*, is a vice president of the PEN American Center, and is a member of the Committee on the Arts and the Humanities appointed by President Barack Obama as of 2010.

Her father Amar Lahiri has worked as a librarian at the University of Rhode Island for a number of years, and her mother taught Bengali at a local university. When she was growing up, her family made many trips around the world, but they often traveled to Calcutta. Lahiri spoke in Bengali to her parents when at home, and this linguistic aptitude made her trips there much easier, especially because they stayed with extended family. Although she is fluent in Bengali, English is the language in which Lahiri first started to write. She started writing at age seven, and wrote for her high school newspaper. After finishing her BA, she spent time crafting her talents and wrote enough to apply to the MFA program at Boston University. When in graduate school, her fiction got published in many national journals and magazines.

Lahiri's narratives are centered on the lives of Bengali Americans, speaking from the perspective of a second-generation South Asian American. Her first collection of short stories, *The Interpreter of Maladies*, is a set of nine tales woven together by certain common themes and motifs, including exile, displacement, melancholia, loneliness, difficult familial and romantic relationships, and problems within communication. Lahiri's writing is characterized by flowing, unadorned language, and her protagonists range from American-born South Asians, to Indian immigrants, to white Americans involved in some capacity with South Asians. The settings for her work are usually in North America, on the Eastern seaboard, or in South

Asia. Her characters do not exude a “foreignness”; they are not embodiments of Oriental exotic commodification. They are frequently transnational figures, characterized by their knowledge of multiple languages, many kinds of history, education, and class privilege.

Her first novel, *The Namesake*, is centered on a middle-class family, the Gangulis. They are Bengali immigrants, husband and wife Ashoke and Ashima, and their son, Gogol, and daughter Sonia, living and working on the Eastern Seaboard of the United States. The text evokes moments of melancholia, as when Ashoke has experienced a trauma causing him to nearly lose his life, and Ashima, as a stranger to America, is away from her family’s mansion in Calcutta, away from everything she knows. The first third of the novel focuses on Ashoke and Ashima and their acculturation. Ashoke is exemplary of the post-1965 group of South Asian immigrants into the United States. He has earned a PhD in electrical engineering and teaches at MIT, a well-educated man from humble beginnings. The crux in this part of the text is the choice that this generation makes—that is, whether to go home to India, or stay. Ashima makes the decision to stay, thereby carving a space for them, and staking a claim. Their decision is characterized by a sense of loss, replaced gradually by a sense of comfort. The latter half of the novel is centered on their son Gogol, who grows up confused and caught between two cultures. His character is one in post-immigrant subjectivity; that is, a sense that immigration is a distant memory, yet an experience that continues to shape the decisions made in subtle and surprising ways, as revealed in going about the complicated business of everyday living. Gogol is a conundrum; on the one hand he has a sense of confusion, on the other hand there are senses of joy and possibility. Immigration is not his sole concern, nor is it for the narrative. She faces the pain of immigration early in life, but with the benefit of a partner. Ashoke feels nostalgia for India, but is very much in the public sphere in an academic institution and has a professional life. Upon Ashoke’s untimely death, Ashima is faced with grieving and loss but forms a community and focuses on raising her children, Gogol and Sonia.

Lahiri gives readers a sense of the way Indian Americans are read in the United States in the twenty-first century. The Gangulis are particular in that they are privileged, and serve as a corrective to certain injustices that have occurred in the past within the South Asian American community. Lahiri fills Gogol with a certain Americanness, but cultural baggage shapes his American life. One might classify this novel as an ethnic bildungsroman, as there are pivotal moments that allow Gogol to come of age, come to terms with his name, and his hybrid identity.

Unaccustomed Earth, a collection of eight short stories by Lahiri, is chiefly concerned with the lives of Bengali folks from South Asia to North America in the 1960s and 1970s. These first-generation immigrants engage in struggles to set down their roots in soil that they find inhospitable, but which nourishes their children. These second-generation South Asian American progeny then negotiate between the foreign soil that is “home” to their families, and the fecund earth that they inhabit.

For most of the parents, immigration was adventurous and privileged, as they were equipped with education and the ability to have such things as paraffin heaters, hot running water, and seeing snow for the first time, but who also need their children to enlighten them in certain ways. This set of stories is closed in a specific way. The focus is a hegemonic South Asian American, Bengali-speaking community, where the fathers are disposed to earning PhDs and seeking academic and professional jobs. Mothers are homemakers and caretakers. These partners make their homes in the suburbs of America, familiarizing themselves with the material clutter of American lives. Their progeny are high-achieving second-generation kids who easily gain access to top-notch educations at M.I.T., Cornell, and Columbia, earning advanced degrees themselves, and lead privileged lives as citizens of the world, with monetary freedom and mobility. *Unaccustomed Earth* admits mild transgressions, with the air of innocence. For example, some of the first generation fathers, as in *Unaccustomed Earth* and in the trilogy *Hema and Kaushik* remarry after becoming widowers. The focus of the text is on the children, who despite the bewilderment and cultural confusions of their parents, engage

readily with American behavior. This is especially true of narrations around social behavior, and experimenting with sexuality, unbeknownst to their Victorian-minded parents. At the heart of these stories is family and marriage. Lahiri is particularly talented when writing about the minutiae of every day existence.

The tales are peppered with the trepidations around parenting, with careful attention paid to details around cooking, on baby clothes and behavior, the precarious business of relationships, of the care of children, and of maintaining domestic spaces. Her style is smooth and restrained, with a slow and methodical momentum to her narratives, punctuated with the traits of characters, or the insertion of cultural details, resulting in precise stories.

Lahiri's fiction is a welcome addition to the existing Asian American literary canon, as hers is told from a second-generation South Asian American perspective. She writes with graceful nuance on what she knows, on the community she is familiar with, and is part of a generation of authors who comprise the changing landscape of American literature.

Lai, Him Mark (1925–2009)

Internationally renowned as the Dean of Chinese American history, Him Mark Lai's extensive research collection provides a mother lode of source material on the experiences of Chinese in America, including their districts of origin in Guangdong Province, their

detention at the Angel Island Immigration Station, the development of community organizations and newspapers, and the Left. His groundbreaking writings—10 books and over 100 articles—are models of scholarship; his commitment to his bicultural heritage, democratic principles, passion for history, and generous spirit are an enduring inspiration to future generations.

Born on November 1, 1925, in San Francisco's Chinatown, Lai was the eldest of five children, all of whom were given the middle name Mark, the true name of their father, Maak Bing, who had entered the United States with the paper name "Lai." As a child, Lai escaped the confines of his family's 8' x 10' home by reading Chinese novels of errant knights and a diverse range of English books borrowed from the Chinatown Branch Library. By middle school, he was adding to his immigrant parents' limited income as garment workers with a part-time job in a sewing factory. Nevertheless, he excelled at both the Nam Kue Chinese School and San Francisco public schools. In his final year of high school, Lai won the first citywide Hearst U.S. History Contest. Yet when he expressed his desire to go to college, his father urged him to go after the good wages in the city's shipyards, pointing out that racism had prevented other Chinese Americans with college degrees from pursuing their professions. Lai, supported by his mother, refused. But pragmatism dictated he pursue a degree in mechanical engineering although continuing to work part time, and he graduated from San Francisco Junior College as valedictorian and received a B.S. degree in engineering from the University of California at Berkeley in 1947.

Working as a mechanical engineer for the state, then at Bechtel Corporation, Lai did not abandon his passion for Chinese history, culture, and politics. He frequented the Oasis Bookstore, a gathering place for young progressive writers, lingering to participate in discussions after making his purchases. By 1949, Lai was volunteering for *Chung Sai Yat Po*, the first daily paper to support the People's Republic of China (PRC), and he became a member of the Chinese American Democratic Youth League, more familiarly known as Mun Ching, leading study groups, introducing the songs, music, folk dances, and vernacular

dramas of the New China to the Chinatown community. Membership in Mun Ching cost Lai years of FBI surveillance, but gifted him with immense personal satisfaction and added fluency to his spoken and written Chinese. When tutoring at the club, Lai also met new immigrant Laura Jung, whom he married in 1953.

In 1960, he enrolled in “The Oriental in North America,” a relatively new course taught by sociologist Stanford Lyman at the University of California Extension in San Francisco. Exposure to the histories of the Chinese, Japanese, and Filipinos in America whet Lai’s appetite for more. He read the few titles then available on Chinese Americans and joined the Chinese Historical Society of America (CHSA) soon after its founding in 1963. These events, together with contemporaneous changes in the status of minorities spurred by the Civil Rights Movement, led Lai toward developing a Chinese American identity.

In 1967, he accepted a proposal by Maurice Chuck, editor of the bilingual weekly *East/West*, to write a series of articles on Chinese American history. These articles—revised and annotated—became the cornerstone for the classic *A History of the Chinese in California: A Syllabus*, coedited with Thomas W. Chin and Philip P. Choy, as well as the basis for the first Chinese American history course in the United States, which Lai team taught with Choy at San Francisco State College in the fall of 1969 and that resulted in another classic, *Outlines: A History of the Chinese in America*. He subsequently taught at the University of California, Berkeley.

Lai’s seminal works in Chinese American history include: “A Historical Survey of Organizations of the Left Among the Chinese in America,” published in the fall of 1972 issue of the *Bulletin of Concerned Asian Scholars*; *Island: Poetry and History of Chinese Immigrants on Angel Island 1910–1940* (1980), co-authored/translated with Genny Lim and Judy Yung; “Chinese on the Continental U.S.” in the *Harvard Encyclopedia of American Ethnic Groups* (1980); *From Overseas Chinese to Chinese American: a History of the Development of Chinese during the Twentieth Century* (in Chinese, 1992); *Becoming Chinese American: A History of Communities and Institutions*

(2004); and, posthumously, *Chinese American Transnational Politics* (2010).

Lai’s research in the Pearl River Delta began as a member of the 1979 joint study of two emigrant villages in Taishan District by UCLA’s Asian American Studies Center and Guangzhou’s Zhongshan University. On subsequent trips, he expanded his study to ever more villages and districts. In 1989, he helped organize the first symposium on Chinese American family history and genealogy at the Chinese Culture Foundation (CCC) in San Francisco. Two years later, he and Albert Cheng founded the “In Search of Roots” program for youth, enabling hundreds of “rooters” since to locate their ancestral villages and learn about their family histories.

In pursuit of source material, Lai climbed into dumpsters; combed through thousands of newspapers, unpublished manuscripts, and documents; traveled to archives and Chinese/American communities on both sides of the Pacific; and conducted scores of oral history interviews. To share his discoveries, he not only wrote and taught but provided text and translations for exhibits; compiled bibliographies of Chinese newspapers and Chinese language materials; served as consultant for individuals, historical projects, institutions, and documentaries in China and the United States; gave talks at conferences in America, Australia, Canada, mainland China, Taiwan, the Philippines, and Hong Kong. To encourage and bring to light new research by others, Lai worked for decades on the editorial committees of *Amerasia Journal* and *Chinese America: History & Perspectives*, CHSA’s annual journal that he cofounded. Authors, artists, and political activists for the past 30-plus years have noted their indebtedness to Lai. Footnotes often reference data he unearthed—and which is now available to all, either through his writings or his vast collection of books and source material, which he donated to libraries at UC Berkeley, San Francisco State University, and CHSA.

Throughout, Lai was uniquely partnered by his wife, Laura, whose astute management of their finances allowed him to accumulate his vast library and made possible his early retirement. By chauffeuring and accompanying him on trips to China, she enabled him to focus on his research and writing. She also

supported his cultural and political commitment to community. For 13 years Lai produced *Hon Sing*, a weekly radio program of news commentary, community announcements, and Chinese music. He served multiple terms on the boards of many organizations—such as CCC and CHSA—often assuming the responsibilities of president.

Lai's community work and prodigious scholarship garnered many awards, including the Association for Asian American Studies Award for Lifetime Scholarship; Outstanding Service Awards from Chinese for Affirmative Action, CHSA, and CCC. His enduring legacy lies in the foundation he laid for all future work in Chinese American history, and he will forever retain the position of Dean.

Lam, Tony (1937–)

Tony Lam (Lâm Quang) is a retired local politician in Orange County, California. In 1992, he was elected to a two-year term on the Westminster City Council, the first Vietnamese American to win a contested public election in the United States. After surviving a recall, he narrowly won reelection in 1994 and 1998. Lam retired from the council in 2002, following controversy surrounding Vietnamese American demonstrations at the HiTek Video shop in 1999.

Among the first wave of migrants to be evacuated from Saigon after April 1975, Lam arrived with extensive U.S. government contacts through positions with

USAID and as a Saigonese business owner who had grown wealthy from Defense Department contracts. Although his first job in the United States was as an insurance agent, his claim to fame among the overseas Vietnamese population was at Camp Pendleton, where he served as one of the elected liaisons permitted to negotiate on behalf of refugees. In 1984, Lam opened Vien Dong Restaurant on Brookhurst Avenue in a central Little Saigon location, which he ran with his wife and family. He broadened his civic profile by heading the Vietnamese Chamber of Commerce and helping to organize the first area festivals for Tet, the Vietnamese Lunar New Year. In early newspaper reports, this earned him the reputation of being a community leader. Lam first ran for the nonpartisan Westminster council by adopting a Republican affiliation despite the perception that the party perceived Asian Americans as inexperienced and unreliable.

Lam's 10 years on the council were tumultuous, often because of issues within the Vietnamese American community. In one reelection bid, he was victimized by racist campaign literature that referred to him disparagingly as Tony "Little Saigon" Lam; at the same time, his alliance with Vietnamese-Chinese developers to transform Little Saigon into "Asiantown" drew severe criticism from Vietnamese Americans. As the Vietnamese and U.S. governments took steps toward normalizing diplomatic relations, Little Saigon became a hotbed for protest and dissent. Lam, a pragmatist, was often in the crossfire between business interests favorable to improved relations and human rights activists who vehemently opposed them. After thousands of Vietnamese Americans gathered in response to a shopkeeper's display of a portrait of Ho Chi Minh, Lam came under attack for not providing support to the cause. Some activists then turned their attention to Lam's restaurant, Vien Dong—a drawn-out affair that weakened the councilmember's health and hastened his political retirement.

Lam remains politically active, serving as an aide to Orange County Supervisor, Janet Nguyen—the first Vietnamese American to hold that office and one of the few women or persons of color to ever serve in that capacity. In 2010, Lam lost an elective bid for the Midway City Sanitary District.

Lang, Ping (1960–)

A well-known Chinese volleyball superstar and international volleyball coach, Ping (Jenny) Lang was born December 10, 1960, in Beijing, China. She began to play volleyball in 1973 when she attended a teenage sports camp in the Beijing Worker's Gymnasium and a year later joined the volleyball team of her high school. After a year playing for the Beijing Youth Volleyball Team, Lang was recruited by the Beijing Municipal Women's Volleyball Team in 1976. Between 1978 and 1985 she was an outside hitter with the newly formed China National Women's Volleyball Team, which won the first international title for China at the Third World Cup Volleyball Tournament in 1981, followed by three major world championship titles a year later. When the Chinese athletes attended the Los Angeles summer Olympic Games in 1984, Lang, as a key player and the captain of the Chinese Women's Volleyball Team, led her teammates in bringing home the gold medal, the first gold for Chinese team sports at the Olympics. In 1985, Lang's team won a Triple Crown at the World Cup Volleyball Championship. For her powerful hammer-like spiking, Lang was nicknamed "Iron Hammer" by Chinese fans. She was voted as one of the Chinese Top 10 Athletes of the Year from 1981 to 1986.

After retiring in 1986 from the Chinese national team, Lang attended college at Beijing Normal University. She came to the United States in 1987 and majored in English at the University of New Mexico. From 1987 to 1989, when studying for a master's

degree in sports management, she worked as an assistant coach of the University of New Mexico's women's volleyball team and, on occasion, was called back to China as an assistant coach for the Chinese national team. After graduation, she was hired to be the head coach of the Women's Volleyball Team of Italy's Modena Club. She also coached Japan's Yaohan Multinational All-Stars Team, World Superstars Team, and U.S. Volleyball Association's All-American Training Center. In 1990 Lang coached the new Chinese National Women's Volleyball Team to a silver medal victory at the 11th World Volleyball Championship.

In 1995, Lang was once again invited back by the Chinese Volleyball Association to reorganize and coach the Chinese National Women's Volleyball Team. Within a short period of time, the team became a top competitor again in Asian and international championships, bringing China a bronze medal at the 1995 World Cup, a silver medal at the 1996 Atlanta Olympics, and the 1998 World Volleyball Championship, as well as a gold medal at the 1998 Asian Games. She was awarded the coach of the year in 1996 by Federation International Volleyball (FIVB). Lang resigned as coach in March 1999 for health reasons but later returned to again coach Italy's Modena Club Team. In February 2005, Lang was signed to be the head coach of the U.S Women's Volleyball Team for the 2008 Beijing Olympics. Although some of Lang's Chinese fans were ambivalent about Lang's new position, especially when the American team beat the Chinese Women's Volleyball Team and won a silver medal in Beijing, most of her fans were proud of Lang's achievements. At the Beijing Olympics Chinese throughout the world cheered for both the Chinese and U.S. teams. After the Games Lang did not extend her contract with the American team and accepted a less-challenging position to coach in Turkey. In August 2009, she took the head coach position for the Evergrande Women Volleyball Club Team in Guangzhou, China.

Lang founded the Lang Ping Foundation to raise funds promoting goodwill and supporting injured athletes in China and overseas in 2007. Despite living in the United States for more than 20 years, Lang still holds Chinese citizenship. Lang was married to Fan

Bai in 1987 and gave birth to a daughter in the United States in 1992. The couple was divorced in 1995.

Lang Lang (1982–)

Lang Lang is a concert pianist of Chinese origin. His remarkable virtuosity and stage personality have created a sensation rarely seen in the classical music world in recent years.

Lang was born on June 14, 1982, in Shenyang, China. His father Lang Guoren was trained in the erhu, a traditional Chinese string instrument, and worked as a policeman. He began piano lessons at age three and gave his first recital when he was five. When Lang was nine, he and his father moved to Beijing so that he could enroll in the Central Conservatory of Music. The sacrifices his parents made for his musical pursuits and the strict practice regimen his father imposed on him during childhood are topics that Lang often speaks about today. In 1995, at age 13, he performed Chopin's 24 études at the Beijing Concert Hall and also won first place at the International Tchaikovsky Competition for Young Musicians in Japan. The following year, he was a featured soloist at the China National Symphony's inaugural concert. He moved to the United States at age 15 to study with Gary Graffman at the Curtis Institute of Music in Philadelphia.

Lang's stardom began at age 17, when he stepped in for André Watts's last-minute cancellation at the

Chicago Symphony Orchestra's "Gala of the Century" and performed Tchaikovsky's Piano Concerto No. 1 to huge acclaim. Following this sensational début, he went on to perform with major orchestras around the world. He became the first Chinese pianist to be engaged by the Berlin Philharmonic, the Vienna Philharmonic, and the top American orchestras. He made his Carnegie Hall recital début in November 2003. Along with Yundi Li, a pianist who in 2000 became the youngest pianist to win the International Frédéric Chopin Piano Competition in Warsaw at age 18, Lang has been a symbol of the surge of Chinese pianists who are attaining prominence on the world stage.

His phenomenal success and popularity has led to visibility usually reserved for a rock star. In 2008, he performed in the opening ceremony for the Beijing Olympics, where he was seen as a symbol of the youth and future of China. In the same year, the Recording Academy named him their Cultural Ambassador to China. He was featured at the 2008 Grammy Awards, pairing up with jazz pianist Herbie Hancock with whom he conducted a world tour in summer 2009. He was also chosen as an official worldwide ambassador to the 2010 Shanghai Expo and performed at its opening ceremony. He has performed for numerous international dignitaries and caused a controversy when he played the theme song to the Korean war movie *Battle on Shangganling Mountain* called "My Motherland" at the White House dinner in honor of the Chinese President Hu Jintao in January 2011, as the lyric lines "we deal with wolves with guns" has been described as a direct reference to the United States and Lang's choice was interpreted by some as an attempt to humiliate the United States.

Despite the popular adulation, the assessment of Lang by classical music critics has been highly mixed. Although many praise his dazzling technique, youthful exuberance, and passionate expression, many critics have characterized his playing with such adjectives as vulgar, incoherent, self-indulgent, mannered, and even dull and boring. He is known for his dramatic physical movements and facial expressions during his performance, which many critics find excessive and distracting. Some also consider his use of Chinese themes in his performance—as in his attire, choice of repertoire such as compositions by Tan Dun, encore performance

with his father on the erhu—to be crowd-pleasing deployment of his ethnicity at the expense of artistic integrity. The audience and the critics either love or hate Lang Lang; few are indifferent or neutral.

Whether one loves or hates Lang, one cannot deny the impact he is making in the world of classical music. Lang's popularity has even created what *The Today Show* called the “Lang Lang effect,” inspiring over 40 million Chinese children to learn the piano. His recording of the first and fourth Beethoven piano concertos with the Orchestre de Paris and Christoph Eschenbach debuted at No. 1 on the Classical Billboard Chart. In 2010, he signed with Sony for a reported \$3 million. In 2008, he partnered with Google and YouTube in the project YouTube Symphony Orchestra. He has stated his mission to share classical music around the world, with an emphasis on training children and young musicians. In 2008, he launched the Lang Lang International Music Foundation in New York with the support of the Grammys and UNICEF. The foundation was created to enrich the lives of children through a deeper understanding and enjoyment of classical music and to inspire and support the next generation of musicians. In May 2009, Lang and his three chosen scholars from the foundation, aged between 8 and 10, performed together on *The Oprah Winfrey Show* in connection with her search for the world's “smartest and most talented kids.”

In 2008, Lang published his autobiography, *Journey of a Thousand Miles*, published by Random House and translated in eight languages. Delacorte Press also released a version of the book for young readers, entitled *Playing with Flying Keys*.

Lao American Ethnic Economy

Colonized by the French in 1893 and shortly occupied by the Japanese during World War II, Laos did not gain full independence as a nation until 1954. Under French rule, Laos had very limited contact with the United States until the Indochina War. With increasing North Vietnamese and U.S. military presence in the country, Laos was dragged out of its neutral stance into the second Indochina War. Known as the Secret War, the United States dropped more than 2 million tons of ordnance on Laos from 1964 to 1973 in attempts to disrupt Communist forces on the Ho Chi Minh Trail. Once Communist forces gained control of the country in 1975, diplomatic relations with the United States deteriorated, although they were never completely severed. Efforts to rebuild the relations began in 1982, but full diplomatic relations were not restored until 1992, with normal trade relations resumed in 2004.

When Communist powers seized control in Southeast Asia, the United States was compelled to let refugees from these countries enter in massive numbers. This was a new phenomenon in U.S. immigration, as nearly 2 million refugees from Southeast Asia have entered the country under refugee status. The immigration of Southeast Asian refugees came in three waves. The first wave of refugees arrived between 1975 and 1979, the second wave arrived between 1979 and 1982, and the largest group of refugees arrived during the third wave from 1982 to the present. The majority of these refugees were Hmong and Lowland Lao; they were also the least educated and poorest among all of the refugee waves. Under the Refugee Act of 1980, Southeast Asians were dispersed throughout the United States upon their arrival; this effort was made to limit the financial burden faced by local governments. Once normal relations resumed with the United States, sponsorships for family members from Laos became possible, also increasing the number of Laotians in America drastically. Stemming from these normalized relations, refugee migration from Laos spiked in 2004 and 2005. Over time, many Vietnamese, Cambodian, Hmong, and Lao Americans started to resettle in locations near family members or in states with larger concentrations of coethnics. States such as

California, Texas, Minnesota, and Washington have seen ethnic enclaves developing in regions with substantial populations of Southeast Asians.

Laos comprises a very large number of ethnic groups, but the main one, the lowland Lao, constitute almost 60 percent of the population. The Hmong, a relatively small group known as the highland Lao, comprise about 10 percent of the Lao population. Despite the population differences in Laos, there were 232,130 Laotians and 260,073 Hmong in America in 2010. The Hmong came in large numbers partly because of their collaboration with the CIA against Communist forces during the Secret War. As a result, they faced greater persecution from the Communist Pathet Lao at the close of the war. Because of their vast cultural and language differences, these two groups are often disaggregated in research. The term “Laotian” is generally used to refer to all ethnic groups originating from Laos, but the Hmong are not often included. Because Hmong immigrants originated from a distinctive culture and therefore deserve a separate study, this piece on the Lao American ethnic economy will focus on the lowland groups from Laos.

Similar to their immigrant predecessors from Asia, Southeast Asians began establishing their own ethnic economies. On the forefront of these developing economies are Vietnamese Americans, who have since established prominent ethnic enclaves, consisting of a highly diversified ethnic economy. Their services have extended from restaurants and nail salons to include an expanding network of professional services. Numerous “Little Saigons” have been established throughout the country, the most prominent being located in Orange County, California. Fellow Southeast Asian counterparts, Cambodians, Laotians, and Hmong have yet to fully expand their ethnic economies into full-fledged enclaves. One explanation to account for this difference is that the population of Vietnamese Americans is much larger. According to the 2010 Census, there are 1,737,433 Vietnamese Americans living in the United States; this is more than double the population of the other Southeast Asian ethnic groups combined. Laotians are the smallest Southeast Asian ethnic group. As well as having a smaller population, the vast majority of Lao refugees were also less educated and poorer than Vietnamese refugees. As part

of the third wave of refugees, the majority of Lao who came to America were farmers with little or no schooling. In contrast, there was a relatively large group of Vietnamese who came with financial resources. This population was able to invest in and help finance Vietnamese American businesses. Consequently, the Vietnamese have had a larger consumer base and more resources to establish and expand their ethnic economies at faster rates than other Southeast Asian ethnic groups.

Unlike the more recognizable Chinese and Vietnamese ethnic economies, Lao American businesses are primarily invisible. The existing Lao enclaves are less prominent and smaller in scale. Characteristic of newly developing ethnic economies, these businesses are concentrated in particular sectors of the economy. The Lao American ethnic economy can be described as what Aldrich and Waldinger term a “local ethnic market.” This type of business economy predominantly serves coethnics in the same geographical region and has yet to reach mainstream consumers. Also characteristic of the Lao American ethnic economy is what Light and Gold term the “secondary labor market.” In this type of market, small entrepreneurs employ family members and immigrants to cut business costs. These “employees” can be paid very minimally (if they were paid at all) for their labor. This is the case in both the formal and informal businesses owned by Lao Americans.

The Lao ethnic economy can be categorized into two distinct sectors: the formal business economy and the informal business economy. The formal sector includes licensed or registered businesses that were established by Lao Americans, primarily comprised of restaurants and small-scale grocery stores. These small-scale grocery stores principally serve a coethnic customer base. These stores, located in communities with a sizable population of Lao Americans, carry produce and dry goods normally consumed by the ethnic population. Although these stores may also receive customers from other Southeast Asian American ethnic groups and the general public, these businesses would struggle to stay afloat without the patronage of their coethnic customers. Unlike these ethnic specific stores, Lao-owned restaurants are doing better in reaching out to the general public. Although there are

some restaurants that advertise as singularly “Laotian,” many Lao restaurants are established under the guise of Thai restaurants and Thai/Lao restaurants to entice mainstream customers. Because most Americans are unfamiliar with Laotian food, Lao entrepreneurs have aimed to acquire more business by advertising themselves as Thai restaurants; the latter have successfully achieved popularity with the mainstream population. These restaurateurs would then incorporate Lao dishes onto the menu.

Although there are many similarities between Lao and northern Thai cuisine, certain foods will distinguish a true Thai restaurant from a Lao-owned restaurant. One of the main determinants of a Lao-owned restaurant would be the inclusion of “sticky rice” on the menu. Sticky rice is a staple in Lao cuisine and is partnered with nearly all Lao food. Although “laarb” (minced meat salad) and papaya salad are also considered to be part of northern Thai cuisine, the addition of “pa dak” (a fermented fish sauce) distinguishes these as a uniquely Lao cuisine. Known to have a distinct flavor and acquired taste by Laotians, this sauce is often not included in restaurants aiming to reach a more mainstream clientele. In catering to the public, many traditional home-style dishes are also hard to find in these restaurants. For example, although raw meat/fish dishes are commonly served in Laos and at Laotian American homes, they are usually not offered in Thai or Thai/Lao restaurants. Through these hybrid Thai/Lao restaurants, mainstream consumers are slowly being introduced to Lao cuisine. However, many of the traditional Lao dishes are withheld from the menu or “watered-down” to cater to the perceived tastes of the general public. Absent from formal Lao restaurants, these authentic ethnic dishes have nevertheless survived in various informal food services run by Lao Americans.

Not operating in an established structure, many Lao Americans run their businesses out of their own homes, at the local temple, or at major Lao festivals. These informal businesses are designed to strictly serve a co-ethnic clientele and do not require any language demands outside of speaking Laotian; they are often unlicensed. On the smallest scale are door-to-door sales of fresh produce, meat and seafood, or prepared food items. This is fairly common in areas with a concentrated population of Lao Americans. The ease

of access allows women to walk from household to household selling their goods. Some of these goods are also sold to local grocery stores catering to Laotian or Asian American customers. Generally, these transactions are made through informal agreements governed by the demands of the shop; profits margins are usually low. Most visible among these informal businesses are the booths and vendors at local temples (or “wat”) and Laotian festivals. Inside of smaller temples, a small number of women could be found selling home-prepared foods at a low price. Characteristic of the various informal businesses, the clientele’s demand plays a significant role in determining the price of the food items. There is also space for bartering, which is not common in formal businesses. Unlike the smaller temples, large temples often have booths and tents selling homemade Lao foods.

The largest venues for reaching customers are Lao New Year’s festivals. The most celebrated holiday occurring in April, New Year’s festivals can draw hundreds of Lao Americans to the same space. Larger festivals are well known for having lines of booths selling delicious homestyle Lao foods. Many of these booth owners are well known for their specialty in certain dishes, and some have created a reputation among the community. Because profit from festival sales may not always be bountiful, running these booths is also an avenue for developing a client base. Booth owners renowned for their specialty sometimes also offer catering services that allow customers to place their orders in advance. Through the years, some of these informal business owners have also begun catering to the younger generations. Some booths will carry a fusion of Asian/American cuisine, catering to the taste of young Americanized customers. There are also snow cones for children, as well as toys and other goods. Often, these businesses generate very little profit, but many owners continue to run them year after year to carry on their tradition. Because Lao New Year festivals are only held once a year, vending in this manner is merely seasonal and cannot be a main source of income.

There are certain characteristics that define the formal and informal Lao ethnic economies. First, the majority of clients are either coethnic Lao or other Southeast Asian ethnic groups. Although many of the restaurants may cater their menu to the general public

to expand their business, the concept of “Laotian food” has yet to successfully permeate into mainstream cuisine. Also characteristic of newly developing ethnic economies, the concentration of the Lao American ethnic economy is in the food business. Ranging from door-to-door sales to fully established restaurants, these businesses are concentrated in geographical areas with a relatively large Lao population. Because these businesses revolve around food, they are primarily spearheaded by the first generation of Lao American women. Women’s roles in traditional Laotian culture involve care of the household and preparation of meals; typically, it was women who sold food and goods in the public markets of Laos. Bringing these traditions to America, women of all ages take charge in generating income through these ethnic economic activities. Grandmothers often contribute to the family income by tending vegetable gardens and selling the harvests and other food items door-to-door. Middle-aged women would lead the start-up of food booths or formal restaurants. Often, members of the entire family would be involved; husbands, their children, grandparents, as well their relatives, would all contribute in any manner needed. From the food preparation, festival setups, working at restaurants or stores, to the delivery of goods, nuclear and extended family members help support each other’s businesses. Because these are primarily family affairs, payment for labor is usually informal. If payment is made, it is done so under the table without formal bookkeeping. Even within formal economies where family members and coethnic immigrants are hired as employees, pay is often negotiated under the table instead of following federal and state regulations. Although these are some of the general characteristics of the developing Lao American ethnic economy, there are possibilities of growth being led by new generations of Lao Americans.

Supported by a small immigrant population base with very little capital investment, the growth of the Lao American ethnic economy can be characterized by its flexibility and low profit margin. As a result of its slow development, both the formal and informal sectors are still predominantly invisible to mainstream society. Because of its small population size and low capital, it is unlikely that the Lao American ethnic economy will soon be able to reach the same scale

and prominence that have been enjoyed by Chinese and Vietnamese American communities. However, some members of a newer generation of Lao Americans have developed an interest in expanding their ethnic economy. The 1.5- and second-generation Laotian Americans have started modifying and expanding ethnic business and food practices to create public awareness of Lao American goods and services. Using their knowledge of American culture and advanced technological tools, some Lao Americans are marketing their goods to mainstream consumers. Although there is an expanding interest among Americans to discover and experience different types of ethnic foods, it remains unclear to what extent Laotian food would enter the mainstream American diet and whether Laotian cuisine would become as popular as Chinese, Vietnamese, or Thai cuisine. It is also a question of whether the Lao American ethnic economy could move beyond the food business, as did other successful Asian ethnic economies. With an increasing number of educated Lao Americans and professionals, the Lao American ethnic economy has the potential to expand its network of professional services for the community. However, these changes will require three main components: capital, concentrations of the ethnic population, and the commitment of second-generation Lao Americans. With these components, the Lao American ethnic economy may indeed gain prominence in American society.

Lao Americans

Laos and the Lao

The Southeast Asian nation of Laos, formally known today as The Lao People’s Democratic Republic, has

borders with Thailand, in the southwest; Cambodia, in the south; Burma, in the west; China, in the north; and Vietnam, in the east. It is landlocked, and has no access to the sea. The country consists of approximately 91,400 square miles (236,800 sq. km.). The terrain of Laos is rugged and mountainous. The country has a tropical monsoon climate, with a rainy season that lasts from May to November and a dry season that lasts from December to April.

The Lao divide the inhabitants of their country into three broad groups. The *Lao Sung* or *Lao Soong* (literally the “high Lao” or “mountain-top Lao”) are those living in the most mountainous and heavily forested parts of the country. Most of the Lao Sung are Hmong, members of an ethnic group who arrived in Laos from China at the end of the nineteenth or the beginning of the twentieth century. The *Lao Theung* (the “hillside Lao” or “Lao of the slopes”) live primarily in the upland areas of the country. Many of the Lao Theung are speakers of languages related to Cambodian and are probably descendants of groups who have lived in the region since antiquity. The *Lao Loum* or *Lao Lum* (the “lowland Lao”) are the ethnic Lao. They speak a language closely related to Thai and the northeastern dialects of the Thai language are virtually the same as neighboring dialects of the Lao language. The term “Lao Americans” usually refers to people of ethnic Lao birth or ancestry living in the United States.

The ethnic Lao are so closely related to the Thai people that the Thai and the Lao may be regarded as two branches of a single cultural and linguistic group. The northeastern dialect of Thai is virtually identical to the dialect of Lao spoken in Vientiane. These close ties of language and culture have implications for Lao Americans, who often work in Thai restaurants. The Lao, as well as the Thai and Cambodians, adhere to the Southern branch of the Buddhist religion, which is known as Theravada Buddhism.

Lao is a tonal language, in which the meanings of words depend on the tone in which they are spoken, as well as on the combination of vowels and consonants. Although the pronunciation of Lao is difficult for speakers of English and other European languages, the basics of Lao grammar are fairly straightforward, since most sentences take a subject-verb-object form. There is no conjugation of verbs or declension of

nouns. Past, present, and future are indicated by adding words of time to sentences.

Laos and the Vietnam War

In the late nineteenth century, Laos became part of the French colony of Indochina, which also included Cambodia and Vietnam. After World War II, efforts to win independence from France increased throughout Indochina. Some people in Laos supported the French, feeling that their country was not ready for immediate independence. The *Lao Issara* (“Free Lao” or “Independent Lao”) opposed French control of their country. Therefore, they became allies of the main anti-French movement in neighboring Vietnam, the *Viet Minh*, led by Ho Chi Minh. In this way, two factions were created in Laos: those, including the king and the royal government, who supported France (and later became allies of the United States), and those who supported the Communist-led Vietnamese.

French military defeat in Vietnam led to the 1954 Geneva Conference, which divided Vietnam into northern and southern regimes to prevent Ho Chi Minh’s northern-based government from taking control of the entire country. France also granted Laos independence at this conference. When the North Vietnamese began the armed struggle to reunify the country under the rule of Hanoi, in 1959, Laos was drawn into the war. The Lao allies the North Vietnam (known as the *Pathet Lao*, or “Lao Nation”) favored a Vietnamese-style socialist government in Laos.

The United States entered the fighting in Southeast Asia to preserve non-Communist regimes. In Laos, this meant that the United States provided advice and military assistance to the royal Lao government to fight an on-again, off-again war with the *Pathet Lao*. In 1962, the United States organized Hmong tribesmen, paid by the C.I.A., to fight a “secret war” against the *Pathet Lao* and against Vietnamese troops in Laos. Because the “Ho Chi Minh Trail,” North Vietnam’s main supply route to its troops in the South, ran the length of eastern Laos, in 1964 the United States began a massive campaign of aerial bombing to cut the supply line. By 1970, American planes had dropped bombs on two-thirds of Laos. This drove over 20 percent of the population away from their homes, villages, and fields.

After American troops were withdrawn from Indochina, in 1973, the Lao government was forced to negotiate with its enemies and to bring the pro-North Vietnamese leftists into a coalition government. Following the fall of South Vietnam in April 1975, the leftists in Laos gradually consolidated their political power. By the end of the year, the royal government crumbled, the king abdicated, and the Lao People's Democratic Republic was proclaimed. Administrators, former soldiers in the royal army, shopkeepers, and technically trained personnel were the first to flee the country. As the new government attempted to implement Soviet-style economic policies, villagers and farmers also began to take refuge across the border in Thailand.

Lao Refugee Settlement in the United States

With the fall of South Vietnam to North Vietnamese forces, the fall of Cambodia to the Communist Khmer Rouge, and the assumption of power by Communist forces in Laos in the spring of 1975, the U.S. Congress passed the Indochina Migration and Refugee Assistance Act to admit Southeast Asians who had been closely associated with American military activities. Although 126,000 Vietnamese and 4,600 Cambodians arrived with this first wave of refugees, only 800 refugees from Laos were admitted.

At the end of 1975, the U.S. Congress agreed to accept more people from Laos who were languishing in refugee camps in Thailand. During the following year, the United States brought in 10,200 refugees from Laos who had been living in Thai border camps. Most of those admitted at that time were members of families headed by people who had been employed by the United States Agency for International Development, the U.S. Information Service, or by the U.S. Embassy in the Laotian capital of Vientiane.

In the late 1970s, these numbers went down again, to 400 in 1977, and then rose to 8,000 in 1978. At the end of the 1970s, war between Vietnam and Cambodia created new, highly publicized waves of refugees to Southeast Asia, bringing increased public attention to the region and creating a favorable environment for the admission of new Southeast Asian refugees. The resettlement of refugees from Laos grew to 30,200 in 1979 and to 55,500 in 1980.

Refugee admissions from Laos never again reached the high point of 1980. Nevertheless, refugees continued to arrive from that country each year until the middle of the 1990s. Still, movement from Laos to the United States did not end. During the last decade of the twentieth century, people from Laos began to enter the United States classified as "immigrants" rather than as "refugees." The shift from refugee to immigrant largely reflects two developments. First, it indicates the normalization of relations between the United States and the governments of Laos and Vietnam. Second, the shift recognizes the growth of the Lao American population. U.S. immigration policy heavily stresses family reunification. As U.S. citizens and residents of a given national or ethnic group increase in numbers, more people in that group will be allowed into the country as family members.

Growth and Distribution of the Lao American Population

The ethnic Lao population of the United States has increased dramatically over the past few decades. In 1970, there were only a tiny number of Lao in this country. Most of them were military or government officials in this country temporarily or students. By 1980, after the first wave of refugees had reached America, the number of Lao Americans had grown to an estimated 45,683. Ten years later, in 1990, an estimated 147,375 Lao Americans lived in this country. Their numbers continued to grow, to 167,792 in 2000 and to 202,366 in 2009, according to data from the U.S. Census Bureau.

By the twenty-first century, this growing Lao American population included many who were born in the United States. In 2009, an estimated 80,000 Lao Americans (or 40 percent of all members of the group) were U.S. natives. The end of the refugee movement and the slow trickle of immigrants meant that almost all children were American-born. Although this has been a new group, composed mostly of refugees throughout the late twentieth century, it is increasingly becoming a native-born American ethnic group.

Lao Americans have settled around the United States and there are small Lao communities in many locations around the country. California, however, is home to the largest number. Just over one-third of the

Lao American wedding procession in Boise, Idaho. The groom, wearing traditional dress, is escorted to the bride's house for the wedding ceremony by friends and relatives. (David R. Frazier/The Image Works)

Lao in the United States, or an estimated 71,200 people, lived in California in 2009. Minnesota held the next largest number, with 14,600 Lao residents, or about 7 percent of the total Lao American population, followed by Washington State, with 12,000; and Texas, with 11,000. Although the Lao have settled in various parts of California, they tend to be most heavily concentrated in the northern part of the state, notably in locations around the San Francisco Bay, Stockton, and Sacramento. This is a contrast with most other Asian groups in California, who tend to be most concentrated around Los Angeles and other southern parts of the state.

Family

Families tend to be close in Laos, where all family members traditionally have worked together to grow

rice and other crops and to produce the things needed by family members. Respect for age is important, and children are expected to remain close to their parents and show respect to them throughout their lifetime. To traditionally minded Lao Americans, different age groups in America often seem to have little to do with one another. Young people associate mainly with their peers in school and after school, adults spend their days in jobs away from their families, and older people rarely live with their children and grandchildren. Many Lao Americans worry about the decline in respect for aging parents and the erosion of family intimacy that sometimes results from the American way of life.

However, Lao Americans often retain a traditional emphasis on the family. Extended families have, in many cases, become even more important to Laotians in the United States to provide networks of support. According to estimates from American Community

Survey data of the U.S. Census Bureau, 7 out of 10 Lao American children lived in married couple families in 2008. In contrast only about one-third of all American children lived in married couple family households at that time.

Immigration scholars have traditionally looked upon marriage outside of a group as an indicator of a high degree of assimilation. When intermarriage between members of ethnic or racial groups becomes common, this usually means that there is little social distance between those groups. Census data show that at the end of the first decade of the twenty-first century, nearly 80 percent of married Lao men and three-quarters of married Lao women had Lao spouses. About 1 in 18 married Lao American men and about 1 in 10 women had spouses who were white. However, these figures include older people and relatively new immigrants. Young, American-born Lao women married outside of their own ethnic group in very large numbers. According to census data, in the years 2006 through 2009, only a minority (40 percent) of native-born married Lao women under the age of 35 had Lao husbands. Over one-fourth of these young women (28 percent) had married white husbands. One in five young, American-born Lao women had married other Asians. Their Asian husbands were mainly from other Southeast Asian groups, mainly Vietnamese, Cambodians, and Filipinos. Young, American-born Lao men, however, continued to marry mostly inside their own group, since about 82 percent of native-born Lao husbands under 35 had Lao wives.

The high rate of marriage outside the group by women means that a type of assimilation is taking place among Lao Americans. Recent decades have seen a growing population of children with Lao ancestry through their mothers and white ancestry or other Asian ancestry through their fathers. However, the tendency of young Lao men to take spouses of their own group indicates that Lao Americans are not simply melting into the larger American population. Logically, the gender differences in marriage also mean that the pool of available partners for young men has become somewhat limited. Lao American men aged less than 35 were only half as likely as women in this age group to be married.

The experience of women working outside the home can be disorienting for many Lao American households. Women generally have much more explicit power in their families than they had in Laos. The shift in power to women is frequently also paired with a shift in power to children. In Lao culture, children should show a high degree of deference to their parents. In the United States, though, American-born children must often act as translators for foreign-born parents, giving children a marked degree of influence in families.

Work and Income

More than 80 percent of Lao American men and more than 70 percent of Lao American women aged 18 through 64 who were not in school were in the American labor force at the end of the first decade of the twenty-first century. They were most likely to work in semi-skilled or skilled blue collar trades or in restaurants. From 2006 through 2009, one-third of the Lao Americans in the labor force worked as operators, fabricators, or laborers. U.S. Census estimates show that the most common occupations among Lao Americans in 2009 were assemblers of electrical equipment; cooks; wood lathe, routing, and planing machine operators; unspecified machine operators; cashiers; and janitors. Their most common industries were eating and drinking places; electrical equipment, machinery and supplies, motor vehicles and motor vehicle equipment; miscellaneous entertainment and recreation services; unspecified machinery; and hospitals.

The occupational concentration in blue collar jobs appears to be diminishing somewhat as younger, American-born people enter the labor force. Young Lao Americans were most likely to work in technical, sales, and administrative support jobs or service jobs in the early twenty-first century. An estimated 37 percent of those aged 30 and under worked in jobs in the former category and 21 percent worked in jobs in the latter.

Lao Americans in general tend to live in modest circumstances, but have adjusted well to the American economy in the few decades since the arrival of the

first refugees. The median income of Lao families in 2009 was \$53,000, compared to \$61,082 for all families in the United States. Despite the smaller median incomes, though, Lao Americans were only slightly more likely to live in poverty than non-Hispanic whites and much less likely to be poor than either African Americans or Hispanics. An estimated 15.4 percent of the Lao in the United States were below the poverty level in 2009, compared to 10.0 percent of non-Latino whites, 25.8 percent of African Americans, and 23.5 percent of Hispanics.

Education

According to researcher Phoumy Sayavong, Senior Researcher of the Oakland Unified School District and an authority on Lao education in the United States, by 2007 young Lao Americans still lagged behind most other Asian groups in their performance on standardized test scores. Nevertheless, Lao American young people generally scored better on standardized tests than many other American minority groups, including African Americans and Hispanics. Young Lao Americans attended college at rates similar to those of other young people in the United States. In the years 2006 to 2009, an estimated 36 percent of Lao American men and 42 percent of women aged 18 through 24 were enrolled in college or graduate school. Among all Americans in this age group, 37 percent of men and 45 percent of women were in college or graduate school.

The college enrollment figures of young people suggest that Lao American young people have been making rapid educational progress, in spite of the fact that they often come from families with relatively limited educational backgrounds. Nevertheless, Lao Americans still had a long way to go to catch up in educational attainment. By 2009, only 64 percent of Lao Americans aged 25 or over were high school graduates, compared to 85 percent of all Americans and only 12 percent were college graduates, compared to 28 percent of all Americans. In the age group 25 through 34, though, 83 percent of Lao Americans were high school graduates, compared to 87 percent of the total U.S. population in this age group and 18 percent were college graduates, compared to 31 percent of all

Americans in the age group. Young Lao Americans, then, still had somewhat higher rates of not completing high school than others, but the largest educational gap lay in college completion.

Religion

Although some Lao Americans are Christians, most continue to adhere to the Theravada Buddhism of their ancestral homeland. Many Lao in the United States participate in religious activities at Thai temples, which have existed in this country since at least the late 1970s and often receive support from the government of Thailand. As Lao communities formed around the United States from the early 1980s onward, though, Lao Americans began to establish their own temples because of the absence of existing Thai temples in many locations and because of their own specific group needs.

In 1980, the first Lao Buddhist monk in the New York metropolitan area, Satu Khamphoui Sinnolai, found housing with four Thai monks in the Bronx. At that time, he was reportedly one of only five Lao Buddhist monks in the United States, with two others in Washington, D.C., one in Oregon, and another in Illinois. This Lao Buddhist monk, initially aided by the Thai American religious establishment, became the core of a new Bronx Lao temple. In Iberia Parish, Louisiana, Lao residents who had been drawn to the area by the availability of jobs in oil-related construction during the early 1980s began plans to create a temple with a surrounding residential neighborhood in 1986; they completed the temple in 1987. Other temples serving Lao communities were established during the 1980s in places as widespread as Tucson, Arizona; Denver, Colorado; St. Petersburg, Florida; Atlanta, Georgia; Salt Lake City, Utah; Rockford, Illinois; Des Moines, Iowa; Amarillo, Texas; Wichita, Kansas; Manassas, Virginia; St. Louis, Missouri; Lowell, Massachusetts; Rochester, New York; Oklahoma City, Oklahoma; Portland, Oregon; Murfreesboro, Tennessee; and Providence, Rhode Island. In 1989, the U.S. Office of Refugee Services published a document titled "Profiles of Some Good Places for Lao People to Live in the United States." This publication identified the presence or accessibility of a Lao temple as

one of the chief characteristics of a good place for Lao people to live.

The temples, or *wat* in Lao, are centers of all religious activity. Theravada Buddhist practices are based on the idea that each individual achieves his or her spiritual standing through making merit, or *bun* in Lao, and through wrongdoing, or *bab* in Lao. The monks of the temples provide some of the primary opportunities for making merit, because adherents provide food to the monks. In Laos, all men are ideally expected to become monks at some point in their lives, usually before marriage, and this is also a way in which men can make merit. Some men do serve as monks permanently, providing something of a professional religious hierarchy. In the United States, the demands of schooling and work make temporary monasticism difficult. For this reason, long-term monks are even more important to Lao American Buddhism than they are to the religion in Laos.

Major Festivals and Rituals

For Lao Americans, one of the most significant ceremonial occasions is the lunar New Year festival, or *Boun Pi Mai* or *Pi Mai Lao* (literally, “New Year Festival” or “Lao New Year”), traditionally celebrated on the full moon of the fifth month. In the United States, Lao communities frequently reschedule New Year celebrations to fall on a date such as Easter to adjust to the holiday and work patterns of American society. Members of Lao American communities often celebrate the lunar New Year at or near temples with dancing, parades, and by splashing water on one another. The Lao circle dance (*lam wong*), which is also a part of Thai culture, is common at New Year celebrations and almost all other cultural activities. Traditional folk singers, known as *maw lam*, invariably perform to the accompaniment of the pipes known as the *khaen* (pronounced as Americans say “can”). Lao Americans, proud of their culture, welcome outsiders at these festivals.

The New Year festival has become a central activity in Lao American communities and is a much larger event than most other Lao festivals. The *Boun Pha Vet* is a religious holiday, around January, that celebrates

an earlier life of the Buddha. When young Lao American men temporarily become monks, this is a popular time for ordination. The *Boun Bang Fai* (rocket or fireworks festival) takes place around May and was traditionally intended to call for rain by shooting rockets into the air.

The most common of all Lao rituals is the *baci* (pronounced “bah-see”) or *sookhwan* (“invitation of the khwan”), which is performed at almost all important occasions. The *khwan* consists of 32 spirits that make up the spiritual essence of a human being according to Lao tradition and that may become separated from the body. In the *baci*, or *sookhwan*, a respected individual, usually an older man who has been a monk calls upon the *khwan* in a loud, somewhat sing-song voice. He calls on the spirits of all present to cease wandering, if these spirits have drifted away from their proper places, and to return to the bodies of those present at the ceremony. He asks the *khwan* to bring well-being and happiness with them and to share in the feast that will follow.

After the calling of the *khwan* is finished, the celebrants will take pieces of cotton thread from silver platters covered with food, and they will tie these threads around each others’ wrists to bind the *khwan*. While tying the thread, they will wish one another health and prosperity. Often an egg is placed in the palm of someone whose wrist is being bound, as a fertility symbol. At least some of the threads must be left on for three days, and when they are removed they must be broken or untied, not cut.

The *khwan* also plays an important part in the traditional Laotian wedding. When a couple adheres to the traditions strictly, the groom will go to the bride’s house the day before the wedding feast, where there are monks and bowls of water. The wrists of the bride and groom are tied together with a long cotton thread, which is looped around the bowls of water and then tied to the wrists of the monks. The next morning, friends and relatives of the couple will sprinkle them with the water, and then hold the *baci* ceremony. Afterward, the couple is seated together in front of all the guests and wedding presents and the monks chant prayers to bless the marriage.

Cuisine

Lao cuisine is highly seasoned and tends to use a good deal of hot pepper. There are a number of good Lao restaurants in the United States, particularly in California and Hawaii, and Thai restaurants usually offer several Lao dishes. “Sticky rice” is the basic ingredient of Lao food. The best-known dishes are *lahp*, which includes various forms of chopped meat spiced with peppers, and a spicy papaya salad. Traditional Lao foods play an important part in festivals and get-togethers and lunar New Year celebrations invariably include many Lao dishes.

Lau v. Nichols (1974)

Lau v. Nichols (414 U.S. 563) is a landmark United States Supreme Court civil rights case. Decided in 1974, it established the right of limited English proficiency students to receive bilingual instruction. Nearly 2,000 Chinese American students brought a class suit against the San Francisco Unified School District

(SFUSD), which had provided a bare minimum of assistance to its non-English-speaking students. Overturning the decisions of several lower courts, the Supreme Court ruled that, by denying special accommodations to its limited English proficiency students, the San Francisco Unified School District had violated their civil rights.

Prior to the court’s decision, Chinese American students in San Francisco public schools were expected to learn in a monolingual English environment regardless of their language abilities. Thousands of families protested this arrangement, as it effectively prevented their children’s access to a meaningful public education. In response to their demands for bilingual education, the SFUSD instituted a one-hour daily English as a Second Language (ESL) class for some of their students.

This, however, was not an adequate solution for the majority of the SFUSD’s Chinese American students. On March 25, 1970, the mother of Kinney Kinmon Lau, an elementary school student, filed a class action lawsuit in San Francisco Federal District Court on behalf of nearly 2,000 students. The defendant, Alan Nichols, was president of the San Francisco Board of Education.

The suit was unsuccessful in district court. The court agreed with the school district’s contention that bilingual assistance for limited English proficiency students did not constitute a legal right, as any accommodations for those students would be in excess of the standard educational setting provided to all students in the SFUSD. Therefore, the court ruled, additional services to bilingual students should continue to be provided permitting personnel and resources, but were not themselves legal obligations.

The decision was appealed to no avail in the United States Court of Appeals for the Ninth Circuit. In a two-to-one decision, the appellate court reaffirmed the district court’s judgment, accepting that the district had fulfilled its legal duty by providing the same materials, teachers, and facilities to its Chinese American students as it did for all of its students. Moreover, it castigated the students and families who had brought the suit, stating that their inability to make use of the education provided them was because of their own failure to learn the English language.

Irving Hill, a judge on the Ninth Circuit panel, dissented from his colleagues and wrote a stern opinion against the decision of the appellate court. Arguing that communication was an integral facet of a meaningful education, Hill held that the school district had failed to justify why it had withheld a minimum level of English language instruction from a significant number of students. As Hill clarified, the services sought by the plaintiffs were intended to facilitate the learning of only basic English skills and would be discontinued for students once they had gained those skills. Because that instruction had not been provided, Hill argued that the Chinese American students were a readily identifiable ethnic minority that had not been afforded equal access to education, a violation of their rights under the Equal Protection Clause of the Fourteenth Amendment.

Though the Ninth Circuit court had ruled in favor of the SFUSD, the plaintiffs' case was far from over. *Lau v. Nichols* had, as was normal for cases in the Ninth Circuit court, been argued before a panel of only three judges. However, because of the important issues at stake in the case, several additional judges of the Ninth Circuit lobbied to rehear the case *en banc*, before all the judges of the court. Judges Shirley Hufstедler and Walter Ely added their dissenting opinions to Hill's earlier rebuke of his colleagues' decision, and the case was finally brought before the U.S. Supreme Court in 1973.

The court was confronted with a difficult decision. On the one hand, the justices had unanimously affirmed that the district had neglected to grant its limited English proficiency students a satisfactory level of education. On the other, by ruling for the plaintiffs, the court would effect a significant change in the educational policies of every school district in the United States, opening the court to charges that it had overstepped its bounds.

Justice William Douglas delivered the court's opinion, writing that the court had not accepted the argument that the students' constitutional rights, under the Equal Protection Clause, had been violated, but would rely only on the Civil Rights Act of 1964 to reverse the appellate court's decision. Because the school district received large amounts of federal funding, it could not, according to the Civil Rights Act,

discriminate based on race, color, or national origin. In accordance with a guideline issued by the Department of Health and Human Services (formerly Health, Education, and Welfare, or HEW), the court found that the district had an obligation to rectify any linguistic deficiencies arising from national origin. Therefore, the earlier decisions were reversed and remanded by the court.

In response to the court's decision, the San Francisco Unified School District signed a consent decree promising to provide bilingual education to its Chinese, Filipino, and Latino heritage students. The case has been seen as a landmark victory for many other immigrant groups, as it affirmed the necessity of additional language instruction for limited English proficiency speakers regardless of national origin. It catalyzed the growth of bilingual education services in the United States, expanding the impact of the Bilingual Education Act in 1968, which directed federal funds to local school districts for the purpose of bilingual instruction.

Lau v. Nichols has also had a significant impact as legal precedent. It was cited in another landmark case, *Castañeda v. Pickard* 648 F.2d 989 (1981), between a Mexican American family and the Raymondville Independent School District in Texas. Although *Lau v. Nichols* had required school districts to take affirmative steps toward rectifying language deficiencies in limited English proficiency students, *Castañeda v. Pickard* established a set of criteria to assess the effectiveness of those steps.

Law-Yone, Wendy (1947–)

Wendy Law-Yone is an Asian American author of novels and short stories. She was born in 1947, in Mandalay, Burma, and lived in Rangoon until she was 20. She has worked as a freelance writer and editor since 1968, and is a book reviewer and columnist for the *Washington Post*. She graduated from Eckerd College in St. Petersburg, Florida, in 1975. She is currently married to John Randall, and has four children.

Law-Yone is the author of *The Coffin Tree* (1983), *Irrawaddy Tango* (1993), and *The Road to Wanting* (2010). Her work has been acclaimed, and in 1995 *Irrawaddy Tango* was nominated for the *Irish Times* Literary Prize. She has written a number of articles on the political climate of Burma, and is working on a nonfictional memoir of her father's life and labor.

Law-Yone is the daughter of the famous Burmese journalist, politician, and newspaper editor Edward Michael Law-Yone, who founded the *Nation*, which was Rangoon's daily English language publication. He was the recipient of numerous accolades for his journalistic work, including the Asian equivalent of a Pulitzer Prize. Law-Yone is of Burmese, Chinese, and English origin. Her childhood was one of turbulence, coinciding with Burma's independence from the yoke of British colonial rule in 1948, as well as a military coup occurring in 1962, which dismantled a parliamentary democracy and established a police state. Her father was imprisoned from 1963 to 1968 without charges or any trials. Because of political upheaval, she was not allowed to attend school, but after being arrested and questioned for two weeks in 1967, was allowed to leave Burma. In 1968, she married Sterling Seagrave, had two children with him and lived in Thailand. She immigrated to the United States in 1973, divorced Seagrave, and graduated college in 1975. In 1980, she married American lawyer Charles O'Connor, and they had two children. She started to freelance for the *Washington Post* and won a National Endowment for the Arts Fellowship in 1987. In 1989, she visited various camps on the Thai and Burmese border, where Burmese students were in hiding after an attempted coup against the military government in 1988. Law-Yone's report on the camp and its

inhabitants was published in the December 1989 issue of *The Atlantic*. Law-Yone's political experiences are reflected in her novels, and her nonfiction includes pieces on her father's work in Burma, which have been published in *Time* magazine, and the *Guardian*.

The Coffin Tree is Law-Yone's first novel, written in first person narrative. It is the story of an unnamed protagonist and her brother, Shan, and their negative experiences upon immigration to the United States. Rather than iterating discourse of "model minority" politics, Law-Yone writes of the fears, violence, and disillusionment experienced by many immigrants of color and refugees when they arrive for the first time in America. Readers empathize with the heroine and her brother particularly as they experience firsthand the indifference and cruelty of an American society ill-equipped to deal with difference. It is the racist and classist treatment that send Shan spiraling into paranoia and death, and the narrator into a suicide attempt and a mental hospital. The sense of extreme isolation, alienation, disorientation, and hostility from nonpeople of color resonates through the lilting prose, and the unsettling can result in serious psychic traumas and disorders. The unnamed heroine and her brother are victims of the Burmese coup; growing up in a privileged estate but without access to education, they are given passage to the United States. Upon arrival, they are without education, money, or skills, and are barely able to survive by working odd jobs and living off canned food. The protagonist is privy to her older brother's gradual disintegration; he experiences bouts of depression and illness, and finally dies. The latter half of the novel takes place in a hospital ward; she eventually succumbs to psychological trauma but is able to seek professional help. The tone of the narrative is not pathologizing or pejorative, but rather sympathetic and compassionate, told in powerful language and with attention to detail of the quotidian.

Irrawaddy Tango encapsulates a vision of Burma's future, a dystopia renamed "Daya," which in Sanskrit/Buddhist/Hindu contexts means "pity" or "wound," but can also mean "compassion." This particular text's narrative is experimental in nature, where a postmodern pastiche results in the colorful protagonist, Irrawaddy, and therefore a means to analyze

contemporary Burmese politics. The protagonist evolved throughout the text, so in some ways, *Irrawaddy Tango* functions as a bildungsroman. Irrawaddy herself morphs from a young woman awakening to her sexuality, to a socialite, to a guerrilla fighter and prisoner, all the while coming into her agency in Burma and the United States. The tale alludes to various events in twentieth-century American politics, including the Hearst kidnapping, and Native American ancient narratives of female power. She is a transnational figure, immigrating to America, where the promise of the American Dream eludes her. She returns to Daya with the promise of potency, and the latter half of the novel is erotic in nature, with Irrawaddy resuscitating a former partner through sex, then bludgeoning him to death, bringing an end to a dictatorship.

The Road to Wanting is a first person narrative tracing the troubled life of Na Ga, a young Burmese woman. The narrative is one of slavery, abandonment, prostitution, and poverty. Set in China, Thailand, and Burma, Na Ga is a keen narrator, sharply observant of her experiences. Na Ga is constantly mobilized, shifting terrains from one traumatic experience to another. However, the novel ends on a hopeful note, and she is ultimately a survivor.

We may situate Law-Yone in a canon of writers narrating on postcoloniality. Law-Yone's inclusion in a wide array of courses about the Asian American experience are a testament to her relevance, talent, and political commitment to articulating a Southeast Asian perspective with its finger on the pulse of globalization and transnationalism.

Lee, Ang (1954–)

As the most prominent Asian American film director in Hollywood, Ang Lee has demonstrated, over the course of his illustrious 20-year career, a unique ability to express his personal vision in different national and generic contexts. From the Jane Austen adaptation *Sense and Sensibility* (1995) to the Mandarin-language martial-arts epic *Crouching Tiger, Hidden Dragon* (*Wohu canglong* 2000) to the revisionist Western *Brokeback Mountain* (2005), Lee has emerged as a gentle stylist whose directorial personality largely resides in narrative realism and naturalist acting. And yet, the filmmaker has also been touted as an international auteur whose oeuvre is tied together by recurrent themes of displacement, alienation, marginalization, and the search for cultural identity.

Born in 1954 in Pingdong, in the southernmost part of Taiwan, Ang Lee moved across the island several times as his father, a high-school principal, transferred from one city to another because of new appointments. As a young boy, Lee was a disappointment to his scholarly father, as his academic performance was too poor to pass a national college entrance exam. After repeated failures in the exam, Lee chose to enter the Taiwan Academy of Arts, a three-year vocational school, where he majored in Theater and Film. There, the budding filmmaker honed his talent in both acting and directing and successfully completed his graduation project, a black-and-white short entitled *Laziness on a Saturday Afternoon* (*Xingqi liu xiawu de lansan* 1976), which foretells his predilection for silence. After fulfilling his mandatory military service in Taiwan, Lee headed to the United States to continue his education in theater and film. First, he went to the University of Illinois where he met his wife, Jane Lin, a fellow Taiwanese student, before graduating with a BFA in Theater in 1980. He then moved on to pursue a master's degree in Film Production from the prestigious New York University Tisch School of the Arts. After collaborating with his soon-to-be famous classmate Spike Lee in *Joe's Bed-Study Barbershop: We Cut Heads* (1984), Ang Lee made an award-winning thesis film, *Fine Line* (1985),

which explores cultural and ethnic schisms between New York's Chinatown and Little Italy.

For a run of six years following his graduation from New York University (NYU), Lee remained unemployed and was a full-time househusband taking care of two sons whereas his wife was earning a living as a microbiology researcher. However, his indefatigable quest for a career in filmmaking was eventually answered when his screenplay, *Pushing Hands*, won the top award in a screenwriting contest sponsored by Taiwan's state-subsidized Central Motion Picture Corporation (CMPC). Along with a \$16,000 cash award came additional financing from the CMPC, which helped produce Lee's debut film. As a template for his future output, *Pushing Hands* is an East-meets-West drama whose narrative pivots around cross-cultural misunderstandings and conflicts between a rational Caucasian daughter-in-law and her traditional Taiwanese father-in-law, a retired tai-chi master who left his home country to live with his son in the United States. Following the commercial and critical success of his debut film in Taiwan, Lee was able to secure funding to start his second project, *The Wedding Banquet* (*Xi yan* 1993), another transnational film centering on a Taiwanese American gay man living in New York, who enters a contract marriage with an illegal immigrant woman from mainland China to please his traditional Chinese parents. Produced on a modest \$750,000 budget, *The Wedding Banquet* was an art-house sleeper that garnered \$32 million worldwide. After earning the Golden Bear at the Berlin Film Festival and an Academy Award nomination for Best Foreign Language Film, the director followed up *The Wedding Banquet* by returning to Taiwan to shoot the final film of his so-called "Father Knows Best" trilogy, which features Sihung Lung as an aging-yet-wise Chinese father who gracefully accepts a strained relationship based on alienation with his Westernized, modern children. In the third film of that trilogy, *Eat Man Drink Woman*, Lee recontextualizes his theme of generation gaps and family divisions in the world of Chinese cooking by foregrounding a semiretired master chef (who collides with his independently minded three daughters) as the protagonist.

With the international success of *Eat Man Drink Woman* (which topped U.S. box-office records of all

previous Chinese language films), Ang Lee firmly established his name in the global filmmaking scene and was called on to direct more mainstream projects, including the British heritage drama *Sense and Sensibility*, the suburban family drama *The Ice Storm* (1997), and the unconventional Civil War epic *Ride with the Devil* (1999)—the latter a fascinating meditation on race relations and cross-cultural bonding in the U.S. South. Although, with these motion pictures, Lee fully demonstrated his ability to transcend his ethnic/national background and tackle traditionally Anglo-American subject matter with subtlety and insight, the biggest breakthrough of Lee's career ultimately came with a return to his cultural roots. With *Crouching Tiger, Hidden Dragon*, Lee not only realized his boyhood dream of making a Chinese martial arts (*wuxia*) film, but also revived the global popularity of the once-faltering genre. Financially backed by Columbia Studios and shot on location in various parts of China (from the Gobi Desert to the Taklamakan Plateau north of Tibet), *Crouching Tiger, Hidden Dragon* garnered mainstream success and generated notice for its high production values and aesthetic sophistication, something largely unseen in previously released, low-budget Taiwanese and Hong Kong martial-arts films of the classical period.

After reaching the pinnacle of his career with the phenomenal hit *Crouching Tiger, Hidden Dragon*, Ang Lee plunged to the depths of critical disregard when his gargantuan-budgeted (\$150 million) failed-blockbuster *Hulk* (2003) turned out to be a commercial disaster, one that nearly forced him into an early retirement from filmmaking. Thankfully, though, in 2005 Lee made an impressive comeback with the understated indie drama *Brokeback Mountain*, an adaptation of Annie Proulx's short story of the same title that bears the marks of his signature style, balancing a predilection for long takes and extended silence with a thematic emphasis on thwarted love (that between two Wyoming sheepherders whose affection for—and physical attraction to—one another is stymied by social propriety). The following year (2006) saw Ang Lee become the first minority filmmaker to receive the Best Director Award at the Academy Awards, an honor that has ensured continued work in an industry that, historically, has kept minority auteurs in general

and Asian Americans specifically on the margins. He won the Academy Award for Best Director the second time in 2012, for *Life of Pi*.

Lee, Bruce (1940–1973)

Bruce Lee's popular cultural status has been dominated by a martial arts discourse that continues to define his legacy. The evolution of his martial arts, biography, and filmography are well documented in books, magazines, and online articles. His martial arts inspired others and he single-handedly popularized martial arts in viewers' collective cultural imagination. His untimely death at the young age of 32 has added to his lore as a cultural icon as fans of Bruce Lee can only imagine what he would have done to elevate his role as a martial artist and movie star.

The rise of his stature in the late 1960s intersected social changes rippling through the social and political fabric of America. The dismantling of the racial status quo provided an opportune time for an ethnic minority to break through Hollywood's glass ceiling. The politics of racial identity empowered people of color to voice their rights and concerns. More important, racial politics had made such an impact on the cultural-social

consciousness of America that a fictional Chinese hero was accepted by the American public. Although gatekeepers of film, such as Warner Bros., were not willing to take the risk of promoting a Chinese martial artist on television, Hong Kong film producers proved that non-Chinese viewers would embrace Bruce Lee's martial arts regardless of his race. Lee's ability to communicate his emotions through his actions transcended linguistic differences as his films were applauded by a global audience. It is remarkable that Bruce Lee, a Chinese American actor, could become such an internationally recognized martial arts hero.

The global fascination with Bruce Lee's martial arts centered on the spectacle of authenticity. He was a bona fide martial artist who did not need extensive editing to enhance a fight sequence. In all of his climactic fight sequences, it was clear that Bruce Lee the actor could dismantle an opponent in a violent yet oddly graceful manner. Lee was a martial arts expert who did not need a stunt double. His demonstration at the Long Beach International Karate Competition in 1964 and 1967 convinced other martial artists that Bruce Lee's Jeet Kune Do (commonly translated as "the way of the intercepting fist") was a legitimate and powerful form of martial arts. The artistry of his technique provided audiences with a sense of awe and excitement. Although the television series *Kung Fu* was quite popular, the slow motion and extensive editing of David Carradine's kung fu was clearly inauthentic.

The irony of Lee's success is the fact that his rise to fame as a martial artist created such a powerful stereotype that uninformed audiences were vulnerable to the belief that martial arts was a natural part of being Chinese. Lee's on-screen charisma proved that one's racial background was irrelevant in reaching a worldwide audience and his recognition provided more opportunities for Asian actors to be cast in films. However, the stereotype of the Chinese martial arts role also limited the kind of roles available to Asian actors. Jackie Chan and Jet Li have taken over the mantle of the Bruce Lee archetype but the range of roles for Asian American actors is still limited because of the subsequent success of Jackie Chan and Jet Li's martial arts films. Lee successfully replaced the previous stereotypes of Fu Manchu, the evil Chinese dictator, and

Charlie Chan, the emasculated cerebral detective. Yet he inadvertently constructed the Chinese kung fu master stereotype. Such is the vicious cycle of dismantling one stereotype when replacing it with a new one. Nonetheless, Lee's authentic masculine image excited many viewers as it displaced Hollywood caricatures of Chinese men in films.

Lee's remasculinization of the Chinese American male is arguably one of his most underappreciated accomplishments. His sculpted muscular body was intimidating and powerful. His films revealed an upper torso that changed the way Chinese American men were viewed physically. He created a hypermasculine image that countered Hollywood's sexually perverted and emasculated images of Asian men. Although Lee's body was sculpted with strength, he did not have the typical Western body-builder frame. The gratification of a smaller man battling a physically bigger opponent played an integral part in the mythologization of his heroic stature in popular discourse. His physical stature and his roles as an underdog provided audiences with a hero they could identify with and relate to.

His characters also embodied a reimagining of Chinese nationalism. Lee's physical domination over an opponent provided many Chinese viewers with symbolic tools that repositioned a Chinese national identity that was not weak, sick, or emasculated. Bruce Lee's personal ideology on the Cultural Revolution and Communism is not clear. However, his roles in his films reveal a clear ethnic pride that projected a simplistic yet symbolically pro-Chinese stance. His films were made available in China in the 1980s and his unofficial acceptance as a Chinese cultural icon can be seen in China Central Television's US\$7.3 million investment in a Bruce Lee biography entitled *The Legend of Bruce Lee* (2008).

Bruce Lee's status as a popular icon has been a source of pride among Chinese from around the world. His racial background as an American-born Chinese has captured the imagination of Chinese Americans who claim him as one of their own. However, Bruce Lee was also raised as a local Chinese boy from Hong Kong. His persona was that of a Chinese immigrant and his roles were consistently cast as an outsider. His bicultural identity has enabled him to cross racial

and cultural boundaries. His mother was of German and Chinese ancestry so he has been categorized as a German American actor. The complexity of his racial and cultural identity undermines rigid racial categories. At the same time, his multiracial and bicultural identity has served to bridge ethnic conflicts. Perhaps it is appropriate that the first Bruce Lee statue was not erected in Hong Kong; it was erected in Mostar, Bosnia, in 2005, because "Bruce Lee was a symbol of the fight against ethnic divisions."

Lee, C. Y. (1938–)

C. Y. (Zuyuan) Lee is a Taiwan-based Chinese architect. He is best known for his work on the design of Taipei 101, the world's tallest building at the time of completion in 2004, and the current tallest building in Taiwan. Stylistically, C. Y. Lee is known for his bold and controversial designs in which he incorporates Chinese cultural elements into architecture as an expression of contemporary Chinese identity.

Lee was born in Guangdong, China, on December 30, 1938. He received a bachelor's degree in architecture from National Cheng Kung University in Tainan, Taiwan and a master's degree from Princeton University. Other than a brief stint in Taipei as an architectural consultant for a construction company, Lee worked as an architect in the United States for over a decade in Pennsylvania, Boston, and Los Angeles. He served on I. M. Pei's team for the Chinese Pavilion at Expo '70 in Osaka, Japan.

Lee moved back to Taipei, Taiwan in 1978 and founded his own firm, C. Y. Lee & Partners, because he wanted his work to contribute to his country and people. In 1980, partner C. P. Wang joined the firm. Together, they are currently the principal architects at the firm.

Having been educated in the West and having returned home to practice architecture, Lee's architectural philosophy mirrors his personal trajectory. Lee seeks to incorporate Chinese and Eastern culture and tradition, with Western elements, and bringing Chinese architecture into the modern world with contemporary engineering and materials. In the 1980s, Lee converted to Buddhism, and cites what he has learned through studies in Buddhism with Monk Wei Jue and in Chinese philosophy with Master Mou Zong Shen as having a deep impact on how he integrates Chinese culture into his work.

Lee's early projects sought to incorporate Chinese cultural elements into modern buildings. With the Da-An Public Housing project, Lee had a major breakthrough. This project, completed in 1987, marked the first time that a client, in this case the government, accepted a design of Lee's in what would become his trademark Chinese postmodern style. Whereas the design for other public housing complexes were often more sleekly modern or minimalistic, Lee aimed for the structure to fit with the culture of the Chinese people. For instance, the Hong Kuo Building (1989), in which C. Y. Lee & Partners house their main office, incorporates an A-shaped front that is a reference to the Chinese character "sheng," meaning "life." The Chang-Gu World Trade Center, the tallest building in Taiwan at the time it was built in 1992, has an octagonal base to provide stability against winds and earthquakes, a symbolic reference to the number eight as a homophone in Chinese for prosperity or wealth. With the T&C Tower in Kaohsiung, also known as the Tun-tex Sky Tower or the 85 Skytower (1997), Lee used another play on words. The tower, the tallest building in Taiwan until the completion of the Taipei 101 in 2004, references the shape of the Chinese character for "gao," meaning "tall," also the first character in the city name Kaohsiung.

Completed in 2001, the Fang Yuan Mansion in Shenyang, China stands out as one of C. Y. Lee's more literal visual representations of Chinese wealth and prosperity. Shaped like an old-fashioned square-holed Chinese copper coin, the Fang Yuan Mansion is a 23-story high-rise office building. The building melds the concrete and steel of Western modernism with the

Chinese coin shape of the structure as a symbol of Eastern wealth.

Lee is best known for his work on the design of the Taipei 101, a mixed-use tower with a six-floor luxury shopping mall, office space, restaurants, a post office, and nightclubs. Lee convinced investors with the Taipei Financial Center Corporation that the building should be the tallest in the world to show the country's skill and technology and serve as a source of national pride. Intended to draw attention to Taiwan's capital and lure foreign corporations to the island, the Taipei 101 also features an advanced telecommunications infrastructure and the world's fastest elevators.

At the time of its completion, it broke several world records for height. Until the Burj Khalifa opened in Dubai in 2010, the Taipei 101 was the world's tallest inhabited building as measured to its architectural height at the tip of its spire with 1,667 feet. It was also the world's tallest building as measured to the height of its roof at 1,470 feet, and the building with the highest occupied floor, with 101 floors measuring to 1,437 feet. The Shanghai World Financial Center surpassed both of these records in 2007. Despite this, the green Taipei 101 continues to dominate the Taipei skyline.

The design of the Taipei 101 required complex engineering to withstand Taiwan's earthquakes and typhoons. The tower rests on 380 concrete piles buried 262 feet into the ground, and uses a multiple method of trusses, vertical column support, and a frame system connecting the columns. For additional structural support, the tower also contains the world's largest passive-tuned mass wind damper, in the form of a 660-ton golden sphere, which hangs from level 92 to level 87.

C. Y. Lee intended the aesthetic design of the tower to also make a strong expression of Eastern identity, with distinctly Chinese elements. Made to look like a growing bamboo stalk, the Taipei 101 is a pagoda-style tower with eight canted sections of eight stories each. The building also includes traditional symbols of wealth and success, such as Chinese copper coins, scepters, and clouds.

Lee's designs, intended to make a strong statement, are extremely controversial. In 2012, CNN ranked the Fang Yuan Mansion as one of the top

10 ugliest buildings in the world. Other critics have argued that his buildings are too grand, are difficult for ordinary people to relate to, and are too individualistic. Despite criticism, between 1994 and 2004, C. Y. Lee & Partners expanded to open branches in Shanghai and Beijing, and continues to work on projects on sites across the globe.

Lee, Chang-rae (1965–)

Chang-rae Lee entered the literary scene with critical acclaim for his debut novel, *Native Speaker* (1995), for which he received a number of awards including the Hemingway Foundation/PEN Award for first fiction, an American Book Award from the Before Columbus Foundation, a Barnes and Noble Discover Great New Writers Award, the QPB's New Voices Award, American Library Association Notable Book of the Year Award, and the Oregon Books Award.

Lee is the first Korean American to have a novel published by a mainstream American publisher (G.P. Putnam's Sons' imprint Riverhead), and some critics consider Lee as the first major Korean American novelist. Lee's subsequent novels, *A Gesture of Life* (1999) and *Aloft* (2004), continued to garner critical praise.

Chang-rae Lee was born in Korea on July 29, 1965. Lee immigrated to the United States with his family when he was three years old and grew up in Westchester, New York. Lee's experience of the different sides of New York—the boisterous metropolitan New York, the ethnic inner-city inhabited by diverse immigrant populations, and the prosperous, quieter suburban neighborhoods—helped him shape his multi-layered fictional world and delve into the deep and often silent struggles of his characters. Lee attended Phillips Exeter Academy in New Hampshire and received a BA in English from Yale University in 1987. Upon graduation, Lee worked as an equities analyst at an investment bank on Wall Street for one year before pursuing his passion for writing. Lee traveled to the University of Oregon, where he earned an MFA in creative writing in 1993. In the writing program, he wrote the first chapter for a class of what would later become the highly praised *Native Speaker*, a book he completed for his master's thesis. Lee began to teach at the Creative Writing Program at the University of Oregon in June 1993; the same year he married Michelle Branca, with whom he later had two daughters.

In 1995, at the age of 29, Lee published his first novel, *Native Speaker*, which immediately received rave reviews. *Native Speaker* is a story about Henry Park, a Korean American corporate spy, who is an acute observer of language and its power. Henry has to use these skills to infiltrate the organization of a fellow Korean American city council member who is running for office as a New York mayor. In the process, Henry also tries to come to terms with his family issues: the death of his young interracial son, the estrangement of his Caucasian wife, and the world of his first-generation immigrant father. Showing how Henry's professional role and personal issues become intertwined, Lee sheds light on the tensions of the emerging multicultural/multiracial generation and

the political culture of diverse immigrant groups in New York who strive to assimilate into mainstream America. *Native Speaker* has been praised for Lee's lyrical prose and the psychologically perceptive portrayal of his characters. For its themes of identity and assimilation, *Native Speaker* has also been compared to Ralph Ellison's classic *Invisible Man*.

Lee's second novel, *A Gesture of Life*, was published in 1999. The novel addresses the issue of Korean "comfort women," and Lee continues to explore the themes of identity, assimilation, and immigration. The central character is a retired physician, Franklin "Doc" Hata, who was born in Korea, raised in Japan and now lives in New York City as a medical supply store owner. Prodded by his adopted daughter, Doc Hata begins to unravel his painful past: his time as a Japanese soldier in World War II, his encounters with comfort women in army camps, his love for one of the Korean comfort women, and the guilt that has made him a silent outsider in his present life. *A Gesture of Life* was also well received, winning no fewer awards than its predecessor: the Anisfield-Wolf Prize, Myers Outstanding Award, NAIBA Book Award, Asian American Literary Award for Fiction, ALA Best Book of the Year Finalist, *New Yorker* Book Award in Fiction, *New York Times* Notable Book of the Year, and *Publishers Weekly* Best Book of the Year.

Lee's third novel, *Aloft*, published in 2004, is his first attempt to write from the point of view of a non-Asian protagonist. *Aloft* follows the life of Jerry Battle, a 60-year-old Italian American from Long Island. Battle is surrounded by troubles in his personal life, past and present, from which he remains aloof and flies away aloft on his small plane. As with Lee's other novels, *Aloft* received positive reviews from the critics for his poeticism and sensitive depiction of his characters' inner struggles. The novel was optioned for film by Warner Brothers when it was still a manuscript, and the movie adaptation went into process in 2004 with Lee's help.

Lee's success in his publications has been paralleled in his teaching career. Lee was an assistant professor of creative writing at the University of Oregon, the director of the MFA Program at Hunter College of City University in New York, and has been a

professor of creative writing and humanities council member at Princeton University since 2002.

Chang-rae Lee's novels are translated into Spanish, German, and French. Lee continues to write and publish short pieces in the *New York Times*, *The New Yorker*, *Granta*, and the *Paris Review*. Lee's novels are translated into Spanish, German, and French. In 2005, *The New Yorker* and *Granta* named him as one of the 20 best American writers under the age of 40.

Lee, Dai-ming (1904–1961)

Dai-ming Lee was a Chinese American editor, publisher, and political activist. He was chief editor of *New China Daily Press* in Honolulu since 1938 and *Chinese World* in San Francisco since 1945. He was also a leader of the Chinese Democratic Constitutionalist Party.

Dai-ming Lee was born in Kauai, Hawaii, in 1904 to immigrant parents from Zhongshan, Guangdong. At the age of six, he was brought back to Guangdong to receive a traditional Chinese education. He returned to Honolulu in 1918 and tried his hand at journalism by independently publishing a Chinese periodical called *Chenxi* (*Morning Light*). A year later he went back to China and made the acquaintance of members of the Chinese Constitutionalist Party (formerly the *Baohuanghui*, or the Protecting Emperor Society).

He also helped to establish the party's newspaper in Hong Kong.

Through association with Constitutionalist members such as Xu Qin (1873–1945) and Wu Xianzi (1881–1959), Lee Dai-ming became an avowed disciple of Kang Youwei (1858–1927), a Chinese intellectual and political reformer known for his radical reinterpretations of Confucianism. In the following years, Lee was an active member of the Constitutionalist Party, helping to assess its activities in North America in preparation for a thorough reorganization. However, the plan was cut short by Kang's death in 1927 (Wu 1952, 113). In 1928, Lee arrived in San Francisco to assist Wu Xianzi in publishing and writing commentaries for the *Chinese World*. He also led the establishment of the Confucius' Society of America and the Confucian School in San Francisco.

Between 1932 and 1937, Lee toured around North China and published *Bei you yinxiang (Impressions from a Trip to the North)* in Shanghai. In 1938, he became chief editor of the *New China Daily Press* in Honolulu while simultaneously teaching at the Mun Lun School. During the World War II, he successfully led a protest against the Honolulu authority's ban on Chinese and Japanese newspapers following the wake of the Pearl Harbor attack.

In 1945, Lee moved to San Francisco and assumed editorship of the *Chinese World*. He helped to revitalize the paper and pull it out of financial difficulties. Believing that Chinese-language newspapers should have a larger impact on non-Chinese readers, Lee added an English section to the paper in December 1949. In November 1957, he also launched an Atlantic Coast edition in New York. However, the New York edition was suspended in January 1959 because of personnel and financial difficulties.

During his tenure, Lee Dai-ming's succinct and sharp political commentaries were a prominent feature of the *Chinese World*. Many of these commentaries also appeared in the *New China Daily Press* and were translated for the English section of the *Chinese World*. He wrote widely on China politics, Chinese American community affairs, and international news. In particular, he was a firm supporter of constitutional democracy in China. He

zealously defended Confucianism and traditional Chinese cultural values, regarding them as a solution to China's political turmoil as well as the social problems haunting the Chinese American community. He also attracted wide attention as a vocal critic of both the Chinese Communist Party and the Guomindang.

Besides being a controversial Chinese American editor and political commentator, Lee Dai-ming was also active in China politics. As deputy chairman of the Chinese Democratic Constitutionalist Party, he brought it to a short-lived amalgamation with the National Socialist Party led by Carsun Chang (1886–1969) in the mid-1940s. In 1946, Lee was appointed minister without portfolio by the Nationalist Government, a position he did not take. In the 1950s, to create an overseas-based "third force" to counter the Chinese Communists and the Guomindang, Lee also entered into a close alliance with the Chinese Free Masons in San Francisco and Canada and led the establishment of a political coalition called Free China Political Organizations. However, all of these activities were short-lived and produced few material results. Lee Dai-ming died on March 18, 1961. He was married to Lily Kwok in 1946 and had two sons.

Lee, Don (1959–)

Don Lee is an Asian American novelist and professor of English in the Master of Fine Arts Creative Writing Program at Temple University. A third-generation

Korean American, he was born in 1959 and spent his younger years in Seoul and Tokyo as the son of a State Department officer. After attending the American School in Japan, Tokyo, he matriculated at the University of California, Los Angeles where he received his BA in English literature. He then attended Emerson College, where he received his MFA in creative writing.

He remained at Emerson following his graduation and taught creative writing workshops as an adjunct instructor. After four years of teaching, he joined the editorial staff of the literary journal *Ploughshares*, eventually becoming primary editor and holding that position for 17 years. He was an occasional writer-in-residence at Emerson and a visiting writer at other colleges and universities. In 2007, he joined the faculty of Macalester College as an associate professor of writing; he began at Western Michigan University's graduate creative writing program as an associate professor a year later. In fall of 2009, he moved to Philadelphia to join Temple University's graduate creative writing program as a professor.

Lee's collection of short stories, *Yellow*, was published in 2001. The collection examines the individual stories of Asian Americans living in the fictional city of Rosarita Bay in Northern California; told from different vantage points and an eclectic assortment of characters, Lee explores issues of ethnicity, self-identity, and relationships. *Yellow* won the Sue Kaufman Prize for First Fiction from the American Academy of Arts and Letters, and the Members Choice Award from the Asian American Writers' Workshop.

His first novel, *Country of Origin*, was also positively received. Set in 1980s Tokyo, it explores topics of national identity, mixed-race heritage, and social convention through the eyes of its multiracial protagonists. It has won the American Book Award, an Edgar Award for Best First Novel, and the Mixed Media Image Watch Award.

His most recent novel, *Wrack and Ruin*, was published in April 2008. Lee returns to *Yellow*'s Rosarita Bay and presents an equally eccentric cast of characters, expanding upon themes of family and identity previously explored in *Yellow*.

In addition to these works, Lee has also published pieces in a variety of journals and popular magazines,

including: *The Southern Review*, *The Kenyon Review*, *GQ*, *The North American Review*, *The Gettysburg Review*, *Manoa*, *American Short Fiction*, *Glimmer Train*, *Charlie Chan Is Dead 2*, and *Screaming Monkeys*.

Lee is the recipient of fellowships from the Massachusetts Cultural Council and the St. Botolph Club Foundation and has also received residencies from the Yaddo and Lannan Foundation. In November 2007, he was given the Fred R. Brown Literary Award for emerging novelists from the University of Pittsburgh. His writings have been awarded an O. Henry Award and a Pushcart Prize. In addition to this academic work, Lee has served as an independent consultant for *Bamboo Ridge*, *The Georgia Review*, *New England Review*, *Agni*, and *CLMP*.

Lee, Hazel (Ah Ying) (1912–1944)

Hazel (Ah Ying) Lee (Li Yueying) is the first and one of the two Chinese American women who served in the Women Airforce Service Pilots (WASP) in World War II.

The daughter of immigrant parents from China, Lee was born in Portland, Oregon, in 1912, and grew up in Portland's Chinatown. She was athletic and enjoyed to swim and play handball. At a time when few business establishments would hire Chinese, Lee worked as an elevator operator at Liebes Department Store in downtown Portland after graduating from high school.

After Japan's occupation of Manchuria in northern China in 1931, the Chinese American community was mobilized to support military resistance of China. With money solicited from community members, several Chinese American aviation schools and clubs were established throughout the United States to train pilots

Chinese American Hazel Ying Lee was a member of the Women Airforce Service Pilots (WASPs). (National Archives)

for the Chinese air force. In 1932, when Portland's Chinese Aeronautical School began instruction, Lee and Virginia (Guiyan) Wong were the only two women in its first class of 32 students. The two received their licenses in October 1932, and a year later, they sailed to China to serve in the Chinese air force. Although most of their male classmates became members of the Chinese military, Lee and Wong were turned down. The Chinese military was not ready to accept female aviators even though it needed trained pilots badly during the war. Disappointed, Lee went to teach in the village of her father's clan, but found adjustment difficult. She then returned to the United States.

In the summer of 1942, Lee learned that Jacqueline Cochran was organizing the Women's Flying Training Detachment (WFTD) in Houston to train pilots for the Air Transport Command. A year later

in August 1943, as the Women's Auxiliary Ferrying Squadron (WAFS) and the WFTD were officially merged under the name of the Women Airforce Service Pilots (WASP), Lee entered its first class. Few American women had the privilege of taking flying lessons at the time. Most of Lee's fellow classmates came from wealthy families that could afford the luxury of private aviation lessons for their daughters or wives, and some of these women had attended distinguished colleges. Lee was different from the rest of the group: she was the only Chinese and she came from a very humble family background.

Training at Avenger Field in Sweetwater, a small town in west Texas surrounded by ranches, cotton fields, and a few oil wells, Lee had a slow start and sometimes got lost during flying sessions. But she eventually caught up with the rest of the class, graduated as scheduled, and went to active duty ferrying aircrafts for the military.

In October 1944, the war was about to end and WASP was ordered to disband. Lee planned to try the Chinese air force one more time. But she never had the chance. One morning in late November 1944, right before WASP was officially disbanded, Lee was caught by a storm in Bismarck, North Dakota, while on active duty. She flew north toward the Rocky Mountains, arriving at the East Base in Great Falls, Montana, in the afternoon. As she proceeded to land, her aircraft, a single engine Kingcobra, exploded after being straddled by another airplane above. Lee died a few days later in the base hospital. She was one of the 214 Chinese American military personnel killed on active duty during World War II.

Lee was married to Yin Cheung Louie, a classmate from the Chinese Aeronautical School in Portland. Louie was in service with the Nationalist air force in China at the time of Lee's tragic death.

Lee, Kyung Won (K. W.) (1928–)

Kyung Won (K. W.) Lee is a Korean American journalist. He is best known for his civil rights reporting in the American South during the 1950s and 1960s, and for his investigative series and activism around the case of Chol Soo Lee, a Korean immigrant who was wrongfully convicted of murder in San Francisco in 1973. He was the first Asian immigrant to work for mainstream American publications in the continental United States. He was founder of the first English-language Korean American newspaper, *Koreatown Weekly*, and the Korean American Journalists Association, and recipient of 29 professional awards, including the first Asian American Journalists Association Lifetime Achievement Award in 1987, for his writing and community involvement.

Lee was born in 1928 in Kaesong, Korea (now a part of North Korea). He studied English literature at Korea University in Seoul from 1946 to 1949, before emigrating to the United States in 1950. He was the news editor of the student newspaper *The Daily Athenaeum* at West Virginia University, Morgantown, where he received his BS in journalism in 1953. Lee got his MS in journalism from the University of Illinois in 1955. As an undergraduate and graduate student, he was the editor of *The Korean Messenger*, a Korean-language periodical.

From the mid-1950s to 1970, Lee was a reporter for *The Kingsport Times-News* in Tennessee and *The Charleston Gazette* in West Virginia. At those dailies, he reported on the Civil Rights Movement, vote buying practices in the South, and black lung disease in coal miners of Appalachia.

In 1970, Lee began work as an investigative reporter for *The Sacramento Union*. It was there that he began his five-year coverage (with over 120 articles) of Chol Soo Lee, a Korean immigrant erroneously convicted of first-degree murder in San Francisco's

Chinatown in 1973. In October 1977, Chol Soo Lee killed a fellow prisoner in an altercation, and Lee contacted him a month later. In January 1978, K. W. Lee began a reporting series questioning the first verdict, which led to the formation of the Chol Soo Lee Defense Committee. In 1982, Chol Soo Lee was acquitted in his first murder case, and a year later accepted a plea bargain for the second murder and was released from San Quentin Prison's Death Row.

Lee's reporting on Chol Soo Lee won him multiple awards, including the Best Series of Articles by the California Newspaper Publishers Association and the Gavel Award from the American Bar Association.

In 1979, Lee founded *Koreatown Weekly*, an English-language daily in Los Angeles, to give a political and community voice to Korean Americans; the paper lasted for three years. In 1990, he became the editor of the *Korea Times English Edition*. He became a tireless crusader for justice and racial harmony following the April 29, 1992, Los Angeles riots. That year, he won the John Anson Ford Award from the Los Angeles County Human Relations Commission for his work on the riots, and he also underwent liver transplant surgery for Hepatitis B.

He has since worked as a columnist, consultant, and journalistic educator at several publications, including *The Korea Times*, *KoreAm Journal*, and *Colorlines*. Recent notable awards include the Free Spirit Award from the Freedom Forum, and his induction into the Journalism History Gallery at the News-eum in Arlington, Virginia. In 1997, Lee donated his articles, publications, photographs, and other archival materials to the University of California, Davis. The K. W. Lee Center for Leadership was formed in 2003 in Los Angeles to provide leadership training to Korean American youth.

Lee is widowed with three children and six grandchildren, and he currently resides in Sacramento. He is working on two books: *Lonesome Journey: The Korean American Century* and *Witnessing a Defining Moment for Korean American Diaspora: Children of Sa-I-Gu Remember*.

Lee, Min Jin (1969–)

Min Jin Lee was born in Korea in 1969. She immigrated to the United States in March 1976 and grew up in Queens, New York. After graduating from Yale with a BA in history, Lee attended law school at Georgetown University. She worked as a lawyer for several years before devoting her time to writing full time in 1995. Lee has received several awards including the NYFA Fellowship for Fiction, the Peden Prize from the Missouri Review for Best Story, and the Narrative Prize for New and Emerging Writers. Lee’s novel, *Free Food for Millionaires* (2007), was a national bestseller, a New York Times Editor’s Choice, and No.1 Book Sense Pick. *Free Food for Millionaires* was also published in Italy, the U.K., and South Korea.

Lee began writing *Free Food for Millionaires* shortly after September 11, 2001. After 9/11, the *New York Times* published a series of obituaries with photographs of those who had perished in the attacks. The protagonist of Lee’s novel is named after a Korean American woman, Casey, whom Lee read about in the obituaries. Lee named the protagonist of her novel, Casey Han. In giving her character the last name, Han, Lee signals pathos and sorrow. *Han* can be translated from Korean as a cultural identity based on longing, trauma, and is deeply wedded to Korea’s history of colonization. Han also encompasses unnamable sorrow and the desire to rectify past wrongs. In naming the protagonist Casey Han, Lee points to the tensions of growing up in America with liberties and freedoms yet subconsciously carrying past suffering and longing. The trauma of the 9/11 attacks as well as the

trauma of displacement involved in the immigrant experience is both embodied in the character of Casey Han.

The title of her novel, *Free Food for Millionaires*, alludes to the relationship between wealth and different types of desires. In the novel, Casey negotiates American capitalism and entrepreneurialism and the desire for power, wealth, and belonging. Casey also experiences lingering regrets, insecurities, and anxieties on her journey to success. The majority of Lee’s characters are Ivy League graduates who are privileged with wealth and elite education. Either they are born into wealthy families like Ella or they attain wealth through hard work like Ted and Casey. *Free Food for Millionaires* addresses questions of how one attains wealth if one is not born rich. The novel explores the complex nuances of the American dream and the model minority myth that Asian Americans work hard, don’t complain, and succeed in society. Lee also discusses common stereotypes society has of women and minorities who attain success. Often, the success of a woman is questioned, whether she made it on her own merits or whether she “slept her way to the top.” Similar negative accusations are levied against people of color. Their success and merit are questioned as to whether they made their millions by their own merit and hard work or received it “free” through programs like affirmative action. Such charges are not levied against white male Americans but at women and people of color. Throughout the novel, Lee explores the vexed relationship between race, gender, education, success, entitlement, and merit.

Lee makes the reader question not only success, stereotypes, and the merit system but also examine ones worth in society. Several of the characters in *Free Food for Millionaires* have attributes that society deems will made one happy like beauty, education, intelligence, and money, but they are still deeply lonely and longing for something more. To fill the loneliness, longing, or *han* inside, the characters of Lee’s novel purchase goods to make themselves feel better. To mask their insecurities, they purchase and don clothes forming what Lee calls a “curated identity.” Casey’s obsession with hats is a good example of this. Lee’s novel deals with one’s worth and the credits and debits of one’s identity in a capitalistic

market. Lee lives in Tokyo with her husband and son. She is working on her second novel, *Pachinko*. The story is set in Tokyo and the central characters are ethnic Koreans, Japanese, and expatriate Americans.

Lee, Robert G.

Robert G. Lee is a historian who specializes in Asian American history. He is the chair and associate professor of American Studies at Brown University. His areas of research include the history of Asians in the United States, racial formation, and relations between Asia and America. He has written and edited numerous publications, and is the author of *Dear Miye, Letters Home from Japan 1939–1946* (1995) and *Orientalism: Asian Americans in Popular Culture* (1999). His other publications include *Displacements and Diasporas: Asians in the Americas* (2005) and *Race, Nation, and Empire in American History* (2007).

Lee received his PhD in history from Brown University in 1980. He is the recipient of several awards notably including the Special Book Award from the Association for American Studies (1996) for *Dear Miye*; three Best Book Awards from the Northeast Popular Culture/American Culture Association, the American Political Science Association, and the American Studies Association, as well as the John Hope Franklin Prize for best book in American Studies for *Orientalism* (1999).

Best known for his 1999 publication, *Orientalism: Asian Americans in Popular Culture*, Lee has become one of the most important Asian American historians in the United States. In an interview, Lee says, “Asians in America, immigrant and native-born, have been made into a race of aliens, Orientals . . . The Oriental is a mode of representation which constructs the alien as a racial category” (Kang 2000: 3). As the term

“Oriental” is a historical and cultural construction, Lee investigates its origin and production in *Orientalism*, identifying six different representational facets of “the Oriental,” which include: the pollutant of white culture; the subservient coolie; the effeminate deviant; the Yellow Peril; the model minority; and the gook. Following the historical trajectory of each term’s rise and fall, Lee contends that these representations, which structure Asian American identity, experience, and their relationships to ethnicity, citizenship, and nationality, are central to the exclusionary strategies of American Orientalism, which maintain Asian Americans as perpetually alien.

What *Orientalism* ultimately demonstrates is that race, ethnicity, and nationality are cultural constructions grounded in perceived biological difference and inscribed upon Asian American bodies. It does so by offering a broad study of how Asian American history was specifically shaped by anti-Asian representations.

In *Race, Nation, and Empire*, Lee demonstrates that Yellow Peril, which is central to discourses of terror that position the East as dangerous and its subjects inassimilable, has been recoded in today’s “Age of Terror,” such that “brown is the new yellow” and Arab Americans and immigrants are experiencing its terrible effects through Islamophobia and similar exclusions historically experienced by Asian Americans.

Currently, Lee is working on a forthcoming book with the working title, *Inventing Chinese America 1870–1950*. The project is a study of how Chinese immigrants and their subsequent American-born generations constructed discourses of and made claims to citizenship in resistance to systemic anti-Chinese racism and strategies of legal and social exclusion. Lee intends to examine how Chinese immigrants fought to make claims to citizenship and establish themselves as civic actors, despite prohibitions against naturalization, land ownership, and immigration.

Lee, Rose Hum (1904–1964)

Rose Hum Lee, a prominent scholar, author, and public speaker, was the first woman, and first Chinese American, to chair a sociology department at an American university (Roosevelt University in Chicago). Utilizing ethnography and extended life histories, her research contributed to the field of urban sociology and to knowledge of Chinese American and Asian American communities in the twentieth century, particularly the rise and fall of Chinatowns in the northern region of Western United States.

Lee was born in Butte, Montana, on August 20, 1904, to Chinese immigrant parents. Her father, Hum Wah Long, immigrated to the United States in 1870 and worked in mining, ranching, and laundries as he made his way from California to Montana, where about 10 percent of the state's population was Chinese. He operated a general merchandise store in Butte's China Alley neighborhood and, as a successful merchant, was able to bypass the restrictions of the Chinese Exclusion Act and returned to China to marry and bring back a wife, Lin Fong.

The second oldest of seven children, Rose Hum Lee graduated from high school with honors in 1921. Working as a secretary and attending a local college in Butte, she met and married Ku Young Lee, a Chinese engineering student from the University of Pennsylvania. After he completed his studies, they returned to China and lived there for almost a decade. After working in a variety of clerical jobs, in 1937, after Japan invaded China, Rose Hum Lee aided the Chinese resistance by working as a radio operator and translator. Her work in hospitals and orphanages led

to the adoption of a daughter, Elaine. In 1939, she and her husband divorced and, deciding to keep her married name, Lee and her daughter returned to the United States.

Supporting herself through odd jobs and by giving lectures on Chinese history, culture, and art, and on the history and experiences of Chinese in the United States, Lee became a popular speaker. During her speeches, she dressed in American-style clothing but after finishing she would change into traditional Chinese-style clothing to meet with the audience and to sell Chinese souvenirs. She successfully put herself through college at Carnegie Institute of Technology in Pittsburgh, and in 1942 she graduated with a BS in social work. She then moved to Chicago and began graduate study at the University of Chicago's School of Social Work and Administration, but ultimately switched to studying sociology. She first earned a master's degree in 1943 and then her doctorate in sociology in 1947. Under the guidance of famed sociologists Robert E. Park and Louis Wirth, Lee completed her dissertation on "The Growth and Decline of Rocky Mountain Chinatowns."

In 1945, Lee attained a faculty position in the sociology department at Roosevelt University, a new college in Chicago that promoted ethnic diversity among faculty and students. She eventually earned the position of chair in 1956, becoming the first Chinese American woman to head a sociology department in the United States. She continued her research by publishing several scholarly articles, including the one considered her most influential, "The Decline of Chinatowns in the United States" in 1949, eventually culminating in her most significant book, *The Chinese in the United States of America*, published in 1960.

The book was a comprehensive historical and contemporary analysis of Chinese American life—immigration, family, occupational, religious, public health, and community—and how Chinese Americans fit into the American mainstream, as seen by the Chinese themselves and by non-Chinese society. Trained in the prevailing "Chicago School" tradition of urban sociology, Lee's research focused on the dynamics of urban life, particularly in ethnically concentrated neighborhoods such as Chinatown. Lee frequently used her own family experiences as examples; although she kept this confidential, her research emphasized how Chinese

Americans, especially women, advanced the most by leaving their ethnic traditions behind and completely assimilating into mainstream American society. Lee argued, “Many [Chinese immigrants] have become so integrated in the societies where they themselves or their ancestors settled that they are indistinguishable from the local population: that is the ultimate ideal to which all Overseas Chinese should aspire” (Lee 1960: vii).

In later years, many scholars in the burgeoning field of Asian American studies took issue with Lee’s emphasis on assimilation into mainstream American society and her failure to recognize the value and importance of preserving ethnic identities and communities and changing the United States into a more inclusive, diverse society. Despite such criticisms, Rose Hum Lee is credited and remembered for being a pioneer in the study of Chinese Americans and for blazing a path of academic success and respect for Asian Americans, particularly women. In 1951, Rose Hum Lee married Glenn Ginn, a Chinese American lawyer from Phoenix, Arizona, and in 1961, they moved to Phoenix. She died from a stroke on March 25, 1964.

Lee, Sammy (1920–)

Sammy Lee is one of the most storied divers and coaches in Olympic diving. He won back-to-back gold medals in Olympic platform diving in 1948 and 1952

and went on to coach several Olympic champion divers. He was the first Asian American to win an Olympic gold medal. Despite pervasive racial discrimination, he was able to reach the pinnacle of success in his sport. He also overcame racial barriers to become a medical doctor, first serving in the Army and then going on to practice as an otolaryngologist.

Samuel Lee was born in Fresno, California, on August 1, 1920, to Korean immigrant parents. Lee’s father Sakhee Rhee immigrated to the United States early in the twentieth century who was later joined by his mother Yukhee Rhee. He was raised in the Los Angeles neighborhood of Highland Park where his parents ran a grocery. Lee grew up at a time when public facilities, including swimming pools, were segregated. Because he was Asian, he was able to use the Brookside Pool in Pasadena only on Wednesdays, the one day of the week reserved for “non-whites.” This was also just prior to the weekly draining and cleaning of the pool. On the days he couldn’t attend the pool, Lee famously practiced his dives into a sand pit built into his backyard. He was coached by famed diving coach Jim Ryan who was determined to groom him into an Olympic champion.

His early ambitions to become an Olympic champion and a medical doctor were met with skepticism during a period of Jim Crow segregation in America. The racial injustice and discrimination he experienced is said to have given him the motivation to prove his detractors wrong. Lee demonstrated the drive to go beyond social barriers early on in his life and to become the first non-white student body president at both Luther Burbank Junior High and Benjamin Franklin High School, where he graduated as the valedictorian and was chosen as the school’s top athlete.

Lee attended Occidental College and as a student in 1942 won the Men’s Senior National AAU springboard and 10-meter tower diving championships to become the first minority to win a national diving championship. Lee had to forgo his Olympic dreams as the 1940 and 1944 Olympics were cancelled because of World War II. He retired from diving in 1943 to attend medical school at the University of Southern California. Yet he found himself back in the pool in 1946 to compete in the National AAU meet and once again win the tower diving championship.

Diver Sammy Lee poses during the Olympic trials in Detroit, Michigan, July 11, 1948. (AP Photo/Preston Stroup)

Because of World War II, he was trained in an accelerated medical program and completed his degree in three years. After his graduation from medical school in 1947, Lee became a major in the U.S. Army Medical Corps. He took a leave of absence from military duties to compete at the 1948 Olympic Games in London where he won a gold medal in the platform competition and a bronze in the springboard competition. He then served in the Korean War for the U.S. Army as a medic. Once again, he came out of retirement to compete in the diving competition at the 1952 Olympics in Helsinki, Finland. There he won another gold medal in platform diving to become the first man to win back-to-back gold medals in diving and the oldest diver to win a gold medal at the age of 32. In 1953, Lee finally retired for good as a competitive diver. In that same year, he was awarded the James E. Sullivan Memorial Award for outstanding U.S. Amateur Athlete. He was the first minority to win this

honor and remains the only Asian American to have earned the title.

When he won his first gold medal, Lee said that he thought of Son Ki-jong, the Korean marathoner who won the 1936 gold medal in the Berlin Olympics. Son Ki-jong ran under the Japanese flag and became a symbol of anticolonial resistance. He also referenced Jesse Owens who competed in the same Olympics to win several gold medals despite fierce racism. Both 1936 gold medalists had significant personal meaning to him as the son of a Korean immigrant who dreamed of Korean national independence and as a minority who also had to overcome significant racial barriers.

Like Jesse Owens and his contemporary Jackie Robinson, Lee continued to face challenges even after great athletic success because of institutionalized racism. Upon returning from a period abroad as the Sports Ambassador to Southeast Asia, he and his new wife, Roz, were unable to purchase a home in Orange County because of housing covenants that prevented the sale of homes in certain neighborhoods to non-whites. He left his position in the U.S. Army and went into private practice as an otolaryngologist (or an ear, nose, and throat doctor).

The service of Lee to his country through the military and sport took place within the context of the Cold War and the struggle against Communism in Asia. Although Dr. Lee retired from the U.S. military, he continued to engage in public service as the personal presidential representative to the Olympics for Presidents Eisenhower, Nixon, and Reagan. He was also a member of the President's Council on Physical Fitness and Sports from 1950 to 1990. He continued to be involved in the Olympics in a coaching capacity as the Olympic diving coach for the U.S. Olympic team in the 1960 Rome Olympics and then coached the United States, Japanese, and Korean teams during the 1964 Tokyo Olympics. He also coached U.S. champion divers, including Bob Webster, Pat McCormick, and Greg Louganis.

Lee has won numerous accolades for his accomplishments in his sport and for his Olympic performances. In 1966, he was named outstanding American of Korean Parentage by the American-Korean Society of Southern California. In 1968,

Lee was elected to the International Swimming Hall of Fame. He was inducted into the U.S. Olympic Hall of Fame in 1990. USA Diving named an award after him called the WHOSAM, which is awarded to a diving coach and athlete who demonstrate excellence and dedication to the sport while maintaining high mental and physical standards. In 2010, the City of Los Angeles created Sammy Lee Square in Los Angeles's Koreatown in his honor. The city also named August 8 as "Sammy Lee Day."

Dr. Lee has contributed to the sport of diving in other ways. He wrote a book called *Diving* published in 1979. His name has become associated with a highly absorbent towel called "The Sammy Sport Towel," which is used by virtually all divers during practice and competition.

Lee, Tsung Dao (1926–)

Tsung Dao Lee is one of the leading physicists in the world and an influential leader in the Chinese American scientific community. Sharing the Nobel Prize in Physics for 1957, Lee has played a key role in facilitating U.S.-China scientific and educational exchanges

and in promoting basic scientific research and education in China.

Tsung Dao Lee (Li Zhengdao in *pinyin*) was born in Shanghai, China, on November 25, 1926, near the end of the chaotic warlord period in modern Chinese history. His father, Li Junkang, had studied agricultural chemistry in college and later managed a fertilizer factory. His mother, Zhang Mingzhang, had graduated from a middle school, a rarity at the time. Learning mathematics, English, Chinese, and martial arts from tutors at home, Lee lived a sheltered life in Shanghai until 1941, when the Japanese invasion led his father to send him and his two brothers inland, first to Zhejiang, then to Jiangxi provinces, to continue their schooling. In 1943, Lee entered Zhejiang University, then in exile in Guizhou Province, to study physics, but left a year later for the Southwest Associated University in Kunming, which was a wartime combination of Beijing, Qinghua, and Nankai Universities. Lee excelled in this competitive environment and was selected for study in the United States at the end of the war as part of the Nationalist government program to prepare for the eventual making of atomic bombs.

In September 1946, Lee enrolled at the University of Chicago where he studied under the Nobel-prize winning physicist Enrico Fermi, who impressed on him the importance for theoretical physicists to keep in touch with experiments. "Even now, sometimes when I encounter difficulties," Lee later wrote, "I try to imagine how Fermi might react under similar circumstances" (Novick 1986, 156). At Chicago, Lee developed a close friendship with Chen Ning Yang, a fellow student from Southwest with whom he would make some of his most important scientific contributions. Upon completing his PhD thesis on white dwarf stars under Fermi in late 1949, Lee worked with the Indian American astrophysicist Subrahmanyan Chandrasekhar at the university's Yerkes Observatory in southeast Wisconsin, for eight months. In 1950, Lee married Jeanette Chin, a fellow Shanghaiese, and moved west to the University of California, Berkeley, as a lecturer in physics for a year.

In 1951, Lee accepted an appointment at the Institute for Advanced Study in Princeton, where he collaborated with Yang, who preceded him there by two years, on two important papers in statistical mechanics,

which led to a memorable meeting with Albert Einstein at the institute. Lee moved to Columbia University in 1953 and was promoted to full professorship in 1956. After a short hiatus, Lee and Yang resumed their collaboration in the mid-1950s, first on quantum field theory, then famously on the question of the violation of parity.

By 1955, many physicists were stymied by the so-called theta-tau puzzle, two so-called “strange” particles of different spin parity and decaying patterns but sharing the same lifetime and mass. An unsuccessful attempt to solve the problem led Lee to consider the possibility that parity was not conserved when theta and tau decayed into other particles and that theta and tau were the same particle with different parity states. Encouraged by some preliminary tests carried by his Columbia colleague Jack Steinberger in April 1956, Lee began to formulate a strategy to examine whether parity was conserved in different nuclear processes. In early May, Yang joined Lee and together, through three weeks of intensive research and calculation, they found, to their surprise, that the parity conservation was never experimentally tested for weak interactions, although it appeared to be well established for the other three fundamental forces in nature: the strong, electromagnetic, and gravitational interactions.

In June 1956, Lee and Yang published their doubt about parity conservation in weak interactions in a paper titled “Question of Parity Conservation in Weak Interactions.” Chien Shiung Wu, Lee’s colleague at Columbia, soon carried out an experiment with scientists at the National Bureau of Standards in Washington, D.C., to prove Lee and Yang to be right. The discovery astonished the world of physics and led to many further breakthroughs. In 1957, Lee and Yang shared the Nobel Prize in Physics.

Lee and Yang continued their fruitful collaboration, coauthoring altogether 32 papers from 1956 to 1962 on a number of topics in nuclear, particle, and statistical physics. The association was facilitated in 1960–1962 when Lee spent two years at the Princeton institute. In 1962, however, their partnership collapsed because of personal friction arising from, in part, a dispute over credit for their scientific discoveries. Lee returned to Columbia in 1963 and has remained active in research from particle physics to a theory of high-

temperature superconductivity to dark energy. He also served as an inspiration to other physicists, both theoretical and experimental, playing a major role in the development, for example, of the Relativistic Heavy-Ion Collider at the Brookhaven National Laboratory, which began operation in 2000 and has produced several major discoveries.

Since the early 1970s, Lee has spent much of his time and energy on promoting U.S.-China scientific and educational exchanges. In the summer of 1972, shortly after President Richard Nixon’s historic trip to Beijing, Lee and his wife visited China for the first time since he left in 1946 and they were received by Premier Zhou Enlai. In May 1974, Lee met with the Chinese leader Mao Zedong, and the two engaged in philosophical discussions related to physics. Lee used his meetings with Zhou and Mao to push for reforms in Chinese science and education, which had suffered greatly during Mao’s Cultural Revolution. Since then, Lee has continued to enjoy access to the Chinese leadership and provide advice on Chinese science and education policy. One of his most influential undertakings was the so-called CUSPEA (China-U.S. Physics Examination and Application) program, which brought nearly 1,000 talented Chinese undergraduate students to come to study in the U.S. in the 1980s. He also helped China establish the postdoc system, establish a National Natural Science Foundation to promote science funding based on peer reviews, and build the successful Beijing Electron-Positron Collider with American scientific assistance. It is interesting to note that although both Lee and Yang have been influential in Chinese science and education policy, Lee generally emphasized the need for China to pursue basic research as a fountainhead for technology whereas Yang saw applied research as a more direct route to economic progress in China.

Lee, Wen Ho (1939–)

Wen Ho Lee is a Taiwanese American nuclear scientist who was falsely accused of espionage by the United States government in 1999. Lee was born on December 21, 1939, in Nantou, Taiwan, during the Japanese occupation. He earned a degree in mechanical engineering at Cheng Kung University in 1960, and came to the United States in 1964, where he earned a doctorate at Texas A&M University in 1969. He married his wife, Sylvia, the same year and they eventually had two children, Chung and Alberta.

In 1974, Lee became an American citizen, which allowed him to apply for jobs at U.S. national laboratories. In 1978, he was hired by Los Alamos National Laboratory, where he worked in the X Division, which was in charge of nuclear weapons research. On March 6, 1999, *The New York Times* published an article by Jeff Gerth and James Risen regarding a weapons breach at Los Alamos National Laboratory, with the main suspect described as a Chinese American scientist who had knowledge of the W-88 warhead. The FBI interrogated Lee about two trips that he had made to China and accused him of failing two polygraph tests that seemed to indicate he was involved in espionage, causing Department of Energy Secretary Bill Richardson to fire Lee from his job at Los Alamos.

In April 1999, another *Times* article surfaced, with the claim that, according to government and lab officials, Lee had downloaded classified data about the United States' nuclear weapons from secure government networks to his home computers and onto portable tapes. On December 10, 1999, the Justice Department arrested Lee and charged him with 59 counts of mishandling classified information, with the intent to aid a foreign country, under the Atomic Energy and Federal Espionage acts. When in prison, Lee sat in solitary confinement, without access to reading materials, television, or radio for 278 days. He had

only an hour's worth of daily exercise, during which he was kept in chains and shackles, conditions that were so severe that they prompted organizations such as Amnesty International, the American Association for the Advancement of Science, and various Asian American organizations to protest Lee's treatment as being cruel and inhumane.

Although the media and the government portrayed Lee as the next Aldrich Ames or Julius and Ethel Rosenberg—a figure so dangerous that government prosecutors advised Chief Judge James Parker of the United States District Court for the District of New Mexico against granting Lee bail—it soon became apparent that Wen Ho Lee bore more similarity to Alfred Dreyfus, the French Jewish officer falsely accused of passing on French military secrets to Germany during the late nineteenth century. Numerous nuclear and defense experts rejected the *Times*'s claim that the W-88 design plans were vital to China's nuclear development, noting that any weapons gains could have as easily been because of internal research. Further investigation revealed that, because the design plans for the W-88 were not even housed at Los Alamos, the theft could not have originated from the X Division, so Lee could not have been the one who had stolen the plans. Likewise, the information that Lee had downloaded was already widely available within the U.S. nuclear weapons community, as well as on the Internet and could be saved on computer desktops as well as sent through the U.S. mail.

The government prosecutors had also misled the court in several key areas. Under intense questioning from Lee's defense team, lead FBI investigator Robert Messemer retracted crucial testimony and admitted that his previous statements, which claimed that Lee had lied to investigators and colleagues, were false. A CBS story revealed that the FBI had also falsely reported the results of Lee's polygraph tests, claiming that he had failed the first test administered, when in fact he had passed it, and then refusing to disclose the results of the second test. Lee's defense team also unearthed evidence of racial profiling and the dominant role that it played in the government's investigation. In a sworn statement, Robert Vrooman, the former head of counterintelligence at Los Alamos, confirmed that Notra Trulock, the former head of

counterintelligence at the Department of Energy who had spearheaded the Lee investigation, focused exclusively on Lee because of his Asian ancestry, despite the number of non-Asian employees who had access to the same data.

As it became apparent that the government was conducting a witch hunt based on racial discrimination and deceptive tactics, Judge Parker ordered government prosecutors to turn over thousands of documents related to racial profiling and potentially incriminating FBI behavior and ruled that the investigation could no longer justify Lee's incarceration. With their case in tatters, the government offered to drop 58 of 59 charges, and let Lee go for the nine months that he served in solitary confinement, in exchange for Lee's pleading guilty to a single felony count of downloading classified information.

In the end, Wen Ho Lee, the so-called "spy of the century," never faced formal charges of espionage, and what was considered one of the worst spy cases in recent history ended with a single plea bargain. Despite similar misconduct by other government employees, including former CIA Director John Deutch, who had downloaded some of the nation's top secrets onto his home computer and then used the computer to access the Internet on an insecure line, Lee became the exclusive focus of a flawed and inept investigation because of his ethnicity and national origin. The investigation led to a backlash against Asian Americans and an eventual "brain drain" of scientists of Asian heritage, as large numbers of Asian Americans boycotted employment in nuclear weapons laboratories, both in protest over Lee's treatment, as well as over discriminatory policies regarding pay and promotion in their own labs.

Following his release from prison, Wen Ho Lee returned to his home in Los Alamos. In 2001, Lee wrote his memoir, *My Country Versus Me*, with writer and activist Helen Zia to give his side of the story.

Lee, Yan Phou (1861–1938)

As the first Asian American to publish a book in English in the United States, Yan Phou Lee occupies a unique place in Asian American literature and history. His ethnographical work, *When I Was a Boy in China* (1887), not only introduced Chinese culture and society to American readership for the first time, it also challenged the prevalent stereotypes of the Chinese at the peak of the anti-Chinese movement in late-nineteenth-century North America.

Lee was born in southern China in 1861 and grew up in a historical period when China was gradually losing its sovereignty and becoming a semicolonial state. In 1872, Lee signed up for the Chinese Educational Mission established by Yung Wing, an early Chinese American with a college degree from Yale, and he came to the United States for further studies the following year. Lee entered Yale College in 1880, but his studies were disrupted by the Chinese government's recall of the Mission the following year. In 1885, with the help of U.S. missionaries in China, Lee came back to the United States and assumed his studies at Yale. In 1887, Lee graduated from Yale College, published his book, *When I Was a Boy in China*, and married a Euro-American woman named Elizabeth Maude Jerome.

Published by Lothrop Publishing Company in Boston in 1887, Lee's *When I Was a Boy in China*, the first in a book series on foreign countries and cultures, played a major role in educating the American readership about Chinese culture and society. Beginning with his own infancy in China, Lee explains the Chinese calendar year and the Chinese process of naming. He then introduces Chinese social practices and cultural customs, which are categorized as house and household, cooking, sports, gender, religion, and

storytelling, and questions misconceptions about Chinese “cruelty.” In the chapter, “Girls of My Acquaintance,” Lee acknowledges the gender oppression of women in China but challenges the stereotype of Chinese parents killing their baby girls. In discussing his experience in relation to the Chinese Educational Mission, Lee questions Western imperialist practices in China and considers Yung Wing’s project as a remedy for “the wrongs” committed by the so-called “Christian” and “enlightened nations.” In the last chapter, “First Experiences in America,” Lee also describes his own experience in a train robbery and critiques the violence in the industrialized America. Though it is categorized as an autobiography, Lee’s work focuses mostly on his memory of everyday practice of Chinese culture and society and his impression of the technologically oriented United States.

Lee also wrote polemic essays explaining his faith and defending Chinese presence in the United States. His first essay, “Why I Am Not a Heathen,” was published in *North American Review* in September 1887, and served as a response to his fellow Chinese American Wong Chin Foo’s essay, “Why Am I a Heathen?” carried in the April issue of the same journal. Lee answers Wong’s concern by differentiating between religion and ethics and narrating his own spiritual journey from a “heathen” to a Christian. He questions the hypocrisy of the British government in claiming to be a Christian nation but practicing gunboat policy in China. Lee concludes by reiterating his faith in “true Christianity” and embracing the values of cosmopolitanism.

As anti-Chinese sentiment and legal exclusion of the Chinese escalated in the United States, Lee changed his modest tone in the previous essay and wrote a powerful argument in the essay, “The Chinese Must Stay,” carried in the *North American Review* in April 1889. Resorting to the high ideals of the founding fathers of the Republic, Lee questions “this generation of Americans in their treatment of other races” and condemns the laws passed against the Chinese and the anti-Chinese platform adopted by both political parties on the West Coast. With statistics, examples, and logical reasoning, Lee challenges all 11 charges against the Chinese and dismisses them one by one as contradictory, speculative, and malicious.

After Lee worked at odd jobs for decades and served as the editor of the *American Banker* from 1918 to 1927, Lee lost his job with humiliation and finally decided to leave for China. Although China had been under siege of the Japanese Imperial Army during the 1930s, Lee could not find decent work and suffered from poverty. His last correspondence with the United States was in 1938, when he was allegedly killed by the Japanese bombing of Canton.

Lee, Yuan Tseh (1936–)

Yuan Tseh Lee is a prominent Taiwan-born scientist who spent much of his scientific career in the United States, including conducting the research that won him a share of the 1986 Nobel Prize in Chemistry. He returned to the island in 1994 where he has played an active role in its science and education policy and in its politics.

Yuan Tseh Lee (Li Yuanzhe in *pinyin*) was born on November 19, 1936, in Hsinchu (Xinzhu) in Taiwan. His father Lee Tze-fan (Li Zefan) was an artist and educator, and his mother Ts’ai Pei (Cai Pei) directed a kindergarten. At the time Taiwan was under Japanese occupation, so Lee grew up speaking Japanese and went to a Japanese school until the end of World War II in 1945 when the island returned to Chinese rule. After some initial difficulties, Lee adjusted to going to a Chinese school and learned to speak Chinese. Soon he became an avid reader of

books and magazines (both Chinese and Japanese), which greatly expanded his horizon and turned him into a young idealist and even a socialist. Lee excelled in both academics and sports (baseball and table tennis), but it was a biography of Marie Curie that led him to decide to pursue a career in science.

Lee entered the elite Taiwan University in 1955 to study chemical engineering, but changed to chemistry a year later because he was attracted in part by the devotion of some of its faculty. Upon the recommendations of an upper classman, C. T. Chang (Zhang Zhaoding), he spent much time and energy on physics as a foundation for the understanding of most chemical phenomena, which eventually led him to specialize in physical chemistry. Following his graduation in 1959, he enrolled in the graduate program in chemistry at Tsinghua University in Hsinchu where he obtained his MS with a thesis on the studies of natural radioisotopes present in a mineral called Hukutolite. Afterward he stayed at Tsinghua as a research assistant conducting research on the determination of the structure of a substance called tricyclopentadienyl samarium using x-rays. Throughout this period, Lee learned to make instruments and set up sophisticated experiments under primitive conditions that would serve him well later in his career.

In 1962, Lee entered the University of California, Berkeley, to pursue a PhD in chemistry. There he was interested in the research on chemical reactions by Dudley Hershbach, one of his chemistry professors, but Hershbach soon moved to Harvard. Lee ended up working with Bruce Mahan, whose style of providing little guidance but maximum freedom benefited Lee in the long run as it forced and encouraged him to find solutions to scientific problems on his own. After successfully completing an experiment on reactions between excited and ground-state alkali atoms, Lee received his PhD in 1965 and stayed in Mahan's lab as a postdoc. This gave Lee the opportunity to carry out studies on ion-molecule reactions by shooting crossed beams of molecules (ions) at each other and using detectors to examine their reactions, a field that was pioneered by Hershbach.

In February 1967, this interest in molecular beam reactions led Lee to take up a second postdoc with Hershbach at Harvard. At the time, one of the major

limitations of Hershbach's crossed molecular beam apparatus was that it could work only with alkali molecules. Within a year, however, Lee, with the support of a team of graduate students and technicians, successfully designed and constructed a machine capable of carrying out such experiments with nonalkali molecules, which opened the era of universal crossed molecular beam experimentation that was fundamental to understanding exactly what happened during chemical reactions. Hershbach marveled at Lee's talent and skills, calling him "the Mozart of physical chemistry." He also commented that Lee could make such a complicated machine and make it work because he had "five thousand years of cultural heritage" behind him.

In 1968, Lee was hired as an assistant professor at the University of Chicago where he continued and expanded his earlier successes with new generations of crossed molecular beams apparatus that revolutionized the field. In quick succession he was promoted to associate professor in 1971 and full professor in 1973. But in 1974 he returned to Berkeley as both a professor of chemistry and a principal investigator at the Lawrence Berkeley National Laboratory that the university ran under contract with the federal government. He also naturalized as a U.S. citizen that same year.

At Berkeley, Lee continued to lead research in his field with the construction of several molecular beams apparatus specially designed to examine reaction dynamics, photochemical processes, and molecular spectroscopy. His lab attracted students and scientists from all over the world and in turn produced many future leaders in the field. Honors also poured in during this period: he was elected a member of the U.S. National Academy of Sciences in 1979, a member of Academia Sinica, the highest scholarly acclaim in Taiwan, several honorary professorships from universities in mainland China, the Ernest O. Lawrence Award from the U.S. Department of Energy in 1981, the National Medal of Science in early 1986, and later that same year, the Nobel Prize in Chemistry, which he shared with Hershbach and Canadian chemist John C. Polanyi "for their contributions concerning the dynamics of chemical elementary processes." As he gained prominence, Lee became increasingly active in public policy both on and off campus, including serving as cochair of the chancellor's

Asian-American Affairs Committee at Berkeley and as a member of the Secretary of Energy Advisory Board.

Finally, in 1994, attracted by the prospect of democratic reforms in Taiwan and propelled by an attachment to his birthplace, Lee decided to take early retirement from Berkeley and return to Taiwan to become the president of Academia Sinica (he gave up his U.S. citizenship to do so). In his new position he devoted himself to strengthening the academy's research efforts by both increasing its budgets and recruiting other scientists who had, like him, gone abroad, especially to the United States, from Taiwan. Believing that scientists and intellectuals should exercise their social responsibilities, Lee also became centrally involved in educational reforms, cross-strait (Taiwan-mainland China) relations, and other social and public affairs in Taiwan.

Most significantly and controversially, Lee lent his considerable prestige in support of the eventually successful candidacy of Chen Shuibian, leader of the opposition Democratic Progressive Party, in Taiwan's 2000 presidential election. He justified his move as a step in encouraging democratic reform in Taiwan, but his critics felt that by doing so he compromised the traditionally nonpolitical status of Academia Sinica (he later expressed his disappointment in Chen, who was indicted for corruption after leaving office in 2008). Lee offered to resign his presidency of the academy but his resignation was not accepted, and he continued in that position until 2006, when he became a research fellow in the academy's Institute of Atomic and Molecular Sciences that he and C. T. Chang had helped found in the early 1990s. In 2008, he was elected president of the International Council for Science and began his term in 2011.

Leong, Russell (1950–)

Russell Leong is the editor of *Amerasia Journal*, a leading interdisciplinary journal in the field of Asian American studies, as well as an adjunct professor in the Departments of English and Asian American Studies at the University of California, Los Angeles. He is also a poet and author whose works have won the PEN Josephine Miles Award in Literature and the American Book Award.

Leong was born in San Francisco's Chinatown district in 1950. He was an early participant in San Francisco's Kearny Street Workshop, a nonprofit, politically active artists' collective dedicated to producing Asian American art. In 1972, he received his bachelor's degree from San Francisco State University. Leong went on to spend the next two years studying in the Department of Chinese Languages and Literature at the National Taiwan University. In 1990, Leong completed a master's degree in fine arts from UCLA's School of Theater, Film, and Television.

Leong's work has been critically praised for its discussion of Chinese American identity, migration, and diaspora. It has also addressed topics including gay and bisexual identity, AIDS, and religion and spirituality. In 1993, Leong published *The Country of Dreams and Dust*, a collection of poems, to widespread acclaim. It would eventually win the PEN Josephine Miles Literary Award as an example of excellence in multicultural literature.

In 2001, *Phoenix Eyes and Other Stories*, a book of short stories penned by Leong, was honored as one of 15 American Book Award winners. The book contained 14 stories written over 30 years, several of which had been anthologized in collections including *Aiiieeee! An Anthology of Asian American Writers*, edited by Frank Chin, and *Charlie Chan is Dead: An Anthology of Contemporary Asian American Fiction*,

edited by Jessica Hagedorn. His works have been published in a number of literary journals, newspapers, and magazines, including the *New England Review*, *Tricycle: the Buddhist Review*, and *Zyzyva*, as well as translated into Mandarin Chinese and published in Shanghai, Nanjing, Hong Kong, and Taiwan.

As an editor, Leong's other notable works include *Asian American Sexualities*, a volume of works exploring gay, lesbian, and bisexual Asian American identities, and *Moving the Image: Independent Asian Pacific American Media Arts*, a book that documented independent Asian American film, video, and radio produced from 1960 to 1990.

Leong currently serves as editor and project coordinator for UCLA's United States/China Media Brief, a publication dedicated to shaping public knowledge of the two nations' relationship. Its functions include the dissemination of accurate and timely information to the public and to journalists seeking to cover U.S./China issues.

LGBT Activism

Asian American political activism maintains a contentious relationship with race and sexuality. From the 1960s to the present, Asian Americans who identify as lesbian, gay, bisexual, or transgender face racism in sexuality-based organizations and homophobia and transphobia in other organizations. This dilemma necessitates the creation of Asian American LGBT

organizations and other means through which activists can fight in a continued struggle for liberation, recognition of their intersectional identity, HIV/AIDS support, and gay rights.

Establishing an Intersectional Identity

Following the 1969 Stonewall Riots in New York City, several groups joined together in response and called themselves the Gay Liberation Front (GLF). On May 29, 1970, Japanese activist Kiyoshi Kuromiya and fellow activists founded the GLF chapter in Philadelphia. He had previously participated in the first gay demonstrations in 1965, which took place every July 4th at Independence Hall, against gay discrimination in the federal government and the military. Reflecting the emergence of the Black Panther Party and ideological shifts toward radical resistance and Third World liberation, however, the GLF as a whole sought the sexual liberation of all people. The group sought to eliminate embedded patriarchy, sexually defined roles, and notions of privileging the nuclear, biological family within social institutions. In addition, the GLF expressed solidarity with the ongoing black power, feminist, and antiwar movements at the time. In September that same year, Kuromiya joined the GLF delegation at the Black Panthers' first Revolutionary People's Constitutional Convention and spoke at the convention, which endorsed the gay liberation struggle.

From the GLF branched the Gay Activist Alliance (GAA), which solely focused on political reform addressing gay and lesbian concerns. Kuromiya attended GAA meetings but its members would kick him out if he spoke against racism. Many other GLFs did not have as much of a diverse membership as Philadelphia's. Daniel Tsang, a Chinese American student, who was part of the Ann Arbor Gay Liberation Front, felt a sense of isolation because his group was largely white.

The 1970s also saw the rise of the Asian American Movement, in which many members, like those of the Black Power Movement, exhibited sexism and homophobia. For example, I Wor Kuen members in Los Angeles viewed homosexuality as degenerate and bourgeois. Melinda Para, a lesbian, helped found the

Union of Democratic Filipinos, but the group silenced her and her relationship with another female member in fear that her sexuality could be used to discredit the organization. This was a common occurrence and many were forced to choose between racial and sexual politics.

Many gay and lesbian Asian Americans found visibility through publications. Kitty Tsui faced hostility within the movement and in response published many writings on sex and sexuality as they intersected with class and race. In February 1975, Tsang published the first ever gay Asian male manifesto, titled “Gay Awareness,” in *Bridge*, the only nationally circulating Asian American magazine. In it, he criticized the movement for silencing gay Asian Americans by perpetuating misogyny and heterosexism in attempt to gain white respectability. Tsang, along with Don Kao, went on to organize the first gathering of gay and lesbian Asians at the first National Third World Lesbian and Gay Conference at Howard University in Washington, D.C., which took place in October 1979, and was organized by the National Coalition of Black Gays. The conference also culminated in the first gay march on Washington, where gay and lesbian Asians marched behind a banner reading, “We’re Asians, Gay & Proud.”

Multiple LGBT Asian American organizations have emerged across the country such as Asian Pacific Lesbians and Gays (Los Angeles 1980), Gay Asian Pacific Alliance (San Francisco 1988), Asian Pacific Sisters (San Francisco 1989), and Gay Asian Pacific Islander Men of New York (GAPINMY) (1990) to build, foster, and mobilize communities. For example, GAPINMY was highly involved in the protests against *Miss Saigon* in the 1990s and *Details* magazine in 2004 for their misrepresentations of Asian Americans in popular culture. Despite progress, the struggle to bring the existence of an LGBT Asian American identity to the consciousness of the American mind remains a continuous struggle to this present day.

Combating HIV/AIDS

The concerns of Asian American LGBT activists began to incorporate issues of identity and community into sexual health during the emergence of the HIV/AIDS pandemic during the latter half of the 1980s.

Initially thought to be a “gay white man’s disease,” multiple factors including racism, homophobia, sexism, classism, and immigration status made HIV/AIDS a difficult issue for Asian American communities to discuss and mobilize around. Critical of the silence from Asian American communities about sexuality as well as from public health discourses that erased racial and cultural differences in how HIV/AIDS was being prevented and treated, Asian American LGBT organizations in urban centers with high Asian American populations coalesced to address HIV/AIDS. In San Francisco, California, the Asian AIDS Project developed in 1987 as a branch of Asian American Recovery Services. As the demand and scope of services became more comprehensive, in 1996 the Asian AIDS Project would merge with the Living Well Project to establish the Asian and Pacific Islander Wellness Center. In New York City, six Japanese American women inspired by a people of color HIV conference would start the Asian and Pacific Islander Coalition on HIV/AIDS (APICHA). In 1991, the Asian Pacific AIDS Intervention Team (APAIT) emerged from expanded efforts of Asian Pacific Lesbians and Gays (APL/G) and the AIDS Intervention Team (AIT) in Los Angeles, California.

These organizations have been crucial in providing culturally competent education, prevention, and treatment services that are available in multiple Asian and Pacific Islander languages and attend to the culturally specific contexts of their clients. Initially focusing on HIV/AIDS, many of these agencies have since expanded the scope of their services to include mental health services, community-based research projects, and political, legal, and cultural advocacy for LGBT Asian American populations. Although HIV/AIDS continues to be a galvanizing issue both locally and nationally, issues such as marriage equality, LGBT people in the military, and immigration reform demonstrate the array of concerns of LGBT Asian Americans and also reveal the diversity of viewpoints on these topics.

Debating Contemporary Issues

For LGBT Asian Americans, same-sex marriage is an important issue because of the social, political, and legal rights granted through the federal recognition of

these unions, such as hospital visitations, parenting rights, and immigration. The legality and recognition of same-sex marriage was sporadically fought for during the 1970s, but did not pick up steam until 1993 in the state of Hawaii. Three couples, which included Asian Americans, sued on the basis of discrimination. The case made it to the Hawaii Supreme Court, which sided with the couples, but the decision was later overturned by a state amendment to make marriage between a man and a woman. In 1996, Congress enacted the Defense of Marriage Act (DOMA), defining marriage as between one man and one woman and left it to individual states to decide if they would follow. In February 2004, San Francisco Mayor Gavin Newsom and a team that included Asian American activists—Mabel Teng, Donna Kotake, and Minna Tao—collaborated to issue marriage licenses to same-sex couples. The Supreme Court of California annulled the licenses that August, but the revitalized interest in legalizing same-sex marriage led to the development of Asian and Pacific Islanders for LGBT Equality (API Equality) in San Francisco (2004) and Los Angeles (2005). In addition to marriage equality, API Equality has also been involved with other issues such as immigration reform, school safety, and gays in the military.

LGBT Asian Americans are also at the forefront of broader issue campaigns. The “Don’t Ask, Don’t Tell” (DADT) policy was designed to prevent openly gay, lesbian, bisexual, people from serving in the military but also sanctioned sexuality-based forms of discrimination. Openly identifying as gay, lesbian, or bisexual would result in discharge. In 2009, Lieutenant Dan Choi, a Korean American in the United States Army, came out as gay and was immediately discharged. In response, he spoke across the country on the repeal of DADT and participated in many protests. DADT was officially repealed in 2011.

Mainstream contemporary issues, such as gay marriage and DADT, however, often falsely represent diverse groups. Although participation in marriage and the military are supported by many LGBT Asian Americans, there are those who are ambivalent or critical toward movements for inclusion in what are viewed as mainstream white and/or LGBT priorities. Those who are antiwar prefer not to be included in the issues related to the military, which they view as

a racist and heteronormative institution. Marriage is often foregrounded for the rights and privileges granted, such as citizenship, but some question whether that should be a path for immigration reform.

Additionally, transgender Asian Americans are often neglected. Transgender Asian Americans faced further silencing and exclusion: A number of transgender groups were racist, while Asian American groups and gay and lesbian groups were transphobic. In 1997, Pauline Park, a Korean transgender woman, cofounded Iban/Queer Koreans of New York to address needs such as having government documents reflect their current gender, obtaining access to affordable health care, and combating employment discrimination. These are common transgender needs that lesbian and gay organizations struggle to meet.

Resistance to racism and homophobia initiated and continues to inform LGBT Asian American activist practices. It is important to recognize the complexity and diversity of the LGBT Asian American community. As problems affecting this population arise in different contexts across different times, there have been and will continue to be a variety of approaches to enacting social justice.

Li, Choh Hao (1913–1987)

Choh Hao Li was a world-renowned biochemist who specialized in the endocrinology of the pituitary gland. In particular, Li is known for the isolation and purification of the hormones of the anterior pituitary, and, just as important, for the analysis of their molecular structure. Li managed this research program at the University of California, first as an untenured research associate in the Institute of Experimental Biology and, later, as the director of his own laboratory, the Hormone Research Laboratory.

Born in 1913, Choh Hao Li grew up in Guangdong, China, a member of a large and well-to-do family. At 16 years old, Li graduated from Pui Ying High School and enrolled at the University of

Nanking, where he studied chemistry. After graduating in 1933, Li stayed on at the university for a couple of years to teach and to conduct research with F. H. Lee, a chemist who had earned his PhD in the United States under the supervision of Ward V. Evans at Northwestern University. Helping to complete the project that Lee had begun in the United States with Evans earned Choh Hao Li his first scientific publication, as third author, in the *Journal of the American Chemical Society*.

Urged by his family to continue his training in America, Li applied to graduate schools in the United States and was admitted to the University of Michigan but rejected by UC Berkeley, where his brother Choh-Ming was studying for a PhD in business administration. On his way to Ann Arbor, Li stopped in Berkeley to see Choh-Ming, who suggested that he meet with Gilbert N. Lewis, the dean of the College of Chemistry, to appeal Berkeley's rejection. Following Choh-Ming's advice, Li requested an interview with Lewis and showed him the JACS article. Because Lewis knew and respected Evans, he immediately admitted Li into the college, but on probation for a semester.

Lewis's caution was unnecessary. Under the supervision of Thomas D. Stewart, Li studied chemical kinetics and supported himself through part-time work as a Chinese language teacher, first at Berkeley's Chinese Community Church, and then at the Chung Mei Home for Chinese Boys in nearby El Cerrito. He completed his PhD in 1938 and that year married Shen Hwai (Annie) Lu, a friend from his college days whom he had convinced to apply to graduate school in the United States. (Annie finished a master's degree in agricultural economics at Berkeley around the time their first child turned two years old.)

After completing his PhD, Li took a position as a researcher in Herbert Evans's Institute of Experimental Biology (IEB) and soon began making a name for himself studying the protein chemistry of the pituitary gland. Over the course of the 1940s, he rose from a research associate to associate professor of experimental biology in the IEB. During this period Li was able, with the help of family and colleagues, to change his immigration status from temporary visitor (student)

to permanent resident. Then, in 1949, Li took advantage of a prestigious Guggenheim Memorial Foundation fellowship to conduct research in the laboratory of Arne Tiselius in Uppsala, Sweden. Fearing the loss of a rising star to the many institutions courting him, upon his return the administration of the UC Berkeley promoted him to full professor with tenure in Berkeley's newly established Department of Biochemistry and placed him in charge of the research unit that would evolve into the internationally renowned Hormone Research Laboratory (HRL). His professional future in America assured, Li became a naturalized U.S. citizen in 1955.

During the next 30-plus years at the University of California Li managed a broad-ranging research program at the HRL (and later, the Molecular Endocrinology Laboratory at UC San Francisco) that succeeded in isolating, purifying, and determining the molecular structure of most of the anterior pituitary hormones, as well as pioneering in the investigation of their biological properties and clinical applications. Throughout his career, widespread hope in the therapeutic powers of purified hormonal extracts ensured that each new discovery earned Li fulsome praise. Much of this early public acclaim came from his work with adrenocorticotrophic hormone (ACTH). Beginning in the late 1940s, ACTH began showing great promise as an anti-inflammatory drug in treating a broad range of ailments, including allergies and arthritis. At a 1947 press conference, Li announced that he had succeeded in tracing the physiological activity of adrenocorticotrophic hormone to a small portion of the ACTH molecule. In early clinical trials with patients suffering from crippling arthritis, the peptide displayed all of the restorative powers of ACTH—the patients were able to walk again—and none of the side effects. Smaller and less complex than the original molecule, Li's fragment brought the possibility of laboratory synthesis that much closer. Synthesis would leapfrog production beyond the painstaking and expensive process of harvesting the hormonal therapy from slaughtered animals. In 1957, after a six-month sabbatical studying synthesis techniques in the laboratory of Robert Schwyzer in Basle, Switzerland, Li returned and set up a synthesis group in the HRL, which succeeded in synthesizing ACTH in 1960.

Li is perhaps best known for his research on growth hormone (GH) and beta-endorphin, however. GH is used to treat dwarfism, a condition caused by underproduction of the hormone during childhood. Li's early work in GH involved isolating it from bovine pituitaries, but because human physiology responds only to growth hormone derived from either humans or primates, Li concentrated on isolating it from monkey pituitaries, which he succeeded in doing in 1956 to great acclaim. His subsequent success in synthesizing it with Donald Yamashiro (a second-generation Japanese American) in 1971 prompted the veteran journalist Joseph Alsop to proclaim a "New American Success Story" that centered on what Alsop viewed as the unparalleled success of Asian Americans in assimilating to American society, despite being racial minorities.

During research into camel pituitaries in the mid-1970s, Li and David Chung discovered a new hormone, which they named beta-endorphin (β -EP), and which was soon shown to have morphine-like properties, though many times more powerful. Li and his team went on to isolate this hormone and determine its amino acid sequencing, work that paved the way for an entirely new field of research in the treatment of pain.

By the time of his death from cancer in 1987, Li had mentored hundreds of visiting scholars, postdoctoral fellows, and graduate students from around the globe.

Li, Yi (1948–)

Yi Li was born in Wenzhou, China, in 1948, but grew up in Hong Kong, and came to the United States to study English in 1973 after working as a nurse in Britain's Chinese communities. In addition to her career as a writer, she has worked as a social worker in urban Chinatowns in California. Furnished with firsthand knowledge gained from personal experience, Yi Li has explored the lives of America's Chinatown residents in her writing with affectionate and unsentimental familiarity. In fact, a particular strength of her writing is that it proves the contextual forces shaping the problems in Chinese America today are not merely racial in nature. By examining how the struggle for survival exacerbate sharp divisions, ignite conflicts, and widen the schism among Chinese immigrants, Yi Li has demonstrated that the process of racialization is never based on race alone. It is determined by a number of factors, economic conditions among them. "Du Tai" ("Abortion" 1978), a widely read story by Yi Li, is such an outstanding example.

Set in San Francisco's Chinatown, the plot of "Abortion" is simple. Mrs. Luo, a sweatshop worker and mother of four, is pregnant. Aware that her family is too poor to support another child, she plans to have an abortion. Unfortunately, her meager salary is barely enough to cover her family's food and rent, never mind the \$160 needed for the abortion. Meanwhile, her husband, a Chinatown restaurant worker and gambling addict, keeps their bank book and refuses to give her money. In the end, it is support from her female coworkers that enables her to pay for the procedure.

Written in a sober tone, the narration of the story is direct and clear. By using abortion as a controlling motif to unfold the stories of her characters, Yi Li describes the tragedy of working-class Chinese women in American life, and reveals that the Chinese community has become increasingly polarized since the 1960s.

In addition, Yi Li shows in her writing purgatorial suffering notwithstanding, many Chinatown residents still see America as a paradise. The feeling of being elevated in America while living in poverty is not

contradictory. Much of it has to do with preimmigration experience and expectations. Because most Chinatown residents lived in poverty and faced back-breaking physical labor in their old countries, their expectations for what constitutes a happy life are moderate. They tend to greet any improvement in living standards and working conditions, however small, as significant progress. It is such a mentality that makes Chinese immigrant laborers endure more than people should, turns them into hardworking employees, and stifles their aspirations for political rights. Their memories, coupled with their relatively better treatment in America, lead them to approach the issues of racial equality and social justice with modest expectations.

That mentality—a "green-card mindset"—is illustrated poignantly in "Tian Tang" ("The Paradise" 1980), a popular story by Yi Li about Chinese refugees from Vietnam. The satirical nature of the work is marked by the author's use of the word *paradise* to refer to the image of America in the eyes of the ethnic Chinese from Southeast Asia. Her lively and artful prose vividly reflects the refugees' mentality and feeling of great relief upon settling in America. Their miserable lives in old homes and refugee camps prompt them to embrace America as a "paradise." "Where can you find such a good government?" exclaims the lead character in the story when handed a small settlement fee on arrival in the United States and finding that his family is eligible for welfare benefits.

By exploring how poverty has affected the experience of working-class immigrants, Yi Li has implied that the yawning chasm between rich and poor plays a significant role in dividing Chinese communities. It challenges prospects of Chinese unity and the establishment of a single, unified Chinese American agenda. In this sense, Yi Li has served as an effective and rare literary voice of the "downtown Chinese," who are immigrant laborers struggling for survival in isolated urban ghettos, although her coverage of the hardships in Chinatown life provides a counterpoint to the success stories of Chinese American professionals and exposes the multileveled complexity of class issues in Chinese American life.

Lim, Genny (1946–)

Born in San Francisco in 1946 and educated at San Francisco State University and Columbia, Genny Lim in an interview stated “My priority has never been to fit in a particular box.” Playwright, poet, musician, teacher, and much more would be one way to describe the literary and cultural achievements of Genny Lim. In 1970, a park ranger named Alexander Weiss discovered what seemed like Chinese calligraphy on the walls of the abandoned barracks on Angel Island in San Francisco Bay. He brought the discovery to the attention of Professor George Araki of San Francisco State College and photographer Mark Takahashi. Soon the Bay area Asian Americans got interested and, through their efforts, managed to get the state to restore and preserve the immigration station as a cultural and historical landmark and consequently save it from being demolished. It was this collective effort that inspired Genny Lim to collaborate with Him Mark Lai and Judy Yung to write, *Island: Poetry and History of Chinese Immigrants on Angel Island, 1910–1940*. The aspiring playwright, then followed up by writing the play *Paper Angels* (1982) a poignant insight into the lives of the Chinese who were quartered there. *Paper Angels* has been produced around the country and serves as an important signpost to highlight and qualify Asian American history through the use of theater. The fact the Lim’s own parents had passed through Angel Island made the subject matter even more relevant and poignant to weave into a play. It was important to Lim to articulate and give meaning

to what really went on in the barracks of Angel Island.

It was also produced as a film by PBS in 1985 with Joan Chen, James Hong, Rosalind Chao, David Huang, and Ping Wu. In September 2010 a New York-based company called *Direct Arts* staged a new multimedia production of the play in San Francisco’s famous Chinatown district.

Genny Lim’s other play of note is *Bitter Cane* (1989), a dramatic representation of Chinese laborers in late nineteenth-century Hawaii. The play is a stark reminder of life on the sugarcane plantations, of racism, and the gradual cultural genocide and exploitation of the indigenous people of Hawaii. Lim is of the opinion that issues of gender and race are still very prevalent in today’s world. Change in society has been slow in coming, even more so for women. The obstacles in theater limit opportunities for aspiring playwrights. However it is up to the individual to learn from history’s mistakes and move forward positively.

XX (1987) was a multimedia work by Lim produced at the Lab in San Francisco. The play centered on the lives of Chinese women with Lim herself acting and directing the production. Lim has always been a champion of the oppressed, particularly of women and their role in society; he feels gender and race are two of the pivotal issues in our society today. *La China Poblana, 1991* was another multimedia production focusing on the cultural aspects of Asians in the Americas in the sixteenth and seventeenth centuries. The strength of Genny Lim’s contribution to the arts lies in the fact that she has been a challenging, collaborative contributor in using the written and spoken word and also combining poetry and music to highlight the interdisciplinary milieu of theater.

Lim’s work also encompasses performance pieces (*Daughter of Han, I Remember Clifford, Faceless*), plays (*Pigeons, The Pumpkin Girl*), and a children’s play *The Magic Brush*. She has also published a collection of poetry, *Winter Place*. This earlier collection was specifically rooted in time and place. However, there has been a definite shift in her poetic focus with more of an accent on the philosophical rather than the personal. In an interview with Jaime Wright, Lim was of the opinion, “Culture changes all the time because circumstances and people change. It would be

pointless to pigeonhole me or my work because my work is so different than what it was before.”

She has won the James Wong Howe Award for *Paper Angels* and the 1981 American Book Award for her collaborative work with Jon Jang and James Newton titled *Songline: The Spiritual Tributary of Paul Robeson Jr. and Mei Lanfang*. This work looked at the commonality between African and Chinese spirituality through the works of Robeson, a cultural icon in the world of African American artists and Lanfang the greatest Chinese opera actor of all time.

Genny Lim has donated her papers (1982–1997) to the Department of Special Collections, University of California, Santa Barbara.

Lim, Shirley Geok-lin (1944–)

Shirley Geok-lin Lim is a poet, novelist, memoirist, literary critic, and scholar. Aside from a prolific writing career, Lim is a professor in the Department of English at the University of California, Santa Barbara.

Lim was born in 1944 in Malacca, Malaysia. She received her BA in English literature from the University of Malaya with first class honors in 1969. Upon graduation, she received a Fulbright scholarship to study at Brandeis University, where she received her PhD in English and American literature in 1973. Before accepting a tenure-track position at UC Santa Barbara, Lim taught at Westchester College and Hostos Community College in New York. Lim has also taught internationally at the National University of Singapore, Nanyang Technological University, and most recently as chair professor at the University of Hong Kong.

Lim’s mother was a member of the *peranakan*, a distinctive Malayan-born people of Chinese descent assimilated into Malay and Western cultures. Lim grew up speaking her mother’s Malay dialect, a dialect that alienated both mother and daughter in Lim’s paternal grandfather’s house, where Hokkien is the dominant language of communication. As a young adult, Lim fell in love with English literature even as she recognizes that the English language serves as a crucial instrument for Britain’s imperialist project in Southeast Asia. An ambivalent relationship with the various languages that she inhabits thus forms a central theme in her memoir *Among the White Moon Face: An Asian-American Memoir of Homelands* and informs her critical work.

Lim’s numerous awards and fellowships include the Commonwealth Poetry Prize for best first book, an American Book Award, and an American Book/Before Columbus Award. She has been a two-time Mellon Foundation fellow, a Visiting Fellow at the National University of Singapore, and a writer-in-residency at the East West Center in Honolulu and at the National University of Singapore.

Lim has published several collections of poetry: *Listening to the Singer: New and Selected Malaysian Poems* (2007), *What the Fortune Teller Didn’t Say* (1997), *Monsoon History: Selected Poems* (1994), *Modern Secrets: New and Selected Poems* (1989), *No Man’s Grove and Other Poems* (1985), *Crossing the Peninsula and Other Poems* (1980). She has published two novels, *Sister Swing* (2006) and *Joss and Gold* (2001), two books of short stories, *Two Dreams: Short Stories* (1997) and *Another Country and Other Stories* (1982), and a chapbook, *A Gathering of Poems from Pok Fu Lam*. Lim’s memoir *Among the White Moon Faces: An Asian-American Memoir of Homelands* was published in 1996.

Lim has also written two critical texts: *Writing Southeast/Asia in English: Against the Grain* (1994) and *Nationalism and Literature: Literature in English from the Philippines and Singapore* (1993). She is the coeditor of numerous anthologies and journal volumes, including a special issue on ethics and ethnicity for *Concentric* journal (2007), the anthology *Transnational Asian American Literature: Sites and Transits* (2006), and the anthology *Tilting the Continent: An*

Anthology of Southeast Asian American Writing (2000). Lim currently lives in Santa Barbara, California.

Lin, Jeremy (1988–)

Jeremy Shu-How Lin is an American professional basketball player with the National Basketball Association (NBA). After leading Palo Alto High School team to a state championship, the Chinese American Lin broke Ivy League records playing for Harvard University by posting 1,450 points, 450 rebounds, 400 assists and 200 steals during his college career. The undrafted Lin stunned audiences in the NBA 2010 summer league and received a contract with the Golden State Warriors for the 2010–2011 season. Waived by the Warriors and the Houston Rockets in December 2011, he joined the New York Knicks in the 2011–2012 season. In February 2012, Lin came off the bench to lead the Knicks to a winning streak as a point guard, scoring over 20 points in over eight games. This stunning performance led to a transnational media frenzy called “Linsanity.” Lin is one of four Asian Americans to have played in the NBA and the first Taiwanese American to play in the professional basketball league.

Background

The six-foot-three-inch Jeremy Lin is the second child of Lin Gie-Ming and Shirley Lin. Both parents emigrated from Taiwan to the United States in the mid-1970s to attend college in Virginia and Indiana. Gie-Ming and Shirley eventually became engineers and

raised their three sons in the upper-middle class, suburban community of Palo Alto located near Stanford University. Competing against older brother Joshua and younger brother Joseph at an early age, basketball was a family affair with Lin learning to play from his father.

High School

The Palo Alto high school basketball coach, Peter Diepenbrock, remarked that Lin was a leader with strong decision-making skills. With a fearless attacking game, Lin was brought up to the varsity team during the play-offs his freshman season in high school. His senior year, Lin led his Palo Alto High School basketball team to 32–1 record and a California Division II state

New York Knicks' Jeremy Lin drives to the basket during the second quarter of an NBA basketball game against the New Jersey Nets at Madison Square Garden in New York on February 4, 2012. (AP Photo/Bill Kostroun)

title in 2005–2006. In the state championship game, Lin and his team defeated the heavy favorite private-school, Mater Dei 51–47, at Arco Arena in Sacramento. As captain of the championship team, Lin was named first-team All State and Northern California Division II Player of the Year. Named the San Francisco Chronicle’s Metro Player of the Year, he averaged 15.1 points, 7.1 assists, 6.2 rebounds and 5.0 steals during his senior year.

College

Lin was not recruited by any Pac-10 or Division I college teams such as UCLA. Majoring in economics and minoring in sociology at Harvard University, he earned national acclaim for his exploits on the basketball team, leading the school to its first 21-win season. Nominated for the John Wooden and Bob Cousy awards, Lin splashed the cover pages of the national magazine, *Sports Illustrated*.

Harvard University has had only three other graduates go on to the NBA, with the last one being in the 1950s. During his senior year, Lin gained national attention after scoring 30 points against the highly ranked University of Connecticut Huskies. Lin often heard racist comments at away games, such as a spectator yelling “wonton soup” while Lin was at the free throw line.

Professional Basketball

After graduating from college, Lin went undrafted in the 2010 NBA draft but received an invitation from the Dallas Mavericks to play on its summer league team. In the NBA summer league for young NBA players, draftees, and undrafted players, Lin created a buzz by scoring nine fourth-quarter points against the number one draft pick and shifting the crowd to cheering for him. In July 2010, he received several contract offers and chose to play for the Golden State Warriors. However, with point guards Stephen Curry and Monte Ellis in front of him, Lin did not get much playing time. The Warriors sent Lin to the NBA Development League twice before releasing him in December 2011. Lin was picked up the New York Knicks; and in February 2012, the aggressive and fast Lin exploded on

the NBA stage. In early February, the undrafted, twice-cut Lin came off the bench to score 25 points and led the New York Knicks to a comeback win over the Nets. Because of a plethora of injuries to the starters and Lin’s promising performance, Lin started eight games, scoring over 20 points a game, including an astounding 38 points against Kobe Bryant and the Los Angeles Lakers. As a drive-and-kick point guard, Lin stunned the NBA with his scoring. With Lin out because of a knee injury, the Knicks were shut out in the first-round of the playoffs by the Miami Heat.

Linsanity

During his meteoric rise in the spring of 2012, Lin and his tremendous basketball performance captured the imagination of the United States and of basketball fans around the world. Thousands of newspaper and magazine articles, Facebook posts, and blogs fomented the phenomenon of “Linsanity.” When Lin was out for the remainder of the regular and playoff season because of knee surgery, Linsanity returned to earth. Ranging from appearing on national magazine covers like *Sports Illustrated* to Harvard Law School alumni and college basketball fan President Obama claiming “I knew about Jeremy Lin before you did,” the rocket speed and broad scope of Linsanity as a social construction was not necessarily surprising given the many dimensions of sport as a transnational, corporate/entertainment complex that shapes public life.

Sport involves media representations and consumption such as Linsanity appearing on a broad spectrum of media outlets ranging from *Entertainment Weekly* and ESPN to the *Washington Post* and the *Wall Street Journal*. Sport is an object of material consumption such as Lin iPhone cases or the Jeremy Lin bobblehead. And sport is an embodied and collective act of playing whether it is on the elite stage of professional sports or in a century-old youth basketball league in the Japanese American communities.

Role Model

Although Yao Ming from China broke barriers in the 2002 season, the news of Lin’s contract lit up Asian American Facebook pages and blogs as he was the

fourth American-born Asian (Wat Misaka in 1947, Robert Townsend in the late 1970s, and Rex Walters in the 1990s) to enter the big stage of the NBA. The vast Asian American community supported Lin by drawing from the long-standing history of Asian American basketball communities. Confronting wide-scale racial and social inequalities at the beginning of the twentieth century, Chinese American, Filipina/o Americans, and Japanese Americans created their own parallel basketball leagues in response to rampant segregation. With the history of marginalization, Asian Americans valued the visibility brought by Lin and the legibility of racism toward Asians during Linsanity. In addition, many Chinese Christians were drawn by Lin's stardom. Lin, who has also been vocal about his Christian faith as a professional athlete, has been called the "Taiwanese Tebow" as a link to the National Football League's quarterback and public Christian Tim Tebow. A member of the Redeemer Bible Fellowship in his youth and a leader of the Asian American Christian Fellowship at Harvard, Lin has publicly discussed becoming a pastor and has a substantial faith-based fan following. Asian American Christianity and Christians are an emerging and significant community on college campuses and in Asian immigrant communities in the United States.

Model Minority Myth

Lin's splash in collegiate and NBA play has been punctuated by social constructions of the model minority myth. The mainstream news frequently couched the undrafted Lin as a "Cinderella Story" highlighting his "devout Christianity" whereas the Warriors franchise marketed him through "Asian Heritage Nights" at the Oakland Coliseum. Linsanity often centered on erasing Lin's race and racism in society. Touted as the ultimate "American" story, Lin was hailed by the mainstream media as the underdog who used grit, discipline, and integrity to make it onto the big stage. In addition to Lin, the framing of his family also encoded the model minority myth narrative. A *New York Times* article on the Lin family framed Lin's mother as a "Tiger Mom" who channeled her focus on Lin's basketball.

Diversity Celebration

The Linsanity discourse also used sport to celebrate differences in a parade of diversity. Overlooking structural discrimination, the media coverage emphasized his cultural background with a jubilant, celebratory tone. The mainstream media praised Lin for breaking stereotypes such as *Time* magazine naming him one of the 100 most influential people in the world. Equating Chineseness with exotica and orientalism, Ben & Jerry's unveiled a frozen yogurt flavor, "Taste the Linsanity," that included swirls of lychee honey and crumbled fortune cookies. After a win against the Sacramento Kings, the MSG Network showed a graphic of Lin's face coming out of a fortune cookie, accompanied by the text: "The Knicks' Good Fortune." Using Lin's name in a variety of puns were common in the media ("Linning Streak"; "Lin Your Face") and by fans from a variety of racial groups ("SuperLinsendo"; "I want you Linside me"). Eliding institutional discrimination and perpetuating the myths of meritocracy and the melting pot, the mainstream discourse struggled to create a healthy public language about Lin and Asian Americanness and to examine the political functions of sport.

Racism

Many media outlets marked Lin's Asianness in ways that made racism and stereotypes toward Asian Americans transparent. A writer for ESPN.com used the headline "Chink in their armor" to describe the Knicks' first loss since Lin took over as point guard. ESPN offered an apology and fired the headline writer. Fox.com journalist Jason Whitlock invoked emasculation of Asian American men and tweeted "Some lucky lady in NYC is gonna feel a couple of inches of pain tonight." The *New York Post* used a controversial headline "Aasian!" In various ways, the racial discourse emphasized the alien, different, and foreign nature of Asian American masculinity. The plethora of problematic media representations led the Asian American Journalist Association to create a media guide regarding Jeremy Lin. The guide included a succinct list of "danger zones" such as "ME LOVE YOU LIN TIME: Avoid. This is a lazy pun on the athlete's

name and alludes to the broken English of a Hollywood caricature from the 1980s.”

Racial Triangulation

Lin’s Asian Americanness complicated the dominant white-marginal paradigms about race. African American boxer Floyd Mayweather raised questions about the racial politics of Linsanity in a tweet: “Jeremy Lin is a good player but all the hype is because he’s Asian. Black players do what he does every night and don’t get the same praise.” Mayweather critiqued the media and fan frenzy over Lin as driven by an aversion to blackness and to the supposed proximity of Asianness to whiteness in a racial hierarchy. Mayweather not only praised Lin but also highlighted the ranking of different racial groups: whiteness at the top, blackness at the bottom, and Asianness somewhere in between. Pitting the marginalized groups against each other, Mayweather’s tweet highlights the complexities of racial hierarchies and the need to examine the dynamics among marginalized groups and whites instead of creating an oppression sweepstakes and overlooking the function of sports to pit racial groups against each other.

Asian American Cultural Production

Asian American community members participated in Linsanity by identifying and problematizing stereotypes present in Linsanity. Some blogs by Asian Americans, such as Chaewon Koo, Justin Huang, and Deanna Fei, used Lin to critique the emasculation of Asian American men and tout Lin’s importance as a liberating symbol of Asian American masculine sexuality. Many Asian Americans used sport not only to highlight normative racial and gendered codes but also to offset and upend them. Artist Bao Phi’s “Hey Girl/Guy/Gender Non Conforming” meme poked holes at normalizing ideologies about Asian Americans in popular culture. These meme’s connected other problematic visible incidents of racialization of Asianness with Linsanity. Other bloggers questioned how Lin was treated as an Asian American, the racial tracking in the NBA, and how an unknown player could come off the bench and play well. They posited whether it

was because of his Asianness that he was overlooked by many NBA coaches and teams. The Los Angeles Lakers’ Kobe Bryant gave Lin credit for his astonishing emergence. “Players don’t usually come out of nowhere. If you go back and take a look, his skill level was probably there but no one ever noticed” (Mannix 2012).

Lin, Maya (1959–)

Maya Lin, one of the most prominent architectural designers in the twenty-first century, has been world renowned since the 1980s for her early work of the Vietnam Veteran Memorial in Washington D.C. She was born in Athens, Ohio, in 1959, 10 years after her parents left China for the United States. Both her parents were professors at Ohio University, where her mother taught literature and her father, as a ceramic artist, once was the dean of the College of Fine Art.

Lin went to Yale University for her undergraduate education and got her master’s and doctoral degrees consecutively also in Yale. During her senior year at Yale, she submitted as her class project a piece of work for the Vietnam Veteran Memorial Designing Competition and beat out 1,420 other contestants. However, her work was an unconventional and nontraditional design style for a war memorial and proved quite controversial, especially after her ethnic identity was revealed. Lin’s Vietnam Veteran Memorial is a V-shaped sculpture with 58,195 fallen soldiers’ name etched on a black stone. Despite ferocious criticism,

Maya Lin, 1981. (AP Photo/Scott Applewhite)

the design became the most visited memorial in the nation's capital and a pilgrimage site for relatives and friends of the American military casualties in Vietnam.

In her 30s, Lin started to realize her cultural heritage as a Chinese American. She had strong desires to understand her cultural background and designed a new home for the Museum of Chinese in America in New York. In recent years, one of the biggest projects she contributed to is a series of seven outdoor installations at points of historic interest along 300 miles of the Columbia and Snake Rivers in the state of Washington, collaborating with other artists, architects, landscape designers, and the native tribes of the Pacific Northwest. Other major works she designed include the "Women's Table" at Yale; the Langston Hughes Library for the Children's Defense Fund in Clinton, Tennessee; Civil Rights memorial in Montgomery, Alabama; the Sculpture Center in Long Island City; and the Manhattanville Sanctuary and

Environmental Learning Lab. Lin is currently working on her last memorial, entitled *What is Missing?*, which focuses on bringing awareness to the current crisis surrounding biodiversity and habitat loss.

Lin is a member of the American Academy of Arts and Letters, the American Academy of Arts and Sciences, and in 2005 was inducted into the National Women's Hall of Fame. She has been profiled in *Time* magazine, the *New York Times Magazine* and *The New Yorker*. The movie *Maya Lin, a Strong Clear Vision*, an Academy Award-winning documentary film in 1995, recorded her work and life in detail. In 2000, she published her first book, *Boundaries*, about her work and creative process, and she described it as a "visual and verbal sketchbook, where image can be seen as text, and text is sometimes used as image."

Lin, Tung-Yen (T. Y.) (1911–2003)

Tung-Yen Lin was a prominent Chinese American educator and pioneering engineer. He was born in Fuzhou, China, on November 14, 1911, to Chinese Supreme Court Judge Ting Chang Lin and Feng-Yi Kuo Lin. His family moved to Beijing shortly after his birth, where he was homeschooled until age 12. He entered Jiao Tong University's Tang Shan Engineering College at the age of 14 and graduated with a bachelor's degree in civil engineering in 1931. He subsequently started civil engineering graduate studies at the University of California, Berkeley, and received a master's degree in 1933.

Lin returned to China to work for the Chinese Ministry of Railways, where he was quickly promoted to chief bridge engineer in the Chongqing-Chengdu

railway section. Over the course of his career, he would be responsible for the survey, design, and construction of over 1,000 bridges in China. Lin married Margaret Kuo in 1941. They would eventually have two children and five grandchildren. Lin continued his work even as the Japanese invaded China.

In 1946, Lin accepted an assistant professor of civil engineering at the University of California, Berkeley. He remained in Berkeley for the rest of his career, eventually serving as chair of the Division of Structural Engineering and Structural Mechanics from 1960 to 1963. Students remember his unique teaching style of emphasizing design instead of analysis.

Lin's most notable civil engineering contribution was his work on prestressed concrete in the 1950s. Prestressed concrete is an economical and efficient method of embedding steel cables into concrete such that the combined material is stronger and more resistant to tension. Eugene Freyssinet, a French engineer, was responsible for the scientific discovery of the method, however, Lin was able to present the new technology in a practical way.

Lin also applied his expertise to the professional world, creating his own engineering firm T. Y. Lin Associates in Los Angeles. The firm pioneered using prestressed concrete in both high-rise and bridge construction. The firm is now known as T. Y. Lin International and has offices across the United States and the Asia Pacific.

However, Lin also realized engineering's potential in diplomacy. In the 1950s, he began designs of an "International Peace Bridge" that would cross the Bering Strait and thus bridge the Soviet Union and United States. Though never built, the design concept remained a symbol for Cold War thaw. Later in the 1970s, Lin went back to his native China to give a month-long lecture series on engineering in numerous cities. This trip marked the first technical exchange between the United States and the People's Republic of China. These accomplishments, among others, ultimately led to President Ronald Reagan awarding Lin the National Medal of Science in 1986.

When asked about his ongoing enthusiasm for his International Peace Bridge design, Lin responded, "You spend money on bombs, and in 10 years they're out of date. You have to throw them away or destroy

them. But you build bridges, they last forever." Lin passed away on November 15, 2003, a day after he turned 92.

Lin, Yutang (1895–1976)

Born in Zhangzhou, China, in 1895, Lin Yutang is the most widely read Chinese writer in America and the English-speaking world. Born in a Chinese Christian family, Lin attended St. John's University in Shanghai and went to America and Germany for graduate education. He taught English in Beijing Women's Normal University on his return to China in 1922; served as the dean of the Humanities at Xiamen University in 1926; and emerged as a preeminent writer, literary critic, and translator in Shanghai in the early 1930s. He immigrated to America in 1936, became mainly a writer in English, and was recognized as an exponent of China and Chinese civilization in the West.

Lin Yutang's fame as a writer in the English-speaking world was first established with the publication of the best-selling *My Country and My People* (1935). His portrayal of the Chinese as loyal, reserved, modest, obedient to elders, and respectful of authority, and his interpretation of Taoism as a philosophy of patience and belief in maintaining a low profile had an enormous impact on American readers. The book

underwent 11 reprintings within two years and became a record-breaking success for a Chinese writer in America.

Lin Yutang subsequently published more than 30 books and numerous articles in English and was continuously lauded by Western critics as a “cultural eye-opener” on China. Chinese and Asian American scholars view Lin’s writing in English differently, however. They argue that Lin misrepresents Chinese culture in precisely the way that Chinese and Asian Americans find offensive, and they criticize Lin’s English writing of representing no more than an effort to exploit “Oriental exoticism” to boost his fame in the West.

Interestingly, although Lin Yutang’s English writing seems to collaborate rather than challenge the stereotyping of the Chinese in the West, his work written in Chinese assumes a surprisingly opposite role. In contrast to the polite and self-mocking tone, light-hearted jokes, and apolitical attitude that characterizes his English writing, his writing in Chinese (published during the same period) was often highly political, angry, impassioned, and even rebellious. For example, in a Chinese essay that appeared shortly before *My Country and My People*, Lin expressed concern with sharp and sensitive feeling for the well-being of the Chinese people: “I am not dreaming: I only wish there would be a good university run by the Chinese so that our children could have a place to study without having to attend schools taught by foreign devils.” In another essay, “Guoshi waiyi” (“China in Crisis”), written after the publication of *My Country and My People*, Lin argued emotionally that the only way to save China was to stand up to foreign pressures and the Chinese government must stop the practice of “spineless diplomacy.” In these essays, his bitter criticism of government policies and passionate defense of the rights of the Chinese people differed dramatically from his humble tone and the doctrine of “endurance and passivity” that he preached in *My Country and My People*.

Lin Yutang’s occasional writing in Chinese, after his settlement in America, also contained criticism and thorny remarks not seen in English. In an essay for the Chinese press in 1943, Lin commented sarcastically on U.S. presidential elections as a competition for politicians to “tell lies.” The biting remarks presented a

sharp contrast to the amiable words and praise of American society in Lin’s English writing.

The progressive views in Lin Yutang’s Chinese writing were no accident. He was a friend of left-wing Chinese writers such as Lu Xun and Yu Dafu. When the League of Defense for Chinese Democracy, a left-wing organization, was founded in Shanghai in 1932, Lin was an elected member of its standing committee and participated in the organization’s activities until he moved to America.

There are various explanations for why Lin Yutang became so “whitewashed” in his English writing, and Lin himself admitted he was “a person full of contradictions.” Two factors are particularly worth mentioning. First, Lin was thrilled by the fame and fortune his role as “an interpreter of China to the West” bestowed. Until the 1960s, he was the only Asian American to be included in *The Picture Book of Famous Immigrants*, where his name was listed together with that of Eleutherie Irene Dupont and Andrew Carnegie. Second, money meant a great deal to Lin, who had grown up in an impoverished family. His daughter recalled Lin enjoyed enormous financial rewards for his publications in English. He made \$36,000 in 1938, \$42,000 in 1939, and \$46,800 in 1940—extraordinary sums in those days.

Editors and agents also influenced Lin Yutang’s writing in English. Particularly influential were Pearl S. Buck, the foremost missionary writer on China, and her husband, Richard J. Walsh, whose publishing house, the John Day Company, brought out most of Lin’s work in English. Lin himself acknowledged Buck and Walsh played an extensive role in his choice of subject matter and themes for his work published in English.

The discrepancy between writing in Chinese and English by Lin Yutang and others seems to indicate that Chinese immigrant writers sometimes assume different identities when working in English. Intending to present the world in the best possible light, they may make conscious choices to provide what they believe mainstream audiences want.

Lin Yutang spent most of his later years in Taiwan and Hong Kong, where he died in 1976. He taught at the Chinese University in Hong Kong for a time and presided over the compilation of *Chinese-English*

Dictionary of Modern Usage (1973). As an important and influential literary figure in the Chinese world, Lin was nominated for the Nobel Prize in Literature several times in the early 1970s.

Lincecum, Tim (1984–)

One of the most dominating starting pitchers in Major League Baseball (MLB), Tim Lincecum possesses Filipino ancestry on his mother's side. Born and raised in Washington, Lincecum was drafted in 2006 out of the University of Washington by the San Francisco Giants of the National League. The young right-hander was pitching in the MLB the next year. In 2008 and 2009, Lincecum won the prestigious Cy Young Award as the best pitcher in the National League. In 2010, his personal statistics were down a bit, but he sparkled when it counted for the World Champion Giants. Particularly brilliant was Lincecum's pitching performance in the deciding game of the World Series. On Saturday, July 13, 2013, pitching for the San Francisco Giants Lincecum threw his first no-hitter. His milestone win came against the San Diego Padres as he recorded a season-high 13 strikeouts and threw a career-high 148 pitches in a 9–0 victory.

Little India and South Asian Communities

As immigrants find their way in a new country, they often gravitate toward one another because of the shared experience of being pushed out of their home countries and the desire to re-create the familiarity of what they left behind. An ethnic community can take various shapes. The most obvious one is a physical district with a concentration of ethnic restaurants, grocery stores, accountants, cultural stores, travel agencies, and the like, all with signs in an ethnic language. Indian Americans have constructed relatively few such districts compared to other immigrant groups. Although "Little Indias" as they can be called are not as numerous as Chinatowns across the country, Indian Americans have found other ways to affirm community ties and still demonstrate their commitment to the United States.

Starting in the early 1900s, Indian immigrants in California, mostly men, settled in Yuba City, Stockton, and Imperial Valley, often arriving from the Pacific Northwest. Mostly engaged in farming, they opened up only a few shops. Still, families formed close ties to one another. A Sikh temple was built in 1915 in Stockton, California. It served as a community site for Indians, including non-Sikhs, in the surrounding area. For instance, noteworthy visiting Indians would come to the temple. The communities continue today, with descendants preserving their grandparents' past. (For instance, the Pioneers Park and Pioneers Museum

and Cultural Center of Imperial Valley, California, have an exhibition on Indian American early immigrants.) Smaller Indian communities also settled in New York City, New Orleans, and a few other locales on the East Coast in the early 1900s.

Rather than gradually grow over time with more immigration, these communities were threatened by racist immigration laws that cut off new arrivals. Immigration from India effectively halted following the Immigration Act of 1917, which created the Asiatic Barred Zone that included China, South Asia, and parts of the Middle East. With U.S. laws prohibiting bringing over relatives, the lack of clear job mobility, and the sojourner mentality of the immigrants even before arrival, about 3,000 Indians returned to India in the 1920s and 1930s, which accounted for approximately half the population in the United States at that time. Only in 1946 did immigration resume with the passage of the Luce-Celler Act and even then the quota was capped at only 100 persons per year. Immigrants who arrived in the 1940s and 1950s settled in various parts of the country. In most instances, wives joined husbands already settled, which helped immigrants feel more grounded in the United States but did not immediately lead to establishing geographically identifiable communities among Indians. Some noteworthy immigration took place at this time despite the limited numbers. For example, a handful of Gujaratis arrived in San Francisco at this time and found opportunities in the hotel industry. Even though they lived within a few blocks of one another, this was not an ethnic enclave. With the work hours required of immigrants, whether as business owners, physicians, laborers, or otherwise, there was little time to form strong relations with fellow coethnics. Community organizations were hard to form and maintain. As another example, a physician and his wife in Washington D.C. in the late 1950s socialized with the few other Indian physicians they met at that time. Friendships were strong, but these did not constitute a sizable community.

A lack of community infrastructure was common until the 1970s, when enough Indians immigrated after passage of the Immigration and Nationality Act of 1965. Still, despite the influx of immigrants, Indians were not quick to form large enclaves. Indians were a bit unlike other Asian immigrants at that time in that

they had reasonably strong English skills. They either had jobs or found them quickly, and these jobs took them all over the country. Physicians, for instance, found residencies in underresourced urban and rural hospitals, a trend that continues today. Engineers found positions in large and small firms dotted around the country. Small business owners would seek the best deal on a new business, with little regard to the distance from fellow coethnics. In other words, economic necessity trumped social-emotional preferences. As many such immigrants have suggested, if one is willing to leave one's homeland and travel across the world in pursuit of economic stability, it makes no sense to not move within the United States to secure financial stability.

Rather than a locale and its ethnic infrastructure drawing immigrants toward it, Indian immigrants would go to a locality for work, connect to the few Indians there, and then develop a smaller ethnic infrastructure. This infrastructure starts in the home and revolves around the family (which means that those who do not fit the heteronormative model are often not fully included and must start their own communities). Families unite around religious or other ethnic bonds (e.g., language, food), which for Indians means that multiple smaller communities form even as Indian as a whole come together at certain times and occasions (e.g., national holidays). Common activities include group worship at one's home each weekend.

Places of worship grow over time and are a good barometer of the size and resources of an ethnic community. As a community grows in numbers and resources, its places of worship correspondingly become more institutionalized. Even Christian immigrants generally seek out ethnic congregations, often because of language needs but also as a way of affirming cultural ties. The first step in forming religious communities is families worshipping together taking turns hosting the gathering in their private homes. For major holidays they will utilize a public space, such as a high school or church. As more families move into the locale, they may accrue enough money to purchase a small, nondescript house and use it as a place of worship. Such spaces exist on residential area with no street sign indicating their function. Gradually, as a community collects enough donations, it may purchase

an already existing commercial space. In this way ethnic communities bring life to buildings otherwise vacant or underutilized. For instance, the BAPS Swaminarayan community in Atlanta converted a closed roller-skating rink into a temple. Ultimately communities seek to build temples in a traditional architectural style. After many years in the roller rink, the Atlanta community raised enough money not only from members in the region but also elsewhere to build one of the largest Swaminarayan temple outside of India and possibly the largest Hindu temple in the United States, with religious materials and statues imported from India. Indian communities are changing rural and suburban landscapes as they construct elaborate spaces. And temples serve more than simply religious functions. They serve as cultural centers, sometimes explicitly noted in their names, where dance or music performances are held and classes are taught.

Along with religious places, communities build up professional, social, and other cultural organizations. They also gradually start to address their own needs in more formal ways. Community service organizations arise that assist seniors, survivors of intimate partner violence, and to meet other community needs. Eventually, ethnic communities start to sponsor their own political candidates and connect to a broader range of politicians to promote awareness of their needs and interests.

Like other groups whose members have become more economically independent of one another, Indian Americans accomplish this community often without a core urban center. Ethnic commercial districts may develop but remain relatively small. Instead, stores and organizations open in varied neighborhoods, following where immigrants settle. Communities that are not geographically concentrated face challenges in sustaining their infrastructure. The affluence of the community members and influx of recent immigrants helps sustain them, but as individuals find support for their interests in mainstream spaces closer to home (e.g., as popular grocery stores stock ethnic items) or in the virtual world, ethnic sites become harder to sustain.

Although most Indian Americans do not reside in a densely populated ethnic neighborhood, “Little Indias” of sorts pepper a few major cities. For

example, Chicago has Devon Street and New York City has Jackson Heights in Queens and “Curry Hill” in Manhattan. Near Los Angeles is Artesia, which has its own Indian district. Edison and Jersey City in New Jersey have strong commercial and residential districts. In each of these places, Indian-owned stores providing ethnic services stretch on for blocks.

Such districts have quite often started as commercial sites first with inexpensive rents rather than residential sites. As one Indian-centered store opens and attracts customers from surrounding areas, other entrepreneurs open nearby to capitalize on the market. Soon, the area becomes known as a good location for ethnic stores. At times residential settlement drives commercial development. For instance, Indians had been known to live in Jackson Heights, and stores have located there in response. As residents earned more income and moved to other parts of the city or surrounding areas, newer immigrants have entered.

The locales become hubs for the community. In addition to stores, cultural centers have started, such as the Indo American Heritage Museum on Devon Street in Chicago. India Day Parades take place in these enclaves, such as through Oak Tree Road in Edison, New Jersey. On weekends these districts attract coethnics from surrounding areas, who utilize them for commercial purposes.

Movie theaters showing Bollywood movies open in these districts (and elsewhere), which serve as community gathering spaces for families and friends. Originally just in a few select cities, such movie theaters are now in cities across the country. For major hit films entire families will attend and the weekend shows will sell out. Alongside popcorn at the concession stands are samosas. Such theaters now show a mixture of Bollywood and Hollywood films, guaranteeing an audience even when the Bollywood offerings do not fare well. Festivals, whether held in “Little Indias” or in rented-out gymnasiums or in an urban downtown, reflect the public face of Indian communities and offer a chance for people to celebrate together.

Community is created by more than physical spaces. As well documented, newspapers create a sense of community and commitment among readers. Indian Americans are served by a number of ethnic

newspapers and television stations. The newspapers, some over 40 years old, often started as monthlies and focused on news from India, along with a bit of coverage of their particular location. As the media outlets grew along with the Indian American population, they began to publish more frequently and include stories from around the nation. In turn readers accumulate common points of reference and affirm a greater solidarity. These papers and television programs cover news that the mainstream press does not, including world affairs. For instance, the ethnic media covered the assassination of Indira Gandhi in 1985 in more depth than found on standard news outlets. Increasingly, social media and the virtual world serve as community sites, with countless web sites, Facebook pages, and discussion groups.

Although community is ultimately a subjective notion, the infrastructure to create that sentiment is important for immigrants to feel grounded in their new country. As ethnic groups grow over time with new immigrants and new generations, they can create a stronger community. Ironically, then, the longer ethnic groups are in the United States, the more ethnic presence they can build. This is not to suggest that coethnics always get along or encounter no barriers to forming strong bonds. For instance, business competition between business owners can limit bonds. Still, to varying degrees, ethnic communities will arise as people congregate. Ethnic communities dissipate as immigration dries up and later generations lack cultural or instrumental reasons to come together—contemporary Indian Americans show no signs of that. Immigrants continue to arrive at a high rate and the U.S.-raised generations continue to feel drawn toward their ethnicity.

Little Saigon and Vietnamese American Communities

Vietnamese American communities and their commercial and cultural enclaves have developed all over the United States since the early 1980s. Vietnamese Americans are now the fourth-largest Asian American group in the country (after immigrants from China, India, and the Philippines in order of size). According to the 2007 Survey of Business Owners report, the percentage of Vietnamese Americans who own businesses has

increased by 56 percent since 2002, compared to the 40 percent increase of other Asian groups.

The oldest and largest of these enclaves is Little Saigon in suburban Orange County, California. Situated in a historically white community lined with orange groves in Southern California, Little Saigon has helped bolster the region's economy with tourism and business. According to 2010 Census figures, the Vietnamese American population in Southern California is 271,000, by far the largest concentration outside of Vietnam. Little Saigon sprawls out from the city of Westminster to adjacent cities of Fountain Valley, Garden Grove, and Santa Ana.

Orange County's Little Saigon is situated about 60 miles north of Camp Pendleton, the Marine Corps base, the first of four emergency processing centers set up to receive the "first wave" of evacuees from South Vietnam in April 1975. About 50,000 Vietnamese were processed through the makeshift "tent cities" of Camp Pendleton in 1975. From the initial entry at Camp Pendleton, many Vietnamese resettled in the Orange County to work in the nearby defense and high-tech industries and in small entrepreneurial enterprises. Timothy Linh Bui's 2001 film, *Green Dragon*, focuses on the experiences of Vietnamese Americans and American marines in Camp Pendleton during this transitional period. Southern California's warm climate and then-affordable housing and real estate provided additional incentives for secondary migrations into the region. Thus, charitable organizations, namely Saint Anselm's, led the effort in meeting the needs of the Southeast Asian communities newly arrived in the region.

Today, Little Saigon offers what sociologists have termed "institutional completeness" for Vietnamese Americans, meaning the enclave can meet all the economic, social, linguistic, and cultural needs of the community within its geographical boundaries.

Historical Development

The development of a Vietnamese American business district in Orange County has been credited to ethnic Chinese immigrants from Vietnam, Danh Quach and Frank Jao, who built the Asian Garden Mall in the heart of Little Saigon. Quach and Jao's ethnic Chinese

background has been cause for controversy within the Vietnamese American community because of centuries-old antagonism between the Vietnamese and the Chinese. They were the pioneers who first established businesses in the area in 1978. Jao's early ventures in real estate development have contributed to putting this enclave on the map as a formally recognized Little Saigon replete with its own signposts from the freeways and a monument dedicated to South Vietnamese and American allies at the Sid Goldstein Freedom Park nearby.

On the surface, Little Saigon appears to be a thriving ethnic enclave unified by language and culture with the myriad ethnic Vietnamese- and Chinese-owned businesses patronized by a large clientele from surrounding cities. From an outsider's vantage point, this recent immigrant group seems to be cohesive and economically successful, living out the American Dream and taking their place among the "model minority." Looking closely, it becomes apparent that the model minority stereotype does not account for the enormous diversity of experience among the Vietnamese American community represented by Little Saigon.

Historically, factors that have united this community despite their heterogeneity in class and education include the common bond of anti-Communist sentiments. An important aspect of Little Saigon, and a reason for its conservatism and pervasive anti-Communist politics, is that it is home to many officers of the former South Vietnamese regime as well as those more recent immigrants sponsored via the Orderly Departure Program (1979–1994), former political prisoners who served a minimum of three years in Communist reeducation camps.

Because the memories of war atrocities committed by the Viet Cong (on both the battlefield and in reeducation camps) remain alive in the consciousness of this community, they inevitably influence the community's politics and its attitude toward mainstream America and Vietnam. A majority of the Vietnamese American community has favored the Republican Party, evidenced by the tradition of support for GOP candidates. A notable event in the 2000 presidential campaign indicating this loyalty to the GOP was when presidential candidate John McCain used the term

“gook” unapologetically in referencing his Viet Cong captors and was still endorsed by Vietnamese American community leaders. Despite the racism that is apparent by the use of such a slur, a large faction of the community overlooked McCain’s speech and gave him a “hero’s welcome” to Orange County’s Little Saigon on March 1, 2000.

Little Saigon has been featured in numerous films, documentaries, books, and even a cookbook. One noteworthy representation of Little Saigon and Vietnamese American Communities is the Smithsonian’s traveling exhibition (2007–2010) “Exit Saigon, Enter Little Saigon,” which featured stories of Vietnamese Americans since 1975 through photo and text panels as well as accompanying educational materials.

Cultural and Social Hub

Every lunar New Year, or *Tet*, Vietnamese Americans come to Orange County’s Little Saigon from all over the country, and even as far as Australia and France, to celebrate the most important holiday for the community. The Tet Festival has been organized by Vietnamese Americans since the very beginning of the community’s formation, albeit very modestly among church groups in the late 1970s. In 1982, the Union of Vietnamese Student Associations (UVSA) consolidated the Tet Festival into a large event that now attracts over 100,000 people every year.

Besides Tet, Little Saigon serves the important function of being the cultural and social hub for Vietnamese Americans and, arguably, all overseas Vietnamese. One way this community stays such a focal point is through its extensive media networks, which includes the largest Vietnamese language daily newspaper in the country, *Nguoi Viet Daily News*. In 1978, Yen Ngoc Do started *Nguoi Viet* from his Garden Grove home. Today, the ethnic press is thriving in Orange County and elsewhere in the United States.

Radio and television are also important sites through which Vietnamese across the United States receive their news and information to maintain an “imagined community” with those spread out all over the country. Popular television channels include Saigon Broadcasting Television Network (SBTN), SaigonTV, and VietFace TV. Radio stations include

Vietnam California Radio (VNCR), Little Saigon Radio, Radio Free Vietnam, and many more. In concert with the news and information industry, Vietnamese Americans are connected via popular entertainment through the music variety show Thuy Nga *Paris by Night* and its competitor Asia Entertainment. These music variety shows, featuring singers of popular Vietnamese music and dancing, are performed live and taped to circulate widely in the United States and abroad. Although they broadcast internationally, they are headquartered in Orange County’s Little Saigon.

Little Saigon meets the needs of Vietnamese Americans through not only providing outlets of entertainment and circuits of news and information, but by the consolidation of food, goods, and services. Restaurants are the most popular attractions for those living in Little Saigon and those who make excursions to the enclave. Grocery stores carrying items not found in mainstream groceries, such as fish sauce, also draw those from surrounding areas to do their shopping in Little Saigon. A variety of service establishments such as beauty salons and foot massage salons have cropped up all over the Orange County area, providing these services for a fraction of mainstream prices.

More recently, language schools and tutoring centers have emerged to meet the demands of a community transitioning into a third generation. Many community organizations geared toward social services that were active in the initial stages of community development have now given way to social and cultural organizations aimed at preserving Vietnamese heritage and disseminating Vietnamese culture. For example, the Vietnamese American Arts and Letters Association (VAALA) was founded in 1991 by journalists, artists, and supporters to promote art by and for the community. They organize the biennial Vietnamese International Film Festival, bringing together films and documentary features and shorts about Vietnam and the diaspora since 2003.

Vietnamese American Communities

Vietnamese American communities have formed all over the United States as a cushion against the assimilative forces of mainstream society and as a means for

Vietnamese Americans to be among others sharing similar historical and cultural background and language. The second-largest concentration of Vietnamese Americans outside of Southern California can be found in Northern California, specifically San Jose and its surrounding cities, anchored by Grand Century Mall—the successor to Lion Plaza. Like others, Vietnamese Americans were drawn to the area by the ascension of Silicon Valley from the 1970s, providing ample job opportunities in the high-tech sector and assembly lines.

In 2007, Vietnamese Americans in San Jose lobbied to name the area comprising of over 200 Vietnamese businesses “Little Saigon,” but efforts for formal recognition failed because of internal political divisions within the community. Madison Nguyen, a Vietnamese American councilwoman, was the first to spearhead the effort at naming the business district. However, during the naming controversy, she was dubbed a “Communist” by her opponents and effectively stalled the process. At the writing of this entry, there is an effort by 1.5- and second-generation Vietnamese Americans to name an area of San Diego “Little Saigon” as well. This area in the eastern San Diego neighborhood of City Heights is diverse along lines of race and ethnicity. Most living in the area are newer immigrants.

The third largest concentration of Vietnamese Americans can be found in Houston, Texas, represented by the four-mile stretch of Bellaire Boulevard. In the 2000s, Houston’s Vietnamese American population increase has been attributed to outmigration from California because of high home prices and cost of living. Hurricane Katrina in the Gulf Coast of 2005 also displaced many Vietnamese Americans from Louisiana to seek new livelihoods in Texas.

In New Orleans, Vietnamese Americans are concentrated in an area called Versailles, where they are primarily united through their membership in the Catholic community. Vietnamese were drawn to the area because of active sponsorship by Catholic parishes for refugee resettlement, availability of jobs in the service sector, and the fishing and shrimping industry. When Hurricane Katrina toppled communities in New Orleans East, Vietnamese Americans became

much more politicized and actively reconstructed their communities through church- and youth-led efforts. In the wake of Katrina, Vietnamese American community organizations have emerged stronger, such as Vietnamese American Young Leaders Association of New Orleans (VAYLA-NO). The community has been cast by the media as triply-displaced, yet fiercely resilient. In a documentary titled *A Village Called Versailles*, S. Leo Chiang shows the strategies Vietnamese Americans in New Orleans deployed in fighting for their homes and their community.

On the East Coast, Vietnamese Americans have come together in areas such as Boston’s Fields Corner and Falls Church, Virginia’s Eden Center. Boston’s urban density framed the construction of a Vietnamese American neighborhood that serves as a “panethnic” and immigrant-focused social services center. Sociologist Karin Aguilar-San Juan’s 2009 book, *Little Saigons: Staying Vietnamese in America*, explores the parallels and differences between Orange County’s Little Saigon and Boston’s Fields Corner as a comparative case study in place-making and community building. Aguilar-San Juan argues that Vietnamese American place-making must be contextualized as part of a broader framework of ethnic enclaves and processes through which groups seek critical mass and political representation.

In a smaller suburban community in Springfield, Massachusetts, Vietnamese Americans were honored during Asian Pacific American Heritage Month (April 2010) when the city council raised the South Vietnam, or “Freedom and Heritage” flag at City Hall. Finally, when Vietnamese Americans do not lay geographical claim to a particular neighborhood or section of a city, they often integrate into other established, or pan-Asian, business districts. This is certainly the case for Honolulu’s Chinatown, which houses many Vietnamese-owned businesses and caters toward this population as well. Los Angeles Chinatown has seen a transition toward a predominant Chinese-Vietnamese population since the 1980s and the physical evidence can be found in multilingual business signs and languages spoken among residents and patrons there.

Liu, Henry (1932–1984)

Henry Liu, more well-known by his pen name Chiang Nan, was a writer and journalist. Liu was best known for writing *A Biography of Chiang Ching-kuo*, which was about the former president of the Republic of China (ROC) in Taiwan and the son of Chiang Kai-shek. Lin was assassinated on October 15, 1984, in Daly City, California by gang members. Because the murder was highly suspected as a political assassination solicited by the ROC intelligence services, the U.S. government was under great pressure to bring Liu's mastermind to trial. The U.S.-ROC relation dropped to its bottom during the period. *The New York Times* described the incident as sullyng Taiwan's international image. The CBS show *60 Minutes* ran a special episode on the issue as well. The Jiang Nan Incident was subject of the book *Fires of the Dragon* by David E. Kaplan. In 2009, it was adapted in the film *Formosa Betrayed*.

Liu was born on December 7, 1932, in Jingjiang, Jiangsu province of China. His father died when Liu was nine. He was drafted into the Nationalist (Kuomintang) army when he was 16 and evacuated to Taiwan in 1949. During the 1950s, he attended the Political Warfare Cadres Academy, also known as Fu Hsing Kang College (Renaissance Hill), which was run by Chiang Ching-kuo. He was a reporter for the *Taiwan Daily News* from 1963 to 1967. In 1967, Liu moved to Washington, D.C. as a special correspondent for the newspaper with his newly married wife, Helen Liu. In addition to writing for the newspaper, Liu also worked on his PhD in political science at American University. Liu stopped writing for the *Taiwan Daily News* in 1973. He became a naturalized U.S. citizen the same year.

In the early 1970s, Liu began collecting materials and writing articles about the Chiang family. In 1983, Liu's book, *A Biography of Chiang Chingkuo*, was serialized in the *California Tribune*. On October 15, 1984, when preparing to write a biography of Wu Kuocheng, former secretary of Chiang Kai-shek, Liu was assassinated in the garage of his home in Daly City, California by Chen Chili, Wu Tun, and Tung Kueisan, members of the Bamboo Union triad, who had been solicited and trained by the ROC military intelligence for the killing. After discovering an incriminating recording by Chen Chili, the FBI determined that Wang Hsiling, Hu Yimin, and Chen Humen, the leadership of the ROC's military intelligence, had ordered the assassination.

In September 1985, Tung Kueisan was arrested in Brazil and extradited to the United States. He testified that Chiang Hsiaowu, son of President Chiang Chingkuo, was the mastermind of the Jiang Nan Incident. The U.S. House of Representatives soon passed a resolution demanding the extradition of the suspects. The ROC government refused to comply with this demand and ended the trials of Chen Chili, Wu Tun, Wang Hsiling, Hu Yimin and Chen Humen.

Some people believed that the Jiang Nan Incident was the crucial moment for Taiwan's democratic movement. Under great public pressure in Taiwan and from overseas, President Chiang Chingkuo stated for the first time during a *Time* magazine interview on August 16, 1985 that the future president of the ROC

would not be a member of the Chiang family but be elected in accordance with the constitution. In 1990, the ROC government reached an out-of-court settlement with Liu's wife, agreeing to pay US\$1.5 million in "Humanitarian Relief."

Lo, Lormong (1959–2011)

Lormong Lo was a Hmong American city councilman from Nebraska. He was first appointed to the Omaha City Council in 1994 and was reelected to serve until 2001. During his time on the city council, Lo also became the first Hmong American city council president. He was a member of the Republican Party.

Lormong Lo was born in Laos. Like many other Hmongs that lived in Laos, Lo and his family worked for the CIA during the Secret War against Communist forces in the Vietnam War. After 1975, Lo and an older brother fled their home country (and the Communist regime) for Thailand, but left behind their parents and other siblings. During his time in a refugee camp in Thailand, Lo became aware of the plight of other refugees and tried to help them by obtaining food and supplies from churches, temples, and international organizations. Lo moved to Omaha, Nebraska in 1976 through the assistance of faith-based organizations.

Although Lo knew little English when he first arrived in the United States, he worked hard and eventually graduated from Ralston High School in 1979. Even though Lo had to work multiple jobs as a college

student, he received his bachelor's degree in political science from Creighton University in 1983. He became a naturalized citizen in 1988.

Before being appointed to the Omaha City Council in 1994, Lo gained community and public service experience as an intern in the mayor's business development office in the summer of 1990. Furthermore, he worked as the executive director of the Woodbury County Community Action Agency in Sioux City, Iowa. Lo also founded the Lao-Hmong Association of Nebraska Refugee Center, an organization that serves to assist Hmong refugees. Additionally, when Lo worked for the Omaha City Department of Planning, he held the position of community development coordinator and worked closely with community groups to rehabilitate the state of inner-city housing.

In early 1994, Lo left his job at the Omaha Planning Department when he was chosen by the Omaha City Council to fill the seat vacated by a council member who had resigned. After three years on the council, Lo was elected to a second term in 1997 and also became the president of the Omaha City Council. Lo also had the opportunity to be the first Hmong American acting mayor when he took over briefly for Mayor Hal Daub.

Although Lo always strove to help the local community, his time on the city council was not without controversy. As acting mayor, Lo used his authority to settle a prolonged contract dispute between the city and the local firefighters' union. It was a decision that many of Lo's Republican constituents were not happy about. And during Lo's second term in the city council, he proposed a ban on the use of fetal tissue from elective abortion for medical research. Some speculated that this "bold" policy proposal was a way for Lo to appeal to his antiabortion, conservative voters.

Lo's public service experience extended beyond his involvement in the Omaha City Council. He was also the vice chairman of the National League of Cities economic development committee. Lo was unsuccessful in his second reelection bid and left the city council when his term ended in 2001.

Locke, Gary (1950–)

Gary Locke, an Asian American politician and Democrat, is the 36th secretary of commerce, serving under the Obama Administration. Locke was also the 21st governor of the state of Washington, serving for two terms between 1997 and 2005. He was the first Chinese American to serve as governor.

Gary Locke was born Gary Faye Locke on January 21, 1950, in Seattle, Washington, to third-generation immigrants on his paternal side. Coming from humble beginnings, Locke spent his childhood in a public housing project for veterans of World War II. After graduating with honors from high school, Locke attended Yale University with a combination of financial aid, scholarships, and part-time jobs. Locke graduated in 1972 with a BA in political science. In 1975, Locke also earned a law degree from Boston University.

After law school, Locke returned to the state of Washington and put his legal expertise to good use serving as a prosecutor in King County. Locke's political career took off when he was elected to the Washington State House of Representatives in 1982. During his tenure as state representative (1983–1994), Locke spent five years serving as the chairman of the State House Appropriations Committee.

After a brief three-year tenure as the 5th King County Executive, Locke would go on to win the Washington gubernatorial race in 1996. Thus, Locke would become the first Chinese American to serve as a governor in the United States. Locke served two terms as governor of the State of Washington (from 1997 to 2005). Somewhat as a surprise, Locke opted not to run for reelection after his second term and was succeeded by fellow Democrat Christine Gregoire.

Some have speculated that threats to Locke and his family were contributing factors in his decision not to run again.

In 2009, President Barack Obama invited Locke to join his administration as the secretary of commerce, which he accepted. Gary Locke became the 36th secretary of commerce and was sworn in on March 26, 2009. Locke is the first Chinese American to hold this position in the presidential cabinet. He also became the third Asian American to be appointed to the Obama administration (the other two being Energy Secretary Steven Chu and Veteran Affairs Secretary Eric Shinseki).

Locke was deemed by many as a good choice for the job of commerce secretary because of his confirmed belief that the United States needs a positive relation with China. Also, as the two-term governor of the most trade-dependent state in the country (one-third of the jobs in Washington depend on foreign trade), Locke has worked hard to ensure an amiable relationship between the state and many of its trade partners. In particular, Locke introduced Washington-based companies to China and, as a result, greatly increased Washington State exports to China. Also, Locke made multiple trade trips to China and has a good relationship with members in the Chinese leadership, including Chinese President Hu Jintao. During his two terms as governor, Locke and his administration helped to create over 280,000 jobs in the state of Washington.

Locke, a Democrat, has also been a long-time ally of the Clintons. Aside from campaigning for the Clinton-Gore ticket during their reelection, Locke supported Hillary Clinton's bid for the 2008 Democratic presidential nomination and signed on as the Clinton Washington State cochair. At this time, Locke was in the interim between leaving the gubernatorial office and his appointment as secretary of commerce.

Locke has held many esteemed political positions and has certainly broken the glass ceiling in terms of Asian Americans in American politics. As a third-generation Chinese American, Locke is not only proud of his heritage but has also been much-admired for his involvement and support for civil rights. Locke was recognized by the Leadership Conference of Civil Rights (LCCR) as well as The American Immigration

Law Foundation (AILF) as a person of exemplary commitment to the immigrant community.

Locke was appointed U.S. Ambassador to China in 2011.

Los Angeles Riots (1992)

The Los Angeles riots of 1992, the worst civil disturbance in America, exposed the deepening racial and class divisions in the United States. The divisions between the haves and have-nots, minority and majority, immigrants and natives, and even among the heterogeneous "minority" populations exacerbated distrust, fear, and hopelessness. On the one hand, because racial and ethnic groups perceive that they

are vying against each other to grab a piece of a shrinking pie, racial and ethnic conflicts in Los Angeles have proliferated in the aftermath of the riots. On the other hand, the riots increased racial and ethnic awareness and opened up dialogue between people who, prior to the riots, had little or no interaction with one another. Additionally, Asian American, African American, white, and Latino riot victims shared the same frustration and anger with the government for not providing adequate compensation for their losses.

For Korean Americans, the Los Angeles riots of 1992 fundamentally altered their discourse in America. The riots had such a profound economic, psychological, and ideological impact that it is often referred to as a "turning point," "wake-up call," and "defining moment" for the 100-year history of Korean immigration to the United States. When the smoke cleared, Korean Americans were among those suffering the heaviest losses: 2,280 Korean American-owned stores had been looted, burned, or damaged, amounting to about \$400 million in losses.

During the 1980s, conflict between Korean immigrant merchants and African American customers intensified throughout major cities in the United States including Los Angeles and New York. Several factors contributed to the exacerbation of the conflict between the two groups: economic, sociocultural, and a clash of ideologies. The "middleman minority" theory suggests that Korean immigrant merchants occupy the middle space between the dominant white society and oppressed African Americans. In other words, the middleman minority theory predicted that Korean merchants could not avoid friction with the African American community because of the built-in conflictual relationship with their African American customers. Korean merchants also faced hostility from African American merchants who charged that they were driving them out of business by undercutting prices. It is easy to see how the problem was exacerbated because the sellers were "immigrants" and the buyers poor.

Indeed, the root cause of the interethnic conflict appears to be economic survival. African American complaints against Korean merchants often focus on the following economic issues: (1) They (Korean merchants) do not hire African American workers. (2) They overcharge African American customers for

Korean shopping mall burns during the Los Angeles Riots, April 30, 1992. (AP Photo/Nick Ut)

inferior products. (3) They do not contribute their profits back to the African American community. In other words, African Americans perceived Korean merchants as a threat to their own economic survival. Some African Americans perceived Korean merchants as part of a long line of “outsiders” who exploited the African American community.

Cultural misunderstanding between the two groups played an important role in fueling and sometimes escalating the confrontations. African American customers complained that Korean merchants treated them with disrespect and that the merchants couldn’t communicate with them.

However, the reasons listed above were not the root cause of the Los Angeles riots of 1992, despite how the mainstream media portrayed it during and after the riots. Unaware of the history of oppression and exploitation of minority groups by white America, Korean immigrants believed that America is a “land of opportunities.” Confrontations were derived from the different historical, economic, and ideological experiences of these two groups.

Los Angeles Riots

The Los Angeles riots of 1992 involved not only whites and blacks but also Koreans, Latinos, and other groups. It is now widely known as America’s first multiethnic riot. Others have characterized it as “bread riots” suggesting a lower-class uprising. The looting and burning may have been an articulation of genuine grievances and protests against social and economic conditions that oppressed and discriminated against poor minorities. Several factors have contributed to the frustration and the worsening of conditions for residents of South Central Los Angeles: deindustrialization, the rise of neo-conservatism, dissatisfaction with law enforcement and the justice system, and the arrival of new Latino immigrants and Asian merchants.

Deindustrialization and relocation of American firms had a negative impact on the African American community. Many American corporations have shut down their manufacturing plants in the United States, relocating abroad (Asia and Mexico), where cheaper labor allows for lower production costs. This caused

African American workers to suffer displacement and unemployment. Deindustrialization, or the structural realignment of the American economy during the 1970s and 1980s, was the U.S. corporate response to the economic crisis created by increasing global competition. “Runaway shops” and overseas investment was an aggressive tactic by capitalists to regain competitiveness and increase profits. Many companies simply decided to pick up and move to other areas where wages were lower, unions weaker, and the business climate better.

Over the past few decades, the “politics of race” have successfully pointed the finger at the victims of racism and then repeatedly scapegoated immigrants or minorities for societal problems. It is important to note that anti-Asian sentiment and violence has increased in an atmosphere of neoconservative public policies, which scapegoat and blame victims. Furthermore, some argue that the neoconservative policies of the Republican administrations pitted minority groups against each other in the form of Korean–African American and Latino–African American tensions and increased the rise of antiminority violence during the 1980s.

The demands for justice were heard loud and clear during the “riots.” The problem of police brutality has been a major issue for African Americans living in the inner city. The Los Angeles Police Department (LAPD) has had a reputation of brutalizing African American suspects. African American communities have long complained that it was common for African American suspects to be harassed and insulted by LAPD officers. Young African American men are often stopped just because they fit a “description” or are in the “wrong” neighborhood. The distrust and enmity between police and African American and Latino youths contributed to the explosion of the city in 1992. Therefore, the Christopher Commission, the Kolts Commission, the Webster Commission, and the Tucker Committee recommended systematic changes in the LAPD to establish a positive relationship with Los Angeles’s diverse communities.

Great Awakening: LA Riots Lessons

Korean Americans were virtually ignored in the United States prior to the 1992 Los Angeles riots. After the

riots Korean Americans gained visibility and recognition as a minority group—distinct from Chinese and Japanese Americans—because they were featured so prominently in media coverage. As Los Angeles burned, the Korean American was born—or reborn—on April 29, 1992.

In the aftermath of the Los Angeles riots, a study found that more than 50 percent of Korean businessmen were facing a “very difficult” financial situation. Psychological damage suffered by victims of the riots still lingers and is very much part of their daily lives. A survey conducted by the Korean American Inter-Agency Council (KAIAC) found that 15 percent of college-age youth had dropped out of school because of the riots. Many Korean Americans lost faith in the American Dream and began to wonder about their place and purpose of life in America. The riots also profoundly impacted Korean American family relations and stability. In retrospect, however, Korean Americans have gained much from the painful, tragic and traumatic experience of the riots; in particular, they have learned many valuable lessons regarding what it means to be a minority group in America.

In trying to rebuild after the riots, the storeowners discovered just how isolated and excluded from the political mainstream Korean Americans were. No one from City Hall or Sacramento paid any attention to the needs of Korean American victims. Many Korean Americans felt that they had been scapegoated as the cause of America’s racial problems by the media and politicians. In the aftermath of the riots, Korean Americans emerged as one of the most vulnerable, exploitable, and underrepresented minority groups in America. Political empowerment became a specific, concrete, and immediate goal for Korean Americans, and they began to take appropriate measures.

For second-generation Korean Americans, the riots gave rise to a renewed sense of pride and ethnic awareness. The riots profoundly altered perspectives of many second-generation Korean Americans who began to appreciate and closely identify with the suffering and pain of first-generation Korean immigrants. For the first time, the second generation could understand how difficult it was for their parents to adjust to life in America. They saw what happened to their parents’ stores and realized no one was there to help

or protect them. Reclaiming “Koreanness” for the second generation brought a new sense of Korean American ethnic identity and activism. A second-generation Korean American student wrote, “I used to just consider myself an American, usually neglecting to express my ethnic background. I was embarrassed and ashamed, because many Koreans had established a negative image among the media and the African Americans.” Second-generation Korean Americans realized that they had to rise to the occasion and provide the bridge between the voiceless and underrepresented Korean immigrants and the mainstream political arena.

On May 1, 1992, a few hundred young Korean Americans organized a “peace rally” in the heart of Koreatown. Calling for peace and harmony in the city and an end to violence and destruction, this rally would be one of the largest Asian American gatherings in the 150-year history of Asian Americans in the United States. On May 2, 1992, approximately 30,000—mostly Korean Americans—attended the peace rally to protest the lack of police protection during the riots and to call for racial harmony in the city. This rally marked a truly historic moment of unity among young, old, men, women, immigrant, 1.5-generation, and second-generation Korean Americans.

Multiethnic Coalition Building

The riots taught Korean Americans that they must adjust their thinking and behavior to live in a multiethnic society. The Korean American community must learn to work with other communities and participate in the making of a multiethnic Los Angeles. First-generation Korean Americans realized that because they were reared in a homogeneous society they were ill-prepared for life in a multiethnic metropolis. During the riots, Korean-language media, especially radio stations, functioned as the “life-line” for the Korean immigrant community providing critical information to desperate listeners. After the riots, Korean Americans showed great interest in learning about Latino and African American history and culture. Korean-language newspapers, television, and radio stations continued to inform, educate, and enlighten the community about African Americans and Latino experiences.

The Korean American community began to play an active role in promoting mutual understanding between different groups in Los Angeles: Such efforts include the Black-Korean Christian Alliance, Scholarships to African American students, trips to South Korea sponsored by the Korean government, and other activities. However, these efforts lacked institutional memory that can prolong relationships into concrete actions or projects.

Conclusion

The Los Angeles riots of 1992 revealed the complexity of interracial relations. However, Los Angeles is still without a specific plan to address the fundamental urban needs underscored by the economic and demographic restructuring during the past two decades. The lack of visions, plans, resources, and leadership pose major challenges for the city as it tries to rebuild its economic base and human relations between its many diverse communities. There have been many discussions and meetings to develop strategies and plans of action for the future of the Korean American community. Although the riots raised the social and political consciousness of Korean immigrants, implementing changes and actions to empower the community in a multiethnic and multiracial environment has not been easy.

The Los Angeles riots of 1992 not only increased ethnic solidarity among Korean Americans, but also raised multiethnic consciousness. Korean Americans learned many valuable lessons from the riots. And yet, the lessons Korean Americans learned from the riots have not produced concrete plans of action. The Korean American community must formalize the urgency of establishing local and national networks and institutions to economically and politically empower themselves.

Louganis, Greg (1960–)

Gregory Efthimios Louganis is widely recognized as the greatest diver in the history of the sport. He won five Olympic medals during his career, including four gold medals at the 1984 and 1988 Olympic Games on both the 3-meter springboard and 10-meter platform, and he holds 47 National Championship titles. Louganis is the only male and the second diver (Patricia McCormick did it in 1952 and 1956) in Olympic history to gain double gold medals in two consecutive Olympics. He is also an accomplished LGBT rights activist, author, agility trainer, actor, dancer, model, public speaker, diving mentor, and philanthropist.

Louganis was born on January 29, 1960, of Samoan/Swedish descent in El Cajon, California. His parents, both 15 years old at the time, gave him up for adoption when he was eight months old, and he was raised in California by his adoptive parents, Peter and Frances Louganis, a Greek American couple. As a child, Louganis was bullied by schoolmates for his ethnicity, his dyslexia and his choices of “sissy-like” extracurricular activities—acrobatics, dance, and gymnastics. This experience deeply impacted his early life until, according to Louganis, he stopped playing the role of victim and began living a life of freedom. He wrote in an article in 2012 that “I mostly attribute my strength in that moment to my tormentors.” He began diving lessons at age eight after the family bought a swimming pool. Only two years after his first lesson, the 11-year-old Louganis was awarded a perfect 10 at the 1971 Junior Olympics national competition. He attended Santana High School in Santee, California, and Valhalla High School in El Cajon, California. He graduated from the University of California, Irvine in 1983, having majored in theater and minored in dance.

At the age of 16 Louganis took part in the 1976 Summer Olympics in Montreal and won an Olympic

silver medal for his performance in the 10-meter platform. At the 1984 Los Angeles Olympics, Louganis won gold medals in both the 3-meter springboard and 10-meter platform. In the 1988 Seoul Olympics, Louganis injured his head on the springboard during the preliminary rounds when performing a reverse 2½ pike, but he hit all 11 dives and won the gold medal. Competing against Xiong Ni, a Chinese diver half his age in the platform, he came from behind and won gold after a difficult last dive. He was chosen as ABC’s *Wide World of Sports*’ “Athlete of the Year” in 1988.

Louganis is more than just a diver; he is a prominent LGBT rights activist. He had been struggling with his sexuality since he was a teenager. He once attributed his interest in sports to this struggle, “When you’re a kid growing up, and you think you’re gay, you know that you’re different; you’re often teased and it can really destroy your self-esteem. But sports can be great for building self-esteem.” By the time he hit his head on the springboard at the 1988 Olympics, Louganis was already diagnosed HIV positive, but he did not disclose this to the public until seven years later. He announced to the world that he was gay in 1994, when taking part in the 1994 Gay Games as a diving announcer as well as putting on a diving exhibition for capacity crowds. In 1995, Louganis cowrote his autobiography, *Breaking the Surface*, that depicted his problems with childhood bullies, his homosexuality, and his gold medal performances in the Olympics Games. This book rose to the top of *The New York Times* Bestseller list.

Since his retirement from competitive diving in 1988, Louganis still maintains a rigorous exercise regimen and pursues his other loves—training dogs and acting. He is a motivational speaker and an agility trainer for his show dogs in Malibu, California. Louganis’s second book, *For the Life of Your Dog: A Complete Guide to Having a Dog From Adoption and Birth Through Sickness and Health*, was published in 1999. Louganis has trained three dogs for the American Kennel Club (AKC) Dog Agility Nationals. One of his dogs, a Harlequin Great Dane, is in the movie *Beethoven II*. He also rediscovered an old interest: as a stage actor. In 1994, he appeared in *Gay Games IV* as well as in *D2: The Mighty Ducks*, in which he played himself. In 1995, he appeared in an

Off-Broadway one-man show, *The Only Thing Worse You Could Have Told Me*; he also appeared as Darius in *Jeffrey*. Since he retired, he has appeared in eight films, including narrating a dramatization of his first book, *Breaking the Surface*.

Louganis travels extensively in his various roles: mentor to the U.S. Olympic diving team, vice president of the U.S. Olympian Association, judge for the Red Bull Cliff Diving Tour, speaker to youth groups about drug and alcohol rehabilitation, actor, model, author, and dancer. Most important, he has raised awareness and support for philanthropic organizations dealing with animals, LGBT rights, dyslexia, and HIV/AIDS.

Lowe, Pardee (1905–c. 1992)

George Cooper Pardee Lowe is best known for his autobiography, *Father and Glorious Descendant* (1943), the first published, book-length literary work by an American-born Asian. Named after George C. Pardee, the-then Republican Governor of California, Lowe was born at a time when second-generation Chinese were still a novelty. His father, Fat Yuen Lowe, was a dry-goods merchant and the head of a large clan association in the Bay area's Chinese community. Because the clan owned more than a hundred stores scattered in cities from San Diego to Seattle, the Lowe family's influence spread throughout the Pacific Coast.

Unlike most of his contemporaries, Lowe grew up in a predominantly white neighborhood in the East Belleville section of Oakland and attended a suburban public school rather than a segregated classroom in Chinatown. He received a BA degree from Stanford University and an MBA degree from the Graduate School of Business Administration of Harvard University. During World War II, Lowe enlisted in the U.S. Army, rose to the rank of lieutenant colonel, and was decorated with a Bronze Star for his service in the Pacific theater.

Portions of *Father and Glorious Descendant* first appeared in *The Atlantic Monthly* and *The Yale Review* in 1937. Focusing on the experience of those who grew up during the early twentieth century, Lowe's personal narrative was well received when it was published as a book in 1943. Critics found the work rewarding and celebrated it as a solid and significant study of the Chinese American community. It was even hailed as "a Chinese-American *Life with Father*."

The positive response in part reflected the dramatically changed attitude of the American public toward China and the Chinese. As a result of the United States involvement in World War II, China had become an important ally and Chinese Americans were deemed a "loyal minority" and enjoyed unprecedented popularity. Such a change in the social trend regarding the attitude toward the Chinese is indicated clearly in a critic's comment on Lowe's book: "[The] author's love for America and his respect for his Oriental roots . . . show an excellent blending of the two cultures. The book will contribute greatly toward better understanding of one of our loyal minority groups."

Presenting a penetrating account of his life as a second-generation Chinese, Lowe's autobiography represents an important aspect of the common experience of American-born Asians in a period when their fate began to attract the attention of the American public. It is a testimony that reveals Lowe's ardent desire to seek admission into mainstream society. The thoroughness of Lowe's assimilation is perhaps best evidenced by his marriage to a Caucasian girl from a New England family during his attendance at Harvard. To avoid interference from his father and relatives, Lowe held the wedding in a Protestant evangelical church in Brandenburg, Germany, in 1931; he did not

inform his parents or any Chinese friends of the event until two years later.

The troubled relationship between Lowe and his father constitutes another major theme running through the autobiography. The title of Lowe's autobiography means "Father and Son," but it is far from being a smooth record of a father-son relationship. Although in retrospect Lowe acknowledges with gratitude that his father's strength, talent, and ability have given him substance and inspired his continuous pursuit of success in American society, he frankly admits that his father's "stubborn Chinese mind" is a source of constant conflict between the patriarch and his son.

The breaking point of the relationship comes when Lowe's father insists that he attend a local Chinese-language school. The father is fully aware that no matter how Americanized the son might be, there is little chance at the time that he would acquire anything other than a menial position outside the Chinese community. Therefore, knowledge of the Chinese language would both preserve a cultural link with Lowe's ancestral land and also provide him with an important means of gaining a China-related profession in the United States in the future.

Lowe's father is met with stubborn resistance from his son on this issue, however. Socially and culturally accustomed to the American way of life, Lowe considers Chinese education a major obstacle that would hamper his effort to become a "real American" and "neutralize" his "excessive Americanism." The gap between the father and son is further exemplified by Lowe's critical attitude toward Chinese family life. He argues that although creativity and personal feelings among family members are encouraged and welcomed in the mainstream society, they are restrained by parental authoritarianism and filial piety in traditional Chinese culture.

Despite the tension between Lowe and his father, they eventually reconciled. The father finally realized that if he had no longer dreamed of returning to his old home in China, how could he demand the absolute loyalty of his son in accordance with traditional Chinese culture? In Lowe's case, it was likely that practical considerations prevailed. Because he failed to find a job after graduating from Stanford and Harvard,

Lowe had to rely on his father's support to make ends meet.

The competing emotions and the message of the father-son relationship are skillfully superimposed in the autobiography's dramatic ending, which supplies the book's title: "Among our people, children are begotten and nurtured for one purpose—to provide for and glorify their parents." Although Lowe's father was more Americanized than the average Chinese immigrant, it was his son, a native-born descendant, who accomplished the transformation from being Chinese to being Chinese American and "glorified" the first generation in the United States.

As the first book-length autobiography by an American-born Asian, *Father and Glorious Descendant* is a significant work. Despite his negative comments on certain aspects of traditional Chinese culture, Lowe relates to the public at a time when the larger society was unaware of the feelings and thoughts of native-born Asians and their determination to seek a place in American life. Together with other works by second-generation Asians, *Father and Glorious Descendant* has added to the understanding of the Asian American experience and gave rise to a new perspective on Asian American literature.

Lu, Ed (1963–)

Ed Lu is a Chinese American physicist, consultant, speaker, and former National Aeronautics and Space Administration (NASA) astronaut. Prior to joining NASA, Lu worked as a research physicist. He spent 12 years as an astronaut at NASA, flew on three space missions, and logged over 206 days in space, and 6 hours and 14 minutes in space walk time.

Edward Tsang “Ed” Lu was born in Springfield, Massachusetts, to Charlie and Snowlily Lu on July 1, 1963, and grew up in Webster, New York. He earned a BS degree in electrical engineering at Cornell University in 1980, and a PhD in applied physics from Stanford University in 1989. Lu worked as a research physicist in the areas of solar physics and astrophysics as a visiting scientist from 1989 to 1992 at the High Altitude Observatory in Boulder, Colorado. He also held a postdoctoral fellowship at the Institute for Astronomy in Honolulu, Hawaii from 1992 to 1995, where he studied the physics of solar flares.

In 1995, Ed Lu began training and evaluation as a NASA astronaut candidate at the Johnson Space Center. In addition to working in the computer support branch of the astronaut office, Lu also served as lead astronaut for Space Station training and Shuttle training.

Lu participated in three space missions. In 1997, Lu made his first trip into space as mission specialist on flight Space Transportation System (STS)-84, in which the Atlantis made NASA’s sixth shuttle mission to the dock with the Russian Space Station *Mir*. In 2000, Lu was the payload commander and lead space walker for STS-106, a mission during which the crew prepared the International Space Station (ISS) for the arrival of its first permanent crew. Lu and Russian cosmonaut Yuri Malenchenko together performed a space walk to connect cables to the *Zvezda* Service Module and the International Space Station. Lu made his third trip to space as flight engineer and NASA ISS Science Officer for ISS Expedition-7 in 2003. This mission took place in the aftermath of the Space Shuttle Columbia disaster on February 1, 2003, and the resulting suspension of the space shuttle program. Lu became the first American to launch and land a Russian *Soyuz* spacecraft, and the first American to launch a *Soyuz* spacecraft as Flight Engineer in April 2003. Lu and Malenchenko were the first two-person crew to live aboard the International Space Station for six months as a skeleton crew.

In 2007, Lu retired from NASA to work in the private sector. He was the lead of the Advanced Projects Group at Google, which developed imaging for Google Street View and Google Maps/Earth, book scanning, and energy projects. Lu was the public face for

PowerMeter, a project of Google’s philanthropic branch, which aimed to help consumers track and reduce their energy usage. He has also served as an advisor and consultant to the White House, NASA, and other government and private sector entities on matters related to science, technology, innovation, space, energy, and strategic planning.

Lu currently works as the Chief of Innovative Applications at Liquid Robotics, an ocean data services company, and is the chairman of B612 Foundation, an organization with the goals of asteroid impact prediction and prevention. He is working on a book about his stay on the International Space Station.

Luce-Celler Act of 1946

Proposed by Republican Representative Clare Boothe Luce of Connecticut and Democratic Representative Emanuel Celler of New York, this legislation lifted the ban on Filipino and Asian Indian immigration to the United States and allowed individuals from these countries already living in the United States to become naturalized citizens. However, each country was permitted only a token number of 100 immigrants per year under the national origins quota system put in place in 1924. Both of these groups had previously been banned from immigrating to the United States as part of the Asiatic Barred Zone passed in 1917 with the hopes of eliminating immigration from Asia. At the time, the American government sought both to remove Asian competition for American jobs and to create a more racially homogeneous society devoid of

a significant presence of Asians, who were deemed unable to assimilate into American life. Furthermore, Indians already living in the United States were denied the possibility of becoming naturalized citizens under the *United States v. Bhagat Singh Thind* decision in 1923. Despite being citizens of a territory of the United States, Filipinos were also denied American citizenship.

Momentum to revise previous American policy with respect to these groups came largely from their efforts during World War II. Although the Philippines was a territory of the United States, America had passed the Tydings-McDuffie Act in 1934, which approved Filipino independence after 10 more years of American control of the Philippines as a commonwealth. All Filipinos who had come to the United States prior to 1935 would have the opportunity to naturalize under the Luce-Celler Act. Concurrently, India was also on track to achieving independence by the end of World War II and this development also helped push the passage of the Luce-Celler Act. The U.S. government had begun to reconsider previous immigration policy toward several Asian nations on account of their service to the Allied cause. In light of their struggle against the Japanese, China gained immigration and naturalization rights in 1943 and the performance of Filipinos and Indians in the war paved the way for their acquisition of similar rights. Soon after Americans revised their immigration and naturalization policy toward China, members of Congress and the American press began suggesting that similar concessions be made for India and the Philippines.

Despite the reassessment of China, when Luce and Celler proposed their bill in 1943 granting immigration and naturalization rights to Indians and the Filipinos, many in Congress were leery of making further changes to immigration policy, largely for economic and racial reasons. When considering the case of these two nations, opponents argued that although China was an independent nation, the Philippines and India were not yet free and thus could not be considered on the same basis. Responding to this argument, members of the Roosevelt Administration cited the contributions both peoples had made to the war effort and the fact that they were both on the road to independence. To deny them greater immigration privileges would be offensive in light of their service. Additionally,

Franklin Roosevelt attempted to allay the fears of congressmen who believed that immigrants from these countries would be economically threatening to the United States, by reassuring them that the small quotas that would be offered would not be harmful competition for American job seekers.

FDR and members of his administration hoped to keep India and the Philippines in the American orbit in the wake of World War II and therefore did not want to appear reluctant to recognize the sacrifices of their other Asian allies. The significance of this issue helped gather support for the Luce-Celler Bill, which benefited from FDR's endorsement of these policy changes in the spring of 1945. Some Southern Democrats and isolationist Republicans in Congress led by Robert Ramspeck of Georgia succeeded, for a time in blocking a vote on the Luce-Celler bill in committee. However, with Roosevelt and later Harry Truman's support, Ramspeck was not able to block consideration of the bill for long. Besides recognizing the value of amicable relations with the Philippines and India, both presidents saw the two nations as a test of the self-determination clause of the Atlantic Charter.

Still, opposition members of Congress cited the United States' relationship with Britain as a reason not to revise immigration policy toward India. By the time Harry Truman took office in April 1945, he indicated his support for the Luce-Celler bill and set about bringing dissenting members of Congress into line as well. Truman obtained approval of the bill from the British, who had initially opposed the measure. Following this, the president met with Congressman Ramspeck personally and convinced him to support the bill. With the opposition mollified, Congress passed the Luce-Celler Act and President Truman signed it into law on July 2, 1946.

On the surface, the small quota of 100 immigrants per year for India and the Philippines seemed limiting. However, the bill also contained nonquota allowances concerning wives, immediate family members, and dependents of naturalized citizens from both countries already living in the United States. Consequently, Filipino and Indian immigration far exceeded their quota numbers. These immigrants were able to circumvent their small quotas and enlarge the immigrant populations of both groups. With respect to Filipinos, the

United States had also passed the Military War Brides Act of 1945 and the Fiancées Act of 1946, which allowed the Filipina wives and fiancées of American servicemen to enter the United States outside the quota as well.

The Luce-Celler Act took a critical step in encouraging the removal of systemic discrimination in United States immigration policy. It also helped both groups to incorporate themselves into American society by granting not only immigration and naturalization privileges but the ability to construct families in the United States, ensuring successive generations of citizens. Renunciation of past racist immigration and naturalization policy did have its limits as the United States

maintained the discriminatory national origins quota system, which would be reaffirmed in the McCarran-Walter Act of 1952.

M

Ma, Yo-Yo (1955–)

Yo-Yo Ma is one of the most talented and sought-after cellists of the late twentieth and early twenty-first centuries. Having given his first public recital at age five, Ma was compared with such masters as Rostropovich and Casals by the time he was 19. He has appeared with eminent conductors and orchestras in all the music capitals of the world. He has also obtained a distinguished international reputation as an ambassador for classical music.

Ma was born in Paris in 1955. Both of his parents are Chinese. His mother, Marina Lu, was a singer and his father, Hiao-Tsiun Ma was a professor of music. Growing up in a family of musicians allowed him to be exposed to music at a very young age.

At age four, Ma learned to play the cello with his father after the family moved to New York. The child prodigy began performing in front of audiences at age five. He took lessons from Janos Scholz, and in 1962, he started to study with Leonard Rose at the Juilliard School of Music. In the same year, at age seven, Ma performed for President John F. Kennedy. At age eight, he appeared with his sister, Yeou-Cheng Ma, a pianist, in a concert conducted by Leonard Bernstein, one of the most talented and successful musicians in American history. He soloed with Harvard Radcliffe Orchestra at age 15 and gained national and international recognition. A graduate of Juilliard School of Music, he briefly enrolled at Columbia University before attending Harvard University, where he received his bachelor's degree. He received honorary doctorate degrees from Harvard (1991) and Princeton University (2005).

In the summer of 1972, when Ma played at the Marlboro Music Festival, he met and fell in love with Mount Holyoke College sophomore and festival administrator Jill Hornor, who later became a German language professor. The two were married in 1977. Ma and his wife have two children, Nicholas and Emily, and reside in Belmont, Massachusetts.

Known for his smooth and rich tone as well as his extraordinary virtuosity, Ma is a classical musician. The style of his music, however, has been referred to as “omnivorous” by critics. He has an eclectic repertoire, including recordings of Baroque pieces using period instruments, American bluegrass music, traditional Chinese melodies, soundtracks to Hollywood movies, the tangos of Argentinian composer Astor Piazzolla, collaboration with the American jazz artist Bobby McFerrin, and the music of modern minimalist Philip Glass.

Ma is known for including a cello recording of Niccolò Paganini's 24th Caprice for solo violin, Zoltan Kodaly's cello sonata, and other demanding works. Ma has also worked with world-renowned Italian composer Ennio Morricone and has recorded Morricone's compositions of the Dollars Trilogy including *The Good, the Bad and the Ugly*. He has over 75 albums, and won many awards, including an Avery Fisher Prize in 1978, 15 Grammy Awards and the International Center in New York's Award of Excellence. In 2009, Ma was appointed by President Obama to serve on the President's Committee on the Arts and Humanities. In 2011, he received the Presidential Medal of Freedom.

As a musician, Ma constantly searches for new ways to communicate with his audiences and has

become known for exploring new ideas and cultures. His Silk Road Ensemble is designed to bring together musicians from diverse countries and cultures.

Ma has performed for national and international events around the world. In 2009, he performed John Williams's "Air and Simple Gifts" at the inauguration ceremony for Barack Obama, together with Itzhak Perlman (violin), Gabriela Montero (piano), and Anthony McGill (clarinet). In the same year he performed at the funeral mass for Senator Edward M. Kennedy. He also appeared alongside Canadian Prime Minister Stephen Harper at the National Arts Center gala in Ottawa. He also performed at the memorial for Steve Jobs (2010), and with dancer Charles "Lil Buck" Riley. He performed in the United States and in China at the U.S.-China forum on the arts and culture. He has made frequent appearances on television and at press events.

Maharishi Mahesh Yogi (c. 1917–2008)

Maharishi Mahesh Yogi developed and popularized the methods of Transcendental Meditation in the United States and Europe and was the leader of the Transcendental Meditation movement up until just before his death in 2008. His teachings are often presented as being rooted in scientific theory and the success of his organization has been buoyed by a number of high-profile practitioners throughout its history, the most significant being the Beatles in the late 1960s.

Born Mahesh Prasad Varma in 1917 (or, variously, in 1911 or 1918) in the city of Jabalpur, India, Maharishi earned a degree in physics at Allahabad University in 1942. When attending university he met his spiritual teacher Brahmananda Saraswati (1868–1953), whom he served as personal clerk and close confidant until the latter's death in 1953. From 1955 to 1957 Maharishi toured India teaching and continued

to develop the Transcendental Meditation techniques he claimed to have learned from Brahmananda.

In 1959, Maharishi began his first of numerous world tours, spending significant time in the United States, Europe, and India. He published his seminal work, *The Science of Being and Art of Living*, in 1963 and his teachings on meditation first found widespread success on college campuses. Notably, in 1968, the Beatles attended a Transcendental Meditation training session in India with Maharishi, an event that gave Maharishi extensive media exposure in the United States through numerous newspaper articles, magazine stories, and television programs.

The techniques presented by Maharishi reflected both traditional Indian teachings in the Vedas (particularly the use of verbal incantation) and his educational background in science. Transcendental Meditation was taught as a scientific approach to the cultivation of higher levels of consciousness and the means to greater health and stress reduction. It was claimed that these individual changes could subsequently bring about a positive change in society, a process called the "Maharishi Effect." In 1977 a New Jersey court case (*Malnak v. Yogi*) ruled that Transcendental Meditation was "religious in nature," and ended the movement's efforts to establish it in secondary schools, jails, and workplaces that received government funding. Although the Transcendental Meditation movement would continue, this ruling effectively stemmed its further expansion.

In 1990, Maharishi relocated his headquarters to the Netherlands and died in his residence there in 2008. The Transcendental Meditation movement remains an influential organization with teaching centers established around the world.

Malaysian Americans

Malaysian Americans are immigrants and their descendants originated from Malaysia, a Southeast Asian nation on the Malay Peninsula. Malaysia is ethnically and culturally diverse. Only 62 percent of the country's population is ethnic Malays and other aboriginal people. The country's two largest ethnic minority groups are Chinese (26%) and Indian (7%).

The early history of Malaysia was influenced by India and then China. Since the beginning of the fifteenth century, Malacca, a coast city on the Malay Peninsula emerged as an international trading center. Between 1511 and 1641, Malacca was controlled by the Portuguese. For the next two centuries, Malay was ruled by the Dutch. The British took control of Malacca in 1795 under the Anglo-Dutch Treaty and combined Malacca, Penang, and Singapore to form the Straits Settlements Presidency in 1867. During World War II, the region was controlled by the Japanese. Following a long and complicated movement for independence, the Federation of Malaysia was formed in 1957.

The long history of contact with foreigners enabled some Malaysians to travel to different parts of the world, and some of them may have come to Hawaii or the U.S. mainland as early as the late nineteenth century. What we do know is that the U.S. government did mention "Malays" in its discriminatory policies against Asian immigrants in the early twentieth century. Exactly when they started to come and how many of them were here before 1960, however, is unknown.

Among those from Malaysia in the 1960s and 1970s were students attending colleges and universities throughout the United States. Many of them eventually settled here and some sponsored their families and relatives. By 2000, there were 18,566 Malaysians recorded in the Census. The population increased to 26,179 in 2010. The rate of growth for

Malaysian America has not been as rapid as for other Asian ethnic groups. It must be noted that many immigrants from Malaysia are ethnic Chinese or Indians, and these immigrants and their descendants are more likely to identify themselves as Chinese Americans or Indian Americans.

According to the 2010 Census, 73 percent of Malaysian Americans were foreign-born, of which 27 percent had gained U.S. citizenship. About 65 percent of Malaysian Americans age five or older spoke a language other than English at home, and 23 percent of the population age five or older had limited English proficiency. A total of 19 percent of the population lived in linguistically isolated households. About 93 percent of Malaysian Americans had at least a high school diploma, whereas the rate for those with at least a bachelor's degree was 57 percent. In comparison, only 86 percent of the Asian American population held high school degrees and 49 percent of them had completed college. Per capita income for Malaysian Americans in 2010 was \$33,264, higher than that of the Asian American population (\$28,343). The poverty rate for Malaysian Americans was 10 percent, lower than the rate for Asian Americans (11%). Only 4 percent of Malaysian Americans were unemployed in 2010, compared to 6 percent for Asian American population. Fifty-three percent of Malaysian Americans were homeowners but 5 percent of the population lived in overcrowded housing.

Manlapit, Pablo (1891–1969)

Pablo Manlapit was a transnational Filipino labor leader in Hawaii and the Philippines. Born to a working-class family in Lipa, Batangas, Philippines,

Manlapit's family relocated to Manila when he was 10. Although he found small jobs working in the U.S. colonial bureaucracy, the young Manlapit set his eyes on Hawaii, then a territorial possession of the United States dominated by an oligarchy comprised of Protestant missionaries and the powerful Hawaii Sugar Planters' Association (HSPA). Following a series of strikes by immigrant Japanese laborers on Hawaii's plantations, the powerful HSPA began to actively target Filipino labor. Manlapit, like thousands of other Filipinos, heard their call and made the journey across the Pacific Ocean.

Although Manlapit experienced some upward mobility during his early years in Hawaii, he also witnessed the great inequality that was common to the plantation economy. Arriving in 1910 as a contract worker at Kuka'iau plantation, he worked 10 to 12 hours per day, six days a week, and received \$20 per week. Manlapit rose to plantation foreman or *luna* and later timekeeper, notable accomplishments given the ethnic stratification of the plantation order. By 1913 Manlapit led a strike of Filipino workers when plantation owners lowered wages without consulting the workers. Because of his activities, Manlapit was fired and from then on remained under the surveillance of the HSPA. After leaving the plantation, he did odd jobs, published the community newspaper, *Ang Sandata*, and served as a stevedore, which introduced him to the potential of a multiethnic labor force.

As the 1920s dawned, a new era of labor agitation arose in Hawaii. By 1919 Manlapit joined a handful of other Filipinos who were trying to better the situations of laborers throughout the territory. Reflective of his stevedore days, Manlapit emphasized the need to improve working conditions for all working people and expressed interest in building a coalition with Japanese labor. Manlapit forged a long-lasting relationship with Kinzaburo Makino, a leader of the early Japanese strikes, and set about cultivating a relationship between his Filipino Labor Union and the Japanese Labor Federation. Building cross-ethnic solidarity proved difficult given the lingering distrust between the groups, which had been fostered by the HSPA. Meanwhile, the ruling elite accused Manlapit of fomenting class warfare and arrested him for

holding a meeting on a public road leading up to the 1920 Filipino-Japanese strike.

By 1920 Filipino and Japanese workers designed a list of demands to the HSPA that included shorter working hours, higher wages, and the use of a minimum wage to replace a bonus system that was tied to the precarious sugar market. At first, Manlapit and other leaders were hesitant to call a strike and workers went ahead without sanction. Nevertheless, he served as a spokesperson for the strike. Tensions between Filipino and Japanese workers continued and each group submitted identical petitions outlining their demands. HSPA agents smeared strike leaders and, without evidence, claimed that Manlapit attempted to extort an HSPA lawyer in exchange for calling off the strike. Moreover, unfounded rumors spread that Japanese strike leaders were puppets of the imperial Japanese government. Unfortunately, this divide and conquer campaign affected Manlapit who instructed the Filipino workers to end the strike.

By July 1920, the strike came to an end but with a punitive outcome for its participants. The HSPA denied the demands and displaced the striking workers with strikebreakers or replenished the rank-and-file with new immigrants from the Philippines. Meanwhile, the Japanese Federation of Labor deteriorated and 15 strike leaders were jailed. Although Manlapit was not incarcerated he nevertheless continued to pursue economic justice for working people through the Higher Wages Movement and, reversing his repudiation of the Japanese labor leaders, sought to build a multiethnic united labor union.

In the spring of 1924 the Higher Wages Movement facilitated another strike. The HSPA again attempted to malign Manlapit through ad hominem attacks and the local police detained him under charges of conspiracy. His arrest had the unanticipated consequence of drawing additional workers to the strike. Convicted of conspiracy charges, Manlapit was imprisoned for two years and forced to leave the islands despite popular support from workers and leaders such as his old comrade Makino.

Banished from Hawaii, Manlapit made his way to California in 1927, which had its own burgeoning Filipino workers movement. The FBI and Los Angeles Police Department closely monitored Manlapit, fearing he would build a labor union in California that

would attract not only Filipinos but also Mexicans and Japanese. Although this multiracial union did not come to fruition Manlapit remained a sought-out speaker in the migrant Filipino communities.

In 1932 Manlapit was allowed to return to Hawaii and set about organizing the Hawaii Federation of Labor. However, his leadership was circumvented by charges that he violated an arcane law about charging a fee over \$10 to assist war veterans. Convicted of this crime Manlapit requested probation and deportation to the Philippines over serving time in Hawaii. The full extent of his reasons for choosing this path remains unknown to this day.

Through filial connections, Manlapit quickly became ensconced in Philippine politics. During World War II, the Japanese-sponsored puppet government appointed him to the Advisory Board on Labor and executive officer of the Labor Recruitment Agency. After the war he won his struggle for a pardon from the territorial government of Hawaii yet was prevented from resettling. During the administration of President Manuel Roxas, the strongly anti-Communist Manlapit served in various administrative positions yet aroused the ire of the ruling class when he exposed cases of government corruption.

Manlapit soon joined the new Labor Party when the administration ceased agrarian reform. Although he lost an election to Congress in 1953, he remained visible in organizing through the Philippine Labor Unity Movement and assisted strikes and negotiations with the National Development Company and the National Shipyards and Steel Corporation. Dedicated to the rights of workers, he lived in genteel poverty after he sold his home and used his personal finances to support strikers and their families and sadly succumbed to cancer in 1969.

Manzanar Children's Village (1942–1945)

The Manzanar Children's Village is part of the Japanese American internment story, but told from the viewpoint of individuals who were a part of a camp inside a camp. The Children's Village cared for children who were interned without their families, and they spent the duration of the war under the care of trained staff. This is a different experience than what is most frequently told as the internment history, which is told as a family narrative. Much of the remaining historical record of the Children's Village exists as oral history interviews, gathered from the California State University Fullerton's Oral History Program archives.

Japanese American Internment Camps

The Japanese American internment during World War II is arguably one of the worst infringements on civil liberties in the history of the United States since the enslavement of African Americans. President Franklin D. Roosevelt issued Executive Order 9066 on February 19, 1942, giving the military the power to imprison roughly 120,000 Japanese Americans during World War II, two-thirds of whom were American citizens, and none who were guilty of any crimes besides being of Japanese descent. Most Japanese Americans lived along the West Coast where they had established farms, businesses, and other community organizations. Japanese Americans residing in the military zone were considered threats and relocated to one of 10 concentration camps scattered across the United States for the duration of the war. Of the 10 Japanese internment camps during World War II, only one of them had an orphanage for Japanese American children.

Orphanages in the Japanese American Community

At the time World War II broke out, there were three orphanages in existence that cared for children of Japanese descent as well as mixed race Japanese children. These orphanages served the needs of the Japanese American communities in Los Angeles (the Shonien and Maryknoll Catholic Home) and in San Francisco (the Salvation Army Children's Home). Both the Shonien and the Salvation Army were built by Issei who had converted to Christianity and had a passion for improving social services in the Japanese American community. As the Japanese American community became more established in the United States, their needs for social services increased.

Masasuke Kobayashi was born in Japan in 1883 and migrated to San Francisco in 1902. He was

involved with the YMCA and was baptized as a Presbyterian in Ogden, Utah. Kobayashi returned to Japan in 1918 and joined the Japanese Salvation Army, where he became a major. He obtained donations for a home for "helpless Japanese girls" in Japan, and also worked to build the Salvation Army Children's Home in San Francisco; he received donations from many sources, namely the Issei in the community and even the Japanese emperor.

The founder of the Shonien, Rokuichi Kusumoto, was born in Beppu, Japan in 1873. Prior to coming to the United States in 1908, he worked in Osaka as the director of education at the Episcopal Benevolent Children's Home. In 1912, he came to Los Angeles and was involved in social welfare activities; he worked with the community to organize the Japanese Humane Society to protect young women. Shortly

thereafter he founded the Shonien, the first Japanese children's home and day-care center in Los Angeles.

The Shonien, the Salvation Army Children's Home, and the Maryknoll Catholic Home served the needs of the Japanese American community prior to internment. The circumstances by which the children came to the orphanages before the internment, and to Manzanar after internment, vary widely. It is thought by some of the former residents and staff that the Manzanar Children's Village was not an orphanage but a village full of children, because not all of the children who lived there during the internment were orphans. By the 1940s, there was a rise in the number of children's homes because of economic reasons, parental illness, and death. For some of the children, they lost one or both of their parents to diseases like tuberculosis, polio, or mental illness, some died because of childbirth or suicide. For others, their single mothers or single fathers simply did not have the economic means to support their children, or they had gone to Japan and could not return to the United States because of the war. For others their parents worked full-time, and rather than be placed for adoption, these children were put in the temporary guardianship of the children's home staff and would later be cared for by the surviving parent when economic situations improved. At the time, many Japanese Americans in the United States did not have large extended families or grandparents to rely on to care for their minor-aged children. The children's homes were the best alternative for these struggling families.

After Executive Order 9066, the Japanese Americans residing on the West Coast made preparations for relocation. With great dignity, the Japanese American community arrived on time at the relocation meeting points dressed in their best clothing with the exact number of suitcases and required items, and boarded the trains or buses to their destination. Included in the logistics for relocation were the three orphanages. The War Relocation Authority (WRA) appointed Henry and Lillian Matsumoto as the superintendent and assistant superintendent of the Children's Village. They had both received graduate education in business and social welfare, respectively, and had worked at the Shonien with Rokuichi Kusumoto. Before their relocation to Manzanar, the State of California Department

of Welfare had recommended to the WRA that the Matsumotos be in charge of the children when they arrived at camp.

The Staff at the Children's Village

The Matsumotos were aware that they would have to relocate the orphanage to the internment camps and were able to go to Manzanar before moving to make suggestions about the Children's Village facilities. The layout was slightly different than the other housing areas because of the recommendations, such as having indoor toilets, prior to construction. One difference between the Children's Village and the other barracks housing area at Manzanar was that there was a grassy lawn and a gazebo in front of the Children's Village.

This made their arrival at Manzanar on June 23, 1942, much later than many of the other families. The Matsumotos and other staff members of the Children's Village were in a unique position because they chose to work at the village and live there rather than be private citizens living in their own barracks. In addition to the Matsumotos, many of the staff at the Children's Village were Nisei, second-generation Japanese Americans, because one generation had passed after the Issei founded the orphanages. Most of the staff were already working for the Shonien and just directly transferred with the children to Manzanar. Rather than enter the camps with their families, all of the staff continued their jobs from the Shonien and relocated as staff members of the Children's Village. In addition, three staff members from the Salvation Army Home worked at the Children's Village. The staff of the Children's Village worked under the Matsumotos, whose supervisors were Margaret D'Ille, the Director of Community Affairs, and Ralph Merritt, the director of the Manzanar Relocation Center. It is most certain that the staff members had a great impact on the daily care and supervision of the children.

Many Children's Village former residents recalled Sohei Hohri as one of the most memorable staff members. Hohri had lived in the Shonien during the 1930s as a child when both of his parents had contracted tuberculosis and were placed in a sanitarium. After they recovered he and his siblings were reunited with

his parents. When he was in high school he relocated with his family to Manzanar and did odd jobs. At Manzanar, he was hired by the Matsumotos to work at the Children's Village. Many of the former residents recall his special talent as a storyteller at the Children's Village. The stories he told were from *Les Misérables* about the characters Jean Valjean and Cosette, as well as Homer and stories from the *Odyssey*. Hohri recalled that there was very little entertainment at Manzanar, with the exception of the radio after five o'clock in the evening; so when he told the stories, the children listened intently with their eyes and mouths open.

The sudden change to a structured institutional life behind barbed wire was one of the most difficult adjustments for the Japanese American internees. However, in the case of most of the children who came to Manzanar from the orphanages, they were already exposed to and familiar with institutionalized life, where they had a schedule, and rules for living were enforced without question. According to Lillian Matsumoto, the children from the Shonien were much younger, whereas the children from the Salvation Army Home were slightly older, and many of them were teenagers when they came to Manzanar. Twenty-four were from the Shonien, and 19 were from Salvation Army Orphanage.

The Internment from Their Eyes

The children ranged from infants and toddlers to 18 years old, and certainly their experiences of Manzanar varied greatly. Prior to departure, the children did not have to prepare for the move or pack their own clothes or belongings because many of them were unable to do so as children. Children's Village residents were unaware of the politics behind the internment at the time, because most of them were too young to understand. Many had few belongings and did not have property to lose. As did other internees, the residents of the Children's Village had to sleep in the barracks on straw bedding that was placed on top of cots. There was no privacy: no doors on the toilets or showers, and there many beds lined up in a large room. The barracks were divided by age: the infants, younger boys, older boys, younger girls, older girls, and the staff. Like many Japanese Americans, this

was the first time that they were around a concentration of primarily Japanese Americans. The children were in an environment where they could play with many other children. The former residents of the Children's Village recalled playing with children from private families, but those children rarely went to the Children's Village to play.

They attended school at Manzanar outside of the Village with students from private families; after school, they had to return straight home to the Children's Village. They already had exposure to living in an institution with a regimented schedule, so when they were interned, the pace of life was a routine similar to the one they had before: they had to get up at a certain time, do chores in the morning, eat breakfast, go to school, and return home. They all had chores to complete, and the older children mainly helped with the laundry. Their schedules were structured by time and enforced with rules.

There were several rules about eating that stood out for many of the residents. One of the rules of the Children's Village, which was different from many of the other internees, was that all residents of the Children's Village had to have their meals together in the Village dining room. Other Japanese Americans in the camps did not have this rule, and during mealtimes at the mess halls, many families ate separately where the children would eat together with their friends away from their parents and families. Many interned families discuss the overall breakdown of the nuclear family within the Japanese American community because they did not eat together.

Another rule for the Children's Village was that they had to eat all of their food. They had to eat everything that was on their plate before they could leave the table, even if they were full. In the oral histories of Children Village residents, they frequently mentioned that the quality of the food at the Children's Village was better than the other blocks at Manzanar. This difference had to do with the fact that they had a different cook than the other blocks, namely the chef from Clifton's Cafeteria in Los Angeles.

The Manzanar Children's Village was home to a little over 100 children both Japanese American and multiracial Japanese American during the course of the World War II internment. Although the Village

itself was ephemeral, the influences of the staff left a solid foundation for the residents so they could get on with their lives after their release from the internment camps.

Manzanar Riot (1942)

The Manzanar "Riot" or "Resistance" occurred on December 5–6, 1942, when Japanese American prisoners incarcerated at the Manzanar War Relocation camp openly resisted the policies of the War Relocation Authority (WRA). This violence was a culmination of an intergenerational struggle predating incarceration. After Pearl Harbor, in an attempt to curry favor with authorities and secure power, Nisei (second generation) members of the Los Angeles branch of the Japanese American Citizens League (JACL) began reporting to federal agents on alleged activities in the camp. During incarceration, some felt deeply betrayed by the JACL calling them *inu* (literally translated as dog). On the night of December 5, 1942, six masked assailants attacked Fred Tayama, a JACL leader, in his barracks sending him to the hospital.

The next morning, the WRA arrested Hawaiian Kibei (Nisei educated in Japan), Harry Ueno, who was perceived as a dissident because of early challenges to WRA policies. He organized kitchen workers into the Mess Hall Union to protect their rights and accused Assistant Project Director Ned Campbell of stealing rationed sugar and meat from Japanese inmates to sell on the black market. Despite the lack of physical evidence or proof of involvement, Ueno was removed from Manzanar and jailed in nearby Independence, California.

Ueno was respected for his stance of fighting for prisoners' rights. His arrest and removal sparked a demonstration of an estimated 2,000 to 4,000 prisoners demanding Project Director Ralph Merritt release him or at give him a fair trial at the Manzanar Center—Merritt agreed to the trial. Militant Japanese prisoners then staged a second rally later that day when Ueno returned to the camp reading a death list of *inus* and making several additional demands. From this rally, two groups with separate goals formed, one to release Ueno from the Manzanar jail and the second to kill Tayama at the hospital. Drs. Morris Little and James Goto saved Tayama's life by hiding him. Ueno refused to leave his cell until Merritt released him.

As the situation deteriorated, Merritt and Captain Martyn Hall ordered the army to launch tear gas on the unarmed Japanese prisoners. As they dispersed, one MP opened fire on the crowd and killed two Nisei bystanders and injured a dozen; all but one were shot in the back or the side, indicating the victims were moving away from the shooter. Captain Hall decreed martial law throughout the center. All forms of communication were censored and the army imposed a curfew. Troops remained in the camp until after Christmas. Consequently, Fred Tayama and 64 others, predominantly members of the JACL, were transferred to Death Valley National Monument before attaining indefinite leaves. Numerous Issei and Kibei, including Harry Ueno, were arrested by the military police and sent to a Civilian Conservation Corps camp near Moab, Utah. WRA officials attempted to downplay this "incident" by blaming a handful of dissidents. The national press misinformed the American public that the riots were Japanese Americans celebrating the anniversary the Pearl Harbor attack.

The Mazanar riot and the Poston strike were the first demonstrations of Japanese American resistance to WRA. These demonstrations eventually led to the controversial “loyalty questionnaire” and later the Tule Lake Segregation Center for those “disloyal” and “unpatriotic” prisoners, including Harry Ueno.

Matsui, Doris O. (1944–)

Doris Matsui is a Japanese American politician that has represented California’s 5th Congressional District since 2005. Before her tenure in Congress, Matsui had been involved in local Sacramento politics and she also served in various posts in the Clinton administration.

Doris Matsui was born Doris Okada at an internment camp in Poston, Arizona, on September 25, 1944. As a person of Japanese descent, the internment experience was commonly shared by many Japanese Americans during World War II. Matsui later grew up on a farm in Dinuba, California, and attended the University of California, Berkeley. When she was at Berkeley, Matsui met her future husband, the late Congressman Robert T. Matsui. They married in 1965.

Matsui’s attorney husband was elected to the Sacramento City Council in 1971 and to Congress in 1978 (representing California’s 5th District); meanwhile Matsui herself also became active in public life. She was known as an early supporter of Bill Clinton’s bid for the Arkansas gubernatorial seat. Furthermore, when Clinton was elected to the White House, Doris Matsui was a member of the Clinton transition team. She later served as deputy assistant to the president in the White House Office of Public Liaison under Alexis Herman during President Clinton’s first term. Her tenure in the White House extended between 1993 and 1998.

Although for many years after her time in the White House, Matsui did not hold public office, she was nonetheless active in community organizations in Sacramento and Washington, D.C. Some of the projects and positions she was involved in included as president and chairwoman of the board for the KVIE public television station in Sacramento. She was also actively involved in the Sacramento Children’s Home, the Woodrow Wilson Center Board of Trustees, Arena Stage, and many other organizations.

A major change came for Matsui in 2005 when her husband passed away after serving in Congress for over 26 years. Matsui announced her decision to run for her husband's vacant seat on January 9, 2005, and the special election was held on March 8, 2005. In the short three months of her campaign, Matsui gained the support of the Democratic Party as well as many local leaders in the Sacramento area. The result was that Matsui beat out 11 other candidates and was elected to replace her husband with 72 percent of the overall vote and 88 percent of the Democratic vote. At the same time, Matsui became the first Asian American woman from the U.S. mainland to be elected to Congress. She was clearly the favorite in the special election. She has since then been reelected, in 2006, 2008, 2010, and 2012.

One of the major points of Matsui's initial campaign was that she would carry on the work and important agendas of her late husband. One of the most important issues that Matsui has focused on since taking office is flood protection in her district. She was able to garner the support of others in Congress and obtain \$700 million in authorized funds for flood control projects in the Sacramento area. Flood control was also an issue that her late husband cared deeply about and worked extensively for.

Matsui also focused her efforts on renovating the transportation infrastructure to address the rising cost of gas as well as the toll of carbon emissions on the environment. Her efforts have included the planning of an intermodal transportation center in downtown Sacramento. Her plan took into account the rising cost of transportation as well as the growing population in the Sacramento area. In May 2009, Matsui also sponsored and spoke on behalf of the Smart Planning for Smart Growth Act. This is a piece of legislation that would require states and metropolitan planning organizations to plan according to emission reduction guidelines by reducing per-capita vehicle miles traveled. This bill echoes Matsui's other work on the Committee of Energy and Commerce. She also serves on the subcommittee on Commerce, Trade, and Consumer Protection; the Subcommittee on Communications, Technology, and the Internet; and the Subcommittee on Energy and Environment.

Aside from transportation and environmental issues, Matsui has been committed to promoting community service. She has helped garner and preserve funding for AmeriCorps programs, which organize and promote community service around the country. Matsui is also the cochair of the National Service Caucus.

Matsui is a member of the House Committee on Rules. Her caucus membership includes the Congressional Asian Pacific American Caucus. She was appointed to the Smithsonian Institution's Board of Regents in 2007 by House Speaker Nancy Pelosi.

Matsui has a good relationship with the Democratic leadership cultivated during her husband's tenure as a representative. She is a very active member of the Democratic Party and served as Parliamentarian at the 2008 Democratic National Convention (DNC) in Denver, Colorado.

Matsui, Robert T. (1941–2005)

Robert Matsui was an American politician of Japanese descent. He was a member of the House of Representative and served for 13 terms and represented California's 3rd and 5th Congressional Districts. During his lifetime, Matsui served for 26 years in the United States Congress.

Robert Takeo Matsui was born on September 17, 1941, to Japanese American parents in Sacramento, California. He was third-generation Japanese American. However, like many Japanese Americans during World War II, Matsui, who was merely six months old at the time, and his family were sent to an internment camp at the Tule Lake Camp, which was located near the California and Oregon border. Matsui and his family would move briefly to Caldwell, Idaho, for work and eventually return to their native Sacramento when he was four years old. After graduating from high school in 1959, Matsui went on to continue his education at the University of California, Berkeley, where he majored in political science.

During his time at Berkeley, Matsui met his future wife, Doris Okata, whom he married in 1965. After graduation from college in 1963, Matsui went on to the University of California, Hastings College of Law in San Francisco. Matsui and his wife moved back to his native Sacramento and started his own law practice.

Matsui's political career started when he was elected to the Sacramento City Council in 1971. He was reelected in 1975 and became the vice-mayor in 1977. After working in local politics, Matsui decided to move on to national politics when Congressman John E. Moss announced his retirement. Matsui ran for Congress in 1978 and was elected to office, representing California's 3rd Congressional District.

One of Matsui's main efforts as a political leader concerned the reparations of the treatment of Japanese Americans during World War II. Along with other congressional members such as Senator Daniel Inouye (D-Hawaii), Senator Masayuki "Spark" Matsunaga (D-Hawaii), and Representative Norman Mineta (D-San Jose, CA), Matsui advised the national Japanese American Citizens League (JACL) on an appropriate course for the emerging movement concerning the past incarceration of Japanese Americans. In 1985, Matsui also gave a speech on the floor of the U.S. House of Representatives on the aforementioned issue and called for reparations on the part of the U.S. government. Finally, after a decade of effort from many, including Robert Matsui, the Japanese American Redress Act (known as the Civil Liberty

Act of 1988) passed through Congress and provided monetary compensation and government apology for those Japanese Americans interned during World War II. This law was signed into law on August 10, 1988, by President Ronald Reagan.

Also in his effort to educate and seek reparation for incarcerated Japanese Americans, Matsui was crucial in having Manzanar (an internment camp during World War II) set up as a national historic site. Moreover, Matsui helped to procure land on the National Mall in Washington, D.C. for the National Japanese American Memorial to Patriotism during World War II.

During Matsui's tenure in Congress, he served on the Judiciary Committee and was also a high-ranking member of the House Ways and Means Committee by the time of his death. Although Matsui spent a wealth of time and effort advocating for Japanese Americans, he was also known for his work on important issues of the day, including policies related to international trade, taxes, health care and welfare reform, as well as social security.

Also, as a member of the Democratic Party, Matsui chaired the Democratic Congressional Campaign Committee during the 2004 election cycle and served in various positions on the Democratic National Committee (DNC).

Robert Matsui served in the United States House of Representatives until his passing on January 1, 2005, because of complications from a prior health condition. In a special election later that year, his wife, Doris Matsui, was elected to fill his vacant seat in California's 5th District. Doris Matsui is a member of the Democratic Party and had served as a deputy director of public liaison in the Clinton Administration up until 1998. A lifelong public servant and leader from the Sacramento area, the city of Sacramento dedicated a waterfront park in Robert Matsui's name in October 2008.

Matsunaga, Masayuki “Spark” (1916–1990)

Spark Matsunaga was a Japanese American politician from the state of Hawaii. He served in the U.S. House of Representatives from 1971 to 1977 and the U.S. Senate from 1977 to 1990. Matsunaga originally got the nickname “Sparky” because he was slow. The name comes from the character “Sparkplug,” an old nag in a popular comic strip during Matsunaga’s youth. After World War II, Matsunaga had his name changed legally to Spark Masayuki Matsunaga.

Masayuki “Spark” Matsunaga was born on October 8, 1917, to poor Japanese immigrant parents in Kauai, Hawaii. Coming from humble beginnings, Matsunaga’s father worked on a sugar plantation and was killed in a work-related accident. Matsunaga had to work his way through school but eventually graduated with honors from the University of Hawaii in 1941. He not only majored in education but participated in the Reserve Officer Training Corps (ROTC) program.

After the attack on Pearl Harbor and the start of World War II for the United States, Matsunaga volunteered for active duty with the U.S. Army. During the war, Matsunaga was a member of the famed 100th Infantry Battalion of the 442nd. He was wounded twice in a minefield in Italy, which earned him the Bronze Star, the Purple Heart, the Legion of Merit, and the Army Commendation Medal. Highly decorated, he was honorably discharged in 1945 with the rank of a captain. After leaving the army, Matsunaga worked as a veterans’ counselor. He would also go on to earn a law degree from Harvard University Law School in 1951.

After law school, Matsunaga returned to Hawaii to work as an assistant public prosecutor in the city of

Honolulu between 1952 and 1954. His political career took shape in Hawaii’s Territorial House, where he served from 1954 to 1959. During his time in the Territorial House, Matsunaga demonstrated his commitment to helping those in need in his community and served as the majority leader between 1957 and 1959.

Although Matsunaga was unsuccessful in his bid as lieutenant governor, he was elected to the U.S. House of Representatives in 1962 and would serve through 1976 with seven consecutive terms. Matsunaga was sympathetic to the injustice suffered by many Japanese Americans during World War II. He cosponsored a bill to repeal Title II of the Emergency Detention Act/Internal Security Act, which had allowed the imprisonment of anyone seen as a security risk during time of war. This repeal was signed into law by President Richard Nixon. When Matsunaga was a member of the House, he served on the influential Rules Committee and the Agriculture Committee. He was also the Deputy Majority Whip.

Matsunaga opted not to run for reelection in 1976 for his House seat but instead was elected into the Senate. He ran against fellow Hawaiian Patsy Mink for the seat Hiram Fong left vacant when he announced his retirement. During his time in the Senate, Matsunaga played important roles in the passing of civil rights legislation, the support for space programs, and the quest of reparations for Japanese Americans that were wrongly imprisoned during World War II. He sponsored the Civil Liberties Act of 1988, which provided for the reparation of Japanese Americans. This legislation was signed into law by President Ronald Reagan. Aside from Matsunaga’s work on minority issues, he was also concerned with environmental issues and advocated for additional research and awareness of our environment. In fact, his last major act as a Senator was the support of the Clean Air Act.

Matsunaga would serve three terms as a U.S. Senator. He was chair of the International Trade and Aging Subcommittees and also had membership on the Veterans’ Affairs as well as Labor and Human Resource subcommittees. He continued his work as a leader in the Democratic Party, serving as the Senate Democratic chief deputy whip until 1988.

In January 1990, Matsunaga told the public that he had prostate cancer and was seeking treatment. He passed away on April 15, 1990, in Toronto, Canada at the age of 73 as a result of his illness. He was succeeded by Daniel Akaka in the U.S. Senate.

One of Matsunaga's many accomplishments during his lifetime was the instrumental role he played in the establishment of the Institute for Peace at the University of Hawaii, which was renamed the Matsunaga Institute for Peace.

McCarran-Walter Act of 1952

Also known as the Immigration and Nationality Act of 1952, this multifaceted legislation most notably reaffirmed the usage of the national origins quota system created in the Immigration Act of 1924. The McCarran-Walter Act served as a battleground over not just immigration policy, but also the best way to serve the United States' interest in the Cold War. Authored by Senator Pat McCarran of Nevada and Representative Francis Walter of Pennsylvania, the bill sought to preserve immigration quotas geared toward

ensuring that large numbers of Asians, as well as Southern and Eastern Europeans did not enter the country.

Although the McCarran-Walter Act revised the previous system slightly, it retained its essential philosophy, which many deemed as discriminatory. Under the 1924 Act, nations of the world were allotted an immigration quota based an extrapolation of one-sixth of one percent of each nationality's proportion of the American population in 1920. Countries of the Western Hemisphere were exempt from the quota. Whereas Asian countries had been almost completely barred from immigration to the United States, with the very recent exception of China, India, and the Philippines, McCarran-Walter allowed for a nominal immigration quota of 100 visas per year for each country of Asia. These numbers were especially insignificant compared with the numbers allotted to immigrants from Northern and Western Europe, which amounted to 85 percent of the total allowable immigrant quota. Most of this quota went unused, yet the proportions remained to keep percentages from so-called undesirable regions of the world low, reducing immigration from those countries to a trickle.

Although the bill removed the previous language touting Nordic superiority, which existed in the 1924 Act, McCarran-Walter aimed to severely limit immigration from Asia, and Southern and Western Europe. Many regarded these provisions as racist and incompatible with American ideals of pluralism and Cold War policy regarding America's role as the exemplar of freedom in the world. This notion was compounded by the fact that McCarran-Walter also contained a provision targeted specifically at people of Asian ancestry regarding stipulations for their attribution to a quota of a specific country. Immigrants from what the act called the "Asia-Pacific Triangle" encompassing the area from Japan, south to Indonesia, and west to Afghanistan would be counted on the basis of their race and not their nationality as the other quota nations would be considered.

Immigrants from Asia counted against the quota of their country of ethnic origin regardless of where they were born. This also applied to immigrants who had only one parent from an Asian nation. For instance, if an immigrant had 50 percent or more Japanese

ancestry and was born outside of Japan, they would still be considered as part of Japan's quota. Thus racial considerations trumped nationality only in the case of peoples of Asian ethnic origin. Despite relaxing previous exclusionary policy toward the peoples of Asia, this legislation did not envision anything but a token number of Asian immigrants coming to the United States.

In addition to these controversial racial provisions, McCarran-Walter took aim at the ideological enemies of the United States by providing for the exclusion or removal of possible Communist infiltrators. The American government retained the power to expel or deport any aliens who were members of, or associated with anarchist, Communist groups, or any movement advocating for the overthrow of the U.S. government. Additionally, because the bill continued low immigration quotas and stringent visa restrictions for those immigrants from Southern and Eastern Europe, its authors believed that they were protecting the United States. Their rationale was that these areas constituted hotbeds of Communism and to allow an increased number of immigrants from these regions would invite Communist infiltrators or sympathizers to threaten the United States from within. This logic ran counter to the beliefs of Harry Truman and other like-minded supporters of American internationalism and humanitarianism.

Such a divergence of opinion lay at the heart of the debate over the McCarran-Walter Act, which led to both Harry Truman's veto of the bill and the subsequent override by Congress in support of the bill. Those who sided with Pat McCarran and Francis Walter fell within what was called the restrictionist element in the American government. Personally, McCarran was highly concerned about Communist infiltrators in the United States and the threat they posed to its national security. He and other restrictionists felt that although America had won World War II, they could still lose the peace if the country let Communism pass through its borders and spread among the populace. To them, immigration policy was equated with American sovereignty and defending the country against Communism. Senator McCarran even went so far as to say that Communists had penetrated international organizations and were taking

advantage of the United States' weak immigration policy to promote seditious activities in the country. The internationalist sentiment promoted by liberals and many conservatives alike in the wake of World War II could leave America vulnerable to fifth-column elements. These fears of Communist expansion seemed to be confirmed and highlighted by the outbreak of the Korean War.

Because of their equation of immigration with national security, restrictionists subsequently felt little sympathy for the oppressed peoples of Europe, including refugees. They denied the need for a broad-spanning humanitarian emphasis in immigration policy, contrary to those who held that such a policy reflected both American ideals and the proper way to promote a positive American image during the Cold War. According to restrictionists, opening the door to an increased number of immigrants from Southern and Eastern Europe would endanger the country and thus the people of these regions continued to be considered undesirable elements as they had been in the past.

Those who stood in opposition to the McCarran-Walter Act represented the liberal internationalist advocates of the time. Among the more notable proponents of this position were Harry Truman and Democratic Representative Emanuel Celler of New York. These people believed that immigration policy was linked to the United States foreign policy and bills like McCarran-Walter could hamper the United States in the prosecution of the Cold War. The inclusion of restrictive measures toward Asians and Eastern Europeans would damage the perception of the United States in the world and make it appear that America considered such peoples inferior. Not only would this damage American credibility as the defender of freedom and equality in the world, but it would desert potential allies in the fight against the Soviet Union and its satellite nations. Furthermore, overpopulation and a growing refugee problem could sap Western Europe's strength and make the region more susceptible to Communism. In short, passage of this bill could not only damage the United States' moral credibility but offset its foreign policy goals in the Cold War. Liberal elements had set forth their own bill for immigration revision, called the Humphrey-Lehman

Bill, which would enlarge quotas, relax immigration qualifications, and redistribute unused quota slots to other countries. Ultimately Congress voted this bill down because it was regarded as insufficient to protect the nation from Communist influence.

In spite of the enmity over these issues, McCarran-Walter did contain some elements regarded as positive by both sides of the debate. The bill created a preference system that allowed individuals with families already in the United States or those with desirable skills to receive precedence for immigration. Alien husbands of American citizens received nonquota status approval for immigration to the United States. Previously, only wives of American citizens could come to the United States without offsetting a country's quota numbers. With respect to naturalization, the category of "aliens ineligible for citizenship" was eliminated, thus allowing all aliens to eventually become U.S. citizens.

Although the bill made some strides in immigration policy revision, Harry Truman vetoed McCarran-Walter after he concluded that it contradicted American ideals and values, particularly in relation to its discriminatory attitude toward the peoples of Asia and Eastern Europe and the retention of the quota system. Truman also found the bill wanting in its view on refugees and humanitarian concerns. Maintaining the quota system did not account for world conditions where immigration from Europe could help the United States in international affairs by recognizing the worth of Southern and Eastern Europeans. Nowhere was this truer, he believed, than in the case of immigrants from nations like Italy, Greece, and Turkey, countries that had joined the United States in NATO to stave off the spread of Communism. Truman found it impossible for the United States to consider itself the benevolent leader of the free world when turning away immigrants escaping Communism in Eastern Europe. Finally, Truman objected to the broad mandate McCarran-Walter provided for the deportation of suspected Communists and anarchists.

Nevertheless, a two-thirds majority of Congress agreed with the spirit of the bill and overrode Truman's veto. Many among them, including the more liberal members, believed it best for the United States to insulate itself from possible infiltration of

undesirables regardless of the foreign policy concerns. After the bill's passage, Truman appointed the Presidential Commission on Immigration and Naturalization whose final report, *Whom Shall We Welcome*, served as a template for the eventual removal of the national origins quota under the Hart-Celler Act of 1965.

McCunn, Ruthanne Lum (1946–)

San Francisco writer Ruthanne Lum McCunn has devoted most of her life to researching and writing about Chinese Americans to counter prevailing stereotypes and correct the historical record. The author of nine books and numerous articles, she is best known for her biographical novels about Chinese American pioneers like Polly Bemis, a slave girl who became a legend in Idaho lore, and Lue Gim Gong, a horticultural innovator in Florida. Her work, which has won many awards, has been translated into 11 languages and adapted for the stage and film.

A Eurasian of Chinese and Scottish descent, Ruthanne was born in San Francisco on February 21, 1946, to Rita Lum Randall from Hong Kong and Robert Drake Drysdale from Idaho. She was the youngest of three daughters. Her father was seldom at home because he was in the merchant marine. Her mother decided to return to Hong Kong when Ruthanne was still an infant. Ruthanne grew up in the Chinese cultural environment of her mother's extended family. Her first language was Cantonese Chinese and she began her formal education in a Chinese school. However, her father decided to enroll her in an English

school when she turned six. Ruthanne recalls being taunted by her classmates for being a “Ching Chong Chinaman,” and the neighborhood kids refused to play with her because she was a “foreign devil.”

At 16, Ruthanne returned to San Francisco for a college education, during which time she worked as a janitor, short-order cook, and waitress to support herself. At 19, Ruthanne met and married Donald McCunn, who was in the navy. She graduated from the University of Texas with a BA degree in English in 1968 and went on to earn a teaching credential from San Francisco State College a year later. The couple then moved to Santa Barbara, where Ruthanne worked as a librarian and elementary school teacher for five years. In 1974, the McCunns decided to make their home in San Francisco. Ruthanne landed a job as an English and bilingual education teacher in the secondary public schools. Then at the age of 30, with the encouragement of her husband, she left teaching to pursue her passion for writing.

Ruthanne wrote her first book, *The Illustrated History of the Chinese in America* (1979), out of necessity after she realized there were no materials about Chinese Americans for classroom use. When she could not find a publisher for the book, she and her husband decided to start their own publishing company, Design Enterprises of San Francisco. Ten years later, the McCunns stopped self-publishing after successfully marketing three more books on Chinese Americans. Her first novel, *Thousand Pieces of Gold* (1981), tells the story of Lulu Nathoy, who overcame poverty and slavery to build a new life for herself in the American West. Based on meticulous research, the novel stays true to history and breaks the stereotype of Chinese women as passive and exotic “China dolls.” The book was twice selected by the Book of the Month’s Quality Paperback Book Club; it was also made into a movie by American Playhouse Films, starring Rosalind Chao and Chris Cooper, in 1991.

Noticing that there were no Chinese American heroes in books for young children, she next turned her attention to filling that gap. Written in English and Chinese with striking illustrations in bold colors, *Pie-Biter* (1983) tells the tall tale of Hoi, a Chinese packer in Idaho whose love for American pies became legendary. The picture book received a Before

Columbus Foundation’s American Book Award in 1984. It was followed by *Sole Survivor* (1985), a biographical novel about ship steward Lim Poon and his survival at sea on a raft for 133 days after his ship was torpedoed in World War II. Based on many hours of oral history interviews with Lim Poon, the novel effectively dispels the myth that Chinese do not value life. It was selected Book of the Month by the Dolphin Book Club. By then, Ruthanne had uncovered many remarkable stories of Chinese Americans who defied the odds in one way or another. She decided to write about 17 of them in *Chinese American Portraits: Personal Histories, 1828–1988*, including such notables as diplomat and educator Yung Wing, railroad baron Chin Gee-hee, and physicians Li Khai Fai and Kong Tai Heong. Published by Chronicle Books, it was selected Outstanding Academic Book by *Choice* in 1990.

For her next book, *Wooden Fish Songs* (1995), Ruthanne employed a unique multicultural and multivocal approach. Plant wizard Lue Gim Gong’s story is told by the three women who knew him best: his mother Sum Jui in China; New England spinster Fanny Burlingame who became his mentor; and Sheba, daughter of a black slave who worked alongside Lue in Florida. The book, which won the Jeanne Farr McDonnell Award for Best Fiction in 1997, was adapted for a stage reading and presented across the country. It was followed by *The Moon Pearl* (2000), a historical novel about three young women who defied cultural norms to forge a powerful sisterhood in nineteenth-century China. Based on actual events that took place in the 1830s and interviews with silk workers in the Pearl River Delta, the book was chosen “The Best of the Best” by the American Library Association in 2002. Her latest book, *God of Luck* (2007), explores the themes of slavery, survival, and family separation from the perspectives of Ah Lung, who was kidnapped by coolie traders and sent to the deadly guano mines in Peru, and his wife Bo See, who never loses hope that they will be reunited. The novel won the Chinese American Librarians Association’s Best Adult Fiction award in 2008 and was a *San Francisco Chronicle* Best Seller.

Ruthanne is the first to research and write about Chinese who served in the Civil War. Her article on

this topic was first published in the 1996 issue of *Chinese America: History and Perspectives*, the annual journal of the Chinese Historical Society of America, which she cofounded. Based on this early research, she has just completed *Chinese Yankee*, the true story of Thomas Sylvanus, who fought in the Union Army and survived nine months of imprisonment in Andersonville.

Ruthanne Lum McCunn has been steadfast in fulfilling her mission as a writer—to explain Chinese American life and culture and give voice to people who have been misunderstood, marginalized, and silenced throughout American history. Her authentic portrayals of Chinese Americans as survivors and activists help to humanize history and advance a better understanding of Chinese Americans and their many contributions to America.

Mehta, Zubin (1936–)

Zubin Mehta is a conductor of symphonic and operatic music and one of the most influential figures in the field of Western classical music.

Mehta was born into a Parsi family in Bombay (Mumbai, India). His father Mehli Mehta was a violinist and founding conductor of the Bombay Symphony

Orchestra and guided him in his early study of the piano and violin. Mehta initially intended to study medicine but abandoned the idea to study music. He entered the Vienna Academy at age 18 to study conducting with Hans Swarowsky and also played the double bass. In 1958 he made his conducting debut in Vienna and also won the Liverpool International Conducting Competition.

Mehta was appointed as the music director of the Montréal Symphony Orchestra from 1961 to 1967 and also the music director of the Los Angeles Philharmonic Orchestra from 1962 to 1978, becoming the youngest conductor to hold a position with a leading orchestra in the United States as well as the first in North America to share a joint appointment with two major orchestras. Under Mehta's directorship, the Los Angeles Philharmonic was transformed from a relatively undistinguished orchestra into a highly reputable ensemble. In 1969 he became the music advisor to the Israel Philharmonic Orchestra and was appointed to be the music director for the orchestra in 1977. In 1981, the Israel Philharmonic Orchestra awarded him the title of music director for life. In 1978, he became the music director of the New York Philharmonic, where he remained until 1991, becoming the longest holder of the position. Since 1985, he has been chief conductor of the Teatro del Maggio Musicale Fiorentino in Florence, Italy.

Mehta has been highly active in conducting opera. He made his *début* as an opera conductor with *Tosca* in Montréal in 1963. He made his Metropolitan Opera *début* with *Aida* in 1965; since then he has conducted at numerous opera houses, including the Vienna State Opera, the Royal Opera House, Covent Garden, La Scala, as well as at the Salzburg Festival. Between 1998 and 2006 he was Music Director of the Bavarian State Opera in Munich.

Mehta is known for his flamboyant and vigorous conducting and theatrical effect. In addition to many performances and recordings of large-scale symphonic music of Bruckner, Strauss, Mahler, and Schmidt as well as operas by Verdi and Puccini, he has led many performances that appeal to the popular taste. In 1990 he conducted the first "Three Tenors" concert with Carreras, Domingo, and Pavarotti in Rome, and joined the tenors again in 1994 at Dodger Stadium in Los Angeles.

Televised worldwide and recorded, these performances made an impact on the popularization of operatic music and turned the three tenors into celebrities.

Mehta also conducted the historic 1992 production of *Tosca* in which each act took place in the actual setting and the time specified in the score. Act I was telecast live from Rome's Basilica of Sant'Andrea della Valle at noon on July 11; Act II was telecast later that evening from the Palazzo Farnese at 9:40 p.m.; Act III was telecast live on Sunday, July 12 at 7 a.m. from the Castel Sant'Angelo, also known as Hadrian's Tomb.

Another of Mehta's innovative, large-scale productions was Puccini's *Turandot*. In collaboration with Chinese film director Zhang Yimou, whose works were routinely banned by the Chinese government at the time, Mehta first produced the opera in Florence then brought it to Beijing. To make the performance "authentic," the opera was staged in its "actual" surroundings in the Forbidden City, and the nine performances used over 300 extras and 300 soldiers (who had no background in music or acting), props, and costumes representing the Ming Dynasty. The making of this colorful, dazzling production was chronicled in a documentary, *The Turandot Project*, directed by Allan Miller. Although Mehta repeatedly makes assertions of "authenticity" in his narration, the film, perhaps inadvertently, highlights the paradox of pursuing cultural authenticity in the production of Puccini's Orientalist opera by staging it in the Forbidden City.

Mehta has conducted performances for audiences around the world, especially those suffering from war and natural disasters. In 1994, he performed the Mozart Requiem, along with the members of the Sarajevo Symphony Orchestra and Chorus at the ruins of Sarajevo's National Library, in a fund-raising concert for the victims of armed conflict and remembrance of those killed in the Yugoslav wars. In 1999, he conducted Mahler Symphony No. 2 ("Resurrection") at the vicinity of the Buchenwald concentration camp in Weimar with members of the Bavarian State Orchestra and the Israel Philharmonic Orchestra sitting alongside each other. For the first anniversary of the Indian Ocean Tsunami in December 2005, he performed with the Bavarian State Orchestra at the Madras Music Academy.

He is also extensively involved in discovering and nurturing musical talents all over the world. With his brother Zarin Mehta, who is currently the president and executive director of the New York Philharmonic Orchestra, he has established the Mehli Mehta Music Foundation in Bombay in 1995. The foundation seeks to promote Western classical music by presenting high-quality performances and providing music education for children. In addition, since the founding of the Buchmann-Mehta School of Music in Tel Aviv in 2005, Mehta has also been significantly involved in its activities. Through a partnership between Tel-Aviv University and the Israel Philharmonic Orchestra, the school develops Israel's young musical talents and prepares them for professional careers.

Mehta has received numerous awards and honors, including honorary citizen of Florence and Tel Aviv; honorary member of the Vienna State Opera, Bavarian State Opera, and Gesellschaft der Musikfreunde Wien; honorary conductor of the Vienna Philharmonic Orchestra, Munich Philharmonic Orchestra, Los Angeles Philharmonic, Teatro del Maggio Musicale Fiorentino, and Bavarian State Orchestra; and the Praemium Imperiale honored by the Japanese imperial family.

Meng, Grace (1975–)

Grace Meng is a lawyer and a former member of the New York State Assembly, representing the 22nd assembly district in Flushing, Queens, New York.

She is the youngest Asian American ever elected to the New York State Legislature and was named one of City Hall's "40 under 40" for being a young influential member of New York City politics in 2008. In June 2012, Meng won the Democratic primary for Congress, becoming the Democratic nominee to represent a House district. And in November, 2012 she won the election and become the first New York State congresswoman, the second Asian American ever elected to the U.S. Congress. (The first Asian American member was Judy May Chu.)

Grace Meng was born on October 1, 1975, in Flushing, Queens, New York. She is one of three children of Jimmy Meng, who was the first Asian American in the New York State Assembly. Born in Shandong province in China, Jimmy Meng lived mostly in Taiwan before he came to the United States as a graduate student of English in 1975. He owns the Queens Lumber Company and the Chung Hwa Book Company in downtown Flushing. Grace Meng graduated from Stuyvesant High School, received her BA degree from the University of Michigan and a Juris Doctor from the Benjamin N. Cardozo School of Law at Yeshiva University. As a lawyer, she previously worked as a partner at Yoon & Kim LLP in New York City.

On September 9, 2008, Meng won the general election with 86 percent of the vote for the member of the New York State Assembly in the 22nd Assembly District that was held at one time by her father. The 22nd Assembly District, which lies east of the Van Wyck Expressway, from the Long Island Expressway to several blocks north of Northern Boulevard, was redrawn after the 2000 Census so that it comprised the Asian American community more completely; it is estimated that Asian voters account for 40 percent of the total population in this area. Jimmy Meng won the election in 2004 and became the first Asian American assembly member in the district. Because of a health problem, he served only one term, from 2005 to 2006, and the position was preceded by Ellen Young, another Taiwanese immigrant. Grace Meng beat Young in 2008 and ran uncontested in 2010. In June 2012, Meng won in the Democratic primary for Congress, becoming the Democratic nominee

to represent a House district and eventually won the election in November 2012.

Meng won the election despite the scandal and pending trial of her father, Jimmy Meng, a former New York State Assemblyman. On July 24, 2012, shortly after she won the Democratic primary and months before the election, Jimmy Meng was arrested and charged with federal wire fraud. The elder Meng took bribes of \$80,000 from a business partner and claimed he would use it to bribe prosecutors in the Manhattan District Attorney's Office to reduce the prison sentence of the partner's state tax crime charges. He was sentenced to one month in jail and a \$30,000 fine in March 2013, after his daughter secured her seat in Congress. Grace Meng currently resides in Flushing with her husband, Wayne Kye, a Korean American who works at the New York University College of Dentistry, two sons—Tyler and Brandon—and a dog—Bounce.

Minami, Dale (1946–)

Dale Minami is a Japanese American attorney and tireless civil rights advocate. He is a founder and partner of the San Francisco law firm, Minami Tamaki LLP,

which is well known as an Asian American law firm serving the interests of the community's minority populations. Dale Minami was also one of the founders of the Asian Law Caucus and of the Asian American Bar Association. Minami is celebrated for his civil rights work in the 1983 overturning of the criminal conviction of Fred Korematsu and the decision in *Korematsu v. United States* (1944). In 1942, Korematsu was imprisoned for refusing to follow the unjust regulations of Executive Order 9066. The Order specifically targeted people of Japanese ancestry. In addition to continuing the fight against policies that are unfairly aimed at racial minorities in the United States, currently Minami also focuses his legal practice in the areas of personal injury and entertainment law.

Minami was born on October 13, 1946, in Los Angeles, California. He attended the University of Southern California for his undergraduate education and then earned his JD at Boalt Hall School of Law at the University of California, Berkeley. Shortly after graduating from UC Berkeley, Minami helped start the Asian Law Caucus in 1972. The organization, based in San Francisco, works for disenfranchised racial minorities and immigrants in cases where civil and human rights are being denied or infringed upon. Two years later, in 1974, Minami cofounded Minami Tamaki LLP. The law firm still thrives today in San Francisco's Union Square.

Minami's activism and tireless commitment to social justice were born from his parents' unjust incarceration during World War II, and his frustration with the denial of equal rights for racial minorities in the United States. His work within the Asian American community and beyond have earned him a significant number of prestigious awards. Recently, he was granted the Citation award, the highest honor given by UC Berkeley's law school. In 2003, he was given the Thurgood Marshall Award by the American Bar Association. Earlier, in 1996, Minami was appointed by President Clinton to be chair of the Civil Liberties Public Education Fund.

In addition to his social activism and personal injury work, Minami has a successful entertainment law practice. He represents Asian American athletes, filmmakers, playwrights, and newscasters. Notable Asian American clients include Olympic gold medal

figure skater Kristi Yamaguchi, Academy Award-winning filmmaker Steven Okazaki, and playwright and film director, Philip Kan Gotanda.

Minami's interest in Asian Americans in the entertainment industry extends beyond the legal field as he was the executive producer for Philip Kan Gotanda's 1999 film, *Life Tastes Good*. Minami is also remembered by many of his peers for being featured in the July 2, 2001, issue of *People Magazine's America's 50 Top Bachelors*. Minami's inclusion in the magazine was groundbreaking for Asian American men as they are often absent from mainstream pop culture publications, especially those focusing on physical attractiveness.

Mineta, Norman (1931–)

Norman Mineta is an American politician of Japanese ancestry. He served as Secretary of Transportation for six years (2001–2006) during the Bush Administration and six months as the Secretary of Commerce for the Clinton administration (2000–2001). Mineta also served for 20 years in the United States House of Representatives (1975–1995).

Norman Yoshio Mineta was born on November 12, 1931, in San Jose, California, to Japanese immigrant parents. The Mineta family operated a prosperous insurance business and was well regarded in the local community. However, like many individuals of Japanese descent, Mineta and his family were forced to shut down the family business and were sent away

Norman Mineta, secretary of commerce during Bill Clinton's administration and secretary of transportation under George W. Bush. (Department of Transportation)

from their native California to an internment camp during World War II. Mineta spent two years of his youth as a detainee at Heart Mountain, Wyoming. The Minetas would eventually return to San Jose to restart their lives.

In 1953, Mineta graduated from the University of California, Berkeley with a degree in business administration. Upon college graduation, Mineta joined the United States Army and served as a military intelligence officer in Japan and Korea between 1953 and 1956. After serving in the military, he returned home to work for his father, who had reopened their insurance agency.

Well regarded in the San Jose community, Mineta was appointed to fill a vacancy on the San Jose City Council Human Relations Commission in 1967. In 1969, he went on to win the San Jose City Council election and in 1971 became the mayor of San Jose. Mineta was the first Asian American to serve as the mayor of a major American city.

After working in San Jose local politics, Mineta was elected as representative to the United States Congress in 1974 and began his 20-year tenure in the House. As one of the few Asian Americans in Congress, Mineta cofounded and served as chair of the Congressional Asian Pacific American Caucus. Moreover, Mineta dedicated a great deal of effort to redress the harsh treatment of Japanese Americans during World War II. The Commission of Wartime Relocation and Internment of Civilians was established in 1978, and Mineta was persistent in pushing the commission investigation. Ultimately, Mineta sponsored the Civil Liberties Act of 1988 with Wyoming's Republican Senator Alan K. Sampson, who Mineta had first met as a detainee in Wyoming. The two politicians became friends and have remained friends since. The Civil Liberties Act, which granted reparation to Japanese Americans interned during World War II, was signed into law by President Ronald Reagan in 1988.

In terms of committee work in Congress, Mineta was a prominent member (chair between 1992 and 1995) of the Public Works and Transportation Committee and chaired the Aviation Subcommittee between 1981 and 1988. Mineta played important roles in most transportation legislations in the 1980s and 1990s. In particular, he worked to increase funding for the Federal Aviation Administration (FAA), sponsored the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA). Mineta's work on ISTEA was important because it changed the process of transportation planning and policies and gave local government control of highways and other mass transit decisions.

After serving 10 terms as House Representative, Mineta resigned his seat in 1995 and the Democrats lost his seat to Republican Tom Campbell in the subsequent special election. Between 1995 and 2000, Mineta worked mainly in the private sector. In fact, Mineta had left Congress to join Lockheed Martin as a vice president. Also, drawing upon his expertise in transportation, Mineta also served as the chairman of the National Civil Aviation Review Commission.

In July 2000, with only six months left in his term, President Clinton asked Mineta to serve as the secretary of commerce. Upon Senate confirmation, Mineta

became the first Asian American to serve on a president's cabinet.

As the Clinton administration transitioned to the Bush administration, Mineta was asked to stay and serve as the secretary of transportation. This was a job that Mineta was extremely well suited for, considering the wealth of experience that he had accumulated as a congressman. Norman Mineta was sworn in on January 25, 2001, and became the fourteenth secretary of transportation. During the eight years of the Bush administration, Mineta would be the only Democratic cabinet member.

As secretary of transportation, Mineta was in charge of more than 100,000 employees, managed a budget of well over \$60 billion, and was responsible for the country's major roadways, waterways, public transit, harbors, and airports. On September 11, 2001, in the wake of the terrorist attack, Mineta issued an order for all flights to land immediately and grounded all air transportation. Furthermore, his order to divert all incoming international flights to Canada was made possible with the help of the Canadian government.

Although Mineta received praise for his swift decisions during the September 11 emergency, the pressing need to provide higher levels of airport and inflight security fell on his shoulders. Mineta played a crucial role in the establishment of the Transportation Security Administration (TSA).

In 2006, Mineta put in his resignation as secretary of transportation. After serving for over five years, he was also the longest serving secretary in the history of the Transportation Department. Later that year, Mineta was awarded the Presidential Medal of Freedom, the nation's highest civilian honor by President George W. Bush.

Although in his 70s when he retired from public service, Mineta took a position as vice chairman of the Washington-based public relations firm of Hill and Knowlton. To honor his hard work and dedication, especially to the transportation infrastructure in this country, the Norman Y. Mineta San Jose International Airport in San Jose was named after him. Highway 85 in California was also named after Mineta.

Mink, Patsy Takemoto (1927–2002)

Patsy Mink was a third-generation Japanese American woman lawyer, rights advocate, and public official from Hawaii whose life was punctuated by a series of firsts. She was the first female student body president in her high school, the first Japanese American woman licensed to practice law in Hawaii, the first Asian American woman elected to Hawaii's Territorial House, the first woman of color elected to the U.S. Congress, and the first Asian American to enter a presidential primary race. Her most celebrated accomplishment, however, was her leadership role shepherding the passage of the Title IX Amendment of the Higher Education Act of 1972 and the tireless efforts to ensure equal rights for girls and women in educational opportunities.

Born on December 6, 1927, in Maui to second-generation, college-educated Neisei parents, Patsy

Matsu Takemoto grew up in an English-speaking household that did not treat her differently from her brother. She attended Maui High School, was elected student body president despite the anti-Japanese sentiment after Pearl Harbor, and graduated as class valedictorian. During her first two years of college at the University of Hawaii, she was elected president of the Pre-Medical Students Club. When attending the University of Nebraska, she engaged the first of many campaigns to challenge institutional racism in student housing and forced the school to rescind its segregation policy. After being rejected by more than a dozen medical schools because of her gender, she attended the University of Chicago law school under its “foreign student quota.” There she met John Mink, got married, and gave birth to daughter Gwendolyn Rachel (Wendy).

The combination of being female, married with a daughter, and Asian American was too much of a liability for her to be hired by a law firm in the early 1950s. After battling a sexist statute to gain eligibility for the bar exam, she became the first woman of Asian descent to enter Hawaii’s bar. The inability to join a law firm in Hawaii prompted her to open one in 1953. She used spare time to reorganize the territory’s first chapter of the Democratic Party and was elected chair of the Young Democrats club.

Disappointed with the work of several legislators, Mink ran for a seat in the territorial House in 1956 and became the first Asian woman to enter the territorial chamber. In the following year, she ran and won a seat in the territorial Senate despite a lack of party support. In 1964, after a second attempt, Mink became the first woman of color elected to Congress, representing Hawaii’s at-large (1965–1973) and 2nd (1973–1977) district. In 1977, after losing her bid to the U.S. Senate, she accepted an appointment made by President Carter as the assistant secretary of state for Ocean and International, Environmental, and Scientific Affairs. Before returning to Congress in 1990 through a special election, she served on the Honolulu city council (1983–1987) and lost her election bids to the governor’s office in 1986 and the Honolulu mayoralty in 1988. She served continuously in the House until her death at age 74 on September 28, 2002, of viral pneumonia brought on by a case of chicken pox.

Because her entry into politics preceded the civil rights and women’s movements, Mink confronted many stereotypes and faced discrimination based on her race, ethnicity, and gender. Her successful campaigns for the territorial Senate and the House were underfunded and disfavored by the Democratic Party, largely in part because she was an outspoken woman of color with an independent mind. Once in office, she introduced and supported legislation to improve early childhood education, women’s pay and access to education, environmental protection, open government, and equal opportunity. She authored the landmark “equal pay for equal work” law in Hawaii while chairing the territorial Senate Education Committee. As a member of the House Education and Labor Committee, she was instrumental in the enactment of Title IX. Written to prohibit discrimination on the basis of gender by educational institutions receiving federal monies, it would have its biggest impact on women’s participation in collegiate sports.

Mink challenged government secrecy in *Mink v. Environmental Protection Agency* (1973) to compel the disclosure of a nuclear explosion plan in Alaska that may have had serious health and other consequences for the nation. The case’s success opened the door for requests and lawsuits to release federal government documents previously withheld from the American people. It was also cited by the U.S. Supreme Court as precedent for the release of the Watergate tapes to the news media that led to Richard Nixon’s resignation as president in 1974. In protest against the Nixon administration’s Vietnam War policy and cutbacks in social programs, Mink made a bold move to enter the Oregon presidential primary in 1972 at the request of a group of progressives most of them were founders of the Oregon branch of the National Women’s Political Caucus. A month before the primary, she generated strong criticism by travelling to Paris to meet with an envoy for the North Vietnamese government.

In the last decade of her political career, Mink was a vigorous advocate on behalf of poor families, especially those headed by women. She was a highly vocal critic of the Republican-led draconian social welfare reform in 1996. She was among the earliest critics of the War in Iraq and the potential loss of civil liberties by the U.S. government’s response to the terrorist

attack on September 11, 2001. In honor of her lifelong campaign to advance women's rights, Title IX Amendment of the Higher Education Act was renamed the Patsy Mink Act a few days before her funeral.

Misaka, Wataru (1923–)

Wataru "Wat" Misaka, a standout college basketball player, broke the color line in professional basketball when he was signed by the New York Knickerbockers in 1947.

Born on December 21, 1923, Misaka grew up in Ogden, Utah, the son of a barber, and attended Weber Junior College. He enrolled at the University of Utah around the time of Pearl Harbor and joined the varsity basketball squad, the Utes. Because he was living in Utah, and outside the West Coast, Misaka was not removed to a government camp following the issuing of Executive Order 9066, though his community welcomed numerous "voluntary evacuees" from the West Coast.

Misaka did not distinguish himself by his play with the Utes until 1944. In March of that year, Misaka and his teammates visited Madison Square Garden to play in the National Invitation Tournament (NIT).

The Utes were defeated by the University of Kentucky Wildcats in the first round. However, the sting of the defeat was relieved when another team was forced to bow out of the NCAA tournament following a group car accident, and the Utes were invited to compete for the championship despite their NIT defeat. They traveled to Kansas City, where they swept their games to win the Western NCAA title, and then returned to New York for the national final against a heavily favored Dartmouth team. With help from Misaka, Utah won a narrow 42–40 victory in overtime.

After a stint in the U.S. Army, Misaka returned to Utah in the postwar years. In the 1946–1947 season, he led the Utes to the NIT once again. This time, however, Utah won their opening game, defeating the Duquesne Dukes 45–44. Misaka clinched the victory with a foul shot in the game's closing moments. In the NIT final, Utah once again matched up against the University of Kentucky and prevailed 49–45 over the Wildcats, avenging the 1944 loss. Misaka, playing small forward, starred on defense, limiting Kentucky's star scorer Ralph Beard to a single point during the first half. With the NIT championship, the Utes became the first-ever team to post a champion in both major college tournaments.

In 1947, Misaka was drafted by the New York Knickerbockers of the Basketball Association of America (two years later, the BAA would merge with a rival league, the National Basketball League, to form the National Basketball Association). Misaka's hiring, which came just months after Jackie Robinson broke major league baseball's color line, drew media attention. Not only was Misaka the first player of Asian ancestry in the infant league, but he was also the first non-white—incredible as it may seem today, there were no blacks in the NBA until Chuck Cooper of the Boston Celtics and the Knicks' own Sweetwater Clifton started in 1950. Misaka opened the season with the team on November 13. However, he played just three games, scoring only seven points, before he was released on waivers on November 25. No explanation was given for the sudden release, which was ordered by new coach Joe Lapchick. Racial issues may have played a role, although Misaka later insisted that he was treated like the other players and did not feel any particular prejudice. At 5'7", he was among the

shortest players in the league, even before the era of 7-footers. Clearly, he was at a disadvantage against taller players in the pros, although he had faced players of equal stature in college. According to Misaka, the Knicks were top-heavy with guards, and he was too short to move to small forward. He was thus expendable.

After leaving the Knicks, Misaka returned West. During a stop in Chicago, he was approached by Abe Saperstein, owner of the Harlem Globetrotters, a celebrated all-black basketball and comedy team, who had seen him play at an exhibition in Hawaii some years earlier. Saperstein offered him a spot as a guard on the Globetrotters. Misaka turned down the offer, however, and returned to the university to complete an engineering degree.

He remains a pillar of the Nisei community in Utah. In 1999, Misaka was inducted into the Utah Sports Hall of Fame. In 2008, a documentary film on Misaka's life, *Transforming: The Wat Misaka Story*, was produced by Bruce Alan Johnson and Christine Toy Johnson. In December 2009, he was honored by the Knicks with a midcourt ceremony. His pioneering basketball career achieved further recognition after he was praised by President Barack Obama in a speech at the White House, and also when another Asian American, Jeremy Lin, began playing for the Knicks in 2011–2012.

Moon Festival

Called "Mid-Autumn Festival" in Chinese, the Moon Festival is one of the most celebrated traditional Chinese festivals. It is held on the fifteenth day of the eighth month of the Chinese lunar calendar, usually

around late September or early October, when the moon is full and bright.

The origin of the Moon Festival can be traced back to moon worships in ancient China. The moon worship is usually held on an autumn night under a full moon. It is believed that a full moon symbolizes a good harvest and success in life. The festival became official in the Tang Dynasty (AD 618–907) and is still celebrated everywhere in China. Outside of China, other southeast Asian countries such as Vietnam, Malaysia, Singapore, and the Philippines also celebrate the Moon Festival, although some refer it as the Lantern Festival instead.

In the Chinese diaspora, the Moon Festival is celebrated with traditional activities and customs. It is the time for family members to get together (the day is also called "Reunion Day") or make family contacts. In the United States, members of the Asian American communities often organize get-togethers. It is common for participants to sing and dance, eat moon cakes, make paper lanterns, write poems, and exchange good wishes during the festival.

The Moon Festival is associated with a popular Chinese legend, "Chang Er Flying to the Moon." Accordingly, once upon a time, there were 10 suns in the form of three-legged birds in the universe, burning human and animal inhabitants as well as crops. To save the Earth, a heroic young archer named Houyi shot down nine of the suns, saving only one to warm the earth. Houyi had a beautiful wife named Chang Er. She mistakenly took a pill of immortality that was presented to Houyi from the immortal Queen Mother of Western Heaven on the fifteenth night of the eighth lunar month, and consequently her body got lighter and lighter, and floated up to the moon where she was to live forever. Heartbroken, Houyi built himself a palace in the sun. Since then Houyi gets to meet Chang Er only once every year, on the fifteenth day of the eighth month, when the moon is fullest and brightest. The story was first recorded in writing in the Han Dynasty (206 BC–220 AD).

Mooncake is served during the Moon Festival. Originated in Central Asia, the mooncakes might have been introduced into China in the Tang Dynasty. The name mooncake and the custom of eating mooncakes for the Moon Festival might have started in the Ming Dynasty (AD 1368–1644). It is said that at the end of

Moon Festival in Boston's Chinatown. (AP Photo/Christopher Pfuhl)

the Yuan Dynasty (AD 1280–1368), a rebellion leader, Zhu Yuanzhang, placed a piece of paper into every mooncake with a message calling an uprising of ethnic Han people to overthrow the Mongolian reign of the Yuan Dynasty on the fifteenth day of the eighth month. The message was spread out as planned. After Zhu established the Ming Dynasty and became its first emperor, eating mooncakes on the fifteenth day of the eighth month became part of the routine of the Moon Festival celebration. The mooncakes are usually baked with bean paste and other sweet fillings, although there are many other variations.

Mori, Toshio (1910–1980)

Toshio Mori is a Japanese American writer best known for his short fiction depicting Japanese American experiences in the 1930s and 1940s. He was born in Oakland, California, to immigrant parents from Otake, Japan. His father had immigrated to the United States in the late 1800s and worked on Hawaii sugar plantations before moving to San Francisco. In 1915, the Mori family—including Toshio's mother and older brothers, who had joined his father by this point—settled in San Leandro, California, and started a nursery farm. Mori worked in the nursery but from high school onward aspired to be a writer. Beginning in his early 20s, he dedicated his nights to writing after working 10 to 12 hour days in the nursery. Mori's work was first accepted in *Coast* magazine, when he was 28 years old. Through this publication, he attracted the notice of author William Saroyan, who encouraged Mori to keep writing. Saroyan later proclaimed him "the first real Japanese American

writer” in his introduction to Mori’s debut collection of short stories, *Yokohama, California*.

Mori’s writing draws on the people and places he knew in California as well as the sociopolitical anxieties of his milieu. In the short story “1, 2, 3, 4, Who Are We For?,” for example, a chat between two men, a Chinese American and a Japanese American, begins with banter about sports and love interests, but is punctuated by an exchange concerning war, patriotism, and race. Much of his work, such as “Sweet Potato” and “Japanese Hamlet,” either gestures toward or directly describes the context of rising tensions between the United States and Japan and accompanying anti-Japanese sentiment. Once the United States entered World War II and initiated the incarceration of Japanese Americans in camps, Mori and his family were held at Tanforan racetrack in San Bruno, California, before being assigned to Topaz, the Central Utah Relocation Project.

In the years leading up to his family’s incarceration in 1942, Mori had published work in magazines such as *The Clipper*, *Iconograph*, *Writer’s Forum*, and *Common Ground*, as well as contributions to the Nisei literary monthly, *Current Life*. The Caxton Printers, Ltd. in Idaho announced plans to publish Mori’s collection, *Yokohama, California*, in 1942, but subsequently delayed publication until 1949. When incarcerated, Mori continued to write, producing “The Man with the Bulging Pockets” at Tanforan, and the novel-length *The Brothers Murata* at Topaz, among other work. At Topaz, he also worked as camp historian and edited an issue of *Trek* magazine entitled *All Aboard*. At the end of the war in 1945, Mori returned to San Leandro and married Hisayo Yoshiwara two years later. Chapters of his novel, *Women from Hiroshima*, were published in *Pacific Citizen* in the 1950s, and the full work appeared in limited edition in 1978. Mori’s second collection of short stories, *The Chauvinist*, was published a year later, with an introduction by Hisaye Yamamoto.

Moua, Mee (1969–)

Mee Moua is a Hmong American politician from the state of Minnesota. Moua is a member of the Democratic-Farmer-Labor-Party. She was a Minnesota state senator from February 2002 to January 2011. A tireless politician, Moua surprised her fellow senators as well as her constituents when she announced in May 2010 that she was retiring and thus not seeking reelection. Moua is the first Hmong American to serve in any state legislature in the United States and the first Asian American woman to serve in the Minnesota legislature.

Mee Moua was born on June 30, 1969, in Xieng Khouang, Laos. She is of Hmong ethnic origins—an Asian ethnic group historically from the mountainous regions of China, Vietnam, Laos, and Thailand. Moua’s family left a war-torn Laos when she was a child and spent three years in a refugee camp in Thailand before finally immigrating to the United States in 1978. In the United States, she attended Appleton High School in Wisconsin and became the first member of her family to master English and go to college. Moua went to Brown University on a scholarship and received her Bachelor of Arts in 1992. She also has a Master of public policy from the Lyndon Baines Johnson School of Public Affairs (University of Texas). In 1997, Moua graduated from the University of Minnesota Law School with a Juris Doctor.

After law school, Moua worked as a young attorney in Twin Cities, Minnesota, and gained some political experience through her uncle Neal Thao’s school board campaign. It was during this campaign that Moua became very involved in the Hmong community and worked tirelessly as a lobbyist for Hmong-business owners. In 2002, Moua decided to run in the special election for the vacant seat of Senator Randy Kelly, who had resigned after his election as St. Paul’s mayor. Moua was successful in her election campaign and became the first Hmong American to be elected to a state-level public office in the United States.

Moua started her first term on February 4, 2002, representing Ramsey County, Minnesota, which includes portions of the city of St. Paul. Since her initial election, Moua has won four consecutive reelections before her retirement announcement in 2010. In the Minnesota Senate, Moua's legislative interests were in the areas of education, housing, economic development, and safety. Moua was a hardworking legislator. Specifically, Moua served on various finance subcommittees and was also the chair of the judiciary committee (2007–2010).

Although sometimes perceived as a rising political star, Moua shocked the St. Paul community in May of 2010 by announcing that she was retiring from the state legislature and would not seek reelection. Although it later came to light that Moua and her family had been facing financial difficulties (including a foreclosure on their home), she did not elaborate on the reasons of her retirement other than the fact that she wanted to focus more time and energy on her family life. She was succeeded in her senate seat by John Harrington, a retired police chief of the city of St. Paul.

Mukherjee, Bharati (1940–)

Bharati Mukherjee is a South Asian American author and professor. She was born on July 27, 1940, in Calcutta to Sudhir Lal and Bina Mukherjee. She spent

much of her childhood in a multigenerational Bengali Brahmin extended family. Her father earned a PhD from the University of London and had a successful business and scientific career in the pharmaceutical industry. Because of that, he moved his family to England in 1948, then Switzerland, and back to India. Bharati Mukherjee attended the Loreto Convent School in Calcutta, and then earned a BA with honors in English from Calcutta University in 1959 as well as an MA in English and ancient Indian culture from Baroda University in 1961. She earned an MFA in creative writing from the University of Iowa, and a PhD in English and comparative literature in 1969.

Mukherjee's formative years had a profound influence on her writing. Although Bina Mukherjee did not receive a formal education, she made sure that all of her children did, sending them to Anglicized Bengali schools and supervising their reading and writing. When in Calcutta, Bharati Mukherjee and her family

Indian American author Bharati Mukherjee. (AP Photo/Marty Lederhandler)

resided in a palatial home within her father's factory compound. Though they were surrounded by material comforts, there was also a phalanx of family around at all times. Not much privacy was afforded, so she turned to reading and writing as a form of escape. The Mukherjees wanted their daughters to seek careers outside their homes and to get the best educations possible but also to return to India for marriage. As a result, Bharati and her sisters received secondary and postgraduate education in the United States, and all three are academics. When she was at the University of Iowa in 1962, Mukherjee's master's thesis was a collection of short fiction, and she was admitted into the doctoral program. In Iowa, she met Clark Baise, a fellow graduate student and Canadian citizen. They married in 1963, halting any probability that Mukherjee would return home to Calcutta, thus marking her, as she has stated, an "accidental immigrant," as she became a naturalized Canadian citizen in 1972. She and Blaise moved to Canada and began their respective teaching careers in Montreal, where she ascended the institutional echelon rapidly, earning a tenured position in 1978 at McGill University. After 14 years in Canada, she found life as a woman of color immigrant to be excruciating, so she and her husband moved to the United States and became naturalized American citizens.

She was writer-in-residence at Emory University, and has taught creative writing at Columbia University, New York University Skidmore College, City University of New York, Queens College, and is currently professor of English at the University of California at Berkeley.

Thus far, Mukherjee's oeuvre comprises novels, short story collections, and a memoir. Her novels include *The Tiger's Daughter* (1971), *Wife* (1975), *Jasmine* (1989), *The Holder of the World* (1993), *Leave it to Me* (1997), *Desirable Daughters* (2002), and *The Tree Bride* (2004). Her short story collections include *Darkness* (1985) and *The Middleman and Other Stories* (1988). She has a forthcoming collection titled *Father*. She coauthored the memoir *Days and Nights in Calcutta* (1977) with her husband, and they also collaborated on *The Sorrow and the Terror: The Haunting Legacy of the Air India Tragedy* (1987). She has also written pieces entitled *Political Culture*

and *Leadership in India* (1991) and *Regionalism in Indian Perspective* (1992) published in the national media. She was the recipient of the National Book Critics Award in 1988 for *The Middleman and Other Stories*.

Mukherjee's works have received widespread acclaim, but she also has come under criticism for what some see as essentializing binaries between the East and West, and reproducing exotic stereotypes of South Asians. Many of her stories deal with an explicit rejection of what she sees as a patriarchal, traditional society of India, and a trepidatious but welcoming foray into the supposedly more empowering, individualistic society of North America. It must be noted that this movement is not endured peacefully, but is comprised of struggle, violence, loss, and psychic traumas. Bharati Mukherjee's characters are presented as survivors, postcolonial subjects who are "born" to be American. She has said that she "feels American" in a deeply fundamental way, whether others view her that way or not. She recognizes brutalities in her work, but the notion of them being survivors makes them American. In her work, some might see a deep nationalism. For example, *The Tiger's Daughter* (1971) draws from her own memories and personal experiences with her family and functions as an exploration and critique of Bengali Brahmin hegemonic practices that she deems archaic. Tara, the protagonist, is a young Bengali woman of privilege who spends seven years in the United States ensconced in academia, only to return home to parental expectations around betrothal. The issue of arranged marriages to suitable, well-educated Indian boys is crystallized in the text and the affluent Indian community that Mukherjee critiques seems to exude an austere unwillingness to change.

One of her best-known works is the novel *Jasmine*, which explores the possibilities of transformation, despite trauma. Situated just after the passing of the 1965 Immigration Act, the story avoids any rhetoric of "the model minority," the protagonist changes and reinvents herself in a quest for an "authentic" self. She is Jyoti, Jasmine, Jassy, Jase, and Jane, first a young widow, moving quickly from one location to another. Each movement and transformation is accompanied by an epistemological violence, and a shifting of space. Jasmine goes from rural Northwest India, to

a city in Punjab, to the swamps of Florida, to Queens, then Manhattan, and finally rural Iowa. With each movement comes a killing of an old self. She is first a widow wanting to commit sati upon the murder of her husband, is raped by a white man in Florida, murders him as Kalimata, the Hindu goddess and protectress of women. She burns her old clothes, emerging from her trauma at a new location, and wanting to move forward.

Despite being taught in canons, including Asian American and South Asian authors, Mukherjee does not adhere to one particular kind of creative descriptor. Her work is published in English, and is read and taught primarily in the United States. Though she has come under fire from postcolonial scholars for depicting South Asian expats in an essentializing manner, her fiction is popular. Her work provides a particular experience to her readers built around expatriation, exile, and immigration, and her narrative skills are undeniable. She gives voice to a wide range of experiences well outside the normative and has been the inspiration for many following her.

Multiracial Asian Americans

In recent American popular culture, many famous and well-known professional athletes and celebrities have been multiracial Asian Americans—Tiger Woods,

Kimora Lee Simmons, Hines Ward, Keanu Reeves, Johnny Damon, Norah Jones, Ann Curry, Kristin Kruek, and Olivia Munn to name just a few. Throughout the years, Asian Americans of mixed racial ancestry have been referred to as multiracial, mixed-race, biracial, "Hapa," and Amerasian, among others. Although these individual multiracial Asian Americans have become prominent in recent years, the presence of Asian Americans of mixed racial ancestry has a long history. However, the political, demographic, and cultural implications of their increasing numbers have only recently emerged for both Asian Americans and non-Asians alike. Furthermore, as American society becomes increasingly diverse, globalized, and transnational, multiracial Asian Americans are poised to occupy a unique position in our country's evolving racial/ethnic landscape.

The Evolution of Mixed-Race Asian Americans

The origin of mixed-race or multiracial Asian Americans can be traced back to the early period of Asian immigration to the United States in the mid-1700s, with large scale migrations common by the mid-1800s, mainly because of the Gold Rush in California and other Western states. Because the vast majority of these early Asian immigrants were men (mostly from the Philippines or China), if they wanted to be in the company of women, these early Asian immigrants had little choice but to socialize with non-Asian women. Eventually, the children from these interracial unions became the first multiracial Asian Americans. In Hawaii, as white settlers from Europe and the United States began to settle there in large numbers in the 1800s, intermarriage between Native Hawaiians and whites also became prominent.

Their multiracial children were called "Hapas," originally meaning half Hawaiian and half white, but these days, Hapa is a common popular culture term that refers to multiracial Asian Americans in general. Together with Pacific Islanders, Native Hawaiians are considered a separate racial group from Asian Americans. Because their ethnic background includes a complex mix of several ancestries, their cultural history is very distinct from that of Asian Americans. As such, this entry will focus only on multiracial Asian

Americans, as other scholars have examined and illustrated the rich and distinctive experiences and characteristics of Native Hawaiians in much more detail.

Eventually, as the numbers of immigrants from Asia began to swell in the mid- and late-1800s, the native white population increasingly began to view their presence in the United States with hostility. Objections were raised concerning perceived economic competition with native U.S. workers that Asian immigrants supposedly posed, along with doubts over whether Asians were cultural and racially compatible with mainstream American society.

This nativist and xenophobic backlash, popularly characterized as the “anti-Chinese movement,” eventually led to several pieces of legislation at the local, state, and federal levels, culminating with the Chinese Exclusion Act of 1882. These laws initially restricted the rights and activities of, Chinese immigrants and were later broadened to include virtually all subsequent immigrants from Asia. Included in these restrictive laws were antimiscegenation provisions that prevented Asians from marrying whites.

These antimiscegenation laws were first passed in the 1600s to prevent freed black slaves from marrying whites. Later versions added persons of Asian origin or ancestry to the list of groups forbidden to marry whites. Although early examples of such antimiscegenation laws singled out those of “Mongoloid” origin specifically, they were later amended to include Filipinos (who claimed that they were of “Malay” origin) and Asian Indians (who characterized themselves as “Aryan” in origin).

One noteworthy exception was the War Brides Act of 1945 that allowed American servicemen to marry and bring back wives from Japan, China, the Philippines, and Korea to the United States. Several thousands of Asian women immigrated to the United States as war brides and their offspring became the first notable cohorts of multiracial Asian Americans. Antimiscegenation laws were finally declared unconstitutional in the 1967 U.S. Supreme Court *Loving v. Virginia* case.

Interracial marriages involving Asian Americans and their multiracial offspring started to increase significantly following the passage of the Immigration and Nationality Act of 1965. This Act replaced the

restrictive National Origins quota system that had been in place for the past four decades and which effectively limited the number of Asian immigrants to a token few each year. In its place, the 1965 Immigration Act was structured around provisions that favored the immigration of family members, relatives, and professional workers. Eventually, these provisions substantially increased the numbers of Asian immigrants coming to the United States, which in turn significantly increased the marriage pool, or the numbers of potential marriage partners, for Asians and non-Asians alike.

The end of the Vietnam War also played an important role in increasing the numbers and visibility of multiracial Asian Americans, in this case “Amerasians”—the children of Vietnamese mothers and American G.I.s who served in Vietnam. After the fall of Saigon and the reunification of Vietnam in 1975, several thousand Amerasians were left behind as all remaining American personnel were evacuated. After enduring systematic discrimination and hostility back in Vietnam as direct legacies of the United States involvement in the war, the Vietnamese Amerasian Homecoming Act of 1988 allowed approximately 25,000 Amerasians and their immediate relatives to immigrate to the United States.

Patterns of Interracial Marriage among Asian Americans

As American society becomes increasingly diverse, globalized, and multicultural, this phenomenon of Asian American intermarriage has received much public and academic attention in recent years. Because most multiracial Asian Americans are the offspring of interracial marriages (also known as intermarriage) involving Asian Americans, it makes sense for us to examine this phenomenon in more detail. In particular, many sociologists and psychologists have analyzed why Asian Americans choose to intermarry with whites, the primary spouse of choice in exogamous marriages.

One theory emphasizes that from the point of view of the Asian American who’s marrying a white person (overwhelmingly the most common form of Asian American intermarriage), such a union would be the ultimate form of assimilation and signifies full

acceptance by white society. Therefore, an Asian American may marry a white person because s/he (consciously or unconsciously) wants to be fully accepted in white society. However, to many people, this theory sounds rather condescending because it presumes that the only reason why an Asian American would marry a white would be to fulfill a need for acceptance.

The related theory of hypergamy suggests that Asian Americans marry whites to increase their social status, because whites generally occupy the highest sociocultural position in the United States' racial hierarchy. In other words, even if a working-class Asian American marries another working-class white, her social status will still improve, compared to if she married someone else in her ethnic group or even another Asian. A further potential motivation from the Asian American spouse's point of view is the conscious or unconscious desire to escape or abandon his/her Asian identity (or at least the stereotypes and stigmas that are associated with being Asians), in favor of identifying with the majority group.

Another issue within this dynamic, particularly as it relates to the motivation of whites to marry an Asian American, is how Asian women are frequently fetishized. Historically, it was very common for Asian women to be portrayed as docile, subservient, exotic, mysterious, and/or seductive. These images can be traced back to Chinese prostitutes who were "imported" to the United States back in the 1800s and through the prevalence of war brides after World War II. Furthermore, these images continue to be reinforced and perpetuated in the media as television shows and movies consistently pair Asian women with white males as romantic leads.

Many critics of Asian American intermarriages argue that this stereotype or fetish of Asian women can be a significant reason why many males (particularly white males) are attracted to Asian women. In this sense, Asian women are not seen as equal partners but, rather, as sexual objects to be controlled and used by the male, or are merely manifestations of a fantasy that's been perpetuated and reinforced in popular culture.

Critics further point out that rarely do you see the opposite happening—Asian males being the subjects

of infatuation or sexual desire by white women. Such critics would point out that Asian males have been and continue to be purposely portrayed as nonsexual martial arts experts, nerds and geeks, or evil villains and that this portrayal serves to eliminate Asian males as potential rivals to white males for the affection of Asian women. These critics also note that it is the saddest irony when Asian women either allow themselves to be objectified and fetishized or when they buy into and accept these demeaning portrayals of Asian men and eliminate them as potential partners.

However, these distorted perceptions and motivations do not necessarily apply to most interracial relationships. In fact, what these criticisms do not mention is why Asian Americans sometimes marry within their ethnic group. That is, many young Asian women (particular immigrants) are pressured into marrying within their own ethnic group by family members and cultural traditions.

Criticisms against interracial marriages also do not address the traditional patriarchy and sexism that still exists within many Asian cultures, which regard Asian women as merely possessions. Additional factors within traditional Asian families that may mitigate outmarrying include expectations of obedience and deference to parental authority, focusing on the child's academic performance and professional preparation rather than social activities, and/or expectations that the child will care for his/her parents in old age.

Furthermore, when the primary motivation for such cross-racial unions (involving whatever racial/ethnic combinations) include love, individual compatibility, and perhaps the desire to broaden the exposure and acceptance of Asian/Asian American culture to the rest of mainstream society, interracial dating and marriage can in fact be a very powerful force for greater acceptance and equality across racial/ethnic groups in American society.

Interracial marriages involving Asian Americans became prominent after World War II as a result of American soldiers bringing home war brides from Asia. These days, interracial marriages among Asian Americans are very common. In fact, several studies show that Asian Americans have some of the highest rates of outmarriages (marrying interracially) among all racial/ethnic minority groups. Keeping in mind that

Table 1. Race/Ethnicity of Spouses among U.S.-Raised Asian Americans, by Gender and Ethnic Group (2000)

	Asian Indian	Chinese	Filipino	Japanese	Korean	Vietnamese
Husbands

Universe: Both husband and wife are U.S.-raised (1.5-generation or higher).

Percentage within each Asian group are in parentheses.

All Asian ethnic groups are monoracial and non-Hispanic.

Pan-Asian can include part-Asian, Native Hawaiian, or Pacific Islander spouses.

Endogamous, Other Asian American, White, and Blacks are non-Hispanics; Hispanics can be of any race.

exact data vary by statistical methodology and data source, Table 1 shows outmarriage rates for the six largest Asian American ethnic groups in 2000, where both spouses are U.S.-raised (either born in the United States or immigrated to the United States before age 13). The data show the percentages of Asian American husbands and wives who have an endogamous (same ethnicity) spouse, a pan-Asian spouse (Asian of a different ethnicity), or a non-Hispanic white, non-Hispanic black, or Hispanic spouse.

The results from Table 1 indicate two distinct patterns. First, there is a significant gender difference—Asian American women are consistently much more likely to outmarry than Asian American men. Second, there are notable ethnic differences—among Asian American husbands, Filipinos are the most likely to outmarry whereas Vietnamese husbands are the least to do so. Among Asian American women, Korean and Filipinos are the most likely to outmarry. In fact, U.S.-raised Korean American and Filipino American women are more likely to marry outside of their ethnic group than to marry within their own group. Among Asian American men and women who marry outside of their own ethnic group, except for Vietnamese American men, the vast majority of them marry a

white spouse. When it comes to having a black spouse, the group most likely to do so by gender are Asian Indian men and Filipino men. Furthermore, both Filipino American men and women are the most likely to have a Hispanic spouse, which is not surprising given the Philippines' history of Spanish colonialization. Finally, recent sociological research shows that since 1990, there has actually been a decline in intermarriages between Asian Americans and whites and, conversely, large increases in marriage between U.S.- and foreign-born Asian Americans, both mono-ethnic and pan-Asian.

To delve into the intersection of Asian American interracial marriage and social class in more detail, research has analyzed how various socioeconomic measures are associated with whether an Asian American husband or wife has a spouse who is endogamous (of the same ethnicity), pan-Asian (Asian but of a different ethnicity), or white. The results of such studies generally show that Asian American husbands and wives with higher levels of social class attainment (in terms of having at least a college degree, a high-skill occupation, and personal income) are much more likely to marry outside of their own ethnic group, either to an Asian American of a different ethnicity or

Table 2. Demographic Summary of Monoethnic, Multiethnic, and Multiracial Asian Americans, 2000

	Total Number		
Total U.S. Population			281,421,906
Asian: Monoethnic, Multiethnic, and Multiracial			11,898,882
	Monoethnic	Multiethnic	Multiracial

more commonly, to someone who is white. In other words, U.S.-raised Asian Americans with higher social class characteristics are generally more likely to have a spouse who is white or Asian of a different ethnicity, whereas their counterparts with lower social class characteristics are more likely to marry endogamously, within their own ethnic group.

Demographics and Socioeconomic Characteristics of Multiracial Asian Americans

Efforts to get an accurate national count of multiracial Asian Americans have been stymied in previous censuses because respondents could not choose more than one racial/ethnic identity. However, for the 2000 Census, the Census Bureau reversed its policy and allowed respondents to identify with more than one “race,” finally allowing researchers to get a reliable count of the number of multiracial Asian Americans in the United States.

As shown in Table 2, according to the 2000 Census, 10,242,998 of the 281,421,906 people living

in the United States identified themselves as entirely of Asian race (3.6%). Additionally, there were 1,655,830 people who identified themselves as being part Asian and part one or more of other races. Also as shown in Table 2, the largest group by far of multiracial Asians is half-Asian and half-white. That is, of the approximately 1.8 million Americans who identify as half-Asian and half one or more other races, 52 percent are half-Asian and half-white. If we include all multiracial Asian Americans as their own “ethnic” group, they would be the fourth-largest group, comprising 8 percent of the entire Asian American population. Multiracial Asian Americans would also be the fastest-growing group as well. In fact, demographers predict that by the year 2020, almost 20 percent of all Asian Americans will be multiracial and that figure will climb to 36 percent by the year 2050. In other words, as intermarriages involving Asians increase, multiracial Asians are becoming a more prominent group within the Asian American community and within mainstream American society in general.

Table 3. Demographic and Social Class Characteristics of Multiracial Asian Americans, 2007

	Sample Size (Average Age)	% Homeowner	% College Degree	% Advanced Degree	% High Skill Occupation	Median Personal Income
Multiracial Asian Americans						
Asian-White	3,234 (20.5)	72.9	43.1	5.7	36.9	\$42,500
Asian-Black	421 (22.7)	60.8	32.1	3.5	28.8	\$40,476
Asian-Hispanic	823 (28.5)	67.3	24.1	2.3	24.4	\$34,688

Monoethnic						
Asian Indians	15,602 (32.0)	68.1	70.8	12.9	61.8	\$60,208
Chinese	20,403 (37.3)	72.5	55.0	11.2	49.9	\$46,548
Filipinos	16,587 (38.2)	75.6	49.8	4.6	35.9	\$40,476
Japanese	6,889 (47.9)	73.7	45.9	4.9	42.3	\$50,595
Koreans	8,221 (35.7)	63.4	53.8	8.2	37.8	\$40,476
Vietnamese	8,805 (34.8)	75.3	29.5	4.0	29.8	\$35,417
Whites	1,530,563 (41.6)	82.0	30.5	3.5	30.0	\$40,476
Blacks	182,816 (35.9)	57.3	17.7	1.6	18.5	\$31,369
Hispanics	202,390 (29.6)	60.9	14.2	1.7	14.4	\$27,321
Native American Indians	14,096 (34.7)	67.8	13.4	3.4	18.9	\$30,357

Universe: 25 years or older, except for Advanced Degree (30 years or older); currently employed for High Skill Occupation and Median Personal Income. Average age encompasses all ages.

All Monoracial and Multiracial groups are Non-Hispanic, except for Asian-Latino and Latinos.

Source: Census 2007. Public Use Microdata Sample (PUMS). American Community Survey.

Among specific Asian ethnicities, the Census data in Table 2 shows that 30.7 percent of those who identify as at least part Japanese are multiracial, the highest proportion among the six largest Asian American ethnic groups. Next are Filipinos (21.8 percent of whom are multiracial), Chinese (15.4 percent), Korean (12.3 percent), Asian Indian (11.6 percent), and Vietnamese (8.3 percent). It also shows that multiethnic Asian Americans are a notable part of the total Asian American population. For example, if we consider monoethnic and multiethnic Asian Americans together as one “Mono-Asian” group, multiethnics comprise 6.5 percent of the Japanese American group, with Vietnamese American multiethnics second at around 4 percent (a noteworthy proportion given that Vietnamese have only been in the United States in large numbers for less than 35 years).

In terms of their socioeconomic characteristics, Table 3 presents 2007 Census data showing selected

measures of socioeconomic attainment among the major multiracial Asian American racial combinations and again with comparisons to the six largest monoethnic Asian American ethnic groups. The social class measures are presented as the percentage of respondents who are homeowners, have a college degree or higher, have an advanced degree (a law, medical, or doctorate degree), have high-skill occupations (executive, senior management, technical, or professional), and median personal income (also known as per capita income).

The results show that among multiracial Asian Americans, those of Asian-white identity tend to have the highest social class attainment levels. For example, their rates of homeownership are 8 percent higher than those of Asian-Hispanic identity, 27 percent higher than Asian-blacks in terms of college degree attainment, 50 percent and 21 percent higher than those of Asian-Multiple identity (Asian with two or more races)

when it comes to having an advanced degree and a high-skill occupation, respectively, and 5 percent higher than other multiracial Asian Americans in terms of personal income. Those of Asian-white identity also compare favorably to monoethnic Asian Americans as their social class attainment levels would generally put them in the middle of rankings that include the six largest monoethnic Asian American ethnic groups. Those of Asian-white identity have higher social class attainment levels than monoracial whites in terms of percentage with at least a college degree and an advanced degree, percentage with a high-skill occupation, and median personal income. This last finding on personal income is notable because whites have the highest personal income levels of the major racial groups, including Asian Americans. As such, we might expect incomes for Asian-whites to fall between those for Asian Americans and whites but, in fact, they are above both groups.

The other multiracial Asian American groups (Asian-black, Asian-Hispanic, and Asian-Multiple) also tend to show higher-than-average levels of social class attainment compared to monoracial whites, blacks, Latinos, and Native American Indians, although not quite as high as most monoethnic Asian American ethnic groups. We should keep in mind that as shown in Table 3, multiracial Asian Americans tend to be significantly younger than their monoethnic counterparts. In fact, the oldest multiracial Asian American group in terms of average age (Asian-Hispanic) is still younger than the oldest monoracial group (Latinos) and 3.5 years younger than the youngest monoethnic Asian American group (Asian Indians). With this in mind, the aggregate social class attainment levels of multiracial Asian Americans—particularly those of Asian-white identity—are actually quite notable. Keeping in mind that the results from Table 3 includes only respondents who are at least 25 years old, the social class attainment levels of multiracial Asian Americans in general (and particularly those of Asian-white identity, whose average age in general is 20.5 years) are likely to gradually increase as they get older, more educated, and progress through their professional careers.

Furthermore, the population numbers of multiracial Asian Americans will almost certainly continue

increasing at high rates. Even by the early 1990s, interracial marriages between all the races had led to an “interracial baby boom” with journalists noting that “between 1968 and 1989, children born to parents of different races increased from 1 percent of total births to 3.4 percent.” Regarding the Asian American population specifically, demographers predict that by the year 2020, almost 20 percent of all Asian Americans will be multiracial and that figure will climb to 36 percent by the year 2050. In other words, as intermarriages involving Asians increase, multiracial Asians are becoming a more prominent group within the Asian American community and within mainstream American society in general.

All Mixed Up?

Traditionally, multiracial Asian Americans, like many other multiracial individuals, have been looked upon with curiosity and/or suspicion by both sides of their ancestry and the rest of society. In the past, the racist “one drop rule” dictated that anyone who even had any trace of non-white ancestry (i.e., a single drop of non-white blood) was “colored” and therefore non-white. To a certain extent today, many Americans still see multiracial Asian Americans as “half-breeds” and don’t consider them to be truly white, black, or even truly American.

On the other hand, many in the conventional Asian American community also do not consider multiracial Asian Americans to be truly “Asian” and, rather, see them as “whitewashed.” Politically, many worry that the Asian American community will lose government funding if people who previously identified themselves as solely Asian now identify themselves as multiracial. In other words, many multiracial Asian Americans still face distrust and even hostility from both their Asian and non-Asian sides.

Sociologists argue that one of the defining characteristics of the U.S. racial/ethnic landscape is the tendency for Americans, white and non-white alike, to prefer a sense of clarity when it comes to racial/ethnic identity. In situations where the racial/ethnic background of a person cannot be immediately identified, many Americans become uncomfortable with this cultural ambiguity. This may help to explain the

traditional emphasis on prohibiting the “mixing” of different races, a motivation that continues to drive many neo-Nazi or white supremacist ideologies.

As a result of these cultural dynamics, many (although certainly not all) multiracial Asian Americans encounter difficulties in establishing their own ethnic identity as they try to fit into both the Asian American community and mainstream American society. As many multiracial Asian American writers have described, as they grow up, they are frequently caught between both sides of their racial/ethnic background. Frequently this involves feeling alienated, marginalized, and that they do not legitimately belong in either community, Asian or non-Asian.

Moving Forward and Forging a New Identity

However, as American society becomes increasingly culturally diverse, globalized, and transnational in the twenty-first century, new avenues are opening up and being created for multiracial Asian Americans to assert their own unique identity. As one example, Shih and Sanchez recently found that multiracial Americans from various racial combinations are frequently happiest and best-adjusted when they identify with both/all of their racial identities. Their research found that multiracial children who identified with multiple racial identities reported much less emotional stress than those who identified with a single racial identity, regardless of whether the racial identities included “low-status” groups like African Americans or “high-status” ones such as whites. The authors argue that identifying with just one racial identity frequently leads multiracial children to encounter various difficulties in their attempts to “pass” as a member of that single racial group, whereas they develop a sense of ownership and pride when they create their own social framework for fitting in that is based on synthesizing their unique and multiple characteristics.

In other words, multiracial Americans are finding benefit and happiness when they actively shape their own identity rather than waiting around and letting others dictate to them what their identity should be. As it turns out, monoethnic Asian Americans (and Latino Americans) have been doing something like this for many generations, as they reconcile and

negotiate their own identities as both Asian and American. In this sense, we might say that multiracial Americans are now going through the same process that Asian Americans have been going through for years.

Pointing this out does not diminish or minimize the demographic and cultural emergence of multiracial Americans. Rather, it acknowledges that monoethnic Asian Americans and multiracial Americans share a common process of actively shaping their identities through combining elements from diverse cultures can help these communities connect with one another. This is especially important as the racial dynamics in American society continue to evolve and, from time to time, lead to confusion and even conflict. In such times of cultural adjustment, it’s always helpful to have similarities that can bridge any such differences.

Finally, as the American economy evolves domestically and globally, issues associated with social class and economic stability are also likely to become a prominent concern for many Americans, individually and institutionally. Within this context of demographic, economic, and cultural change and understanding that the twenty-first century is likely to be very different from the previous century, Americans from all backgrounds may have little choice but to gradually adapt to the age of diversity and global interconnectedness. One of the ways in which they can adapt is to accept the idea that the definition of an American, or who qualifies to be an American, should be expanded. In the past, the traditional image that most Americans and others around the world associated with an “American” was white, middle class, and Protestant. But as the face of American society continues to evolve and diversify, this traditional image is slowly fading away. In its place is an amalgamated and pluralistic image of the many faces of who Americans are in this new century.

Furthermore, this expanded image of who is an American includes not just a sense of emotional attachment and patriotic loyalty to the American nationality, but also involves contributing to greater economic stability and prosperity for the American society. With this in mind, multiracial Asian Americans are poised to make significant contributions to rebuilding the American economy and helping it become more

competitive in the twenty-first century, particularly considering that their socioeconomic attainment levels and accomplishments are quite remarkable given their young average age. As multiracial Asian Americans grow older and become more established in their professional careers, combined with their rapid population growth, they are poised to make notable contributions to the American economy in many ways.

Just as important, however, will be their cultural contributions—by serving as valuable facilitators in connecting different racial groups and nationalities. Keeping in mind the recent study showing the positive benefits when multiracial Americans create their own identities that incorporate diverse elements from all their racial backgrounds, multiracial Asian Americans can play an important role in bridging the cultural gaps between Asians and Americans, or between Asian Americans and whites, blacks, Latinos, and Native American Indians. In other words, multiracial Asian Americans are likely to play a prominent role in shaping the evolving American identity of the twenty-first century. In that respect, their “uniqueness”—or more specifically their diverse collection of cultural and racial ties—is likely to emerge as an asset, rather than a liability, as they help lead American society forward into a new demographic, political, economic, and cultural era.

Multiracial/Multiethnic Experience in Hawaii

Depending on how one defines the term, Hawaii has been a multiracial place since at least the arrival of Captain James Cook in 1778—or even before, if one takes into account early Tahitian voyagers circa 1100 CE and the possibility of Spanish visitors in the 1500s. With the opening of Hawaii to the rest of the world, ports like Honolulu on the island of O‘ahu and Lahaina on Maui became multiracial communities by the early nineteenth century.

Interracial relations became more common throughout the nineteenth century as missionaries, merchants, and sailors settled more permanently and intermarried with Native Hawaiian ali‘i (chief and chiefesses) as well as maka‘āinana (commoners). Among the most well-known intermarriages were those of Kamehameha the Great’s advisors—sailors Isaac Davis and John Young—who married Native Hawaiian ali‘i women. One of Young’s granddaughters married Kamehameha IV and became Queen Emma—a popular political rival of King Kalākaua in the 1870s. At the end of the nineteenth century, the international community took note of Princess Victoria Kai‘ulani—a possible heir to the throne, who was the daughter of Miriam Likelike (a sister of King Kalākaua) and Archibald Cleghorn of Scottish ancestry. Many commented on her beauty—including family friend, Robert Louis Stevenson, who described her in the poem, “To Princess Kaiulani” as “Light of heart and bright of face: The daughter of a double race.”

During the mid- to late-nineteenth century, the growth of sugar plantations and the simultaneous

decline of the Native Hawaiian population led to the importation of immigrant laborers mainly from East Asia but also from selected locales in Europe and other parts of the Pacific. Chinese laborers arrived in large numbers in the 1850s followed by the Portuguese in 1878 and then the Japanese in 1885. Smaller groups of laborers were also recruited from Spain, Norway, Russia, the Ukraine, the Gilbert and Caroline Islands, and other places. As the number of Native Hawaiians dwindled because of exposure to new diseases, declining fertility, and high infant mortality, Hawaiians out-married more frequently. The most common pairings during this period were Native Hawaiian women with white or Portuguese men and Hawaiian women with Chinese men. In some parts of the islands, there were fewer Hawaiian men available for marriage due to their shorter life spans and their outmigration for work at sea or in the American West. Movement off the plantations and into other rural or urban settings often continued the trend of outmarriage for some groups—especially as individuals came into contact with one another through work, school, and recreational activities.

Annexation to the United States in 1898, supported by sugar planters of American ancestry, allowed for continued growth of the plantation system in Hawaii. New laborers from the Philippines and Puerto Rico—places annexed to the United States as well after the Spanish American War—were now more readily able to immigrate to the Territory of Hawaii. Korean laborers also arrived in the first decade of the twentieth century, thus bringing another racial/ethnic group to intermarry in the islands.

By the 1920s and 1930s, scholars like Romanzo Adams and Andrew Lind at the University of Hawaii were beginning to carry out studies of multiracial/multiethnic Hawaii, describing it as an interesting “laboratory of race relations” where racial harmony prevailed for the most part. Both Adams and Lind had trained under well-known scholar Robert E. Park as part of the so-called Chicago School of Sociology that took a particular interest in studying matters of race, ethnicity, immigration, and social organization.

Hawaii was of great interest because its location as a meeting ground for East and West. Its relative isolation until the late eighteenth century also allowed for

patterns of demographic change to be studied more precisely with the arrival of successive immigrant groups. Also, unlike other states and territories in the United States, Hawaii never developed an antimiscegenation law, alien land law, or other legal restrictions that would have hampered interracial marriages and family formation.

World War II brought hundreds of thousands of military personnel, defense workers, and their families to Hawaii in the 1940s, which created new opportunities for interracial romance and marriage in the islands. One new arrival was James Michener who wrote of interracial romances between servicemen and Asian or Pacific Islander women in his books like *Hawaii* (1959) and *Tales of the South Pacific* (1947). The offspring of such marriages, whom Michener called “Golden Men,” were allegedly comfortable both in the modern ways of America and the ancient ways of Asia.

In the post-World War II, Cold War era, leaders like President John F. Kennedy boasted that in terms of civil rights and race relations: “Hawaii is what the United States is striving to be.” In the early 1960s, the federally funded East-West Center brought students from around the world to the University of Hawaii campus—among them was Stanley Ann Dunham, a white woman from Kansas, who met and married a student from Kenya, Barack Obama, Sr. Their son, current U.S. President Barack Obama, was born in Honolulu on August 4, 1961, and is probably the islands’ best known person of multiracial ancestry.

At times, changes in Census classification have made it difficult to trace demographic shifts in Hawaii’s multiracial/multiethnic character. Kingdom of Hawaii Censuses and U.S. Censuses for Hawaii from 1853 to 1960 have counted “Hawaiians” as well as “Part-Hawaiians,” but in most other cases the mixing of other racial/ethnic groups has been difficult to trace precisely.

Nevertheless, recent U.S. Censuses have allowed for individuals to self-select more than one “race.” Nearly one-quarter of all Hawaii residents who responded to Census 2010 indicated that they were more than one race, thus making it the state with the largest multiracial population by far. For island residents younger than 18 years old, 41.3 percent

identified two or more races. By comparison, only 2.9 percent of the U.S. population as a whole identified as being of more than one race.

As of 2010, nearly one out of three marriages in Hawaii is interracial—four times the U.S. national average. The most common combination for 2010 was “Asian and Hawaiian or other Pacific Islander.” It should be noted as well, however, that the intermarriages are often interethnic rather than solely interracial per se. Indeed, more than half of all the marriages in the islands are interethnic according to the State of Hawaii Health Department data (which include the ethnic backgrounds that couples designate on their marriage licenses). Interethnic relations—often among Asian ethnic groups within the racial grouping of “Asian”—were common during the plantation era, and the general pattern of interethnic mixing seems to be continuing.

Mura, David (1952–)

A third-generation Japanese American (Sansei), David Mura is a performance artist and writer who engages in multiple genres. His published works include several collections of poetry, one novel, two memoirs, and numerous plays and essays. Much of Mura’s writing explores the intricate and complex interconnections between race, history, memory, Asian American masculinity, and sexuality, extending and complicating issues that have been addressed by earlier generations of Asian American male authors such as Carlos Bulosan, Frank Chin and Shawn Wong.

Born David Uyemura in June 1952, Mura spent most of his childhood and young adult life with his family in the suburbs of Chicago in a primarily Jewish community. His father, Tom Mura, who worked as a reporter for the International News Service (INS), changed the family name from Uyemura to Mura when David was seven years old to get “better bylines” at his job as Tom found that most people had difficulty pronouncing his Japanese last name (*Body* 55). David Mura’s parents have both lived in internment camps during World War II, and they have been reluctant to discuss their experiences in the camps with their children. As a writer, Mura explores the roots and implications of his parents’ silence toward the camps and tries to excavate and reimagine that part of his family history that has been buried. Mura’s writings demonstrate how the history of the internment continues to impact contemporary Japanese American life.

The discovery of a *Playboy* magazine in his parents’ closet when he was in junior high marks the beginning of David Mura’s exploration of the connections between race and sexuality. Mura’s critique of the ways in which Asian American men have been emasculated by the dominant culture and his desire to articulate the connection between the history of the internment camp and the formation of his sexuality and desire as a Sansei constitute some of the central themes of his writing.

Mura received his BA from Grinnell College and an MFA in creative writing from Vermont College. Much of his college years and the beginning of his

graduate career were marked by his addiction to pornography, binge drinking, and bouts of depression, as he struggled with his self-image as a Japanese American man. Mura recounts these experiences in his 1996 memoir *Where the Body Meets Memory: An Odyssey of Race, Sexuality and Identity*.

In 1984, Mura received a U.S./Japan Creative Artist Exchange Fellowship while working as an arts administrator for the Writers-in-the Schools program in Minnesota. His one-year fellowship in Japan resulted in the publication of his first memoir: *Turning Japanese: Memoirs of a Sansei*, which won the Josephine Miles Book Award from the Oakland PEN and was listed among the *New York Times* Notable Books of Year in 1991.

Mura has written three collections of poetry. The first, *After We Lost Our Way*, won the 1989 National Poetry Series Contest. His second collection, *The Colors of Desire*, published in 1995, won the Carl Sandburg Literary Award from the Friends of the Chicago Public Library. His third book of poetry, *Angels for the Burning*, was published in 2004. Mura has also published the chapbook, *A Male Grief: Notes on Pornography & Addiction*, and a collection of critical essays entitled *Song for Uncle Tom, Tonto & Mr. Moto: Poetry & Identity* was published by the University of Michigan Press in its Poets on Poetry series in 2002. With the publication of his first novel *Famous Suicides of the Japanese Empire* in September 2008, Mura's work continues to illumine the relationship between discourses of race, masculinity, and desire.

As a performance artist and playwright, Mura has worked with African American writer Alex Pate. Together they have created and performed a multimedia performance piece, *Secret Colors*, which depicts their lives as men of color and explores Asian American-African American relations. A film adaptation of this piece, *Slowly, This*, was broadcast in the PBS series ALIVE TV in July/August 1995. Mura has also been featured on the PBS series, *The Language of Life*. His other performance pieces and plays include, *Relocations: Images from a Sansei*, *Silence & Desire*, and *After Hours*.

Mura has received a Lila Wallace-Reader's Digest Writers' Award, a U.S./Japan Creative Artist Fellowship, two NEA Literature Fellowships, two Bush

Foundation Fellowships, four Loft-McKnight Awards, several Minnesota State Arts Board grants, and a Discovery/The Nation Award.

Aside from his writing career, Mura is also a teacher and has an active presence in various literary and artistic communities. He has taught at the University of Minnesota, St. Olaf College, the University of Oregon, the Loft Literary Center, and the Voices of the Nation Association writers' conference. He cofounded the Asian American Renaissance, an Asian American arts organization and served as its artistic director. Currently, he teaches at Hamline University, VONA (Voices of the Nation Association), and the Stonecoast MFA program. Mura frequently gives readings and presentations at educational institutions, businesses, writers conferences and other organizations throughout the United States. David Mura currently resides in St. Paul, Minnesota, with his wife and their three children.

Murayama, Milton (1923–)

Milton Murayama is an American Nisei author and playwright, and a pioneer in local Hawaiian literature. He is the author of *All I Asking for Is My Body* (1975), *Five Years on a Rock* (1994), *Plantation Boy* (1998), and *Dying in a Strange Land* (2008). He has also written and produced two plays, *Yoshitsune* (1977) and an adaptation of *All I Asking for Is My Body* (1989). Murayama is known as one of the first writers to transcribe pidgin and Japanese in English-language literature. His work has been given a considerable

amount of critical attention within Asian American studies and Hawaiian local literature.

Murayama was born in 1923 in Lihana, Hawaii, to a Japanese family that emigrated from Kyushu, Japan. When he was a child, his family moved to a sugar plantation camp in Pu'ukoli'i, a small town comprised of several hundred workers and their families, which no longer exists today. His experiences in that environment provide much of the content for his novels. Following his graduation from Lahailuna High School in 1941, Murayama enrolled in the University of Hawaii. Though he initially enlisted and served in the Territorial Guard, in the aftermath of Pearl Harbor, like other Japanese Americans, he was discharged. Yet, this act did not prevent Murayama from volunteering to serve in the U.S. Army's Military Intelligence Service (MIS) in 1944. As a native speaker of Japanese, he acted as a translator in the China-Burma-India Theater, where he completed a tour in Taiwan to aid in the surrender and repatriation of Japanese troops.

Upon his return to the United States in 1946, Murayama completed his BA in English and philosophy from the University of Hawaii in 1947. Under the G.I. Bill, he completed his MA in Chinese and Japanese at Columbia University in 1950. Following his graduation, he moved to Washington, D.C. and worked at the Armed Forces Medical Library from 1952 to 1956. To facilitate his writing, which he felt he needed to invest more time in, he moved to San Francisco, where he worked first at the public library and then at the U.S. Customs Office as an import specialist. Murayama is retired and currently lives in San Francisco with his wife, Dawn.

At Columbia, he began to write creatively, simultaneously completing his master's thesis and "I'll Crack Your Head *Katsun*," a short story that would later become the first chapter of *All I Asking for Is My Body*. The story was first published in the *Arizona Quarterly* in 1959, and then in *The Spell of Hawaii*, an anthology of Hawaiian literature, in 1968. Despite the positive reception of the short story, Murayama had difficulty securing a publisher for the full-length novel, *All I Asking for Is My Body*. Publishers were wary to issue the book, which made risky narrative moves such as wide use of pidgin and transcribed

Japanese, and dealt heavily with local Hawaiian issues that publishers did not find marketable. After nearly three decades of failing to find a publisher, Murayama and his wife incorporated Supa Press and published the novel in 1975. *All I Asking for Is My Body* proved the fears of established publishing houses wrong, when it became a huge success. It won the American Book Award from the Before Columbus Foundation in 1980 and the Hawaii Award for Literature in 1991. In 1989, Murayama adapted the novel into a play performed by the Kuma Kahua theater company. The novel has since become a classic in the Asian American canon, as representative of pre-war Japanese American plantation life in Hawaii. It is currently reprinted by University of Hawaii Press.

Murayama's four novels, *All I Asking for Is My Body*, *Five Years on a Rock*, *Plantation Boy*, and *Dying in a Strange Land* all feature the Oyama clan, who struggle with the plantation society in which they live and must negotiate the incommensurability of Japanese and American culture. To write his novels, Murayama developed a system of transcribing pidgin, which he believed was critical in understanding the local Hawaiian experience.

All I Asking for Is My Body follows the struggles of Kiyoshi Oyama as he grows up in the pre-war Hawaiian plantation society. The novel underscores economic and ethnic conflict within the socially hierarchized plantation community comprised of Portuguese, Spanish, Japanese, and Filipino families. The predominant source of tension in the novel arises in the choices Kiyoshi must make between social mobility and ethnic loyalty—a trope central in many diasporic narratives that is reproduced and further developed in all of Murayama's subsequent novels.

Five Years on a Rock, published in 1994, approaches Kiyoshi's conflict through the mother's eyes. Though the Oyama boys feel that they are at constant odds with their parents, whom they view as a source of oppression and old-fashioned traditions that conflict with American ideals, Sawa Oyama's narrative demonstrates that the Japanese "disease" of *gaman* (patience, perseverance) can become a means of survival. The positive aspects of *gaman* are further illustrated in 1998, with *Plantation Boy*, which tells Toshio's bildungsroman tale mediated by *gaman*: by

working hard and persevering with Japanese ideals, Toshio is able to realize his dream of finally leaving the plantation.

Rounding out the Oyama family saga is *Dying in a Strange Land*. Published in 2008, Murayama's capstone novel traces the Oyamas' diasporic journey from Japan to Hawaii to the mainland as they continue to strive with ethnic transformation and self-formation.

Murayama's work captures the complexity of Hawaii's complicated past, rendering history in the present within a remarkable archive that documents the Japanese American fight for upward mobility and self-making. From the grueling work and poverty of Hawaii's plantation society to the systemic racism that pervades the modern mainland, Murayama's work simultaneously documents Japanese American experience and provides an incisive cultural critique.

N

Nagano, Kent (1951–)

Kent Nagano is a conductor of symphonic and operatic music with extensive engagements in North America and Europe.

Nagano was born in Berkeley, California, in 1951 to Japanese American parents and grew up in Morro Bay in the Central Coast of California. He began piano lessons with his mother, who was a microbiologist and a pianist; he also learned the clarinet and the koto. During the 1950s and 1960s, he received musical training through California's public school system, in which a Georgian-born musician infused students with music in the style of European conservatories.

Nagano studied sociology and music at the University of California, Santa Cruz (BA 1974). During this time he had intended to pursue a law degree and a career in international relations, and he was involved in the civil rights, antiwar, and other social movements. Nagano chose to pursue music after having studied composition with Grosvenor Cooper and Roger Nixon. He then studied conducting and piano at San Francisco State University (MM, 1976) and at the University of Toronto.

From the beginning of his musical training and career, Nagano has been deeply grounded in opera. His first employment as a conductor was with the Opera Company of Boston, where he apprenticed under Sarah Caldwell from 1977 to 1979 and learned the operatic repertoire and *métier* in the German tradition. During his Boston years, he worked as an assistant conductor to Seiji Ozawa at the Boston Symphony Orchestra and played a key role in the world premier of Olivier Messiaen's opera, *Saint*

Francois d'Assise. This was the beginning of Nagano's long association with Messiaen, who became his mentor and collaborator. Nagano has championed Messiaen's music, claiming that its beauty and challenging complexity address universal nature and religious thought that stand over and against time.

In 1978, Nagano became the music director of the Berkeley Symphony Orchestra. With his strong connection to the San Francisco Bay Area community and his strong artistic vision, especially his association with the music of Messiaen, Nagano turned the Berkeley Symphony Orchestra into a progressive force in the West Coast music scene over the next three decades.

Much of the next phase of Nagano's career was based in Europe. He was the music director of the Lyons Opéra from 1988 to 1998; associate principal guest conductor of the London Symphony Orchestra from 1990 to 1998; and music director of the Hallé Orchestra in Manchester from 1992 to 2000. Nagano is renowned for his mastery of late nineteenth- and twentieth-century music. During his tenure in Lyons he performed and recorded rare repertoire, including Poulenc's *Dialogues des Carmélites*, Martinů's *Les trois souhaits*, Prokofiev's *The Love for Three Oranges*, Debussy's *Rodrigue et Chimène*, Busoni's *Doktor Faust*, Carlisle Floyd's *Susannah*, and the first recording of Strauss's *Salomé* with the original French text by Oscar Wilde. In 2000 he conducted the premiere of John Adams's nativity oratorio *El Niño* at the Théâtre du Châtelet in Paris. During Nagano's appointment at the Hallé Orchestra, some criticized him for his emphasis on contemporary works that led to expensive programming, and he was blamed for the orchestra's near-bankruptcy. In 2000 he became

the chief conductor of the Deutsches Sinfonieorchester in Berlin and served in this position until 2006.

Nagano was appointed principal conductor of the Los Angeles Opera in 2000. His first performance of *Lohengrin* was set against the terrorist attacks on September 11, 2001. He was named the Los Angeles Opera's first music director in 2003. He stepped down from the position in 2006 to take up two new posts as music director of the Bayerische Staatsoper in Munich and the Montréal Symphony Orchestra.

Nagano's extensive recordings represent a range of works in both established and contemporary repertoire, including works by John Adams, Bartók, Beethoven, Bernstein, Britten, Bruchner, Mahler, Milhaud, Prokofiev, Ravel, Schoenberg, Stravinsky, and Zemlinsky.

As a strongly identified Californian and Japanese American, Nagano has been involved in artistic projects that deal with the ethnic and the regional communities. In 2005, he led a performance of *Manzanar: An American Story* at Royce Hall at UCLA. This musical work told the story of Japanese American internment during World War II and addressed issues of human rights and civil rights. The project involved three composers, including Japanese-born Naomi Sekiya and playwright/director Philip Kan Gotanda; U.S. Senator Daniel Inouye and actors John Cho and Martin Sheen, and figure skater Kristi Yamaguchi served as narrators; and local musical organizations such as the American Youth Symphony, the Santa Monica College Chamber Choir, and the Manzanar Youth Choir were part of the production. Nagano believed that this was an important project in keeping alive the historical memory of the Japanese American internment and addressing contemporary issues of civil liberties. The work critically depicted the difficulties faced by the immigrant and the Nisei generations while illustrating the complexity, diversity, and hybridity of the Japanese American experience through narrative and musical devices.

Although Nagano is thus strongly identified with his Japanese American background and involved in issues of social justice, as a classical musician he firmly believes that factors such as ethnic or national identity are secondary to his artistic goals, stressing the importance of assimilating oneself into the culture

and language of the music. "This art form (of classical music) has too much tradition to respect. One needs to embrace the responsibility to assimilate, evolve, and improve. Only by doing so, one can evolve to a different level," he said in an interview (Yoshihara 2007: 198). At the same time, Nagano has considered it important as a music director to be aware of trends in popular culture and has collaborated with musicians in other genres, such as rock musician Frank Zappa and avant-pop artist Björk.

Nagano is married to Japanese pianist Mari Kodama, and they have one daughter.

Nagasu, Mirai Aileen (1993–)

Mirai Nagasu is a singles figure skater who was born in Montebello, California, and grew up in the nearby city of Arcadia. She is the only child of Kiyoto and Ikuko Nagasu, immigrants from Japan. Mirai began skating at the age of five. When bad weather one day prevented her from playing sports outdoors, her parents brought her to an ice rink instead, and soon afterward she started lessons. In 2007, Nagasu burst into prominence in junior-level competition, winning gold medals at both the U.S. Junior Figure Skating Championships and the Junior Grand Prix Final. She also earned a silver medal that year at the Junior World Championships in Oberstdorf, Germany.

These successes were followed by an even more stunning debut at the senior level. In 2008, the 14-year-old Nagasu clinched the U.S. Figure Skating Championships in the senior division, becoming the second-youngest woman—and the youngest Asian American woman—to win the crown. Her victory also made her the first woman since Joan Tozzer in the 1930s to claim consecutive junior and senior national titles. Two years later, in 2010, Nagasu competed at

the Winter Olympics in Vancouver, Canada. She achieved a personal best total score and placed fourth overall, the highest finish for the U.S. female singles skaters at the Games.

Since then Nagasu has medaled in several other national and international competitions, including the U.S. Championships, the Four Continents Championships, and the Cup of China. An admirer of skating legends Kristi Yamaguchi and Michelle Kwan, Nagasu represents a younger generation of Asian American athletes who are making their own mark in the world of figure skating.

Nakanishi, Don T.

Don T. Nakanishi is a former Director of the Asian American Studies Center at the University of California, Los Angeles (UCLA), as well as a professor emeritus in the university's Department of Asian American Studies and Graduate School of Education. He has served as a former national president of the Association of Asian American Studies, as well as the publisher of the *Amerasia Journal* and the *AAPINexus*, two leading publications of the discipline.

Nakanishi is a political scientist by training, having received both his bachelor's degree from Yale University in 1971 and doctorate from Harvard University in 1978 in that discipline. Upon receiving his doctorate, Nakanishi began his academic career as an assistant professor of education and Asian American studies at UCLA. In the late 1980s, he became embroiled in a conflict over tenure. His supporters believed that Nakanishi had accomplished the expected research required for tenure in the system of University of California, and that he was being

unfairly denied tenure because of his race and the sensitive nature of some of his research. Those who denied his tenure argued that Nakanishi had not accumulated a sufficient number of publications in major academic journals, particularly in the field of education. In 1989, following several appeals and a prolonged campaign by Nakanishi's supporters, Nakanishi was granted tenure at UCLA.

In 1990, he was appointed director of the university's Asian American Studies Center, the nation's largest and most prestigious institution of its kind. During Nakanishi's tenure as director, the AASC's endowment was increased to more than \$6 million. This large endowment enabled the Center to add six endowed academic chairs.

Nakanishi was born and raised in East Los Angeles, an ethnically diverse region. He attended Theodore Roosevelt High School, winning an election for student body president after appealing to voters in English, Spanish, and Japanese. As an undergraduate at Yale, Nakanishi encountered racial abuse when, on the anniversary of the Japanese attack on Pearl Harbor, he was pelted in his dorm room with water balloons by white students. Nakanishi would later cite this event as triggering his interest for Japanese American history, and Asian American studies in general. He helped found a chapter of *Movimiento Estudiantil Chicano de Aztlá (MEChA)*, a Chicano student organization, at Yale, as well as the university's first Asian American student group. Upon graduating cum laude in 1971, Nakanishi began his graduate study at Harvard University, completing his doctorate in 1978.

As an academic, Nakanishi is a prolific author. He published over 100 articles, chapters, reports and books on issues such as the participation of Asian Americans and other ethnic groups in American political processes, the access and representation those groups have to and in American educational settings, and the effects of international politics they encounter in everyday life. He is known in particular for finding lower rates of voter registration and participation among Asian Americans, contrary to what their higher group levels of education and income would ostensibly indicate.

Nakanishi has served on the boards of directors for numerous influential organizations, including the

Poverty and Race Action Council, Simon Wiesenthal Museum of Tolerance, and Japanese American National Museum. He has remained involved in both of his alma maters, serving on the board of the Association of Yale Alumni and the Harvard University Graduate Alumni Council. In 1988, more than 40 years after the signing of Executive Order 9066 and the internment of Japanese Americans—including Nakanishi's parents and older brother—during World War II, the United States Congress established the Civil Liberties Public Education Fund as part of the Civil Liberties Act. Nakanishi would later be appointed by President Bill Clinton to the CLPEF, responsible for educating the public and providing materials for research on the circumstances and history of Japanese American internment.

Nakanishi has won several prestigious accolades for his accomplishments. In 2007, he received the National Community Leadership Award from the Asian Pacific Institute for Congressional Studies. His work with the Institute includes the joint formation, with AASC, of a Leadership Academy for Elected Officials, an annual program dedicated to providing leadership training to Asian American and Pacific Islander politicians. In 2008, Nakanishi received the Yale Medal from Yale University in recognition of his advocacy of Asian American issues and service to the university. In 2009, he was the inaugural recipient of the Engaged Scholar Award of the Association of Asian American Studies.

Nakanishi retired as director of the AASC in 2009. He was succeeded by David K. Yoo, a professor in the Department of Asian American Studies at UCLA and a former chair of the Departments of Asian American Studies and History at the Claremont Colleges in Claremont, California.

Nakanishi is married to Marsha Hirano-Nakanishi, the assistant vice chancellor for Academic Research and Resources at the California State University Office of the Chancellor. The two have a son, Thomas Nakanishi. In 2006, the family established the Nakanishi Prize at Yale, an annual award given to two graduating seniors with an excellent record of leadership in enhancing racial and ethnic relations at the university.

Nambu, Yoichiro (1921–)

Yoichiro Nambu is a leading Japanese American theoretical physicist who made fundamental contributions to our understanding of the interactions between elementary particles as nature's building blocks. He shared the Nobel Prize in physics for 2008.

Yoichiro Nambu was born on January 18, 1921, in Tokyo to father Kichiro Nambu, a young man who ran away from his business-oriented family to study English literature at Waseda University in Tokyo, and mother Kimiko. Following the 1923 earthquake, the Nambus moved from the devastated Tokyo to the father's hometown of Fukui where he became a school teacher.

Reading science books that his father gave him and taking science courses in school led Yoichiro, with Thomas Edison as his inventor hero, to become interested in biology, mathematics, and physics. When still in grade school, Nambu built a radio set using electronic parts left by a deceased uncle. In 1937, he finished high school in Fukui, entered a higher school in Tokyo for three years, and then enrolled in the Imperial University of Tokyo in 1940. Inspired by Hideki Yukawa, an internationally respected Japanese physicist, Nambu chose to study physics and graduated in 1942 with an MS degree. He stayed on at the university as a research associate but was soon drafted into the Japanese army as a soldier for one year and then worked in a radar laboratory, especially in submarine detection, for two years until the end of the war.

In 1945, he married Chieko Hida and they would have a son, Jun-ichi.

In 1946, Nambu returned to his associate position at the University of Tokyo, but moved to Osaka City University in 1949 as an associate professor of physics. When there, he completed and submitted a thesis on quantum electrodynamics to his alma mater and received a doctor of science degree in 1952. Throughout this period, he was often on the verge of starvation because of severe food shortages but thrived scientifically, working on a variety of topics in physics, ranging from solid state physics to quantum field theory, by himself and with others in a community of talented physicists led by Yukawa and Sin-Itiro Tomonaga.

In 1952, Nambu spent two years visiting the Institute for Advanced Study in Princeton, New Jersey, at the invitation of its director, the well-known American physicist J. Robert Oppenheimer, probably upon the recommendation of Tomonaga or Yukawa. Although Nambu (and later his wife and son who joined him) enjoyed the living conditions in the United States, he did not make as much scientific progress in nuclear physics as he had hoped at Princeton. He also felt somewhat intimidated by Freeman Dyson, C. N. Yang, and T. D. Lee, some of the most brilliant physicists at the institute at the time. Nevertheless, dreading the poor living conditions in Japan, Nambu searched for a way to stay in the United States after his Princeton term ended. He received an offer from the University of Chicago and went there in 1954 as a research associate to work with one of its faculty members, Marvin Goldberger, on dispersion theory that had to do with the interactions of light and particles. In Chicago Nambu encountered some racial prejudice off campus, but he enjoyed the collegial atmosphere at the university much more than at Princeton. He thrived scientifically and was made an associate professor in 1956, which led to his permanent settlement in the United States and later naturalization as an American citizen in 1970.

It was in Chicago in the late 1950s that Nambu conducted a study on “spontaneous symmetry breaking” (SSB) that eventually won him the Nobel Prize. His success demonstrates the importance of scientific communication and interdisciplinary cross-fertilization. It started when he heard a talk at Chicago by J. Robert Schrieffer describing his recent research

with John Bardeen and Leon N. Cooper at the University of Illinois at Urbana-Champaign on superconductivity (it became known as the BCS theory following the initials of the three physicists). The talk presented a puzzle to Nambu because the superconducting fluid did not conserve the number of particles, which in physics was called a breaking of symmetry. Nambu used his expertise in particle physics to propose an explanation: a particle is like a dog choosing between two identical bowls of food in that it oscillates in the process, which according to quantum physics creates a new particle called boson. Nambu and other physicists soon elaborated on the idea of “oscillation creating a new particle” and found that it applied not only to the BCS theory but also to many particles in particle physics as well. In fact it became a key of the modern theory of elementary particles.

Described by colleagues as a powerful, visual, and foresighted thinker, Nambu would go on to make other fundamental discoveries in particle physics, including the founding of the string theory. At the University of Chicago, he was promoted to full professor in 1958 but recognition for his theories took a while to materialize. He was made Distinguished Service Professor at Chicago in 1971 and two years later was elected a member of the U.S. National Academy of Sciences, and in 1982 he received the National Medal of Sciences from President Ronald Reagan in the White House. He promoted U.S.-Japan scientific collaboration and was bestowed the Order of Culture by the government of Japan in 1978. The Nobel Prize eluded him until he was 87 years old—“I’d been told that I was on the list for many, many years”—and then when it finally came he said “I was very surprised when I got the news” (Manier). The two corecipients of the Nobel—Makoto Kobayashi and Toshihide Masukawa of Japan—both acknowledged Nambu’s influence as an inspiration for them.

National Civil Rights Movement Against Anti-Asian Violence

See Chin, Vincent

National Maritime Union (NMU) and Chinese Seamen

After the passage of the Chinese Exclusion Act, Chinese were forced out of the American labor market. White workers refused to work alongside them, and they demanded that employers not hire them. As a result, the Chinese were excluded from the American labor movement as well and from all the benefits participation would have entailed, especially during the heady days of industrial labor organizing of the 1930s. One of the few exceptions was the Chinese seamen.

During the Great Depression, when thousands of American seamen were unemployed, the U.S. shipping companies preferred to hire foreign crews, including Chinese, because of the conditions they could impose on them. The Chinese were forced to sign contracts that allowed the company to withhold 50 percent of their wages until their discharge. They also had to post a \$50 bond to guarantee compliance and promise not to join any unions.

Chinese seamen had a history of militancy. In 1922, under the leadership of the Nationalist Party,

50,000 Chinese seamen in Hong Kong organized the Lien Yi Society and demanded higher wages from British shipping companies. Their strike tied up 166 ships belonging to 16 steamship companies. In the celebrated 1925–1926 Canton-Hong Kong general strike, 20,000 Chinese seamen responded to the call to protest Britain's slaughter of Chinese workers in Shanghai. They completely paralyzed the Hong Kong harbor for nearly a year. But soon thereafter a split developed within the Lien Yi Society leadership between those supporting the Nationalists and the Communists, and the activism of the seamen waned.

In the 1930s American rank-and-file seamen, fed up with their ineffective "company union," the Seamen's International Union (SIU), formed a new labor organization, the National Maritime Union (NMU). They pledged to run it democratically, without discrimination based on race, color, political affiliation, religion, or national origin in their membership. During the national strike of 1936–1937, the NMU recruited some 20,000 black seamen and reached out to the Chinese, who occupied the lowest menial positions and were paid one-third less for their work. Chinese activists revived the Lien Yi Society and mobilized 3,000 Chinese to get off their ships and join the picket lines. In return, the NMU supported the Chinese demand for equal pay and the right to shore leave. Even though the Chinese never gained the full right of shore leave, many continued to work with the NMU. They convinced the union to support the Chinese war of resistance against Japan by ordering its membership to refuse to load scrap iron heading for Japan.

In December 1941, when the United States formally entered World War II, President Roosevelt initiated a Lend-Lease program to ship weapons and supplies to our allies, England and the Soviet Union. As convoys of these "liberty ships" crossed the Atlantic, they came under intensive attacks by German U-boats. By the end of 1942, the first year of U.S. participation in the war, almost 4 percent of all the U.S. merchant seamen were dead or missing—four times the combined losses of the army, navy, marine corps, and the coast guard during the same period. These high casualties led to the aggressive recruitment of 15,000 Chinese seamen from China to serve on U.S. and British merchant ships. Hundreds of them lost their

lives during the U-boat attacks, and some drifted in the open ocean for weeks. Poon Lim was the only survivor of a U-boat torpedo attack that sunk his ship and the entire crew. He was able to build a makeshift raft and survived on the ocean for 133 days before being rescued by a Brazilian fishing fleet.

The major problems facing Chinese seamen, in addition to being restricted to menial jobs and receiving lower pay, was the issue of shore leave. Some sailors remained on the Atlantic Ocean for months without setting foot on dry land. Their objections only subjected them to violence. One Chinese seaman, who had been so abused that he requested to be relieved of duty and put ashore, was shot to death by a British captain for "insubordination during wartime." The appeals to the Nationalist government in China were rejected, because it too believed that shore leave would encourage the seamen to "jump ship."

The Chinese community in New York sought help from the Committee for Protection of the Foreign Born, an organization founded to defend the rights of the foreign-born residents of the United States, in lodging protests on behalf of the seamen. At the same time, Chinese seamen persuaded the NMU officials to side with them. Once the Chinese gained the right to shore leave, they began to join the union and established a Chinese section.

The NMU continually took up issues concerning its Chinese members. In 1943, it officially supported the repeal of the Chinese Exclusion Act. In 1944, it asked Congress to pass legislation giving the right of naturalization to all foreign seamen who had worked on U.S. vessels for more than three years during the war. Although this proposal was never approved, in August 1945 the Department of Transportation did allow noncitizen Chinese seamen to continue to work on U.S. ships if they had been hired before July 30, 1945. Thousands benefited from this ruling, and the union's efforts resulted in increased hiring of Chinese seamen on U.S. vessels in the postwar period. By 1946, the NMU Chinese section had a membership of 3,000, with a branch headquarters in the Red Hook section of Brooklyn.

The NMU condemned the continued presence of the U.S. troops in China and their interference in the internal conflicts of the country. It also called repeatedly for the cessation of the civil war in China and

urged the establishment of a coalition government. It was obvious that these positions closely reflected the sentiments of the union's Chinese members. The Chinese section, in turn, supported the union in its activities on behalf of all seamen.

In 1946, the NMU called a strike for higher wages. The Chinese section immediately formed a strike committee headed by an executive council that included representatives for the districts in China where most of the seamen came from to ensure that as many of their countrymen as possible joined the walkout. Nearly 6,000 foreign seamen had lost their lives in the war, but once the war was over the Immigration Office began to harass the ones who remained in service. The strike committee sent a representative to meet with Chinatown leaders and explain the importance of the strike. It also requested all striking seamen not to seek interim employment in Chinese restaurants, so that the Immigration Office would not have an excuse for arresting them. At the same time, it urged the other Chinese in the community not to undermine the seamen's interests by working as scabs for the shipping companies.

Active participation in the NMU was a step forward not only for the seamen but for all Chinese workers in the United States, laying the foundation for their integration in other areas of the U.S. labor movement.

Native Hawaiian Religion

Native Hawaiian religion is the ancient form of religion that governed a highly stratified precontact Hawaiian society. It regulated interpersonal interactions, gender roles, and personal hygiene, in addition to religious mores. It maintained the *lōkāhi* (balance, unity, harmony) of the society. Native Hawaiian religion is significant because it influenced every aspect of ancient indigenous Hawaiian life, from religious beliefs, to lifestyle, to warfare, to hula.

There were several akua (gods). Wākea was the sky father. Papa was the earth mother. They mated and gave birth to Hawaii (Big Island), Maui, O‘ahu, Kaua‘i, Ni‘ihau, and Kanaloa (Kaho‘olawe). Wākea and Hina mated and gave birth to Moloka‘i. Wākea mated with Ho‘ohokukalani (stars in the heavens) and gave birth to a stillborn, Hāloa Naka. They buried Hāloa Naka and from his body, the kalo (taro) plant was born. Wākea and Ho‘ohokukalani’s second child, Hāloa was the first Hawaiian; the kaona (meaning) being that Hawaiians and the kalo plant are siblings. There are four other akua that are considered important. Kāne was the akua of creation. Lono was the akua of agriculture, storms, rain, fertility, and productivity, including occupations around production. Kanaloa was the akua of death, navigation, the ocean and its currents. Kū was the akua of war and politics. There were varieties of animal akua. There were varieties of natural occurrence akua, the most well-known, Pele, the akua of fire, lava, and volcanoes. Each family had individual ‘aumakua (family gods) that protected them, and in return the family would make offerings to the ‘aumakua.

Worship of the akua took place at various heiau (temples) named after them. It was important for ali‘i (chiefs) and kahuna (priests) to conduct worship, offerings, and sacrifices to these akua. There were a variety of heiau, from simple mounds of dirt to wooden structures to more elaborate structures. Of the more elaborate structures, the first one was the more important. The heiau luakini (ruling chief’s temple) is where sacrifices of pigs and humans occurred. If an ali‘i conquered a rival ali‘i, it was important for the conqueror to rededicate the luakini to assert his power over his rival’s lands. The luakini was a rock wall enclosed area that contained the hale mana (mana house) shaped like a hālau (long house), an ‘anu‘u (white tapa-covered tower) with idols, a lele (sacrificial altar), a hale imu (oven house), hale waiea where ‘aha (services or prayers conducted under taboo and without interruption) were conducted by the ali‘i and kahuna. Two images were at the entrance, one just outside the enclosure and one just inside the wall entrance. The other more elaborate heiau structure was one where nonsacrificial offerings occurred. Within its rock walls a male image

was next to the kuahu (offering altar) where cooked bananas were laid. This image was usually one of olo-lupe, the akua that guides those that have died. The images and altar lay between the opu (heiau tower) and the anu‘u. A female image and another kuahu for bananas stood just outside the entrance to the heiau.

Various kapu (rules) regulated daily life for all indigenous Hawaiians. Each island was a self-contained society structured as a pyramid with the akua on top; followed by the ali‘i mō‘ī (king) or ali‘i nui (high chief) on the next level; kahuna nui (high priests, religious advisors to the monarchy); kahuna (priests); kaukau ali‘i (lesser chief) who would assign konohiki (land steward); and the bottom level would be maka‘āinana (commoner). The maka‘āinana would be allocated a piece of property, mo‘o (narrow strip of land), several of which would comprise an ‘ili (subdivision of ahupua‘a) that was overseen by the konohiki. Several ‘ili would be a part of an ali‘i’s ahupua‘a (land division that extended from the land to the sea). All of the various ahupua‘a comprise the moku (district or island) run by the ali‘i mō‘ī or ali‘i nui. The relationship between the maka‘āinana and the ali‘i mō‘ī, ali‘i nui, and ali‘i was based on a combination of political and religious responsibilities. An ali‘i, regardless of rank, gained and maintained power through the number of maka‘āinana that worked the ‘āina (land). If the ‘āina (land) produced an abundance of food, it was believed that the akua approved of an ali‘i and could gain maka‘āinana. If the ‘āina did not produce, it was believed that the akua was punishing an ali‘i for some transgression of the lōkāhi (i.e., being stingy with their offerings to the akua) and maka‘āinana could leave to work the ‘āina for another ali‘i. Religious beliefs and the continual need to maintain lōkāhi could make an ali‘i politically and socially strong or weak.

Of the kapu that could be declared, three were the highest. These kapu could be inherited through birth from one or both parents. Kapu moe (prostrate) is considered the harshest kapu. When faced by an ali‘i with kapu moe, the person without kapu must prostrate and remove any clothes that cover their head and shoulders. If clothed, the person must prostrate fully. An ali‘i with kapu moe would travel at night to avoid disturbances caused by their presence. The punishment for

violating kapu moe is death. Kapu nohi is the sitting kapu. A person without kapu must sit in the presence of an ali'i with kapu nohi. However, the kapu moe overpowers the kapu nui. The most powerful kapu, the kapu wohi (exempt from prostrate kapu) is considered a good kapu. An ali'i with kapu wohi can mingle with men, women, and children. When faced by an ali'i with kapu wohi, a person does not have to prostrate or sit, regardless of their kapu status. The only part of an ali'i with kapu wohi that is considered forbidden is their back. Only the person in charge of their personal belongings is allowed to move back and forth behind the ali'i. All Hawaiian monarchs inherited the kapu wohi by virtue of their genealogy. In addition to the kapu moe, kapu nohi, and kapu wohi that can be inherited, mana (a sacred spiritual power) can also be inherited, gained, decreased, or lost by indigenous Hawaiians. Mana is also present in places, objects, plants and animals, and can move in-between all of these.

Aside from the kapu that could be inherited, there were other kapu that governed daily life. There were occupational kapu that relegated occupations based on gender. Men, higher in rank than women, could inherit or be apprenticed into a specialized occupation. Women would work the tapa clothes, basket weaving or hula. Other kapu could be declared to make specific fish or plants forbidden to protect that food supply or fulfill a revelation from an akua. Men and women were forbidden to eat together or share an imu by the kapu 'ai (food plant or poi). This kapu also made certain foods forbidden to women, that is, pork.

There were several duties that the kahuna fulfilled. One was of healer, kahuna lā'au lapa'au. Another duty of the kahuna was to conduct prayers, festivals, and offerings to the akua. One important festival was the Makahiki, celebrated at the end of the agricultural season. At the end of the calendar year, a four-month festival, the Makahiki, would occur. This festival was run by the kahuna of Lono, the Kualii'i. The ali'i would be the symbol of Lono, and as Lono, would receive offerings of food and pigs. This festival would move from ahupua'a (heiau for pig offerings) to ahupua'a freeing people from all kapu. This festival is also a time for the maka'āinana to make offerings to the ali'i, to allow

the 'āina to renew itself for another season, and for the ali'i to maintain their rule over the 'āina. The ali'i and warriors would board canoes and then try to land at an appointed place. The maka'āinana would try to prevent the ali'i from landing. If the ali'i made it to shore, it is a sign that the akua have blessed the ali'i's rule. If the ali'i did not make it to shore, it is was a sign that the akua do not favor the ali'i and made the ali'i open to attacks from rival ali'i.

Another duty of the kahuna was around the oli (chant), which were memorized and recited. This was highly important in an oral culture like the indigenous Hawaiian culture was during these times. If chosen, these kahuna were to maintain, adapt, and pass on important oli, most of which were genealogical in nature. Families had genealogical chants that belonged to them and were only known to family members and their kahuna. It was through one's genealogy that an ali'i could prove that they belonged in a particular class or could rightfully achieve or maintain power. This is why these genealogical oli were protected. One such oli, *the Kumulipo*, is a creation and genealogical chant starts in the time of darkness, then day is created. Coral are the first creatures followed by other marine animals. Plants and animals were the next to appear, followed by the akua. Kane (man) and Wahine (woman) were created by Kāne and Lono. Lastly, the greatest ali'i and their descendants were named from past to the present. King David Kalākaua, the second to the last Hawaiian monarch, had it altered for the last time to add his name to *the Kumulipo* making his reign legitimate. Another aspect of the oli was its kaona (hidden or multiple meanings), some of which were sacred and known only to a select few. Oli was the personification of the importance of religion and politics in indigenous Hawaiian society. It was through oli that political power was maintained and it was religion that reinforced it with its divine references.

In May 1819, Kamehameha I died and as per religious tradition, his bones were secreted away. A period of mourning ensued, with the kapu 'ai and other kapu surrounding foods halted. This period is also known as one of "free-eating" where men and women can eat together and woman can eat food normally forbidden to them. Liholiho is crowned Kamehameha II

Ahu'ena Heiau, restored under the direction of the Bishop Museum, was a temple where King Kamehameha I conducted government meetings, Kailua-Kona, Hawaii. (Ted Streshinsky/Corbis)

and is supposed to reinstate the kapu. However, at his coronation, Queen Ka'ahumanu, Kamehameha I's wife, announced that she would share rule with Liholiho as kuhina nui (prime minister) and began to argue for continued "free-eating." The kapu 'ai and the kapu system are effectively overthrown when Liholiho eats with Ka'ahumanu and his mother, Keōpūolani. There was a brief uprising to restore the kapu system, but it was defeated. With the abolishment of the kapu system, many of the heiau were destroyed or vandalized and the duties of the kāhuna ceased, for instance, keeping the calendar of the planting seasons and the oli. Privately, some families, the kua'āina (rural people) continued to worship the akua and 'aumakua, care for their family graves, hula and oli.

Christian missionaries, namely Protestant Congregationalists (ancestors of the United Church of Christ), arrived in 1820. They began to establish churches on the various islands. The ali'i were very important in the establishing of Protestant churches, with Ka'ahumanu being one of the first ali'i to convert to

Christianity (and later to Mormonism). As the missionaries translated the Hawaiian language into a written language, and translated the Old and New Testament into Hawaiian, more ali'i converted. The maka'āinana were also converting and learning to palapala (read and write); close to 90 percent of the indigenous Hawaiian population could palapala. Catholic priests arrived later in 1927, followed by other Protestant denominations. Mormons arrived in 1950.

The ancient Native Hawaiian religion is still practiced today by kua'āina. Many other indigenous Hawaiians maintain some form of Native Hawaiian spirituality: maintaining lōkāhi by caring for the 'āina, returning to a more sustainable lifestyle, fishing, and planting kalo. Even indigenous Hawaiian Christians, although considered controversial by some, have incorporated Hawaiian spirituality and culture into their practice; saying the Lord's Prayer in Hawaiian, Hawaiian-language hīmeni (hymns), and performing hula (dance) during worship service.

Native Hawaiians and Pacific Islanders

Native Hawaiians and Pacific Islanders are the indigenous peoples of the island nations of Polynesia (many islands); Micronesia (small islands); Melanesia (black islands); and Australia. The U.S. Census combines all of these peoples into one racial category, “Native Hawaiians and other Pacific Islanders.” The three largest national groups that make up this racial category trace their ancestry through descent or emigration to the islands of Hawaii, Samoa, and Guam. Except for Tonga, all of these nations were colonized by European and Asian nation-states or the United States. Immigration of Native Hawaiians to the continental United States and of Pacific Islanders to Hawaii and the continental United States has been shaped by the political and economic relationship of their island nations with the United States.

History

The China trade served as the nexus that integrally linked Asians, Native Hawaiians, and Pacific Islanders in their historical encounters and experiences with the United States. The stages in the development of trade with China marked significant stages in the colonization of Hawaii and the Pacific by the United States.

During the fur and sandalwood trade with China, merchant ships from New England journeyed around South America and stopped in Hawaii to replenish their supplies. They recruited Hawaiians as sailors and placed orders for sandalwood. Then they sailed to the Pacific Northwest, to what is now Alaska, Canada, Washington, and Oregon and traded with the Indians for the furs of animals. Sailing to China, these U.S. merchant ships stopped in Hawaii to pick up the sandalwood they had ordered. The furs and sandalwood were traded for tea, silks, porcelain, chinaware, tapestries, sugar, spices, and other goods in China.

Throughout the nineteenth century, American commerce with Hawaii expanded and Americans invested in the sugar industry, importing contract laborers from Asia to work on Hawaiian sugar plantations.

By the 1890s, the United States faced a severe economic recession and embarked on a plan to “open the door” to China as a “most favored nation” to be a market for U.S. industrial products. This strategy involved the development of a powerful navy that would keep the sea lanes to China open for U.S. mercantile ships; the construction of an isthmian canal; and the acquisition of island colonies for naval bases, which would serve as coaling stations for a superior navy. Puerto Rico and Cuba in the Caribbean, Guam and the Philippines in the Pacific, colonies of a weak and declining Spanish empire were ideally suited to the strategy. Panama was chosen for the construction of the isthmian canal. Hawaii, with its proximity to the West Coast, its large protected deep draft harbor at Pu‘uloa (Pearl Harbor), and an economy dependent on the United States, would serve as a strategic staging ground for U.S. naval forces in the Pacific and Asia. American control of Samoa would deny use of its harbor by competing European powers.

In 1898, the explosion and sinking of the U.S.S. *Maine* in Havana harbor with more than 250 men onboard triggered the declaration of war by the United States against Spain. This resulted in completing the insular expansion phase of the “open door” policy. On July 7, 1898, in the middle of the Spanish-American War, and 2 months after Admiral Dewey defeated the Spanish in Manila Harbor, President William McKinley signed the Newlands Joint

Resolution of Annexation of Hawaii. On December 10, 1898 the United States and Spain signed the Treaty of Paris under which the Spanish government ceded its interest in Puerto Rico, the Philippines, and Guam to the United States and Cuba became independent. In 1899, international rivalries over the Pacific were settled by a Tripartite Convention under which Germany and the United States divided the Samoan Islands under their separate rule. The United States established the U.S. Naval Station of Tutuila at Pago Pago Bay. In 1900, the U.S. Navy secured a Deed of Cession of Tutuila and in 1904 secured a deed of Cession of Manu'a. Under the Platt Amendment of 1901, Cuba became a U.S. protectorate and the United States established a naval base at Guantanamo. The United States entered the twentieth century as a world power determined to Americanize the multiethnic peoples of the Pacific and the Caribbean islands that they had just conquered.

From 1898 to 1902 America waged a war against the people of the Philippines, using Hawaii as a staging ground for the transport of troops and supplies. A million Filipinos were killed in what the Americans called the suppression of the Filipino Insurrection. Hawaii proved to be an important staging ground and refueling base for the transport of American troops and supplies to the war in the Philippines. The colonization of Guam, Samoa, and Hawaii was not as brutal as that of the Philippines, although it was equally successful in suppressing the sovereignty of the Chamorros, Samoans, and Hawaiians. Americanization of the island peoples who came under the American flag in 1898 was primarily implemented through an educational system that required English as the medium of instruction; agricultural capitalism that displaced subsistence farmers from rural countrysides and tracked them into urban wage labor; and the confiscation of national lands for American military bases.

The United States was drawn into World War II when Japan attacked the U.S. naval fleet stationed at Pearl Harbor in Hawaii. Throughout World War II major battles were fought by the United States against Japan in the islands of Micronesia, which had been controlled and occupied by Japan since World War I. At the end of World War II, the Micronesian islands

became a United Nations Trusteeship, the UN Trust Territory of the Pacific, ruled by the United States.

An overview of the political status of the Pacific Island nations controlled by the United States during the twentieth century and the current economy and demographics of these nations are provided below. Beginning in the 1950s a diaspora out of these islands began, with high school graduates joining the U.S. military, attending colleges and universities in Hawaii and the U.S. continent, and generally seeking the opportunity for better and higher-paying jobs, most recently in the field of sports.

Overview of the Pacific Island Nations Under U.S. Control

This section provides data from the 2010 Census on the number and status of Native Hawaiians and Pacific Islanders.

American Samoa. On July 17, 1911, the U.S. Navy Station Tutuila, made up of the islands of Tutuila, Aunu'u, and Manu'a, was officially renamed American Samoa. Swains Island, which was on a list of guano islands appertaining to the United States under the Guano Islands Act, was annexed in 1925 and placed under the jurisdiction of American Samoa. In the twenty-first century, American Samoa remains an unincorporated and unorganized territory of the United States administered by the Office of Insular Affairs, U.S. Department of Interior. Although the president of the United States is the formal head of state, the head of the American Samoan government is the elected governor. The bicameral Fono or elected legislative assembly consists of the senate, elected from local chiefs, the house of representatives, elected by popular vote, and with one appointed delegate from Swains Island. American Samoa elects one nonvoting representative to the U.S. House of Representatives who can introduce and speak on legislation. The economy of American Samoa is shaped by the traditional social system in which 90 percent of the land is communally owned. Its remote location, limited transportation, and susceptibility to devastating hurricanes inhibit its modern economic development. Tuna

fishing and the canning of tuna are major industries that provide 80 percent of the jobs on these islands. Family remittances from overseas, especially from Hawaii and the continental United States, also contribute a significant amount to the economy. Because of limited economic opportunities, a high number of American Samoans enlist in the U.S. military, resulting in American Samoans being overrepresented in the military and among those who have died in military service relative to their population. In 2007, a *Chicago Tribune* reporter noted, “American Samoa is one of the few places in the nation where military recruiters not only meet their enlistment quotas but soundly exceed them.” Similarly, American Samoans are overrepresented in the National Football League (NFL). In 2010, *60 Minutes* reported that boys born to Samoan parents are estimated to be 56 times more likely to play in the NFL than any other Americans. In 2012, there were more than 30 Samoans in the NFL and another 200-plus playing Division I college football. The population of American Samoa in 2012 was 159,358. According to the 2000 Census, 90.6 percent of the population was native Pacific Islander; 2.8 percent Asian; 1.1 percent white; 4.2 percent mixed; and 0.3 percent other.

The two main western Samoan islands (Savaii and Upolu) and small islets were ruled by Germany from 1899 through World War II and named Western Samoa. The New Zealand government ruled Western Samoa from the end of World War I through 1962, when the islands became the first Polynesian nation to reestablish independence. Since 1997, the country changed its name to Samoa. The chief of state is the Tuiatua and the heads of the government are the prime minister and the deputy prime minister. The Fono has 49 seats, of which 47 are elected by voters affiliated with traditional village-based electoral districts. Only matai or chiefs may run for these seats. Two seats are elected by non-Samoan or part-Samoan voters who do not have a village affiliation. The economy of Samoa is based on development aid; family remittances from overseas; agriculture, and fishing. Samoa exports coconut cream, coconut oil, and copra. Two-thirds of the population are employed in agriculture. Tourism is a growing factor that contributes 25 percent of the nation’s revenue. According to the country’s

2000 Census, Samoans comprised 92.6 percent of the population; Euronsians (European and Polynesian ancestry) made up 7 percent and Europeans made up 0.4 percent of the population.

Guam. Guam is the largest and southernmost island in the Marianas archipelago. It is an organized, unincorporated territory of the United States. The United States administers Guam through the Office of Insular Affairs of the U.S. Department of Interior. Although the chief of state for Guam is the president of the United States, the head of the government of Guam is an elected governor. There is also an elected unicameral legislature. Guam elects one nonvoting delegate to the U.S. House of Representatives who has the right to introduce and speak on legislation. The economy of Guam is dependent on the U.S. military. In 2004, U.S. grants, wage payments, and procurements totaled \$1.3 billion. The tourist industry, primarily dependent on Japanese investment and tourists, is the second-largest source of income for Guam.

In the 2010 U.S. Census, the population of Guam was 159,358. Although the indigenous people of Guam are Chamorro, the government of Guam has defined Chamorro as those persons who became U.S. citizens by virtue and under the authority of the 1950 Organic Act of Guam and their descendants. According to the 2000 Census, the following ethnic groups made up the population of Guam: native Chamorro comprised 37 percent; Filipino made up 26.3 percent; other Pacific Islander made up 11.3 percent; white made up 6.9 percent; other Asian made up 6.3 percent; other ethnic origin 2.3 percent and mixed 9.8 percent.

In 1976, the Guam Legislature organized a referendum to allow its citizens to vote on the political status of the territory. “Status Quo with Improvements” won 51 percent of the vote. “Statehood” received 21 percent and independence received 5 percent of the vote. In 1987, the Guam Legislature set up a new Commission on Self-Determination. The commission held four referenda. In the first referendum, the voters chose statehood and commonwealth as their preferred political status. In the second referendum, the voters chose commonwealth as the realistic and preferred status. The commission then drafted a commonwealth measure to submit to the U.S. Congress. The measure

was approved in two referenda. However, a disagreement between the United States and Guam about the terms of Guam becoming a commonwealth arose over the provisions that would limit immigration, set up a native Chamorro self-determination process, and allow for mutual consent in changing the document. The document was introduced in Congress four times and hearings were held in 1989 and 1997. The bills were never reported out of committee and the negotiations between the commission and federal officials never yielded a final agreement. The future political status of Guam remains unresolved and the political status of Guam is essentially the same as it was at the time that Spain ceded its claim over Guam to the United States in 1898 under the Treaty of Paris. However, the desire and the inherent right of self-determination will continue to be sought by the Chamorro people.

Hawaii. In 1900, the U.S. Congress passed the Organic Act under which Hawaii was governed as an incorporated territory through 1959. In 1959, following a plebiscite in which voters overwhelmingly voted yes to the question, “Shall Hawaii be immediately admitted into the union as a state?” Congress passed the Admission Act to make Hawaii a state. The head of state is the president of the United States. The governor is elected, as are the members of the Hawaii state Senate and Hawaii House of Representatives. Hawaii has two senators and two representatives in the U.S. Congress. Tourism provides the major source of revenue, jobs, and income, followed by the U.S. military. Diversified agriculture is the third major source of revenue, including flowers, coffee, papaya, other fruits, vegetables, macadamia nuts, aquaculture, and ranching. Hawaii’s gross state product in 2001 was 39th in the nation at \$43.7 billion, to which financial services contributed \$10.1 billion; general services (including tourism), \$10 billion; government, \$9.4 billion; trade, \$6.5 billion; transportation and public utilities, \$4.1 billion, and manufacturing, \$1.2 billion. According to the 2009 Hawaii Health Survey, Kānaka ‘Ōiwi, or Native Hawaiians, comprised 25.3 percent of the population; Caucasians comprised 20.8 percent; Japanese comprised 24 percent; Filipinos made up 13.9 percent, and others made up 16 percent. Among all of the Kānaka ‘Ōiwi or Native Hawaiians in the 2010 U.S.

Census, 289,970 or 55 percent live in Hawaii and 237,107 or 45 percent live in the continental United States.

A quest for Kānaka ‘Ōiwi sovereignty began when the U.S. government invaded Hawaii on January 16, 1893, to support the illegal takeover of the Hawaiian monarchy by American missionary descendants, businessmen, and planters. It is reinforced by the historical and contemporary injustices reflected in the low incomes, high unemployment rates, high incarceration rates, reliance on public assistance, and poor health conditions of Kānaka ‘Ōiwi. It is provoked by legal suits seeking to dismantle the private and public land trusts established for Kānaka ‘Ōiwi in the late nineteenth and early twentieth centuries. It is nurtured by a renaissance of Hawaiian language, music, hula, navigation, and spiritual practices.

Initiatives for the recognition of the inherent right of sovereignty and self-governance for Kānaka ‘Ōiwi have included a state-funded sovereignty plebiscite wherein 73 percent of those who cast a ballot voted yes to the question, “Shall the Hawaiian people elect delegates to propose a Native Hawaiian government?” It has also included the introduction of the Native Hawaiian Government Reorganization Act (a.k.a. Akaka Bill) in the U.S. Congress every year since 2000. It has passed by a majority vote in the House of Representatives, but has failed to pass in the U.S. Senate.

There are also initiatives for the recognition of Hawaii as an independent nation-state. Some advocates rightfully point out that Hawaii was not annexed through a treaty of annexation, but merely by a joint congressional resolution of annexation. Such a process is not legal under international law. They proclaim that Hawaii is still a sovereign nation-state, that it is illegally occupied by the U.S. government. Others point out that the statehood plebiscite was not a thorough exercise in self-determination because it provided only one choice to the voters: statehood. The choice for independence, commonwealth status, status quo, or free association should have been included on the ballot for it to be a free exercise of self-determination. Moreover the strong presence of the U.S. military was a factor of intimidation. These advocates seek reinscription with the UN Committee on

Decolonization with a new plebiscite conducted under the auspices of the United Nations. The journey toward sovereignty and self-determination will continue until it is achieved.

Micronesia. The Trust Territory of the Pacific (TTP) was established by the United Nations in 1947. It was controlled by the U.S. Navy from a headquarters in Guam until 1951, when its administration was turned over to the U.S. Department of Interior. At that point, the administration was based in Saipan in the Northern Marianas. Negotiations on the future status of the nations that were part of the TTP began in the 1970s. The result was the creation of four political entities with their own unique political status. The Northern Marianas is commonwealth. The Micronesian nations of the Federated States of Micronesia (FSM), the Marshall Islands and the Republic of Belau (Palau) have Compacts of Free Association with the United States. The United Nations estimates for the populations of these nations are: FSM 111,000; Marshall Islands 54,000; Northern Marianas 53,883; and Republic of Belau (Palau) 20,000.

Federated States of Micronesia. In 1979 the Federated States of Micronesia (FSM) adopted a constitution. The FSM includes the states of Pohnpei (Ponape), Chuuk (Truk) Islands, Yap Islands, and Kosrae (Kosaie). In 1986, a Compact of Free Association with the United States went into force whereby the FSM is internally independent in free association with the United States, which is responsible for its military defense and international relations. The unicameral Congress has 4 senators elected at-large from each state and 10 senators elected from single-member districts. The chief of state and head of government is the president who is elected by the unicameral Congress from among the four at-large senators who represent one of the states. The economy is primarily subsistence farming and fishing. Under the original terms of the Compact of Free Association, the United States provided \$1.3 billion in grant aid during the period 1986–2001. The 2004 Amended Compact of Free Association with the United States guarantees the Federated States of Micronesia (FSM) millions of dollars in annual aid through 2023 and establishes a

Trust Fund into which the United States and the FSM make annual contributions to provide annual payouts to the FSM in perpetuity after 2023. The country's medium-term economic outlook appears fragile not only because of the reduction in United States assistance but also to the current slow growth of the private sector. The population of FSM is 48.4 percent Chuukese; 24.2 percent Pohnpeian; 6.2 percent Kosraean; 5.2 percent Yapese; 4.5 percent Yap outer island; 1.8 percent Asian; 1.5 percent Polynesian; 6.4 percent other and 1.45 unknown according to the 2000 Census placed the total population at 133,144. Large-scale unemployment contributes to the diaspora of persons from the FSM, especially the Chuukese, to Hawaii and the United States. According to the 2012 Census, the greatest increase in NHPI in the United States was among the Chuukese, from 700 in 2000 to 4,000 in 2010.

Republic of the Marshall Islands. The United States conducted 67 atmospheric nuclear tests on atolls in the Marshall islands from June 30, 1946 through August 18, 1958. The 1952 test named “Ivy Mike” destroyed the island of Elugelab in the Enewetak Atoll. The most powerful test was “Castle Bravo,” in which a 15-megaton thermonuclear hydrogen bomb device was detonated on March 1, 1954, at Bikini Atoll. The test was equivalent to 1,000 Hiroshima bombs. Within a second of detonation it formed a 4.5-mile-sized fireball. The fallout cloud contaminated more than 7,000 square miles of the surrounding Pacific Ocean, including the islands of Rongerik, Rongelap, and Utirik. As a secret test, no warning was given and the children on these islands thought the radioactive material was snow and they played in it and rubbed it on their skin. An examination of U.S. government records revealed that the Marshallese had been treated like human guinea pigs to document the affect of radiation exposure on humans. The Marshallese suffer cancer, leukemia, thyroid disease, miscarriages, and birth defects because of their systematic and deliberate exposure to nuclear radiation.

In 1986, the Compact of Free Association with the United States entered into force, granting the Republic of the Marshall Islands (RMI) its sovereignty. The Compact provides for aid and U.S. defense of the

islands in exchange for continued U.S. military use of the missile testing range at Kwajalein Atoll. The independence procedure was formally completed under international law in 1990, when the UN officially ended the Trusteeship status.

Under the Compact of Free Association, the governments of the United States and the Marshall Islands agreed to the establishment of a Claims Tribunal that would have jurisdiction “to render final determinations of all claims past, present and future, of the Government, citizens and nationals of the Marshall Islands which are based on, arise out of, or are in any way related to the Nuclear Testing Program, and disputes arising from distributions made under Article II and III of this agreement.”

The government is a mixed parliamentary-presidential system. Voters elect senators to the lower house of the bicameral legislature called the Nitijela. The members of the Nitijela elect the president of the Republic of the Marshall Islands. The upper house of Parliament is called the Council of Iroij. It is an advisory body comprised of 12 tribal chiefs. U.S. government assistance is the primary source of revenue and income. The Marshall Islands received more than \$1 billion in aid from the United States from 1986 to 2002. Agriculture consists primarily of subsistence agriculture on small farms. Commercial crops are coconuts and breadfruit. Small-scale industry includes handicrafts, tuna processing, and copra. There is a small tourist industry. Under the terms of the 2004 Amended Compact of Free Association, the United States will provide millions of dollars per year to the Marshall Islands (RMI) through 2023, at which time a Trust Fund made up of United States and RMI contributions will begin perpetual annual payouts. The population of 60,000 is comprised of 92.1 percent Marshallese; 5.9 percent mixed Marshallese; and 2 percent other according to 2006 Census data.

Northern Marianas. In 1975, the voters in the Northern Marianas approved a covenant to establish a commonwealth in political union with the United States. The new government and constitution went into effect in 1978. The U.S. government provides federal funds to the Commonwealth administered by the U.S. Department of Interior, Office of Insular Affairs. At

the local level, the commonwealth is governed by an elected governor and a legislature. The economy is largely dependent on U.S. financial assistance. Before trade relations were normalized with China, Chinese garment factories that operated in the Northern Marianas employed as many as 17,500 Chinese and Filipino immigrants at their peak thereby taking full advantage of the commonwealth’s exemptions from duty and trade quotas and minimum wage standards. Once the minimum wage laws extended to the Northern Marianas and trade relations with China improved, the garment factories closed, leaving a vacuum in the economy. Tourism, mainly from Japan, is a major part of the economy. The agricultural sector is made up of small cattle ranches and small farms producing coconuts, breadfruit, tomatoes, and melons. In the 2000 Census, Asians (primarily Filipinos) made up 56.3 percent of the 71,000 total population; Pacific Islanders made up 36.3 percent; Caucasians made up 1.8 percent; others comprised 0.8 percent and mixed made up 4.8 percent of the population.

Republic of Belau (Palau). This westernmost cluster of the Caroline Islands opted for independence in 1978 rather than join the Federated States of Micronesia. A Compact of Free Association was approved in 1986, but not ratified until 1993. It entered into force in 1994 when the islands gained independence.

The chief of state and head of government is the president who is elected by the voters. There is a bicameral National Congress or Oliil Era Kelulau (OEK), which consists of 9 senators and 16 representatives. The economy consists of tourism and subsistence agriculture and fishing. The government is the major employer of the work force, relying on U.S. financial assistance. The Compact of Free Association with the United States, entered into after the end of the UN trusteeship on October 1, 1994, provided Palau with up to \$700 million in U.S. aid for the following 15 years, through 2009, in return for furnishing military facilities. The population of Belau, according to the 2000 U.S. Census is 21,000 with 69.9 percent Belauan; 15.35 percent Filipino; 4.9 percent Chinese; 2.4 percent other Asian; 1.9 percent White; 1.45 percent Carolinian; 1.1 percent other Micronesian; and 3.2 percent other or unspecified.

U.S. Census Categories and Representation

In 1977, the federal Office of Management and Budget issued Directive 15, which required government agencies to maintain statistics on specified racial groups rather than by ethnic group. The office derived the category of “Asian or Pacific Islander,” which was defined as “A person having origins in any of the original peoples of the Far East, Southeast Asia, the Indian subcontinent, or the Pacific Islands. This area includes, for example China, India, Japan, Korea, the Philippine Islands, and Samoa.” Therefore, the 1980 Census included several individual ancestry groups from Asia and the Pacific within the racial classification of “Asian or Pacific Islander.”

In 1987, the Office of Management and Budget revised Directive 15 by separating the “Asian or Pacific Islander” category into two categories, “Asian” and “Native Hawaiian or Other Pacific Islander.” However, this separation was not implemented in the 1990 Census, which still used the category “Asian or Pacific Islander.” The 2000 Census was the first time that the category “Asian” was used and the new category of “Native Hawaiian or Other Pacific Islander” was introduced. These categories were also used in the 2010 Census.

In 1978, a joint congressional resolution established Asian/Pacific American Heritage Week to be celebrated in the first week of May. In 1992, this was expanded to a month-long observance of the culture and historic contributions of Asians, Native Hawaiians, and Pacific Islanders during the month of May.

In the 2010 Census, over 1.2 million people, or 0.4 percent of the people in the United States identified themselves as Native Hawaiian and Other Pacific Islander (NHPI), either alone or in combination with one or more races. This represented a 40 percent increase from 2000. More than half (56 percent) reported that they were NHPI in combination with one or more other races. Those who reported being NHPI alone totaled 540,000.

The largest ethnic group included in the NHPI category in 2010 is Native Hawaiian with a total population of 527,077. Samoan is the second largest NHPI ethnic group, with a total population of 184,440. The third largest group is Guamanian or Chamorro with a total population of 147,798.

The largest population of NHPI in the United States is concentrated in Hawaii (356,000) and followed by California (286,000). States with the next largest populations of NHPI were Washington (70,000); Texas (48,000); Florida (40,000); New York (36,000); Nevada (33,000); Oregon (26,000); and Arizona (25,000). Combined, these 10 states have 78 percent of the NHPI in the United States.

The Chuukese population from the Federated States of Micronesia is the fastest-growing group of NHPI in Hawaii and the continental United States. In 2000, there were 700 Chuukese in the United States and by 2010 there are 4,000 Chuukese in the United States.

Educational Attainment

In 2010, 87 percent of Native Hawaiians/Pacific Islanders, alone or in combination, have high school diplomas or higher, as compared to 88 percent for whites. Fifteen percent of Native Hawaiians/Pacific Islanders have a bachelor’s degree or higher in comparison to 30 percent of whites. 3.5 percent of Native Hawaiians/Pacific Islanders have obtained graduate degrees in comparison to 11 percent of whites. Forty-two percent of Native Hawaiians/Pacific Islanders speak a language other than English at home.

Economics

According to the 2010 Census Bureau, the average Native Hawaiian/Pacific Islander family median income was \$58,083 in comparison to \$67,892 for non-Hispanic white families. In 2010, the U.S. Census bureau reported that 16 percent of Native Hawaiian/Pacific Islander families live at the poverty level, in comparison to 9.9 percent of non-Hispanic whites.

Health

Native Hawaiians and Pacific Islanders generally have poorer health than the American population as a whole. They are more at risk for developing and dying from cancer, heart disease, diabetes, and other diseases. Factors contributing to poor health include cultural barriers, limited access to health care, low incomes, and poor nutrition.

Ng, Poon Chew (1866–1931)

Ng Poon Chew was an influential Chinese American newspaperman in San Francisco. He was the founder of *Chung Sai Yat Pao* (*East-West Daily Paper*, 1900–1951), the first Chinese language daily newspaper published outside China.

Born in Guangdong, China, Ng migrated to California at age 13. Working as a domestic laborer on a ranch in San Jose, he obtained his Western education from a local Sunday School teacher. He was converted to Christianity in 1883, and in 1884, he began to study full time with Reverend Augustus Loomis of the San Francisco Presbyterian Church. In 1888, he traveled to rural Chinatowns in the Bay Area, introducing the Bible to Chinese fisherman along the coast and gaining firsthand knowledge about their lives. In 1889, he was selected to attend the San Francisco Theological Seminary.

In 1892, after his marriage to Chun Fah, Ng became America's first Chinese Presbyterian Minister on the Pacific Coast, working at the church on Sacramento and Stockton Streets. A year later, he was

transferred to lead the church in Los Angeles. The church was burned down in 1898. And in 1899, after working at a Japanese language newspaper briefly, he started his first weekly newspaper, *Hua Mei Sun Bo* (*Chinese American Morning Paper*), in Los Angeles.

In 1899, Ng, Chun Fah, and their four young children resettled to San Francisco, where he founded the *Chung Sai Yat Pao*. The first copy of the daily was published on February 16, 1900. This newspaper had no affiliation with political parties in China. It focused on issues concerning everyday life of Chinese in the United States and worked to cultivate discussions on community economic and social development. The paper also encouraged its readers to learn American culture, ideology, values, and customs. For the first half of the twentieth century, the newspapers enjoyed a large circulation among Chinese in the western part of the United States and Mexico.

Ng was also a well-known speaker and author. He gave public speeches in many places throughout the United States against Chinese exclusion, and he published books and pamphlets.

Ngor, Haing S. (1940–1996)

Haing Somnang Ngor was a Cambodian American surgeon, gynecologist, and obstetrician who became a social worker and actor after he resettled as a refugee in the United States in 1980. He was born on March 22, 1940, in Samrong Yong located south of Phnom Penh, the capital of Cambodia. His father was of Chinese ancestry and his mother was Khmer. (Khmer are the dominant ethnic group in Cambodia.) He became internationally known after winning an Academy Award for Best Supporting Actor portraying photographer Dith Pran in the 1984 film, *The Killing Fields*.

On April 17, 1975, the most radical faction among Cambodia's Communists, the Khmer Rouge, captured Phnom Penh and established a new regime called the Democratic Kampuchea. Within days, the victors forced about 1.5 million people to leave the capital and march long distances to their ancestral villages. Residents of other urban areas were also forced to march to the countryside where the displaced people became beasts of burden, plowing fields with yokes on their necks and breaking apart rocks without any tools as they were commanded to build dams and levees. They were allowed to eat only a single bowl of thin rice porridge a day. People caught scrounging for anything edible—including cockroaches and rats—were shot to death. The Khmer Rouge, led by Pol Pot, aimed to erase all traces of modern civilization. They closed schools and banks, desecrated Buddhist temples and defrocked monks, destroyed machinery and vehicles, and tortured and killed all suspected enemies, including some of their own political cadres and military commanders. During their reign of terror that lasted three years and eight months, a conservative estimate of 1.7 million Cambodians (out of a total population of a little over 7 million) perished from executions, overwork, starvation, disease, and exposure to the elements.

Dr. Haing Ngor was in Phnom Penh when the Khmer Rouge captured it. He was in private practice and simultaneously served as a medical officer in the Cambodian Army. He and his family were coerced to walk miles and miles to rural northwestern Cambodia while several million other Cambodians were likewise crisscrossing the country. Dr. Ngor's wife, My Huoy, who was a teacher, died in childbirth during this period of immense suffering. Because the Khmer Rouge targeted educated people, Ngor had thrown away his eyeglasses (the Khmer Rouge presumed that only educated people became near-sighted and had to wear glasses) and kept his professional training secret. Tragically, though he could have saved his wife who needed a Caesarian section had he had any surgical tools with him, he had to stand by helplessly as she and their baby died. The Khmer Rouge also killed his parents and siblings. He later recounted these horrific events in his autobiography, *Haing Ngor:*

A Cambodian Odyssey, cowritten with Roger Warner and published in 1988.

When Cambodia's neighbor, the Socialist Republic of Vietnam, overthrew the Khmer Rouge regime in January 1979, millions of emaciated people returned to their former homes to look for family members and friends who might still be alive. Tens of thousands refugees also escaped by crossing the Thai-Cambodian border. Haing Ngor fled and spent about a year and a half in a refugee camp in Thailand where he offered his services as a doctor. In 1980, the United States accepted him and his orphaned niece as refugees. They were resettled by an agency on contract with the government in Los Angeles. Unable to practice medicine, he found work as a security guard and as a job counselor to refugees in Los Angeles.

As British film director Roland Joffe began preparations for making *The Killing Fields*, using a script based on the writings of Sydney Schanberg, a *New York Times* journalist who had reported on events in Cambodia, the film's casting director, Pat Golden, met Ngor at a Cambodian wedding party in Los Angeles and encouraged him to audition for a role in the film. At first, Ngor was hesitant but later agreed to go for a tryout because he felt that Cambodia's tragic story needed to be told to a wide audience. Only when production began in Thailand did Ngor find out that he had been chosen to portray Dith Pran, who had served as Schanberg's interpreter, photographer, and general assistant. Ngor was riveting on screen and critics lauded his performance for its emotional intensity and veracity. In addition to winning the Academy Award for Best Supporting Actor, he also won the Golden Globe for Best Supporting Actor, and two awards from the British Academy of Film and Television Arts—Best Actor and Best Newcomer to Film. In subsequent years, he appeared in more than a dozen films and television programs.

In 1990, he established the Dr. Haing S. Ngor Foundation, an outgrowth of his earlier Project Cambodia, which raised funds to support Cambodian orphans and to help rebuild some of Cambodia's destroyed infrastructure. He and Dith Pran actively spoke out to publicize the Cambodian "genocide" or "holocaust." (Those two words are in quotes because

some scholars and Jewish American community leaders dispute their applicability to Cambodia.) When Haing Ngor was shot to death by three members of the Oriental Lazy Boyz gang outside his apartment on the edge of Los Angeles Chinatown on February 25, 1996, rumors spread within Cambodian American communities that it must have been a hit job ordered by the Khmer Rouge, many of whose leaders and members remain alive and some of whom are serving in Cambodia's current government. U.S. law enforcement officers, however, have never found any evidence to substantiate that allegation. Ngor's foundation was incorporated in 1997 as a nonprofit charitable organization dedicated to promoting human rights and preserving Cambodian art and culture.

Nguyen, Dat (1975–)

Dat Tan Nguyen is the first person of Vietnamese descent to play professional football. After a stellar career at Texas A&M University, he joined the National Football League (NFL) as a member of the Dallas Cowboys.

Nguyen was born on September 25, 1975, in Fort Chaffee, Arkansas. Fort Chaffee served as a processing center for Southeast Asian refugees from 1975 to 1976. Nguyen's parents came to the United States shortly after the North Vietnamese army overtook

Saigon in April 1975. Nguyen spent most of his childhood in Rockport, Texas. He attended Rockport-Fulton High School where he played linebacker and punter. During his high school career, he was named a Texas Top 100 linebacker and received second-team All-State honors as a punter. Several top Division I schools including Notre Dame, UCLA, and Michigan recruited Nguyen to play football.

Wanting to stay close to his family, Nguyen enrolled at Texas A&M University where he played from 1995 to 1998. At 5-foot-11, 240 pounds, he was considered too small to effectively play the middle linebacker position. Despite his smaller build, he became integral to the team's success. He served as the leader of the famed "Wrecking Crew," a nickname given to the Aggies defensive team. Nguyen started every game (51) and became the only player in school history to lead the team in tackling for four consecutive seasons. In his senior season, Nguyen was named a consensus All-American, the Big 12 Conference Defensive Player of the Year, and received the Chuck Bednarik College Defensive Player of the Year Award and the Lombardi Award, presented to the nation's top lineman. He finished his college career with 517 tackles making him the Aggies' all-time tackles leader and was named to the Texas A&M athletic hall of fame in 2004. He graduated with a degree in agricultural development in 1998.

In 1999, the Dallas Cowboys selected Nguyen with the 85th overall pick in the NFL draft. He made an immediate impact, leading the team in special teams tackles as a rookie. He earned a starting position as middle linebacker during his second season. Nguyen led the Cowboys in tackling in 2003 and was named to the Associated Press All-Pro second team. Over his seven-year career, he played a total of 90 games and amassed 665 total tackles, six sacks, seven interceptions, and four forced fumbles. He retired from football in 2006.

Nguyen rejoined the Cowboys organization in 2007 as an assistant linebackers coach and defensive quality control coach. In February 2010 he returned to Texas A&M as the inside linebackers coach. Outside of football, he has worked with various community programs including the Dallas Cowboys Let Us Play! Sports Camp for Girls, the Salvation Army, and

the Vietnamese Culture Science Association. He received the Golden Torch Award at the 2004 Vietnamese American National Gala for his professional achievements and service to local communities. In July 2005, Nguyen published his autobiography *Dat: Tackling Life and the NFL* that explores how he overcame the challenges of professional athletics and racism.

Nguyen, Dustin (1962–)

Dustin Tri Nguyen (born Nguyen Xuan Tri) is a Vietnamese American actor, writer, and martial artist who holds a black belt in Taekwondo. He first gained fame for his role as Detective Harry Truman Ioki in the late 1980s television series, *21 Jump Street*. Since then, he has garnered recognition for his roles in various films.

Nguyen was born in southern Vietnam, where he lived until the age of 11. Nguyen's father, Xuan Phat, was a writer, producer, and actor who wrote for a Vietnamese radio station. My Le, his mother, was an actress and dancer. Nguyen escaped with his family in April 1975, when North Vietnamese troops invaded Saigon. In the United States, the Nguyens first arrived at a refugee camp in Arkansas and later relocated to St. Louis, Missouri. After high school, Nguyen attended Orange Coast College in Southern California. There, he enrolled in an acting class at the suggestion of a friend.

In the mid-1980s, Nguyen landed his first role in a two-hour episode of *Magnum, P.I.*, in which he

portrayed a Cambodian freedom fighter. His first major role was on the police show *21 Jump Street*, in which he starred opposite Johnny Depp. He remained in this role for four seasons, during which time the producers of the show devoted one episode to Nguyen's real-life refugee experience. In the following years, Nguyen worked in the series *SeaQuest DSV* as Chief Helmsman William Shan and in *V.I.P.* as Johnny Loh, with Pamela Anderson. In this series, Nguyen choreographed his own fight scenes. In 2000, Nguyen became the first model of Asian descent for Levi's Jeans' European "Hero" Campaign.

Along with a successful career on the small screen, Nguyen has been featured in various films. He played Cate Blanchett's former boyfriend in *Little Fish*, a film about a former heroin addict trying to reestablish herself. This performance earned Nguyen the 2007 Asian Excellence Award for Best Supporting Actor in a feature film. Nguyen took on his first villain role in *The Rebel*, a 2006 movie about Vietnam under French colonial rule. Filmed in Vietnam, this opportunity signaled Nguyen's first return trip to the country in 32 years. The film opened for the 2007 Vietnamese International Film Festival in Orange County, California. Another notable role in *The Legend Is Alive* earned Nguyen the Vietnamese Golden Lotus Award for Best Actor, the Golden Kite Award from Vietnam, and China's Golden Rooster for Favorite International Actor. In 2010, Nguyen wrote, produced, and starred in *De Mai Tinh (Fool for Love)*.

Nguyen has been married to former model Angela Rockwood since 2001. Following an accident that left Rockwood a quadriplegic, Nguyen and Rockwood have been involved with the Christopher Reeve Paralysis Foundation and the Paralysis Resource Center's Minority Communities Outreach Campaign. She currently resides in Los Angeles, while he lives in Vietnam as an actor and director.

Nguyen, Jacqueline H. (1965–)

On May 7, 2012, Judge Jacqueline H. Nguyen received confirmation to the U.S. Ninth Circuit Court of Appeals by a U.S. Senate vote of 91–3. She is President Barack Obama's third nomination to the U.S. Ninth Circuit, a federal appellate court one level below the U.S. Supreme Court and the largest of the nation's 13 Circuits of Appeal. The jurisdiction of the Ninth Circuit Court of Appeals includes the states of California, Arizona, Nevada, Oregon, Washington Idaho, Montana, Alaska, and Hawaii. Judge Nguyen will fill a new appellate seat in San Francisco, California.

President Obama nominated Judge Nguyen to her most recently confirmed seat on September 22, 2011. After a hearing on November 2, 2011, the Senate Judiciary Committee reviewed her nomination and voted 91–3 on May 7, 2012, in favor of her confirmation. At 48, Judge Nguyen has earned the distinction of being the first Vietnamese American and the first Asian Pacific American woman ever to occupy a seat on the federal appeals circuit. Judge Nguyen joins Judge Denny Chin as the only two active Asian Pacific American judges on the appellate circuit. (Judge Chin was nominated by President Obama to the federal bench in 2009 and is seated in New York.)

In 2002, Nguyen became the first Vietnamese American female judge to sit on the California Bench. At the time of her nomination to the Los Angeles County Superior Court by Governor Gray Davis, Judge Nguyen was 37 years old. President Obama nominated Judge Nguyen to the U.S. District Level Court in 2009 at the recommendation of Senator Dianne Feinstein, a recommendation that came with the support of a bipartisan advisory committee. Upon a unanimous U.S. Senate confirmation (97–0), Nguyen became Judge of the U.S. District Court for the Central District of California. The 2009 confirmation earned

her the distinction of being the first Vietnamese American federal judge. Previous to her time on the bench, Judge Nguyen served as a federal prosecutor for the U.S. Attorney's Office and as a litigator for a private practice. As of her new appointment, Nguyen is now currently the only Asian Pacific American judge serving on the Ninth Circuit of Appeals.

Born in Dalat, Vietnam, as Hong-Ngoc Thi Nguyen, Nguyen was 10 years old when she and her family were forced to leave the country in 1975 with the fall of Saigon to Communist forces. Because of her father's position in the South Vietnamese Army and his close work with U.S. forces, the family was among the first wave of refugees to leave Vietnam. Like many refugee families arriving in the United States, the Nguyen family spent some months in a military tent at a refugee processing center established at Camp Pendleton Military Base near Oceanside, California. Once settled in Los Angeles proper, both parents worked odd jobs as nightshift cleaners, a gas station attendant, and a pie factory worker, eventually earning enough money to invest in a family business. Nguyen would work at the family's Donut Shop throughout high school and college.

Between helping out at her family's business and taking classes, Nguyen completed high school and earned a full scholarship to Occidental College. She earned her BA from Occidental in 1987 and her JD at UCLA in 1991.

A graduate of UCLA's School of Law and newly admitted to the California bar, Nguyen embarked upon a legal career as a litigator at Musick, Peeler & Garrett LLP. In 1995, she joined the criminal division of the U.S. Attorney's Office, serving as a federal prosecutor. From 1999 to 2000, Nguyen worked with the Organized Crime Strike Force division of the U.S. Attorney's Office until being promoted to Deputy Chief of the General Crimes section, a position that she held until 2002.

Judge Nguyen has contributed to the Asian Pacific American legal community by establishing the Asian Pacific American Bar Association and serving as its president. Additionally, she has participated in a number of other bar associations, including the Korean American Bar Association, the Japanese American Bar Association, the Southern California Chinese

Lawyers Association, and the Vietnamese American Bar Association of Orange County. Judge Nguyen has also served on the board of the Women Lawyers Association of Los Angeles.

Members of the American Bar Association Standing Committee of the Federal Judiciary unanimously supported Judge Nguyen's 2011 nomination to the U.S. Ninth Circuit of Appeals.

Nguyen, Madison (Phuong) (1975–)

Madison (Phuong) Nguyen is currently the vice mayor of San Jose, California. She became the first Vietnamese American elected to public office in Northern California when she won a seat on the Franklin-McKinley School District Board in San Jose, California in 2002. She eventually served as the Board's president before running for San Jose's City Council in 2005. Her election to the council gave her the remarkable distinction of being the first Vietnamese American to serve on the council of a major American city (San Jose is the tenth largest city in the United States). In January 2011, the mayor and City Council of San Jose appointed Nguyen the city's first Vietnamese American vice mayor.

In 1979, at the age of four, Nguyen fled Vietnam by boat with her parents and eight siblings, settling temporarily in a Philippine refugee camp before gaining sponsorship to the United States. Nguyen changed her first name to Madison when she became a U.S. citizen at the age of 18. At the University of California, Santa Cruz, Nguyen pursued an undergraduate degree in history, then continued on to receive a master's in social science at the University of Chicago before returning to Northern California. When reenrolled at

the University of California, Santa Cruz, this time for a PhD in sociology, Nguyen sought to provide San Jose with a representative voice that reflected the city's distinction as home to one of the largest Vietnamese communities in the diaspora. She subsequently won a seat on the Franklin-McKinley School Board.

Among her political work, vice mayor Nguyen has raised concerns regarding the participation of Vietnamese Americans on juries and public councils, particularly in cases directly relevant to the community. In 2003, the question of equal representation became crucial when police shot and killed Bich Cau Thi Tran, a young mother of two, after mistakenly identifying the traditional Vietnamese vegetable peeler held by Tran as a cleaver. The incident received little attention, prompting Nguyen to organize a community rally that would place the Vietnamese community on the political map. Approximately 250 people attended the rally, bringing attention to the callous shooting that resulted in Tran's death. Although in 2003 Nguyen did not express interest in pursuing a career in public office, the visibility that she gained from the event catapulted her into public service.

In 2008, Nguyen's popularity among Vietnamese American constituents in San Jose was sharply tested over the controversial naming of a Vietnamese business section. Nguyen supported naming the area the "Saigon Business District," whereas locals who opposed her rallied for the more widely used designation of "Little Saigon." Although the latter term carries a collective political critique of Vietnam's government within the diaspora since 1975, Nguyen's preference was not politically charged but simply to reduce the confusion with the much larger "Little Saigon" in Westminster, California. The agenda item has since been postponed by the city council.

Vice Mayor Nguyen currently serves as vice chair of the Public Safety, Finance and Strategic Support Committee, vice chair of the Rules and Open Government Committee, vice chair of the San Jose/Santa Clara Water Treatment Plant Advisory Committee, member of the Mayor's Gang Prevention Task Force, Silicon Valley Rapid Transit Policy Advisory Board (BART), Housing and Community Development Advisory Committee as well as other key commissions and committees.

Nhat Hanh, Thich (1926–)

Thich Nhat Hanh is a Vietnamese Buddhist monk, celebrated peace activist, and prolific author. Nominated by Martin Luther King, Jr. for the Nobel Peace Prize in 1967 for his efforts opposing the Vietnam War, Thich Nhat Hanh later led the Buddhist Peace Delegation to the 1969 Paris Peace talks and organized humanitarian aid for those affected by the war. He is also credited with coining the term "Engaged Buddhism" in the 1960s and promoting its principles of nonviolent activism and social service throughout the United States and Europe.

Born Nguyen Xuan Bao in central Vietnam in 1926, Thich Nhat Hanh was fully ordained as a Buddhist monk in 1949. In 1960 he accepted a fellowship to study at Princeton University and was later appointed as a lecturer at Columbia University. Because of the ongoing conflict in Vietnam Thich Nhat Hanh returned in 1963 and founded the School of Youth Social Service in Saigon, a war-relief organization that established schools and medical centers, and resettled families who lost their homes. After visiting the United States in 1966 to speak about the effects of the war in Vietnam, Thich Nhat Hanh was exiled by the Vietnamese government and subsequently granted asylum in France.

Throughout the 1970s, Thich Nhat Hanh continued teaching a small group of followers in France and maintained his humanitarian efforts, such as organizing rescue missions for the "boat people" escaping South East Asia. In 1982 he founded a monastery and meditation center in southern France called Plum Village, and from 1985 to 1989 returned to the United States for a series of lecture tours that established Thich Nhat Hanh as a prominent Buddhist figure in America and a leader of the Engaged Buddhist movement. Two branches of Plum Village have opened in America, one in California in 2000, and another in New York in 2007. In 2005, Thich Nhat Hanh was finally allowed to return to Vietnam to give public lectures and publish a limited number of his books.

Thich Nhat Hanh's Buddhist teachings tend to combine a variety of traditional and modern approaches, but often stress the oneness or "inter-being" of all phenomena as well as nonviolent activism. He currently resides at Plum Village, but frequently travels to give lectures and hold meditation retreats. Furthermore, Thich Nhat Hanh's numerous publications have granted him a widespread exposure and popular appeal.

Ni, Fu-Te (1982–)

Fu-Te Ni is the first professional baseball player who successfully moved from Taiwan's Chinese Baseball Professional League (CPBL) to Major League Baseball (MLB). As a left-handed pitcher, Ni started his professional career with the Chinatrust Whales

of CPBL in 2007. After the Chinatrust Whales dissolved at the end of 2008, Ni decided to challenge the MLB. He signed a minor league contract with the Detroit Tigers in January 2009 and made his MLB debut in June as a relief pitcher. He was a constant member of the Taiwanese team for several games, including the 2007 Asian Championship, the 2008 Olympics, and the 2009 World Baseball Classic.

Nichibei Shimbun (Japanese American News)

Published in San Francisco, the *Nichibei Shimbun*, or *Japanese American News*, had its official beginning on April 4, 1899. Its origins, however, can be traced to two earlier vernacular papers called the *Hokubei Shimpo* (1898) and the *Soko Nihon Shinbun* (Japan Herald 1897). Organized by a group of immigrant students (“school boys”) and writers, the *Soko Nihon Shinbun* came into the hands of Abiko Kyutaro, a Christian entrepreneur who had come to the United States as an indigent student, by 1898. The *Hokubei Shimpo* was a product of ongoing disputes between Christian converts and other factions of the early Japanese immigrant community in San Francisco. Whereas non-Christians seized editorial control of the preexisting *Shin Sekai Shimbun* (*New World Daily* 1894) to turn it into something of their political organ, some Christian Issei cut their ties from the newspaper to form the *Hokubei Shimpo*. Thus, for a short period around 1898, the San Francisco Japanese community had three major vernacular newspapers; however, under the support of nationalist-minded immigrants and working-class newcomers, the *Shin Sekai* increased its readership rapidly. Sharing a similar political support base, the *Soko Nihon Shinbun* and

Hokubei Shimpo were thus soon compelled to merge into a new paper called the *Nichibei Shimbun*. Abiko served as its publisher and editor whereas such immigrant intellectuals as Yamato Ichihashi (later a Stanford University professor) and Yoneda Minoru (later a renowned diplomatic historian in Japan) participated in the operation of the *Nichibei Shimbun* in its inceptive years. By a few years later, Abiko became the sole proprietor of the *Nichibei Shimbun*, as others moved back to Japan or onto other ventures in the United States.

Throughout the prewar years, the *Nichibei Shimbun* remained one of the most important Japanese vernaculars in San Francisco. The old politico-ideological conflict between the *Nichibei Shimbun* and *Shin Sekai* resurfaced time and again, which often reflected deep-seated religious divides in early Japanese America. The *Nichibei Shimbun* represented aspects of Japanese immigrant political thinking and practice that sought harmony with white America, valorized social assimilation and permanent settlement over immigrant sojourning, and aspired to adapt to America’s Christian traditions. Yet, for that very reason, the newspaper sometimes found itself under severe attacks by more nationalistic segments of early Japanese America that had close ties to the *Shin Sekai* and Buddhist churches, as well as some leftist elements. In 1911–1912, for example, the *Nichibei Shimbun* was accused of being traitorous to the Japanese Emperor, for it refused to criticize an Issei Christian minister in Bakersfield who had exhibited his serious “disrespect” for the throne. Some eight years later, the *Nichibei Shimbun* came under fire by the *Shin Sekai* again, when the former supported the Japanese government’s decision to suspend the issuance of passports to “picture brides” bound for the United States. Given the *Nichibei Shimbun*’s proassimilation stance, it made perfect sense that the newspaper embraced Tokyo’s policy, because white exclusionists had singled out the picture-marriage practice as an example of Issei’s “un-American” character. But the *Shin Sekai* was upset by its support for Tokyo’s decision to make it impossible for ordinary Issei to get married without having to go to Japan. In this way, the rivalry between the two San Francisco vernaculars illuminated a major political fault line within early Japanese America.

As historian Yuji Ichioka argued, it is important to note that Abiko's advocacy for permanent settlement contributed to the emergence of stable settlement Japanese communities during the 1910s. And Abiko's desire to reform Japanese immigrant society through the *Nichibei Shimbun* compelled him to extend its reach to Southern California. In 1922, he purchased a bankrupt local vernacular and renamed it the *Rafu Nichibei* (*Los Angeles Japanese American*).

Abiko's quest of interracial harmony unfolded in tandem with his belief in the intermediary role of second-generation Japanese Americans (Nisei) in U.S.-Japan relations. The concept of Nisei as a bridge of understanding thus became a main underpinning of *Nichibei Shimbun's* editorial policy, especially after the completion of racial exclusion of Issei by the mid-1920s. His dream of inclusion into white America was untenable as far as the immigrant generation was concerned because of the denial of naturalization rights and the 1924 Immigration Act. Yet, Nisei U.S. citizens were free from existing legal discrimination against "aliens ineligible for citizenship." Although Abiko optimistically predicted that Nisei would be able to blend into white America on account of their outstanding racial character, he also believed that the youngsters were saddled with the mission to improve bilateral relations between the country of their birth and their ancestral country by dispelling white American misunderstanding about the Japanese—both Issei and people of Japan. Abiko used the *Nichibei Shimbun* to disseminate this idea, stressing the importance of teaching Nisei about Japan with an eye to enabling them to serve as a bridge of mutual understanding between the United States and Japan. In 1925 and 1926, the newspaper sponsored "kengakudan," or "study tours" of selected Nisei men and women to Japan. Abiko Yonako, Kyutaro's wife, accompanied these study tours, which received red carpet welcome by upper echelons of Japanese society. In the ensuing years, many other community organizations dispatched similar Nisei study-tour groups to Japan on the basis of the bridge ideal espoused by Abiko. The *Nichibei Shimbun's* pioneering role in the edification of Nisei also entailed its new policy of inserting English-language Nisei sections—the practice that began in 1925 and was subsequently imitated by all

major Japanese press in the continental United States and Hawaii.

During the early 1930s, the *Nichibei Shimbun* was engulfed in serious financial problems and labor strife. In 1931, a dispute over editorial policy and unpaid wages led to an all-out strike by the *Nichibei Shimbun* staff, which resulted in the liquidation of the *Rafu Nichibei*, the dismissal of many workers and reporters, and the establishment of the *Hokubei Asahi* by the dismissed *Nichibei* employees. That newspaper and the *Shin Sekai* merged in 1935. The bitter rivalry between the *Nichibei Shimbun* and *Shin Sekai* continued until the outbreak of the Pacific War. In the same decade, the *Nichibei Shimbun* underwent other significant changes as well. The death of Abiko Kyutaro in 1936 resulted in the transfer of the business operation to his wife Yonako. Three years later, the *Nichibei Shimbun* suffered a devastating fire, reducing its building to ashes. Although a new building and equipment were acquired by 1940, Japan's attack on Pearl Harbor caused the newspaper to permanently cease its operation in April 1942. After the wartime internment of Japanese Americans, former employees of the *Nichibei Shimbun* formed the *Nichibei Jiji* (*Nichi Bei Times*) under the control of Yasuo William Abiko, Nisei son of Kyutaro and Yonako. The newspaper is still in operation out of San Francisco as an English weekly and online-based news outlet.

1982 ILGWU Strike in New York's Chinatown

Jewish, Italian, and Irish immigrants founded the International Ladies Garment Workers Union (ILGWU) in New York City in 1900. The union

sought to unite the various workers in the rapidly growing garment industry. By the late 1940s, the union had increasing black and Latino membership. During the 1950s, Local 25 began to organize Chinese immigrant workers and enlisted the help of an English-speaking worker from Hong Kong named Wing Fong Chin, who expanded the union into the sweatshops of New York's Chinatown.

By the early 1980s, Local 23–25 was the largest of the ILGWU affiliates because it represented all the shops in New York's Chinatown. Wages were calculated by piece rate, where each sewing operation was assigned a price and the more you sewed, the more you earned. Workers and the union got the employers to increase the piece rate by stopping work until a fair price was negotiated. However, work stoppages were difficult to organize in the tightly controlled factories.

Local 23–25 organized all the factories in Chinatown from the top down through union contracts that required all union manufacturers to do business with union contractors. If either the contractor or manufacturer attempted to use a nonunion firm, the union was allowed to strike the violating party, and all other union firms would be required to observe the picket line. Every three years, the union first bargained a new contract with the manufacturers, then it negotiated the same set terms with the contractors. Finally the contractors negotiated with the manufacturers to strike an agreement. This triangular bargaining system passed through wage increases and benefits from the manufacturers to the contractors, and then from the contractors to the workers. Because the union had organized nearly three quarters of the New York market's manufacturers, the triangular bargaining arrangement locked manufacturers, contractors, and workers into a highly unionized job market.

By the 1980s, manufacturing was increasingly outsourced to offshore factories. This development threatened the triangular bargaining arrangement, and in 1982, manufacturers refused to sign a new union contract and demanded that the workers give back three holidays and other medical and retirement benefits. On June 24, 1982, a rally was held in Chinatown to urge manufacturers to sign a new contract with the union. When the rally began, nearly 20,000 Chinatown garment workers showed up at the park, all wearing

union caps and carrying picket signs and banners. For the next few days, the union broke the bargaining impasse by ignoring the Chinatown contractors' association and got individual Chinese contractors to pledge that they would sign the union contract. Several dozen contractors held out and the union planned another rally at Columbus Park for June 29. At the end of that rally, it was decided that any contractor who had not signed a pledge would be struck. Once again, nearly 20,000 workers showed up at the rally, and within hours the few shops that were put on strike caved in and signed the pledge. The ILGWU won the 1982 strike for Chinatown's garment factory workers and demonstrated the capacity of Asian immigrant workers to organize.

Noguchi, Isamu (1904–1988)

Isamu Noguchi is remembered today as one of the first Japanese American artists to attain fame in the American art world. As a sculptor, he created artifacts, designed stage sets for dance, and directed public art and landscaping projects in and outside the United States. Through his sculpture and, in his words, "sculpturing spaces," he brought new values and

meanings to the physical environment. Throughout his career, Noguchi's racially mixed background created various personal opportunities and obstacles. He strategically emphasized different elements of his ethnic identity depending on the nature of the projects he pursued.

Noguchi was the son of Yonejiro Noguchi, a Japanese poet well-known in the United States and Japan, and Leonie Gilmour, a white American (half Irish and sixteenth Native American) who helped Yonejiro write his poetry in English. Their marriage did not last long as Yonejiro married another woman in Japan soon after Leonie gave birth to Isamu.

For most of his early life in Japan and the United States, Noguchi went by the name Isamu Gilmour until he decided to pursue his career in the art world in 1924. He became conscious of his surname's value: its association with his renowned father that conferred "oriental authenticity." In 1927, Noguchi applied for a Guggenheim Fellowship to study abroad. In his application, he stressed his Japanese background to distinguish himself from other applicants. He ultimately received this fellowship and traveled to Paris where he studied under Constantin Brancusi, a highly influential figure in the European art world.

Although Noguchi took advantage of his Japanese ethnicity and traveled to Japan in search of his roots, he was careful to differentiate himself from his father who exhibited nationalistic sentiment through his poems as Japanese imperialism gained momentum in the 1920s and 1930s. Noguchi became vocal about his stance against totalitarian states and for the empowerment of the subjugated classes. His first visible artistic expression of social protest was the production of *Death* (1934), a sculpture that powerfully represented the agony of a lynched figure.

The gloomy atmosphere of the Great Depression coupled with Noguchi's own unstable economic condition caused him to become more receptive to socialism. Through friendships he cultivated in Paris, he earned the opportunity to take part in a mural project in Mexico City. His mural, filled with Socialist and Communist symbolism, expressed his unequivocal protest against capitalist greed and Fascism. Noguchi's life in the 1930s was marked by highly transnational and interracial movements and activities—a stark

contrast with the following decade. Especially in the first half of the 1940s, his life came to be particularly oriented around Japanese American issues.

Following the Japanese attack on Pearl Harbor in 1941, Japanese Americans came to be labeled as enemy aliens, and Noguchi realized that he was inevitably part of this segregated group, although he had had scarce contact with the Japanese American community on the West Coast. Soon after this attack, he organized the group Nisei Writers and Artists for Democracy with several other influential Nisei, hoping to prove Japanese American loyalty to the United States. Even though Noguchi was able to circumvent the internment (he was a resident of New York at that time), he voluntarily entered the Poston internment camp in May 1942 to direct the arts and crafts program for the internees, believing that he could be useful in showing American society that Japanese Americans can sustain a democratic and loyal community. Life inside the barbed wires, however, was much more difficult than he expected. He found it particularly hard to have intellectually and politically enriching conversations with much younger Nisei internees who appeared to be only interested in farming. He was soon disillusioned from the noble goal of building an exemplary democratic community—which he felt was doomed because of the fundamental racist motive of the internment—and left the camp after six months. His social status as a famous artist granted him more freedom in comparison to other Japanese Americans interned at the camps, but his mobility, coupled with his mixed ethnicity, negatively affected his credibility and enticed suspicion from internees and FBI agents alike that he might be a spy.

After World War II, Noguchi firmly established his status as a leading American artist when he was selected as one of the 14 American artists to be featured at a Museum of Modern Art exhibit in 1946. After rising to fame, he returned to Japan, gave lectures on the Japanese traditional art forms that influenced him, and played an important role in the development of Japanese modernism—an art movement that rejected blind submission to the Western standards of art.

The enthusiastic welcome did not mean that the Japanese public fully embraced his complex identity,

however. In 1951, Kenzo Tange, the leading architect at the University of Tokyo, invited Noguchi to design the central cenotaph along with the Peace Bridges for the Hiroshima Peace Memorial Park that commemorated the war dead. Noguchi readily accepted the invitation, and the Peace Bridges were built according to Noguchi's plan. However, to his disappointment, the Hiroshima Peace Memorial City Construction Committee rejected his design proposal for the central cenotaph. Although the Committee did not officially explain a clear reason for the rejection, it was apparent that a nationalistic sentiment of the Japanese public was reflected in disqualifying the American artist (whose country dropped the atomic bombs) and excluding him from the most sensitive center of national memory.

Outside of Japan, Noguchi's Japanese ethnicity allowed him to represent Japanese art and culture and play the role of an ambassadorial artist. In the late 1950s, he received commission to design the Japanese-themed gardens at the headquarters of UNESCO in Paris, a project for which he utilized stones imported from Japan. The Japanese government, convinced that these gardens would raise interest and respect for Japanese culture, helped fund this project.

Toward the end of his career, Noguchi became more interested in using stones he collected in Japan for his art projects. From 1969 onward, he often stayed at his studio in Mure, Japan, where he could devote himself to working with the stones. Noguchi worked energetically until the last year of his life, sculpturing spaces in big cities and remote corners and receiving many awards and honors. After he passed away, his studios in Mure and Long Island, New York, were turned into museums where his artworks and archives were stored.

Living through the turbulent twentieth century, Noguchi exhibited his politics through his art and activities. His identity was by no means static or authentic; he tactically expressed parts of his identity depending on the circumstances. The "Japanese" label was always attached to him, and he at times consciously took advantage of it; however, he knew that Japanese culture was foreign to him. Although he respected Japanese culture and art, he also had an outsider/orientalist view toward Japan that it retained "primitiveness" and an "unchanged past" that the fully developed American society had lost. In his later years, Noguchi constantly sought connectivity with earth and inspirations in Japan.

More than 20 years after his death, the sculptor's legacy continues. In 2010, the film *Leonie* featuring Noguchi's mother was released in Japan. This reflects the Japanese public's renewed interest and pride in the transnational identity and life of the great artist who sought his roots in Japan.

Odo, Franklin (1939–)

Franklin Odo is a Sansei (third-generation) Japanese American historian who is a prominent scholar, activist, author, and academic pioneer. Odo is known mainly for his contributions to Asian American studies through his involvement as an academic and as the director of the Asian Pacific American Program at the Smithsonian Institute.

Odo was born and raised on the island of Oahu where he attended Kaimuki High School located in Honolulu. After graduation, Odo received a BA in Asian studies from Princeton University in 1963. Following his undergraduate career, Odo obtained an MA in East Asia regional studies from Harvard University and a PhD in Japanese history from Princeton University in 1975. Although Odo's academic background was in Asian studies, he became involved in Asian American studies and ethnic studies.

After receiving his doctorate, Odo taught Asian American studies at various academic institutions around the nation for over 30 years. His first stop was at Occidental College in Los Angeles, where he advocated for an Asian American studies curriculum. His other academic appointments included University of California, Los Angeles; California State University, Long Beach; University of Pennsylvania; Hunter College; Princeton University; Columbia University; and the University of Hawaii at Manoa. When at the University of Hawaii at Manoa, Odo chaired and directed the Ethnic Studies Department.

Odo was a pivotal figure in the formation of the Smithsonian Asian Pacific American (APA) Program in 1997. Professor Odo served as the director of the program and under his leadership, the program

provided vision, education, and outreach for the Asian American community. Even though his expertise lies in Japanese American history, Odo utilized his position as director to expand the knowledge of Asian Americans to include Koreans, Chinese, Vietnamese, Indian, Filipinos, and other Asian American groups in the United States. Odo was instrumental in addressing many issues pertaining to the Asian Americans through different exhibits. In 2002, he supported the traveling exhibit "*Through My Father's Eyes: The Filipino American Photographs of Ricardo Ocreto Alvarado (1914–76)*". In 2003, he co-organized the traveling exhibit *Dreams and Reality* that showcased 100 years of Korean immigration to the United States by Korean contemporary artists. To commemorate the 30th anniversary of the Fall of Saigon, he curated the traveling exhibit *Exit Saigon, Enter Little Saigon: Vietnamese America since 1975*. These exhibits all added more knowledge and awareness to the experiences and voices of Asian and Asian Americans in the United States. In 2010, Odo stepped down as the director of the Asian Pacific American Program.

As an author, Odo wrote and coedited several books that pertained to Asian American history, and specifically, Japanese American history. In 1971, Odo along with Amy Tachiki, Eddie Wong, and Buck Wong co-edited an Asian American anthology *Roots: An Asian American Reader*. Odo's next book, published in 1985, *A Pictorial History of the Japanese in Hawaii 1885–1924* chronicles the experiences of the first Japanese immigrants to Hawaii. In 2003, Odo tells the story of a small group of Japanese American soldiers who were a part of the Varsity Victory Volunteers during World War II entitled *No Sword to Bury: Japanese Americans in Hawaii during World War II*.

Also in 2003, Odo was an editor of the *Columbia Documentary History of the Asian American Experience*, which attempted to bring together various texts surrounding Asian American history.

Ohno, Apolo Anton (1982–)

During the 2010 Vancouver Olympics, Apolo Anton Ohno became the most decorated U.S. Winter Olympian with eight career Olympic medals: two gold, two silver, and four bronze medals in short track speed skating. As of 2012 he won 21 medals in World Championship competition including the overall gold medal at the 2008 games in Gangneung, South Korea.

Born May 22, 1982, in Federal Way, Washington, Ohno's Japanese father, Yuki Ohno, divorced his Caucasian mother, Jerrie Lee, when Apolo was an infant and raised his son in Seattle. A single parent working long hours as a hair stylist and salon owner, Yuki Ohno sought positive ways to occupy his son's time and quickly recognized his athletic ability, especially

in competitive inline skating and swimming. Watching the 1994 Winter Olympics, The young Ohno decided to enter speed skating. In 1996, he became the youngest skater admitted to Lake Placid Olympic Center at age 13. Initially, Ohno was somewhat rebellious and not fully dedicated to the regime of the training camp. He was given the nickname "Chunky" by his fellow trainees and this motivated him to become more focused and committed to the program. In 1997, at 14 years of age, Ohno became the youngest U.S. Senior Champion in the sport. After this triumph, Ohno struggled finishing nineteenth at the World Championship in Nagano, Japan. He did not train for several months, gained weight, and failed to qualify for the 1998 Olympic team. Yuki brought Apolo home to Washington to consider his future in the sport. Ohno decided to rededicate himself to intensive training and won the 1999 World Junior Championship, and 2000–2001 World Cup for short track.

During coverage of the 2002 Salt Lake City Winter Olympics, Ohno, with his long hair, soul patch,

Apolo Anton Ohno at a film premiere in Los Angeles, May 10, 2012. (S. Bukley/Dreamstime.com)

and bandana, became a fan favorite and a recognizable face on the NBC coverage. In the competition, Ohno was disqualified from the 500 meter race, took bronze in the 1,000 meter race after a collision with two other racers, and won gold in the 1,500 meter race after the referee disqualified South Korean Kim Dong-Sung for cross tracking (blocking or impeding another racer from passing). South Korea filed and lost an IOC protest to Ohno's win. They also threatened to pull out of the remainder of the games and boycott the 2004 Athens summer games. Ohno personally received death threats allegedly from supporters of Kim, but did not allow this to distract him or impede his progress as he went on to win the 2003 and 2005 World Cup. Finally, at the 2006 Olympic Games in Turin, Italy, Ohno won gold in the 500 meter race but finished last in the 1,500 meter race. He also won two bronze medals in the 1,000 meter and 5,000 meter relay competition after passing Nicola Rodigari of Italy in the final laps of the race.

His achievements during his career in short-track speed skating were the basis for Ohno's induction into the Asian Hall of Fame in 2007. Concurrent with this honor, Ohno expanded his public profile with his debut in reality television's *Dancing with the Stars* when he was paired with Julianne Hough and eventually won the competition. The demands of the show did not halt his training during the 2007–2008 winter season. He won multiple medals at the World Championships in Milan, Italy, and finished as overall champion at the 2008 Championship held in Gangneung, South Korea.

In 2011, Ohno accepted the challenge of *Subway* spokesman Jared Fogel to run the New York City Marathon and completed it in the time of 3:25:14. As of February 2012, Apolo is still deciding whether to complete in the 2014 Winter Olympics in Sochi, Russia.

Okada, John (1923–1971)

John Okada authored the novel, *No-No Boy*, one of the most commonly taught novels about the Japanese American internment and resettlement experience. Although it was published in 1957, the novel was largely forgotten until it was rediscovered in the early 1970s. John Okada's novel tells the story of a young Japanese American man, Ichiro Yamada, and his return to his hometown of Seattle after having served time in federal prison for resisting the draft. Labeled a "no-no boy," Ichiro is disdained by many in the Japanese American community, especially veterans, and he struggles to find a job. Ichiro's friendships with the veteran Kenji and a young woman named Emi play a key role in his character development. Much of the novel is told from Ichiro's point of view and Okada's main focus in the novel is Ichiro's inner struggle as

he continues to blame his mother and himself for resisting the draft, an act that Ichiro considers to be a sign of disloyalty.

John Okada was born in Seattle on September 23, 1923. He had two brothers and a sister and his father owned several hotels. John Okada and his family were sent to a War Relocation Authority Internment Camp in Minidoka, Idaho. Okada served in Army intelligence in the Pacific theater and earned the rank of sergeant. Following his service, he entered the University of Washington where he earned his bachelor's degrees in English and library science and then attended Columbia University where he earned a master's degree in English and met his wife, Dorothy. He moved to Seattle to work for the Seattle Public Library, he then moved to the Detroit Public Library, and later he switched to technical writing with Chrysler Missile Operations. Unhappy with their life in the community in Detroit, Okada and his wife moved to Los Angeles in 1956 where he continued to work as a technical writer. He died of a heart attack on February 20, 1971.

Okada's novel, *No-No Boy*, was published in 1957, but the original run of 1,500 copies did not sell out. The original publisher, Charles Tuttle, noted that the book did not find an audience in the Japanese American community. Jeffery Paul Chan "discovered" Okada's novel in San Francisco in 1970 when he and other Asian American artists scoured used bookstores looking for early Asian American authors. Chan along with Frank Chin, Lawson Inada, and Shawn Wong published an excerpt from *No-No Boy* in their anthology, *AIIEEEEE!* (1974) and dedicated the collection to John Okada and Louis Chu, author of *Eat a Bowl of Tea*. *No-No Boy* was reissued in 1976 with a preface that relates the novel's rediscovery and the conversations that the editors of *AIIEEEEE!* had with Okada's wife, Dorothy, who survived him. She told the editors of the anthology that she had attempted to donate John Okada's papers, including an unpublished manuscript, a novel on first-generation Japanese Americans, to the University of California at Los Angeles. But they rejected her offer, and she burned the manuscripts, notes, and correspondence. Since its republication, the novel on the complex issues of national loyalty has become a staple in the college classroom and has gone through several printings.

Although Okada's novel is largely told from the point of view of Ichiro Yamada, a no-no boy, Okada did serve in the U.S. Army during World War II. Scholars believe that Ichiro's character is modeled after Okada's friend, Hajime "Jim" Akutsu. The novel's title and the insult leveled at Ichiro in the novel, "no-no boy," refers to one's answers to Questions 27 and 28 on survey questions that every male Japanese Americans over the age of 17 were required to answer when they were interned. The questions asked respondents if they would agree to fight wherever ordered and if they would fore-swear allegiance to the Emperor of Japan. "No" answers would classify the respondent as disloyal; and many of the no-no-boys were moved to Tule Lake Internment Camp, the last of the camps to close after the war in March 1946. *No-No Boy's* main character Ichiro and other draft resisters, like those from Heart Mountain Internment Camp, took the extra step of refusing to be inducted into the army when drafted, which was a federal offense. Although Ichiro largely sees loyalty as a simple choice between Japan and America, the reasons for draft resistance or for "no" answers to Questions 27 and 28 were many and complex. Some draft resisters like members of the Heart Mountain Fair Play Committee refused induction to protest their imprisonment in internment camps.

Okihiro, Gary (1945–)

Gary Y. Okihiro is a scholar, author, and a critically acclaimed historian who is one of the founders of the fields of Asian American studies and comparative ethnic studies. His career spans over three decades at both public and private institutions as a teacher and administrator.

Born in Aiea, Honolulu, Hawaii, Okihiro graduated from Hawaii Mission Academy, followed by a BA in history from Pacific Union College. He continued on to earn a PhD in history in 1976 from the University of California, Los Angeles, where his dissertation research focused on the Kgalagadi region of South Africa. Okihiro's career in comparative ethnic studies was established at Humboldt State University, California in 1977, and then at the Department of History at Santa Clara University, California in 1980, where he served as an associate professor and director of the Ethnic Studies Program. In 1989 Okihiro joined the Department of History at Cornell University to help develop an Asian American Studies Program. He reprised his efforts in program development by establishing and serving as the founding director of the Center for the Study of Ethnicity and Race and the Asian American Studies Program at Columbia University, where he continues to teach, research, and write. Okihiro has also served as a professor, visiting lecturer, and senior scholar at

institutions such as Nihon University, Japan; University of Hawaii; Amherst University; Stanford University; University of California, Berkeley; Oberlin College; Vassar College; University of British Columbia; and Princeton University. His dedication to the field is exemplified in his roles as a former president of the Association of Asian American Studies. He is also an active member of the Organization of American Historians, and a delegate to American Council of Learned Societies.

Okihiro's research and writing focuses broadly on the United States, southern Africa, and world history. He is a prolific scholar as he has written and published 10 books on Asian American and Hawaii history, racial formation and racism in the United States, and approaches to understanding history and social formations. Six books have received national awards including *Cane Fires: The Anti-Japanese Movement in Hawaii, 1865–1945* (1991), *Margins and Mainstreams: Asians in American History and Culture* (1994) and *Common Ground: Reimagining American History* (2001). His latest two books are part of a trilogy on space/time. *Island World: A History of Hawaii and the United States* (2008) and *Pineapple Culture: A History of the Tropical and Temperate Zones* (2009). He has edited or coedited six other volumes and co-authored numerous essays, articles, book chapters, and reviews. Okihiro is a frequent keynote speaker and guest lecturer. He has received countless fellowships, grants, and book awards, including the Fulbright-Hayes Dissertation Fellowship, Social Science Research Council and the American Council of Learned Societies Research Fellowship, Lifetime Achievement Award from the American Studies Association, and an Honorary Doctorate from the University of Ryukyus, Okinawa.

Omachi, George Hatsuo “Hats” (1923–1995)

George Hatsuo “Hats” Omachi was born in San Fernando, California. At the age of 19 his family moved to Fresno, and with the start of World War II they were relocated to Jerome, Arkansas. In the camps George played with the Jerome All-Stars, who competed against and defeated Arkansas A&M, the 442nd ballclub, the Hawaiian Asahi, and neighboring semipro teams. After a brief stay in the camp, he and his wife Alice moved to St. Louis, where he was fortunate to meet future Hall of Fame manager Billy Southworth (inducted in 2008). When the war ended George returned to Fresno where he became a regular in the lineup for Kenichi Zenimura’s Japanese ballclub. After nine years of close mentoring, Zenimura retired and passed the managerial reigns on to Omachi. Within five years Omachi led the Fresno Nisei to back-to-back state championships. In 1968 Omachi joined the New York Mets as their central California scout. He also provided scouting services for the San Francisco Giants, Pittsburgh Pirates, Milwaukee Brewers, and Houston Astros. By the early 1970s the number of Japanese Americans participating in baseball declined, so he formed the Omachi All-Stars, a multiethnic team comprised of the best players in the Fresno County area. In 1984, Omachi was cohost of the Japanese Olympic baseball team during a series of exhibition games in San Francisco before the Olympic Games in Los Angeles.

Much like his mentor Zenimura, Omachi possessed a unique ability to break down a player’s strength and weaknesses almost immediately. He also displayed the same analytical approach and passion for the game. Often referred to as “the Doctor,” Omachi would conduct assessments on potential major leaguers by stripping them down to their shorts and studying the individual’s movement, form, muscle groups, and biomechanics. He was willing to help any ballplayer for free, regardless of age. The only criteria required were a willingness to learn and passion for the game. Players from the major-league to the little-league levels benefited from Omachi’s wisdom. A few of those included Bobby Cox, Tom Seaver, Will Clark, Rex Hudler, and Geoff Jenkins. He worked

passionately and intensely on every level with his players. Rain or shine, Omachi was always available.

Omachi died on May 27, 1995, at the age of 72. Tragically, he was killed in a traffic accident when his car was broadsided. Omachi was on the road scouting for the Houston Astros when the accident occurred. Former major-leaguer Pete Dalena (Cleveland Indians), one of Omachi’s successful pupils from the time he was 16 years old, said “George was good for baseball, but more than that he was good for kids. He made a difference for me. He taught me the principles of batting. He was good for me as a baseball player and as a person. He was instrumental in development of so many people.”

Omi, Michael

Michael Omi has been an influential scholar in the fields of Asian American studies and ethnic studies over the past several decades. His best-known contribution remains the concept of racial formation, a theory he initially advanced in the mid-1980s with sociologist Howard Winant.

Omi’s academic background resides in sociology, where he received an MA and a PhD in the field, both from UC Santa Cruz. For the past several decades, he has served on the faculty of the Ethnic Studies Department at UC Berkeley, where he teaches courses ranging from Asian American communities to comparative ethnic studies research. Along with Sucheng Chan, David Palumbo-Liu, and Linda Vo, Omi has edited the Temple University Press series “Asian American History and Culture.”

Omi came to the forefront of racial theory with the 1986 publication of *Racial Formation in the United States*, coauthored with Howard Winant. Racial formation theory emerged as a reaction to the prevailing tendency of racial theory to treat race as inherently *reducible* to other phenomena (in particular, ethnicity, nation, and class) that, in Omi and Winant's words, "neglect the specificity of race as an autonomous field of social conflict, political organization, and cultural/ideological meaning" (48). Their related notion of "racial projects" posits race as inherently fluid and unstable, constantly formed and reformed in the cauldron of political struggles that span the ideological spectrum from reactionary to radical.

In his many essays published after *Racial Formation*, Omi has applied this theory to a range of important racial issues. For example, in his 2001 essay "(E)racism," Omi interrogates the nature of contemporary anti-racist organizations. For Omi, the efficacy of such organizations turns on the very meanings they apply to race and racism, and he employs racial formation theory as means to situate antiracism in the context of post-civil rights understandings of race and racism. He notes that although white antiracist organizations have primarily focused on neutralizing the prejudice whites have toward other racial groups, organizations run principally by people of color conceive of racism as structural; these latter groups understand that mere "equality before the law" is insufficient in eradicating the myriad inequalities that separate racial groups in the United States today.

Much of Omi's work involves the specific location of Asian Americans within contemporary racial discourse. In the essay "Situating Asian Americans in the Political Discourse of Affirmative Action," Omi and coauthor Dana Y. Takagi demonstrate the inherently complex position Asian Americans inhabit within the contentious racial tapestry of the United States. Arguing that Asian Americans have convenient narrative to exploit, they demonstrate how the prevailing black/white binary suffocates attempts to grapple with the intricacies of racism. As the populations of those who are neither "black" nor "white" continue to grow, Omi and Takagi contend racial theory must keep pace in any attempt to properly assess the complexity of racism in the twenty-first century.

1.5 Generation Asian Americans

On March 27, 2012, KPCC Radio Crawford Family Forum sponsored a panel titled "Are you a 1.5 generation?" Despite the fact that the concept of 1.5 generation emerged in the 1970s, the saliency of this generational term as well as the confusion of what it means to be a 1.5 generation continues. The practice of labeling of children immigrants is in fact universal. The term is often credited to Ruben Rumbaut who states that he first used the idea of "one and a half generation" and later "1.5 generation" when he wrote about the Cuban and Southeast Asian experience, although others, including Korean American scholar Won Moo Hur, argue that the term was established in the Korean community in the 1980s. The 1.5 generation are children immigrants who are not quite first or second generation. According to the U.S. Census and traditional studies of immigration, the 1.5 generation does not exist—there are only first generation, second, and so on. Immigrants to the United States or those born in Asia are considered first generation whereas those who are U.S. born are second generation. Asian children immigrants, however, are those who straddle both cultures of Asia and the United States and have memories of being an immigrant in a new land. They can pass as second generation in many instances because they are conversationally bilingual, bicultural, and able to switch between the two cultures with relative ease.

The idea of an in-between generation is not unique to Asian Americans, but rather applicable to any

children immigrants who immigrated during their early years and to those who experienced growing up in the United States. The prominence of this generational group hit the airwaves when a Korean soap opera titled “Ilchom Ose” (the 1.5 Generation) first aired in 1995. The drama characterized the 1.5 generation as a group that feels alienated and faces intergenerational conflict with their parents and older Korean relatives. Although the term has been used primarily to refer to Korean Americans, the term has been gaining popularity among the larger Asian American communities and other ethnic immigrant groups. Although there is still debate on what makes one a 1.5 generation, from the age of immigration to language ability, the term has gained momentum in academic circles that differentiates young immigrants from adult immigrants. Social markers are significant in discussing the 1.5 generation as they often are faced with negotiating their Asian ethnic heritage and cultural expectations with the new American culture. One aspect of culture that is linked to be a key identification of the 1.5 generation is language. The range of what makes one bilingual stems from someone who is both fluent in their ethnic language and English, to one who is more fluent in one language. The level of bilingualness, however, varies depending on whether the person is raised in a community with a strong ethnic presence; whether their families continue to speak their ethnic language at home; if they have other friends who are 1.5 generation; or if the person themselves has a strong desire to speak their ethnic language with their elders and/or peers. Another factor that has been cited as a way to distinguish a 1.5 generation person is if one immigrated during their formative years. If we were to conclude that anyone who immigrated between the ages of 6 to 15 is 1.5 generation, we are ignoring the role of space and location as influence. For example, Asian American youth who are raised in neighborhoods with limited Asian ethnic interactions are less likely to have opportunities to speak their ethnic language. If parents encourage their children to speak only English to help them fit in with the rest of the neighborhood, the young immigrants are not likely to become bilingual. Similar dynamics exist with access and familiarity with Asian culture. However, it has become increasingly clear that

geographic community has significant influence in the construction of an Asian American 1.5 ethnic identity. As there are children who immigrate at age three who can’t speak any Korean, there are others who are more fluent in their ethnic language than English largely because of the community in which they were raised. For example, the exposure to other Asian Americans will vary for those who immigrate to Kansas versus those who immigrate to Hawaii; or Korean adoptees who are raised in Minnesota will have a different sense of being Korean as to those who are raised in Koreatown in New York. Regional and cultural exposures to other Asian Americans play a large role in how culture is interpreted and/or embraced by young immigrants who go through a process of learning what it means to be 1.5 generation. Thus, the concept of the 1.5 generation is complex and nuanced by class, location, and social structures that shape their socialization process.

A key indicator of “1.5ness” is language. Language culturally transmits shared understanding and emotions that are not easily expressed through translations. By maintaining an Asian ethnic language, parents are able to relay their feelings and ideas to their children in the manner in which it was passed down to them, allowing intergenerational transfer of cultural knowledge. By continuing to speak their ethnic language when learning English, 1.5 generation can become bilingual, which is a key characteristic of this group. The family’s role is also significant in creating a 1.5 generation. Through the family, the children immigrants continue to practice and learn about their ethnic traditions, holidays, and culture. The 1.5 generation may be perceived as lost or “in-between,” but those who fully identify as 1.5 can become cultural bridgemakers who are able to straddle two cultures.

Ong, Han (1968–)

Han Ong is a Filipino-Chinese American award-winning playwright and novelist and one of the youngest recipients of the MacArthur Foundation's "Genius" Fellowship in 1997. Ong has written nearly three dozen plays, which include *The L.A. Plays* (1990), *The Chang Fragments* (1996), *Middle Finger* (1997), and *The Suitcase Trilogy* (1992–1997). They have been staged throughout the United States and internationally at venues such as the Joseph Papp Public Theater in New York City, the Mark Taper Forum in Los Angeles, and London's Almeida Theater. His two novels have also received positive receptions. *Fixer Chao* (2001) was named as *The Los Angeles Times* Best Book of the Year, and *The Disinherited* (2004) was nominated for a Lambda Book Award.

Ong has been the recipient of fellowships from the National Endowment for the Arts, the Guggenheim Foundation, and the Cullman Center for Scholars and Writers at the New York Public Library. He has also appeared as a guest lecturer at Columbia University and Long Island University and has held playwriting workshops at New York's 92nd Street Y and at the Asian American Arts Alliance.

Born in 1968, Ong was raised in Manila, the Philippines. From a very young age, he knew that he would one day become a writer, and began seriously writing prose in his teens. Growing up Filipino of Chinese descent, Ong experienced first-hand racism against the Chinese in the Philippines. Despite this fact, he was not particularly politically inclined, and in an interview with Jessica Hagedorn in 1993, he describes his teenage self as a middle-class, Catholicized dork. Ong cites his Catholic upbringing as the source of his hatred of redundancy and repetition.

When Ong was 16, his family immigrated to the United States, temporarily staying in Illinois for a month before settling in the Koreatown area of Los Angeles. Because of overcrowding in the schools, Ong was sent to the predominantly white Grant High School, but after only two years, he took the high school equivalency exam. After passing the exam, Ong worked odd jobs to support his passion for writing, and eventually worked at the Mark Taper Forum, where he met George C. Wolfe, who booked him at the Public Theater's New Voices Festival, where he performed his breakthrough "Symposium in Manila." The performance opened doors for Ong, who, almost overnight became one of the most sought-after Asian American playwrights. Touted as "the avant-garde leader of the next generation," Ong had written and staged 20 plays by the time he was 25.

Though Ong's plays are surreal and filled with expressionistic cadences and avant-garde imagery, they unflinchingly delve into complex and serious issues at the intersections of race, class, gender, and sexuality, often through a deconstructive lens. In an interview with Jan Breslauer in 1992, Ong insists, "I want to complexify the issue of race by giving my characters various facets of gender and occupation that we've never seen onstage before now."

His determination to "complexify" racial and class issues in his plays can also be observed in his novels. In 1993, Ong contributed a short story that was initially an excerpt from an unpublished novel, *The Stranded in the World*, to Hagedorn's anthology of Asian American literature, *Charlie Chan Is Dead*. Despite the fact that Ong always believed his true calling was writing novels, it was not until 2001 that he finally published *Fixer Chao*, which quickly became a *Los Angeles Times* bestseller.

Fixer Chao is a picaresque satire that offers a scathing yet humorous critique of the superficial and overprivileged upper class. The novel features William Paulinha, a gay Filipino street hustler who escapes from his dire circumstances by becoming Master Chao, a feng shui practitioner, to con New York City's wealthy elite of money. The plan, engineered by Shem C, a Jewish writer obsessed with revenge against the upper crust of society who shunned him, takes William

through an upper-class society that pays “Master Chao” exorbitant amounts of money to provide them with “expert” feng shui advice. Their failure to recognize that William isn’t Chinese demonstrates the way in which these patrons Orientalize, fetishize, and commodify the very Asian cultures they claim to appreciate. The novel exposes the hypocrisy and ignorance of the upper class, which eschews responsibility for their direct or indirect exploitation of developing nations and the underclass. It also demonstrates the subversive and comical ways in which William’s inauthentic performance of ethnicity allows him to push against the limits of race and class.

Considered Ong’s imagined homecoming to the Philippines, *The Disinherited*, published in 2004, tells the postcolonial story of Roger Caracera, a Filipino expatriate living in the United States who returns to the Philippines upon his father’s death. At the funeral, he is awarded an inheritance of half a million dollars, which Roger considers corrupt, as its legacy can be traced to the colonial sugar industry. In a bid to absolve his father’s legacy of guilt, Roger begins a journey to find a worthy charity for the money. However, his attempts to do so make him complicit in ongoing American imperialist strategies within the Philippines, which undermine self-determination. Ong’s critique of first world intervention within postcolonial states suggests that such interventions, which masquerade as benevolent acts, are always dangerous and must be aggressively interrogated.

Continuing in the vein of *The Disinherited*, Ong is currently working on a forthcoming novel with the working title, *Burden of Dreams*, which tells the tale of an American real-estate mogul who retires to the Philippines and decides to practice philanthropy by sponsoring college educations for local children. Like his second novel, the upcoming work questions the spirit of philanthropy and American involvement in developing nations. A long story with the same plot and title was published in *Zoetrope* in 2009. Ong recently was awarded the 2011–2012 Holtzbrink Berlin Prize from the American Academy in Berlin for the upcoming book.

Onizuka, Ellison (1946–1986)

Ellison Shoji Onizuka was a Japanese American astronaut from Kealahou, Kona, Hawaii. He was the first astronaut in space of Asian descent and first from Hawaii. He was a member of the United States Air Force and worked as an aerospace flight test engineer before becoming an astronaut. Onizuka flew on two space missions, Space Transportation System (STS) 51-C and STS 51-L. He was killed in the space shuttle *Challenger* disaster in 1986, in which all seven members of the crew lost their lives.

Onizuka was born on June 24, 1946, to Masamitsu and Mitsue Onizuka. His grandparents had migrated to Hawaii as plantation workers in the 1890s, and Onizuka grew up in Keolu, Kona on a coffee plantation.

Ellison Onizuka, the first Asian American in space. (National Aeronautics and Space Administration)

His father worked in the coffee fields and drove a taxi and his mother managed a general store. His mother recounted in an interview with *Time* magazine that Onizuka had dreamed of being an astronaut but hesitated to tell anyone because there were no astronauts of color, much less Asian American astronauts, when he was growing up.

Onizuka attended the University of Colorado, Boulder as a member of the ROTC program. He received bachelor's and master's degrees in aerospace engineering in June and December of 1969, respectively, and began active duty in the U.S. Air Force in January 1970. Onizuka was an aerospace flight test engineer with the Sacramento Air Logistics Center on the McClellan Air Force Base in California and worked on flight testing and systems safety engineering. In 1974, he attended the U.S. Air Force Test Pilot School and in 1975 was assigned to the Air Force

Flight Test Center on the Edwards Air Force Base in California as an instructor and manager of flight test modifications for the school's and test center's aircraft fleet. In January 1978, Onizuka was accepted as an astronaut candidate and he completed his training and evaluation in August 1979. He worked at the Kennedy Space Center in Florida and the Shuttle Avionics and Integration Laboratory.

On January 24, 1985, Onizuka became the first Japanese American and Hawaiian-born astronaut in space when he boarded the *Discovery*. He was a mission specialist for Space Transportation System (STS) 51-C, the first Department of Defense space shuttle mission. He was responsible for primary payload activities, including the deployment of a modified Inertial Upper Stage. During this flight, Onizuka logged 74 hours in space as the *Discovery* made 48 orbits around Earth.

Onizuka was selected for the 10th flight of the *Challenger*, STS 51-L, which launched from Kennedy Space Center. Onizuka was assigned as mission specialist to use a handheld camera to film Halley's Comet at perihelion, its closest point to the sun. After several delays, the *Challenger* launched at 11:38 a.m. on January 28, 1986. Seventy-three seconds after liftoff, the shuttle experienced structural failure later determined to be caused by the rupture of an O-ring seal. All crew members were killed by the resulting explosion. Onizuka is survived by his wife, Lorna, and daughters Janelle and Darien. He was posthumously promoted to the rank of colonel, and awarded the Congressional Space Medal of Honor.

Otsuka, Julie (1962–)

Julie Otsuka wrote the bestselling novel, *When the Emperor Was Divine*, depicting the internment of a Japanese American family during World War II. Since the novel's publication in 2002, the book has gained a wide readership and has become a favorite among high school and college educators. *When the Emperor Was Divine* tells one family's story from the father's arrest following Pearl Harbor, through the mother and children's incarceration in a War Relocation Authority internment camp in Topaz, Utah, to the family's release and reunification with the father following his release from a federal prison camp. The novel has few historical details and instead focuses intently on the inner turmoil of each family member as they endure their separation and imprisonment during the war and as they attempt to rebuild their lives upon their release; each of the chapters in the novel focuses on a different family member, and each of whom remain nameless in the novel. Beautifully written with understated emotion, the novel is lauded for its psychological realism and the universality of its characterization.

For Otsuka, the unlawful incarceration of over 110,000 Japanese and Japanese Americans during World War II was a subject that haunted her artistic imagination as she began the novel during her stint in the MFA program at Columbia University. Her grandfather's arrest by the Federal Bureau of Investigation, and her mother, uncle, and grandmother's imprisonment at Topaz provided the loose inspiration for the novel. Years before she began the novel in the 1980s, Otsuka read through her grandmother's collection of her grandfather's letters and postcards to his family, which had been censored. Although inspired by her family's experience, the novel is fictional and the result of many months of research reading through oral histories, newspapers, and other sources, as her family did not often discuss their wartime experiences especially as she was growing up.

Julie Otsuka was born on May 15, 1962, in Palo Alto, California and grew up in the state. Her father, a Japanese immigrant, worked as an aerospace engineer, and her mother, a second-generation Japanese American, worked as a lab technician. She has two younger brothers. Otsuka graduated from Yale University in 1984. She pursued a career as a painter before moving to New York City where she began writing. In 1999, she received her MFA from Columbia University and had several chapters of *When the Emperor Was Divine* completed by then. The book manuscript was finished in 2001 and published a year later.

Ozawa, Seiji (1935–)

Seiji Ozawa is a Japanese conductor with a long career in the United States, Japan, and Europe. He is the first Asian to achieve international fame in the world of Western classical music.

Ozawa was born on September 1, 1935, to Japanese parents in Mukden, Manchukuo (now Shenyang, China). After the family returned to Japan in 1941,

Ozawa began studying music at Toho Gakuen School of Music under Hideo Saito, a cellist and conductor who played a critical role in the development of Western music education in Japan. Although he initially started with the piano, he was unable to continue playing the piano after injuring his finger in a rugby game; listening to the performance of Beethoven's Piano Concerto No. 1 with Leonid Kreutzer as soloist and conductor in 1951 made Ozawa shift his focus from piano to conducting.

In 1959 Ozawa left Japan on a freighter ship to study music in Europe. He earned the support of Fuji Heavy Industries, which agreed to provide financial support for Ozawa under the condition that he would ride the company's new scooter throughout his journey and that he would publicize his identity as a musician and as a Japanese national. He thus traveled on the scooter carrying a guitar and a Japanese flag on his back. With Ozawa's subsequent success in Europe and the United States, the Japanese public came to see his quixotic European journey (which he recollects in his memoir published in Japan in 1980) as a symbol of Japan's reentry into the world stage after the nation's defeat in World War II.

Ozawa's international career began with winning the first prize at the International Competition of Orchestra Conductors in Besançon, France, in 1959. The following year he won the Koussevitsky Prize for outstanding student conductor at the Berkshire Music Center (now the Tanglewood Music Center). These achievements earned the attention of the world's premier conductors Charles Münch, Herbert von Karajan, and Leonard Bernstein. Ozawa subsequently came to work closely under the tutelage of these masters. He served as an assistant conductor for the New York Philharmonic from 1961 to 1965 and accompanied the orchestra's Japan tour in 1961. He made his *début* with the San Francisco Symphony Orchestra in 1962 and became artistic director of the Ravinia Festival, the summer home of the Chicago Symphony Orchestra, from 1965 to 1969. With the Chicago Symphony Orchestra he produced many recordings with the RCA label. He was also the music director of the Toronto Symphony Orchestra from 1965 to 1969 and began performing with the Boston Symphony Orchestra and the Philadelphia Orchestra. Ozawa was the first

Japanese musician to hold such posts with prestigious orchestras in North America and to record with a major label.

Like many others who achieved international fame, Ozawa received mixed reaction in his home country even as he was hailed as the symbol of Japan's national success. This was manifested most blatantly in what came to be known in Japan as the "NHK Symphony Incident." Ozawa began performing with Japan's most established orchestra, the NHK Symphony, in 1961, but conflicts with the orchestra members led to the musicians boycotting the concert in December 1962, resulting in Ozawa standing alone on stage. Some attribute this conflict to differences in musical conceptions between U.S.-influenced Ozawa and the orchestra that had been performing with a distinctively European style; others claim that the tension came from the orchestra members' jealousy and resistance toward a young, brash conductor who had achieved international success; yet others argue that the orchestra was protesting Ozawa's irresponsible and immature behavior especially during the Southeast Asia tour in the fall of 1962. After this highly controversial incident, Ozawa did not perform with the NHK Symphony for 32 years until the 1995 concert at Suntory Hall. In the meantime, many influential figures in Japan's music world expressed support for Ozawa, who shifted the base of his Japanese performances to the New Japan Philharmonic Orchestra. In 1984, he assembled the former students of Hideo Saito from all over the world and performed concerts in Tokyo and Osaka. This led to the 1992 founding of the Saito Kinen Orchestra for which Ozawa serves as the music director.

Ozawa is most known for his contribution as the music director of the Boston Symphony Orchestra. He was appointed to the post in 1973 and remained there for 29 years, the longest tenure of any music director. During his tenure in Boston, he improved the orchestra's technical precision and developed a dark, weighty sound for the Romantic German repertoire. Ozawa's repertoire favors large-scale works by Berlioz, Brahms, and Mahler and his 1990s recordings of the Mahler symphonies by Philips has been particularly acclaimed. He also has championed modern composers and has extensively performed works by

Schoenberg, Stravinsky, Ligeti, Messiaen, and has premiered new works by Peter Maxwell Davies, Lucas Foss, and others. His close relationship with Japanese composer Toru Takemitsu has led to numerous collaborations and recordings. He conducts most of the repertoire, including the most difficult scores, from memory. In addition to his musicality, he is well known for breaking the conventions of formal attire and wearing turtlenecks that became his signature performance attire.

More recently, Ozawa has turned more toward conducting opera. In 2002, Ozawa became the principal conductor of the Vienna State Opera; in 2005 he became the music director for the Tokyo Opera no Mori, an annual opera festival held in Tokyo. Since 2006, he has had to cancel many performances because of illness; in 2010 he announced that he was canceling all engagements because of his treatments for esophageal cancer. Although he served as the artistic director for JapanNYC, a music festival mounted at Carnegie Hall where he conducted Britten's "War Requiem," illness caused Ozawa to considerably diminish his involvement in the festival. Despite his illness, he continues his involvement especially with the activities of the Saito Kinen Orchestra. A book of his interviews with author Haruki Murakami was published in Japan in 2011.

Ozawa v. United States (1922)

Takao Ozawa had come to the United States when he was a minor, migrating first to Hawaii and eventually settling in California. He attended Berkeley High

School and matriculated at the University of California at Berkeley, until the Great Earthquake in San Francisco in 1906 disrupted his studies. By the time he applied to become a naturalized citizen, he had lived in the United States for over 20 years and, according to the historian, Yuji Ichioka, "[Ozawa] was a paragon of an assimilated Japanese immigrant, a living refutation of the allegation of Japanese unassimilability." He had married a Japanese immigrant woman as assimilated as himself, they spoke English to one another, raised their American-born children speaking English, attended a Christian church, and perhaps deliberately distanced themselves socially from Japanese immigrants. When he applied for naturalization, for example, he did not ask for the support of the Japanese government, Japanese immigrant organizations, or the Japanese American Citizens League. He preferred to speak for himself: "In name, I am not an American citizen, but at heart I am a true American." In other words, he was asking the federal government to affirm by law that which he already felt inside.

Ozawa had some powerful allies. By 1920, the Empire of Japan was a formidable military presence in East Asia. Japan had taken possession of northern China and Mongolia, the Korean peninsula, and the southern portion of Sakhalin Island. All were acquired through war, against the Chinese, the Russians, the Mongolians, and the Koreans. In 1919, at the Treaty of Versailles, though the Japanese acquired the Shandong peninsula from Germany, the Empire was livid that the Europeans had not fully acknowledged Japanese supremacy in Asia, and leading Japanese politicians accused the Western powers of being hopelessly racist. It did not help that by 1920 the Americans had excluded virtually all Japanese migration to the United States, and the federal courts had consistently rejected the petitions of Japanese immigrants for naturalization, even from men who had served in the American military. The Imperial Japanese government took a deep interest in American immigration and naturalization policies, and they saw there a great many insults to their national honor.

In 1921, American diplomats in the State Department encouraged their government to ease at least some restrictions against the Japanese, arguing that it was unwise to antagonize such a powerful nation.

They reminded their colleagues that in 1906, when President Roosevelt saw a rising Japan for himself, he had recommended exactly the same policy. Yet the federal government and the states had been moving in the opposite direction. Indeed, by 1919, legislators pressed to limit the migration of Japanese women, especially “picture brides,” who were lawfully admitted since 1908 under the Gentlemen’s Agreement of 1907. The Gentlemen’s Agreement had barred the migration of Japanese laborers into the United States, and by 1921, Japanese immigrants already in the United States were completely barred from bringing their spouses.

In California, leading politicians saw the Japanese as an even greater threat to Western civilization than the Chinese. Because Japanese immigrants had been permitted to bring their wives into the United States for over 10 years, they had formed families in California, the couples had children, and they participated in sectors of the economy that were booming. Over a third of Japanese immigrant families went into farming, first as tenants, then as property owners. California passed a series of Alien Land Laws to stop this trend, starting in the legislature in 1913, and by state referendum in 1920. In the first version, “aliens ineligible for citizenship” were not allowed to own or to lease agricultural land; in the second, Japanese immigrants were forbidden from creating agricultural trusts using the identities of their American-born children, or from creating dummy corporations or using the identities of whites to circumvent the rule. Moreover, the new rule provided for escheat actions, where the state could take possession of land held in violation of state rules. Between 1910 and 1920, Japanese immigrant and Japanese American landholdings had actually increased, tripling in counties like Los Angeles; by 1920, however, the harsh new rules threatened to push Japanese Americans completely out of farming. Millions of dollars of property were now at stake.

For these obvious reasons, the Japanese American Citizens League, the Japanese Consulate, and more progressive American diplomats all took a keen interest in Takao Ozawa’s case, though the petitioner himself had been ambivalent about foreign relations and was not a farmer. At the time of his case, he was living in Honolulu and working for an American company.

He was, in his own words, a model minority: “I neither drink liquor of any kind, nor smoke, nor play cards, nor gamble, nor associate with any improper person. My honesty and my industriousness are well known among my Japanese and American acquaintances and friends; and I am always trying my best to conduct myself according to the Golden Rule. So I have all [the] confidence in myself that as far as my character is concerned, I am second to none.” In some accounts of his case, historians say that the federal judge denied Ozawa’s petition not because he thought the petitioner unworthy, but because, through Ozawa, the higher federal courts might strike down the rules preventing honest men like Ozawa from American citizenship.

As a United States Supreme Court Justice, George Sutherland had an uncommon background, if only because he was the first Justice not born in the United States since the Revolution. Although Sutherland had been born in England, he and his parents were Mormons. They moved to Utah, where he attended Brigham Young Academy; later he enrolled at the University of Michigan Law School. Sutherland served first in the House of Representatives and then in the Senate, both times as the gentleman from Utah. He was appointed to the court on September 22, 1922. On October 3, Ozawa’s case appeared before him in oral argument, and in November, Sutherland wrote the unanimous opinion, one of the first he penned for the highest court. To Ozawa’s petition, the answer was no and no.

Sutherland said that “in all of the naturalization acts from 1790 to 1906 the privilege of naturalization was confined to white persons (with the addition in 1870 of those of African nativity and descent), although the exact wording of the various statutes was not always the same. If Congress in 1906 desired to alter a rule so well and so long established it may be assumed that its purpose would have been definitely disclosed and its legislation to that end put in unmistakable terms.” Congress had not done so. The primary question, then, was whether Ozawa was “white” or a person of African nativity—the second possibility had been soundly rejected by Ozawa and his own attorneys, one of whom insisted in both oral and written arguments that Ozawa was physically “whiter” than many Southern and Eastern Europeans who had

become naturalized citizens. Japanese people were the “Yankees of the Orient,” they said.

So, was Ozawa “white”? No: “We have been furnished with elaborate briefs in which the meaning of the words ‘white person’ is discussed with ability and at length, both from the standpoint of judicial decision and from that of the science of ethnology. It does not seem to us necessary, however, to follow counsel in their extensive researches in these fields. It is sufficient to note the fact that these decisions are, in substance, to the effect that the words import a racial and not an individual test, and with this conclusion, fortified as it is by reason and authority, we entirely agree. Manifestly the test afforded by the mere color of the skin of each individual is impracticable, as that differs greatly among persons of the same race, even among Anglo-Saxons, ranging by imperceptible gradations from the fair blond to the swarthy brunette, the latter being darker than many of the lighter hued persons of the brown or yellow races. Hence to adopt the color test alone would result in a confused overlapping of races and a gradual merging of one into the other, without any practical line of separation.” So what test was most appropriate? “Beginning with the decision of Circuit Judge Sawyer, *In re Ah Yup*, . . . the federal and state courts, in an almost unbroken line, have held that the words ‘white person’ were meant to indicate only a person of what is popularly known as the Caucasian race.”

Sutherland conceded that although “Caucasian” could itself be open to debate, it was not so here: “The appellant, in the case now under consideration, however, is clearly of a race which is not Caucasian and therefore belongs entirely outside the zone on the negative side.” If Congress wanted to amend the rule to include people like Ozawa, Congress should do so

and the Court would comply. Neither meant any offense with the present state of the law, especially not to any angry Imperial government: “Of course there is not implied—either in the legislation or in our interpretation of it—any suggestion of individual unworthiness or racial inferiority. These considerations are in no manner involved.”

Ozawa lost and he returned to Hawaii. Very little has been published about his life after his famous case—he himself seems to have withdrawn from public life. A set of challenges to the Alien Land Laws culminated in a series of opinions from the United States Supreme Court in 1923, all of them upholding the Alien Land Laws in California, as well as in other states that had modeled their discriminatory rules after ones from the Golden State. Over the next two decades, prior to their mass internment during World War II, Japanese immigrants were lawfully forced out of the agriculture economy—indeed, by 1945, the vast majority were no longer farmers. The Ozawa case affirmed the idea that Asians were unassimilable and perpetually foreign, and that it was the Americans who were the reluctant party. Paul Spickard reports these words from an editorial published by the Los Angeles Chamber of Commerce in 1921: “It is not a question of whether the Jap is assimilable or not, we do not want to assimilate him.”
